1992 All Cotton Ginnings

Texas

Cotton Ginnings 1992: A total of 15.8 million running bales were ginned during the 1992 season, 8 percent below the 1991 ginnings of 17.1 million bales. Ginnings generally exceeded the 1991 pace mainly due to a smaller crop but also because of few weather related delays. Oklahoma and the Carolina's experienced some delays from excessive rain during harvest.

Cotton Production 1992: All cotton production in the United States totaled 16.2 million bales in 1992. That output, 8 percent below 1991 level, becomes the sixth largest production. Upland cotton production, at 15.7 million bales, was 9 percent below the 1991 level. American-Pima production of 508,300 bales, up 28 percent from 1991, represents the second largest production on record.

Area planted to all cotton totaled 13.2 million acres, a 6 percent decrease from 1991. Harvested area, at 11.1 million acres, was down 14 percent from the previous year. Abandonment during 1992 amounted to 16 percent of planted acres, compared with 8 percent in 1991. The larger abandonment was due to adverse weather early in the season in Texas, which forced producers to abandon 35 percent of the acreage. Yields for the U.S. averaged 699 pounds per acre, 47 pounds above 1991.

The Texas-Oklahoma production, at 3.48 million bales, was down 30 percent from 1991. Texas producers experienced poor planting conditions, and abandoned nearly 2 million acres early in the season.

Plantings of the 1992 Upland crop equaled or exceeded the normal pace in the Delta. Although Arkansas realized a record high yield of 823 pounds per harvested acre, Louisiana and Mississippi yields declined from their record high 1991 levels.

Production in the Southeast decreased 9 percent from the previous year. Production increases in Alabama and Georgia were offset by lower production levels in the Carolina's.

Western States' production increased 2 percent from the previous year to 3.59 million bales. The higher level was due to an 11 percent increase in California's production, although production decreased in Arizona and New Mexico. While California realized a record high yield of 1,359 pounds per harvested acre, Arizona's crop was adversely affected by Whitefly infestation and weather.

Cottonseed: Cottonseed production in 1992 totaled 6.23 million tons, down 10 percent from 1991.

Report Features

The next "Cotton Ginnings " report will be released at 3:00 p.m. ET on August 11, 1993.
