Introduction.	1
Map - Distribution of Cotton Production in the United States.	2
1. Grade and staple of upland cotton ginned in the United States, 1981-82.	3
2. Grade and staple of upland cotton ginned in the United States, 1980-81.	4
3. Grade and staple of upland cotton ginned in the United States, during specified periods, 1981-82.	5
4. Grade reductions by specified causes of upland cotton ginned in the United States, by states, 1981-82.	6
5. Average staple of upland cotton ginned in the United States, by states, crops of 1977-1981.	7
6. Tenderability of upland cotton ginned, by states, 1981-82	8
7. Tenderability of upland cotton ginned in the United States, 1962-1981	8
8. Grade and staple of upland cotton ginned, by states, 1981-82.	9-23
9. Grade and staple of upland cotton ginned, during specified periods, by states, 1981-82	24-30
10. Grade and staple of upland cotton ginned in marketing services office areas, by states, 1981-82.	31-37
11. Percentage distribution of micronaire readings for upland cotton ginned in the United States, by states, crops of 1980 and 1981.	38
12. Percentage distribution of micronaire readings for upland cotton ginned, during specified periods, by states and United States, crops of 1980 and 1981.	39-41
13. Percentage distribution of micronaire readings for upland cotton ginned in the United States, by marketing services office areas, crops of 1980 and 1981	42
14. Percentage distribution of fiber strength for upland cotton ginned in the United States, by states, crops of 1980 and 1981.	43
15. Percentage distribution of fiber strength for upland cotton ginned, during specified periods, by states and United States, crops of 1980 and 1981.	44-46
16. Percentage distribution of fiber strength for upland cotton ginned in the United States, by marketing services office areas, crops of 1980 and 1981	47
17. Grade and staple of American Pima cotton ginned, by states and United States, 1981-82	48
18. Grade and staple of American Pima cotton ginned in the United States, during specified periods, 1981-82.	49
19. Percentage distribution of micronaire readings for American Pima cotton ginned in the United States, by states, crops of 1980 and 1981	50

Cotton Quality - United States

1981 Crop

The 1981 United States upland cotton crop contained the smallest proportion in white grades since records began in 1938, according to the Cotton Division, Agricultural Marketing Service, USDA. The average staple length was the shortest since the 1977 crop. The 1981 crop contained a smaller proportion of cotton in the mike 35-49 range than the previous year. Average fiber strength in grams per tex was 24.1. The 1981 crop was the largest since 1963.

Grade. White grades 41 and higher accounted for about 42 percent of upland ginnings from the 1981 crop. This was the smallest proportion of grades 41 and higher since records began in 1938 and compares with 54 percent a year earlier and 56 percent two years ago. All white grades also made up the smallest proportion on record, accounting for almost 53 percent of ginnings this season, down from 66 percent a year earlier and 67 percent two years ago. Light Spotted grades made up 40 percent of ginnings, the largest percentage since comparable records began with the 1958 crop and up from 27 percent last season and 28 percent in 1979. Grades 41 and 42 were predominant this season accounting for 21 percent each. This was the first time since records began that a Light Spotted grade was predominant. Below Grades accounted for almost two percent of the 1981 crop, the largest percentage since records began in 1938 and up from less than one percent the two previous seasons.

Staple. The average staple length of the 1981 upland cotton crop was 33.6 thirty-seconds inches, the shortest since the 1977 crop. This compares with 34.0 in 1980 and 33.9 in 1979. Staples 31 and shorter, at 19 percent of ginnings, made up the largest percentage of any crop since 1975 and compares with 14 percent a year earlier and 16 percent two years ago. Staples 32 and 33 made up 19 percent of ginnings compared with 18 percent last year and 21 percent in 1979. Staples 34 and 35 comprised 47 percent, about the same proportion as a year earlier and up from 41 percent two years ago. Staples 36 and longer made up 15 percent of the crop. This was the smallest proportion in longer lengths since the 1978 crop and was down from 22 percent the two previous years.

Mike. Cotton with mike 35-49 made up 74 percent of the 1981 crop. This was down from 80 percent a year earlier but up from 67 percent two years ago. Mike 34 and lower accounted for 18 percent of ginnings compared with 10 percent the previous year and 28 percent two years ago. Cotton with mike 50 and higher made up eight percent against 10 percent last year and six percent in 1979. The average mike of the 1981 crop was 41. This compares with 43 in 1980 and 40 in 1979.

Strength. Average fiber strength of upland cotton ginned from the 1981 crop was 24.1 grams per tex and compares with 24.0 a year earlier. Strengths in the 19 and lower range accounted for two percent of ginnings, the same as a year earlier. About 43 percent of the crop had strengths in the 20 to 23 range, down from 44 percent in 1980. Cotton with strengths of 24 to 27 grams per tex accounted for 44 percent of ginnings, the same as a year ago. Strengths in the 28 and higher range made up 11 percent of the 1981 crop against 10 percent a year earlier.

American Pima cotton ginned from the 1981 crop contained a smaller proportion of higher grades than last season. Grades 4 and above accounted for 85 percent of this season's ginnings compared with 88 percent in 1980. Grade 3 was the predominant quality in 1980 at 50 percent of ginnings but grade 4 at 46 percent was predominant this season. Staples 44 and shorter accounted for 20 percent of ginnings against 5 percent last year. Staples 46 and longer made up 80 percent of ginnings, down from 95 percent a year earlier. Staple 46, the predominant length both years, declined from 93 percent in 1980 to 79 percent in 1981. Average mike of American Pima cotton ginned from the 1981 crop was 38, the same as a year ago.

Ginnings of 1981-crop cotton in the United States totaled 15,150,300 running bales, according to the Bureau of the Census. This total includes 15,072,900 bales of upland and 77,400 bales of American Pima cotton. The average net weight per bale of cotton ginned from the 1981 crop was 495.1 pounds. This was the largest crop since 1963.

July 19, 1982

U.S. Cotton Production

Each dot represents 5,000 bales of cotton ginnings from average of 1976 through 1978

Estimated U.S. total cotton bales = 11,636,000
