Student Opportunity

Here is a link to our program website https://www.ckwri.tamuk.edu/research-programs/texas-native-seeds

I have a part-time position available for a student worker or recent graduate, up to 19hrs/week if in school and 40/week when on break or out of school, with compensation that I am working to keep competitive with the area’s demands (13-15/hr). Ideally, I would like a student who is interested in ecology/plants/biology, or at least will find the work interesting. This position will be based in Midland, TX.

The position will help to assist me in field collections, cataloguing, and cleaning native plant seed. It will also include data collection of long-term field evaluations studying physiological and morphological measurements of different plants. The establishment and removal of these field trials will also be part of the position. Familiarity with agricultural work and equipment is a plus, willingness to learn is acceptable. Some travel may be required and will be paid for by the university.

If you or a student would like more info, feel free to call or e-mail me anytime. If there is anything else I can do to help, please let me know. If possible, I would appreciate you sharing this with any staff/students you think may be interested.

Best,

Samuel Lutfy
