

## Weekly Cotton Market Review

March 21, 1985

Spot cotton prices were higher, according to the Cotton Division, Agricultural Marketing Cervice, USDA. Trading slowed. Grower-held supplies were limited and the volume of offerings was light. Many growers withheld uncommitted cotton with the expectations of higher prices. Demand was selective and merchants were primarily covering immediate needs. Domestic mill purchases were light. Reports indicated Russia was in the market. Growers forward contracted a light volume of 1985 -crop cotton in a few states. Land preparation made good to excellent progress in most southern states. Planting made good progress in the El Centro area and began on a limited scale in western portions of the Phoenix area. Rains and wet fields delayed initial planting in California's San Joaquin Valley and hampered planting in south Texas and portions of central Texas. Beneficial rains fell over most of the Texas Plains. All cotton ginned in the U.S. from the 1984 crop was reported at $12,544,881$ bales.

Spot cotton prices for grade 41 staple 34 , mike $35-49$, in the designated markets averaged 60.93 cents per pound during the week ended Thursday, March 21 . Prices ranged from a low of 59.78 cents on Friday to a high of 61.75 cents on Wednesday and ended the week at 61.63 cents. A week earlier, prices averaged 59.59 cents per pound and ranged from 58.88 to 60.46 cents. In the corresponding week a year ago, prices averaged 75.30 cents. The New York May 1985 futures settlement price ended the week on Thursday at 67.55 cents per pound compared with 65.68 cents a week earlier. The October settlement price was 65.30 cents against 65.02 cents last Thursday and the December price was 65.35 cents compared with 65.20 cents a week ago.

Trading on spot cotton markets slowed. Grower-held supplies were limited and offerings were light. Many growers with uncommitted cotton rejected merchant bid prices and showed more interest in the CCC loan program. Merchant demand was selective and mostly for cotton to fill immediate needs. Domestic mill buying was restricted primarily to the San Joaquin Valley. Purchases included both 1984 and 1985 -crop cotton. Export trading was more active. Reports indicated Russia bought San Joaquin, California-Arizona and Delta growths for prompt or nearby shipment. Purchases reported by cotton exchanges in the designated markets totaled 86,500 bales in the week ended Thursday, March 21 . This compares with 61,100 bales a week earlier and 58,800 bales reported in the corresponding week last season.

Textile mill report. Domestic mill buying remained slow. Purchases were light and largely of California growths for prompt to nearby delivery. Most mills were amply covered through early summer and limited purchases to filling gaps in stocks. Activity at many mills centered around fixing prices and accepting or rescheduling delivery of early purchases. Mill sales of goods continued to reflect wide variations in the textile market. A few products, notably materials for athletic wear and underwear, continued to sell at a moderately active rate while numerous apparels and many household items were trading sluggishly. Sales of most yarns were light and intermittent with work schedules at some mills drastically reduced to keep inventories under control. Most other mills were working five days, although at some plants only one shift per day was operating.

Ginnings. All cotton ginned from the 1984 crop totaled $12,544,881$ running bales, according to a preliminary report from the Bureau of the Census. This includes 25,756 bales which ginners estimated would be ginned after the March canvass. Upland ginnings totaled $12,418,764$ bales, compared with $7,413,334$ in 1983 and $11,429,648$ in 1982. American Pima cotton ginned from the 1984 crop totaled 126,117 bales against 90,902 in 1983 and 96,387 in 1982. The number of active cotton gins for the 1984 crop was 1,859 compared with 1,852 for 1983 and 2,000 for 1982 .

U.S. cotton exports by ports. During the first half of the $1984-85$ season, movement of $\overline{\text { U.S. cotton exports }}$ indicate a greater concentration through west coast ports, despite larger exports to European destinations, according to the Foreign Agricultural Service, USDA. West coast ports accounted for 72 percent of export movement compared with 65 percent in the first half of 1983-84. Los Angeles remains the principal port of exit, handling 44 percent of all cotton exports. Other leading ports were San Francisco, Houston and Seattle. East coast ports represented 4 percent, Great Lakes 3 percent and Gulf ports 21 percent.

Source: Export Sales Reporting Division, Foreign Agricultural Service, USDA
Upland cotton export sales totaled 192,900 running bales during the week ended March 14 , according to the Foreign Agricultural Service, USDA. The increase was primarily due to the purchase of 176,400 bales by Russia. Japan bought 9,700 bales and South Korea 9,400 . Exports for the week totaled 145,100 bales. Asian destinations accounted for 75 percent of the shipments and West Europe accounted for 22 percent.
