Cotton Quality Statistics, United States  
1944-45

This report contains information on the quality of cotton ginned during the 1944-45 season, and on the quality of cotton on hand in the United States on August 1, 1945. To facilitate comparison, certain data contained in the reports for previous years are included. The term "quality" as used in this report refers to grade and staple length.

The purpose of this report is to furnish a permanent record of the quality of cotton ginned in the United States during specified periods, by States, and districts, from the 1943-44 crop, and of the quality of the cotton in the carry-over on August 1. This information should be helpful to cotton growers and breeders and to merchants, consumers, research workers, and others interested in the quality of the crop or the carry-over.

Estimates of the quality of the ginnings are based on the classification of samples representing approximately 10 percent of the crop. These samples were submitted by gins selected to represent a cross-section of the quality of total ginnings in the United States. The proportions of the various qualities found in the samples classed were applied to total ginnings of upland, and American-Egyptian cotton as reported by the Bureau of the Census for each of the cotton-producing States. Data were prepared by ginning periods for all cotton-producing States and by districts for the major producing States. For the purpose of preparing the estimates, the major cotton-producing States are divided into districts.

The report for the carry-over includes statistics on the grade and staple length of upland, American-Egyptian, cotton and on the staple length of cotton of foreign growth on hand in the United States on August 1, 1945. The estimates of the quality of the carry-over on hand August 1, 1945, were based on the classification of samples representative of the cotton in consuming establishments, in public warehouses and compresses, and in other places of storage. The proportions of the various qualities found in the samples classed were applied in each instance to the total number of bales in the consuming establishments, public warehouses or compresses, or in other places of storage, that were checked. About 85 percent of all cotton other than Government-controlled cotton was checked. The data for each State for the principal types of storage were then raised to correspond with the number of bales as reported by the Bureau of the Census, excluding stocks of Government controlled cotton. Quality data on Government-owned, loan, and pooled cotton were included without additional classification, as the Department had already classed or supervised the classification of this cotton.

The tables in this report which contain data regarding the tenderability of cotton on contracts for future delivery indicate only the total quantities tenderable and those untenderable. Reports of this series issued prior to 1941 have given separately the quantities of cotton of untenderable grades, those of untenderable staple lengths, and those untenderable in both grade and staple length. The revised cotton futures contracts have

reduced the number of tenderable grades and have excluded from delivery any cotton reduced in grade or staple length because of irregularities or defects found in the samples submitted for classification. Moreover, the revised contracts have limited the tenderable qualities of non-rain-grown cottons to those classified as Middling or better, White and Extra White, 1-1/32 inches and longer in staple. In view of these changes in the cotton futures contracts, it is not practicable to tabulate the data on tenderability in the same detail as heretofore.

Throughout this report the official grade designations are abbreviated as follows: Middling Fair, 1-M.F.; Strict Good Middling, 2-S.G.M.; Good Middling, 3-G.M.; Strict Middling, 4-S.M.; Middling 5-M; Strict Low Middling, 6-S.L.M.; Low Middling, 7-L.M.; Strict Good Ordinary, 8-S.G.O.; Good Ordinary, 9-G.O.
