How to configure your TTU computer to accept remote connections (Windows 10)

1. Go to the Start menu and in the search bar type Run and press Enter.

2. Type the command `systempropertiesremote` in the Run dialog box and press Enter.
3. In the window that appears, make sure that the following items are selected and select **OK**.
   a. **Allow Remote Assistance connections to this computer**
   b. **Allow remote connections to this computer**
   c. **Allow connections only from computers running Remote Desktop with Network Level Authentication (recommended)**

Outcome: Your TTU computer is now configured to accept remote connections.
