Texas Tech University Pricing Exclusively from IKON Office Solutions
The Aficio 3035 multifunctional system offers advanced document distribution, security and reliability – everything needed to streamline workflow. The IKON Certified Series program gives you access to “like-new” equipment devices that cost less than they would if purchased new. IKON Certified Series equipment goes through a rigorous 120-step process for remanufacturing, a standards-based approach and offers an array of available service guarantees.

Rigorous Requirements and Process

Before it can be remanufactured, every piece of IKON equipment must meet strict eligibility criteria. For machines that are selected, certified technicians then complete the following process:

- Device is disassembled down to its frame
- Sub-assemblies are cleaned and inspected
- Worn, cracked or fatigued parts, circuit boards, power supplies, clutches and drive assemblies are tested and repaired or replaced
- Panels and casings are refinished
- Firmware updates are installed
- Device is reassembled and tested, with final testing performed by independent inspectors
- Device also undergoes Underwriters Labs’ safety testing and receives the “UL Listed Remanufactured” mark

Once those steps are complete, the unit is packaged under new equipment standards and shipped.

Ricoh DataOverwriteSecurity System (DOSS):

To further thwart data loss, an organization’s information security measures should incorporate technology that destroys latent digital images on the MFP’s hard drive. Ricoh’s DataOverwriteSecurity System achieves that goal as it destroys temporary data stored on the MFP’s hard drive by writing over the latent image with random sequences of “1’s” and “0’s.”

- Ricoh’s three-pass random data overwrite process makes any effort to access and reconstruct stored print/copy files virtually impossible.
- Operates in conjunction with the Removable Hard Drive Security Systems, providing a multi-layered approach to securing sensitive documents.
- A simple display panel icon provides visual feedback regarding the overwrite process, e.g., completed or in-process.
- Conforms to National Security Agency (NSA) recommended methods of managing classified information.
- Assists in compliance with HIPAA, GLBA and FERPA requirements.
Ricoh Aficio 2051 Digital B&W Multifunction Copier

Ricoh MFP 171SPF

- The Ricoh MP 171SPF packs multi-functional productivity into a small footprint, saving you both space and time. All of your printing, scanning, copying, and faxing can be done from the same source. The Ricoh MP 171SPF meets busy office demands and goes beyond them, offering environmentally friendly features.

- Optional Accessories
  - 1 x 500 Sheet paper Bank
  - USB Scan to Media Kit

RAM-based Security
Select Ricoh MFP systems use RAM (Random Access Memory) for document processing tasks as a copier, not a hard disk drive. Though a hard drive is available as an option on some units, there is a security benefit to the base configuration in that jobs processed though RAM are volatile (i.e., when the system is turned off, data is immediately erased). Without a means to permanently store data, such as a hard drive, the security threat is eliminated. As such, these MFP systems can be proposed for low-volume environments where information security is the top priority.

Ricoh DataOverwriteSecurity System (DOSS) Option:
To further thwart data loss, an organization’s information security measures should incorporate technology that destroys latent digital images on the MFP’s hard drive. Ricoh’s DataOverwriteSecurity System achieves that goal as it destroys temporary data stored on the MFP’s hard drive by writing over the latent image with random sequences of “1’s” and “0’s.”

- USB Scan to Media Card
- Camera Direct Print Card
- GigaBit Ethernet Interface
- Wireless LAN Card
- Bluetooth Interface
- HDD Encryption Unit
- Fiery Controller

**Ricoh DataOverwriteSecurity System (DOSS):**

To further thwart data loss, an organization’s information security measures should incorporate technology that destroys latent digital images on the MFP’s hard drive. Ricoh’s DataOverwriteSecurity System achieves that goal as it destroys temporary data stored on the MFP’s hard drive by writing over the latent image with random sequences of “1’s” and “0’s.”

- Ricoh’s three-pass random data overwrite process makes any effort to access and reconstruct stored print/copy files virtually impossible.
- Operates in conjunction with the Removable Hard Drive Security Systems, providing a multi-layered approach to securing sensitive documents.
- A simple display panel icon provides visual feedback regarding the overwrite process, e.g., completed or in-process.
- Conforms to National Security Agency (NSA) recommended methods of managing classified information.
- **Assists in compliance with HIPAA, GLBA and FERPA requirements.**
Ricoh MPC 5000 Digital Color Multifunction Copier

- 50 pages per minute Color and Black & White
- 100 Sheet Automatic Document Feeder
- 2 x 550 sheet paper trays + 100 sheet bypass
- Warm up time of less than 60 seconds
- 50 sheet stapling finisher
- Data Overwrite Security System
- Output up to 140-lb index Paper
- 600 x 600 dpi resolution
- Energy Star® compliant
- Touch Screen LCD Control Panel

10,000 - 20,000 pages per month
