

March 28, 1985 Spot cotton prices were firm, according to the Cotton Division, Agricultural Marketing Service, USDA. Trading was slow. Growers were holding limited quantities of uncommitted cotton and very little was offered at prevailing prices. Demand was weak and merchants were primarily covering nearby needs. Domestic mills made limited purchases. Export trading was slow but increased in the San Joaquin Valley. Growers forward contracted a light volume of 1985 -crop cotton. Wet fields restricted planting efforts in the Corpus Christi area. Planting neared completion in Harlingen, Texas, made good progress in Arizona, the El tro, California, area and in southern portions of central Texas. Limited planting was done in the San Joaquin Valley of California. Domestic mill consumption of cotton for the first seven months this marketing year was the smallest since 1930-31. The average staple length of the 1984 U.S. upland cotton crop was 34.7 thirty-seconds inches, the longest since records began in 1940 .

Spot cotton prices for grade 41 staple 34 , mike $35-49$, in the designated markets averaged 61.41 cents per pound during the week ended Thursday, March 28 . Prices ranged from a high of 61.92 cents on Friday to a low of 61.03 cents on Wednesday and ended the week at 61.19 cents. A week earlier, prices averaged 60.93 cents per pound and ranged from 59.78 to 61.75 cents. In the corresponding week a year ago, prices averaged 75.53 cents. The New York May 1985 futures settlement price ended the week on Thursday at 67.18 cents per pound compared with 67.55 cents a week earlier. The October settlement price was 65.51 cents against 65.30 cents last Thursday and the December price was 65.61 cents compared with 65.35 cents a week ago.
Trading remained slow on spot cotton markets. Grower-held supplies were light and very little cotton was offered. Although some merchant bid prices strenthened, many growers were unwilling to sell. Several merchants traded among themselves and with marketing organizations to fill commitments. Domestic mill buying was confined mainly to Texas plains cotton for prompt to nearby delivery. Export trading remained fairly active in the San Joaquin Valley. Demand was best for grade 31 and a moderate volume traded. Purchases were made by both Far Eastern and European mills, mostly for April and May shipment. Purchases reported by cotton exchanges in the designated markets totaled 63,500 bales in the week ended Thursday, March 28. This compares with 86,500 bales a week earlier and 73,200 bales in the corresponding week last season.
Textile mill report. Mill demand for cotton remained weak. Mills were very selective, choosing qualities and growth areas carefully. Recent purchases were primarily Texas growths for prompt to nearby delivery. Mills continued to adjust shipments to balance with needs and to hold down inventories. Sales of yarn and numerous finished goods remained slack. Some mills received cancellation or hold orders on existing sales. Most mills continued to reduce output of goods where demand has weakened. Numerous yarn mills were on reduced work schedules. Some apparels and items for the household and industrial market were also in poor demand. Sportswear and underwear represented the bright side of the market with these products continuing to sell at a moderately active rate. Mill's work schedules ranged from three to five days.

Quality of ginnings. The 1984 United States upland cotton crop averaged 34.7 thirty-seconds inches in length. This was the longest average length since records began in 1940 . Staple 36 was the predominant length, accounting for 35 percent of the crop. Grade 31 was the predominant grade in the 1984 crop, accounting for 22 percent of ginnings. This was the largest proportion of grade 31 in any crop since 1980 and was the second time grade 31 predominated since 1961. Grade 41 has normally been the predominant grade. Average mike was 39 , the lowest since records were established in 1965. Average fiber strength was 26.1 grams per tex, the strongest since records began in 1980.

Domestic mill consumption of cotton averaged 20,000 bales per day during the four weeks ended February 23, according to the Bureau of the Census. This was up from 19,300 bales a month earlier but down from 22,400 bales per day in February 1984. Domestic mills consumed 400,400 bales during February, bringing consumption for the season ( 30 weeks) to $2,895,800$ bales. This was the smallest usage for the first seven months of any season since 1930-31. Through February last year, mills had used. $3,302,500$ bales and two years ago $2,925,700$ bales.

Stocks of cotton at mills totaled 864,700 running bales on February 23, up from 812,500 bales a month earlier, according to the Bureau of the Census. End-of-February stocks at mills this season were up from 712,700 bales a year earlier and 776,600 bales two years ago. At the February daily rate of consumption, mill stocks were equivalent to over eight and one-half week's supply. Stocks of cotton in public storage totaled $6,554,600$ bales on February 23, down from $7,427,200$ bales a month earlier. Public storage stocks amounted to $6,359,400$ bales at the end of February last year and $10,546,000$ bales two years ago.

Consumption of manmade fibers by domestic mills with cotton system spindles totaled 124.9 million pounds (about 260,200 bales of 480 pounds) in the four weeks ended February 23, according to the Bureau of the Census. Consumption for the first 30 weeks this season (August-February) totaled 910.2 million pounds (about $1,896,300$ bales). This was the smallest usage for this period since 1974-75 and was down from $1,089.1$ million pounds (about $2,269,000$ bales) used through February a year ago.

IV Consumption figures relate to four-week months except as noted. Daily consumption rates calculated on the basis of 20 days for four-week months and 25 days for five-week months with no allowance for holidays. Season totals are adjusted data as reported in Supply and Distribution of Domestic and Foreign Cotton in the United States by Bureau of the Census.
$2 /$ These data refer to a particular day near the end of the month.
Preliminary.
Five-week month.

China is aggressively pursuing cotton export markets throughout the African continent, according to the Foreign Agricultural Service, USDA. Samples of Chinese cotton could be seen in textile mills in a half dozen countries, including Egypt, Zaire and South Africa. In a number of cases, China was reportedly offering cotton at below world prices and discussing alternative financial terms that covered barter arrangements and payment in nonconvertible currencies. With a crop in excess of 27 million bales and mounting stocks, the Chinese are taking an active role as world cotton traders in an effort to increase exports.

Source: Export Sales Reporting Division, Foreign Agricultural Service, USDA
Upland cotton export sales for the current marketing year totaled 26,800 running bales during the week ended March 21, according to the Foreign Agricultural Service, USDA. Major purchases by the USSR of 22,000 bales and Japan 17,400 were partially offset by net reductions for Israel of 5,300 bales, Romania 5,000 , Spain 3,800 and unknown destinations of 3,000 bales. Sales for the $1985-86$ marketing year totaled 65,200 bales. Purchases were primarily by Japan with 41,300 bales and South Korea 21,700 bales. Exports for the week amounted to 189,600 bales. Asian destinations accounted for 57 percent of the week's shipments, Western Europe 25 percent and Africa 15 percent.
