2008-2009 Annual Progress Report

MAP: STUDENT RESEARCH

Inputs	Strategies	Outputs	Outcomes		Impacts (Long Term-Conditions)
			(Short Term-Learning)	(Medium Term-Action)	
1. Funds from HHMI  2. Matching funds from TTU <ul style="list-style-type: none"><li>Financial support for Scholars</li><li>Travel support for Scholars</li><li>Research space</li><li>Existing expertise for mentoring and teaching in the lab from various lab members</li><li>Research presentation training</li></ul>	1, 2. Mentoring of Scholars by experienced, faculty researchers and post-docs, technicians	1, 2. Better prepared Scholars with first-hand experience in doing research	Science content knowledge and experiences go far beyond what regular courses teach (hypothesis development, hypothesis testing)  Valuable collaborative experiences between Scholars, staff and mentors	Scholars compete for and are successful in getting interviews for post-bac opportunities	There is an increase in prestige and reputation for TTU  This program will help to improve teaching and research in academia  Scholar mentors <ul style="list-style-type: none"><li>Serve in preparation for research conference</li><li>Serve as research faculty Mentors</li><li>Carry out program development and innovation</li></ul> Informed career choices for Scholars  Mentor-scholar exchange and Project/Proposal development
	Scholars attend workshops, seminars and various program events (developing a research plan, hypothesis development and testing)	Professional and academic development of Scholars		A culture of understanding is developed in the Scholars that bridges science education and research	
	Facilitate career planning	Writing research papers for their lab and an annual Scholar report		There is an increase in prestige at CISER for the reputation for the Scholars	
	Annual Research Conference	Public oral presentations		Professional development through presentations at scientific meetings (local, regional, national) Ability of Scholars leverage their Experience for future career Opportunities and strengthening their resum	
	Program and mentor-supported research meeting attendance	Participation in writing manuscripts		Ability of Scholars to relate and interact in a seamless community of teaching and research	
3. Strengthen partnering for enhanced participation of underrepresented minorities	3. NIH-Bridges, SACNAS, WT-AWIS, JAMP	3. Stronger academics among scholars	Fewer scholars on academic probation		
4. Research Roundtables and other program events	4. Faculty seminars and workshops in computational biology/ bioinformatics	4. Improved underrepresented minority participation in STEM	Increased numbers of minority participation increase diversity of applicant pool		
		5. Increased awareness of computational biology/bioinformatics	Increased numbers of mentors and scholars participate in computational biology/bioinformatics

2008-2009 Annual Progress Report

MEASURES: STUDENT RESEARCH

Evaluation Questions for OUTCOMES	Possible Indicators/Measures	Possible Data Collection Methods and Information Sources	Rank/Priority (include brief rationale)
<p>1. How has the scholar research experience positively or negatively impacted students either short or long term? How do scholars, their lab mates and their mentors feel about the success of the research experience? Has mentoring increased?</p> <p>2. After graduation how has the research experience Impacted what the scholars are doing? What is the level of scholar involvement in science post-graduation?</p> <p>3. How have the funds from HHMI and/or the University match influenced the infrastructure of the programs (and therefore, the scholars in the program)? For example, the Undergraduate Research Center (URC) and their relative ability to travel and present at meetings and publish their results?</p> <p>4. How has the support impacted the efforts at recruiting and retaining underrepresented groups to our program and in science after graduation?</p> <p>5. How have the Research Roundtables and other program events impacted the scholar academic/research efforts and the overall programmatic success?</p> <p>6. Has Scholar performance improved in the classroom?</p> <p>7. Are scholars increasingly better with time management?</p>	<p>1. a. Continued (or increased) number of scholar applications b. Length of time that scholars remain in research labs that they start with c. Number of student-presented and/or published results d. Retention of scholars by certain mentors e. Scholar-scholar or scholar other undergraduate-graduate students collaborations f. mentors increasingly interact/collaborate</p> <p>2. a. Scholars that have remained in science education or research in academia b. Scholars that have remained science education or research in industry</p> <p>3. Correlate Improvements in the URC (computers, study areas, seminar prep/presentation space) to scholar retention in our program</p> <p>4. Increase or decreases in underrepresented groups that apply and/or are accepted into the program and what academic or career path taken after graduation</p> <p>5. Changes in the scientific culture or appreciation of scholars or in research direction after Research Roundtables</p> <p>6. GPA in science courses improving</p> <p>7. Scholar participation in TTU/HHMI activities and on-schedule response time improved</p>	<p>1. Scholar Competition and Scholar/Mentor Annual Report (SAR) is both written, includes interviews for feedback a. Monitor numbers of applicants, and current scholars b. Document lab retention or changes and keep track c. Keep records of student contact info, academic progress, travel, awards, presentations and papers, including copies of reprints d. TLTC Focus Groups with scholars about nature of lab and program experiences and interactions with mentor, other scholars and other lab mate collaborations</p> <p>2. a. Interviews with alumni scholars and mentors b. Maintain contact with scholar alumni and have them return to the University to evaluate the Undergraduate Research Conference, give talks at special events and Research Roundtables c. Alumni Scholar tracking questionnaire via email and Facebook</p> <p>3. Interview scholars about any changes that have taken place and take photographs for documentation; also about ease of requesting and receiving funds for professional travel and or page charges if needed</p> <p>4. Keep records on application numbers, acceptances and retention of all scholars, specifically from underrepresented groups</p> <p>5. Interviews and written scholar testimonials in the SAR: Increases in scholar interactions with participants at Research Roundtables and/or other events</p> <p>6. Review of Scholar grades via the SAR</p> <p>7. Fewer late submission and more fully engaged participation in activities/improved SURE responses</p>	<p>Scholars apply their undergraduate experience to their careers (science, medicine, law, education, industry)</p> <p>Scholars become leaders in their respective university, science education, research and or corporate communities</p> <p>Program grows and improves its ability to attract future scientists, science education professionals, corporations, and other potential partners who can better mentor or support our scholars and our program</p> <p>Improve and increase institutional support for the TTU/HHMI Program at the Center for the Integration of Science Education and Research, enhancing our ability to successfully leverage other support</p> <p>A primary goal of doing research is to enhance one’s ability to read critically, analyze data, develop hypotheses and improve technical proficiency. An additional goal is for participants to become more aware of alternate strategies to answer questions or test hypotheses. We have observed enhanced maturity over time in our scholars in all these components primarily because of the LONG-TERM MULTI-YEAR RESEARCH EXPERINCE WE OFFER. We continue to work to develop Scholars’ expository writing skills, a critical component in their development as emerging scientists.</p>
