

The Sandy Land Underground Water Conservation District, located in Plains, Texas, endowed this scholarship in 2000, with the first awards being distributed in 2003.

The water district is committed to provide for the conservation, preservation, protection, recharge, and prevention of waste of groundwater within the boundaries of the water district, now and in the future. The district is responsible for activities from well permitting and monitoring water quality and quantity to public education programs.

Water is an integral component to the arid West Texas region, and this scholarship is essential in assisting graduate students in their pursuit of water conservation research, thus helping the entire region.
