AGRonomy Field Scout/Apprentice & Internship

Indigo is a high-growth and innovative agricultural company. We have an extraordinary opportunity to help farmers harness nature to feed and clothe the planet in a sustainable manner. Our biological advancements enable us to work with farmers to improve agriculture in a way that creates enormous economic value while benefiting the environment and providing consumers a more natural food and fiber supply.

The role of the Agronomy Field Scout is to work with an Indigo Agronomist to delight Indigo growers with world-class crop advisory services. Indigo Agronomy Field Scouts will work with an Indigo Agronomist directly to aid forward-thinking growers and provide value-added agronomic services including but not limited to: field scouting, crop monitoring, and input recommendations. Additionally, Field Scouts will learn knowledge of agronomy and row crop production, deliver exceptional customer service, and building a long-lasting partnership with growers. These efforts will enable grower success by maximizing farm profitability, productivity, and sustainability.

Outcomes:

- Collect and submit consistent field data to the Indigo Agronomist including but not limited to crop growth, weeds, insects, disease, and other environmental impacts on the crop.
- Collect and submit soil and/or plant tissue samples for analysis when applicable.
- Promote cultural practices that enable growers to achieve profitable yields above their historical average.
- Learn to create a strong feedback loop between the information collected and the Indigo Agronomist.
- Collect detailed on-farm data utilizing precision ag technology and leverage for improved farm productivity, profitability, and sustainability.

Attributes and Competencies:

- Willingness and desire to work outside, on farms, and in fields.
- Clear communication skills.
- Comprehensive understanding or desire to learn agronomy and row crop production practices.
- Ability to work in the Indigo system - loves continual learning, adaptable, and agile in approach.
- Works as part of the agronomy team to collect and submit consistent data.
- Able to utilize new technologies and tools to collect and submit consistent data.

Experience:

- Graduation from a senior high school or equivalent program.
- Familiar with agriculture, and the production practices in West Texas.
- Two years completed in an agricultural science program is a plus, but not a requirement.
- Knowledge of cotton and wheat production is a plus, but not a requirement.
