Texas Higher Education Coordinating Board

Texas Core Curriculum

(Beginning fall 2014)

Statement of purpose

Through the Texas Core Curriculum (TCC), students gain a foundation of knowledge about human cultures and the physical and natural world, develop principles of personal and social responsibility for living in a diverse world, and advance intellectual and practical skills essential for all learning.

Core objectives

Definitions for the six core objectives for the TCC are as follows:

- Critical Thinking Skills (CT) – creative thinking; innovation; inquiry; and analysis, evaluation and synthesis of information
- Communication Skills (COM) – effective development, interpretation, and expression of ideas through written, oral, and visual communication
- Empirical and Quantitative Skills (EQS) – manipulation and analysis of numerical data or observable facts resulting in informed conclusions
- Teamwork (TW) – ability to consider different points of view and to work effectively with others to support a shared purpose or goal
- Social Responsibility (PR) – intercultural competence, knowledge of civic responsibility, and the ability to engage effectively in regional, national, and global communities
- Personal Responsibility (SR) – ability to connect choices, actions, and consequences to ethical decision-making

Texas Tech University
Core Curriculum

CRITICAL THINKING SKILLS

Texas Core Curriculum

| |
|--|
| General Education Objectives (Student Learning Outcomes) |
| <i>Explanation:</i> Critical Thinking Skills (CT) are defined by the Texas Higher Education Coordinating Board as encompassing "creative thinking, innovation, inquiry, analysis, evaluation, and synthesis of information." |
| CATEGORIES OF ASSESSMENT |
| <i>Explanation of issues</i> -Explains an issue or problem using creative thinking, innovation, inquiry, analysis, evaluation and/or synthesis of information |
| <i>Evidence</i> -Selects and uses information to investigate a point of view or conclusion |
| <i>Student's position (perspective, thesis/hypothesis)</i> -Presents a position related to the issue or problem |
| <i>Conclusions and related outcomes (implications and consequences)</i> -Draws conclusions from and projects related outcomes (consequences or implications) for the issue or problem |
| <i>Outcome Status:</i> Active |
| Assessment Method (1) |
| <i>Course Level Assessment:</i> Instructors of Record (IOR) will submit rubric evaluations for a designated assignment to be analyzed by the Core Curriculum Committee (CCC). The following component areas are associated with CRITICAL THINKING SKILLS: Written Communication; Mathematics; Life and Physical Science; Language, Philosophy, and Culture; Creative Arts; American History; Government/Political Science; Social and Behavioral Sciences; (option) Oral Communication; and (option) Mathematics and Logic. |
| <i>Criterion:</i> AY 2015-2016 will be used to identify baseline results for future benchmarking expectations. Data will be presented in an aggregated format by Component Area, allowing for multiple scores to be presented with aspirational scores identified for future benchmarks. |
| <i>Results:</i> |
| Forty courses contributed to course level assessment. The Foundational Component Areas included: American History; Creative Arts; Government/Political Sciences; Language, Philosophy, and Culture; Life and Physical Sciences; Mathematics; and Social and Behavioral Sciences. A total of 11,481 students participated. The average student rating was 2.90 with the highest score of 3.73 in Creative Arts and the lowest score of 2.06 in Social and Behavioral Sciences. To view all scores, open the attached document. |
| Critical Thinking, FY 2015.xlsx |
| <i>Actions:</i> |
| This year's data is benchmark data that will be most valuable over the course of a number of years. There are a number of ways that this data can be used. (1) Comparative analysis among foundational component areas should reveal areas of strength and weakness. This will be valuable for making specific recommendations in course selection and criteria for inclusion in the Core. (2) Comparative analysis will also be beneficial with establishing meaningful benchmarks. Ultimately, the goal is to see increases with student learning within general education. The rich data will provide targeting strategies for curricular improvements. (3) Trend analysis will take a number of years, but will reveal the most meaningful contribution of course level assessment. The Core Curriculum Committee should carefully review the data and be prepared to make more significant recommendations after the second year of administration. With benchmark data it is difficult to identify what is specifically expected, however, scores should be fairly consistent across component areas. Variations can identify issues with scoring or student populations. Since this objective hits a large number of students with the majority within their first two years, a score just over an average of 2 on a 4 point scale seems reasonable though. |

Assessment Method (2)*Portfolio Review:*

Students voluntarily upload to their iPortfolios self-selected artifacts relating to the identified general education objective. Each artifact has the potential to be assessed using a linked rubric. A sample of artifacts will be assessed by the Core Curriculum Committee. Additionally, when students graduate, a holistic assessment of student work will be administered.

Criterion:

AY 2015-2016 will be used to identify baseline results for future benchmarking expectations. Rubric scores will be presented for both formative and summative assessment results.

Results:

The first year portfolio analysis included a small number of assessments. The number of scores was too low for reliable data, however, the number of scores will increase through the second pilot year (2016-2017) and even more during full implementation (2017-2018).

Actions:

iPortfolio reviews will take a few years to be either reliable or valid. The sample of students and student work is far too limited for any analysis. However, the Core Curriculum Committee did determine that there are measures that can be taken to improve the assessment of student work. The rubrics used to measure student learning need to be revised for other objectives, but instructions for students on what should be uploaded are applicable to all Objectives.

During the assessment of student work, many faculty felt that students identified artifacts that were not consistent with the objective. Providing more description would be valuable. Additionally, the faculty felt that the rubric was not generalizable across student degree options. The rubric needs to be adjusted to account for this issue.

Assessment Method (3)*NSSE:*

Selected questions. Administered alternating years.

During the current school year, how much has your coursework emphasized the following?

4b. Applying facts, theories, or methods to practical problems or new situations.

4c. Analyzing an idea, experience, or line of reasoning in depth by examining its parts.

4d. Evaluating a point of view, decision, or information source.

4e. Forming a point of view, decision, or information source.

Criterion:

AY 2014-2015 will be used to identify baseline results for future benchmarking expectations.

Results:

4b. Freshman students reported 2.9 while seniors reported 3.1, demonstrating a gain of 0.2 over students' time at TTU. The senior report is equal to the national average of 3.1.

4c. Freshman students reported 2.9 while seniors reported 3.1, demonstrating a gain of 0.2 over students' time at TTU. The senior report is equal to the national average of 3.1.

4d. Freshman students reported 2.8 while seniors reported 2.9, demonstrating a gain of 0.1 over students' time at TTU. The senior report is slightly below the national average of 3.0.

4e. Freshman students reported 2.8 while seniors reported 2.9, demonstrating a gain of 0.1 over students' time at TTU. The senior report is slightly below the national average of 3.0.

NSSE is an excellent indirect measure of student learning. NSSE measures student activities and perceptions related to student engagement. TTU scores indicate that students are exposed to a level of critical thinking opportunities equivalent to the national average. This should not be interpreted that students are as successful or competent with the areas measured, simply that students rate their experiences the same as students at other institutions.

[NSSE\TTU Crosswalk NSSE15 Frequencies and Statistical Comparisons \(Texas Tech\).xlsx](#)

Actions:

While the scores indicate an acceptable level of critical thinking opportunities, the value added score is surprisingly low. It would be expected that seniors would rate this higher, both from a developmental and experiential perspective. The

Core Curriculum Committee should review NSSE results to determine if additional opportunities exist within the Core, but also for the purpose of making broader recommendations to the campus community.

Assessment Method (4)

OSA:

Selected questions. Although the OSA was developed as related to the pre-2014 Core Objectives, this years' administration is valuable as it closes the loop. Select questions and results related to the new Core are reported here.

Q10. What is the LEAST likely reason why many people today might find the story upsetting?

Q42. Which of the following is NOT a property that defines life?

Criterion:

AY 2014-2015 will be used to identify baseline results for future benchmarking expectations.

Results:

The Natural Sciences pre-2014 Core Objective may be compared to the new Core Objective of Critical Thinking Skills. For comparison, the Natural Science mean score was 68.3%.

[OSA\OSA 2016 Report.pdf](#)

Actions:

The Core Curriculum Committee needs to determine if the OSA should be rewritten with the updated Core Objectives in order to continue administration.

COMMUNICATION SKILLS

Texas Core Curriculum

| |
|---|
| General Education Objectives (Student Learning Outcomes) |
| <i>Explanation:</i> Communication Skills (COM) are defined by the Texas Higher Education Coordinating Board as encompassing "effective development, interpretation, and expression of ideas through written, oral, and visual communication." |
| CATEGORIES OF ASSESSMENT |
| <i>Context and purpose</i> -Expresses the context or place of the work and to identify the reason for presenting it |
| <i>Organization</i> -Logically structures the work |
| <i>Content development</i> -Presents relevant information |
| <i>Command of delivery</i> -Communicates the work to its intended audience |
| <i>Outcome Status:</i> Active |
| Assessment Method (1) |
| <i>Course Level Assessment:</i> Instructors of Record (IOR) will submit rubric evaluations for a designated assignment to be analyzed by the Core Curriculum Committee (CCC). The following component areas are associated with COMMUNICATION SKILLS: Written Communication; Mathematics; Life and Physical Sciences; Language, Philosophy, and Culture; Creative Arts; American History; Government/Political Science; Social and Behavioral Sciences; (option) Oral Communication; and (option) Mathematics and Logic. |
| <i>Criterion:</i> AY 2015-2016 will be used to identify baseline results for future benchmarking expectations. Data will be presented in an aggregated format by Component Area, allowing for multiple scores to be presented with aspirational scores identified for future benchmarks. |
| <i>Results:</i> |
| Thirty-two courses contributed to course level assessment. The Foundational Component Areas included: American History; Creative Arts; Government/Political Science; Language, Philosophy, and Culture; Life and Physical Sciences; Mathematics; and Social and Behavioral Sciences. With the exception of fall semester POLS, a total of 7,565 students participated. The average student rating was 2.29 with the highest score of 4.00 in Social and Behavioral Sciences and the lowest score of 2.09 also in Social and Behavioral Sciences. During fall semester, POLS used a different scoring schedule compared to other courses and, therefore, cannot be included in the aggregate scores. To view all scores, including POLS, open the attached document. |
| Communication, AY 2015.xlsx |
| <i>Actions:</i> |
| Preliminary analysis indicates that scores are significantly higher than would be expected for students in core areas. Perhaps more training is necessary with instructors to ensure that appropriate evaluation of student performance is being conducted. |
| This year's data is benchmark data that will be most valuable over the course of a number of years. There are a number of ways that this data can be used. (1) Comparative analysis among foundational component areas should reveal areas of strength and weakness. This will be valuable for making specific recommendations in course selection and criteria for inclusion in the Core. (2) Comparative analysis will also be beneficial with establishing meaningful benchmarks. Ultimately, the goal is to see increases with student learning within general education. The rich data will provide targeting strategies for curricular improvements. (3) Trend analysis will take a number of years, but will reveal the most |

meaningful contribution of course level assessment. The Core Curriculum Committee should carefully review the data and be prepared to make more significant recommendations after the second year of administration.

With benchmark data it is difficult to identify what is specifically expected, however, scores should be fairly consistent across component areas. Variations can identify issues with scoring or student populations. Since this objective hits a large number of students with the majority within their first two years, a score just over an average of 2 on a 4 point scale seems reasonable though.

Assessment Method (2)

Portfolio Review:

Students voluntarily upload to their iPortfolios self-selected artifacts relating to the identified general education objective. Each artifact has the potential to be assessed using a linked rubric. A sample of artifacts will be assessed by the Core Curriculum Committee. Additionally, when students graduate, a holistic assessment of student work will be administered.

Criterion:

AY 2015-2016 will be used to identify baseline results for future benchmarking expectations. Rubric scores will be presented for both formative and summative assessment results.

Results:

The first year portfolio analysis included a small number of assessments. The number of scores was too low for reliable data, however, the number of scores will increase through the second pilot year (2016-2017) and even more during full implementation (2017-2018).

Actions:

iPortfolio reviews will take a few years to be either reliable or valid. The sample of students and student work is far too limited for any analysis. However, the Core Curriculum Committee did determine that there are measures that can be taken to improve the assessment of student work. The rubrics used to measure student learning need to be revised for other objectives, but instructions for students on what should be uploaded are applicable to all Objectives.

During the assessment of student work, many faculty felt that students identified artifacts that were not consistent with the objective. Providing more description would be valuable. Additionally, the faculty felt that the rubric was not generalizable across student degree options. The rubric needs to be adjusted to account for this issue.

Assessment Method (3)

CAAP:

Final results. Administered alternating years.

Criterion:

AY 2014-2015 will be used to identify baseline results for future benchmarking expectations.

Results:

Writing Skills: TTU freshmen, sophomores, juniors, and seniors scored an overall average of 62.6, which is at the national mean of 62.7.

Student performance on this assessment has remained consistently average. This is both good and bad news. The focus on communication that is emerging institutionally should result in above average results. However, it still reflects scores that are on par with many comparative institutions. It is important to note that the CAAP assessed many students that were not exposed to or instructed under the new Core Curriculum.

[CAAP\CAAP 2016 Writing Skills Report.pdf](#)

Actions:

It is uncertain if CAAP will be used in the future. TTU is moving toward more authentic assessment measures. TTU needs to determine if CAAP, a standardized test that is taken in classroom environments, is still a viable option. CAAP does provide valuable benchmark data and should not be dismissed too quickly.

Assessment Method (4)

NSSE:

Selected questions. Administered alternating years.
1i. During the current school year, about how often have you given a course presentation?
4d. During the current school year, how much has your coursework emphasized evaluating a point of view, decision, or information source.
17b. How much has your experience at this institution contributed to your knowledge, skills, and personal development in speaking clearly and effectively?
Criterion:
AY 2014-2015 will be used to identify baseline results for future benchmarking expectations.

Results:

1i. Freshman students reported 2.0 while seniors reported 2.6, demonstrating a gain of 0.6 over students' time at TTU. The senior report is slightly below the national average of 2.7.
4d. Freshman students reported 2.8 while seniors reported 2.9, demonstrating a gain of 0.1 over students' time at TTU. The senior report is slightly below the national average of 3.0.
17b. Freshman students reported 2.4 while seniors reported 2.9, demonstrating a gain of 0.5 over students' time at TTU. The senior report is at the national average of 2.9.

NSSE is an excellent indirect measure of student learning. NSSE measures student activities and perceptions related to student engagement. TTU scores indicate that students are exposed to a level of communication activities equivalent to the national average. This should not be interpreted that students are as successful or competent with the areas measured, simply that students rate their experiences the same as students at other institutions. It will be interesting to see how the QEP impacts these scores over the next few years.

[NSSE\TTU Crosswalk NSSE15 Frequencies and Statistical Comparisons \(Texas Tech\).xlsx](#)

Actions:

The Core Curriculum Committee should discuss the results and work collaboratively with the QEP Director to determine how Core courses can positively impact student engagement in the area of communication activities identified in the NSSE.

Assessment Method (5)

OSA:
Selected questions. Although the OSA was developed as related to the pre-2014 Core Objectives, this years' administration is valuable as it closes the loop. Select questions and results related to the new Core are reported here.
Q13. Which of the following is FURTHEST from the evidence of the text?
Q69. When we say that two houses of a legislature have symmetric power, we are saying which of the following?
Criterion:
AY 2014-2015 will be used to identify baseline results for future benchmarking expectations.

Results:

The Humanities pre-2014 Core Objective may be compared to the new Core Objective of Communication Skills. For comparison, the Humanities mean score was 72.6%.

[OSA\OSA 2016 Report.pdf](#)

Actions:

The Core Curriculum Committee needs to determine if the OSA should be rewritten with the updated Core Objectives in order to continue administration.

EMPIRICAL & QUANTITATIVE SKILLS

Texas Core Curriculum

| |
|---|
| General Education Objectives (Student Learning Outcomes) |
| <i>Explanation:</i> Empirical and Quantitative Skills (EQS) are defined by the Texas Higher Education Coordinating Board as encompassing "manipulation and analysis of numerical data or observable facts resulting in informed conclusions." |
| CATEGORIES OF ASSESSMENT |
| <i>Interpretation</i> -Explains information presented in mathematical forms (e.g., equations, graphs, diagrams, tables, words) |
| <i>Representation</i> -Converts relevant information into various mathematical forms (e.g., equations, graphs, diagrams, tables, words) |
| <i>Calculation</i> -Demonstrates a logical path to a correct answer |
| <i>Use of Data</i> -Makes judgments and draws appropriate conclusions based on the quantitative analysis of data, while recognizing the limits of this analysis |
| <i>Outcome Status:</i> Active |
| Assessment Method (1) |
| <i>Course Level Assessment:</i> Instructors of Record (IOR) will submit rubric evaluations for a designated assignment to be analyzed by the Core Curriculum Committee (CCC). The following component areas are associated with EMPIRICAL AND QUANTITATIVE SKILLS: Mathematics, Life and Physical Sciences, Social and Behavioral Sciences, and (option) Mathematics and Logic. |
| <i>Criterion:</i> AY 2015-2016 will be used to identify baseline results for future benchmarking expectations. Data will be presented in an aggregated format by Component Area, allowing for multiple scores to be presented with aspirational scores identified for future benchmarks. |
| <i>Results:</i> Thirty-two courses contributed to course level assessment. The Foundational Component Areas included: Life and Physical Sciences, Mathematics, and Social and Behavioral Sciences. A total of 14,291 students participated. The average student rating was 2.69 with the highest score of 3.84 in Social and Behavioral Sciences and the lowest score of 1.13 in Mathematics. To view all scores open the attached document. |
| Empirical and Quantitative, FY 2015.xlsx |
| <i>Actions:</i> This year's data is benchmark data that will be most valuable over the course of a number of years. There are a number of ways that this data can be used. (1) Comparative analysis among foundational component areas should reveal areas of strength and weakness. This will be valuable for making specific recommendations in course selection and criteria for inclusion in the Core. (2) Comparative analysis will also be beneficial with establishing meaningful benchmarks. Ultimately, the goal is to see increases with student learning within general education. The rich data will provide targeting strategies for curricular improvements. (3) Trend analysis will take a number of years, but will reveal the most meaningful contribution of course level assessment. The Core Curriculum Committee should carefully review the data and be prepared to make more significant recommendations after the second year of administration. With benchmark data it is difficult to identify what is specifically expected, however, scores should be fairly consistent across component areas. Variations can identify issues with scoring or student populations. Since this objective hits a large number of students with the majority within their first two years, a score just over an average of 2 on a 4 point scale seems reasonable though. |
| It is evident in the preliminary analysis that the scores vary significantly. This could be attributed to a couple of factors. The first is that the rubric may not measure this objective consistently among foundational component areas. It is also |

possible that more training for assessing this objective is needed. It is recommended that the Core Curriculum Committee review the results and the rubric.

Assessment Method (2)

Portfolio Review:

Students voluntarily upload to their *i*Portfolios self-selected artifacts relating to the identified general education objective. Each artifact has the potential to be assessed using a linked rubric. A sample of artifacts will be assessed by the Core Curriculum Committee. Additionally, when students graduate, a holistic assessment of student work will be administered.

Criterion:

AY 2015-2016 will be used to identify baseline results for future benchmarking expectations. Rubric scores will be presented for both formative and summative assessment results.

Results:

The first year portfolio analysis included a small number of assessments. The number of scores was too low for reliable data, however, the number of scores will increase through the second pilot year (2016-2017) and even more during full implementation (2017-2018).

Actions:

*i*Portfolio reviews will take a few years to be either reliable or valid. The sample of students and student work is far too limited for any analysis. However, the Core Curriculum Committee did determine that there are measures that can be taken to improve the assessment of student work. The rubrics used to measure student learning need to be revised for other objectives, but instructions for students on what should be uploaded are applicable to all Objectives.

During the assessment of student work, many faculty felt that students identified artifacts that were not consistent with the objective. Providing more description would be valuable. Additionally, the faculty felt that the rubric was not generalizable across student degree options. The rubric needs to be adjusted to account for this issue.

Assessment Method (3)

CAAP:

Final results. Administered alternating years.

Criterion:

AY 2014-2015 will be used to identify baseline results for future benchmarking expectations.

Results:

Mathematics Skills: TTU freshmen and seniors scored an overall average of 58.0, which is at the national mean of 58.7.

[CAAP\CAAP 2016 Mathematics Report.pdf](#)

Actions:

It is uncertain if CAAP will be used in the future. TTU is moving toward more authentic assessment measures. TTU needs to determine if CAAP, a standardized test that is taken in classroom environments, is still a viable option. CAAP does provide valuable benchmark data and should not be dismissed too quickly. TTU students have historically performed well on this the math module, but that also provides limited information for making improvements.

Assessment Method (4)

NSSE:

Selected questions. Administered alternating years.

During the current school year, about how often have you done the following?

6a. Reached conclusions based on your own analysis of numerical information (numbers, graphs, statistics, etc.)

6b. Used numerical information to examine a real-world problem or issue (unemployment, climate change, public health, etc.)

6c. Evaluated what others have concluded from numerical information.

Criterion:

AY 2014-2015 will be used to identify baseline results for future benchmarking expectations.

Results:

- 6a. Freshman students reported 2.7 while seniors reported 2.6, demonstrating a slight loss over students' time at TTU. The senior report is 0.1 lower than the national average.
- 6b. Freshman students reported 2.4 and seniors reported 2.4, demonstrating neither a gain nor a loss over students' time at TTU. The senior report is equal to the national average.
- 6c. Freshman students reported 2.3 while seniors reported 2.4, demonstrating a 0.1 gain over students' time at TTU. The senior report is equal to the national average.

[NSSE\TTU Crosswalk NSSE15 Frequencies and Statistical Comparisons \(Texas Tech\).xlsx](#)

Actions:

NSSE is an excellent indirect measure of student learning. NSSE measures student activities and perceptions related to student engagement. For many components of the NSSE, a value added score is valuable as it reflects a higher degree of exposure and engagement. However, some questions could reflect students' maturity and a score that is the same as the Freshman score or even lower may not be indicative of less engagement over time. It is unlikely that Freshmen are truly exposed to more empirical problem solving than seniors. However, it is worth noting that students' perceptions of exposure doesn't increase. This is worth considering from a Core Curriculum perspective, but more valuable from an institutional learning outcomes perspective. This information should be considered institutionally.

Assessment Method (5)

OSA:

Selected questions. Although the OSA was developed as related to the pre-2014 Core Objectives, this year's administration is valuable as it closes the loop. Select questions and results related to the new Core are reported here.

Q30. Which of the following numbers is largest?

Q32. Alice is looking to rent an art studio.... She wants the studio whose total cost for one year is less expensive, which studio contract should she accept?

Criterion:

AY 2014-2015 will be used to identify baseline results for future benchmarking expectations.

Results:

The Mathematics pre-2014 Core Objective may be compared to the new Core Objective of Empirical and Quantitative Skills. For comparison, the Mathematics mean score was 55.0%.

[OSA\OSA 2016 Report.pdf](#)

Actions:

The Core Curriculum Committee needs to determine if the OSA should be rewritten with the updated Core Objectives in order to continue administration.

TEAMWORK SKILLS

Texas Core Curriculum

| |
|---|
| General Education Objectives (Student Learning Outcomes) |
| <i>Explanation:</i> Teamwork Skills (TW) are defined by the Texas Higher Education Coordinating Board as encompassing the "ability to consider different points of view and to work effectively with others to support a shared purpose or goal." |
| <p>CATEGORIES OF ASSESSMENT</p> <p><i>Contributes to team meetings</i></p> <ul style="list-style-type: none"> -Actively works with the group <p><i>Individual contributions outside of team meetings</i></p> <ul style="list-style-type: none"> -Completes assigned tasks independently <p><i>Fosters constructive team climate</i></p> <ul style="list-style-type: none"> -Models behaviors appropriate to productive collaboration <p><i>Responds to conflict</i></p> <ul style="list-style-type: none"> -Negotiates conflict |
| <i>Outcome Status:</i> Active |

Assessment Method (3)

NSSE:

Selected questions. Administered alternating years.

During the current school year, about how often have you done the following?

1g. Prepared for exams by discussing or working through course material with other students.

1h. Worked with other students on course projects or assignments.

Criterion:

AY 2014-2015 will be used to identify baseline results for future benchmarking expectations.

Results:

1g. Freshman students reported 2.5 and seniors reported 2.5, demonstrating neither a gain or nor a loss over students' time at TTU. The senior report is equal to the national average of 2.5.

1h. Freshman students reported 2.5 while seniors reported 2.8, demonstrating a 0.3 gain over students' time at TTU.

The senior report is slightly below the national average of 2.9.

[NSSE\TTU Crosswalk NSSE15 Frequencies and Statistical Comparisons \(Texas Tech\).xlsx](#)

Actions:

NSSE is an excellent indirect measure of student learning. NSSE measures student activities and perceptions related to student engagement. TTU scores indicate that students are exposed to a level of communication activities equivalent to the national average. This should not be interpreted that students are as successful or competent with the areas measured, simply that students rate their experiences the same as students at other institutions. It will be interesting to see how the QEP impacts these scores over the next few years.

The results for these questions are consistent with expectations for the type of work that students at both freshman and senior levels would participate in. However, it would be worthwhile for the Core Curriculum Committee to review these results to make recommendations to improve student collaborative efforts.

Assessment Method (4)

OSA:

Selected questions. Although the OSA was developed as related to the pre-2014 Core Objectives, this years' administration is valuable as it closes the loop. Select questions and results related to the new Core are reported here.

Q19. From culture to culture, the understanding of "being on time" is:

Q20. International and intra-national cultural competence involves:

Criterion:

AY 2014-2015 will be used to identify baseline results for future benchmarking expectations.

Results:

The Social & Behavioral Sciences pre-2014 Core Objective may be compared to the new Core Objective of Teamwork Skills. For comparison, the Social & Behavioral Sciences mean score was 49.5%.

[OSA\OSA 2016 Report.pdf](#)

Actions:

The Core Curriculum Committee needs to determine if the OSA should be rewritten with the updated Core Objectives in order to continue administration.

SOCIAL RESPONSIBILITY

Texas Core Curriculum

| |
|--|
| General Education Objectives (Student Learning Outcomes) |
| <i>Explanation:</i> Social Responsibility (SR) is defined by the Texas Higher Education Coordinating Board as encompassing "intercultural competence, knowledge of civic responsibility, and the ability to engage effectively in regional, national, and global communities." |
| CATEGORIES OF ASSESSMENT <i>Cultural self-awareness</i> -Assesses own cultural identity <i>Verbal and nonverbal communication</i> -Identifies multiple cultural perspectives <i>Analysis of knowledge</i> -Connects academic knowledge to civic engagement <i>Diversity of communities and cultures</i> -Applies multicultural perspectives to own attitudes and beliefs |
| <i>Outcome Status:</i> Active |
| Assessment Method (1) |
| <i>Course Level Assessment:</i> Instructors of Record (IOR) will submit rubric evaluations for a designated assignment to be analyzed by the Core Curriculum Committee (CCC). The following component areas are associated with SOCIAL RESPONSIBILITY: Written Communication, Creative Arts, American History, Government/Political Science, and (option) Oral Communication. <i>Criterion:</i> AY 2015-2016 will be used to identify baseline results for future benchmarking expectations. Data will be presented in an aggregated format by Component Area, allowing for multiple scores to be presented with aspirational scores identified for future benchmarks. |
| <i>Results:</i> |
| Six courses contributed to course level assessment. The Foundational Component Areas included: American History; Government and Political Science; and Language, Philosophy, and Culture. A total of 1166 students participated. The average student rating was 3.02 with the highest score of 3.59 in Government/Political Science and the lowest score of 2.92 in American History. To view all scores open the attached document. Social Responsibility, FY 2015.xlsx |
| <i>Actions:</i> |
| This year's data is benchmark data that will be most valuable over the course of a number of years. There are a number of ways that this data can be used. (1) Comparative analysis among foundational component areas should reveal areas of strength and weakness. This will be valuable for making specific recommendations in course selection and criteria for inclusion in the Core. (2) Comparative analysis will also be beneficial with establishing meaningful benchmarks. Ultimately, the goal is to see increases with student learning within general education. The rich data will provide targeting strategies for curricular improvements. (3) Trend analysis will take a number of years, but will reveal the most meaningful contribution of course level assessment. The Core Curriculum Committee should carefully review the data and be prepared to make more significant recommendations after the second year of administration. With benchmark data it is difficult to identify what is specifically expected, however, scores should be fairly consistent across component areas. Variations can identify issues with scoring or student populations. Since this objective hits a large number of students with the majority within their first two years, a score just over an average of 2 on a 4 point scale seems reasonable though. |
| Assessment Method (2) |
| <i>Portfolio Review:</i> |

Students voluntarily upload to their *i*Portfolios self-selected artifacts relating to the identified general education objective. Each artifact has the potential to be assessed using a linked rubric. A sample of artifacts will be assessed by the Core Curriculum Committee. Additionally, when students graduate, a holistic assessment of student work will be administered.

Criterion:

AY 2015-2016 will be used to identify baseline results for future benchmarking expectations. Rubric scores will be presented for both formative and summative assessment results.

Results:

The first year portfolio analysis included a small number of assessments. The number of scores was too low for reliable data, however, the number of scores will increase through the second pilot year (2016-2017) and even more during full implementation (2017-2018).

Actions:

*i*Portfolio reviews will take a few years to be either reliable or valid. The sample of students and student work is far too limited for any analysis. However, the Core Curriculum Committee did determine that there are measures that can be taken to improve the assessment of student work. The rubrics used to measure student learning need to be revised for other objectives, but instructions for students on what should be uploaded are applicable to all Objectives.

During the assessment of student work, many faculty felt that students identified artifacts that were not consistent with the objective. Providing more description would be valuable. Additionally, the faculty felt that the rubric was not generalizable across student degree options. The rubric needs to be adjusted to account for this issue.

Assessment Method (3)

NSSE:

Selected questions. Administered alternating years.

During the current school year, about how often have you done the following?

2b. Connected your learning to societal problems or issues.

2e. Tried to better understand someone else's views by imagining how an issue looks from his or her perspective.

Criterion:

AY 2014-2015 will be used to identify baseline results for future benchmarking expectations.

Results:

2b. Freshman students reported 2.4 while seniors reported 2.7, demonstrating a gain of 0.3 over students' time at TTU. The senior report is less than the national average of 2.9.

2e. Freshman students reported 2.8 while seniors reported 2.8, demonstrating neither a gain or nor a loss over students' time at TTU. The senior report is less than the national average of 3.0.

[NSSE\TTU Crosswalk NSSE15 Frequencies and Statistical Comparisons \(Texas Tech\).xlsx](#)

Actions:

NSSE is an excellent indirect measure of student learning. NSSE measures student activities and perceptions related to student engagement. The metric should be interpreted carefully. While scores do indicate gains and the scores are relatively consistent with the national average, there is still not a significant increase over time. However, student development theory should shed light on the student's individual ability to perceive issues related to personal responsibility. In other words, as students mature, they are often more likely to reflect on these issues and establish more objective measures. Therefore a slightly less than significant increase does not necessarily indicate limited growth. This measure is, however, excellent supplemental data. We expect the QEP's focus on global understanding to augment student awareness of multiple perspectives and issues.

Assessment Method (4)

OSA:

Selected questions. Although the OSA was developed as related to the pre-2014 Core Objectives, this years' administration is valuable as it closes the loop. Select questions and results related to the new Core are reported here.

Q12. Which of the following is MOST likely an explanation of why the story warns against disobedience?

Q23. As a rule, ethnic groups share which of the following:

Criterion:

AY 2014-2015 will be used to identify baseline results for future benchmarking expectations.

Results:

The Multicultural pre-2014 Core Objective may be compared to the new Core Objective of Social Responsibility. For comparison, the Multicultural mean score was 72.1%.

[OSA\OSA 2016 Report.pdf](#)

Actions:

The Core Curriculum Committee needs to determine if the OSA should be rewritten with the updated Core Objectives in order to continue administration. The results for these two questions are lower than results from other OSA questions. As the OSA is potentially redesigned, these results indicate that special attention should be paid to questions related to ethics and ethical reasoning.

PERSONAL RESPONSIBILITY

Texas Core Curriculum

| |
|---|
| General Education Objectives (Student Learning Outcomes) |
| <i>Explanation:</i> Personal Responsibility (PR) is defined by the Texas Higher Education Coordinating Board as encompassing the "ability to connect choices, actions, and consequences to ethical decision-making." |
| CATEGORIES OF ASSESSMENT |
| <i>Ethical self-awareness</i> -Assesses own core beliefs and their origins |
| <i>Ethical Issue Recognition</i> -Recognizes and responds to ethical issues |
| <i>Application of ethical perspectives/concepts</i> -Considers multiple ethical responses to a single question |
| <i>Evaluation of different ethical perspectives/concepts</i> -Articulates and addresses multiple ethical perspectives in relationship to own core beliefs |
| <i>Outcome Status:</i> Active |
| Assessment Method (1) |
| <i>Course Level Assessment:</i> Instructors of Record (IOR) will submit rubric evaluations for a designated assignment to be analyzed by the Core Curriculum Committee (CCC). The following component areas are associated with PERSONAL RESPONSIBILITY: Written Communication; Language, Philosophy, and Culture; Creative Arts; American History; Government/Political Science; and (option) Oral Communication. |
| <i>Criterion:</i> AY 2015-2016 will be used to identify baseline results for future benchmarking expectations. Data will be presented in an aggregated format by Component Area, allowing for multiple scores to be presented with aspirational scores identified for future benchmarks. |
| <i>Results:</i> Ten courses contributed to course level assessment. The Foundational Component Areas included: American History; Creative Arts; Government/Political Science; Language, Philosophy, and Culture; Life and Physical Sciences; and Social and Behavioral Sciences. A total of 2,351 students participated. The average student rating was 3.37 with the high rating from Government/Political Science of 3.83 and the low rating from Social and Behavioral Sciences of 2.45. To view all scores, open the attached document. |
| Personal Responsibility, FY 2015.xlsx |

Narrative/Interpretation: Core curriculum data was requested from 199 courses at Texas Tech University from fall semester 2015 and spring semester 2016. A four-point rubric (with four being high), developed by the TTU Core Curriculum Committee, was used to score student achievement (except as noted below*). Data was returned by 175 courses and is represented in the tables above. Of the 38,476 students that were assessed, 37% achieved a rating of 4, 30% achieved a rating of 3, 18% achieved a rating of 2, and 15% achieved a rating of 1. The overall rubric score was 2.89.

*Communication did not report any information at all.

*P*ortfolio Assessment Rubrics

i Portfolio Assessment Instrument--Critical Thinking Skills

| | | | | |
|--|--|---|---|--|
| Explanation of Issues | <p>1.0 Inadequate Demonstration Issue/problem is stated without clarification or description, OR the issue is not stated coherently.</p> | <p>2.0 Basic Demonstration Issue/problem is stated but description leaves some terms undefined, ambiguities unexplored, boundaries undetermined, and/or backgrounds unknown.</p> | <p>3.0 Adequate Demonstration Issue/problem is stated, described, and clarified so that understanding is not seriously impeded by omissions.</p> | <p>4.0 Comprehensive Demonstration Issue/problem is stated clearly and described comprehensively, delivering all relevant information necessary for full understanding.</p> |
| Evidence | <p>1.0 Inadequate Demonstration Information is taken from source(s) without any interpretation/evaluation or citation. Viewpoints of experts are taken as fact, without question.</p> | <p>2.0 Basic Demonstration Information is taken from source(s) with some interpretation/evaluation, but not enough to develop a coherent analysis or synthesis. Viewpoints of experts are taken as mostly fact, with little questioning.</p> | <p>3.0 Adequate Demonstration Information is taken from source(s) with enough interpretation/evaluation to develop a coherent analysis or synthesis. Viewpoints of experts are subject to questioning.</p> | <p>4.0 Comprehensive Demonstration Information is taken from source(s) with enough interpretation/evaluation to develop a comprehensive analysis or synthesis. Viewpoints of experts are questioned thoroughly.</p> |
| Student's Position (perspective, thesis/hypothesis) | <p>1.0 Inadequate Demonstration Specific position is stated, but is simplistic and obvious.</p> | <p>2.0 Basic Demonstration Specific position acknowledges different sides of an issue.</p> | <p>3.0 Adequate Demonstration Specific position takes into account the complexities of an issue. Others' points of view are acknowledged within position.</p> | <p>4.0 Comprehensive Demonstration Specific position is imaginative, taking into account the complexities of an issue. Limits of position are acknowledged. Others' points of view are synthesized within position.</p> |
| Conclusions and related outcomes (implications and consequences) | <p>1.0 Inadequate Demonstration Conclusion is inconsistently tied to some of the information discussed; related outcomes are oversimplified.</p> | <p>2.0 Basic Demonstration Conclusion is logically tied to information (because information is chosen to fit the desired conclusion); some related outcomes are identified clearly.</p> | <p>3.0 Adequate Demonstration Conclusion is logically tied to a range of information, including opposing viewpoints; related outcomes are identified clearly.</p> | <p>4.0 Comprehensive Demonstration Conclusions and related outcomes are logical and reflect student's informed evaluation and ability to place evidence and perspectives discussed in priority order.</p> |

i Portfolio Assessment Instrument--Communication Skills

| | |
|---------------------|--|
| Context and Purpose | <p>1.0 Unacceptable Demonstrates minimal attention to context, audience, purpose, and to the assigned task(s) (e.g., expectation of instructor or self as audience).</p> <p>2.0 Acceptable Demonstrates awareness of context, audience, purpose, and to the assigned task(s) (e.g., begins to show awareness of audience's perceptions and assumptions).</p> <p>3.0 Very Good Demonstrates adequate consideration of context, audience, and purpose and a clear focus on the assigned task(s) (e.g., the task aligns with audience, purpose, and context).</p> <p>4.0 Excellent Demonstrates a thorough understanding of context, audience, and purpose that is responsive to the assigned task(s) and focuses all elements of the work.</p> |
| Organization | <p>1.0 Unacceptable Organizational pattern is not observable within the work.</p> <p>2.0 Acceptable Organizational pattern is intermittently observable within the work.</p> <p>3.0 Very Good Organizational pattern is consistently observable within the work.</p> <p>4.0 Excellent Organizational pattern in consistently observable, is skillful, and makes the content of the work cohesive.</p> |
| Content Development | <p>1.0 Unacceptable Content is inappropriate and/or undeveloped.</p> <p>2.0 Acceptable Uses appropriate content to illustrate a superficial understanding of the subject.</p> <p>3.0 Very Good Uses appropriate and compelling content to illustrate a solid understanding of the subject.</p> <p>4.0 Excellent Uses appropriate and compelling content to illustrate a comprehensive understanding of the subject.</p> |
| Command of Delivery | <p>1.0 Unacceptable Delivery techniques are inappropriate for the genre of work and detract from the understandability of the work.</p> <p>2.0 Acceptable Delivery techniques are appropriate for the genre of work and the work is understandable.</p> <p>3.0 Very Good Delivery techniques are appropriate for the genre of work and the work is interesting.</p> <p>4.0 Excellent Delivery techniques are outstanding for the genre of work and make the work engaging and compelling.</p> |

i Portfolio Assessment Instrument--Empirical and Quantitative Skills

| | | | |
|----------------|--|--|--|
| Interpretation | <p>1.0 Inadequate Demonstration Attempts to explain information presented in mathematical forms, but draws incorrect or illogical conclusions about what the information means. For example, attempts to explain the trend data shown in a graph, but misinterprets the nature of that trend, perhaps by confusing positive and negative trends.</p> <p>2.0 Basic Demonstration Provides somewhat accurate explanations of information presented in mathematical forms, but occasionally makes minor errors related to computations or units. For instance, accurately explains trend data shown in a graph, but may miscalculate the slope of the trend line.</p> | <p>3.0 Adequate Demonstration Provides accurate explanations of information presented in mathematical forms. For instance, accurately explains the trend data shown in a graph.</p> | <p>4.0 Comprehensive Demonstration Accurately explains and draws conclusions from information presented in mathematical forms. For example, accurately explains the trend data shown in a graph and makes reasonable predictions regarding what the data suggest about future events.</p> |
| Representation | <p>1.0 Inadequate Demonstration Completes conversion of information but resulting visual mathematical portrayal is illogical or inaccurate.</p> <p>2.0 Basic Demonstration Completes conversion of information but resulting visual mathematical portrayal is only partially appropriate or accurate.</p> | <p>3.0 Adequate Demonstration Converts relevant information into an appropriate and desired visual mathematical portrayal.</p> | <p>4.0 Comprehensive Demonstration Converts relevant information into an insightful visual mathematical portrayal in a way that contributes to a further or deeper understanding.</p> |
| Calculation | <p>1.0 Inadequate Demonstration Calculations are attempted but are both unsuccessful and illogical.</p> <p>2.0 Basic Demonstration Calculations attempted are logical, but represent only a portion of the calculations required to comprehensively solve the problem.</p> | <p>3.0 Adequate Demonstration Calculations are mostly successful and sufficiently comprehensive to solve the problem.</p> | <p>4.0 Comprehensive Demonstration Calculations attempted are all successful and sufficiently comprehensive to solve the problem. Calculations are well organized.</p> |
| Use of Data | <p>1.0 Inadequate Demonstration Uses quantitative analysis of data as the basis for inaccurate or illogical judgements.</p> <p>2.0 Basic Demonstration Uses the quantitative analysis of data as the basis for logical but incomplete judgements, drawing plausible conclusions.</p> | <p>3.0 Adequate Demonstration Uses the quantitative analysis of data as the basis for competent judgments, drawing reasonable and appropriately qualified conclusions from this work.</p> | <p>4.0 Comprehensive Demonstration Ability to make judgements and draw appropriate conclusions based on the quantitative analysis of data, while recognizing the limits of this analysis.</p> |

f Portfolio Assessment Instrument--Teamwork Skills

| | | | | |
|-----------------------------------|---|---|---|---|
| Contributes to Team Meetings | 1.0 Inadequate Demonstration Shares ideas but does not advance the work of the group. | 2.0 Basic Demonstration Offers new suggestions to advance the work of the group. | 3.0 Adequate Demonstration Offers alternative solutions or courses of action that build on the ideas of others. | 4.0 Comprehensive Demonstration Helps the team move forward by articulating the merits of alternative ideas or proposals. |
| | Individual Contributions Outside of Team Meetings | 1.0 Inadequate Demonstration Work accomplished does not advance the project. Does not complete all assigned tasks by deadline. | 2.0 Basic Demonstration Work accomplished may advance the project. Completes all assigned tasks by deadline. | 3.0 Adequate Demonstration Work accomplished advances the project. Completes all assigned tasks by deadline. |
| Fosters Constructive Team Climate | 1.0 Inadequate Demonstration Does not model behaviors (encouragement, positive attitude, respect, enthusiasm) that foster a constructive team climate. | 2.0 Basic Demonstration Occasionally models behaviors (encouragement, positive attitude, respect, enthusiasm) that foster a constructive team climate. | 3.0 Adequate Demonstration Generally models behaviors (encouragement, positive attitude, respect, enthusiasm) that foster a constructive team climate. | 4.0 Comprehensive Demonstration Consistently models behaviors (encouragement, positive attitude, respect, enthusiasm) that foster a constructive team climate. |
| | Responds to Conflict | 1.0 Inadequate Demonstration Passively accepts alternate viewpoints/ideas/opinions. | 2.0 Basic Demonstration Redirecting focus toward common ground, toward task at hand (away from conflict). | 3.0 Adequate Demonstration Identifies and acknowledges conflict and stays engaged with it. |
| | | | | 4.0 Comprehensive Demonstration Addresses destructive conflict directly and constructively, helping to manage/resolve it in a way that strengthens overall team cohesiveness and future effectiveness. |

i Portfolio Assessment Instrument--Social Responsibility

| | | | | |
|---------------------------------------|---|--|--|---|
| Cultural Self-Awareness | <p>1.0 Inadequate Demonstration Does not show understanding of one's own or other cultures.</p> | <p>2.0 Basic Demonstration Identifies own cultural rules and biases.</p> | <p>3.0 Adequate Demonstration Can compare and contrast one's own culture with other cultures.</p> | <p>4.0 Comprehensive Demonstration Articulates insights into own culture and articulates awareness of how he/she recognizes and responds to cultural biases resulting in a shift in self-description.</p> |
| Verbal and Nonverbal Communication | <p>1.0 Inadequate Demonstration Does not view the experience of others.</p> | <p>2.0 Basic Demonstration Identifies components of other cultural perspectives but responds in all situations with own worldview.</p> | <p>3.0 Adequate Demonstration Recognizes intellectual and emotional dimensions of more than one worldview and sometimes uses more than one worldview in interactions.</p> | <p>4.0 Comprehensive Demonstration Interprets intercultural experiences from the perspective of own and more than one worldview and demonstrates ability to act in a supportive manner that recognizes the feelings of another cultural group.</p> |
| Analysis of Knowledge | <p>1.0 Inadequate Demonstration Is not able to identify knowledge from one's own academic study/field/discipline that is relevant to civic engagement.</p> | <p>2.0 Basic Demonstration Can identify some knowledge from one's own academic study/field/discipline that is relevant to civic engagement.</p> | <p>3.0 Adequate Demonstration Analyzes knowledge from one's own academic study/field/discipline making relevant connections to civic engagement.</p> | <p>4.0 Comprehensive Demonstration Connects knowledge from one's own academic study/field/discipline to civic engagement, and is involved in community.</p> |
| Diversity of Communities and Cultures | <p>1.0 Inadequate Demonstration Is indifferent or resistant to what can be learned from other cultures.</p> | <p>2.0 Basic Demonstration Has limited awareness that own attitudes and beliefs are different from those of other cultures and communities. Exhibits little curiosity about other cultures.</p> | <p>3.0 Adequate Demonstration Reflects on how own attitudes and beliefs are different from those of other cultures and communities. Exhibits curiosity about what can be learned from other cultures.</p> | <p>4.0 Comprehensive Demonstration Demonstrates evidence of adjustment in own attitudes and beliefs because of working within and/or learning from other cultures. Promotes others' engagement with diversity.</p> |

i Portfolio Assessment Instrument--Personal Responsibility

| | |
|---|---|
| Ethical Self-Awareness | <p>1.0 Inadequate Demonstration Student states either her/his core beliefs or articulates the origins of the core beliefs but not both.</p> <p>2.0 Basic Demonstration Student states core beliefs and their origins.</p> <p>3.0 Adequate Demonstration Student discusses/analyzes in detail core beliefs and their origins.</p> <p>4.0 Comprehensive Demonstration Student discusses/analyzes in detail and with depth and clarity core beliefs and their origins.</p> |
| Ethical Issue Recognition | <p>1.0 Inadequate Demonstration Student recognizes basic and obvious ethical issues but fails to grasp complexity or interrelationships.</p> <p>2.0 Basic Demonstration Student recognizes basic and obvious ethical issues and recognizes (incompletely) the interrelationships among the issues.</p> <p>3.0 Adequate Demonstration Student recognizes ethical issues when issues are presented in a complex, multilayered context OR recognizes cross-relationships among the issues.</p> <p>4.0 Comprehensive Demonstration Student recognizes ethical issues when presented in a complex, multilayered context AND recognizes cross-relationships among the issues.</p> |
| Application of Ethical Perspectives/Concepts | <p>1.0 Inadequate Demonstration Student applies ethical perspectives/concepts to an ethical question with support (using examples, in a class, in a group, or a fixed-choice setting) but is unable to apply ethical perspectives/concepts independently.</p> <p>2.0 Basic Demonstration Student independently applies ethical perspectives/concepts to an ethical question but the application is inaccurate.</p> <p>3.0 Adequate Demonstration Student independently applies ethical perspectives/concepts to an ethical question but does not consider the specific implications of the application.</p> <p>4.0 Comprehensive Demonstration Student independently applies ethical perspectives/concepts to an ethical question and comprehensively considers full implication of the application.</p> |
| Evaluation of Different Ethical Perspectives/Concepts | <p>1.0 Inadequate Demonstration Student states a position but cannot state the objections to and assumptions and limitations of the different perspectives/concepts.</p> <p>2.0 Basic Demonstration Student states a position and can state the objections to, assumptions and implications of different ethical perspectives/concepts but does not respond to them.</p> <p>3.0 Adequate Demonstration Student states a position and can state the objections to, assumptions and implications of, and responds to the objections to, assumptions and implications of different ethical perspectives/concepts but the student's response is inadequate.</p> <p>4.0 Comprehensive Demonstration Student states a position and can reasonably defend against the objections to, assumptions and implications of different ethical perspectives/concepts, and the student's defense is adequate and effective.</p> |

Collegiate Assessment of Academic Proficiency

Office of Planning & Assessment™

Collegiate Assessment of Academic Proficiency

SPRING 2016 MATHEMATICS TEST

EXECUTIVE SUMMARY

The present report contains results from the Collegiate Assessment of Academic Proficiency (CAAP) Mathematics Test form 11-G. Scores were obtained from a representative sample of 185 students (freshman = 65; senior = 120). Analysis of the results indicates that on average, students scored at the level of their respective normative group. Therefore, the established benchmark of performing *at or above* the normative group was attained for all classifications.

BACKGROUND

The Collegiate Assessment of Academic Proficiency is the standardized, nationally normed assessment program from American College Testing (ACT) that enables postsecondary institutions to assess, evaluate, and enhance student learning outcomes and general education program outcomes.

CAAP can be used to:

- Satisfy accreditation and accountability reporting requirements
- Measure students' achievement levels on a group and individual basis
- Compare students' achievement levels with national user norms
- Evaluate the strengths and weaknesses of general education programs
- Document the performance gain of students' achievement levels over time

DESCRIPTION

The CAAP Mathematics Test is a 35-question exam designed to measure a student's aptitude in mathematical reasoning. The content areas examined include: pre-algebra, elementary algebra, intermediate algebra, coordinate geometry, college algebra, and trigonometry. The Mathematics Test aims to place a greater emphasis on quantitative reasoning rather than the memorization of formulas. The CAAP Mathematics Test is administered during the spring semester to a representative sample of students and measures students' core curriculum competency in mathematics.

BENCHMARK

The CAAP is administered to a national sample of students and scored to establish a benchmark measure. The benchmark serves as a point of reference to which institutional scores can be compared. Benchmark measures for the CAAP Mathematics module have been established as being *at or above the national average* for the classification being tested. Table 1 shows whether benchmarks were met for each classification tested.

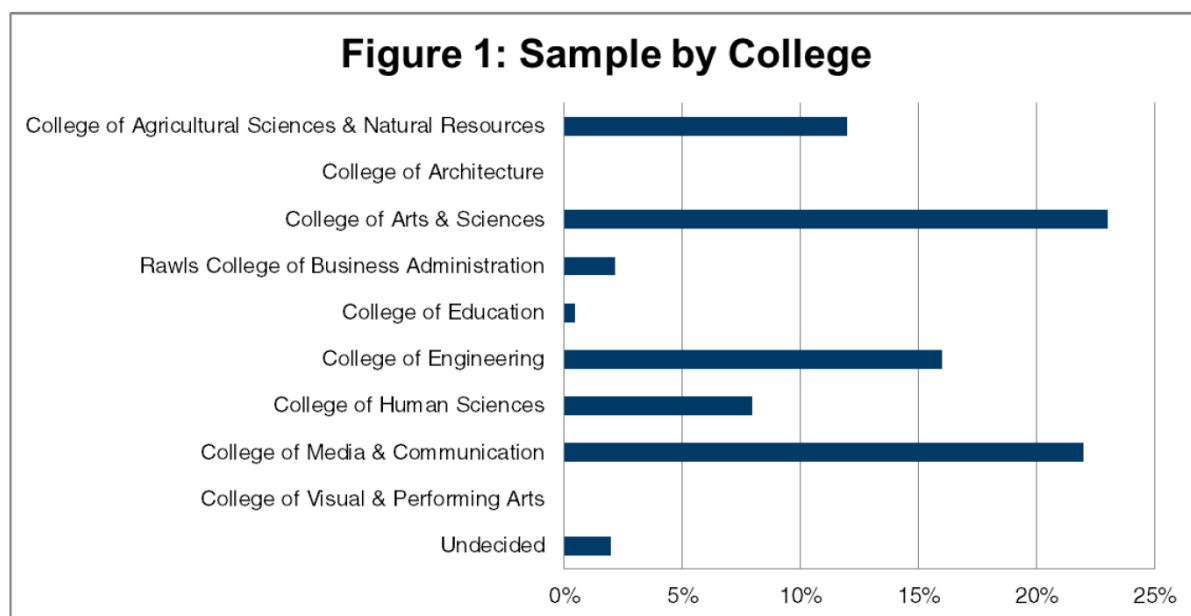

Table 1

| Benchmark | | |
|-----------|--|-----|
| Freshman | At or above CAAP national average for Freshmen | Yes |
| Senior | At or above CAAP national average for Seniors | Yes |

ASSESSMENT STRATEGY

The test was administered to a random stratified sample of freshmen and seniors at Texas Tech University (TTU). A breakdown of students by college is provided in Figure 1. Courses were chosen based on enrollment by student classification and size. Freshman courses were chosen from the core curriculum, whereas senior courses were chosen based on capstone status. The sample included courses from the following colleges: College of Agricultural Sciences and Natural Resources, College of Arts and Sciences, College of Engineering, Honors College, College of Human Sciences and College of Media & Communications. The test was administered during regularly scheduled class time for the courses that were selected. A total of 315 students participated in the CAAP Mathematics Test from nine undergraduate classes, of which 185 tests were valid for scoring by ACT.

RESULTS

Table 2 provides a summary of CAAP scores by student classification. Scores for each sample were averaged to arrive at a mean score by classification. Each classification tested did not score significantly different from the national mean, resulting in the conclusion that TTU students met the benchmark of *at or above the national mean* for the Mathematics module.

Table 2

| Summary of CAAP Scores by Student Classification | | | | | |
|--|----------|-------------|-----|---------------|-----|
| | <i>n</i> | Sample Mean | SD | National Mean | SD |
| Freshman | 65 | 60.1 | 3.8 | 58.7 | 4.3 |
| Senior | 120 | 56.8 | 3.2 | 58.7 | 4.3 |

PERFORMANCE BY QUARTILES

Student performance on the CAAP Mathematics test was also classified by quartiles for freshman and senior students. The first and lowest quartile encompassed national percentile scores of 1-25, the second quartile scored 26-50, the third quartile scored 51-75, and the fourth quartile scored 76-100. Of particular relevance are the students whose scores fall in the lowest quartile (Q1) relative to the national percentile. Of the total number of students tested, 24% fell within the lowest quartile for the assessment. Only 13% of senior students and 26% of the overall sample scored within the highest quartile (Q4). Freshman students had the highest percentage of students who scored in the fourth quartile with 49%. In spite of these results, on a supplemental self-reported performance question, 35.6% of students rated themselves as "Tried My Best" and 41.6% of students rated themselves as "Gave Moderate Effort." Below, Table 3 depicts the percentage of students in each quartile by classification level:

Table 3

| Freshmen | |
|----------------|-----|
| Q ₁ | 11% |
| Q ₂ | 20% |
| Q ₃ | 20% |
| Q ₄ | 49% |

| Seniors | |
|----------------|-----|
| Q ₁ | 32% |
| Q ₂ | 38% |
| Q ₃ | 17% |
| Q ₄ | 13% |

| Institutional | |
|----------------|-----|
| Q ₁ | 24% |
| Q ₂ | 32% |
| Q ₃ | 18% |
| Q ₄ | 26% |

CONCLUSION

The overall findings from the analysis indicate that Texas Tech University students are performing at the national average in the core curricular subject of mathematics. However, nearly a quarter of the students assessed performed in the lowest quartile relative to the national percentile whereas only a slightly higher percentage performed in the highest quartile. It is recommended that the core curriculum committee, in conjunction with faculty and pertinent administrators, consider these results in order to enhance the educational experience and continue improving student learning at Texas Tech University.

Collegiate Assessment of Academic Proficiency

SPRING 2016 WRITING SKILLS TEST

EXECUTIVE SUMMARY

The present report contains results from the Collegiate Assessment of Academic Proficiency (CAAP) Writing Skills Test form 11-A. Scores were obtained from a representative sample of 630 students (freshman = 196; sophomore = 124; junior = 119; senior = 191). Analysis of the results indicates that on average, students scored at the level of their respective normative group. Therefore, the established benchmark of performing *at or above* the normative group was attained for all classifications.

BACKGROUND

The Collegiate Assessment of Academic Proficiency is the standardized, nationally normed assessment program from American College Testing (ACT) that enables postsecondary institutions to assess, evaluate, and enhance student learning outcomes and general education program outcomes.

CAAP can be used to:

- Satisfy accreditation and accountability reporting requirements
- Measure students' achievement levels on a group and individual basis
- Compare students' achievement levels with national user norms
- Evaluate the strengths and weaknesses of general education programs
- Document the performance gain of students' achievement levels over time

DESCRIPTION

The CAAP Writing Skills module assesses students' knowledge and skills in written English. This module contains 72 items that measure the students' understanding of content in punctuation, grammar, sentence structure, and rhetorical skills. The test is composed of six prose passages that are accompanied by a set of 12 multiple-choice questions. The CAAP Writing Skills Test is administered during the spring semester to a representative sample of students and measures students' core curriculum competency in written English.

BENCHMARK

The CAAP is administered to a national sample of students and scored to establish a benchmark measure. The benchmark serves as a point of reference to which institutional scores can be compared. Benchmark measures for the CAAP Writing Skills module have been established as being *at or above the national average* for the classification being tested. Table 1 shows whether benchmarks were met for each classification tested.

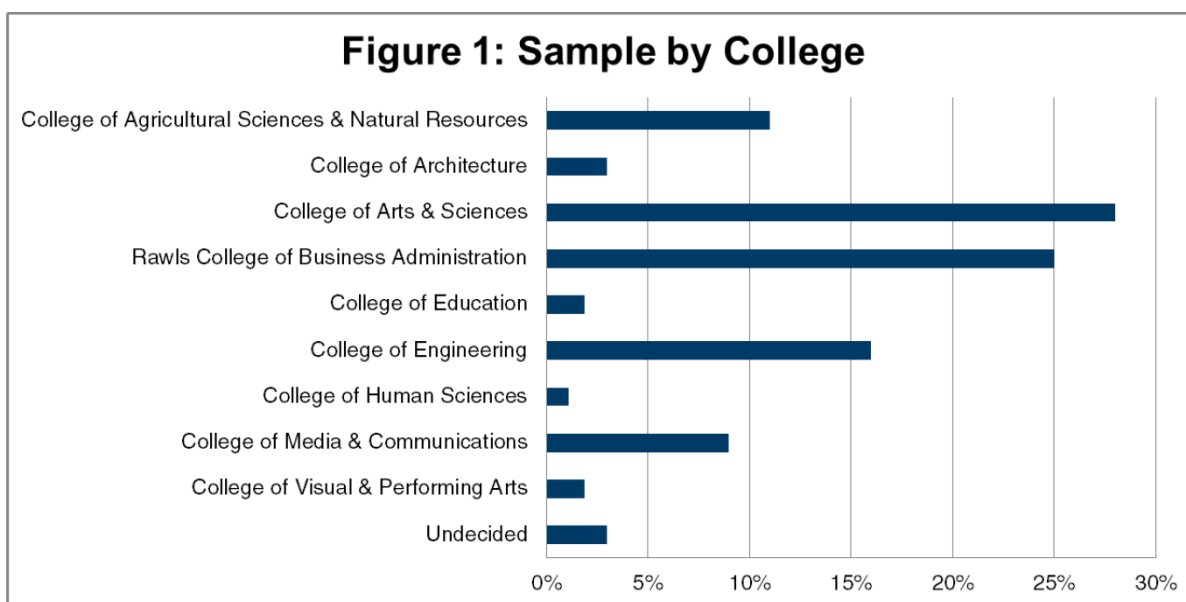

Table 1

| Benchmark | | |
|-----------|--|-----|
| Freshman | At or above CAAP national average for Freshmen | Yes |
| Sophomore | At or above CAAP national average for Sophomores | Yes |
| Junior | At or above CAAP national average for Juniors | Yes |
| Senior | At or above CAAP national average for Seniors | Yes |

ASSESSMENT STRATEGY

The test was administered to a random stratified sample of freshmen, sophomores, juniors, and seniors at Texas Tech University (TTU). A breakdown of students by college is provided in Figure 1. Courses were chosen based on enrollment by student classification and size. Freshman courses were chosen from the core curriculum, whereas senior courses were chosen based on capstone status. The sample included courses from the following colleges: College of Agricultural Sciences and Natural Resources, College of Arts and Sciences, College of Engineering, and College of Media & Communications. The test was administered during regularly scheduled class time for the courses that were selected. A total of 646 students participated in the CAAP Writing Skills Test from eight undergraduate classes, of which 630 tests were valid for scoring by ACT.

RESULTS

Table 2 provides a summary of CAAP scores by student classification. Scores for each sample were averaged to arrive at a mean score by classification. Each classification tested did not score significantly different from the national mean, resulting in the conclusion that TTU students met the benchmark of *at or above the national mean* for the Writing Skills module.

Table 2

| Summary of CAAP Scores by Student Classification | | | | | |
|--|----------|-------------|-----|---------------|-----|
| | <i>n</i> | Sample Mean | SD | National Mean | SD |
| Freshman | 196 | 62.3 | 4.1 | 62.7 | 5.2 |
| Sophomore | 124 | 62.7 | 4.6 | 62.7 | 5.2 |
| Junior | 119 | 62.3 | 4.7 | 62.7 | 5.2 |
| Senior | 191 | 63.2 | 5.0 | 62.7 | 5.2 |

PERFORMANCE BY QUARTILES

Student performance on the CAAP Writing Skills test was also classified by quartiles for freshman, sophomore, junior, and senior students. The first and lowest quartile encompassed national percentile scores of 1-25, the second quartile scored 26-50, the third quartile scored 51-75, and the fourth quartile scored 76-100. Of particular relevance are the students whose scores fall in the lowest quartile (Q1) relative to the national percentile. Of the total number of students tested, 21% fell within the lowest quartile for the assessment. Only 16% of freshman students and 24% of the overall sample scored within the highest quartile (Q4). Senior students had the highest percentage of students who scored in the fourth quartile with 33%. In spite of these results, on a supplemental self-reported performance question, 42.2% of students rated themselves as "Tried My Best" and 45.1% of students rated themselves as "Gave Moderate Effort." Below, Table 3 depicts the percentage of students in each quartile by classification level:

Table 3

| Freshmen | |
|----------------|-----|
| Q ₁ | 19% |
| Q ₂ | 27% |
| Q ₃ | 38% |
| Q ₄ | 16% |

| Sophomores | |
|----------------|-----|
| Q ₁ | 20% |
| Q ₂ | 25% |
| Q ₃ | 31% |
| Q ₄ | 24% |

| Juniors | |
|----------------|-----|
| Q ₁ | 25% |
| Q ₂ | 22% |
| Q ₃ | 30% |
| Q ₄ | 23% |

| Seniors | |
|----------------|-----|
| Q ₁ | 21% |
| Q ₂ | 21% |
| Q ₃ | 25% |
| Q ₄ | 33% |

| Institutional | |
|----------------|-----|
| Q ₁ | 21% |
| Q ₂ | 24% |
| Q ₃ | 31% |
| Q ₄ | 24% |

CONCLUSION

The overall findings from the analysis indicate that Texas Tech University students are performing at the national average in the core curricular subject of writing. However, nearly a quarter of the students assessed performed in the lowest quartile relative to the national percentile whereas only a slightly higher percentage performed in the highest quartile. It is recommended that the core curriculum committee, in conjunction with faculty and pertinent administrators, consider these results in order to enhance the educational experience and continue improving student learning at Texas Tech University.

National Survey of Student Engagement
(NSSE)

NSSE 2015

Frequencies and Statistical Comparisons

Texas Tech University

[Texas Tech created this abbreviated report.]

Please note: The layout of this file is optimized for printing and PDF creation, not on-screen viewing. When the Excel version is viewed on screen, some cells appear to contain truncated text or misplaced line breaks. This is due to differences in Excel between on-screen display and what appears in print or PDF.

The *Frequencies and Statistical Comparisons* report presents item-by-item student responses and statistical comparisons that allow you to examine patterns of similarity and difference between your students and those at your comparison group institutions. The report uses information from all randomly selected or census-administered students. The display below highlights important details in the report to keep in mind when interpreting your results. For more information please visit our website (nsse.indiana.edu) or contact a member of the NSSE team.

- Class level:** As reported by your institution.
- Item numbers:** Numbering corresponds to the survey fascimile included in your *Institutional Report* and available on the NSSE website.
- Item wording and variable names:** Survey items are in the same order and wording as they appear on the instrument. Variable names are included for easy reference to your data file and codebook.
- Values and response options:** Values are used to calculate means. Response options are worded as they appear on the instrument.
- Count and column percentage (%):** The Count column contains the number of students who selected the corresponding response option. The column percentage is the weighted percentage of students selecting the corresponding response option.

Note: Column percentages and statistics are weighted by institution-reported sex and enrollment status. Comparison group statistics are also weighted by institutional size. Counts are unweighted and cannot be used to replicate column percentages. For details visit: nsse.indiana.edu/html/weighting.cfm

Statistical comparisons: Items with mean differences that are larger than would be expected by chance are noted with asterisks referring to three significance levels (** $p < .05$, *** $p < .01$, **** $p < .001$). Significance levels indicate the probability that an observed difference is due to chance. Statistical significance does not guarantee the result is substantive or important. Large sample sizes tend to generate more statistically significant results even though the magnitude of mean differences may be inconsequential. Consult effect sizes (see #7) to judge the practical meaning of differences. Unless otherwise noted, statistical comparisons are two-tailed independent t -tests. Exceptions are items 11 a-f which are compared using a z -test.

| | 615 | 100 | 15,858 | 100 | 2,833 | 100 | 228,452 | | | | | | | |

7. **Effect size:** Effect size indicates practical significance. An effect size of .2 is often considered small, .5 moderate, and .8 large. A positive effect size indicates that your institution's mean was greater than that of the comparison group, thus showing a favorable result for your institution. A negative effect size indicates your institution lags behind the comparison group, suggesting that the student behavior or institutional practice represented by the item may warrant attention. Effect sizes for independent t -tests use Cohen's d . z -tests use Cohen's h . Cohen's d is calculated by dividing the mean difference by the pooled standard deviation. Cohen's h is calculated by taking the difference in the proportion of students who responded "Done or in progress" after the proportion has been transformed using a non-linear (arcsine) transformation. See: Cohen, J. (1988). *Statistical power analysis for the behavioral sciences* (2nd edition). New York: Psychology Press.

8. **Key to symbols:**

- ▲ Your students' average was significantly higher ($p < .05$) with an effect size at least .3 in magnitude.
- △ Your students' average was significantly higher ($p < .05$) with an effect size less than .3 in magnitude.
- ▽ Your students' average was significantly lower ($p < .05$) with an effect size less than .3 in magnitude.
- ▼ Your students' average was significantly lower ($p < .05$) with an effect size at least .3 in magnitude.

Note: It is important to interpret the direction of differences relative to item wording and your institutional context.

Online Senior Assessment (OSA)

TEXAS TECH UNIVERSITY

Office of the Provost

Office of Planning & Assessment™

Online Senior Assessment

Spring 2016 Report

Introduction

The Online Senior Assessment (OSA) was designed in 2008 to assess general education knowledge and abilities. In fall 2014, Texas Tech University (TTU) revised their core curriculum in compliance with the new Texas mandated core curriculum. It is important to note that this OSA administration does not reflect the current TTU core curriculum and was meant to gather final data on students who were exposed to the previous core curriculum.

The OSA consists of a total 32 knowledge-based questions from the following core curriculum areas: Humanities, Multicultural, Mathematics, Natural Sciences, and Social and Behavioral Sciences.

The instrument has one section for each of the following core areas:

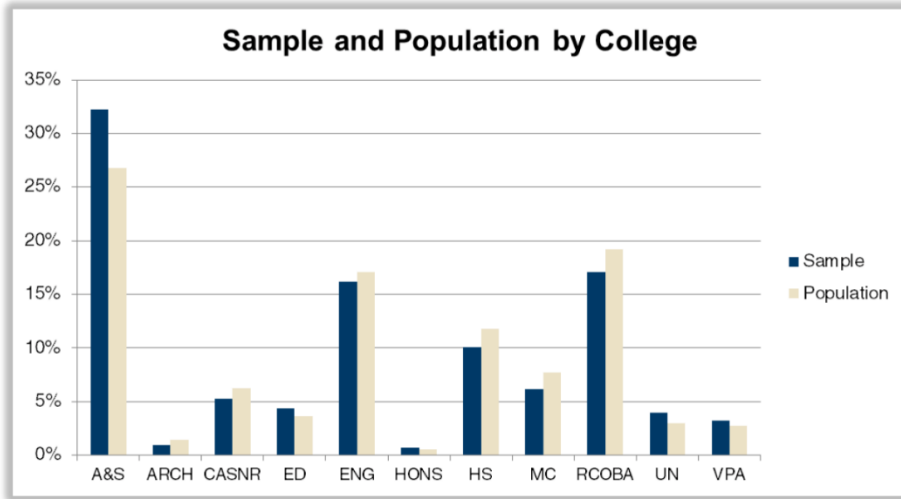

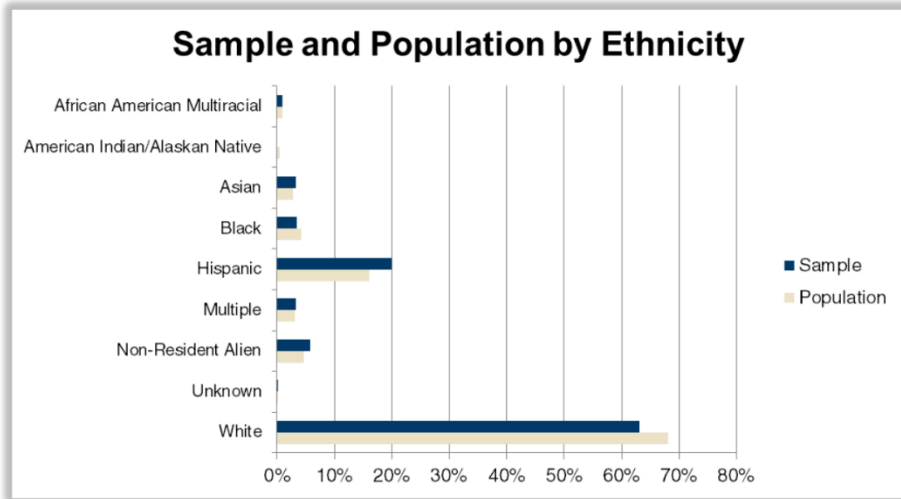

- Humanities: 4 knowledge questions
- Multicultural: 7 knowledge questions
- Mathematics: 5 knowledge questions
- Natural Sciences: 6 knowledge questions
- Social and Behavioral Sciences: 10 knowledge questions

Instrumentation

The OSA was administered for the fifth time in the Spring 2016 semester between March 21st and April 25th through use of the Qualtrics online survey program. The survey invitation was sent to all TTU senior students with 90 or more credit hours, approximately 2,928 students or 31.5% of the senior population. Of the targeted population, we received an 18.89% response rate, a total sample of 553 students. As an incentive for participating in the survey, two of the participants were randomly selected to win a \$500 scholarship toward tuition and fees.

The sample consisted of 61.6% female students and 38.4% male students. This represents more female students and fewer male students than what would be expected from the population, but the sample was representative in terms of college and ethnicity. The following tables break the participants down by gender, ethnicity, and college.

Before starting each core area section, participants were asked where they completed their core requirement for that specific area. Credits could be received from dual credit courses, advanced placement, CLEP exam, another institution, or TTU. The following table summarizes the responses.

Results

Of the 70 questions the OSA contained, only the 32 questions from Humanities, Multicultural, Mathematics, Natural Sciences, and Social and Behavioral Sciences where one correct answer exists (i.e. knowledge questions) were included in this analysis. The self-assessment questions were excluded since there is no right or wrong answer. Of the 32 knowledge questions, one question was excluded from data analysis due to an error in the administration which caused incorrect answer choices to be linked to the question. As a result, only 31 questions are included in the analysis. The average overall score on the OSA was 61.3%. The low score was 12.9% and the high score was 100%.

The following chart summarizes the overall performance of students (i.e., the percentage of correct answers) with a standard deviation of 16.58.

One of the main questions the OSA can help answer is if students who took their core requirement courses at institutions other than Texas Tech perform similar to students who took their core requirement courses at Texas Tech. In this analysis, we compare students who took their core requirement courses at Texas Tech, referred to as the “TTU” group, to students who transferred in credits for core requirements from elsewhere, referred to as the “ELSE” group. Since it is possible for the same student to receive credit for one core area at Texas Tech (e.g. Multicultural) and credit for another core area somewhere else (e.g. Humanities), we created a third category, referred to as “Mixed”, to address this. Overall, 11.07% of students stated that they took all of their courses at Texas Tech.

The following chart shows that students who took their core courses at Texas Tech had more scores between 50% and 80% on the assessment and students who took courses both at Texas Tech and somewhere else had more scores between 80% and 100%. Students who took all of their core courses somewhere else had the most scores below 40%. Additionally, the average score for the TTU group was 63.42%, whereas the Mixed group scored an average of 62.94% and the ELSE group scored an average of 60.27%.

The chart below compares the average scores of each core curriculum area for the three groups. The lowest performing core area was Social & Behavioral Sciences, with an average score of 49.54%, and the highest performing core area was Humanities, with an average score of 72.59%.

Conclusion

Comparing overall average scores for students who completed their core courses at TTU (TTU group) and scores for students who completed their core courses somewhere else (ELSE group) show that on average the TTU group scored slightly higher than the ELSE group (63.42% for TTU vs 60.27% for ELSE). In comparing the average scores for the separate core areas, the only area in which TTU scored significantly higher than the ELSE group was Multicultural (75.61% for TTU vs 70.07% for ELSE). The only core area in which the TTU and ELSE groups scored similarly was Natural Sciences (67.79% for TTU vs 67.72% for ELSE).
