Cotton Quality - United States

1979 Crop

Introduction

Almost 24 percent of the 1979 upland cotton crop was in white grades 31 and higher, according to the Cotton Division, Agricultural Marketing Service, USDA. Staples 35 and 36 accounted for nearly 52 percent of ginnings. Cotton miking in the 35-49 range comprised almost 67 percent of ginnings. Over 89 percent of ginnings showed fiber strength of 80,000 pounds per square inch or stronger. Average staple length of the 1979 crop was 33.9 thirty-seconds inches; predominant grade was 41, average mike was 40 and average fiber strength was 86,700 psi.

Upland grade. White grades 31 and higher made up almost 24 percent of upland ginnings from the 1979 crop. This was the largest proportion in the higher white grades since 1964 and compares with 13 percent last season and 22 percent in 1977. Grade 41, the predominant grade since the 1962 crop, accounted for over 26 percent of ginnings, down from 35 percent a year earlier and 29 percent two years ago. White grades comprised over 67 percent of the 1979 crop, down from 69 percent and 71 percent in 1978 and 1977, respectively. Light Spotted grades made up 28 percent of ginnings, about the same as a year earlier and up from 26 percent two years ago. Spotted grades accounted for almost four percent of the 1979 crop compared with slightly over two percent the two previous years.

Upland staple. The average staple length of the 1979 upland cotton crop was 33.9 thirty-seconds inches. This compares with 33.7 in 1978 and 33.6 in 1977. Staples 36 and longer made up almost 22 percent of the 1979 crop, the largest proportion on record and up from 10 percent in 1978 and 11 percent in 1977. The medium lengths, staples 34 and 35, comprised over 41 percent of ginnings, down from 54 percent a year earlier and 50 percent two years ago. Staples 32 and shorter accounted for about 29 percent of the 1979 crop, up from 26 percent in 1978 and about the same as 1977.

Upland mike. Cotton miking in the 35-49 range made up almost 67 percent of the 1979 crop. This was the smallest proportion in the 35-49 range since 1966 and compares with 77 percent last season and 80 percent two years ago. Cotton miking 34 and lower comprised almost 28 percent of the 1979 crop against 11 percent in 1978 and five percent in 1977. Cotton with mike of 50 and higher made up six percent compared with 12 percent a year earlier and 15 percent two years ago. The average mike of the 1979 crop was 40. This compares with 42 a year earlier and 44 in 1977.

Upland strength. Average fiber strength of the 1979 upland cotton crop was 86,700 pounds per square inch (psi). This compares with 88,300 psi the previous season and 87,600 psi two years ago. Cotton with fiber strengths of 90,000 psi and higher accounted for 29 percent of ginnings from the 1979 crop, down from 38 percent in 1978 and 35 percent in 1977. Fiber strengths of 80,000 to 89,000 psi accounted for 60 percent of this season's ginnings against 57 percent the two previous seasons. Cotton with fiber strengths of 79,000 psi and lower made up 11 percent of the 1979 crop compared with five percent a year earlier and eight percent two years ago.

American Pima cotton ginned from the 1979 crop was much higher quality than the previous year. Almost 63 percent of the 1979 crop was grade 3 compared with less than nine percent in 1978. Grade 4 made up only 28 percent of the 1979 crop against over 44 percent a year earlier. Grade 5 accounted for only four percent in 1979 compared with almost 30 percent in 1978. Staple 46 accounted for over 82 percent of the 1979 American Pima crop compared with less than 77 percent a year earlier. Staples 44 and shorter made up less than 18 percent in 1979 against over 23 percent in 1978. Average mike of American Pima cotton ginned from the 1979 crop was 39 compared with 37 a year earlier.

Ginnings of 1979-crop cotton in the United States totaled 14,261,900 bales, according to the Bureau of the Census. This total includes 14,165,600 bales of upland and 96,300 bales of American Pima cotton. The average net weight per bale of cotton ginned from the 1979 crop was 492.1 pounds.

September 22, 1980

U.S. Cotton Production

Each dot represents 5,000 bales of cotton ginnings from average of 1976 through 1978
