The Biggest Uses of Cotton in 1954

The 85 leading uses of cotton are presented in the array which begins on this page and continues through page 16. Articles are listed according to quantity of cotton consumed in their manufacture in the United States during 1954. For uses requiring less than 5,000 bales, consult the tables which begin on page 17.

Permanent Record Do Not Destroy

Introduction

The revised 1953 and preliminary 1954 estimates contained in this publication are presented as the most reliable data which the Council staff has been successful in obtaining from published literature, trade associations, private companies, and individuals. Whenever possible, estimates were based on production statistics compiled by the Bureau of the Census and recognized trade associations. Some estimates, however, were based on industry statistics, opinions, and impressions which provided the best information available. Evaluations and computations were checked and rechecked in an attempt to eliminate or correct misinterpretations of data and tabulation errors.

Substantial changes, which have been acknowledged and explained by footnotes, were made in some of the revised 1953 estimates because more reliable production statistics and conversion factors were obtained. Although estimates for 1954 are for the entire calendar year, many of the estimates were based on production and consumption during the first three quarters. It should be recognized that substantial revisions may be required in final estimates for any uses in which abnormal production

and consumption practices may have occurred during the last quarter of 1954.

All quantity estimates relate to the volume of raw cotton required to produce that quantity of a given article which was manufactured in its final form in the United States during the calendar years 1953 and 1954 regardless of whether or not the item was actually used by the ultimate consumer. All estimates reported in bales have been rounded to the nearest ten bales. As in previous editions of this publication, the subject matter is presented in three parts:

1. Beginning on page 2 and continuing along the bottom of succeeding pages, the largest uses for cotton during 1954 are presented in a graphic array according to their size. This array provides a quick view of major markets and of the relative size of each.
2. Beginning on page 5, the principal uses and sub-uses for cotton are listed in tabular form with estimates of the quantity of cotton consumed in each. The tabular material is arranged in three major classifications: apparel, household, and industrial. The apparel classification is further subdivided in-

Formosa Cotton Co. Inc. Destroy

to men's, youths', and boys'; women's, misses', and juniors'; and children's and infants'.

- Beginning on page 17, an appendix provides a further breakdown of each major classification with detailed data on production, conversion factors, and sources of information.

Throughout the report, major uses have been keyed with a numerical code number

and arranged in alphabetical order to facilitate reference to any part of the report.

The "apparel" and "household" uses are substantially what the terms imply, except that articles whose cotton content is quite secondary to some other material — the leather in shoes for example — are classified as "industrial". In keeping with general practices, the term "industrial" has been employed to cover all uses other than "apparel" and "household".

SUMMARY OF ESTIMATES FOR 1953 AND 1954

(478-lb. net weight bales)

APPAREL	<u>1953</u>	<u>1954</u>
Men's, Youths', and Boys'.....	2,047,300	1,929,550

APPENDIX

Statistics on production, weight per unit, non-cotton content, processing loss, percent of the market held by cotton, and the estimated quantity of cotton consumed in each market are presented below. As a result of space limitations, the complete statistical tabulations used to arrive at the separate estimates for each use and sub-use have not been presented. If the reader is interested in the tabulations, they may be reproduced by the following steps:

- Unit production multiplied by average weight per unit equals gross weight of fabric;
- Gross weight of fabric multiplied by percent non-cotton content equals weight of non-cotton content;
- Gross weight of fabric minus weight of non-cotton content equals net weight of fabric;
- Net weight of fabric divided by (100 minus percent processing loss) equals raw cotton equivalent in pounds;
- Raw cotton equivalent in pounds divided by 478 equals raw cotton equivalent in bales;
- Raw cotton equivalent (pounds or bales) multiplied by the percent of the market held by cotton equals quantity of cotton consumed (pounds or bales);
- Raw cotton equivalent (pounds or bales) minus quantity of cotton consumed (pounds or bales) equals total consumption of competing materials (pounds or bales).

Insofar as possible, production data were obtained from *Facts For Industry* reports of the Bureau of the Census, United States Department of Commerce and from information published by trade or industry organizations. Where such information was inadequate, supplementary data were obtained from industry representatives and private companies.

Conversion factors are based on typical weights per unit, non-cotton contents, and losses incurred in processing; as reported by manufacturers, trade associations, and government agencies. In some instances, the conversion factors which appear in this publication do not reconcile with those employed in previous editions because of changes which have occurred in the quantity or type of materials required for a specific use.

Although the purpose of this report is not to show the consumption of materials other than cotton, the quantity of competing materials consumed in many uses can be determined from the percentage of the market held by cotton. In certain uses, however, the quantity of competing materials cannot be determined because the estimates cover only cotton's share of the market. Such uses are marked by an asterisk.

Comments, additional data, and suggestions for improving future editions of this publication will be appreciated.

APPAREL USES

TABLE I: MEN'S, YOUTHS', AND BOYS' WEARING APPAREL, 1953-1954

- (a) Source of production statistics is Bureau of the Census, Facts For Industry, 1953 and 1954; and trade information.
- (b) Ratio of cotton fiber to all other fibers and materials consumed, according to Bureau of the Census, Facts For Industry, 1953 and 1954; and/or trade information unless otherwise indicated.
- (c) 478-pound net weight bales.
- (d) Actual weight per unit, calculated on quantity of fabric or yarn required per unit. NOTE: All weights are in terms of cotton equivalents obtained by estimating the average weight of each item when fabricated from 100% cotton.
- (e) Any material or substance other than cotton, such as starches and coatings.
- (f) Average waste incurred in processing raw cotton into finished fabrics or yarns. NOTE: Since calculations are based on yards of fabric required per unit, etc., allowances are included for cutting losses.
- (g) Bureau of the Census, Facts For Industry, M670, Summary 1953; and trade information.
- (h) Estimate based on trade information.
- (1) Bureau of the Census, Facts For Industry, M67B, Summary 1953, monthly reports 1954; and trade information.
- (j) Bureau of the Census, Facts For Industry, M67D, Summary 1953, and trade information.
- (k) National Association of Hosiery Manufacturers, Hosiery Statistics, 1953, Condensed Hosiery Statistics, 1954; and trade information.
- (l) Estimate based on production of knit outerwear shirts by underwear producers as reported in Bureau of the Census, Facts For Industry, M67C, quarterly reports 1954.
- (m) Bureau of the Census, Facts For Industry, M67C, Summary 1953, and quarterly reports 1954.
- * Represents only cotton's share of the market. Sufficient data were not available to estimate total market.

TABLE III: CHILDREN'S AND INFANTS' WEARING APPAREL, 1953-1954

- (a) Source of production statistics is Bureau of the Census, Facts For Industry, 1953 and 1954; and trade information.
- (b) Ratio of cotton fiber to all other fibers and materials consumed, according to Bureau of the Census, Facts For Industry, 1953 and 1954; and/or trade information unless otherwise indicated.
- (c) 478-pound net weight bales.
- (d) Actual weight per unit, calculated on quantity of fabric or yarn required per unit. NOTE: All weights are in terms of cotton equivalents obtained by estimating the average weight of each item when fabricated from 100% cotton.
- (e) Any material or substance other than cotton, such as starches and coatings.
- (f) Average waste incurred in processing raw cotton into finished fabrics or yarns. NOTE: Since calculations are based on yards of fabric required per unit, etc., allowances are included for cutting losses.
- (g) Bureau of the Census, Facts For Industry, 1967G, Summary 1953; and trade information.
- (h) Bureau of the Census, Facts For Industry, 1967K, Summary 1953; and trade information.
- (i) Estimate based on production of birdseye and gauze diaper cloth reported in Bureau of the Census, Facts For Industry, M15A, Summary 1953, quarterly reports 1954; and trade information.
- (j) Bureau of the Census, Facts For Industry, 1967D, Summary 1953; and trade information.
- (k) National Association of Hosiery Manufacturers, Hosiery Statistics, 1953, and Condensed Hosiery Statistics, 1954.
- (l) Bureau of the Census, Facts For Industry, 1967J, Summary 1953; and trade information.
- (m) Bureau of the Census, Facts For Industry, 1967C, Summary 1953, and quarterly reports 1954.

APPENDIX

TABLE IV: HOUSEHOLD USES, 1953-1954

- (a) Source of production statistics is Bureau of the Census, Facts For Industry, 1953 and 1954; and trade information.
 - (b) Ratio of cotton fiber to all other fibers and materials consumed, according to Bureau of the Census, Facts For Industry, 1953 and 1954; and/or trade information unless otherwise indicated.
 - (c) 478-pound net weight bales.
 - (d) Actual weight per unit, calculated on quantity of fabric or yarn required per unit. NOTE: All weights are in terms of cotton equivalents obtained by estimating the average weight of each item when fabricated from 100% cotton.
 - (e) Any material or substance other than cotton, such as starches and coatings.
 - (f) Average waste incurred in processing raw cotton into finished fabrics or yarns. NOTE: Since calculations are based on yards of fabrics required per unit, etc., allowances are included for cutting losses.
 - (g) Estimate based on Bureau of the Census, Facts For Industry, M153, 1953, and first six months of 1954. NOTE: Estimated consumption of rayon tufting yarn in bedspreads during 1954 was less than one-half of one percent of total yarn consumption reported in M153.
 - (h) Estimate based on production of Jacquard and other woven bedspread fabrics as reported in Bureau of the Census, Facts For Industry, M15A, Summary 1953, and quarterly reports 1954.
 - (i) Trade information indicated that 90% of total production of ticking — reported in Bureau of the Census, Facts For Industry, M15A, Summary 1953, and quarterly reports 1954 — was consumed as mattress and pillow ticking.
 - (j) Bureau of the Census, Facts For Industry, M15A, Summary 1953, and quarterly reports 1954; Facts For Industry, M15H, Summary 1953, and first three quarters 1954; and trade information. NOTE: As a result of revisions of typical weights per square yard, estimates for years prior to 1953 are not strictly comparable. Revised estimates for the period 1947-1952 are available on request.
 - (k) Estimate based on trade information.
 - (l) Estimate based on Cotton Fabric in Upholstery, Drapes, and Slip Covers, National Cotton Council of America, 1953; Bureau of the Census, Facts For Industry, M15A, M15G, M15J, and M15H, Summaries 1953, and quarterly reports 1954; and trade information.
 - (m) Estimate based on Federal Reserve Bulletin index, adjusted for price changes, of department store sales of these products, 1953 and 1954; and trade information.
 - (n) Estimate based on mattress production as reported in Bureau of the Census, Facts For Industry, M54A, Summary 1953; and Federal Reserve Bulletin index, adjusted for price changes, of department store sales of mattresses, springs, and studio beds, 1953 and 1954.
 - (o) Trade information indicated that 12% of carded percales and muslins, 14% of combed percales, and 80% of pillow tubing — reported in Bureau of the Census, Facts For Industry, M15A, Summary 1953, and quarterly reports 1954 — was consumed in pillowcases.
 - (p) Estimate based on Cotton in Retail Piece Goods, National Cotton Council of America, 1952; Federal Reserve Bulletin index, adjusted for price changes, of department store sales of piece goods, 1953 and 1954.
 - (q) Estimate based on production reported in Bureau of the Census, Facts For Industry, M15H, Summary 1953, and first three quarters 1954; and trade information.
 - (r) Trade information indicated that 75% of carded percales and muslins, and 86% of combed percales — reported in Bureau of the Census, Facts For Industry, M15A, Summary 1953, and quarterly reports 1954 — was consumed in sheets.
 - (s) Estimate based on Cotton Fabric in Upholstery, Drapes, and Slip Covers, National Cotton Council of America, 1953; Federal Reserve Bulletin index, adjusted for price changes, of department store sales of draperies, curtains, and upholstery, 1953 and 1954.
 - (t) Bureau of the Census, Facts For Industry, M15A, Summary 1953, and quarterly reports 1954; Facts For Industry, M15G, Summary 1953; and trade information.
 - (u) Excludes spun rayon, filament and spun rayon, and rayon and wool.
 - (v) Estimate based on data provided by the Thread Institute.
 - (w) Estimate based on production reported in Bureau of the Census, Facts For Industry, M15A, Summary 1953, and quarterly reports 1954; and trade information.
 - (x) Estimate based on production reported in Bureau of the Census, Facts For Industry, M15K, Summary 1953; and trade information.
 - (y) Estimate based on vacuum cleaner production reported in Survey of Current Business, 1953 and 1954; and trade information. NOTE: Estimates include an undetermined quantity of fabric consumed in commercial type vacuum cleaners.
- * Represents only cotton's share of the market. Sufficient data were not available to estimate total market.

TABLE V: INDUSTRIAL USES, 1953-1954

- (a) Source of production statistics is Bureau of the Census, Facts For Industry, 1953 and 1954; and trade information.
- (b) Ratio of cotton fiber to all other fibers and materials consumed, according to Bureau of the Census, Facts For Industry, 1953 and 1954; and/or trade information unless otherwise indicated.
- (c) 478-pound net weight bales.
- (d) Actual weight per unit, calculated on quantity of fabric or yarn required per unit. NOTE: All weights are in terms of cotton equivalents obtained by estimating the average weight of each item when fabricated from 100% cotton.
- (e) Any material or substance other than cotton, such as starches and coatings.
- (f) Average waste incurred in processing raw cotton into finished fabrics or yarns. NOTE: Since calculations are based on yards of fabric required per unit, etc., allowances are included for cutting losses.
- (g) Estimate based on trade information.
- (h) Estimate based on shipments of coated abrasives as reported in Survey of Current Business, 1953 and 1954; and trade information.
- (i) Estimate based on trade information; and Automobile Manufacturers Discuss Fabrics and Fibers for Passenger Cars, United States Department of Agriculture, 1951.
- (j) As a result of increased usage of coated fabrics for sidewalls, the 1954 estimate was computed on the basis of 4% non-cotton content and 1% processing loss.
- (k) Bureau of the Census, Facts For Industry, MISA, Summary 1953, and quarterly reports 1954. NOTE: Estimate includes a small amount of cotton and rayon tire cord and fabric consumed in mechanical V-belts, hose, and other end uses.
- (l) Converted to raw cotton equivalent on the assumption that 0.24 pounds of rayon and/or nylon cord and fabric is equivalent to 1 pound of cotton cord and fabric, and that 425 pounds of rayon and/or nylon is equivalent to one 478-pound bale of raw cotton.
- (m) Estimate based on Bureau of the Census, Facts For Industry, MISA-O2 Supplement, 1954, "Cotton Duck Distribution By End Use, 1952"; and trade information.
- (n) Estimate based on data provided by Textile Bag Manufacturers Association.
- (o) Estimate based on trade information; and Cotton in the Belting Industry, National Cotton Council of America, March 1952. NOTE:
- (p) Estimated production of leather belting; represents pounds of leather. Estimate based on trade information; and Fibers, Opinions, and Practices Among Manufacturers of Cordage and Twine, United States Department of Agriculture, 1953.
- (q) Bureau of the Census, Facts For Industry, MISA, Summary 1953, and quarterly reports 1954. NOTE: Estimate includes only fabrics reported as filter cloth in Facts For Industry, MISA. Trade information indicates that total fabric consumption for filtration purposes is considerably larger than yardage reported for filter cloth in MISA.
- (r) Estimate based on trade information; and Cotton in Industrial Hose, National Cotton Council of America, March 1952.
- (s) Estimate based on data provided by the Thread Institute.
- (t) Estimate based on trade information; and Fibers and Other Materials Used in Insulating Wire and Cable, June 1954, United States Department of Agriculture.
- (u) Estimate based on trade information; Bureau of the Census, Facts For Industry, MISA, Summary 1953, and quarterly reports 1954; and Cotton in the Laundry Industry, National Cotton Council of America, 1949.
- (v) Estimate based on trade information; Cotton in the Luggage Industry, National Cotton Council of America, 1950; and Federal Reserve Bulletin index, adjusted for price changes, of department store sales of luggage.
- (w) Estimate based on procurement of mail bags by the United States Post Office Department, 1953 and 1954.
- (x) Bureau of the Census, Facts For Industry, MISA, Summary 1953; and trade information.
- (y) Bureau of the Census, Facts For Industry, MISA, MISH, Summaries 1953, and quarterly reports 1954.
- (z) Bureau of the Census, Facts For Industry, MISA, Summary 1953, and quarterly reports 1954; and trade information.
- (aa) Bureau of the Census, Facts For Industry, MISA, Summary 1953, and monthly reports 1954; Cotton in the Shoe Industry, National Cotton Council of America, 1948; and trade information.
- (bb) Estimate based on tobacco acreage harvested 1953 and 1954, as reported in Crops and Markets, United States Department of Agriculture. Represents only cotton's share of the market. Sufficient data were not available to estimate total market.
