The Biggest Uses of Cotton in 1953

The 97 leading uses of cotton are presented in the array which begins on this page and continues through page 17. Articles are listed according to quantity of cotton consumed in their manufacture in the United States during 1953. For uses requiring less than 3,000 bales, consult the tables which begin on page 18.

Permanent Record Do Not Destroy

Foreword

Textile fiber competition in the United States was more intense during 1953 than in any previous year. Supplies were plentiful, price reductions occurred frequently, and consumer acceptance depended more than ever upon quality and promotion. With a buyer's market prevailing, competitive gains or losses were particularly significant.

In many apparel and household uses cotton's competitive position continued to strengthen because of the united effort by all segments of the cotton industry to provide better products and to inform the consumer of cotton's merits. Competing materials made further gains over cotton in some of the important industrial uses because of aggressive research and product specialization.

Cotton's versatile application affords its competitors with many targets. Cotton's success in meeting these challenges, by maintaining and expanding its current markets, depends upon the aggressive and persistent use of effective research, promotion,

and merchandising programs by the entire cotton industry.

The purpose of this study, and others in the series, is to provide the cotton industry and allied interest groups with a gauge for measuring significant changes in the quantity of cotton and other materials consumed in principal uses. Without indicators of market size, the industry would have no basis for appraising market gains and losses or evaluating the effectiveness of its programs to expand consumption of cotton and cotton products. With market size measurements as a guide, the industry can focus its research and sales activities on outlets which provide the biggest market opportunities for cotton. Over a period of years, the influence of these activities can be measured by changes in the quantity of materials consumed.

The interest and cooperation of the many individuals who contributed information for use in this statistical measurement of fiber consumption in principal uses is acknowledged with appreciation.

INTRODUCTION

The revised 1952 and preliminary 1953 estimates contained in this publication are presented as the most reliable data which the Council staff has been successful in obtaining from published literature, trade associations, private companies, and individuals. Whenever possible, estimates were based on production statistics compiled by the Bureau of the Census and recognized trade associations. Some estimates, however, were based on industry statistics, opinions, and impressions which provided the best information available. Evaluations and computations were checked and rechecked in an attempt to eliminate or correct misinterpretations of data and tabulation errors.

Substantial changes, which have been acknowledged and explained by footnotes, were made in some of the revised 1952 estimates because more reliable production statistics and conversion factors were obtained. Although estimates for 1953 are for the entire calendar year, many of the estimates were based on production and consumption during the first three quarters. It should be recognized that substantial revisions may be required in final estimates for any uses in which abnormal production and consumption practices may have occurred during the last quarter of 1953.

All quantity estimates relate to the volume of raw cotton required to produce that quantity of a given article which was manufactured in its final form in the United States during the calendar years 1952 and 1953 regardless of whether or not the item was actually used by the ultimate consumer. As in previous editions of this publication, the subject matter is presented in three parts:

1. Beginning on page 2 and continuing along the bottom of succeeding pages, the largest uses for cotton during 1953 are presented in a graphic array according to their size. This array provides a quick view of major markets and of the relative size of each.
2. Beginning on page 5, the principal uses and sub-uses for cotton are listed in tabular form with estimates of the quantity of cotton consumed in each. The tabular material is arranged in three major classifications: apparel, household, and industrial. The apparel classification is further subdivided into men's, youths', and boys'; women's, misses', and juniors'; and children's and infants'.
3. Beginning on page 18, an appendix provides a further breakdown of each major classification with detailed data on production, conversion factors, and sources of information.

Throughout the report, major uses have been keyed with a numerical code number and arranged in alphabetical order to facilitate reference to any part of the report.

The "apparel" and "household" uses are substantially what the terms imply, except that articles whose cotton content is quite secondary to some other material—the leather in shoes for example—are classified as "industrial." In keeping with general practices, the term "industrial" has been employed to cover all uses other than "apparel" and "household."

SUMMARY OF ESTIMATES FOR 1952 AND 1953 (478-lb. net weight bales)

APPAREL	1952	1953
Men's, Youths', and Boys'	1,908,400	2,030,860
Women's, Misses', and Juniors'	778,060	796,630
Children's and Infants'	533,970	559,560
HOUSEHOLD	3,220,430	3,387,050
INDUSTRIAL	2,650,120	2,733,670
	2,189,620	1,938,240
Total Bales Consumed in Uses Included in This Report	8,060,170	8,058,960
Consumed in Uses Not Included in This Report	1,353,940	1,497,310
Total Domestic Mill Consumption of Raw Cotton	9,414,110	9,556,270
Percent of Consumption Covered by This Report	85.6%	84.3%

APPENDIX

Statistics on production, weight per unit, non-cotton content, processing loss, percent of the market held by cotton, and the estimated quantity of cotton consumed in each market are presented below. As a result of space limitations, the complete statistical tabulations used to arrive at the separate estimates for each use and sub-use have not been presented. If the reader is interested in the tabulations, they may be reproduced by the following steps:

- a. Unit production multiplied by average weight per unit equals gross weight of fabric;
- b. Gross weight of fabric multiplied by percent non-cotton content equals weight of non-cotton content;
- c. Gross weight of fabric minus weight of non-cotton content equals net weight of fabric;
- d. Net weight of fabric divided by (100 minus percent processing loss) equals raw cotton equivalent in pounds;
- e. Raw cotton equivalent in pounds divided by 478 equals raw cotton equivalent in bales;
- f. Raw cotton equivalent (pounds or bales) multiplied by the percent of the market held by cotton equals quantity of cotton consumed (pounds or bales);
- g. Raw cotton equivalent (pounds or bales) minus quantity of cotton consumed (pounds or bales) equals total consumption of competing materials (pounds or bales).

Insofar as possible, production data were obtained from Facts For Industry reports of the Bureau of the Census, United States Department of Commerce and from information published by trade or industry organizations. Where such information was inadequate, supplementary data were obtained from industry representatives and private companies.

Conversion factors are based on typical weights per unit, non-cotton contents, and losses incurred in processing; as reported by manufacturers, trade associations, and government agencies. In some instances the conversion factors which appear in this publication do not reconcile with those employed in previous editions because of changes which have occurred in the quantity or type of materials required for a specific use.

Although the purpose of this report is not to show the consumption of materials other than cotton, the quantity of competing materials consumed in many uses can be determined from the percentage of the market held by cotton. In certain uses, however, the quantity of competing materials cannot be determined because the estimates cover only cotton's share of the market. Such uses are marked by an asterisk.

Comments, additional data, and suggestions for improving future editions of this publication will be appreciated.

TABLE I: MEN'S, YOUTHS', AND BOYS' WEARING APPAREL, 1952-1953

- (a) Source of production statistics is Bureau of the Census, Facts For Industry, 1952 and 1953, and trade information.
- (b) Ratio of cotton fiber to all other fibers and materials consumed, according to Bureau of the Census, Facts For Industry, 1952 and 1953; and/or trade information unless otherwise indicated.
- (c) 478-pound net weight bales.
- (d) Actual weight per unit. NOTE: All weights are in terms of cotton equivalents obtained by estimating the average weight of each item when fabricated from 100% cotton.
- (e) Any material or substance other than cotton, such as starches and coatings.
- (f) Average waste incurred in processing raw cotton into finished fabrics or yarns. NOTE: Since calculations are based on yards of fabric required per unit, etc., allowances are included for cutting losses.
- (g) Bureau of the Census, Facts For Industry, M670, Summary 1952; and trade information.
- (h) Estimate based on trade information.
- (i) Bureau of the Census, Facts For Industry, M67B, Summary 1952, monthly reports 1953; and trade information.
- (j) Bureau of the Census, Facts For Industry, M67D, Summary 1952; and trade information.
- (k) National Association of Hosiery Manufacturers, Hosiery Statistics, 1952 and 1953.
- (l) Estimate based on production of knit outerwear shirts made by underwear producers as reported in Bureau of the Census, Facts For Industry, M670, quarterly reports 1953.
- (m) Bureau of the Census, Facts For Industry, M67C, Summary 1952, and quarterly reports 1953.
- * Represents only cotton's share of the market. Sufficient data were not available on which to base estimates of the total market.

TABLE III: CHILDREN'S AND INFANTS' WEARING APPAREL, 1952-1953

- (a) Source of production statistics is Bureau of the Census, Facts For Industry, 1952 and 1953; and trade information.
- (b) Ratio of cotton fiber to all other fibers and materials consumed, according to Bureau of the Census, Facts For Industry, 1952 and 1953; and/or trade information unless otherwise indicated.
- (c) 470-pound net weight bales.
- (d) Actual weight per unit. NOTE: All weights are in terms of cotton equivalents obtained by estimating the average weight of each item when fabricated from 100% cotton.
- (e) Any material or substance other than cotton, such as starches and coatings.
- (f) Average waste incurred in processing raw cotton into finished fabrics or yarns. NOTE: Since calculations are based on yards of fabric required per unit, etc., allowances are included for cutting losses.
- (g) Bureau of the Census, Facts For Industry, M67G, Summary 1952; and trade information.
- (h) Bureau of the Census, Facts For Industry, M67G, Summary 1952; and trade information. NOTE: Estimates in previous editions of Cotton Counts Its Customers are not comparable to 1952 and 1953 data as a result of changes in Census classifications.
- (i) Bureau of the Census, Facts For Industry, M67K, Summary 1952; and trade information.
- (j) Bureau of the Census, Facts For Industry, M67K, Summary 1952; and trade information. NOTE: Production of infants' woven nightgowns

- and kimono reported in previous editions of Cotton Counts Its Customers under item 37 are included in item 45.
- (k) Estimate based on production of birdseye, and gauze diaper cloth reported in Bureau of the Census, Facts For Industry, M15A, 1952 and 1953; and trade information. A special tabulation from the Bureau of the Census in 1953 indicated that diaper production as reported in previous editions of Cotton Counts Its Customers has been understated by approximately 20 percent.
- (l) Bureau of the Census, Facts For Industry, M67D, Summary 1952; and trade information.
- (m) National Association of Hosiery Manufacturers, Hosiery Statistics, 1952 and 1953.
- (n) Bureau of the Census, Facts For Industry, M67J, Summary 1952; and trade information.
- (o) Bureau of the Census, Facts For Industry, M67J, and M67K, Summary 1952; and trade information.
- (p) Bureau of the Census, Facts For Industry, M67C, Summary 1952; and trade information.
- (q) Bureau of the Census, Facts For Industry, M67K, Summary 1952; and trade information. NOTE: Estimates in previous editions of Cotton Counts Its Customers are not comparable to 1952 and 1953 data as a result of changes in Census classification.

APPENDIX

TABLE IV: HOUSEHOLD USES, 1952-1953

- (a) Source of production statistics is Bureau of the Census, Facts For Industry, 1952 and 1953; and trade information.
 - (b) Ratio of cotton fiber to all other fibers and materials consumed, according to Bureau of the Census, Facts For Industry, 1952 and 1953; and/or trade information unless otherwise indicated.
 - (c) 478-pound net weight bales.
 - (d) Actual weight per unit. NOTE: All weights are in terms of cotton equivalents obtained by estimating the average weight of each item when fabricated from 100% cotton.
 - (e) Any material or substance other than cotton, such as starches and coatings.
 - (f) Average waste incurred in processing raw cotton into finished fabrics or yarns. NOTE: Since calculations are based on yards of fabric required per unit, etc., allowances are included for cutting losses.
 - (g) Estimate based on Bureau of the Census, Facts For Industry, M153, "Tufted Textile Products, and Woven and Knitted Cotton Rugs", 1952, and first six months 1953.
 - (h) Estimate based on production of jacquard and other woven bedspread fabrics reported in Bureau of the Census, Facts For Industry, M15A, Summary 1952, and quarterly reports 1953.
 - (i) Trade information indicated that 90% of total production of ticking — reported in Bureau of the Census, Facts For Industry, M15A, Summary 1952, and quarterly reports 1953 — was consumed as mattress and pillow ticking.
 - (j) Bureau of the Census, Facts For Industry, M15A, Summary 1952, and quarterly reports 1953; Facts For Industry, M15H, Summary 1952, and monthly reports 1953.
 - (k) Estimate based on trade information.
 - (l) Estimate based on trade information, and quantity of fabrics finished for use in curtains, draperies, upholstery, table cloths, and napkins as reported in Bureau of the Census, Facts For Industry, M150, Summary 1952.
 - (m) Estimate based on Cotton Fabrics in Upholstery, Drapes, and Slip Covers, National Cotton Council of America, 1953; Bureau of the Census, Facts For Industry, M15A, M150, M150, and M15H, Summaries 1952, and quarterly reports 1953; and trade information.
 - (n) A weight of .579 pounds per square yard was used in calculating 1953 estimate as a result of changes in distribution among drapery, slip-cover, and upholstery fabrics.
 - (o) Estimate based on Federal Reserve Bulletin index, adjusted for price changes, of department store sales of these products, 1952 and 1953.
 - (p) Estimate based on mattress production as reported in Bureau of the Census, Facts For Industry, M54A, Summary 1952; and Federal Reserve Bulletin index, adjusted for price changes, of department store sales of mattresses, springs, and studio beds, 1952 and 1953.
 - (q) Trade information indicated that 12% of carded percales and muslins, 14% of combed percales, and 80% of pillow tubing — reported in Bureau of the Census, Facts For Industry, M15A, Summary 1952, and quarterly reports 1952 — was consumed in pillowcases.
 - (r) Estimate based on Cotton in Retail Piece Goods, National Cotton Council of America, 1952; Federal Reserve Bulletin index, adjusted for price changes, of department store sales of piece goods, 1952 and 1953; and trade information.
 - (s) Bureau of the Census, Facts For Industry, M15H, Summary 1952, and monthly reports 1953; and trade information.
 - (t) Trade information indicated that 75% of carded percales and muslins, and 86% of combed percales — reported in Bureau of the Census, Facts For Industry, M15A, Summary 1952, and quarterly reports 1953 — was consumed in sheets.
 - (u) Estimate based on Cotton Fabrics in Upholstery, Drapes, and Slip Covers, National Cotton Council of America, 1953; and Federal Reserve Bulletin index, adjusted for price changes, of department store sales of draperies, curtains, and upholstery, 1952 and 1953.
 - (v) Bureau of the Census, Facts For Industry, M15A, Summary 1952, and quarterly reports 1953; Facts For Industry, M150, Summary 1952; and trade information.
 - (w) Estimate based on data provided by the Thread Institute.
 - (x) Estimate based on production reported in Bureau of the Census, Facts For Industry, M15A, Summary 1952, quarterly reports 1953; and trade information.
 - (y) Bureau of the Census, Facts For Industry, M15K, Summaries 1952 and 1953.
 - (z) Estimate based on production of vacuum cleaners reported in Survey of Current Business, 1952 and 1953; and trade information.
- * Represents only cotton's share of the market. Sufficient data were not available on which to base estimates of the total market.

APPENDIX

TABLE V: INDUSTRIAL USES, 1952-1953

- (a) Source of production statistics is Bureau of the Census, Facts For Industry, 1952 and 1953; and trade information.
- (b) Ratio of cotton fiber to all other fibers and materials consumed, according to Bureau of the Census, Facts For Industry, 1952 and 1953; and/or trade information unless otherwise indicated.
- (c) 478-pound net weight bales.
- (d) Actual weight per unit. NOTE: All weights are in terms of cotton equivalents obtained by estimating the average weight of each item when fabricated from 100% cotton.
- (e) Any material or substance other than cotton, such as starches and coatings.
- (f) Average waste incurred in processing raw cotton into finished fabrics or yarns. NOTE: Since calculations are based on yards of fabric required per unit, etc., allowances are included for cutting losses.
- (g) Estimate based on trade information.
- (h) Estimate based on trade information, and shipments of coated abrasives as reported in Survey of Current Business, 1952 and 1953.
- (i) Estimate based on Automobile Manufacturers Discuss Fabrics and Fibers for Passenger Cars, United States Department of Agriculture, 1951; and trade information.
- (j) Weight of fabric before coating.
- (k) Bureau of the Census, Facts For Industry, M15A, Summary 1952, and quarterly reports 1953. NOTE: Estimate includes a small amount of cotton and rayon tire cord, principally rayon, consumed in mechanical V-belts. Production of synthetic tire cord and fabric is actual weight of synthetics, as reported in Facts For Industry, M15A.
- (l) Converted to raw cotton equivalents on the assumption that 0.84 pounds of rayon and/or nylon cord and fabric is equivalent to 1 pound of cotton cord and fabric, and that 425 pounds of rayon and/or nylon is equivalent to one 478-pound bale of raw cotton.
- (m) Estimate based on Bureau of the Census, Facts For Industry, M15A-02, Supplement, 1954, "Cotton Duck, Distribution By End Use, 1952"; and trade information. NOTE: Estimates for 1952 and 1953 include ducks, drills, and twills; and include an undetermined quantity of these fabrics consumed in porch and lawn furniture. Estimates in previous editions of Cotton Counts Its Customers excluded drills and twills, and were understated by approximately 25%.
- (n) Estimate based on data provided by Textile Bag Manufacturers Association.
- (o) Estimate based on data provided by Textile Bag Manufacturers Association. Excludes 6,018,000 linear yards in 1952, and 6,448,000 linear yards in 1953, of osanburg estimated to have been consumed in cotton pick sacks.
- (p) Estimate based on trade information; and Cotton in the Belting Industry, National Cotton Council of America, March 1952. Estimated production of leather belting represents pounds of leather.
- (q) Estimate based on trade information; and Fibers, Opinions and Practices Among Manufacturers of Cordage and Twine, United States Department of Agriculture, 1953.
- (r) Bureau of the Census, Facts For Industry, M15A, Summary 1952, and quarterly reports 1953.
- (s) Estimate based on trade information; and Fibers, Opinions and Practices Among Manufacturers of Cordage and Twine, United States Department of Agriculture, 1953. NOTE: Seine twine estimates in previous editions of Cotton Counts Its Customers, were overstated each year by the amount reported for fish netting.
- (t) Estimate based on trade information, and Cotton in Industrial Uses, National Cotton Council of America, March 1952.
- (u) Estimate based on data provided by the Thread Institute.
- (v) Estimate based on trade information; Bureau of the Census, Facts For Industry, M15A, Summary 1952, and quarterly reports 1953; and Cotton in the Laundry Industry, National Cotton Council of America, 1949.
- (w) Estimate based on trade information; Cotton in the Luggage Industry, National Cotton Council of America, 1950; and Federal Reserve Bulletin index, adjusted for price changes, of department store sales of luggage.
- (x) Estimate based on procurement of mail bags by the United States Post Office Department, 1952 and 1953.
- (y) Bureau of the Census, Facts For Industry, M15K, Summaries 1952 and 1953.
- (z) Estimate based on trade information; Cotton in the Shoe Industry, National Cotton Council of America, 1948; and Bureau of the Census, Facts For Industry, M68A, 1952 and 1953.
- (aa) Estimate based on Bureau of the Census, Facts For Industry, M15A-02, Supplement, 1954, "Cotton Duck, Distribution by End Use, 1952".
- (bb) A weight of .753 pounds per square yard was used in calculating 1953 estimate, as a result of a decline in production of military tarpaulins. Weight per yard of fabric consumed in military tarpaulins is normally heavier than weight per yard of fabric consumed in civilian tarpaulins.
- (cc) Estimate based on tobacco acreage harvested 1952 and 1953, as reported in Crops and Markets, United States Department of Agriculture.
- * Represents only cotton's share of the market. Sufficient data were not available on which to base estimates of the total market.
