MAMMALS OF OKLAHOMA RECORDS OF OCCURRENCE: A COMPANION TO *MAMMALS OF OKLAHOMA, SECOND EDITION*

LYNDA SAMANIE LOUCKS, MICHELLE L. HAYNIE, BRAD WATKINS, AND WILLIAM CAIRE

ABSTRACT

The first edition of *Mammals of Oklahoma*, published in 1989, contained a records of occurrence section with specific location data for 19,228 museum specimens. The second edition, currently in press, does not contain a records of occurrence section. Although 36,290 museum specimens were used to produce the distribution maps for the book, specific locality data were not included due to page limitations. The records of occurrence included here provide specific locality data for those specimens and are intended to act as a companion for *Mammals of Oklahoma, Second Edition*. Also provided is a brief overview of the distribution of species and museum records across the state.

Key words: county records, mammals, museum records, Oklahoma, voucher specimens

INTRODUCTION

The first edition of *Mammals of Oklahoma* (Caire et al. 1989) was published 35 years ago. Since 1989, the number of mammals known to occur in Oklahoma has increased from 106 to 117, including extirpated and introduced species (Caire et al. 2019). Additional species recognized as occurring in Oklahoma as well as distributional limits and prevalence of species has changed in the intervening years. A historical overview of mammalogy in Oklahoma and discussions of changes in distribution and prevalence for each species

is provided by Caire et al. (2024, *in press*) in *Mammals of Oklahoma, Second Edition*. General locations (counties) for each species are included in Caire et al. (2024, *in press*), although specific localities are not. Therefore, the records of occurrence provided here serve as a supplement to *Mammals of Oklahoma, Second Edition*, providing detailed collection information for each species and where verified voucher specimens are deposited in various museum collections.

METHODS

Mammalian taxonomy and common names follow Bradley et al. (2014) and Caire et al. (2019), as mirrored in *Mammals of Oklahoma, Second Edition* (Caire et al. 2024, *in press*). Although taxonomic revisions recently have been suggested for some species, and these are addressed in Caire et al. (2024, *in press*), we retain the naming convention used in the book for consistency. Prior to drafting the book, the authors examined thousands of specimens that were collected in Oklahoma and deposited in museums across North America (Table 1). Although data for many museum collections are available on VertNet (<http://vertnet.org/>) or other online resources (e.g., iDigBio portals),

small museum holdings such as those found at regional colleges and universities typically are not included in those databases. Additionally, some of the specimens listed in online resources are misidentified or missing from the collection. To ensure accurate identification of specimens, particularly those associated with county records, the authors attempted to verify all specimens included in the records of occurrence. Although most specimens examined were preserved skins, only skulls or skeletal material were available for review for some. Identification of specimens was verified by the authors in person or through loans, or in cases where the authors were unable to review specimens, records were

Table 1. Museums in the United States and Canada containing Oklahoma mammal specimens alphabetized by acronym. The museum name and acronym (as used in the records of occurrence) are provided. Museums denoted by an asterisk (*) were not physically visited by the coauthors but contain specimens with significant county records that were verified by other means. Acronyms used are based on those provided in Caire et al. (1989), Dunnun et al. (2018), Braun et al. (2020), or through verification with the institution (collection curators, collections managers, or institutional contacts).

confirmed by a mammalogist working at the museum or verified through other natural history publications (Caire et al. 1989; Braun et al. 2005; Braun et al. 2020). Because not all museums containing Oklahoma mammal specimens could be visited by the authors, only some county records in collections not personally visited were included in the records of occurrence. Additionally, many of the records included were part of the first edition of the *Mammals of Oklahoma* (Caire et al. 1989) and were reexamined and confirmed when possible. Several museum collections have become

obsolete since the first edition and some specimens were transferred to other collections. Only museum voucher specimens are included in the records of occurrence. Observational, literature, or camera trap records are not included here and are provided in *Mammals of Oklahoma, Second Edition* (Caire et al. 2024, *in press*) as significant sight records in the distributional maps. Museum voucher specimens were not included if they were added after we visited the museum or we could not confirm the identity of the specimen.

RESULTS AND DISCUSSION

Of the 50 museums in the United States and Canada that contain Oklahoma mammal specimens and were contacted by the authors, 33 were visited directly by the authors. Additionally, some Oklahoma specimens from the American Museum of Natural History were loaned to the Sam Noble Oklahoma Museum of Natural History, University of Oklahoma, and reviewed by the authors. The number of records between the first edition and second edition of *Mammals of Oklahoma* increased from 19,228 to 36,290.

The total number of specimen records per county is provided in Figure 1. The number of species with museum records, per county, is shown in Figure 2. The fewest number of species are reported from Coal, Okfuskee, and Love counties (15, 18, and 19 species, respectively) and the fewest number of specimen records are reported from Coal, Okfuskee, and Nowata counties (33, 42, and 45 records, respectively). The highest number of species are reported from Cimarron, Comanche, and Payne counties (65, 59, and 54 species, respectively) and the largest number of specimen records are reported from Cleveland, Cimarron, and Payne counties (2,640, 2,431, and 2,109 records, respectively). Differences in the number of specimen records across the state most likely indicate areas of biased sampling associated with urban settings and university locations (e.g., Oklahoma State University, Payne County; University of Oklahoma, Cleveland County; University of Central Oklahoma, Oklahoma County); wildlife management areas, state parks, field

stations, or other such facilities (e.g., Black Mesa State Park, Cimarron County; Wichita Mountains Wildlife Refuge, Comanche County); or a combination of these and other factors. Only one species, *Sigmodon hispidus*, has a voucher specimen from each of the 77 Oklahoma counties, although there are an additional 12 species (*Sylvilagus floridanus*, *Cryptotis parva*, *Scalopus aquaticus*, *Canis latrans*, *Lynx rufus*, *Mephitis mephitis*, *Procyon lotor*, *Odocoileus virginianus*, *Peromyscus leucopus*, *P. maniculatus*, *Mus musculus*, *Sciurus niger*) that are reported to have a statewide distribution and most likely occur in all counties. *Peromyscus leucopus* and *P. maniculatus* have voucher specimen records for 76 of 77 Oklahoma counties. Some mammals, such as *M. mephitis* and *O. virginianus*, have been recorded in all counties through camera trapping and other non-invasive techniques, as well as hunting records and roadkill documentation. Information on records not associated with museum voucher specimens (considered observational records) is included in species accounts and on distribution maps in Caire et al. (2024, *in press*).

Natural history data from collections is important for understanding biodiversity, geographical and ecological changes over time, and researching the impact of climate change on ecosystems. These data are important in understanding conservation needs and developing management strategies and plans for future conservation efforts.

RECORDS OF OCCURRENCE

The organization of species in the Records of Occurrence corresponds to the nomenclature used in *Mammals of Oklahoma, Second Edition*, following Wilson and Reeder (2005), Bradley et al. (2014), and Caire et al. (2019) for traditional taxonomic orders and families. A conservative approach was used in adopting name changes for various taxa as cladistics and phylogenetic arrangements are still being addressed.

Specific localities are arranged alphabetically by county and within a county alphabetically from a

point of reference (e.g., name of town), followed by distance from the reference point. All obvious errors in spelling of locality data on specimen tags were corrected as needed; otherwise, information presented is as it occurred on the tag to maintain the integrity of the original data. Although careful consideration was made in listing location information as included on the specimen tag, the authors recognize there may be inaccuracies and inconsistencies. The number of specimens verified from each collection are listed before the museum acronym which is provided in parentheses.

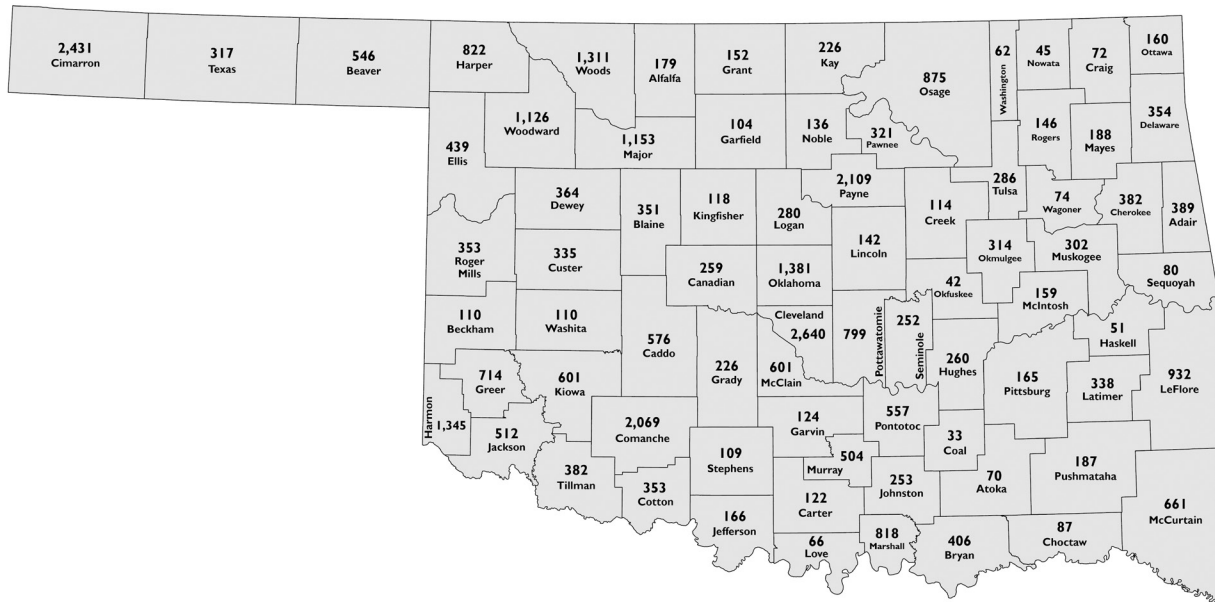

Figure 1. County map of Oklahoma showing the number of mammal voucher specimens included in the records of occurrence for each county. Not included are records for specimens with no known county association or specimens that were reported from county boundaries (e.g., Washita/Custer) in the records of occurrence.

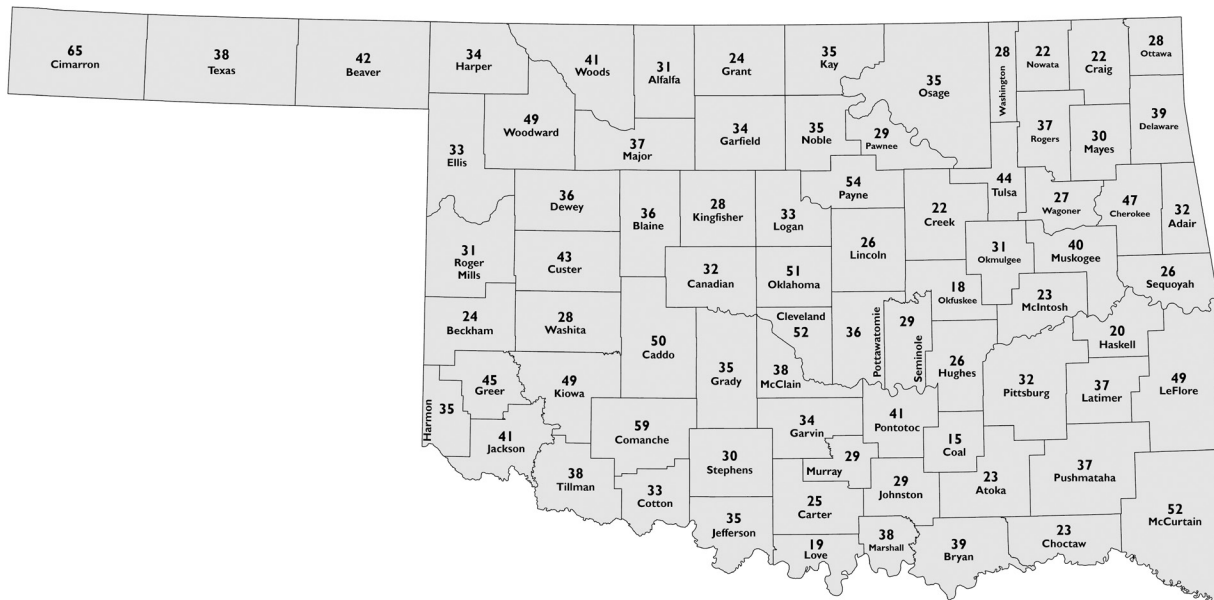

Figure 2. County map of Oklahoma showing the number of species for which mammal voucher specimens are available in museums for each county. Not included are records for *Blarina sp.* (those that were determined to be *Blarina* but could not be identified to species) and specimens with no known county association or specimens that were reported from county boundaries (e.g., Washita/Custer) in the records of occurrence.

Museums containing Oklahoma specimens and their acronyms are provided in Table 1. Not all specimens from every museum are included here, only those that were verified by the means discussed previously.

Other abbreviations used: AFB – Air Force base; approx – approximately; Ave – avenue; ca. – circa; Dr – drive; E – east; Ext – extension; Ft – Fort; Hwy – highway; km – kilometer; LCTA – Land Condition-Trend Analysis; Ln – lane; m – meter; mi – mile; Mtn – mountain; Mts – mountains; N – north; Nat'l – national; NE – northeast; NW – northwest; NWR – National Wildlife Refuge; Rd – road; Rec – Recreation; Rte – route; S – south; SE – southeast; Sec – section; SH – state highway; St – street; SW – southwest; US – United States; W – west; WMWR – Wichita Mountains Wildlife Refuge; WMA – Wildlife Management Area; X – unknown value; yds – yards.

ORDER DIDELPHIMORPHIA

Family Didelphidae

Didelphis virginianus

Virginia Opossum

There are 446 verified museum records for *D. virginianus* included, representing voucher specimens from 65 of 77 Oklahoma counties.
