FOREWORD

"Cotton Counts Its Customers" is a statistical report containing measurements of the quantities of cotton and competing materials consumed in major textile products manufactured in the United States. All data in this report are presented on a calendar-year basis. Annual editions providing preliminary data for the previous year are published regularly; special editions are published at periodic intervals to revise data for a series of years and to present supplementary information on conversion factors and typical cotton materials consumed.

This special edition contains end use consumption data for the years 1965-1971. The report is presented in four sections:

Section I summarizes end use consumption data for cotton and competing materials in 96 major product classifications for the years 1965-1971;

Section II contains separate statistics for each end use within the major product classifications for the years 1965-1971, including (a) domestic production of each item, (b) total material consumption within each item expressed in terms of raw cotton equivalents, (c) cotton's percentage share of materials in each use, and (d) the quantity of raw cotton consumed in each use;

Section III reports quantities of woven fabrics, knitting yarns, and other textile materials consumed in domestic production of each end use item during 1971;

Section IV lists typical cotton fabrics and yarns utilized in each use and conversion factors employed in estimating the quantities of cotton and other materials required to manufacture the number of items produced.

Since each of the four sections contains different sets of data relating to fiber utilization by end uses and since this edition incorporates a conceptual change in the measurement of material consumption in "cotton equivalents", readers should study introductory comments preceding each section to avoid misinterpretation or misuse of the data.

Statistical data in this report were compiled by the National Cotton Council's market research staff. The interest and cooperation of the many representatives of private companies, trade associations, and government agencies who contributed information are acknowledged with appreciation.

TABLE OF CONTENTS

	Page
GENERAL INTRODUCTION	1
SECTION I: CONSUMPTION OF COTTON AND COMPETING MATERIALS SUMMARIZED BY MAJOR END USES, 1965-1971	
Summary	3
Men's, Youths', & Boys' Apparel	4
Women's, Misses', & Juniors' Apparel	7
Girls', Children's, & Infants' Apparel	10
Home Furnishings	12
Industrial Uses	15
SECTION II: UNIT PRODUCTION, TOTAL MATERIAL CONSUMPTION, PERCENT OF MARKET HELD BY COTTON, AND COTTON CONSUMPTION BY END USE, 1965-1971	
Introduction	21
Men's, Youths', & Boys' Apparel	23
Women's, Misses', & Juniors' Apparel	31
Girls', Children's, & Infants' Apparel	35
Home Furnishings	39
Industrial Uses	43
TWENTY LARGEST END USES FOR COTTON, 1965 & 1971	51
SECTION III: ESTIMATED END USE CONSUMPTION OF COTTON AND COMPETING MATERIALS, 1971 PRELIMINARY	
Introduction	52
Summary	55
Men's, Youths', & Boys' Apparel	55
Women's, Misses', & Juniors' Apparel	63
Girls', Children's, & Infants' Apparel	66
Home Furnishings	70
Industrial Uses	73
SECTION IV: CONVERSION FACTORS FOR END USE PRODUCTS, 1971	
Introduction	80
Men's, Youths', & Boys' Apparel	83
Women's, Misses', & Juniors' Apparel	90
Girls', Children's, & Infants' Apparel	93
Home Furnishings	98
Industrial Uses	100

INTRODUCTION

This report incorporates many changes, additions, and revisions in statistical data reported in 1965-1971 annual editions of "Cotton Counts Its Customers". Consequently, it is imperative that users of the data fully understand the changes, additions, and revisions and the reasons why they were made. Explanations are set forth here and in the introductions at the beginning of each section where applicable.

A change in the method of calculating the "cotton equivalent" of competing materials has been incorporated in this edition. Previously, the "cotton equivalent" of competing materials was calculated on the basis of typical cotton materials in use - or conventional cotton materials which might be used in competition with other materials - with allowances for recognized differences in use life, style, and strength-to-bulk ratios.* The intent was to express total material consumption in terms of the volume of cotton that would have been consumed if cotton had accounted for all fibers and competing materials utilized in each application. Often, the result was an overstatement, not only of total volume of materials consumed, but of the "potential market" for cotton. Furthermore, changes in technology and fashion have made it increasingly difficult to determine what kind of cotton fabrics or yarns represent the most likely candidates for replacing competing materials in each end use application. In many end uses, for instance, a wide variety of materials are utilized simultaneously, according to the dictates of fashion and technology: light weight materials, heavy weight materials, filament yarns, spun yarns, carded yarns, combed yarns, etc. For these reasons a decision was reached to effect a change in methodology involved in calculating total material consumption, as explained below:

Total Gray Material Consumption: Whereas in previous editions, total gray material consumption by end use was calculated on the basis of "typical cotton" materials, it is now calculated on the basis of estimated "average weight" of all materials - cotton and other - in each end use. The average weights used herein are estimated with the aid of the Census Bureau's average width-weight reports and a considerable volume of data collected from mills, cutters, and other sources knowledgeable about types of materials utilized by end use. The result of this change is an estimate of total gray fabric, yarn, and other materials utilized, not in terms of "cotton equivalents", but in terms of actual pounds of all materials consumed.

Total Material Consumption in Cotton Bale Equivalents: Total fiber consumption in cotton bale equivalents is, in effect, a conversion of gray pounds into raw fiber equivalents. Consequently, the change in methodology described for gray materials has a direct bearing on the measure of consumption in bale equivalents. However, there continue to be differences in processing wastes and sizing contents of cotton and

* Exceptions are tire cord, women's hosiery, and tricot knit underwear, nightwear, and loungewear, where total material consumption has been reported on a pound-for-pound displacement basis since 1964.

its principal natural and man-made competitors, and it is deemed appropriate to take these differences into account in the conversion of total gray materials into cotton bale equivalents. Toward this end, a judgment was made about the specific kind or kinds of cotton materials - i.e., carded or combed - that are used, and/or those that would be most competitive in each end use; the, appropriate cotton processing waste and sizing (non-cotton content) factors were used to convert total gray pounds into cotton bale equivalents. To the extent that there are differences in processing wastes and sizing contents of cotton and competing materials, the measure of raw fiber in bales continues to be expressed in "cotton equivalents" rather than in actual volume of all fibers consumed.

The end use estimates presented in this report may differ from those presented in earlier editions of "Cotton Counts Its Customers" for one or more of several reasons:

- a) Change in method of calculating "cotton equivalent", as explained above;
- b) Revisions in statistics resulting from the incorporation of the latest available information on production, material requirements per unit, and percent cotton; and
- c) Deletion of some small end uses that were included in earlier reports and the addition of several larger ones.

As in previous editions, end use estimates of raw cotton consumption do not necessarily agree with total mill consumption of cotton for a specified calendar year because:

- a) Many small uses are not included in the end use estimates;
- b) Time lags occur between mill consumption of raw cotton and the conversion of yarns and fabrics into end use products;
- c) Inventories of yarns and fabrics vary from one year to another;
- d) An unknown quantity of spinnable cotton waste included in some end use products has been calculated as staple cotton; and
- e) Imported yarns and fabrics used in products manufactured in the United States are included in this report; exported yarns and fabrics are excluded.

FOOTNOTES, SECTION I

- 1/ Data in this section are summarized from more detailed calculations in Section II. Bale figures for individual end uses and sub-totals may not add exactly to totals shown because of independent rounding.
 - 2/ Total material consumption expressed in 480 pound cotton bale equivalents. Refer to introductions preceding Section I and II for explanation of conceptual change in term "cotton equivalent".
 - 3/ Percentages are calculated from consumption estimates rounded to nearest ten bales (Section II).
 - 4/ Beginning with the 1971-1972 season, the trading basis for U. S. cotton was changed from gross weight to net weight. In this report, therefore, all measures of volume in "bales" or "bale equivalents" are expressed on a 480 pound net weight basis rather than the old 500 pound gross weight basis.
 - 5/ End use estimates in this report may differ from those presented in earlier editions of "Cotton Counts Its Customers" for reasons noted in introduction preceding Section I.
- * Less than five hundred bales.

SECTION II: UNIT PRODUCTION, TOTAL MATERIAL CONSUMPTION, PERCENT OF MARKET
HELD BY COTTON, AND COTTON CONSUMPTION BY END USES, 1965-1971

Introduction

End use detail for textile products manufactured in the United States during calendar years 1965-1971 is shown in this section. Statistics for each use within major product classifications include: (a) domestic production, (b) total material consumption expressed in terms of raw cotton equivalents, (c) cotton's percentage share of total materials, and (d) quantity of raw cotton consumed.

Explanation of Column Headings

End Use - A list of major end uses for textiles and of components within each major use. Items shown, however, do not represent a complete listing of all uses for textile fibers; many small uses are not included in this report due to insufficient information on production and fiber requirements.

Production - United States annual production of end use items, reported in thousands of units as follows: dozen, dozen pairs, linear yards, square yards, pounds, sets, or units. The primary source of production estimates is the Industry Division, Bureau of the Census, United States Department of Commerce. Data contained in the Census' "Current Industrial Reports" Series 1965-1971, and the 1967 "Census of Manufactures" served as a basis for much of the production detail used in this report. Other sources of production estimates are trade associations, identified in footnotes following Sections II and III, and private companies.

Materials Consumed

Total - Estimated total quantity of materials - expressed as equivalent 480 pound net weight bales of raw cotton - consumed annually in the production of end use items. Data in this column are computed by multiplying production estimates by the amount of raw fiber required per unit, in "cotton equivalents", then converting to bales by dividing by 480 pounds and rounding to the nearest ten bales. Equivalent raw fiber required per unit for calendar year 1971 is presented in Column (j), Section IV. However, for many end uses, it was necessary to adjust these factors at intervals during the 1965-1971 period to account for changes in material requirements, resulting from hem length modifications, fabric weights, carded versus combed fabrics, and yarns, etc.

Percent Cotton - Estimated percentage share of total materials accounted for by cotton, including cotton content of blends and mixtures. Percent cotton for totals and sub-totals is computed by dividing bales of cotton consumed by bales of total materials consumed.

Cotton Consumed - Estimated total number of 480 pound net weight bales of raw cotton consumed annually in the production of end use items. Computed by multiplying data in "total" column by the percent cotton figure; the result is rounded to the nearest ten bales. For a few small uses in which cotton's share is less than 100%, this method of rounding slightly overstates or understates cotton consumption.

1/ Unless otherwise annotated, estimates are based on statistics published by the Industry Division, Bureau of the Census, United States Department of Commerce, and/or information provided by manufacturers of textiles and textile products.

2/ Estimates of cotton and other materials consumed by end use, expressed in equivalent 480 pound net weight bales of raw cotton. Beginning with the 1971-1972 season, the trading basis for U. S. cotton was changed from gross weight to net weight. In this report, therefore, all measures of volume in "bales" or "bale equivalents" are expressed on a 480 pound net weight basis rather than the old 500 pound gross weight basis. Refer to introductions preceding Sections I and II for explanation of conceptual change in term "cotton equivalent".

3/ Consumption figures for the years 1965-1971 differ from those reported in previous editions of "Cotton Counts Its Customers" because of: (a) the addition or deletion of some end use categories, (b) revisions in production, percent cotton, and material requirements, and (c) a change in the method of calculating the "cotton equivalent" of competing materials. Refer to introductions preceding Sections I and II for explanation of conceptual change in term "cotton equivalent".

4/ Boys' hosiery reported in Item 38.

5/ Boys' bib overalls reported with boys' dungarees, Item 14.

6/ Bureau of the Census production data for 1970 and 1971 may not be comparable with data reported for previous years.

7/ Classification detail for the years 1965-1969 has been revised to correlate with new product terminology reported by the Bureau of the Census for 1970-1971. Since no published data are available for new product categories prior to 1970, total trouser production reported for 1965-1969 was distributed among new product categories on the basis of trade information.

8/ Misses' hosiery to size 11, footsocks, anklets, and knee length stockings are reported in Item 38.

9/ Excludes (a) flannel diapers, (b) knit diapers, and (c) diapers and diaper liners made from paper and/or nonwoven fabrics.

10/ Distribution of girls' and children's nightwear in sizes 3 to 6X versus 7 to 14 is not available for the years 1965-1969.

11/ Includes "lumber bags" and/or zippered comforters made by comforter and quilt manufacturers.

12/ Excludes materials consumed in the production of ready-made slip covers, reported in Item 61.

13/ Excludes pillow ticking, reported in Item 57.

14/ Includes flappings and dust covers.

- 15/ Radical fluctuations in material requirements per unit and percent cotton result, in part, from annual changes in the volume of military purchases.
- 16/ Excludes drapery, upholstery, and slip cover fabrics sold at retail as yard goods.
- 17/ Excludes automotive and other transportation carpeting, reported in Item 67.
- 18/ Excludes paper and other non-textile materials which were included in previous editions of this report.
- 19/ Includes unsupported vinyl.
- 20/ Includes a relatively small volume of nonwoven materials.
- 21/ Includes paper and nonwovens.
- 22/ Includes ABS, unsupported vinyl, and carpeting used in sidewall areas.
- 23/ Includes cotton tire cord and tire cord fabric as well as cotton filling yarns in synthetic tire fabrics.
- 24/ Based on data from Textile Bag Manufacturers Association, military award records, and trade information.
- 25/ Estimate includes cloth, paper, and nonwoven covers for case bound books. Covers for paper bound news-stand books, work books, pamphlets, and related items are excluded.
- 26/ Includes cotton and synthetic yarns and woven fabrics. Excludes plastic, rubber, jute, sisal, paper, and asbestos materials.
- 27/ Based on mail bag procurements by U. S. Post Office Department.
- 28/ Excludes (a) filling materials and (b) absorbent cotton and rayon rolls and balls.
- 29/ Based on data from American Footwear Manufacturers Association and trade information.
- 30/ Includes leather, pre-shaped plastic, fiber board, and nonwoven materials.
- 31/ Includes nonwoven materials consumed primarily in poromeric uppers.
- 32/ Includes golf bags, body protectors, bases, inflated balls, and striking bags.
- 33/ Materials 12 inches or less in width (narrow fabrics) converted to equivalent square yards.

* Less than five bales.

TWENTY LARGEST END USES FOR COTTON
1965 & 1971

(Thousands of 480 Pound Bales)

SECTION III: ESTIMATED END USE CONSUMPTION OF COTTON AND
COMPETING MATERIALS, 1971

Introduction

Estimated domestic production of end use items and quantities of woven fabrics, knitting yarns, and other textile materials utilized in making end products during the calendar year, 1971, are presented in this section.

A change in the method of calculating the "cotton equivalent" of competing materials has been incorporated in this edition. The nature of the change and the reasons for it are explained in the Introduction preceding Section I. Readers are cautioned to refer to that explanation and to the notations which follow to avoid misinterpretation or misuse of data.

Estimates of material consumption by end use are classified in this section by principal constructions:

Woven Fabrics - Includes woven textile fabrics and other materials which are consumed in direct competition with conventional woven fabrics, such as nonwoven textiles, plastic film, leather, and paper. In some uses, however, product classification detail notes exclusion of these competing materials. In some cases, figures shown in the woven fabric column still include a small quantity of knit fabrics, although classification detail has been expanded considerably to minimize such occurrences.

Knitting Yarns and Other Textile Materials - Includes knitting yarns, tire cord, tufting yarns, thread, cordage and twine, etc. In most instances knitted products are identified in Column (a) and production and consumption figures are reported in the appropriate columns. Despite considerable expansion in classification detail, there remain a few end uses where reliable data are not available for separating knitted items from woven items. In such cases, knitting data are included with woven fabrics.

Units of Measure and Abbreviations

Production estimates are reported in thousands of units as follows: dozen, dozen pairs, linear yards, square yards, pounds, sets, or units.

The quantity of gray materials required per unit of production is reported in square yards or pounds. Total materials consumed are reported in square yards and/or pounds and 480 pound net weight bales.

Abbreviations used are: (a) Doz. - Dozen; (b) Doz. Pr. - Dozen Pairs; (c) Lyds. - Linear Yards; (d) Syds. - Square Yards; and (e) Lbs. - Pounds.

Explanation of Column Headings

- Column (a) - A list of end uses for textile materials.
- Column (b) - United States production of end use items.
- Column (c) - Gray materials required per unit of production.
- Column (d) - Total consumption of woven fabrics - including materials consumed in direct competition with woven fabrics unless product detail in Column (a) notes exclusion - expressed in square yards.
- Column (e) - Yardage reported in Column (d) converted into pounds of gray fabrics. Whereas in previous editions this column was expressed in "cotton equivalents", it now represents an estimate of actual pounds of all materials consumed. (See explanation in Introduction preceding Section I.)
- Column (f) - Total consumption of (1) knitting yarns, and (2) tufting yarns, thread, tire cord, etc., expressed in pounds of gray materials. Whereas in previous editions this column was expressed in "cotton equivalents", it now represents an estimate of actual pounds of all materials consumed. (See explanation in Introduction preceding Section I.)
- Column (g) - Grand total, all materials consumed - Column (e) plus Column (f) - expressed in pounds of gray materials. Whereas in previous editions this column was expressed in "cotton equivalents", it now represents an estimate of actual pounds of all materials consumed. (See explanation in Introduction preceding Section I.)
- Column (h) - Grand total, all materials consumed, expressed in equivalent 480 pound net weight bales of raw cotton. This measure of total material consumption in bales involves a conceptual change in the term "cotton equivalent". (See explanation in Introduction preceding Section I.)
- Column (i) - Percentage of total material consumption accounted for by cotton at the raw fiber (bale) level. "Percent Cotton" in this report represents a weighted calculation involving (1) 100% cotton materials plus (2) cotton content of blends and mixtures. Note: Percent cotton for all sub-totals and totals is computed by dividing Column (n) by Column (h).
- Column (j) - Cotton yardage consumed, expressed in square yards of gray woven fabrics. Includes (1) 100% cotton materials plus (2) cotton content of blends and mixtures expressed in square yards.

Column (k) - Yardage reported in Column (j) converted into pounds of woven fabric. Includes (1) 100% cotton materials plus (2) cotton content of blends and mixtures.

Column (l) - Total cotton consumed in (1) knitting yarns, and (2) tufting yarns, thread, tire cord, etc., expressed in pounds of gray cotton materials. Includes (1) 100% cotton materials plus (2) cotton content of blends and mixtures.

Column (m) - Grand total, cotton materials consumed - Column (k) plus Column (l) - expressed in pounds of gray cotton materials. Includes (1) 100% cotton materials plus (2) cotton content of blends and mixtures.

Column (n) - Grand total, cotton materials consumed, expressed in equivalent 480 pound net weight bales of raw cotton.

1/ Unless otherwise annotated, estimates are based on statistics published by the Industry Division, Bureau of the Census, United States Department of Commerce, and/or information provided by manufacturers of textiles and textile products.

2/ Estimates of total material consumption by end use are reported in Columns (d), (e), (f), (g), and (h). A change in the method of calculating the "cotton equivalent" of competing materials has been incorporated in this edition. Refer to introductions preceding Sections I and II for additional information about the change and for an explanation of data presented in each column.

3/ Estimates of cotton consumed by end use are reported in Columns (j), (k), (l), (m), and (n). Volume includes (a) 100% cotton materials, plus (b) cotton content of blends and mixtures. Refer to introduction preceding Section III for an explanation of data presented in each column.

4/ Estimates of total materials consumed by end use, expressed in equivalent 480 pound net weight bales of raw cotton. Beginning with the 1971-1972 season, the trading basis for U. S. cotton was changed from gross weight to net weight. In this report, therefore, all measures of volume in "bales" or "bale equivalents" are expressed on a 480 pound net weight basis rather than the old 500 pound gross weight basis. Refer to introductions preceding Sections I and III for explanation of conceptual change in term "cotton equivalent".

5/ Estimates of cotton materials consumed by end use, expressed in 480 pound net weight bales. Beginning with the 1971-1972 season, the trading basis for U. S. cotton was changed from gross weight to net weight. In this report, therefore, all measures of volume in "bales" or "bale equivalents" are expressed on a 480 pound net weight basis rather than the old 500 pound gross weight basis.

6/ Small quantity of knit and tufted pile fabrics consumed in linings are reported as woven.

7/ Knitting yarn data include leather calculated on a cotton equivalent basis.

8/ Boys' hosiery reported in Item 38.

9/ Boys' bib overalls reported with boys' dungarees, Item 14.

10/ Principally knit but includes small quantity of woven removable liners.

11/ Bureau of the Census production data for 1970 and 1971 may not be comparable with data reported for previous years.

12/ Foundation garments may be 100% woven fabrics, 100% knit fabrics, or a combination thereof; material requirements in Column (c) are weighted averages reflecting usage of knitting yarns and woven fabrics rather than square yards or pounds of materials required per dozen "knit" or "woven" garments.

13/ Misses' hosiery to size 11, footsocks, anklets, and knee length stockings are reported in Item 38.

14/ Relatively low yardage requirement per unit, Column (c), reflects estimated relationship of fully lined to partially lined coats.

15/ Excludes (a) flannel diapers, (b) knit diapers, and (c) diapers and diaper liners made from paper and/or nonwoven fabrics.

16/ Includes "slumber bags" and/or zippered comforters made by comforter and quilt manufacturers.

17/ A small quantity of knitted fabrics consumed in this item is reported as woven fabrics.

18/ Excludes materials consumed in the production of ready-made slip covers, reported in Item 61.

19/ Excludes pillow ticking, reported in Item 57.

20/ Includes fluctuations in material requirements per unit and percent cotton result, in part, from annual changes in the volume of military purchases.

21/ Excludes drapery, upholstery, and slip cover fabrics sold at retail as yard goods. The figure "1.16 Syds." reported in Column (c) reflects area change from gray to finished fabric.

22/ Excludes automotive and other transportation carpeting, reported in Item 67.

23/ Excludes paper and other non-textile materials which were included in previous editions of this report.

24/ Includes unsupported vinyl.

25/ Includes a relatively small volume of nonwoven materials.

26/ Includes paper and nonwovens.

27/ Includes ABS, unsupported vinyl, and carpeting used in sidewall areas.

28/ Includes cotton tire cord and tire cord fabric as well as cotton filling yarns in synthetic tire fabrics.

29/ Based on data from Textile Bag Manufacturers Association, military award records, and trade information.

30/ Estimate includes cloth, paper, and nonwoven covers for case bound books. Covers for paper bound news-stand books, work books, pamphlets, and related items are excluded.

31/ Includes cotton and synthetic yarns and woven fabrics. Excludes plastic, rubber, jute, sisal, paper, and asbestos materials.

32/ Based on mail bag procurement by U. S. Post Office Department.

33/ Excludes (a) filling materials and (b) absorbent cotton and rayon rolls and balls.

34/ Based on data from American Footwear Manufacturers Association and trade information.

35/ Includes leather, pre-shaped plastic, fiber board, and nonwoven materials.

36/ Includes nonwoven materials consumed primarily in poromeric uppers.

37/ Includes golf bags, body protectors, bases, inflated balls, and striking bags.

38/ Materials 21 inches or less in width (narrow fabrics) converted to equivalent square yards.

* Less than five bales.

** Less than five hundred pounds.

Separate Consumption Data for "Knitting Yarns" and "Other Textile Materials", 1971 Preliminary

	Total Materials (1,000 Lbs.)	Cotton Materials (1,000 Lbs.)
	Other Knitting Yarns	Other Textile Materials

Industrial Uses, Total	48,113	32,851
GRAND TOTAL, ALL USES	1,549,426	542,668

SECTION IV: CONVERSION FACTORS FOR END USE PRODUCTS, 1971

Introduction

This section presents basic data and methodology employed in converting production of end use products into square yards, pounds, and bale equivalents of cotton and other materials.

As explained in the Introduction preceding Section I, a change in the method of computing "cotton equivalents" of competing materials becomes effective with this edition. Readers should review that explanation as well as the following notations on methodology and column headings before using data presented in this section.

Conversion factors computed herein are based on fabric and yarn utilization data compiled over a period of years from published literature, special surveys, and extensive personal interviews with individuals in spinning and weaving mills, finishing establishments, and manufacturers of apparel, home furnishings, and industrial products. While only 100% cotton fabrics and yarns are listed under Column (d), all data relating to material requirements per unit - Columns (c), (e), (f), (g), and (j) - are based on estimated utilization rates of all materials, including 100% cotton, blends containing cotton, and various non-cotton materials. For many end uses, this results in a significant change from previously used gray and raw fiber conversion factors which are based on "typical cotton" fabrics and yarns only.

All conversion factors computed in this section are applicable to calendar year 1971. For many end uses, however, it was necessary to adjust these factors at intervals during the 1965-1971 period to account for changes in material requirements per unit resulting from product styling changes, fabric weights, utilization of carded versus combed fabrics and yarns, etc. Explanations of column headings provide additional information about, and clarification of, methodology involved in conversion factor computations.

Explanation of Column Headings

- Column (a) - End Use: A list of end uses, corresponding to the end use listing in Sections II and III.
- Column (b) - Unit of Measure: Apparel items are in dozens or dozen pairs. Home furnishings and industrial products are in linear yards, sets, square yards, or units.
- Column (c) - Gray Square Yards Per Unit: Estimated number of gray square yards required per unit specified in Column (b). Includes allowances for cutting losses and surface area changes occurring during finishing.

- Column (d) - Description of Gray Cotton Fabrics and Yarns: A description of cotton fabrics, yarns, and materials most frequently utilized in the different applications. The order in which fabrics or yarns appear provides a rough indication of their relative importance by volume. Fabrics and yarns shown are "carded" unless specified as "combed". Although a description is provided for 100% cotton fabrics and yarns only, conversion factor calculations in subsequent columns are based on estimated utilization rates of all materials, including 100% cotton, blends containing cotton, and the various non-cotton materials.
- Column (e) - Equivalent Square Yards Per Pound: Estimated average number of square yards of fabric per pound. Average is weighted according to estimated utilization rates of all materials, including 100% cotton, blends containing cotton, and the various non-cotton materials. The reciprocal of this figure appears in Column (f).
- Column (f) - Equivalent Pounds Per Square Yard: Estimated average number of pounds of fabric per square yard. Average is weighted according to estimated utilization rates of all materials, including 100% cotton, blends containing cotton, and the various non-cotton materials. The reciprocal of this figure appears in Column (e).
- Column (g) - Approximate Gross Weight of Gray Fabric or Yarn Per Unit: In most cases, gross weight per unit is computed by multiplying Column (c) by Column (f). Exceptions are (1) end products made on knitting machines, such as sweaters and hosiery, where gross weight per unit is simply estimated and entered in Column (g); and (2) end products for which "unit production" is reported in pounds and gross weight per unit is shown in Column (g) as 1.0000.
- Column (h) - Non-cotton Content: Starches, fillings, and other materials - applied during spinning or weaving processes - expressed as a percentage of gray fabric or yarn weight. Does not include coatings, such as rubber, pyroxylin; or vinyl, which are applied to fabrics or yarns. Non-cotton content based on "Cotton Processing Wastes - A Mill Survey", National Cotton Council of America, 1958.
- Column (i) - Processing Loss: Average percentage waste incurred in manufacturing raw cotton into gray fabrics or yarns, excluding the weight of bagging and ties. Estimates of processing waste take into account (1) the relative use of carded versus combed cotton materials and (2) the most likely cotton candidate material - i.e., carded or combed - for displacing competing materials utilized in each end use. Percentages are based on "Cotton Processing Wastes - A Mill Survey", National Cotton Council of America, 1958 and 1972 Supplement.

Column (j) - Equivalent Pounds of Raw Fiber Required Per Unit: The number of pounds of raw fiber required to produce one unit of production. Computed by deducting non-cotton content from gross weight of gray fabric or yarn and dividing by 100% minus the processing loss percentage. Processing losses and non-cotton contents apply to 100% cotton fabrics and yarns in all cases. To the extent that there are differences in processing losses and non-cotton contents for cotton and its principal competitors, the raw fiber requirements shown in Column (j) are expressed in "cotton equivalents".

1/ To avoid misinterpretation or misuse of data in Section IV, readers should refer to introductory comments and explanations of column headings on pages 80-82.
 2/ Allowance for unlined and partially lined items has been made through adjustment in yardage requirements.
 3/ Because two layers of fabric are used in constructing this item, basic fabric yardage requirements exceed that of other, otherwise similar items.
 4/ Material requirements per unit are based on estimated production ratio of quilted to non-quilted robes and on estimated production of floor length robes versus shorter styles.
 5/ Material requirements per unit are based on estimated production of fully quilted, partially quilted, and non-quilted bedspreads.
 6/ Material requirements per unit are based on estimated production of rugs and carpets with secondary backings versus those with primary backings only.

THE NATIONAL COTTON COUNCIL

The National Cotton Council is the central organization representing the millions of people who make up the American cotton industry.

It is a representative body composed of some 285 delegates selected by the nation's cotton farmers, ginners, warehousemen, merchants, cottonseed crushers, cotton cooperatives, and textile manufacturers through their own state, regional, or national organizations.

Each branch of the cotton industry has an equal voice in the National Cotton Council. Each of the seven branches, voting separately, must approve every recommendation by a majority, thus assuring unity of purpose and action.

The central goal of the National Cotton Council is to increase the consumption of American cotton, cottonseed, and their products, both at home and abroad. It seeks that goal through programs of research, public relations, and industry representation on matters involving government.
