SECTION I: COTTON CONSUMPTION BY END USES

Summary.....	1
End Uses	
Men's, Youths' & Boys' Apparel.....	1
Women's Misses' & Juniors' Apparel.....	4
Children's & Infants' Apparel.....	6
Household Uses.....	8
Industrial Uses.....	10

SECTION II: UNIT PRODUCTION, PERCENT OF MARKET HELD BY COTTON, AND COTTON CONSUMPTION BY END USES

Men's, Youths' & Boys' Apparel.....	14
Women's, Misses' & Junior's Apparel.....	18
Children's & Infants' Apparel.....	22
Household Uses.....	26
Industrial Uses.....	28

SECTION III: TYPICAL COTTON CONVERSION FACTORS FOR END USE PRODUCTS

Explanatory Notes.....	36
Illustrations of Conversion Factor Applications.....	38
Men's, Youths' & Boys' Apparel.....	40
Women's, Misses' & Juniors' Apparel.....	44
Children's & Infants' Apparel.....	47
Household Uses.....	51
Industrial Uses.....	53

Introduction

This *Special Edition* of "Cotton Counts Its Customers" was prepared to revise and to supplement data contained in previous editions of "Cotton Counts Its Customers." It provides statistics on the volume of cotton consumed by major end uses, cotton's share of each, and changes and trends in cotton consumption for the calendar years 1939 and 1947-1956. The report:

Contains comparable data for each year by end uses. Some estimates in previous editions of "Cotton Counts Its Customers" are not comparable from one year to another because of changes in classifications, variations in conversion factors, and the addition of items not previously covered;

Incorporates, for some uses, more detailed information than was available when the yearly estimates were compiled;

Converts cotton bale equivalents from a 478-pound net weight to a 500-pound gross weight basis to facilitate tabulation of the data and to make the bale figures more comparable with other published statistics on the production and consumption of cotton;

Includes supplementary data on conversion factors employed in estimating cotton consumption by uses. These data provide a basis for computing equivalent yardage of fabric,

pounds of yarn, or pounds of raw cotton consumed by uses.

The estimates in this publication are based on data compiled by the staff of the market research section of the National Cotton Council from published statistics and information from government agencies, trade associations, and private companies—supplemented by information and estimates from many private companies and individuals.

All estimates of cotton consumption by end uses relate to the volume of raw cotton required to produce that quantity of a given article manufactured in its final form in the United States during the calendar years 1939 and 1947-1956, regardless of whether or not the items were actually consumed during those years.

The data in this report do not include some of the smaller end uses of cotton or United States exports of fabric and yarn. Domestic production of consumer products for export, covered by the end use classifications in this report, are included in the consumption estimates.

The interest and cooperation of the many individuals in private companies, trade associations, and government agencies who contributed information for use in this publication is acknowledged with appreciation.

1/ Estimated ratio of cotton fiber to all other fibers and materials consumed, in terms of cotton equivalents.

2/ Omitted because of insufficient data on consumption of competing materials in certain industrial uses. For percent of market held by cotton in most industrial uses, see detailed breakdown on individual uses, Section II.

* Represents only cotton's share of the market. Sufficient data not available to estimate total market.

SECTION II: UNIT PRODUCTION, PERCENT OF MARKET HELD BY

FOOTNOTES, SECTION II

- 1/ Sources of production estimates are United States Bureau of the Census, *Census of Manufactures, 1939, 1947, and 1954*; United States Bureau of the Census, *Facts For Industry, 1939 - 1956*; United States Department of Commerce, *Survey of Current Business, 1939 - 1956*; Board of Governors of the Federal Reserve System, *Federal Reserve Bulletin, 1939 - 1956*; and trade information unless otherwise indicated.
- 2/ Estimated ratio of cotton fiber to all other fibers and materials consumed, in terms of cotton equivalents.
- 3/ Estimated equivalent raw cotton consumption in terms of 500-pound gross weight bales.
- 4/ For the years 1939 and 1947 - 1953, double gloves are included with cotton flannel gloves. For the years 1954 - 1956, huckling gloves are included with cotton flannel gloves.
- 5/ Based on data reported in National Association of Hosiery Manufacturers, *Hosiery Statistics*.
- 6/ "Heavyweight" drawers includes garments 7 pounds per dozen and over, containing 25% or more wool. Heavyweight garments less than 25% wool, and all-cotton, are included with "lightweight and mediumweight" drawers.
- 7/ Includes estimated production of men's and boys' total knit underwear made from synthetic fabrics and silk fabrics - distributed equally between knit shorts and briefs, and knit undershirts.
- NOTE: Estimates for the period 1954 - 1956 are not comparable to estimates for prior years.
- 8/ Beginning with 1951, a considerable quantity of garments formerly included with balbriggan undershirts are included with lightweight undershirts.
- 9/ Includes girls', teenage girls', and children's tufted robes.
- 10/ Estimate for 1954 is not comparable to estimates for other years.
- 11/ Girls' and teenage girls', and children's tufted robes are included with women's, misses', and juniors' tufted robes in Item 17.
- 12/ Excludes diapers, and diaper liners, made from paper and/or non-woven fabric.
- 13/ Principally dungarees and jeans for the period 1950 - 1956. Because of insufficient data on production of these garments, dungarees and jeans are excluded in estimates prior to 1950.

- 14/ Data in "production" column of household and industrial uses cannot be totaled because of the various units of measure used.
- 15/ Based on United States Bureau of the Census, *Facts For Industry*, Series M22L; and data from the Textile Manufacturers Association.
- 16/ Based on United States Bureau of the Census, *Census of Manufactures*, 1939, 1947, and 1954; and data from the American Carpet Institute.
- 17/ United States Bureau of the Census, *Census of Manufactures*, 1939, 1947, and 1954; and data from the Thread Institute.
- 18/ Included in "other" cotton thread.
- 19/ Sufficient data not available to estimate cotton's percentage share of total market.
- 20/ Based on data from Buff and Polishing Wheel Manufacturers Association, Inc.
- 21/ Based on data from Coated Abrasives Association.
- 22/ Based on data reported in United States Department of Agriculture, *Fabrics and Fibers for Passenger Cars*, Marketing Research Report #152; and trade information.
- 23/ Rayon "tire cord not woven" included with rayon "tire cord and all other tire cord fabric".
- 24/ Based on data from Textile Bag Manufacturers Association.
- 25/ Estimate for "leather transmission" based on data from National Industrial Leather Association.
- 26/ Based on data from Casket Manufacturers Association of America.
- 27/ Cotton's share of total market based on data from National Cheese Institute.
- 28/ Based on procurement of mail bags by United States Post Office Department.
- 29/ United States Bureau of the Census, *Facts For Industry*, Series M68A; and data from National Shoe Manufacturers Association, Inc.
- 30/ Based on data from Athletic Goods Manufacturers Association.
- 31/ Based on data from Venetian and Vertical Blind Association of America.
- * Estimate represents production and/or consumption of cotton items only. Sufficient data not available to estimate total market.
- N.A. Not available.

SECTION III: TYPICAL COTTON CONVERSION FACTORS FOR END USE PRODUCTS

Explanatory Notes

This section is a presentation of basic data and methodology employed in converting finished products, fabrics, yarns, and fibers into cotton equivalents. The information provides a method for estimating the size of end use outlets for textile products, in terms of cotton equivalents, total yards or pounds of fabric required by uses, and the quantity of waste incurred in converting raw cotton into finished yarns and fabrics.

The fact should be noted that the data represent "typical" cotton conversion factors rather than absolute factors. The data are believed to be representative of materials in general use during the period 1954-1956; however, exact measurements are impractical in most cases because of wide variations in use practices. In computing cotton consumption for years prior to 1954, it was necessary to make some adjustments in the "typical" conversion factors reported in this section to adjust for changes in cotton fabric weights, product styles, and other variations in the different end use applications.

These "typical" conversion factors were compiled over a period of years from published literature, from special surveys, and from extensive personal contacts and interviews with individuals within spinning and weaving mills, finishing establishments, the cutting trade, household furnishing manufacturers, and producers of industrial products. A preliminary draft of the principal conversion factors was checked with industry representatives. Although the conversion factors represent the best available at the time of publication, and while they are believed to be representative for materials utilized in each major classification, the fact is recognized that some errors may have resulted from important shifts in types of materials utilized or from the misinterpretation of data. Users of the conversion factors are invited to confer with the staff of the National Cotton Council regarding any factors subject to question.

Explanation of Column Headings

Column 1 — End Use: A list of all major end uses, corresponding to the end use listings in Sections I and II.

Column 2 — Unit of Measure: Apparel items are in dozens or dozen pairs. Household and industrial products are in linear yards, numbers, pairs, square yards or pounds.

Column 3 — Finished Fabric: Estimated number of square yards of finished fabric required per unit. No data appears in this column for applications in which gray fabrics or yarns represent the unit of measure.

- Column 4 — Equivalent Gray Fabric: Yards of gray fabric required to obtain the number of yards of finished fabric consumed per unit. Conversions from gray fabrics to finished fabrics are based on average percentage changes in surface area by type of finish and type of fabric utilized in the different applications, as estimated by woven fabric finishers and converters.
- Column 5 — Description of Cotton Gray Fabrics and Yarns: A description of cotton fabrics, yarns, and materials most frequently utilized in the different applications. The order in which fabrics or yarns are listed provides a rough indication of their relative importance by volume. NOTE: In a few end uses in which cotton is not consumed, it was necessary to designate a cotton construction which appeared to be comparable to materials actually utilized.
- Column 6 — Equivalent Square Yards Per Pound: Average number of yards of fabric per pound. Calculations for apparel uses are based on the first fabric listed in Column 5; household and industrial uses are based on the first fabric or an average of the fabrics listed in Column 5.
- Column 7 — Approximate Gross Weight of Gray Fabric or Yarn Per Unit: Gross weight of fabric obtained by dividing yards per unit by yards per pound (Column 4 by Column 6). For those uses where the unit of measure is yards, and no data are reported in Columns 3 and 4, the weight of gray fabric or yarn per unit was calculated from data reported in Bureau of the Census, 1954 Census of Manufactures, and manufacturers estimates of average weight per yard of typical constructions used. Weights of knit items are based on data provided by product manufacturers. All calculations include allowances for cutting losses, and weight changes resulting from bleaching and other finishing operations.
- Column 8 — Non-Cotton Content: Starches, fillings, and other materials — expressed as a percentage of the gray fabric or yarn weight reported in Column 7 — applied during the spinning or weaving of yarns and fabrics. Does not include coatings which are applied to fabrics or yarns, such as rubber, pyroxylin or vinyl. Non-cotton content based on "Cotton Processing Wastes — A Mill Survey", National Cotton Council of America, 1958.
- Column 9 — Processing Loss: Average percentage waste incurred in manufacturing raw cotton into gray fabrics or yarns, including an allowance for the weight of bagging and ties (equal to approximately 3.85% of the gross bale weight of 500 pounds). Processing loss percentages based on "Cotton Processing Wastes — A Mill Survey", National Cotton Council of America, 1958.

Column 10 — Equivalent Pounds of Raw Cotton Required Per Unit: The number of pounds of raw cotton required to produce one unit. The raw cotton equivalent is computed by deducting non-cotton content from gross weight of gray fabric or yarn and dividing the result by 100 minus the processing loss.

Illustrations of Conversion Factor Applications

Example 1: To find total yards of fabrics required for men's dress shirts in 1956 — (Multiply dress shirt production by number of yards required per unit.)

Dress shirt production, dozens (Item 10, Section II)...	7,258,000
Square yards gray fabric per dozen (Item 10, Section III).....	<u>33</u>
Total square yards gray fabric required.....	239,514,000
96% Cotton (Item 10, Section II).....	229,933,000
4% All Other Fibers.....	9,581,000

NOTE: If finished yards are desired, production should be multiplied by yards of finished fabric required per unit, or 30 in the case of men's dress shirts.

Example 2: To find total pounds of gray fabric consumed in dress shirts, 1956 — (Multiply total gray yards required by average weight of gray fabric per yard.)

Total gray fabric required, square yards (Example 1, above).....	239,514,000
Average weight of gray fabric, pounds (4.21 sq. yds. per pound, Item 10, Section III).....	<u>.238</u>
Total pounds gray fabric required, cotton equivalent.....	57,004,332
96% Cotton (Item 10, Section II).....	54,723,000
4% All Other Fibers.....	2,281,000

Example 3: To find quantity of waste incurred in producing fabrics consumed in men's dress shirts, 1956 — (Multiply dress shirt production by raw cotton required per unit to obtain gross weight of raw materials consumed, in cotton equivalents. Multiply gross weight of materials consumed by percent processing loss to obtain gross waste loss in processing, including bagging and ties. Weight of bagging and ties may be computed by multiplying gross weight of material consumed by 3.85. Net fiber waste loss may be obtained by subtracting weight of bagging and ties from gross waste loss.)

Dress shirt production, dozens (Item 10, Section II)...	7,258,000
Gross weight raw materials per dozen, pounds (Item 10, Section III).....	<u>10.21</u>
Gross weight of raw material consumed, pounds.....	74,104,000
Processing loss, percent (Item 10, Section III).....	<u>27</u>
Gross waste loss in processing, including bagging and ties, pounds.....	20,008,000
Weight of bagging and ties, pounds (3.85 times 74,104,000).....	<u>2,853,000</u>
Net weight of fiber loss, raw cotton equivalent, excluding bagging and ties.....	17,155,000
96% Cotton (Item 10, Section II).....	16,469,000
4% All Other Fibers.....	686,000

FOOTNOTES - SECTION III

- 1/ Apparel manufacturers indicate that approximately fifty percent of jackets are lined, excluding jackets with quilted lining.
- 2/ It is believed that the classification "women's gloves" is actually a misnomer, and that most of the production reported in this category by the Bureau of the Census consists primarily of knit gloves.
- 3/ Conversion factors for men's and boys' sport shirts are based on approximate production ratios: Men's long sleeve sport shirts - 1, short sleeve sport shirts - 3; Boys' long sleeve sport shirts - 1, short sleeve sport shirts - 2.

1/ Excludes weight of filling material.

2/ Conversion factors for women's blouses are based on approximate production ratio: long sleeve blouses - 1, short sleeve blouses - 3.
