Current research interest:
- Obesity treatment (surgical and non-surgical): Short- and long-term outcomes, psychosocial correlates and medical comorbidities
- Neurobiological correlates of obesity and health behavior
- Internet, telemedicine and other technology in the treatment and prevention of obesity
- Health disparities and underserved populations: Community intervention and prevention
- Body image in ethnic, cultural and gender diverse populations
- Roles of pain & sleep and other comorbidities in obese populations
- Physical activity and overall wellness promotion

Proposed Collaboration:
- Open to collaboration across a range of topics involving obesity (from basic science through to public health and advocacy including translational research)
- Available for broader topics in behavioral medicine, health promotion and health behavior change
