THE QUANTITY OF COTTON
CONSUMED IN FINAL USES
IN THE UNITED STATES

PRELIMINARY 1950

UTILIZATION RESEARCH DIVISION

NATIONAL COTTON COUNCIL OF AMERICA

Memphis, Tennessee

MAY, 1951

The Biggest Uses of Cotton in 1950

The 92 leading uses of cotton are presented in the array which begins on this page and continues through page 12. Articles are listed according to the quantity of cotton consumed in their manufacture in the United States during 1950. For uses requiring less than 2,500 bales, consult the tables which begin on page 5.

This is a publication of the market research department of the National Cotton Council of America. Frank A. McCord, Director; Raymond Steinbach, Jr., Market Investigator; John A. McCrossan, Jr., Market Investigator; Neil J. Dikeman, Jr., Market Analyst.

Permanent Record Do Not Destroy

Foreword

A time lag of approximately twelve months from the close of the calendar year until publication of estimates on cotton distribution by major uses has been recognized by the National Cotton Council as a serious limitation on the usefulness of the statistics to industry. Since the first edition was published in 1942, various attempts have been made to eliminate the delay; but most of them have been unsuccessful because much of the statistical data on which final estimates are based is not available until nine or ten months after the end of the year. When industry demands for current statistics became urgent after the outbreak of hostilities in Korea in the early summer of 1950, the decision was made to publish preliminary estimates soon after the end of the year and final estimates at a later date. This edition of *Cotton Counts Its Customers*, therefore, represents a departure from

previous issues in that estimates are preliminary and not final. Future issues of *Cotton Counts Its Customers* will present preliminary estimates for the most recent calendar year as well as revised estimates for the preceding year.

Although these estimates are preliminary, they are believed to be reliable indicators of quantities of materials consumed by uses and of general trends in fiber consumption. In instances where 1950 estimates appeared to be out of line with previous years, careful checks were made to ascertain reasons for the differences. Footnotes have been employed to explain some of the more important variations.

To the many individuals, groups, and agencies contributing to this study of major cotton markets, the National Cotton Council of America extends its thanks and appreciation.

INTRODUCTORY NOTES

All estimates relate to the volume of raw cotton required to produce that quantity of a given article which was manufactured in its final form in the United States during the calendar year 1950. All estimates contained herein are preliminary and are subject to revision in subsequent issues of this publication. The subject matter is presented in three parts:

- (1) Beginning on page 2 and continuing along the bottoms of succeeding pages, the largest uses for cotton during 1950 are presented in a graphic array according to their size. This array provides a quick view of the major markets and the relative size of each. Uses consuming less than 2,500 bales may be determined by consulting the tabular material in the Appendix.
- (2) Beginning on page 5, 107 principal uses and sub-uses are listed in tabular form with estimates of the quantity of cotton consumed in each. An effort was made to include each significant end use for cotton; however, the fact is recognized that some uses may have

been omitted. The tabular material is arranged in three major classifications: apparel, household, and industrial. The apparel classification is further divided into men's, youths', and boys'; women's, misses', and juniors'; and children's and infants'.

- (3) The Appendix contains an outline of the techniques employed in the construction of each estimate. Source references are cited except in instances where the information was obtained with the understanding that the source would be treated as confidential.

Throughout the report, the major uses have been keyed with a numerical code number and arranged in alphabetical order to facilitate reference to any part of the report.

The "apparel" and "household" uses are substantially what the terms imply, except that articles whose cotton content is quite secondary to some other material—the leather in shoes, for example—are classified as "industrial." In keeping with general practice, the term "industrial" has been employed to cover all uses other than "apparel" and "household".

SUMMARY OF ESTIMATES FOR 1950	
(478-lb. net weight bales)	
Apparel	1950
Men's, Youths', and Boys'	1,853,870
Women's, Misses', and Juniors'	702,080
Children's and Infants'	388,440
Household	2,431,370
Industrial	2,588,570
Total bales consumed in uses included in this report	7,964,330
Consumed in uses not included in this report	1,923,920
Total Domestic Mill Consumption of Raw Cotton	9,888,250
Percent of consumption covered by this report	80.5

APPENDIX

Source materials and techniques employed in making each estimate are briefly described in the following pages. Any major item in the Appendix may be referred to from the preceding material by use of the code number.

Insofar as possible, production or shipment data reported in the Facts For Industry series for 1950 were used as a basis for estimates. Where these data were inadequate, estimates were based on trade information obtained through associations and private companies. Conversion factors were based on typical weights per unit, non-cotton contents, and losses incurred in processing as reported by manufacturers, trade associations, and government agencies. In some instances, the conversion factors which appear in this publication do not reconcile with those employed in previous publications because: a) changes have occurred in the quantity or type of material consumed in a specific market; b) supplementary information collected since the release of former publications indicates that the conversion factors previously used were not representative of the total market.

While the purpose of this report is not to present a tabulation of the consumption of materials other than cotton, the detailed breakdowns in the Appendix contain a significant amount of information on the total quantity of other materials consumed by uses. Such information, however, should be evaluated with the understanding that it is

not complete for all uses. For example, the bag tabulation represents only the quantity of cotton consumed; no estimates for burlap, paper, or other type containers are included. Footnotes have been inserted to indicate the principal markets in which only cotton's share of the total was estimated.

In some instances, changes in classifications were made to simplify presentation and to include more information. A few classifications, included in previous publications, were omitted in this report because data on such uses were inadequate, or the uses were no longer important cotton outlets.

As indicated in the introductory statement, the 107 classifications of uses covered in this report represent 80% of the total mill consumption of raw cotton in 1950. The fact must be kept in mind, however, that a significant percentage of the waste incurred in processing raw cotton is spinnable waste which may be used in coarse fabrics such as osenaburges and low grade sheetings. Additional quantities of waste cotton may be consumed in non-woven fabrics, padding, absorbent cotton, and other such uses. Since it is difficult to segregate raw cotton from spinnable waste in every use, some quantities of waste may be represented as raw cotton in a few uses.

Comments, additional data, and suggestions for improving future editions of this publication will be welcomed.

APPENDIX

TABLE I: MEN'S, YOUTHS', AND BOYS' WEARING APPAREL, 1950

- (a) Source of production statistics is Bureau of the Census, Facts For Industry, 1950, unless otherwise indicated.
- (b) Actual weight per unit. Derived from trade information on average weights of products; from weight information contained in Census of Manufactures, 1939 and 1947; from data assembled by the Office of Price Administration and by the War Production Board; and by weighing items. NOTE: All weights are in terms of cotton equivalents obtained by estimating the average weight of each item when fabricated from 100% cotton.
- (c) Units produced (Col. 1) multiplied by weight per unit (Col. 2).
- (d) Any material or substance other than cotton; such as, starches and coatings.
- (e) Gross weight (Col. 3) less non-cotton content (Col. 5).
- (f) Average waste incurred in processing raw cotton into finished fabrics and yarns. Information based on Cotton Regulations, Volume 2, Supplement 2 (Agricultural Adjustment Administration) supplemented by information from manufacturers.
- (g) Equivalent quantity of raw cotton consumed in fabrics and yarns utilized in specified products, obtained by dividing net weight (Col. 6) by 100 minus processing loss (Col. 7).
- (h) Pounds of raw cotton equivalents (Col. 8) divided by 478 (net weight of a cotton bale).
- (i) Ratio of cotton fiber to all other fibers or materials consumed according to fiber distributions as reported by Census of Manufactures, 1947; Bureau of the Census, Facts For Industry, 1949 and 1950; and/or trade members, unless otherwise indicated. NOTE: All percentage figures rounded to nearest whole numbers.
- (j) Estimated consumption of raw cotton. (Col. 8 multiplied by Col. 10.)
- (k) Pounds of raw cotton actually consumed; (Col. 11) divided by 478 (net weight of a cotton bale).
- (l) Trade estimates.
- (m) Estimate based on total shipments of hosiery manufacturers during 1950 as reported in Condensed Hosiery Statistics, National Association of Hosiery Manufacturers, December, 1950.
- (n) Estimate of men's garments based on 9 months production as reported in Bureau of the Census, Facts For Industry, Series M67B, 1950.
- (o) Production of boys' garments based on output of men's garments. Distribution as reported by Bureau of the Census, Facts For Industry, Series M67B, Summary, 1949 was used as basis for breakdown into sub-classifications.
- (p) Bureau of the Census, Facts For Industry, Series M67C, 1950 reported total men's and boys' polo, "T", basque shirts and sweat shirts knit in underwear mills. Production by sub-classes based on distribution reported in Bureau of the Census, Census of Manufactures, 1947. These data were used to estimate total knit shirt output by types.
- (q) Bureau of the Census, Facts For Industry, Series M67C, 1950. Lightweight and mediumweight men's knit drawers reported as one total in Bureau of the Census, Facts For Industry, Series M67C, 1950. Weight per garment was adjusted accordingly.
- * Represents only cotton's share of the market. Sufficient data were not available on which to base estimates of the total market.

TABLE II: WOMEN'S, MISSES', AND JUNIORS' WEARING APPAREL, 1950

- (a) Source of production statistics is Bureau of the Census, Facts For Industry, 1950, unless otherwise indicated.
- (b) Actual weight per unit. Derived from trade information on average weights of products; from weight information contained in Census of Manufacturers, 1939 and 1947; from data assembled by the Office of Price Administration and by the War Production Board; and by weighing items. NOTE: All weights are in terms of cotton equivalents obtained by estimating the average weight of each item when fabricated from 100% cotton.
- (c) Units produced (Col. 1) multiplied by weight per unit (Col. 2).
- (d) Any material or substance other than cotton; such as, starches and coatings.
- (e) Gross weight (Col. 3) less non-cotton content (Col. 5).
- (f) Average waste incurred in processing raw cotton into finished fabrics and yarns. Information based on Cotton Regulations, Series 2, Supplement 2 (Agricultural Adjustment Administration) supplemented by information from manufacturers.
- (g) Equivalent quantity of raw cotton consumed in fabrics and yarns utilized in specified products, obtained by dividing net weight (Col. 6) by 100 minus processing loss (Col. 7).
- (h) Pounds of raw cotton equivalents (Col. 8) divided by 478 (net weight of a cotton bale).

- (i) Ratio of cotton fiber to all other fibers or materials consumed according to fiber distributions as reported by Census of Manufacturers, 1947; Bureau of the Census, Facts For Industry, 1949 and 1950; and/or trade members, unless otherwise indicated. NOTE: All percentage figures rounded to nearest whole numbers.
- (j) Estimated consumption of raw cotton. (Col. 8 multiplied by Col. 10.)
- (k) Pounds of raw cotton actually consumed, (Col. 11) divided by 478 (net weight of a cotton bale).
- (l) Trade estimates.
- (m) Estimate based on 6 months production as reported in Bureau of the Census, Facts For Industry, Series M67H, 1950.
- (n) Estimate based on total shipments of hosiery manufacturers during 1950 as reported in Condensed Hosiery Statistics, National Association of Hosiery Manufacturers, December, 1950.
- (o) Estimate based on production of knit adult sleeping wear as reported in Bureau of the Census, Facts For Industry, Series M67C, 1950. Distribution based on Facts For Industry, Series M67C, 1949.
- (p) Bureau of the Census, Facts For Industry, Series M67C, 1950, reported output of women's, children's, and infants' knit polo, "T", basque shirts produced by underwear mills during 1950. This total was sub-divided into women's wear and children's and infants'

FOOTNOTES TO TABLE II (Concluded)

wear based on reported output of each type by Bureau of the Census Facts For Industry, Series M67C, 1949. Total output of women's misses', and juniors' polo, "T", and blouse shirts was estimated based on these data.

(q) Bureau of the Census, Facts For Industry, Series M67C, 1950, reported total output of these garments. Distribution was based on output by type as reported by Bureau of the Census, Facts For Industry, Series M67C, 1949.

TABLE III: CHILDREN'S AND INFANTS' WEARING APPAREL, 1950

- (a) Source of production statistics is Bureau of the Census, Facts For Industry, 1950, unless otherwise indicated.
- (b) Actual weight per unit. Derived from trade information on average weights of products; from weight information contained in Census of Manufactures, 1939 and 1947; from data assembled by the Office of Price Administration and by the War Production Board; and by weighing items. NOTE: All weights are in terms of cotton equivalents obtained by estimating the average weight of each item when fabricated from 100% cotton.
- (c) Units produced (Col. 1) multiplied by weight per unit (Col. 2).
- (d) Any material or substance other than cotton; such as, starches and coatings.
- (e) Gross weight (Col. 3) less non-cotton content (Col. 5).
- (f) Average waste incurred in processing raw cotton into finished fabrics and yarns. Information based on Cotton Regulations, Series 2, Supplement 2 (Agricultural Adjustment Administration) supplemented by information from manufacturers.
- (g) Equivalent quantity of raw cotton consumed in fabrics and yarns utilized in specified products, obtained by dividing net weight (Col. 6) by 100 minus processing loss (Col. 7).
- (h) Pounds of raw cotton equivalents (Col. 8) divided by 478 (net weight of a cotton bale).
- (i) Ratio of cotton fiber to all other fibers or materials consumed according to fiber distributions as reported by Census of Manufactures, 1947; Bureau of the Census, Facts For Industry, 1949 and 1950; and/or trade members, unless otherwise indicated. NOTE: All percentage figures rounded to nearest whole numbers.
- (j) Estimated consumption of raw cotton. (Col. 8 multiplied by Col. 10.)
- (k) Pounds of raw cotton actually consumed, (Col. 11) divided by 478 (net weight of a cotton bale).
- (l) Trade estimates.
- (m) Estimate based on total output of all types of diaper cloth as

- reported by Bureau of the Census, Facts For Industry, Series M15A, 1948, 1949, and 1950.
- (n) Estimate based on 1950 hosiery shipments by hosiery producers as reported in Condensed Hosiery Statistics, National Association of Hosiery Manufacturers, December, 1950.
- (o) Estimated on the basis of woven fabrics finished for nightwear material in 1950 as compared with 1949. Fabrics finished in 1949 reported by Bureau of the Census, Facts For Industry, Series M150, 1949. Fabrics finished during 1950 estimated on basis of relation between fabrics woven and fabrics finished in 1949. Fabrics woven in 1950 reported by Bureau of the Census, Facts For Industry, Series M15A, 1950. Breakdown by classes based on distribution reported in Census of Manufactures, 1947.
- (p) Bureau of the Census, Facts For Industry, Series M67C, 1950. Breakdown based on distribution reported by Bureau of the Census, Facts For Industry, Series M67C, 1949.
- (q) Bureau of the Census, Facts For Industry, Series M67C, 1950 reported total output of women's, children's, and infants' polo, "T", and basque shirts by knit underwear mills. Children's and infants' wear estimated on the basis of distribution reported by Bureau of the Census, Facts For Industry, Series M67C, 1949. Total output of children's and infants' polo, "T", and basque shirts based on these data.
- (r) Production of children's and infants' knit vests, panties, bloomers, shirts, and bands for 1950 was reported as one total in Bureau of the Census, Facts For Industry, Series M67C, 1950. Distribution was based on breakdown reported by Bureau of the Census, Facts For Industry, Series M67C, 1948 and 1949.
- (s) Production of children's and infants' union suits for 1950 reported as one total by Bureau of the Census, Facts For Industry, Series M67C, 1950. Distributed into heavy and lightweight garments on the basis of distribution reported by Bureau of the Census, Facts For Industry, Series M67C, 1948 and 1949.

| <p>(a) Source of production statistics is Bureau of the Census, <u>Facts For Industry</u>, 1950, unless otherwise indicated.</p> <p>(b) Actual weight per unit. Derived from trade information on average weights of products; from weight information contained in <u>Census of Manufactures</u>, 1939 and 1947; from data assembled by the Office of Price Administration and by the War Production Board; and by weighing items. NOTE: All weights are in terms of cotton equivalents obtained by estimating the average weight of each item when fabricated from 100% cotton.</p> <p>(c) Units produced (Col. 1) multiplied by weight per unit (Col. 2).</p> <p>(d) Any material or substance other than cotton; such as, starches and coatings.</p> <p>(e) Gross weight (Col. 3) less non-cotton content (Col. 5).</p> <p>(f) Average waste incurred in processing raw cotton into finished fabrics and yarns. Information based on <u>Cotton Regulations</u>, Series 2, Supplement 2 (Agricultural Adjustment Administration) supplemented by information from manufacturers.</p> <p>(g) Equivalent quantity of raw cotton consumed in fabrics and yarns utilized in specified products, obtained by dividing net weight (Col. 6) by 100 minus processing loss (Col. 7).</p> <p>(h) Pounds of raw cotton equivalents (Col. 8) divided by 478 (net weight of a cotton bale).</p> <p>(i) Ratio of cotton fiber to all other fibers or materials consumed according to fiber distributions as reported by <u>Census of Manufactures</u>, 1947; Bureau of the Census, <u>Facts For Industry</u>, 1949 and 1950; and/or trade members, unless otherwise indicated. NOTE: All percentage figures rounded to nearest whole numbers.</p> <p>(j) Estimated consumption of raw cotton. (Col. 8 multiplied by Col. 10.)</p> <p>(k) Pounds of raw cotton actually consumed, (Col. 11) divided by 478 (net weight of a cotton bale).</p> <p>(l) Tufted Textile Manufacturers Association reported total of 11,500,000 linear yards of fabric used during 1950. According to <u>Cotton in the Redspread Industry</u>, National Cotton Council of America, 1950, one linear yard of base fabric is the equivalent of 2.75 square yards.</p> | <p>(m) <u>Directory</u>, Tufted Textile Manufacturers Association, 1950.</p> <p>(n) Estimate based on 9 months production as reported by Bureau of the Census, <u>Facts For Industry</u>, Series M15A, 1950.</p> <p>(o) Estimate based on 9 months production reported by Bureau of the Census, <u>Facts For Industry</u>, Series M15H, 1950.</p> <p>(p) Trade estimates.</p> <p>(q) Estimate based on the average ratio of fabrics produced to fabrics finished for the trade during the period 1947 through 1949, applied to estimated volume of fabrics produced during 1950. Fabrics finished for the trade during the period 1947-1949 are reported in Bureau of the Census, <u>Facts For Industry</u>, Series M15G. Fabrics produced reported in Bureau of the Census, <u>Facts For Industry</u>, Series M15A.</p> <p>(r) Estimate based on the volume of oils consumed in producing oil cloths during 1950 as compared with 1949. Annual oil consumption by uses reported in Bureau of the Census, <u>Facts For Industry</u>, Series M17-2, 1950.</p> <p>(s) Estimate based on 9 months production as reported by Bureau of the Census, <u>Facts For Industry</u>, Series M15A, 1950. NOTE: Carded percale sheeting production now included with muslin production reports.</p> <p>(t) Processing loss for combed percale sheeting as reported in <u>Cotton Counts Its Customers</u>, 1945-1949, was incorrect. The correct processing loss of carded percale sheeting is 35.01%; the correct processing loss for combed percale sheeting is 38.70%.</p> <p>(u) Estimate based on data supplied by the Thread Institute.</p> <p>(v) Estimate based on 9 months production as reported by Bureau of the Census, <u>Facts For Industry</u>, Series M15A, 1950. Linear yards converted to square yards on the basis of conversion factors reported in <u>Census of Manufactures</u>, 1947.</p> <p>(w) Estimated on the basis of the number of vacuum cleaners produced during 1950.</p> <p>* Represents only cotton's share of the market. Sufficient data were not available on which to base estimates of the total market.</p> |

TABLE V: INDUSTRIAL USES, 1950

- (a) Source of production statistics is Bureau of the Census, Facts For Industry, 1950, unless otherwise indicated.
- (b) Actual weight per unit. Derived from trade information on average weights of products; from weight information contained in Census of Manufactures, 1939 and 1947; from data assembled by the Office of Price Administration and by the War Production Board; and by weighing items. NOTE: All weights are in terms of cotton equivalents obtained by estimating the average weight of each item when fabricated from 100% cotton.
- (c) Units produced (Col. 1) multiplied by weight per unit (Col. 2).

- (d) Any material or substance other than cotton; such as starches and coatings.
- (e) Gross weight (Col. 3) less non-cotton content (Col. 5).
- (f) Average waste incurred in processing raw cotton into finished fabrics and yarns. Information based on Cotton Regulations, Series 2, Supplement 2 (Agricultural Adjustment Administration) supplemented by information from manufacturers.
- (g) Equivalent quantity of raw cotton consumed in fabrics and yarns utilized in specified products, obtained by dividing net weight (Col. 6) by 100 minus processing loss (Col. 7).

APPENDIX

FOOTNOTES TO TABLE V (Concluded)

- (h) Pounds of raw cotton equivalents (Col. 8) divided by 478 (net weight of a cotton bale).
- (i) Ratio of cotton fiber to all other fibers or materials consumed according to fiber distributions as reported by Census of Manufactures, 1947; Bureau of the Census, Facts For Industry, 1949 and 1950; and/or trade members, unless otherwise indicated. NOTE: All percentage figures rounded to nearest whole numbers.
- (j) Estimated consumption of raw cotton. (Col. 8 multiplied by Col. 10.)
- (k) Pounds of raw cotton actually consumed, (Col. 11) divided by 478 (net weight of a cotton bale).
- (l) Trade estimates.
- (m) Estimate based on trade information supplemented by an index of shipments of coated abrasive materials, Survey of Current Business, 1950.
- (n) Fiber Consumption in Textiles Used for Automobile Interiors, a preliminary summary report, United States Department of Agriculture, Bureau of Agricultural Economics, December, 1950.
- (o) Trade information supplemented by data on fabric weights as contained in Staple Cotton Fabrics, John Hoye, 1942.
- (p) Estimate based on 9 months production as reported by Bureau of the Census, Facts For Industry, Series M15A, 1950.
- (q) Estimate based on data contained in Major Cotton Duck Markets, United States Department of Commerce, 1949; and the production of duck for the first 9 months as reported by Bureau of the Census, Facts For Industry, Series M15A, 1950.
- (r) Textile Bag Manufacturers Association.
- (s) Estimated on the basis of cement production during 1950 as reported by Bureau of the Mines, Mineral Industries Survey Monthly Cement Report, 1950.
- (t) Estimate based on number of books published during 1950, Survey of Current Business, 1950.
- (u) Computed by multiplying casket output during 1950 - National Association of Casket Manufacturers - by the average unit consumption of backing, covering, and lining materials as estimated by trade members.
- (v) Trade estimates, supplemented by consumption of cotton yarn in cordage and twine reported in Report of the Developing World Cotton Situation, Part A, International Cotton Advisory Committee, May, 1950. Revised estimates indicate that cordage and twine consumed 88,098,000 pounds or 184,300 bales of cotton in 1947; 85,500,000 pounds or 178,870 bales in 1948; and 72,700,000 pounds or 152,090 bales in 1949 instead of quantities reported in Cotton Counts Its Customers, 1947 and 1948-1949.
- (w) Trade estimates. Industry members indicated that their preliminary estimates for the period 1947 - 1949 were too high. In 1947, the 6,000,000 square yards of fabric which were produced consumed 18,250 bales of cotton; in 1948, 6,800,000 square yards consumed 20,680 bales of cotton; and in 1949, 6,000,000 square yards of cotton consumed 18,250 bales of cotton.
- (x) Estimate based on data supplied by the Thread Institute.
- (y) Estimated by applying an index of materials billed to the electrical industry, adjusted for price changes, to consumption data for 1946. Survey of Current Business, 1950 and Cotton Counts Its Customers, Supplement #3.
- (z) Estimated on the basis of information supplied by the United States Department of Agriculture.
- (aa) Estimated on the basis of luggage sales by department stores, after adjustment for price changes, Federal Reserve Bulletin, 1950. Distributed on the basis of information contained in Cotton in the Luggage Industry, National Cotton Council of America, 1950.
- (bb) Estimate based on procurement of mail bags by the United States Post Office Department. Weight per unit varied from 1949 due to use of lighter material in air mail bags.
- (cc) Estimated on the basis of sales of bedding, after price adjustment, Federal Reserve Bulletin, 1950.
- (dd) Estimated on the basis of meat output during 1950. Survey of Current Business, 1950.
- (ee) Estimated on the basis of shipments of asphalt impregnated fabrics during 1950. Survey of Current Business, 1950.
- (ff) Estimated on the basis of 9 months production reported by Bureau of the Census, Facts For Industry, Series M68A, 1950.
- (gg) Total output estimated on the basis of the number of man-hours worked in the rubber shoe industry during 1950. Monthly Labor Review, 1950. Distribution based on information supplied by members of the trade.
- (hh) Estimated by multiplying tobacco acreage harvested during 1950 - Crops and Markets, United States Department of Agriculture, 1950 - by requirements of material per acre harvested as estimated by trade members.
- (ii) Trade estimates. Actual 1948 and 1949 production totals were higher than were indicated in Cotton Counts Its Customers for 1948 and 1949. A total of 5,148,000 pounds of cotton yarn, requiring 10,770 bales of cotton, was consumed in producing venetian blind tapes during 1948, and 5,766,000 pounds of cotton yarn, requiring 12,060 bales was consumed in 1949.
- (jj) Trade estimates. Industry members estimate that the equivalent of 8,000,000 square yards of material, requiring 5,270 bales of cotton, were produced for sippers in 1948; and in 1949, 10,232,000 square yards, requiring 6,610 bales of cotton, were produced.
- * Represents only cotton's share of the market. Sufficient data were not available on which to base estimates of the total market.
