SOIMONO33 9V 10 1430 Weekly Cotton Market Review

Vol. 72, No. 41 May 22, 1991

Spot cotton quotations were up sharply from a week earlier, according to the Cotton Division, Agricultural Marketing Service, USDA. The average quotation for grade 41 staple 34, mike 35-49, in the designated markets was 85.25 cents per pound during the week ending Friday, May 17, 251 points higher than the week earlier average of 82.74 cents and 1,060 points above the 73.65 cents averaged in the corresponding week last season. Daily average quotations ranged from a low of 83.16 cents on Monday, May 13, to a marketing year high of 86.29 cents on Friday, May 17. The New York July 1991 futures settlement price closed on Friday at 92.30 cents compared with 87.72 cents a week earlier. The October 1991 settlement price was 81.00 cents compared with 78.00 cents a week earlier, and December 1991 was 73.95 cents compared with 72.05 cents the previous week. Spot transactions reported in the designated markets totaled 21,538 bales during the week ending Friday, May 17. This compares with 26,713 bales reported during the previous week and 20,456 bales in the corresponding week last season.

Southeastern markets. Trading remained slow. Demand was best for grades 41 and higher, which were in short supply. Prices for these qualities strengthened. A few mixed lots traded in Alabama at around 300 points off the New York July futures, FOB warehouse, and 100 to 200 points off in Georgia FOB trucks, basis grade 41 staple 34, mike 35-49. Buyer interest remained weak and prices weakened for lower grade mixed lots. Grades 51 and 42 traded at around 350 to 450 points lower than grade 41. Offers for CCC loan equities were around 26 to 28 cent per pound. Merchant interest in forward contracting increased. In the Carolinas, incentives for early delivery and high strength resulted in offers of 50 to 100 points off NY December futures, basis grade 41 staple 34 and longer. Offering prices remained mostly 150 points off in Georgia and 400 to 450 points off in Alabama. Wet fields continued to limit planting activity, but some progress was made and crop prospects have improved.

South central markets. Trading was restricted by minimal supplies of uncommitted cotton. Demand was good for grades 41 and higher which were in short supply. Inter-merchant trades were the predominant activity. In mixed lots, grade 41 staples 34 and longer, mike 35-49, traded at 150 to 200 points off NY July futures. Large even-running lots of grade 41 brought premiums of around 150 points. Prices weakened for mixed lots of lower qualities. A moderate volume of grade 52, staples 34 and longer, sold at prices averaging around 1,850 points off NY July futures. A few domestic mills made purchases of cotton to cover nearby needs and a light to moderate volume was bought for forward delivery. Export trading was light and primarily with Far Eastern mills. Growers booked a light volume of 1991-crop cotton at 600 to 650 points off NY December futures, basis grade 41 staple 34, mike 35-49. Rain hampered fieldwork in many localities. Some growers resumed planting operations between showers.

Southwestern markets. Trading remained slow. Supplies were limited. Prices strengthened for higher grades. A few mixed lots brought around 2,200 to 2,800 points above CCC loan rates. A limited acreage was contracted in south and central Texas at 66 to 80 cents per pound, basis grade 41 staple 34, mike 35-49, depending on area, variety, dryland versus irrigated acreage and picker versus stripper harvest methods. A very limited amount of acreage in west Texas was contracted at around 1,500 points over the 1991 CCC loan rates. Domestic mill inquiries were light to moderate. Poteign mill inquiries were very light. The crop made excellent progress in central and south Texas. Planting was underway in west Texas and Oklahoma.

Western markets. Trading was slow in the San Joaquin Valley (SJV). Supplies were extremely light. A few mixed lots of grades 41 and higher, traded at 89 cents per pound. Domestic and Far Eastern mills purchased a light volume for prompt and nearby shipment. Forward contracting of 1991-crop cotton was slow to moderate, at 81 to 82.75 cents per pound, basis grade 31 staple 35, mike 35-49, UD free, gin yard. Below normal temperatures slowed plant development. Trading was mostly inactive in the Desert Southwest (DSW). Domestic mills purchased a light to moderate volume for prompt through early 1992 delivery. In Arizona, a small amount of 1991-crop cotton was forward contracted at 73 to 74 cents, basis grade 31 staple 34, mike 35-49. American Pima trading was slow. In mixed lots, grades 2 and 3, mike 35-49, brought \$1.27 per pound. Grade 4 traded at \$1.05 and grade 5 brought at around 70 cents per pound. Far Eastern mills purchased a small volume for prompt shipment. In Arizona, a light volume was forward contracted at \$1.25 per pound, basis grade 3.

Textile mill report. Buying interest centered mostly on qualities for prompt through nearby shipment. Most purchases were small. The bulk of trading was for summer fill-ins, but a few mills made small new crop purchases. Supplies of higher grade cotton were scarce and prices were higher. Mill business continued to improve. Denims and open-end yarns were selling well, while sales of ladies apparel and home furnishings remained weak.

Domestic mill consumption of cotton averaged 32,300 running bales per day during the first quarter of 1991, according to the Bureau of the Census. This was up from 28,500 bales per day in the fourth quarter of 1990, but down from 32,500 bales consumed during the first quarter of 1990. Domestic mills consumed 2,067,800 bales during the first quarter of 1991.

Stocks of cotton at mills totaled 649,900 running bales at the end of the first quarter of 1991, according to the Bureau of the Census. This compares with 580,900 bales held at the end of the fourth quarter in 1990. At the first quarter of 1991 daily rate of consumption, mill stocks were equivalent to about four weeks' supply. Cotton in public storage totaled 5,518,100 running bales at the end of the first quarter of 1991, against 9,874,600 bales three months earlier and 6,565,800 bales a year ago.

Exports of all cotton from the United States totaled 960,000 running bales during April, according to the Foreign Agricultural Service, USDA. This was the highest April volume exported since 1976. A month earlier, 804,000 bales were shipped and 818,000 bales were shipped in April 1990. August-April exports totaled 6,323,000 bales. This represents the second largest volume of cotton exported for this period since 1980 and was up from 4,937,700 bales shipped last season and 3,453,500 bales two years ago.

These 14 states produced 99% of the 1990 cotton crop.

Two major spring storms moved across the nation, generating rain, snow, high winds, and severe weather during the week of April 7-13, 1991. Rain slowed fieldwork in most areas east of the Mississippi River and caused localized flooding from the lower Mississippi Valley to the Great Lakes. Temperatures averaged above normal in the Great Plains and the east but were below normal in the west. Cotton planting lagged behind normal in California and Arizona but drier weather during the week allowed field preparation to progress well. In the upper coast of Texas, excessive rain slowed cotton plant emergence and was expected to force some replanting.

Sales next marketing year		62,700	1,027,000		67,000	1,165,700

Upland cotton export sales for the 1990-91 marketing year were reduced by 6,600 running bales. Sales for marketing year 1991-92 totaled 67,000 bales. Japan was the predominant buyer with purchases of 26,800 bales, South Korea 16,600, Thailand 12,300, and Indonesia 7,200 bales. Exports of 118,000 bales were off 8 percent from the previous week. Asian destinations accounted for 71 percent of the week's shipments; African 13 percent; West European 10 percent; and Western Hemisphere 6 percent.
