SUBJECT: Guidelines on Authorship of Papers and Other Academic Documents

DATE: June 2018

PURPOSE: This policy offers guidance to faculty and students in determining inclusion as an author and order of authorship.

REVIEW: This policy will be reviewed if the University develops a policy on this issue.

POLICY

1. The College of Human Sciences recognizes that faculty members hold a reasonable degree of autonomy in their creation of academic documents, notably refereed journal publications and creative works. The College also respects the variability in policies and typical practices found in varying discipline affiliations.

2. The College as well recognizes that in matters of scholarly work involving multiple faculty members and/or students the issue of authorship may be the source of misunderstanding and in dispute.

3. The College also acknowledges that faculty members are often in a position of authority and power with respect to students. Faculty members have the obligation to act in an ethical manner with respect to students and acknowledge the importance of the mentor and mentee relationship. Just as with other mentor/mentee relationships there is a responsibility for the mentor to be clear with communication, enhance the development of the mentee, and for the mentor to not take advantage of their position.

4. The same ethical expectations exist in regard to tenured faculty members and untenured faculty members. The same kind of mentor/mentee power issues apply.

5. If this policy is in conflict with discipline/journal norms, the differences should be discussed with the Department Chairperson, who can consult with the Associate Dean for Research if necessary to assure fair and appropriate authorship attribution.

6. Definitions*
   a. Author – creator of and/or contributor to a research/scholarly publication or creative endeavor
   b. Publication – a publically shared piece of scholarship or creative work that relates new information and knowledge (includes books, journal articles, abstracts, websites, exhibitions and performances of works of art or any work that can be explicitly documented)
   c. Authorship – a person shall qualify as an author provided the following conditions are satisfied
      i. Participation in conception and design of the creative work, study, review, analysis and/or interpretation of any data
      ii. Participation in the drafting of the creative work or manuscript or in the editing of the creative work or manuscript
      iii. Final approval of the version of the creative work or manuscript to be published
      iv. Ability to explain and defend appropriate portions of the work or study in public or scholarly meetings

Potential authors should check with the journal-specific criteria with respect to all aspects relevant to publication. If journal criteria are in conflict with the COHS policy, the journal criteria would usually take precedent.
d. Acknowledgements – contributions that do not justify authorship should be acknowledged in accordance with disciplinary standards (stipulated by individual journals). Contributions to a work that do not constitute authorship can include, for example, technical support or assistance in attaining funding.

e. Lead Author and Order of Authors – lead author (sometimes called corresponding author) is defined as the person who leads a research/scholarly effort or creative work and makes a major contribution to a multi-author work; lead author also is responsible for gathering appropriate consents, validating the integrity of the work, leading the discussion of the order of all authors. Ideally the order of authors should be decided prior to the initiation of the study.

f. Accountability – EVERY author listed on a publication or creative endeavor is responsible for approving the final version of the manuscript and verifying the integrity of the research/scholarly/creative work performed.

PROCEDURE

1. Faculty members who plan to work together on a research/scholarly/creative activity should discuss among themselves the order of authorship and responsibilities of each individual before the project starts. As the project evolves, there may be a need to revise the original plan, but every member of the group should be involved in the discussion.

2. If the author group includes a student, special expectations may apply as provided below.
   a. If the student is involved in the project as all or a major part of his/her thesis or dissertation, the student should always be primary author on any resulting publication even if the student did not do most of the writing.
   b. If the faculty member who worked with the student uses the information generated from the thesis/dissertation research as the basis of further inquiry, the student would not necessarily be included as an author on that paper, but their work would be referenced in the article.
   c. If a student is involved in the project as part of a larger group and does not make a significant specific contribution, that student would not necessarily be an author and certainly not primary author; this is typical in the case of an undergraduate student researcher.

3. If a dispute arises regarding authorship, the issue should be taken to the Department Chair. If a resolution cannot be reached at the department level, the issue would then go to the office of the Associate Dean for Research and be heard by the standing COHS Research Committee.

4. If Research Committee finds evidence of research misconduct, the issue will be forwarded to the Associate Vice President for Research (Research Integrity).

The policies and procedures of the College of Human Sciences function within the context of the larger institution and are designed to advance the overall mission of the university. Should conflict occur between the policies of the college and those of the institution, the operating policies and procedures of the university shall take precedent.
