Come learn how the ddSEQ™ Single-Cell Isolator, paired with the SureCell™ WTA 3' Library Prep Kit, offers a robust and scalable solution with a user-friendly workflow from the industry leaders in sequencing and Droplet Digital™ technologies.

Single-cell RNA-Seq allows researchers to go beyond the bulk averages of traditional RNA-Seq methods to differentiate individual cells in heterogenous populations, providing a higher resolution of cellular differences to facilitate access to cell function, disease progression, and identification of therapeutic targets in research.
