Internship Opportunity

"My name is Clay Golden, I am an Independent Crop Consultant, and 1997 graduate of Texas Tech.

I am currently looking for a paid intern for the 2017 growing season. I use two interns every summer, and one just got the opportunity to go to Spain with TTU over the summer.

The intern would be responsible in assisting me scout fields and generate reports for our customers. They will see many different farming practices and get a lot of practical skills throughout the summer. I go way beyond "bean counters" and try to teach my employees as much as they are willing to learn. They will learn insect pests, predators, weeds, PGR's, varieties, moisture sensing, diseases and more. Our main crops will be cotton, corn and sorghum.

My only requirement is they must be a current Agriculture related major in college. Most of the farms will be within one hour of Lubbock. They will be provided with a work vehicle."
