Early Head Start Passes Focus Area Two Monitoring Review with Flying Colors
Monitoring Review of Texas Tech University Early Head Start by the Administration for Children and Families

Texas Tech University’s Early Head Start (EHS) program received the results from a federal review, conducted by the Administration for Children and Families. The Early Head Start program is an initiative of the Department of Human Development and Family Studies in the College of Human Sciences.

Early Head Start was found to have met the requirements of all standards and regulations, celebrating its ability to conduct effective teaching practices and well-organized learning environments that promote progress in child development and growth.

Successful reviews indicate that grant funding and oversight of services will continue, with the provided assurance that programs like EHS at Texas Tech are working to ensure the comprehensive services are maintained for young children and their families.

Based on information gathered from the federal review, the EHS program was found to fully engage with children with disabilities in a supportive environment. This environment for disabled children was found to welcome the support of families in taking the steps to advocate for their children’s needs where outside services often are lacking.

Early Head Start demonstrated the ability to promote parent-child relationships in high quality learning experiences, engage parents to encourage learning and trust, and create a culturally and linguistically welcoming program for all children.
