TExAS TECH
UNIVERSITY CENTER FOR
EARLY HEAD START

TTU Center for Early Head Start Center (CEHS), in the Department of Human Development and Family Studies, is a federally funded program serving young children from families with low incomes and diverse ethnic backgrounds in East Lubbock. Located on East Broadway and on Zenith Avenue, CEHS provides comprehensive services including child care, home visits, and parent education. Open all year, CEHS is accredited by the National Association for the Education of Young Children, follows the high Scope curricular approach and provides nutritious meals and snacks to children.

The Center for Early Head Start provides interdisciplinary research opportunities for faculty and graduate students in fields such as child development, parenting, teacher attitudes and behaviors, poverty and risk, nutrition, family financial planning, classroom environments, and outdoor settings. Previous researchers have come to the Center for Early Head Start to study eating habits of young children, parent views of early education, and parent preferences in playground design.

All proposals for programs and research are reviewed by the Director of the TTU Center for Early Head Start and Human Development and Family Studies faculty. Research studies of children are primarily observational or are based on children's play activities. Research involving parents may consist of surveys, interviews, and focus groups. Families may be recruited for studies in research laboratories across campus.
