WHAT DOES IT DO TO MY BODY?

MARIJUANA & CIGARETTES

- Anxiety and paranoia
- Problems with attention and memory
- Negative impacts to brain development
- Increased risk of stroke
- Blindness
- Cataracts
- Gum disease
- Increased heart rate
- Increased risk of stroke
- Increased risk of heart disease
- Coronary heart disease
- Pneumonia
- Tuberculosis
- COPD
- Asthma
- Cough and phlegm
- Damaged lung tissue
- Increased risk of bronchitis
- Scarring and damage to blood vessels
- High doses in edibles can lead to poisoning
- Ectopic pregnancy
- Increased risk of diabetes
- Erectile dysfunction
- Reduce fertility
- Damaged lung tissue
- Scarring and damage to blood vessels

E-CIGARETTES

E-cigarettes may benefit adult smokers trying to quit. E-cigarette aerosol usually contains heavy metals, diacetyl (which causes lung scaring), volatile organic compounds, cancer-causing chemicals, and nicotine.

TOBACCO

Tobacco contains tar, which causes build up in lungs and arteries. Use of tobacco products leads to a higher risk of cancer as well as heart disease and other health complications.

NICOTINE

Nicotine is a stimulant that is highly addictive and causes a “fight or flight” response in the body. Nicotine withdrawals can lead to a number of symptoms such as fatigue and severe headaches.

HOW TO QUIT

Talk to your doctor about getting help to quit.
- Keep a journal of your experience.
- Reflect on why you chose to quit.
- Find healthy distractions and other outlets.
- Drink plenty of water: stay hydrated!
- Get active: help remove toxins from the body.
- Avoid activities where temptations are high.
- Reward yourself for improving your health!
