

June 27, 1985

Trading remained slow on spot cotton markets, according to the Cotton Division, Agricultural Marketing Service, USDA. Prices were steady. Grower-held supplies were limited and offerings were very light. Most growers with uncommitted cotton were not willing to sell at prevailing prices. Domestic and foreign mill buying was light. Forward contracting of 1985-crop cotton by growers was at a standstill. The crop made good to excellent progress in most localities. Although cotton consumption by domestic mills during May was up from the previous month, consumption for the first ten months this marketing year was the smallest since 1920-21.

Spot cotton prices for grade 41 staple 34, mike 35-49, in the designated markets averaged 60.01 cents per pound during the week ended Thursday, June 27. Prices ranged from a low of 59.66 cents on Friday to a high of 60.24 cents on Wednesday and ended the week at 60.18 cents. A week earlier, prices averaged 59.94 cents per pound and ranged from 59.64 to 60.21 cents. In the corresponding week a year ago, the average price was 71.98 cents. The New York October 1985 futures settlement price ended the week on Thursday at 61.48 cents per pound compared with 61.15 cents a week earlier. The December settlement price was 61.48 cents against 61.39 cents a week ago.

<u>Trading</u> on spot cotton markets remained slow. Grower-held supplies were at low levels and very little cotton was offered. Merchant demand was weak. Most bid prices were near CCC loan rates and growers were not willing to sell. Merchants continued to trade among themselves to fill commitments. Domestic mill purchases remained light but some mills showed an increased interest in buying new-crop cotton for forward delivery. The limited export trading was mostly with Far Eastern mills for October shipment. Purchases reported by cotton exchanges in the designated markets totaled 35,900 bales in the week ended Thursday, June 27. This compares with 20,800 bales reported a week earlier and 10,100 bales in the corresponding week last season.

Textile mill report. Domestic mill purchases were light but covered a wide range of growth areas. Purchases for prompt and nearby delivery included San Joaquin Valley, Texas Plains and Memphis territory growths. Inquiries for 1985-crop cotton increased but purchases remained light. Purchases of 1985-crop cotton included California, Rio Grande Valley and Memphis territory growths. Most mills reported sales of finished goods were steady to slowly improving. Sales of athletic wear, industrial fabrics, underwear and denim continued steady. Some yarn mills reported an improvement in sales. Some printcloths, broadcloths and cords remained slow sellers. A few sheeting mills reported a slight slowing of sales.

<u>USDA</u> announces new standards for American Pima cotton. The U.S Department of Agriculture will put into effect new grade standards for American Pima cotton on July 1, 1986, according to an announcement June 17. The new standards will provide a more accurate description of the American Pima cotton crop.

USDA will reduce the number of physical grade standards from nine to six by consolidating some of the existing grades. Concurrently, the color range within each of the new standards will be widened, reflecting a color shift that has occurred gradually within the American Pima cotton crop as new varieties have been introduced. The new standards will encompass a portion of the crop having too much color to fit within the current standards.

The final rule establishing the standards was scheduled to be published in the June 18 Federal Register.

Crop progress. The crop made excellent progress in California. Plants were squaring and blooming. Lygus bugs were present in isolated areas in sufficient number to require spraying. The Arizona crop was rated as good to excellent and was slightly ahead of last year. Insect populations were light and had not reached levels requiring controls in most cases. The crop in New Mexico was making good progress. Cotton in earlier planted fields was squaring. Insect control measures were under way, as necessary. In Texas, replanting continued on portions of the Plains and some growers decided to turn to alternative crops. Warm, dry weather was beneficial. Beneficial rains fell in parts of central Texas. The crop was maturing rapidly in southern counties. In Oklahoma, warmer weather allowed the crop to improve. Some early planted cotton was blooming. Most replanting was completed except for isolated wet areas. The Arkansas crop varied. In some fields plants were small while in others plants were over knee high. Many growers would welcome a good general rain. No serious outbreaks of insects were reported. The Missouri crop made good to excellent progress. Plants were growing rapidly. Insect problems were minor. Most of the Tennessee area received beneficial rains and the crop made good progress. Plants were growing rapidly and most cotton was squaring. In Mississippi, the crop responded to last week's rains. Insect counts were being closely monitored but no major problems were reported. Plants were fruiting heavily and blooms were becoming common in many fields. The crop was generally regarded as one to three weeks earlier than normal. Most of the crop in Louisiana received beneficial rain. Plants responded to the moisture and crop conditions improved. Cotton was squaring and blooming. Insect infestations were fairly light. The Alabama crop made excellent progress. Most cotton was blooming in southern counties and a few blooms were reported in the north. Insect problems were minimal. The crop was about a week to ten days ahead of last season. The Georgia crop made good progress. Most plants were squaring and in some fields were beginning to bloom. Insects remained controllable. Soil moisture was less than adequate over most of the state but conditions improved because of frequent rains. The North Carolina and South Carolina crop made good progress. Plants are blooming heavily and observers rate the crop about two weeks ahead of average. Insect problems are minimal. Rains would be welcomed.

Domestic mill consumption of cotton averaged 21,200 running bales per day during the four weeks ended May 25, according to the Bureau of the Census. This was up from 20,300 bales used per day a month earlier and was the largest daily rate for any month since May 1984 when 22,100 bales were used. Domestic mills consumed 424,700 bales during May, bringing consumption for the first ten months (43 weeks) this season to 4,236,300 bales. This was the smallest consumption for the first ten months of any season since 1920-21. Through May last year, mills had used 4,722,300 bales and two years ago 4,346,200 bales.

<u>Stocks</u> of cotton at mills totaled 803,600 running bales on May 25, according to the Bureau of the Census. This compares with 795,600 bales a month earlier and 766,100 bales at the end of May last year. At the May daily rate of consumption, mill stocks were equivalent to about seven and one-half weeks' supply. Stocks of cotton in public storage totaled 3,989,200 bales on May 25 compared with 4,805,900 bales a month earlier and 2,965,900 bales at the end of May 1984.

<u>Consumption of manmade fibers</u> by domestic mills with cotton system spindles totaled 123.4 million pounds (about 257,100 bales of 480 pounds) in the four weeks ended May 25, according to the Bureau of the Census. This brought consumption for the August-May period this season to 1,306.7 million pounds (about 2,722,200 bales) and compares with 1,561.3 million pounds (about 3,252,800 bales) used through May a year ago.

<u>Tunisia</u> has just received delivery of the first 1,000 tons of cotton negotiated as part of a countertrade agreement with China, according to the Foreign Agricultural Service, USDA. The agreement, which involved construction of a fertilizer factory in China by Tunisia and Kuwait, provided for the shipment of 150,000 tons of soft wheat and 6,000 tons of cotton to Tunisia. The 6,000 tons of cotton constitutes about half of Tunisian annual raw cotton import needs. The United States has supplied about 630 tons of cotton to Tunisia thus far this marketing year. The countertrade agreement reduces the likelihood of additional U.S. cotton sales in the near future.

Upland cotton export sales for the current marketing year totaled 7,300 running bales during the week ended June 20, according to the Foreign Agricultural Service, USDA. Major sales to Japan of 9,300 bales, South Korea 3,300, Ireland 2,000 and Indonesia 1,700 bales were partially offset by reductions by Spain of 4,800 bales, the Philippines 1,400, Thailand 1,400 and Taiwan 1,200 bales. Sales for the 1985-86 marketing year totaled 8,500 bales and were primarily to South Korea with 4,000 bales, Thailand 1,400 and the Philippines 1,000 bales. Exports for the week totaled 79,100 bales. Asian destinations accounted for 81 percent of the week's shipments, West European 14 percent and East European 3 percent.
