[post-graduation paths]

E X PLORE
TEXAS TECH UNIVERSITY ADVISING
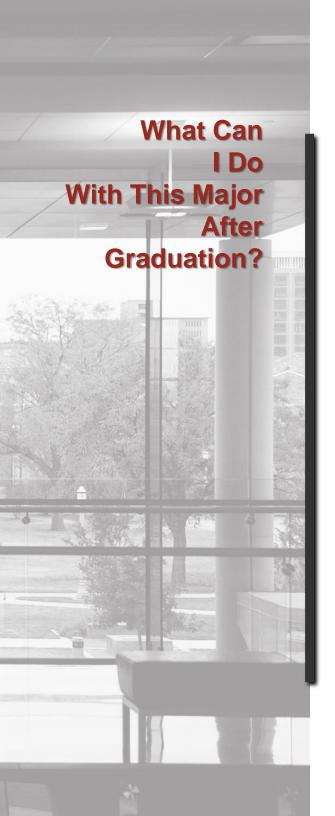

solve for (X) in terms of (why)!

- demographics, cultural trends, and new technologies are rapidly changing the job market.

- people are living much longer than we used to. new technologies and automation are rapidly replacing repetitive jobs. new communication tools are eliminating formerly popular media for disseminating information (good-bye printed newspapers).

- 10 essential skills for the jobs of the near future:

1) sense-making: clear understanding of processes, procedures and policies
2) social intelligence: the ability to connect to others successfully
3) novel and adaptive thinking: creative problem solving
4) cross cultural competency
5) computational thinking: the ability to move from data and numbers to abstract concepts
6) new media literacy
7) transdisciplinary: the ability to understands concepts from different disciplines
8) design mindset: the ability to develop tasks and processes for desired outcomes
9) cognitive load management: the ability to discriminate and filter information for importance
10) virtual collaboration: the ability to work productively, drive engagement and be an effective part of a virtual team
11) competency in social media, IT networking, graphic design and computer programming
