Intern in Australia for Engineering Majors

Intern for 8 or 10 weeks Summer 2018!

“Any industrial experience is valuable for career development, but international industrial experience is becoming more of a necessity to be noticed in any field. My supervisor and co-workers have been very supportive and made me feel part of the team. Not only was I involved in projects for improving control of noise and air pollution, but also independently worked in design, proposal and implementation of water treatment bioremediation project. I can confidently say this experience has been the most enriching, empowering and perfect start of my professional career.”

-Mohamad
Chemical Engineering Intern
