Text Responses
Comments instructor or course
Overall a good class, most of the labs were a waste of time seeing as we drive 20minutes to class, took a 10 minute quiz and left. It would be better if Dr. Crossland was more present in class and did more of the lectures herself rather than having a guest lecture every other week.
Dr. Crossland is a great teacher and I learned a lot from her
I really enjoyed this class. I found it easy to learn to the material, and be able to apply it when necessary. Great fundamental class, and would recommend to other students.
The course was definitely tailored to Ruminant nutrition, however, I would have like to to see more in depth material. Traditional studies are good, but what is cutting edge right now?

Awesome instructor! Made accommodations very well compared to some other professors with all this covid going on

I really enjoyed this class and Dr. Crossland is an awesome professor. While the materials in class were sometimes challenging to learn, overall the class is really interesting.

Dr. Crossland was great. I loved going to her class because she made it very interesting and fun.

Dr. Crossland is a very knowledgable professor. When teaching she goes very in-depth to really give us the big picture which I like. Her tests actually test our knowledge rather than our test-taking ability which I appreciate.

I really enjoyed your teaching method, and I learned so much in your class that wasn't on the exams. I like how you engaged your students to your learning. I was always looking forward to attending.

Dr.Crossland is one of the most smart professors I have had in the ANSC department. She is enthusiastic about the material she is teaching and that alone makes her very easy to listen and learn from.

Dr. Crossland makes taking this course 100 times better she is a great teacher and has a wonderful personality

this course is great and to the point. Crossland is clear about her objectives for the class and what students will be required to know. This makes it easy to stay on task and understand the class.

Great course, hands on

The instructor has us take 100 question test which I think is way too much. That's really hard to learn all this material and memorize a bunch for 100 questions. It's very stressful especially for someone who has ADHD which affects memory. Memorizing breeds, in my opinion, is a lot of work you should just have us memorize a small amount of breeds not 5 cows and 4 dogs. that's alot of mental strain.

The lab portion did not connect at all with the lecture portion which was very odd. The lab portion also came off as lazy and the TA put little effort into creating new content or making sure we understand information. When I asked to view past quizzes to understand the information, I was told it's not allowed. I have never had a class tell me I can't look at a prior grade and get corrections. I believe this is a way to hide the shady stuff in her quizzes, some questions on them weren't even in the prior lecture.

Good job

Dr. Crossland has been one of my favorite professors I've ever had. She is well educated about the subject and tries to make class fun with experiments and jokes. Loved having her as my professor.

she was very good and very helpful with everything

You did a great job of providing study materials (self assessments, examples of GI tracts, working through nutrient digestion).

I loved this class , she's a very fun professor , I took her for animal nutrition and she. turned a hard class into easy and fun.

The portion of class held at school was informative, and easy to follow. The teacher was interesting and informative.

Very good professor. Makes learning fun.

the instructor made the class so understanding and simple that if you did not get an A in class it would be sad

I thoroughly enjoyed this course

She did not provide a tutor and when asked about setting up a meeting time I never got a response. She throws the course's context at us like a bullet train and only wanted us to know some of it. Gave us way to much information and ended up confusing us. She was very hard to get a hold of.

Professor clearly loves her subject and is realistic in that most students are not majoring in anything hugely relevant to this class so she does not delve too deep into subjects unless asked to. Made fun activities for most classes that made me want to come to class even though attendance was not mandatory.

This class was interesting and well constructed, I believe that is all due to this instructors work put in and personality. Absolutely loved this class
Dr. Crossland gives students the opportunity to succeed in her class. She is teaching for her students and makes sure everyone has the ability to do well!
I loved this class and would recommend it to anyone with any major. Dr. Crossland made the class very enjoyable and easy to stay engaged and learn everyday!!
I enjoyed the class.
Dr. Crossland is funny, extremely intelligent, and a great professor. I loved this class and I am glad that got to take it.
Course was well structured and Dr. Crossland was very engaging with students
Great professor. The class was a little boring, but Dr. Crossland made it fun. She is very passionate about the subject and really cares for her students. She wants to see us succeed. I loved this class.
I really enjoyed taking this class, I learned a lot of valuable information throughout this class. To me the powerpoints were helpful to this class, the information presented on the slides were straight forward and easy to gather information from.
I think Dr. Crossland does a very good job teaching the class and is very knowledgeable on the topics.
This course was simply amazing I was excited to learn due to Dr. Crossland's enthusiastic teaching. My most favorite topic was learning was the nutritional diseases.
I absolutely loved this class. I got my B.S. at TTU in Chem, and never took a course that was as intriguing or engaging as this one was.
great class
Went into the class with little to no knowledge regarding livestock and other farm animals, and finished the class with a lot clearer insight of how to handle and take care of these animals.
Fun class very helpful for my future.
Her teaching style was very effective. I was able to easily understand her and comprehend the information.
Overall this class was very useful to have a better understanding of nutrition. I love how helpful this class was and how knowledgeable I am now. Thank you Dr. Crossland for everything you do for this class hope to see you around for any future help! Have a great summer!
really great course. good for a general animal science course.
Very knowledgeable and clearly had experience in the subbject
The information seemed easy to understand, however the way it was delivered and instructed for us to know was extremely difficult. Only about 50% of the information was given in the notes that was required for us to know on the exams. Only 2 study guides were given and for the third exam we were not given an in person review or a study guide. I attended every class throughout the semester and still struggled to understand what was being required for us to learn. The notes were rarely submitted in a timely manner for us to have for the exams. Overall, this class was harder than it should have been and the professor was rarely prepared.
This was the most unorganized course I have ever taken at Texas Tech University. Dr. Crossland did not teach the content effectively and it seemed to be a burden to her when something was not understood. In addition to the lecture, the lab section was a disaster. The homework added more variables and variety than included in the lab notes, and there were little to no resources to get help with understanding the content. The course fell apart as the semester progressed. It seemed like Dr. Crossland had given up on trying to help her students understand the content; therefore, we have been struggling to teach ourselves the information. I feel that this could have been a good course and that I could have learned some valuable content if it weren't for Dr. Crossland.
The way that this class was set up was super beneficial for me, I feel as though I have learned more in this class than some of my classes with mandatory attendance. Dr. Crossland had such a good attitude and even when attendance was not mandatory, I still wanted to make it to class.
I genuinely enjoyed going to this class. Dr. Crossland is extremely knowledgeable and made the learning environment both interactive and fun.

n/a
Really good professor will take again for nutrition, her lectures had a lot of information and were very helpful.
This course was hard for me, but I did learn a lot and Crossland was helpful when I went to her for help.
Professor Crossland is a really good teacher. She explains the content very throughly. I have enjoyed this class very much.
Dr. Crossland is one of the best professors I have had so far. I was able to actually learn from her lectures instead of just memorizing material.
Dr. Crossland is a wonderful educator! She knows how to effectively get information through to students.
I think the professor was great, she taught very well and made sure to post everything after lectures.
Good instructor very interactive
This is an amazing course and it's taught very well
Having to buy many books instead of one textbook really made it hard to keep up with readings because receaving them took forever. Also the way the structure of the class was of not using blackboard until COVID-19 was hard to follow up on grades and lectures.
Great course and even better instructor. No issues at all and Dr. Crossland is a great teacher.
Instructor has great attention getters and presents class well
This class was very informative, and I learned so many new things. Thanks for a great semester!
Notes are very informative and easy to follow, which makes studying a lot easier. Dr. Crossland always made sure we knew everything we needed to know for exams and was a very interactive professor.
Great professor
I loved the course and the professor was awesome
In this course it was easy to follow the work and we knew what content was going to be on the test which made it easy to study for the midterms.
Dr. Crossland was probably my favorite professor I have ever had. She is so nice and helpful, and her class was so fun and interesting to me. 10/10
I really enjoyed this class for the short time that we attended in-class lecture. Dr. Crossland was very helpful in the online course transition.
I loved this class so interesting and fun
absolutely loved the course and dr. crossland!
Dr. Crossland was a wonderful professor. I loved her personality and willingness to help her student succeed. She very clearly laid out her expectations and objectives for the class. I especially loved when she brought experiments to class so student who are visual learners could easily understand the lesson being taught.
Dr. Crossland is very funny, even though she doesn't try be. It's just in her nature. She makes class very fun and exciting. Great course and instructor.
Loved this class!
Dr. Crossland was very nice and funny. She's probably the most amazing teacher I've had besides one other one, but they're tied for best.
I enjoyed Dr. Crossland's ANSCI 1401 course very much. I learned a great amount from her in class but also by myself through the online quizzes and study material given. I wish I could take another course of hers because she is a great professor but means business. While I'm not an animal science major, I will be looking for more opportunities to study under and learn from Dr. Crossland.
Overall a great professor, just had a hard time studying for tests. The information seemed hard to find.

thank you for a great class.

Really enjoyed this course and learned a lot. Always will a take a class if Dr. Crossland is the professor!

I loved Dr. Crossland's class and wish I could have her for more classes.

I loved this class, I LOVE Dr. Crossland, love her teaching style!

This was my favorite class. I always looked forward to class. I love the way you lecture. It is so evident how much passion you have and knowledge for this class. I like how you make the topics. we are learning. relevant by using personal stories ect... Of course I appreciate the self assesments! LOVE THIS CLASS, YOU'RE AWESOME!!!

I really enjoyed this class. Dr. Crossland really engaged with her students and made it a point to lighten the mood with jokes every once in a while. Loved that.

I really enjoyed her method of teaching... definitely one of my favorite professors this semester

Overall informative and effective course/professor.

In response to the last question about attendance, I do not feel that attendance be mandatory due to the fact that I was able to study and complete assessments on my own time and still make very reasonable grades on the exams that were in class.

Overall, I did enjoy the course! It was definitely challenging, however, Crossland will shoot it to you straight on the expectations for the class. Sometimes, however, it would be difficult to really know what exactly to study for exams.

Dr. Crossland is a wonderful professor with clear expectations for her students. Wish I could take more classes taught by her!

The class was alright. Learning material could feel repetitive at times, but this is no fault of the instructor. Along these line, learning material often felt like the memorization of random facts and data instead of the learning of useful information. Lectures were great and allowed helpful student to teacher interaction. Guest lectures were also interesting, but didn't translate very well into exam material.

Everything was explained in a way that was easy to understand and grasp. Course materials were easily accessible and well organized.

Dr. Crossland is a great professor and I found myself actually excited for class. She would explain the material instead of just reading off of the screen and put things in ways that would stick with you. I look forward to learning the material and I very much appreciate her teaching.

She's amazing and very easy to learn from

made the course very fun and easy to learn but effective

Dr. Crossland was very excellent in teaching. I loved how she would go beyond to answer any questions we had after classes and during online sessions.

Loved her and was very nice and informative

Listens to student feedback regarding exams.

Dr. Crossland was very specific about her expectations and our expectations, and I really liked that. There was no surprises, so everything was expected in this course.

Very understanding professor and helped with any assignments student needed help on

this class is taught very well, the information is extremely interesting, and overall I think this class is very valuable.

I really like the format of the class and if anything need to be done would have to say would maybe have a few homework assignments maybe one before each test to help grades if people do not score high on test

Loved this class! I loved all of the experiments we did to see the various processes that happen within our animals.

She is one of my favorite professors! It's always a joy to take her class, she is amazing at teaching! If I could take classes of just her I totally would!!

Doctor Crossland was such an amazing professor. She is so knowledgeable and a structures her class so well. Gives all the resources to be successful in her class.

This was a very messy course and was stressful at times to understand because of the lack of organization.

Class was taught and ran well.

I truly enjoyed the class, and believe that Dr. Crossland enjoyed teaching the information.

N/A

She was an amazing teacher! She explained all the topics thoroughly and made the class exciting to attend! I loved her class!

I feel like this class was a hot mess. It need to be structure better. Half the time no one knew what was going on the notes were never available till right before class started or even days after we had lectures over it. The exam did not reflect the lectures. I found it impossible to study for this class because it was a shot in the dark there was no guidance. Nothing about this class went smoothly.

great course for beginners to animal science

Overall, I loved Dr. Crossland's course! You can tell she is very knowledgeable and passionate to engage and teach her students! I also liked how she made her exams and provided study quizzes, they were extremely helpful.

I really enjoy the structure and content of this course. I wish that there were a few assignments that counted towards our grade for this class.

I really liked this class. The modules helped out tremendously on the exams. Very pleased with this class

the notes would not always be posted so when I would get stuck on something I wouldn't have anything to look off of, also near the end of the semester we didn't receive much help or reviews so we would be lost on what to study.

I thoroughly enjoy Dr. Crossland as a professor. However the course was unorganized. And in her syllabus it states that there would be some sort of materialized study guide for each unit and there hasn't been consistently and missing a lot of class due to extra curriculars it made it hard to excel in this coarse because there were not reviews provided consistently throughout the semester.

I absolutely loved this course. If I wasn't a psychology major I would want to be pre-vet. The material was so interesting and the lab was even better! I loved going to the farms and being with animals! I can't explain how amazing it is to understand what I consume and how its processed. This course was very effective and entertaining. I think the attendance for me was never really an issue because I took a quick liking to the course and it helps me when preparing for exams to actually knowing the material.

Although it was very obvious that Dr. Crossland understood the material she was teaching, she began the semester saying we needed to be able to teach ourselves all of the material instead of her having to do it. I definitely think it is very smart to have TAs for this class in the following semesters.

Good Instructor

This course was extremely difficult because there were limited notes and resources given to succeed. I feel like the course would have been fine to take if notes were provided and reviews for the test were provided. I was in class every single day and still struggled to do well on tests. I do know that professor Crossland had a lot on her plate during this semester but I believe it is only fair as students that we are given the same opportunities to succeed as any other class. Most of the time talking to other classmates no one really knew what was going on or what was being tested over.

This class was a very effective intro to animal sci class, covering all common topics with just enough depth to be memorable. The powerpoints used were super helpful and thorough, but I feel like that made class slightly less engaging due to all the info being on the slides, meaning students could skip class and still have all the info

love this teacher and the course, just wish we had more grades in there other than the test grades.

great person, but it was apparent she was over scheduled to be teaching this class.

This class was one of my favorites this semester. Despite the situation regarding COVID, she was very interactive with her students and made sure we knew that she prioritized her students and their safety the entire time. When I went into self isolation, she ensured that I still had an equal chance to take my exam. And when I couldn't be in class in person, she made it just as easy to attend virtually.

This was my favorite course, I had a lot of fun learning throughout the semester.

Tough course but taught well

By far my favorite teacher this year. She made the class enjoyable and knew how to be fun and serious at the same time. I applaud how she combated technological issues; although clearly frustrated, she didn't let it ruin her day, and actually made a joke out of it.

This was Dr. Crossland's first year teaching this course and she did a really good job.

Dr. Crossland is amazing!!

Dr. Crossland is one of my favorite professors. She makes learning a complicated subject easier.

Dr. Crossland is an excellent instructor and has provided a laid-back environment while also effectively teaching the coursework. One of my favorite instructors so far.

Dr. Crossland is a wonderful teacher, my work schedule got changed and after the first exam I was not as present in class. However, she has the course set up for student success and I really enjoyed this course.

I think Mrs. Crossland is an amazing and supportive professor. She is extremely kind and understanding to her students and makes classes entertaining to attend; however, I think not making class mandatory affected a lot of people in her classes to fall short for assignments and exams. Her assignments and exams are not difficult, and she tells you what you need to know for the exams, but if class is not mandatory, no one is going to show unless they care to gain something out of the course, or they are struggling with the class.

Enjoyed this class and learned a lot of information that is just useful to have.

I really enjoyed this course and I learned a lot! Dr. Crossland is a great professor!

Very good class, learned a lot.

Very good at teaching the material

Overall, I loved the class and Dr. Crossland did a very good job of teaching us.

I have had Dr. Crossland before and have loved her classes. This class was a bit different though in its effectiveness. I know that this class was new to Dr. Crossland and she was very open and upfront about that, which I appreciated. I still feel like there was not a lot of organization going on. There was never a review, self assessments, or quizzes made for class and being compared with her previous classes, that was always something that helped me the most! I think this was just a one time thing with Dr. Crossland but overall it was still frustrating not feeling like I was learning to the best of my abilities, nor did I feel like I was getting taught to the best of her abilities.

Dr. Crossland has gone above and beyond to help me as an advisor and a professor. I absolutely believe she embodies what it means to be a part of Texas Tech faculty. As a professor, she strived to make sure students were well prepared and equipped with information needed to execute the course. As an advisor, she has been a mentor, life coach, and even more, a guidance to higher confidence for what's to come after graduation. She was an absolute blessing.

Lectures are very helpful, and supplemental material provided by this instructor was integral to succeeding in this course.

This class was by far my favorite class this semester. Great professor and great material.

Always made the content clear and made sure we were aware of what was expected in class and in lab

Awesome professor that knows how to teach her students.

Teacher definitely knows what she is talking about and she tries to make learning interesting but because this is a general animal science course there is a lot of things to go over which can seem overwhelming.

Dr. Crossland taught our nutrition class with a lot of passion for the subject. I appreciated how she taught because she wanted you to learn the subject and not just memorize the material for exams. Not only were her lectures beneficial to just our nutrition class, but it also helped me understand the materials in some of my other classes where nutrition was a topic.

She's great!!

Absolutely loved this class and really enjoyed it. Dr. Crossland made this class so much more enjoyable than I actually thought it could be. She sparked interest in other fields of study for me.

N/A

Very Passionate

Dr. Crossland is obviously well educated and passionate about animal science.

I loved the professor. She was straight forward and always in a clear and concise manner.

Genuinely learned from and enjoyed this course.

I really enjoyed this coarse and I always love Dr. Crossland, she's an amazing professor!

Great class, this class was fun and I feel like I learned a lot with this class plus the lab.

She did an incredible job with the class. Lots of material for one class.

Dr. Crossland has been one of the best professors I have had, and I am a junior. She has been an amazing professor

Love Dr. Crossland!

Loved this class, made it easy and enjoyable to learn in her class.

Allie Martin, Teacher's Assistant for the Animal Science 1401 Lab, was one of the worst TA experiences I've had thus far. She yelled at my group the second week of the lab for not writing down our lab section on our paper. Additionally, she was moody all the time and expected us the very first week of class to arrive on time for the lab when we had to walk 15+ minutes from Ag Comm/Ed building to animal science. She was literally going to make those in class vote for us to stay in class until she realized there were around 20 of us coming straight from the lecture. It took her until the end of the semester to grade all of our assignments which were on paper, so if she lost anything it was gone forever. Finally, after emailing her several times about a quiz I took and didn't get credit for, she didn't take the time and effort to do her job as a TA and look at the correct quiz which she marked as late but it clearly wasn't. I had to forward her the email I sent her from that week's quiz where the due date was March 27th, 2021 and not October 27th. She also didn't update Blackboard from the assignments from last year so clearly, she has poor planning skills for courses. I would not ever recommend taking any class where she is the TA. She is mean and overly opinionated.

I loved this class and feel like I gained a lot from it. I liked how Professor Crossland was able to relate most of the content to real life experiences and not just read straight from her powerpoint presentations. Overall I loved this class!

Loved this course and Crossland's teaching style and enthusiasm for the content!

She was really nice

Dr.Crossland did a great job making sure all information needed was available to us and was very present if any questions were asked.

Dr Crossland is such an amazing professor, she not only teaches the class but makes going to class enjoyable

I have had Dr. Crossland for a class before and she is a great professor. I know this class was a last minute thing and although it was very unorganized this semester, I know Dr. Crossland tried her absolute best to give us what we needed for both lab and lecture! She is a great professor/ person. Love her!

I like how Dr. Crossland does little experiments in class to keep us engaged as well as telling relevant stories!

Best professor everrrrrr, I've taken two classes tonight by dr crossland and they've both been so fun and educational

Dr. Crossland is a fantastic teacher who engages the class in a fun way. I cannot wait to take her for feeds and feeding in the fall!

Crossland is an absolutely amazing teacher and the course itself was very informative and interesting

I really enjoyed this class and Dr.Crossland as a professor!! She always kept lectures interesting and engaging, which is something I really appreciated.

This course has been my favorite course I have taken so far. Although animal nutrition is not a topic I am particularly interested in, Dr. Crossland made this class so enjoyable and easy to be successful. I adore her teaching style, and she made all of the information very digestible (pun intended). I especially appreciated the self-assessments for each unit; I have never been provided with such a useful studying tool by a professor. I truly hope that I can take another class taught by Dr. Crossland in the future.

Very great instructor, made us all laugh

Doctor Crossland never made the lectures boring, she always threw in entertaining jokes and personal experiences to aid in her teachings and I appreciated that.

It was a very interactive class. I enjoyed every lecture.

The only thing I did not like about the course was my lab partners. I think the professor and Lab TA should give people the ability to form their own groups of 4 or maybe even less instead of a random grouping. Some people in the class really enjoy the topic then there are others who are doing it simply for the credit. I am one of the ones who only truly cared about getting a B or higher but I was stuck in a lab group that enjoyed taking up as much time at the labs as possible. While I understand trying to enjoy a topic can make it easier to learn we where always the last lab group out the door which I didn't not enjoy at all.

I honestly just took this class for a science credit, so I had no knowledge of anything related to this class at all when I entered. Dr. Crossland is an amazing teacher and I have learned so much information from her class. I loved that she gave us self assessments to complete throughout the class. These self assessments really helped me prepare for the tests and feel confident going into taking the exam. Dr. Crossland was so sweet, funny, and relatable. I loved being in her class even though sometimes the subject matter made me uncomfortable. (I honestly considered vegetarianism multiple times throughout this class!:))

I loved her! She was super informative and made learning fun! I know I will carry all the information she taught with me!

I really enjoyed this class and I think overall Dr. Crossland did an excellent job teaching it. I would strongly recommend her as a teacher to anyone.

Loved the instructor!

Loved this Instructor!

Dr. Crossland is an amazing professor, but unfortunately, this semester was kind of out of wack as it was her first time teaching. I think next semester when she has more feedback and a set plan for teaching the material will be better understood.

I have no comments about this course, Dr. Crossland is a great teacher.

Dr. Crossland is a wonderful and devoted Professor. This class is not easy, but Dr.Crossland does a phenomenal job of explaining concepts and answering any questions. I loved this course and having Dr. Crossland as my instructor, she is a shining jewel in the crown of Texas Tech Faculty and Staff and a wonderful and charming person.

Dr. Crossland is the best!

My favorite class ever.

Dr. Crossland did an amazing job as always. Her quick wit and dry humor keep her classes interesting. So sad this is the last class I will have to opportunity to take with her.:(

She seems very lost, picked up the phone during class a couple times, wasn't clear about content, forgot to write lecture notes, and took a long time to make quizzes available to be taken (which many of them had wrong answers and had to be corrected by her)… overall quite unprofessional, I don't think I've ever had a professor like this, I was excited to learn the content at the beginning of the semester and now I just dread going to class.

This was her first time teaching this class so there's definitely room to improve such as having the class material ready before class. I have a hard time connecting to the wifi in the building so sometimes I'm not able to open the notes until class is already over, which does nothing to help me learn

I took this class not knowing it was for beginner Agriculture majors. I'm planning on studying business and just took it for a science credit. This class was very educational for beginners. I didn't expect to learn about agriculture but i'm glad I did!

Dr. Crossland is very helpful and explains everything in a lot of detail. Great professor.

Instructor was very professional but also had a fun way of teaching. She took the time to explain everything in a way everyone could understand and gave visuals as well as things she's experienced that went along with the course material.

I thoroughly enjoyed the course and thought it was very interesting. the professor was very knowledgeable and engaging.

Professor Crossland taught the lectures very well.

A challenging course, but it was good!!!

Super super sweet professor !!!! Loved this course !!!!

Amazing instructor! Very helpful and kind to me! Even though this is not my major, I enjoyed learning from Dr. Crossland!

Dr Crossland made learning about the mitochondria and rumen bloat enjoyable and interesting.

Instructor is amazing and teaches information very well.

Very well constructed course covers each topic very well.

I feel like I didn't get a ton out of the course. Hard to apply the information at times.

I feel like I didn't get a ton out of the course. Hard to apply the information at times.

The content of the class was spectacular. Would of liked to have a couple of assignments throughout each unit to help learn.

Great teacher.

I've taken Dr. Crossland for another course and the professor was effective and the course was excellently organized. However, the way this course was handled does not reflect her past courses. Dr. Crossland did her best, but I do wish that the quizzes and the lab lectures had the same numbers. There were instances that the way to solve the quizzes needed different values than were discussed in lab. Dr. Crossland does understand that she could've done better organization for this course, therefore, I won't go into detail. I do wish the professor posted the notes in adequate timing instead of a week or a few days before.

None

This was a very informative and well taught class. Dr. Crossland is very easy to work with and a joy to have as a professor. She is very serious about students careers but also takes the time to get to know students.

Dr. Crossland is brilliant. She's very knowledgeable and clearly wants her students to succeed. She provides every resource one could need to at least pass the course, and I feel bad about how many people ignore that. I wish I needed more of her classes for my degree because I would love to take her again.

Loved Dr. Crossland as a professor

She's great!!!

Dr. Crossland not only taught the material but made sure everyone was able to understand

Dr. Crossland really cares about her students and goes out of her way to ensure our success.

The course was very fun, I enjoyed learning the basics of identifying animal breeds and how they came to be.

This professor was very direct and helpful in teaching the class by making it interesting.

The class was very ineresting and gave alot more information into the world of feeds. However, the teacher sometimes made the material confusing and did not elaborate on some of the major topics on the exam. Other than that, the class and the lab were fun!

Dr. Crossland made the class very fun and allowed us to further learn our material by small experiments.

I absolutely loved this class. I enjoyed Dr. Crossland and her way of teaching. It is a very interesting class, and I would highly recommend it to others.

I love Dr.Crossland as a teacher, I just felt she did not enjoy teaching this class as much as general nutrition. I appreciate her taking the time to teach it however.

She was very interesting in how she reached and seemed passionate which made me focus.

She was very conductive and taught me a lot about the general information about animals in the farm industry. I had a lot of fun.

Crossland was awesome!

I had a terrible situation happen this semester and had to get Title IX involved. Due to this situation, I had to miss a lot of my classes including hers, and that made this semester extremely difficult. She was given a letter from Title IX regarding my situation but did nothing to help me. She disregarded my efforts to ask for help. I would never want her as a professor again if this is how I am treated when I have proper documentation regarding my circumstances.

I LOVED this class!

I think the self-assessments & quizzes were extremely helpful when studying for the exams. I think attendance should be mandatory because I have been coming to class almost every class time and there is no one here. That makes me not want to come because no one else did. I did enjoy the way Dr. Crossland teaches. She keeps me engaged the whole time.

The professor is straightforward with her material and her lectures are entertaining.

Great teacher! Loved the class

I wish there was more grades besides the exams to help with grade averages. If you bomb a test, it's kind of hard to come back from that if there are only four overall. Maybe not even more homework or quizzes, maybe just one or two more extra credit opportunities.

Dr Crossland was a great instructor.

The self assessments were very helpful for studying purposes. I also got a lot of going to class and just listening.

None

Great teacher!!!!

Learned a lot in the class but I think it went too fast and was hard to really learn the different animals

I really like how Dr. Crossland formatted the class. I appreciate not having homework and only having exams. For me, this makes it easier to learn the material when I don't have to struggle with completing my homework on time in conjunction with my other classes. This class has been enjoyable for me to attend because of the way Dr. Crossland teaches.

I really liked how the class was formatted. Our teacher was very clear, and it was easy to learn because she was not confusing.

Overall a very positive and engaging instructor for an 8am course, offered help when we needed it and made her expectations very clear.

She is very passionate about any topic and is very helpful if you have questions.

She gives a lot of leniencies, is kind, and is very specific in her instructing.

Dr. Crossland is so great. This is the third class I have had with her. i had some challenges I was trying to overcome this semester and she really helped me throughout this semester!

Dr. Crossland is one of my favorite teachers at TTU. Her teaching style is remarkably memorable, and she makes learning a fun experience.

Dr. Crossland is a very straightforward professor and will not trick you on the exams which is very helpful.

Dr. Crossland is a very outstanding professor. She is very easy to follow and a great teacher.

I really love the instructor. Class is fun, engaging and very informative. She is extremely helpful and goes out of her way to help students be successful. I would take a class again with her anyday.

I really like the way she instructs the class and is really good at explaining the course material.

This course was very interesting, and the professor was very enjoyable.

Professor Crossland did a great job of teaching the course material and keeping the lecture entertaining. Her teaching style, power points, and self assessment quizzes made it easy to understand the material and made the class enjoyable.

I loved Dr. Crossland, she was very entertaining especially effective in gathering the crowds attention at 8:00 am. I loved her very much and I highly recommend her in all her classes.

This was my absolute favorite class so far here at Texas Tech. Dr. Crossland creates such a fun atmosphere that I looked forward to coming to class. She made it enjoyable to learn and it was so much easier to learn concepts this way rather than sitting through a boring lecture.

Overall she was an amazing professor, She explained everything very well and it wasn't too hard for me.

Dr. Crossland was an amazing reacher and you could really see her passion in what she taught she was a great teacher this semester.

Her course was fun yet educational. Would take again.

Loved the class practice material was incredibly helpful.

good class

Great class and professor!

Great professor and class!

She was really cool and understanding about her students.

Although this class was difficult, Dr Crossland was a great professor! I usually really struggle with chemistry oriented classes, but I'm potentially ending this class with an 'A' because of her.

N/A

This professor was amazing!

This course was very unorganized. The instructor did not have the material ready that we needed in order to study at the appropriate time for the next exam. The course objectives were supposed to help but did not relate to what was covered or on the exam. The lab was great; however, there were not enough practice problems. I enjoyed the chemical analysis of our feed but it was, again, not organized and hard to keep up with what we are looking for. I would check calculations, grammatical errors, and spelling in material for the next semester to study with clarity. Along with this, course objectives should be changed to accurately represent what students should focus on. The class, overall, was interesting and informative.

I absolutely love the relatability Dr. Crossland shares with us. She was funny, engaging, and approachable. I hope to have another class with her in the future. She should give a little more accountability to the class.

Professor Crossland was a great professor and I thoroughly enjoyed taking her class. I feel I learned a lot and found the class easier with her at the professor

Crossland is a great professor and I enjoyed her class. I hope to take more classes with her in the future!

Excellent course and professor. I enjoyed this class the most this semester.

This instructor is a very effective and productive professor. She is professional but also knows how to relate to her students. There is no one I would trust more to teach me in this class than professor Crossland. I highly recommend that students attend her class regularly to get the full benefits of having Crossland as a professor for it is a privilege and honor.

Dr. Crossland shows up to class unprepared and acts like she does not want to be there a majority of the time.

Dr. Crossland is a fun and interactive professor. Her knowledge of nutrition is well-portrayed in her lectures. This course is a perfect introduction to nutrition that can be built upon.

My favorite course Ive taken here at Texas Tech so far learned a lot and had a lot of fun in this class.

I absolutely loved this class and Dr. Crossland! She is one of my favorite professors I've had at Texas Tech. The way she teaches her class is very interesting as she uses real-life examples to help us understand it better and her study guides made me feel prepared for every exam.

I liked this class a lot! Dr. Crossland is awesome and the study guides, self-assessments and quizzes helped me feel prepared for every exam.

I learned a lot in this class and enjoyed her stories to back up the material:).

All in all this course was very easy to understand and follow along. The resources were great for studying for exams. I greatly appreciated the extra credit opportunities throughout the semester.

I love this professor and her classes. I have taken some of her classes in the past and I loved them and learned so much. I agree that attendance is strongly advised for this class. For the sake of the exams and the lab materials. Overall, I would recommend this professor to anyone.

Dr. Crossland is a very energetic teacher. She makes her students want to attend class and you can definitely see a difference in success if they do show up for class. I learned a lot from this course and would recommend this professor to other students.

No comments great class

the professor was great at teaching materials, and providing us with great sources to study for exams. the lectures were fun and engaging, as she really knew what she was talking about and would go off of the lecture

The course was tough good and I was able to learn what I needed to learn from the notes.

Doctor Crossland is good teacher, one of my favorite classes this semester, however it's one of the toughest classes I have. One of the things that I dislike about the class is taking the exam which consist of 100 questions and you have 50 minutes to answer them. It makes it tough to process each question, since you have around 30 seconds to answer each question. After each exam, Doctor Crossland is very good at grading the exams the next day. So you don't have to sit and wait to see what you made. Overall I really like the class, lots of useful information that I can use in my degree. Crossland will do everything in her power to help you and to make the class fun and interesting!

She was funny, and she cared about her students passing the class

She was very efficient and got the point across. Overall she taught what we needed to know and challenged us with the exams. Great teacher!

I LOVED Dr. Crossland. She is an incredible professor and I enjoyed her class very much.

This instructor created a great learning environment that was relatable and fun while still being an effective learning and teaching experience.

A class I learned a lot in and enjoyed what we learned. Crossland is an amazing professor and super fun to have

I loved the way this class was taught and it was a very beneficial learning experience. The self assessment quizzes were very useful as well as the notes and videos given to us.

I really enjoyed this class and how it was taught. It was helpful that the slides were posted and the self assessments helped a lot when studying.

Dr. Crossland is an amzaing professor as long as you read the pwoerpoints and provided study information you will do well.

Great course!

I have never enjoyed a science class more than I enjoyed this class. It was fun yet terrifying knowing how delicate the body is, and yet how it can adapt so quickly. She made the material fun with her sarcastic attitude and fun stories to really integrate the class into the lecture. I was most excited to attend this class out of all my classes. I enjoyed how in-depth she would go in order for her students to understand the material. One thing I liked about the instructor was her quizzes and reviews for the exams. It helped me feel prepared for every exam and I could make flashcards on the quizzes to help me remember. Another thing I liked was how all the material was for viewing at the beginning of the semester for us to look at before classes began. I could look over lecture slides and create flashcards and study sets even before she lectured on them. It almost felt like we could learn at our own pace but still have the guidance of a teacher. My favorite interactive activity was making a "rumen" out of a bottle and a balloon. It was so cool watching everyone get involved and use it as an extra credit opportunity as well.

I enjoyed this class

Overall a good class and the instructor did very well.

Really enjoyed this class. She kept me engaged the whole semester and she is one of the teachers here that I felt truly cared about her students. She is very good at getting the material across clearly. I would recommend her as a teacher to anyone!!

Professor Crossland was an amazing professor and excelled at teaching this course efficiently. Thanks to her, I have a new appreciation for nutrition

Dr. Crossland was amazing! Always engaging with the class and had plenty of helpful study/quiz materials to fully prepare us for exams

This class was very interesting and I enjoyed taking it. I do wish I had gone to more classes, but the distance from my dorm and my morning habits affected my attendance more than I wanted.

I really liked the instructor you could tell she cared about teaching and she made her lessons more listenable by engaging with the class. She was also very nice to everyone and offered extra credit.

Dr. Crossland is brilliant and made a course I wasn't very excited about something to look forward too. Her Exams were not easy but she provided everything her students needed to take them successfully. I leave this class more knowledgable about nutrition and would love to take a course with Dr. Crossland again.

Good class and teacher overall

Oustanding course with an excellent learning model

Nice straight forward class. Lectures and assignments were good. Overall I enjoyed the class, Dr. Crossland does a good job being engaging during the lectures.

Great Instructor!

Dr. Crossland is a great teacher and makes us really dive into the discussion of ruminant nutrition. Very well-taught class.

Dr. Crossland is an excellent professor, and I loved her class!

Instructor was great I could really tell she knew the material she was talking about

The instructor was very informative and lecture were easy to follow

Dr. Crossland is one of the best professors I have had. She treats her students like people and not a paycheck and genuinely wants them to learn the content and make a good grade.

Loved this professor. She needs a raise. She is the best!

Information was presented clearly and in an interesting way.

Dr. Crossland was a great professor and managed to make Feeds and Feeding a very interactive course with an open space to ask questions. Taking the new course in stride, her material was always fair on exams and if you attended class there would be no reason why you could not succeed. I do appreciate that attendance was not mandatory, because sometimes life happens, or you have an exam to study for and you just need that extra time. I did not think I would enjoy feeds as much as I have, and I owe that to Dr. Crossland.

n/a

Class was fine until around a month and a half in, then she started showing up to class with no notes/power points, had no notes for us to use to do our homework that had difficult math, and was just disorganized, never mentioned we had a lab final until week of, mood determines how will go

Dr.Crossland is amazing and makes the class easy to get an A in. Thank you!!

I enjoy hearing her talk about how what we are learning applies to society

I love that the instructor did pop quizzes for candy and had many extra credit opportunities.

Professor came to class unprepared to teach more than a few times

I really enjoyed this class. I love the way Crossland teaches.

I absolutely loved this class and recommended all of my friends take this course because it was such a great experience.

She did a great job preparing us for exams and clarifying what she expected from us

She was extremely fair with exams and communicated what information needed to be studied

Having not mandatory attendance helped me when i was struggling with health issues. I helped me not have to worry so much.

Dr Crossland is an amazing professor and I am looking forward to taking another class of hers next semester.

Amazing and straight to the point.

This is a really fast course and the teacher also teaches very fast so for someone with a learning difference, It is very hard to keep up.

Dr. Crossland was a good professor, she was strict and clear on her expectations. I appreciate her reviewing topics in the following lecture and giving positive reinforcement. Her offering candy as positive reinforcement encouraged me to pay attention so that I could participate. I also appreciate the extra credit opportunities she offers.

n/a

I loved having Dr. Crossland as my general animal science teacher. She made learning fun and I really enjoyed all of the content in this course. Thank you, Dr. Crossland, for being a great teacher.

Always engaging defefintly one of my favorite classes this semester.

The instructor made the class very enjoyable and engaging. I really enjoyed taking the class and I feel like I learned more than I expected to learn during this course.

This course felt challenging with limited resources for help.

I love this professor. Crossland actually cares for her students and how they learn.

I am currently a junior and Whitney Crossland is one of the best professors I've had going to Texas Tech. Crossland is very interactive with the class and comes up with different ways for students to participate. She cares about her students and only wants the best for everyone in her class. She is very innovative with her experiments to help show what is going on in the body visually. I would definitely take this course again and recommend it to anyone who is willing to learn about Nutrition. I have learned a lot from this course and will apply it to my future.

Great class

I enjoyed the conversational style lectures and how the class focused a lot on real world application not just memorizing or reading a textbook. I also appreciated how understanding Dr. Crossland was when a class had to be missed.

I think the test are difficult and need some lessons tying directly to what is on the test.

She was amazing. I have no background in animal science and had to take this class because I needed a science credit. She was so understanding and amazing.

I adored this teacher. She makes sure you understand the course, offers extra credit, and as long as you go to class most days and study the slides she posts and the quizzes she offers, girl you'll be more than fine.

Dr. Crossland made class fun but very informative all at the same time. She often explained all of the topics very well and thoroughly. I would definitely take her class again.

I LOVED learning from Dr. Crossland in this class. Not only is she very intellectual and experienced in animal nutrition, she is able to explain complex topics in an interesting, comprehensible manner. I am very glad I was able to take nutrition with her. I truly learned so much and have grown a great interest in animal nutrition because of her!

I regularly attended the class because I truly enjoyed Dr. Crossland's lectures. She is engaging, funny, knowledgeable, and you can really tell she has a passion for what she teaches. I feel like I truly learned a lot from this course. I would not change much about this course, except maybe consider mandatory attendance only because I think Dr. Crossland's lectures are truly informative AND enjoyable. It is also not fair to Dr. Crossland who gives her time to lecture and only 1/4 of her class shows up.

Dr WHITNEY CROSSLAND is an effective instructor, we are pleased to have this class. Her TEACHING concepts and methods involves everyone in the class. Overall the course is an learning asset to the Master student which could strength their profile

N/A

N/A

I recommend Ms. Crossland

The course was well organized and easy to follow.

very good teacher, sticks to schedule and teaches content well.

I like this instructor and how everything way laid out I recommended her.

I loved this class and really like Dr. Crossland. I did not ever think before this class that I would be so interested in nutrition and now I am thinking of studying it for my master's degree thanks to Dr. Crossland and her dedication to providing us with knowledge.

maybe make the practice quizzes extra credit.

Dr. Crossland is a great instructor and is very informative. Both lecture and lab were fun and I enjoyed taking this class!

Great teacher in a difficult subject.

I did not like using proctorio. I would have rather taken my exams in person in class.

Made the class super interactive and fun! Amazing professor

I liked her, she was to the point, shared relevant stories that helped me understand certain points, and i loved her small demonstrations like the fermentation balloon and the lipid zip block activities.

Dr. Crossland is a very knowledgeable professor, and she did a great job this semester, my only issue was that she talks pretty fast so it was hard to keep up with notes when she switches the powerpoint slides too fast.

Crossland is easygoing and makes the information understandable and accessible for students to really take in what is being taught. Great teacher, made taking the class fun!

I loved this course. I found it engaging and I really felt like I learned the material. Professor Crossland was great instructor. She made sure to highlight what was important in the course. Also, they way the tests are set up really help to learn the material because you don't always know what she will ask for the short answer questions.

Dr. Crossland was a great professor, you could tell she really loved teaching this course. In addition, she was always willing to help in any way she could.

Professor Crossland was a great professor who went out of her way to make the content we learned interesting. She also was incredibly helpful and truly wished the best for her student's success.

Overall a great instructor.

I have never been fond of nutrition, but Dr. Crossland made this class fun and engaging. She explains the course material in interesting ways that allow you to memorize it easily. I liked having the notes available on Blackboard but attending class is very beneficial because it is easier to learn when she explains it!

My lab TA for the class, Carly, was so great. One of the most fun and most effective classes/lab I have taken. I enjoyed going to lab and lecture! Thank you Dr. Crossland for the environment you provide for your students.

She very explained all of my questions very well and made topics easy to understand.

I enjoyed the class. I would have liked the answers to be shown after submitting the self assessments and quizzes so I could've used it later for studying.

The lab that goes along with this lecture is one of the most fun classes I have taken. The information was valuable and Allie Martin made the labs easy to understand and was organized in her instructions.

N/A

Professor Crossland was a very engaging professor and I really enjoyed her experiments in class that allowed us to get a better understanding of each concept.

it was a great class and learned a lot

Professor Crossland obviously knew what she was talking about, but there were several times she didn't respond to my emails. Obviously I can't expect her to respond every time due to her position, but an acknowledgement of some sort would've been appreciated.

Dr. Crossland was very understanding when I had to miss class and lab due to a death in the family. She was an amazing professor!

I enjoyed the course and also the lectures. I specifically liked how rewards were given for answering questions.

The course material was thoroughly explained in lecture, and the assignments/assessments matched up very well. All expectations were very clear and easy to follow. This is easily my favorite course that I have taken so far.

I absolutely loved this class! Dr. Crossland was an amazing professor and was amazing at explaining topics! The class was always interesting and I will for sure take another class by her

n/a

This class was phenomenal. Dr. Crossland is a great teacher and explains the material in a way that is easy to understand. I throughly enjoyed this class and learned a lot. Lectures were great.

loved this teacher and class!

I really enjoyed this course and learned a lot from it. I liked the structure of the class. It is also nice that the final is optional.

Dr. Crossland is super knowledgeable and an engaging instructor. Though I wish that when she lectured it was less off of the slides, some days it felt like we were just reading the PowerPoint. This wasn't every class, as some days we had great discussions, but I feel like that is the cause for sporadic class attendance (I only missed class twice so I could see the progression of which students showed up).

would recommend her class

I always love taking classes with this instructor, she is not only a really good teacher in terms of the content but she makes it fun.

Good class but based upon self-assessments and exams class attendance is not necessary.

The lecture was great I learned a lot and it was fun to go to. The lab, on the other hand, was not so great. We would just skim over the lab notes and then have to go and do the lab. Help was not given when questions were asked, it was just "figure it out". We also never got to see if we were doing the lab correctly on paper. I could have been doing the health portion completely wrong this whole time but I have no clue. So I probably failed the practicum part of the lab final because I don't know if I was doing anything correct or not.

I loved my instructor for this course. She made the class very engaging and always made the class fun.

Very nice and understanding

I LOVED this class. The self assessments were very helpful and I learned a lot.

The instructor is great. She is patient and her teaching style is very easy to comprehend.

great teacher and fun class, really enjoyed her personality and being in her course

Improving interactive learning

Field trips or a few lecture days set aside to tour some places related to the industry

I honestly have not interacted this much in a class before. It was super refreshing.

I really liked the one day when you brought in(or were going to) bring in the stomach of a cow. Maybe showing all GIT like that in class could help!

We did a mini experiment during the course and I enjoyed that aspect... perhaps more experiments?

Doing more in class experiments.

Maybe for the part where students are learning the digestion and absorption of nutrients, you could have them split into groups and do it correctly as a game.

There might not be a lab portion but Crossland makes it interactive.

I would say make labs for topics like how protein works in the digestive system and maybe demonstrate in class the equipment used for treating toxicity of minerals.

Maybe some games like jeopardy or kahoot

Offering more hands on approaches, and more of the fun extra credit assignments

I think more experiments. I loved doing those and talking with others about theirs

I think Crossland does a great job making the class interactive with her drawings and the fermentation experiment, there is nothing I would change.

Being someone that is not fond of group work, I find this class perfect the way it is.

More hands on work

None
Maybe more case studies that involve specific animal breeds?
SI session to help with exams
SI session to help with exams
I personally do not think that the class needed to be more interactive. There were a few activities in class that I found helpful. The only change I may suggest would be that instead of following videos to learn how to draw the digestion of certain foods (ie: starch digestion in a ruminant), these should be presented in person. Otherwise, I found the class to be very engaging.
I liked the few experiments we did in class, using people as volunteers
Dr.Crossland has made this lecture very interactive for her students. It has been the most interactive lecture I have ever participated in.
Not anything, she asks questions throughout lecture and makes it engaging.
N/A! Dr. Crossland is doing a great job!
I enjoyed it, just as it is! Really great class!
Nothing I think the delivery is interactive enough.
I would love to have some sort of lab for this course. I'm not sure what that would look like but I have always enjoyed my animal science labs. If not a lab, maybe a field trip to feed lots or other places where we could physically see what we are learning about.
I thought all of our experiments were really helpful in learning the materials. Though I would say to go easy on the honey next time on the tea tasting for different sugars.
I really enjoyed when we did little "experiments" during class, maybe try to incorporate a couple more of those.
Maybe somehow incorporate more whole lecture experiments like when drinking energy drinks.
More experiments/labs. Maybe dissecting the ruminant and monogastric body systems as a class.
It was very interactive as it is.
n/a
ask questions / little quizzes
I believe Dr. Crossland does a good job of making it fun to learn and keeping the class attentive
more experiments
I wish there were a few more assignments that helps towards our grade in the class. This will also allow us to get more immersed in the material.
I don't have many ideas, but I did enjoy the pop quizzes for candy and the water bottle and yeast experiment!
I believe Dr. Crossland is super good at being interactive already.
N/A
I think the instructor did a great job of making it interactive through out the semester with the little experiments we did.
At the beginning of each class the professor would ask questions to help us review previous material, maybe turn that into a game/ competition and assign teams so at the start of every class the teams get together and are able to discuss.

I would've enjoyed making a working (or just a regular poster board) diagram of a nutrients pathway through a specified GIT which could be completed as a group project.
I think the example shown during class with the sections such as the fermentation one were as interactive as it could be without a lab
I think Crossland did a great job making the course extremely interactive
I liked the take-home labs we did about fermentation, so I did more of those.
I think the instructor did well by including some in class interactive examples and mini experiments
I would say none. The professor kept the whole class involved by asking questions and rewarding students who answered correctly.
No comment
We could do more extra credit "experiments" or just incorporate them within our classes. We could do small interactive experiments with other classmates so that it will help us remember material more and we can connect with others in class.
More hands-on experiments like the fermentation one
I believe this class is already interactive enough.
I wish we had more projects or group work.
I think the class is good the way it is.
hands on application (more than already provided)
Maybe more experiments like the fermentation one.
It was alright
Pop quizzes (not for grade) but participation. Also, I think it's better to call people out to answer a question rather than wait for someone to volunteer. Personally, I prefer it because I prepare more accordingly for class.
I thought it was great!
n/a
I actually thought it was already pretty involving because of fermenting bottle experiment that was offered as extra credit for a coming test
Maybe have more example digestive tracts or something. I thought everything was taught fine
Maybe looking into different feed brands in person as well.
-some interactive labs online we could look over
Dr. Crossland made a point to make the class interactive most lectures. I think a review lecture before test like we do every class period.
Maybe add more fun little experiments we can do or see.
none
more hands on during class time with, whether it is a demonstration go the bodily/ organ functions or simply work in groups over case scenarios
I loved the "in-class" experiments we had. It made everything more clear and understandable. The balloon and the bag of fats was probably my favorites.

One way to make this class more interactive could be to get in a group every now and then and go over different types of digestive tracts, how those digestive tracts digest different organic molecules/minerals and vitamins, and practice case studies together. Another way could be to do more visual examples like the fermentation in a bottle demonstration.
n/a
I don't really like the idea of the course being more interactive, but I think doing trivia games over the course material before exams in groups would be a good learning/interactive experience.
Having interactive opportunities, like the fermentation activity.
I think that she made this class interactive as is! Best teacher so far
N/a. I enjoyed it as is. Very fascinating class.
I think Dr. Crossland did a great job making this course interactive. Through different experiments as well as having hands on experiences in the classroom, like bringing in different parts of an animal in, so we could visualize what we were learning about.
I liked the way she asked questions to all the students in class to involve us, but I could also go back to saying that there could be extra credit opportunities by involving group activities and other things like that.
Some more attendance questions
I do not have any, Dr. Crossland had plenty of activities for us to do hands on experience.
More experiments to help us better understand the material. Also a group project over different aspects of livestock nutrition
Yes, and more group work would be nice
N/A
None
Overall Dr. Crossland did great at keeping the course interactive by asking the class review questions and rewarding us, bringing in animal parts for us to look at or letting us try different taste-tests.
I think the class was very interactive especially with candy being used as an incentive to answer questions. I think it helped people want to answer questions more often.
Maybe a detailed overlay project of just the GIT (of the students choice) , and they also choose a type of digestion.. fiber, protein. I think this would really allow students to retain the information of digestion in the GIT
I thought this class was very interactive without a lab.
None
I do wish there was more homework we could have done to make learning the material a little easier than just having to study for several days at a time.
Go to feed lots to try to identify some of the animals that may have some of the vitamins or mineral deficiencies that we discuss in class.
Rather than not having class the section before the exams, it might be beneficial to have an optional group work day to go over the self-assessments/quizzes (Dr. Crossland present to answer questions, but working on other things/not lecturing). I think it would be good to give students a designated time and place to form study groups.
I liked how the class was run
Activities like the oatmeal fermentation to demonstrate rumen fermentation was very informative and interactive. More activities like that would be fun.

A lab would be fun to have for this class to have some hands on experiences.

Have some more showings of things like we did during the first unit.

It was very interactive despite that!!

I have previously had an anatomy class and think that bringing in examples of what we have been covering in class would be helpful. this could be something done of fridays to encourage students to attend on fridays as it would be similar to a lab day.

More guest speakers or an optional field trip

NOne

I enjoyed the bottle experiment a lot and whenever we would have different digestive systems shown in class. I think it would be cool to have more hands-on activities where we could build other digestive systems or simulate a GIT. I also liked the candy awards for answering questions correctly.

I liked the questions that were asked and the extra credit experiment. I also liked how on the first day you told everyone to introduce themselves to the people they were sitting next to

I think having a lab section would have been helpful in applying what I learned

N/A

Maybe incorporating more simple in-class labs/visuals like the fermentation and lipid digesting activities . Maybe even an in-class Kahoot game to review for exams.

maybe add some projects with a partner

I enjoyed the extra credit opportunity like the fermentation demo. More of these types of demos would be fun and make the class more interactive.

Dr. Crossland did an outstanding job making sure everyone was active and even used her own money for demonstrations in class. Other teachers should look up to her.

Maybe a field trip.

Perhaps more demonstrations. I enjoyed watching her demonstrate the different types of fats or when we made alcohol from oatmeal.

I think the class was interactive with real-life examples.

More experiences like the water bottle experiment.

I think Dr. Crossland did a good job of making the course interactive with review questions and extra credit activities, so there's nothing extra I would suggest.

A hands on matching game and lab for all subjects are always helpful for learning.

Questions for class to answer integrated during lectures?

I think that Dr. Crossland has incorporated many different ways for the class to be interactive with her in class activities.

Kahoots or interactive games to play as a class to test our knowledge.

The class was actually pretty interactive.

No, I think the drawing and fermented alcohol were interactive.

Nothing!

I loved the experiments and demonstrations, and I think more of those would be great!

I enjoyed not having a lab for this class as almost all my other classes have labs that are very time consuming.

Spend a potion of the class doing hands on things

In class labs would be cool, but the course was interactive as is

Field Trips

I would've liked to see real examples of GI tracts which was part of the course we just didn't see it due to the snow days.

i have no ideas

I would like if we had more activities/projects/homework. I feel if I had more opportunities to submit work or even a quiz before the exam, then I would be able to comprehend the material better.

she did a good job and brought in mini-interactive things, but if she had to do more then just more of that, and she was good about it at the beginning of each class.

na

We could do a group project on a subject presented in nutrition.

The professor does a great job in lecture making the course interactive.

Distance learning comments

Dr. Crossland did an amazing job keeping me engaged in the class with her energy and lecture topics. She was able to explain complex topics in a smooth way and help me study throughout the semester. Overall, I think she was able to adjust to being completely online effortlessly. The power-points that were shown in lecture (and online to study) were greatly detailed. This. along with having the self assessments and quizzes was a very useful tool in narrowing my studying focuses. This class was a great learning experience and well done by Dr. Crossland!

I really enjoyed taking this class! The information was given in a way that was easy to understand, but also difficult enough to make you think and solve the issue. The content was great, and Dr. Crossland made sure to explain the material and present in a way that was understandable, and not unnecessarily difficult like other animal science courses. I am confident that I can take the information learned in this class and apply it in the near future when I become an ag teacher!

I feel this was a good course and a very understanding professor. Dr. Crossland did anything to help. Is harder to make your self attend class with no mandatory attendance but she does record all lectures to view later.

Dr. Crossland is an amazing professor. She knows how to relate to the students and understand us.

good

Dr. Crossland made a great effort to make the class fun and engage students

Great course! Maybe a weekly meeting over zoom or some platform would have been helpful, but great professor and very interesting course!

This course was rigorous, thorough, detailed, effective, and challenging. This course stood out among my course load as one of the few that required critical thought, and for that I am very grateful. Thank you, Dr. Crossland, for what you do and the principles by which you abide-- they are admirable and make for a high quality learning experience.

Over reacting to the china virus

Dr. Crossland was awesome, super knowledgeable and enthusiastic

This class was one of my favorite courses this semester.

I enjoyed the organization and the presentation of the materials for this class. Dr. Crossland is very helpful and terrific professor. I have no complaints about her or this class.

Dr. Crossland is a great professor and is great at keeping lectures interesting by telling us real life instances in which she has applied what we are learning. She incorporated hands on activities even though we were online, which I really appreciated! Additionally, she did mini experiments to demonstrate things that pertained to our lectures and showed them to us via Blackboard Collaborate Ultra. I appreciate that attendance was not required because one time I had tot meet my ferrier and I had to miss a class, but due to it being recorded I could easily catch up.

N/A

I really enjoyed Dr. Crossland. She is passionate and knowledgeable about what she teaches and she has fun with class. Often times there were fun things that were said that was the best part of my day, I just wish I could have had this class face to face.

I enjoyed Professor Crossland lectures everyday. It was a lot of information but she explained in a way where it was easy to understand. Any issues I had she was always willing to help me understand. I hope to have her as a professor again if possible.

Everything is very accessible for me, and I like the fact that I can finish my assignments before due dates.

Clear with teaching! wonderful course.

Dr. Crossland is an outstanding professor and this was the most interesting class I took this semester.

Dr. Crossland managed and taught this online class perfectly. Probably the most smooth flowing online class I have ever taken as well as I felt like I was truly able to learn and retain material rather then having to teach myself.

Amazing professor! Would take again if she offered more classes!

Dr. Crossland is amazing! Loved taking her class!

I learned a lot from Dr. Crossland. She was able to properly deliver information to myself, when I had questions, off the top of her head which really showed how knowledgeable she is with the subject. At times when I was confused about similar topics in my other classes Dr. Crossland's class cleared everything up for me. I really enjoyed Dr. Crossland's online course and have already recommended it to several friends who are planning on attending Texas Tech. Attending Dr. Crossland's class was the highlight of my day because I was learning, but most importantly I was understanding every bit of knowledge being presented. I never left her class feeling confused. Thank You Dr. Crossland.

Great instructor.

Dr. Crossland goes above and beyond! Very understanding and helps constantly.

Professor was extremely knowledgeable on the topics + pieced each unit together to create an understanding of the bigger picture.

I enjoyed this class and learned a lot by taking it. Dr. Crossland answered all emails in a reasonable time frame and the exams were on a flexible schedule. You were allowed to work ahead in the class and that was very helpful when taking a summer class. Crossland tonight very effectively and communicated clearly with the class as a whole. Definitely would take from her again.

Dr. Crossland was a great professor and amazing at explaining topics. Her exams made sense without completely stumping me and I have gained so much knowledge just from this one course.

I really enjoyed the material of this course and felt that the videos explaining processes in the GIT were extremely helpful.

Overall, I love the way that the course was set up as it was very well-organized and easy to navigate. Dr. Crossland was very helpful and responsive to potential questions or issues that arose throughout the course. However, I really wish that there had been weekly scheduled check-ins or scheduled office hours for people to attend. I find the group office hours much more helpful than by apt. The exam reviews were very helpful and I wish there would have been more interaction such as this.

Loved the class!

Overall the format of the course for distance learning was very accessible and helpful; especially for those of us working through the summer. The reminders and notes were also helpful. As I'm perhaps a 'mature student' I did actually miss required textbook materials, but I really appreciated the video diagrams Dr. Crossland shared as well as the fermentation activity. The visuals for anatomical parts also helped make up for wet lab experience.

Improving interactive learning

I thought the interaction and demonstrations were already above and beyond for a course of this size.

Honestly this class is pretty straight forward and really should be taught online as it doesn't need participation or attendance in my opinion.

I liked the experiments done in class to show what we had been learning.

i think what you did was good in class- bringing out the stuff definitly made it easier!

more experiments in class

More hands on options with examples of animal sections, etc

I'd say the class is more interactive then other large classes that I am in.

More visual aids.

Dr. Crossland did a great job making the course interactive and I personally have no qualms.

The little experiments we do during class are great. Maybe in the future we can break off and do these little easy experiments with a partner outside of class as a homework or project.

more experiments like making the beer in class.

I thought all of the hands on activities we did during class were a great way to learn and would encourage more.

More demos and maybe include a discussion for the class that's optional for students.

I liked having the stomachs brought in. I think interaction and interest was common in the class and enjoyed my overall experience.

Professor made this class as hands on as possible, showing students GI tracts and making activities that accurately imitate digestion, can't think of anything better than that !

I think a lab and tutors would be beneficial. I also think that having more than one extra credit option would help those of us who struggle with this kind of subject. It could be something they would increase our knowledge on the subject, like a lab or a study group or even a paper.

I really enjoyed the little experiments you did to help us learn about how food was digested, etc. I think those are great ways to get students more interacted.

The end of class labs were perfect alongside the quick anatomy lesson!

The class had a good level of being interactive that helped with learning the content.

Dr. Crossland did an excellent job by bringing small mini lab demonstrations to class everyday making the material tangible and memorable. I don't think any improvements need to be made.

I actually really liked that Dr. Crossland created small labs to visually teach us what goes on in the body. That was a very good idea and I don't have any suggestions.

Possibly more time for experiments before/after the lecture. The experiments really helped me to understand what I was supposed to take out of the lecture and help me focus my attention on learning rather than taking so many notes.

Group Discussions

Dr. Crossland provided small demonstrations to the class for better understanding.

I think, with the course objectives of this class, the way it is currently run was perfect for me and my classmates.

I loved the case studies, would have loved to see the issues if something wasn't absorbing right and what the symptoms were.

Class difficulty

I work full time, so going into class in the middle of a work day is tough, but this isn't anything Dr. Crossland can change.

Lack of strong foundation in chemistry for sure

I struggled retaining information regarding the amino acids and the different kinds of carbs

The lack of knowledge in chem/bio.

The most difficult thing for me was probably the topic related to how animals digest and absorb certain nutrients differently. It took me some time but the videos that were posted were such a big help.

The only thing that I can think of is that all the notes were online.

What was most difficult for me in the class was my lack of background experience because with my grandpa at his ranch we only work with pigs, goats, and sheep.

The course pace I think but once the first exam is done it starts to become more normal

I think it was the second exam I struggled with the most, it was on my part because I should have studied more

For me it was probably learning the more complex biological processes that go into processing nutrients

nothing was really difficult with this class, there is just only 4 grades so you have to pour lots of effort into studying.

My lack of foundation in biological concepts did show at times.

Some of the context was difficult but I think it is because of my lack of science

quantity of course content

None

The amount of information we learned in one singular class.

I had the most difficulty with our first introduction to the biochemistry side of nutrition. Although it got noticeably easier and more understandable as we worked through the units, I definitely struggled the most with this part.

There was just a lot of information, but Dr. Crossland made it easy to study for the exams

N/a

I think sometimes terminology was not defined and I found myself sometimes being confused and having to google a few words to understand the full concept of the lecture.

N/A

Just really finding people to study with.

Nothing it was great!

The exams in the course were difficult for me but I have always struggled when taking tests.

I believed all of the concepts were easy to understand and follow since I've taken all of my chemistry courses for my minor, but I definitely needed to put more effort into learning the common nutritional diseases

I think the amount of course content was the most difficult thing in this class.
I think the amount of course content was the most difficult thing in this class.
Lack of chemistry foundation would have to be my biggest weakness, however this instructor maybe it possible for me to succeed even with my chemistry problems.
I did not find anything difficult. I really loved this class!
This class was very easy.
Lack of strong foundation in chemistry
course context. alot of information in small amount of time
The most difficult part was finding time to study when this class lined up with 2 of my other major classes test, all in the same week
Lack of background with animals
I would say more study materials that test retention of information
The hardest part for me in this class would be myself and my own mental barriers for studying, nothing to do with the instructor or the material.
Probably my own personal lack of experience within the large animal field made this course somewhat challenging at times. I did really enjoy this class though because it taught me a lot about large animal medicine and nutrition which is something I've found myself to be more interested in with my time at Texas Tech.
The drawing portion of the exams.
N/A
Lack of strong foundation of biochemistry but it wasn't a huge issue
Having 4 tests was most difficult for me. I understood why there were 4 but it was very quick turn around between tests.
The most difficult part was the digestive system drawings and labeling of how things are broken down.
lack of chemistry foundation
I was lacking slightly in the biological concepts but that is because I have yet to take a biology other than in high school. It was a slightly heavy course load although it did help with retaining information because everything was connected.
I didn't find anything extremely difficult, however I haven't taken some of the classes usually taken before this course like anatomy so occasionally I had to look something up.
Lack of solid foundation in chemistry and/or biological concepts.
Lack of background experience with animals, but overall did an awesome job explaining, and all the stories helped in remembering key concepts and being able to connect the dots!
N/A. I felt that the pace of the course was reasonable and was well explained by the instructor. Having some background in animals and animal hospital settings, it was easier for me to relate to the topics discussed.
This class was taught effectively and thoroughly. I can't think of any part that was difficult.
The hardest part for me was relating what I learned in class to real life experiences. I did not show animals in high school so, I really had to study harder to grasp topics to help me understand what's happening for my future career.
Maybe some lack of chemistry but that is all.

The most diffcult would just be the exams of course.
the amount of content covered in the amount of time and being able to remember everything for the test.
Sometimes remembering the different illnesses and treatments could get difficult. Some of them are similar or have a lot of parts to it, so it is hard to memorize all of them.
The most difficult part of this class would probably be the amount of information there is to learn about each topic section.
The most difficult part of this class for me was studying for exams. It took me a while to learn how to study effectively.
I struggle with chemistry
lack of a strong foundation in chemistry
I didn't fine anything too difficult in this class.
Nothing for me really
The most difficult for me was the huge diagrams describing ATP and other functions like cellular respiration. I do not know if it was the visuals or just the subject overall. I wanted to understand but I found myself just memorizing what I needed to for the test. Application is better.
Studying.
n/a
Lack of deep knowledge in chemistry
The most difficult concept I faced in this course was the diagnosing of metabolic diseases
Memorizing everything for tests
Understanding material for the case study.
I usually don't do well with tests as I am not a good test taker. This course only has four exams and doesn't have other assignments to back up the tests. That's the only complicated issue I had with this course.
The most difficult part of this class for me was figuring out how I needed to study for it, but I figured it out rather quickly.
Most difficult would be that I do not posses more experience with animals so I could not relate to some examples given but it was okay did just fine.
lack of experience with large animals
a lack of strong foundation in chemistry
The most difficult thing for me in this class would probably be the drawings on the exams. Now, tell me to draw and label a mono gastric digestive system I got it. But trying to memorize all of the descriptions that go with them was difficult. Mostly the second and third exam.
The most difficult part of the class was probably my lack of experience with farm animals, but at the same time it didn't affect my final grade too much.
none, she was very helpful with it all.
Due to the large class size, it was hard to get in contact with her and speak to her after class due to the long line.
The chemistry part of the course was difficult for me because there is so much of it, but Dr. Crossland made it make more sense.
lack of foundation in biological concepts

My horrible chemistry skill did prevent a very small misunderstanding of part of this course, overall I enjoyed it and probably learned the most from this class than any other so far.
My biggest struggle in this class was probably just the amount of memorization necessary, on topics that I did not necessarily know a lot about, ex. different types of enzymes.
Nothing
I think the amount of content on each test was kind of a lot, but overall I think it was pretty well paced and well taught.
nothing really, maybe just course pace but nothing
It would be my own studying practices, I never found the workload to be too much.
Lack of strong foundation in chemistry
NA
I had a situation happen and had to get Title IX involved for some academic help and she completely disregarded that. I could've used her understanding but was not given that and that made the class extremely difficult.
Learning the different structures of the plants and how they're digested
The course was very easy to take in as a whole the only part I had trouble in was the digestion process for different types of stomachs because it was a lot to take in at once.
Open ended questions on the test
The most difficult thing was I don't have the strongest foundation when it comes to chemistry.
None
The exams were easily the most difficult part. I'm a hands on learner so with no lab it made learning the material much harder which in turn made the exams more difficult.
n/a
The only grades that count for this course are the exams. All classes that are graded like this one are relativly more difficult, especially for students who just arent good exam takers. It gives them no wiggle room if they were to make a failing grade on an exam.
Chemistry is always a weak point for me personally.
Definitely my troubles came from a lack of strong foundation in chemistry.
Everything was great!
nothing really
The ATP development was pretty complicated, but that can't really be help (it's just a complicated subject).
Some of the course context for one of the units was complex and a lot to remember.
Nothing was hard enough to not understand you just need to put in time.
Nothing really!! The material matched up with physiology, so it was easier to understand!
It is just a lot of information so i highly encourage student attend but I would not make attendance mandatory because the students that want to learn with be in class and the ones that prefer being at home will do that no matter what.

lack of strong chem/bio foundation
I struggled the most when it came to the chemistry which has always been my weakness so the lack of my understanding of chemistry was one of my short comings.
Some of the course content was a bit difficult to understand because there were a lot of similar topics
Just learning the inormation and memorizing it after moving on from the lesson, but that is just because the information can be challenging.
Despite my struggle with chemistry, I felt like I could understand the class quite well. Though the chemistry parts of the class did stump me sometimes but because she had all the lecture slides readily available, I could look for the information I needed.
it being at 9:00am
N/A
N/A easy ish
I did not find anything difficult about this course. I felt that I learned well and always had the resources I needed to do well on the exams.
Didn't really have much difficulties
just my depression, the course was great haha
I found this class very easy because of my prior experiences with animals as well as how Dr. Crossland taught the class just made it make sense.
The most difficult thing in this class would be the course context, but Dr. Crossland did an outstanding job at teaching everything.
The exams.
none
Sometimes Dr. Crossland covers the material quickly and the PowerPoint slides are not in order therefore it is hard to keep up.
The pace really kicked up towards the end of the semester and that became somewhat difficult.
Studying and memorizing the diagrams and explanation of the passageway for each exam.
Foundation in chemistry
I didn't really have any difficulties with the class. I think the most difficult part would just be the amount of content on the exams.
-I struggled with the pace of this course. It was very fast and it was hard for me to keep up. -It was also difficult to keep my grade up in this course even though I was trying my hardest, never missed a class (perfect attendance), and found other resources online and still have a very low grade. -This course just has a lot of information to cover in a very short amount of time. -Only having 4 exams and no homework made it hard to keep my grade up if I didn't understand the topic we were being tested on.
N/a
The most difficult part for me was the knowledge about starch digestion, but that was also my fault as I was not as prepared as I should have been.
The short answer questions, I never study for those topics so that's on me.
The only part I struggled with was the chemistry portion of this class but Crossland did a great job explaining everything
I had some trouble with the third unit. I think it was because I just had a hard time processing the information though.
I think the lack of understanding of biochemical pathways for digesting carbs/proteins.
I found the free response questions pretty difficult at times. The drawing portions were very beneficial though.

My lack of artistic ability when drawing the digestive system, but Dr. Crossland only wanted us to know the information, rather than worry on how well the digestive system was drawn.

Specifically the last unit was very memorization-heavy. I didn't struggle with the material or the teaching but it did feel somewhat unbalanced compared to other units.

Class concept

I personally did not struggle with any content in this class.

Understanding specific things about livestock animals because I don't have any experience with them

Learning the long definitions

memorizing digestion through tracts

I do not come from a strong livestock background but everything I needed to know was explained to me.

the most difficult thing was just taking the time to study

I had a hard time understanding the GIT from watching the video. Personally learning from a lecture on my computer is hard for me because we can't see it in person and ask questions.

learning how the different nutrients digested in each digestion system

learning the microbial digestion scenarios were difficult but i also feel valuable and acceptable to be taught in the class

The only grades were exams I feel like we should of had more grades instead of just the four exam grades.

I didn't struggle within this class I found the information to be very interesting and really enjoyed the topic of nutrition.

Chemistry

I did not find this class to be exceptionally difficult, but a good learning opportunity.

i really dont think this class was hard or challenging for me and it shouldn't be as its a beginning class for the rest of the degree. should be easy since we pay for it. Don't make it harder than it needs to be. this class doesn't need to be harder.

N/A

nothing i really think the course is perfect.

drawing digestive tracts

I believe the animal disorders was most difficult. However I believe part of this was due to the face-to-face cancellation. Not the professor

What I struggled with the most was trying to remember what happened within a digestive tract.

The unknown part of the exams

The course content was hard to grasp but when I really studied it made sense. I also wish I had more background experience with these animals. I would have probably done better in the course.

While the course pace was fast, each concept was covered well and I only struggled when I missed a class and had to catch up.

by far the digestion nutrient maps, very valuable learning experience though.

This class was more of a review for a lot of the material I have learned in my biology classes and my chemistry classes. I feel like the material was clearly presented and was able to be made sense by every student in the class.

going to online learning

Some parts of the chemistry and biological concepts were a little difficult. But Dr. Crossland's passion for the topic made things easier to process and learn.

In my opinion, the hardest thing was the Digestion through the GIT. There's not much to change about that in terms of teaching. That content just required memorization and lots of studying.

The course is a little fast paced, but I have already taken FDSC 2300 and this easily prepared me for some of the material since I was already familiar with it.

nothing

The course pace and context

N/A

The last test was the hardest for me. I am a visual learner and the other subjects could be drawn out, but minerals and vitamins are just memorization.

I did struggle with my lack of chemistry background but, I will say it also helped me expand my knowledge on chemistry that I didn't already have because I was having to figure out the chemical part on my own for the most part.

Nothing was really difficult in this class except learning the digestion of lipids perhaps?

The most difficult thing for me was a lack of background in the subject.

This class has been great! Dr. Crossland makes it very hard to do poorly in the class. She gave us clear expectations about what we need to know and how to do well in her class. I wish more classes would be taught the way she teaches.

Course pace could be a little fast at times.

I found the pace of the class to be the most difficult.

I took Food Science last semster, so I was very familiar with all of the material.

Probably the most difficult thing was not being able to have a specific lab devoted to the class

The digestion tract process moved quickly

The hardest thing for me to learn was the different diseases during unit 4. I do wish that this unit was able to be taught through face-to-face instruction, however that was not the fault of the professor.

Lack of strong foundation in Kreb's cycle and other biology-based concepts.

Lack of chemistry and cell knowledge, but was able to understand the class easily.

Some content was hard to retain, such as remembering the enzyme digestion. But every class has its hard parts

Distance learning comments

The instructor made it clear what students needed to do in order to succeed. The instructor also worked with students and helped students understand the material.

I really enjoyed this course! Dr Crossland did a great job communicating our assignments and is a wonderful instructor. I really liked how the class was asynchronous. Being able to take exams early was immensely helpful because I was taking another summer class and working.

Loved this class with Dr. Crossland! Everything was laid out very well from online materials, notes, and assignments. The reviews were extremely helpful as well as the discussion board.

Great class and very educational!

Texas Tech University

Whitney Crossland Teaching all types in all course levels in all course traits in the Coll of Ag Sci and Natl Res college, for the past 5 years

Text Responses
Comments instructor or course
(Whitney Crossland) Overall a good class, most of the labs were a waste of time seeing as we drive 20minutes to class, took a 10 minute quiz and left. It would be better if Dr. Crossland was more present in class and did more of the lectures herself rather than having a guest lecture every other week.
(Whitney Crossland) Dr. Crossland is a great teacher and I learned a lot from her
(Whitney Crossland) I really enjoyed this class. I found it easy to learn to the material, and be able to apply it when necessary. Great fundamental class, and would recommend to other students.

(Whitney Crossland) The course was definitely tailored to Ruminant nutrition, however, I would have like to to see more in depth material. Traditional studies are good, but what is cutting edge right now?

(Whitney Crossland) Awesome instructor! Made accommodations very well compared to some other professors with all this covid going on

(Whitney Crossland) I really enjoyed this class and Dr. Crossland is an awesome professor. While the materials in class were sometimes challenging to learn, overall the class is really interesting.

(Whitney Crossland) Dr. Crossland was great. I loved going to her class because she made it very interesting and fun.

(Whitney Crossland) Dr. Crossland is a very knowledgable professor. When teaching she goes very in-depth to really give us the big picture which I like. Her tests actually test our knowledge rather than our test-taking ability which I appreciate.

(Whitney Crossland) I really enjoyed your teaching method, and I learned so much in your class that wasn't on the exams. I like how you engaged your students to your learning. I was always looking forward to attending.

(Whitney Crossland) Dr.Crossland is one of the most smart professors I have had in the ANSC department. She is enthusiastic about the material she is teaching and that alone makes her very easy to listen and learn from.

(Whitney Crossland) Dr. Crossland makes taking this course 100 times better she is a great teacher and has a wonderful personality

(Whitney Crossland) this course is great and to the point. Crossland is clear about her objectives for the class and what students will be required to know. This makes it easy to stay on task and understand the class.

(Whitney Crossland) Great course, hands on

(Whitney Crossland) The instructor has us take 100 question test which I think is way too much. That's really hard to learn all this material and memorize a bunch for 100 questions. It's very stressful especially for someone who has ADHD which affects memory. Memorizing breeds, in my opinion, is a lot of work you should just have us memorize a small amount of breeds not 5 cows and 4 dogs. that's alot of mental strain.

(Whitney Crossland) The lab portion did not connect at all with the lecture portion which was very odd. The lab portion also came off as lazy and the TA put little effort into creating new content or making sure we understand information. When I asked to view past quizzes to understand the information, I was told it's not allowed. I have never had a class tell me I can't look at a prior grade and get corrections. I believe this is a way to hide the shady stuff in her quizzes, some questions on them weren't even in the prior lecture.

(Whitney Crossland) Good job

(Whitney Crossland) Dr. Crossland has been one of my favorite professors I've ever had. She is well educated about the subject and tries to make class fun with experiments and jokes. Loved having her as my professor.

(Whitney Crossland) she was very good and very helpful with everything

(Whitney Crossland) You did a great job of providing study materials (self assessments, examples of GI tracts, working through nutrient digestion).

(Whitney Crossland) I loved this class , she's a very fun professor , I took her for animal nutrition and she. turned a hard class into easy and fun.

(Whitney Crossland) The portion of class held at school was informative, and easy to follow. The teacher was interesting and informative.

(Whitney Crossland) Very good professor. Makes learning fun.

(Whitney Crossland) the instructor made the class so understanding and simple that if you did not get an A in class it would be sad

(Whitney Crossland) I thoroughly enjoyed this course

(Whitney Crossland) She did not provide a tutor and when asked about setting up a meeting time I never got a response. She throws the course's context at us like a bullet train and only wanted us to know some of it. Gave us way to much information and ended up confusing us. She was very hard to get a hold of.

(Whitney Crossland) Professor clearly loves her subject and is realistic in that most students are not majoring in anything hugely relevant to this class so she does not delve too deep into subjects unless asked to. Made fun activities for most classes that made me want to come to class even though attendance was not mandatory.

(Whitney Crossland) This class was interesting and well constructed, I believe that is all due to this instructors work put in and personality. Absolutely loved this class

(Whitney Crossland) Dr. Crossland gives students the opportunity to succeed in her class. She is teaching for her students and makes sure everyone has the ability to do well!

(Whitney Crossland) I loved this class and would recommend it to anyone with any major. Dr. Crossland made the class very enjoyable and easy to stay engaged and learn everyday!!

(Whitney Crossland) I enjoyed the class.

(Whitney Crossland) Dr. Crossland is funny, extremely intelligent, and a great professor. I loved this class and I am glad that got to take it.

(Whitney Crossland) Course was well structured and Dr. Crossland was very engaging with students

(Whitney Crossland) Great professor. The class was a little boring, but Dr. Crossland made it fun. She is very passionate about the subject and really cares for her students. She wants to see us succeed. I loved this class.

(Whitney Crossland) I really enjoyed taking this class, I learned a lot of valuable information throughout this class. To me the powerpoints were helpful to this class, the information presented on the slides were straight forward and easy to gather information from.

(Whitney Crossland) I think Dr. Crossland does a very good job teaching the class and is very knowledgeable on the topics.

(Whitney Crossland) This course was simply amazing I was excited to learn due to Dr. Crossland's enthusiastic teaching. My most favorite topic was learning was the nutritional diseases.

(Whitney Crossland) I absolutely loved this class. I got my B.S. at TTU in Chem, and never took a course that was as intriguing or engaging as this one was.

(Whitney Crossland) great class

(Whitney Crossland) Went into the class with little to no knowledge regarding livestock and other farm animals, and finished the class with a lot clearer insight of how to handle and take care of these animals.

(Whitney Crossland) Fun class very helpful for my future.

(Whitney Crossland) Her teaching style was very effective. I was able to easily understand her and comprehend the information.

(Whitney Crossland) Overall this class was very useful to have a better understanding of nutrition. I love how helpful this class was and how knowledgeable I am now. Thank you Dr. Crossland for everything you do for this class hope to see you around for any future help! Have a great summer!

(Whitney Crossland) really great course. good for a general animal science course.

(Whitney Crossland) Very knowledgeable and clearly had experience in the subbject

(Whitney Crossland) The information seemed easy to understand, however the way it was delivered and instructed for us to know was extremely difficult. Only about 50 % of the information was given in the notes that was required for us to know on the exams. Only 2 study guides were given and for the third exam we were not given an in person review or a study guide. I attended every class throughout the semester and still struggled to understand what was being required for us to learn. The notes were rarely submitted in a timely manner for us to have for the exams. Overall, this class was harder than it should have been and the professor was rarely prepared.

(Whitney Crossland) This was the most unorganized course I have ever taken at Texas Tech University. Dr. Crossland did not teach the content effectively and it seemed to be a burden to her when something was not understood. In addition to the lecture, the lab section was a disaster. The homework added more variables and variety than included in the lab notes, and there were little to no resources to get help with understanding the content. The course fell apart as the semester progressed. It seemed like Dr. Crossland had given up on trying to help her students understand the content; therefore, we have been struggling to teach ourselves the information. I feel that this could have been a good course and that I could have learned some valuable content if it weren't for Dr. Crossland.

(Whitney Crossland) The way that this class was set up was super beneficial for me, I feel as though I have learned more in this class than some of my classes with mandatory attendance. Dr. Crossland had such a good attitude and even when attendance was not mandatory, I still wanted to make it to class.

(Whitney Crossland) I genuinely enjoyed going to this class. Dr. Crossland is extremely knowledgeable and made the learning environment both interactive and fun.

(Whitney Crossland) n/a

(Whitney Crossland) Really good professor will take again for nutrition, her lectures had a lot of information and were very helpful.

(Whitney Crossland) This course was hard for me, but I did learn a lot and Crossland was helpful when I went to her for help.

(Whitney Crossland) Professor Crossland is a really good teacher. She explains the content very throughly. I have enjoyed this class very much.

(Whitney Crossland) Dr. Crossland is one of the best professors I have had so far. I was able to actually learn from her lectures instead of just memorizing material.

(Whitney Crossland) Dr. Crossland is a wonderful educator! She knows how to effectively get information through to students.

(Whitney Crossland) I think the professor was great, she taught very well and made sure to post everything after lectures.

(Whitney Crossland) Good instructor very interactive

(Whitney Crossland) This is an amazing course and it's taught very well

(Whitney Crossland) Having to buy many books instead of one textbook really made it hard to keep up with readings because receaving them took forever. Also the way the structure of the class was of not using blackboard until COVID-19 was hard to follow up on grades and lectures.

(Whitney Crossland) Great course and even better instructor. No issues at all and Dr. Crossland is a great teacher.

(Whitney Crossland) Instructor has great attention getters and presents class well

(Whitney Crossland) This class was very informative, and I learned so many new things. Thanks for a great semester!

(Whitney Crossland) Notes are very informative and easy to follow, which makes studying a lot easier. Dr. Crossland always made sure we knew everything we needed to know for exams and was a very interactive professor.

(Whitney Crossland) Great professor

(Whitney Crossland) I loved the course and the professor was awesome

(Whitney Crossland) In this course it was easy to follow the work and we knew what content was going to be on the test which made it easy to study for the midterms.

(Whitney Crossland) Dr. Crossland was probably my favorite professor I have ever had. She is so nice and helpful, and her class was so fun and interesting to me. 10/10

(Whitney Crossland) I really enjoyed this class for the short time that we attended in-class lecture. Dr. Crossland was very helpful in the online course transition.

(Whitney Crossland) I loved this class so interesting and fun

(Whitney Crossland) absolutely loved the course and dr. crossland!

(Whitney Crossland) Dr. Crossland was a wonderful professor. I loved her personality and willingness to help her student succeed. She very clearly laid out her expectations and objectives for the class. I especially loved when she brought experiments to class so student who are visual learners could easily understand the lesson being taught.

(Whitney Crossland) Dr. Crossland is very funny, even though she doesn't try be. It's just in her nature. She makes class very fun and exciting. Great course and instructor.

(Whitney Crossland) Loved this class!

(Whitney Crossland) Dr. Crossland was very nice and funny. She's probably the most amazing teacher I've had besides one other one, but they're tied for best.

(Whitney Crossland) I enjoyed Dr. Crossland's ANSCI 1401 course very much. I learned a great amount from her in class but also by myself through the online quizzes and study material given. I wish I could take another course of hers because she is a great professor but means business. While I'm not an animal science major, I will be looking for more opportunities to study under and learn from Dr. Crossland.

(Whitney Crossland) Overall a great professor, just had a hard time studying for tests. The information seemed hard to find.

(Whitney Crossland) thank you for a great class.

(Whitney Crossland) Really enjoyed this course and learned a lot. Always will a take a class if Dr. Crossland is the professor!

(Whitney Crossland) I loved Dr. Crossland's class and wish I could have her for more classes.

(Whitney Crossland) I loved this class, I LOVE Dr. Crossland, love her teaching style!

(Whitney Crossland) This was my favorite class. I always looked forward to class. I love the way you lecture. It is so evident how much passion you have and knowledge for this class. I like how you make the topics. we are learning. relevant by using personal stories ect... Of course I appreciate the self assesments! LOVE THIS CLASS, YOU'RE AWESOME!!!

(Whitney Crossland) I really enjoyed this class. Dr. Crossland really engaged with her students and made it a point to lighten the mood with jokes every once in a while. Loved that.

(Whitney Crossland) I really enjoyed her method of teaching... definitely one of my favorite professors this semester

(Whitney Crossland) Overall informative and effective course/professor.

(Whitney Crossland) In response to the last question about attendance, I do not feel that attendance be mandatory due to the fact that I was able to study and complete assessments on my own time and still make very reasonable grades on the exams that were in class.

(Whitney Crossland) Overall, I did enjoy the course! It was definitely challenging, however, Crossland will shoot it to you straight on the expectations for the class. Sometimes, however, it would be difficult to really know what exactly to study for exams.

(Whitney Crossland) Dr. Crossland is a wonderful professor with clear expectations for her students. Wish I could take more classes taught by her!

(Whitney Crossland) The class was alright. Learning material could feel repetitive at times, but this is no fault of the instructor. Along these line, learning material often felt like the memorization of random facts and data instead of the learning of useful information. Lectures were great and allowed helpful student to teacher interaction. Guest lectures were also interesting, but didn't translate very well into exam material.

(Whitney Crossland) Everything was explained in a way that was easy to understand and grasp. Course materials were easily accessible and well organized.

(Whitney Crossland) Dr. Crossland is a great professor and I found myself actually excited for class. She would explain the material instead of just reading off of the screen and put things in ways that would stick with you. I look forward to learning the material and I very much appreciate her teaching.

(Whitney Crossland) She's amazing and very easy to learn from

(Whitney Crossland) made the course very fun and easy to learn but effective

(Whitney Crossland) Dr. Crossland was very excellent in teaching. I loved how she would go beyond to answer any questions we had after classes and during online sessions.

(Whitney Crossland) Loved her and was very nice and informative

(Whitney Crossland) Listens to student feedback regarding exams.

(Whitney Crossland) Dr. Crossland was very specific about her expectations and our expectations, and I really liked that. There was no surprises, so everything was expected in this course.

(Whitney Crossland) Very understanding professor and helped with any assignments student needed help on

(Whitney Crossland) this class is taught very well, the information is extremely interesting, and overall I think this class is very valuable.

(Whitney Crossland) I really like the format of the class and if anything need to be done would have to say would maybe have a few homework assignments maybe one before each test to help grades if people do not score high on test

(Whitney Crossland) Loved this class! I loved all of the experiments we did to see the various processes that happen within our animals.

(Whitney Crossland) She is one of my favorite professors! It's always a joy to take her class, she is amazing at teaching! If I could take classes of just her I totally would!!

(Whitney Crossland) Doctor Crossland was such an amazing professor. She is so knowledgeable and a structures her class so well. Gives all the resources to be successful in her class.

(Whitney Crossland) This was a very messy course and was stressful at times to understand because of the lack of organization.

(Whitney Crossland) Class was taught and ran well.

(Whitney Crossland) I truly enjoyed the class, and believe that Dr. Crossland enjoyed teaching the information.

(Whitney Crossland) N/A

(Whitney Crossland) She was an amazing teacher! She explained all the topics thoroughly and made the class exciting to attend! I loved her class!

(Whitney Crossland) I feel like this class was a hot mess. It need to be structure better. Half the time no one knew what was going on the notes were never available till right before class started or even days after we had lectures over it. The exam did not reflect the lectures. I found it impossible to study for this class because it was a shot in the dark there was no guidance. Nothing about this class went smoothly.

(Whitney Crossland) great course for beginners to animal science

(Whitney Crossland) Overall, I loved Dr. Crossland's course! You can tell she is very knowledgeable and passionate to engage and teach her students! I also liked how she made her exams and provided study quizzes, they were extremely helpful.

(Whitney Crossland) I really enjoy the structure and content of this course. I wish that there were a few assignments that counted towards our grade for this class.

(Whitney Crossland) I really liked this class. The modules helped out tremendously on the exams. Very pleased with this class

(Whitney Crossland) the notes would not always be posted so when I would get stuck on something I wouldn't have anything to look off of, also near the end of the semester we didn't receive much help or reviews so we would be lost on what to study.

(Whitney Crossland) I thoroughly enjoy Dr. Crossland as a professor. However the course was unorganized. And in her syllabus it states that there would be some sort of materialized study guide for each unit and there hasn't been consistently and missing a lot of class due to extra curriculars it made it hard to excel in this coarse because there were not reviews provided consistently throughout the semester.

(Whitney Crossland) I absolutely loved this course. If I wasn't a psychology major I would want to be pre-vet. The material was so interesting and the lab was even better! I loved going to the farms and being with animals! I can't explain how amazing it is to understand what I consume and how its processed. This course was very effective and entertaining. I think the attendance for me was never really an issue because I took a quick liking to the course and it helps me when preparing for exams to actually knowing the material.

(Whitney Crossland) Although it was very obvious that Dr. Crossland understood the material she was teaching, she began the semester saying we needed to be able to teach ourselves all of the material instead of her having to do it. I definitely think it is very smart to have TAs for this class in the following semesters.

(Whitney Crossland) Good Instructor

(Whitney Crossland) This course was extremely difficult because there were limited notes and resources given to succeed. I feel like the course would have been fine to take if notes were provided and reviews for the test were provided. I was in class every single day and still struggled to do well on tests. I do know that professor Crossland had a lot on her plate during this semester but I believe it is only fair as students that we are given the same opportunities to succeed as any other class. Most of the time talking to other classmates no one really knew what was going on or what was being tested over.

(Whitney Crossland) This class was a very effective intro to animal sci class, covering all common topics with just enough depth to be memorable. The powerpoints used were super helpful and thorough, but I feel like that made class slightly less engaging due to all the info being on the slides, meaning students could skip class and still have all the info

(Whitney Crossland) love this teacher and the course, just wish we had more grades in there other than the test grades.

(Whitney Crossland) great person, but it was apparent she was over scheduled to be teaching this class.

(Whitney Crossland) This class was one of my favorites this semester. Despite the situation regarding COVID, she was very interactive with her students and made sure we knew that she prioritized her students and their safety the entire time. When I went into self isolation, she ensured that I still had an equal chance to take my exam. And when I couldn't be in class in person, she made it just as easy to attend virtually.

(Whitney Crossland) This was my favorite course, I had a lot of fun learning throughout the semester.

(Whitney Crossland) Tough course but taught well

(Whitney Crossland) By far my favorite teacher this year. She made the class enjoyable and knew how to be fun and serious at the same time. I applaud how she combated technological issues; although clearly frustrated, she didn't let it ruin her day, and actually made a joke out of it.

(Whitney Crossland) This was Dr. Crossland's first year teaching this course and she did a really good job.

(Whitney Crossland) Dr. Crossland is amazing!!

(Whitney Crossland) Dr. Crossland is one of my favorite professors. She makes learning a complicated subject easier.

(Whitney Crossland) Dr. Crossland is an excellent instructor and has provided a laid-back environment while also effectively teaching the coursework. One of my favorite instructors so far.

(Whitney Crossland) Dr. Crossland is a wonderful teacher, my work schedule got changed and after the first exam I was not as present in class. However, she has the course set up for student success and I really enjoyed this course.

(Whitney Crossland) I think Mrs. Crossland is an amazing and supportive professor. She is extremely kind and understanding to her students and makes classes entertaining to attend; however, I think not making class mandatory affected a lot of people in her classes to fall short for assignments and exams. Her assignments and exams are not difficult, and she tells you what you need to know for the exams, but if class is not mandatory, no one is going to show unless they care to gain something out of the course, or they are struggling with the class.

(Whitney Crossland) Enjoyed this class and learned a lot of information that is just useful to have.

(Whitney Crossland) I really enjoyed this course and I learned a lot! Dr. Crossland is a great professor!

(Whitney Crossland) Very good class, learned a lot.

(Whitney Crossland) Very good at teaching the material

(Whitney Crossland) Overall, I loved the class and Dr. Crossland did a very good job of teaching us.

(Whitney Crossland) Fun teacher and valuable information!

(Whitney Crossland) I have had Dr. Crossland before and have loved her classes. This class was a bit different though in its effectiveness. I know that this class was new to Dr. Crossland and she was very open and upfront about that, which I appreciated. I still feel like there was not a lot of organization going on. There was never a review, self assessments, or quizzes made for class and being compared with her previous classes, that was always something that helped me the most! I think this was just a one time thing with Dr. Crossland but overall it was still frustrating not feeling like I was learning to the best of my abilities, nor did I feel like I was getting taught to the best of her abilities.

(Whitney Crossland) Dr. Crossland has gone above and beyond to help me as an advisor and a professor. I absolutely believe she embodies what it means to be a part of Texas Tech faculty. As a professor, she strived to make sure students were well prepared and equipped with information needed to execute the course. As an advisor, she has been a mentor, life coach, and even more, a guidance to higher confidence for what's to come after graduation. She was an absolute blessing.

(Whitney Crossland) Lectures are very helpful, and supplemental material provided by this instructor was integral to succeeding in this course.

(Whitney Crossland) This class was by far my favorite class this semester. Great professor and great material.

(Whitney Crossland) Always made the content clear and made sure we were aware of what was expected in class and in lab

(Whitney Crossland) Awesome professor that knows how to teach her students.

(Whitney Crossland) Teacher definitely knows what she is talking about and she tries to make learning interesting but because this is a general animal science course there is a lot of things to go over which can seem overwhelming.

(Whitney Crossland) Dr. Crossland taught our nutrition class with a lot of passion for the subject. I appreciated how she taught because she wanted you to learn the subject and not just memorize the material for exams. Not only were her lectures beneficial to just our nutrition class, but it also helped me understand the materials in some of my other classes where nutrition was a topic.

(Whitney Crossland) She's great!!

(Whitney Crossland) Absolutely loved this class and really enjoyed it. Dr. Crossland made this class so much more enjoyable than I actually thought it could be. She sparked interest in other fields of study for me.

(Whitney Crossland) N/A

(Whitney Crossland) Very Passionate

(Whitney Crossland) Dr. Crossland is obviously well educated and passionate about animal science.

(Whitney Crossland) I loved the professor. She was straight forward and always in a clear and concise manner.

(Whitney Crossland) Genuinely learned from and enjoyed this course.

(Whitney Crossland) I really enjoyed this coarse and I always love Dr. Crossland, she's an amazing professor!

(Whitney Crossland) Great class, this class was fun and I feel like I learned a lot with this class plus the lab.

(Whitney Crossland) She did an incredible job with the class. Lots of material for one class.

(Whitney Crossland) Dr. Crossland has been one of the best professors I have had, and I am a junior. She has been an amazing professor

(Whitney Crossland) Love Dr. Crossland!

(Whitney Crossland) Loved this class, made it easy and enjoyable to learn in her class.

(Whitney Crossland) Allie Martin, Teacher's Assistant for the Animal Science 1401 Lab, was one of the worst TA experiences I've had thus far. She yelled at my group the second week of the lab for not writing down our lab section on our paper. Additionally, she was moody all the time and expected us the very first week of class to arrive on time for the lab when we had to walk 15+ minutes from Ag Comm/Ed building to animal science. She was literally going to make those in class vote for us to stay in class until she realized there were around 20 of us coming straight from the lecture. It took her until the end of the semester to grade all of our assignments which were on paper, so if she lost anything it was gone forever. Finally, after emailing her several times about a quiz I took and didn't get credit for, she didn't take the time and effort to do her job as a TA and look at the correct quiz which she marked as late but it clearly wasn't. I had to forward her the email I sent her from that week's quiz where the due date was March 27th, 2021 and not October 27th. She also didn't update Blackboard from the assignments from last year so clearly, she has poor planning skills for courses. I would not ever recommend taking any class where she is the TA. She is mean and overly opinionated.

(Whitney Crossland) I loved this class and feel like I gained a lot from it. I liked how Professor Crossland was able to relate most of the content to real life experiences and not just read straight from her powerpoint presentations. Overall I loved this class!

(Whitney Crossland) Loved this course and Crossland's teaching style and enthusiasm for the content!

(Whitney Crossland) She was really nice

(Whitney Crossland) Dr.Crossland did a great job making sure all information needed was available to us and was very present if any questions were asked.

(Whitney Crossland) Dr Crossland is such an amazing professor, she not only teaches the class but makes going to class enjoyable

(Whitney Crossland) I have had Dr. Crossland for a class before and she is a great professor. I know this class was a last minute thing and although it was very unorganized this semester, I know Dr. Crossland tried her absolute best to give us what we needed for both lab and lecture! She is a great professor/ person. Love her!

(Whitney Crossland) I like how Dr. Crossland does little experiments in class to keep us engaged as well as telling relevant stories!

(Whitney Crossland) Best professor everrrrrr, I've taken two classes tonight by dr crossland and they've both been so fun and educational

(Whitney Crossland) Dr. Crossland is a fantastic teacher who engages the class in a fun way. I cannot wait to take her for feeds and feeding in the fall!

(Whitney Crossland) Crossland is an absolutely amazing teacher and the course itself was very informative and interesting

(Whitney Crossland) I really enjoyed this class and Dr.Crossland as a professor!! She always kept lectures interesting and engaging, which is something I really appreciated.

(Whitney Crossland) This course has been my favorite course I have taken so far. Although animal nutrition is not a topic I am particularly interested in, Dr. Crossland made this class so enjoyable and easy to be successful. I adore her teaching style, and she made all of the information very digestible (pun intended). I especially appreciated the self-assessments for each unit; I have never been provided with such a useful studying tool by a professor. I truly hope that I can take another class taught by Dr. Crossland in the future.

(Whitney Crossland) Very great instructor, made us all laugh

(Whitney Crossland) Doctor Crossland never made the lectures boring, she always threw in entertaining jokes and personal experiences to aid in her teachings and I appreciated that.

(Whitney Crossland) It was a very interactive class. I enjoyed every lecture.

(Whitney Crossland) The only thing I did not like about the course was my lab partners. I think the professor and Lab TA should give people the ability to form their own groups of 4 or maybe even less instead of a random grouping. Some people in the class really enjoy the topic then there are others who are doing it simply for the credit. I am one of the ones who only truly cared about getting a B or higher but I was stuck in a lab group that enjoyed taking up as much time at the labs as possible. While I understand trying to enjoy a topic can make it easier to learn we where always the last lab group out the door which I didn't not enjoy at all.

(Whitney Crossland) I honestly just took this class for a science credit, so I had no knowledge of anything related to this class at all when I entered. Dr. Crossland is an amazing teacher and I have learned so much information from her class. I loved that she gave us self assessments to complete throughout the class. These self assessments really helped me prepare for the tests and feel confident going into taking the exam. Dr. Crossland was so sweet, funny, and relatable. I loved being in her class even though sometimes the subject matter made me uncomfortable. (I honestly considered vegetarianism multiple times throughout this class!:))

(Whitney Crossland) I loved her! She was super informative and made learning fun! I know I will carry all the information she taught with me!

(Whitney Crossland) I really enjoyed this class and I think overall Dr. Crossland did an excellent job teaching it. I would strongly recommend her as a teacher to anyone.

(Whitney Crossland) Loved the instructor!

(Whitney Crossland) Loved this Instructor!

(Whitney Crossland) Dr. Crossland is an amazing professor, but unfortunately, this semester was kind of out of wack as it was her first time teaching. I think next semester when she has more feedback and a set plan for teaching the material will be better understood.

(Whitney Crossland) I have no comments about this course, Dr. Crossland is a great teacher.

(Whitney Crossland) Dr. Crossland is a wonderful and devoted Professor. This class is not easy, but Dr.Crossland does a phenomenal job of explaining concepts and answering any questions. I loved this course and having Dr. Crossland as my instructor, she is a shining jewel in the crown of Texas Tech Faculty and Staff and a wonderful and charming person.

(Whitney Crossland) Dr. Crossland is the best!

(Whitney Crossland) My favorite class ever.

(Whitney Crossland) Dr. Crossland did an amazing job as always. Her quick wit and dry humor keep her classes interesting. So sad this is the last class I will have to opportunity to take with her.:(

(Whitney Crossland) She seems very lost, picked up the phone during class a couple times, wasn't clear about content, forgot to write lecture notes, and took a long time to make quizzes available to be taken (which many of them had wrong answers and had to be corrected by her)… overall quite unprofessional, I don't think I've ever had a professor like this, I was excited to learn the content at the beginning of the semester and now I just dread going to class.

(Whitney Crossland) none

(Whitney Crossland) This was her first time teaching this class so there's definitely room to improve such as having the class material ready before class. I have a hard time connecting to the wifi in the building so sometimes I'm not able to open the notes until class is already over, which does nothing to help me learn

(Whitney Crossland) I took this class not knowing it was for beginner Agriculture majors. I'm planning on studying business and just took it for a science credit. This class was very educational for beginners. I didn't expect to learn about agriculture but i'm glad I did!

(Whitney Crossland) Dr. Crossland is very helpful and explains everything in a lot of detail. Great professor.

(Whitney Crossland) Instructor was very professional but also had a fun way of teaching. She took the time to explain everything in a way everyone could understand and gave visuals as well as things she's experienced that went along with the course material.

(Whitney Crossland) I thoroughly enjoyed the course and thought it was very interesting. the professor was very knowledgeable and engaging.

(Whitney Crossland) Professor Crossland taught the lectures very well.

(Whitney Crossland) A challenging course, but it was good!!!

(Whitney Crossland) Super super sweet professor !!!! Loved this course !!!!

(Whitney Crossland) Amazing instructor! Very helpful and kind to me! Even though this is not my major, I enjoyed learning from Dr. Crossland!

(Whitney Crossland) Dr Crossland made learning about the mitochondria and rumen bloat enjoyable and interesting.

(Whitney Crossland) Instructor is amazing and teaches information very well.

(Whitney Crossland) Very well constructed course covers each topic very well.

(Whitney Crossland) Very well constructed course covers each topic very well.

(Whitney Crossland) I feel like I didn't get a ton out of the course. Hard to apply the information at times.

(Whitney Crossland) The content of the class was spectacular. Would of liked to have a couple of assignments throughout each unit to help learn.

(Whitney Crossland) Great teacher.

(Whitney Crossland) I've taken Dr. Crossland for another course and the professor was effective and the course was excellently organized. However, the way this course was handled does not reflect her past courses. Dr. Crossland did her best, but I do wish that the quizzes and the lab lectures had the same numbers. There were instances that the way to solve the quizzes needed different values than were discussed in lab. Dr. Crossland does understand that she could've done better organization for this course, therefore, I won't go into detail. I do wish the professor posted the notes in adequate timing instead of a week or a few days before.

(Whitney Crossland) None

(Whitney Crossland) This was a very informative and well taught class. Dr. Crossland is very easy to work with and a joy to have as a professor. She is very serious about students careers but also takes the time to get to know students.

(Whitney Crossland) Dr. Crossland is brilliant. She's very knowledgeable and clearly wants her students to succeed. She provides every resource one could need to at least pass the course, and I feel bad about how many people ignore that. I wish I needed more of her classes for my degree because I would love to take her again.

(Whitney Crossland) Loved Dr. Crossland as a professor

(Whitney Crossland) She's great!!!

(Whitney Crossland) I appreciate the quizzes for this course, it helped so much!

(Whitney Crossland) Dr. Crossland not only taught the material but made sure everyone was able to understand

(Whitney Crossland) Dr. Crossland really cares about her students and goes out of her way to ensure our success.

(Whitney Crossland) The course was very fun, I enjoyed learning the basics of identifying animal breeds and how they came to be.

(Whitney Crossland) This professor was very direct and helpful in teaching the class by making it interesting.

(Whitney Crossland) Dr. Crossland is always very upfront on her expectations for the class.

(Whitney Crossland) The class was very ineresting and gave alot more information into the world of feeds. However, the teacher sometimes made the material confusing and did not elaborate on some of the major topics on the exam. Other than that, the class and the lab were fun!

(Whitney Crossland) Dr. Crossland made the class very fun and allowed us to further learn our material by small experiments.

(Whitney Crossland) I absolutely loved this class. I enjoyed Dr. Crossland and her way of teaching. It is a very interesting class, and I would highly recommend it to others.

(Whitney Crossland) I love Dr.Crossland as a teacher, I just felt she did not enjoy teaching this class as much as general nutrition. I appreciate her taking the time to teach it however.

(Whitney Crossland) She was very interesting in how she reached and seemed passionate which made me focus.

(Whitney Crossland) She was very conductive and taught me a lot about the general information about animals in the farm industry. I had a lot of fun.

(Whitney Crossland) Crossland was awesome!

(Whitney Crossland) I had a terrible situation happen this semester and had to get Title IX involved. Due to this situation, I had to miss a lot of my classes including hers, and that made this semester extremely difficult. She was given a letter from Title IX regarding my situation but did nothing to help me. She disregarded my efforts to ask for help. I would never want her as a professor again if this is how I am treated when I have proper documentation regarding my circumstances.

(Whitney Crossland) I LOVED this class!

(Whitney Crossland) I think the self-assessments & quizzes were extremely helpful when studying for the exams. I think attendance should be mandatory because I have been coming to class almost every class time and there is no one here. That makes me not want to come because no one else did. I did enjoy the way Dr. Crossland teaches. She keeps me engaged the whole time.

(Whitney Crossland) The professor is straightforward with her material and her lectures are entertaining.

(Whitney Crossland) Great teacher! Loved the class

(Whitney Crossland) I wish there was more grades besides the exams to help with grade averages. If you bomb a test, it's kind of hard to come back from that if there are only four overall. Maybe not even more homework or quizzes, maybe just one or two more extra credit opportunities.

(Whitney Crossland) Dr Crossland was a great instructor.

(Whitney Crossland) The self assessments were very helpful for studying purposes. I also got a lot of going to class and just listening.

(Whitney Crossland) None

(Whitney Crossland) Great teacher!!!!

(Whitney Crossland) Learned a lot in the class but I think it went too fast and was hard to really learn the different animals

(Whitney Crossland) I really like how Dr. Crossland formatted the class. I appreciate not having homework and only having exams. For me, this makes it easier to learn the material when I don't have to struggle with completing my homework on time in conjunction with my other classes. This class has been enjoyable for me to attend because of the way Dr. Crossland teaches.

(Whitney Crossland) I really liked how the class was formatted. Our teacher was very clear, and it was easy to learn because she was not confusing.

(Whitney Crossland) Overall a very positive and engaging instructor for an 8am course, offered help when we needed it and made her expectations very clear.

(Whitney Crossland) She is very passionate about any topic and is very helpful if you have questions.

(Whitney Crossland) She gives a lot of leniencies, is kind, and is very specific in her instructing.

(Whitney Crossland) Dr. Crossland is so great. This is the third class I have had with her. i had some challenges I was trying to overcome this semester and she really helped me throughout this semester!

(Whitney Crossland) Dr. Crossland is one of my favorite teachers at TTU. Her teaching style is remarkably memorable, and she makes learning a fun experience.

(Whitney Crossland) Dr. Crossland is a very straightforward professor and will not trick you on the exams which is very helpful.

(Whitney Crossland) Dr. Crossland is a very outstanding professor. She is very easy to follow and a great teacher.

(Whitney Crossland) I really love the instructor. Class is fun, engaging and very informative. She is extremely helpful and goes out of her way to help students be successful. I would take a class again with her anyday.

(Whitney Crossland) I really like the way she instructs the class and is really good at explaining the course material.

(Whitney Crossland) This course was very interesting, and the professor was very enjoyable.

(Whitney Crossland) Professor Crossland did a great job of teaching the course material and keeping the lecture entertaining. Her teaching style, power points, and self assessment quizzes made it easy to understand the material and made the class enjoyable.

(Whitney Crossland) I loved Dr. Crossland, she was very entertaining especially effective in gathering the crowds attention at 8:00 am. I loved her very much and I highly recommend her in all her classes.

(Whitney Crossland) This was my absolute favorite class so far here at Texas Tech. Dr. Crossland creates such a fun atmosphere that I looked forward to coming to class. She made it enjoyable to learn and it was so much easier to learn concepts this way rather than sitting through a boring lecture.

(Whitney Crossland) Overall she was an amazing professor, She explained everything very well and it wasn't too hard for me.

(Whitney Crossland) Dr. Crossland was an amazing reacher and you could really see her passion in what she taught she was a great teacher this semester.

(Whitney Crossland) Her course was fun yet educational. Would take again.

(Whitney Crossland) Loved the class practice material was incredibly helpful.

(Whitney Crossland) good class

(Whitney Crossland) Great class and professor!

(Whitney Crossland) Great professor and class!

(Whitney Crossland) She was really cool and understanding about her students.

(Whitney Crossland) Although this class was difficult, Dr Crossland was a great professor! I usually really struggle with chemistry oriented classes, but I'm potentially ending this class with an 'A' because of her.

(Whitney Crossland) N/A

(Whitney Crossland) This professor was amazing!

(Whitney Crossland) This course was very unorganized. The instructor did not have the material ready that we needed in order to study at the appropriate time for the next exam. The course objectives were supposed to help but did not relate to what was covered or on the exam. The lab was great; however, there were not enough practice problems. I enjoyed the chemical analysis of our feed but it was, again, not organized and hard to keep up with what we are looking for. I would check calculations, grammatical errors, and spelling in material for the next semester to study with clarity. Along with this, course objectives should be changed to accurately represent what students should focus on. The class, overall, was interesting and informative.

(Whitney Crossland) I absolutely love the relatability Dr. Crossland shares with us. She was funny, engaging, and approachable. I hope to have another class with her in the future. She should give a little more accountability to the class.

(Whitney Crossland) Professor Crossland was a great professor and I thoroughly enjoyed taking her class. I feel I learned a lot and found the class easier with her at the professor

(Whitney Crossland) Crossland is a great professor and I enjoyed her class. I hope to take more classes with her in the future!

(Whitney Crossland) Excellent course and professor. I enjoyed this class the most this semester.

(Whitney Crossland) This instructor is a very effective and productive professor. She is professional but also knows how to relate to her students. There is no one I would trust more to teach me in this class than professor Crossland. I highly recommend that students attend her class regularly to get the full benefits of having Crossland as a professor for it is a privilege and honor.

(Whitney Crossland) Dr. Crossland shows up to class unprepared and acts like she does not want to be there a majority of the time.

(Whitney Crossland) Dr. Crossland is a fun and interactive professor. Her knowledge of nutrition is well-portrayed in her lectures. This course is a perfect introduction to nutrition that can be built upon.

(Whitney Crossland) My favorite course Ive taken here at Texas Tech so far learned a lot and had a lot of fun in this class.

(Whitney Crossland) I absolutely loved this class and Dr. Crossland! She is one of my favorite professors I've had at Texas Tech. The way she teaches her class is very interesting as she uses real-life examples to help us understand it better and her study guides made me feel prepared for every exam.

(Whitney Crossland) I liked this class a lot! Dr. Crossland is awesome and the study guides, self-assessments and quizzes helped me feel prepared for every exam.

(Whitney Crossland) I learned a lot in this class and enjoyed her stories to back up the material:).

(Whitney Crossland) The instructor was very helpful and effective when teaching the content. I would highly recommend Dr. Crossland to anyone as an instructor!

(Whitney Crossland) All in all this course was very easy to understand and follow along. The resources were great for studying for exams. I greatly appreciated the extra credit opportunities throughout the semester.

(Whitney Crossland) I love this professor and her classes. I have taken some of her classes in the past and I loved them and learned so much. I agree that attendance is strongly advised for this class. For the sake of the exams and the lab materials. Overall, I would recommend this professor to anyone.

(Whitney Crossland) Dr. Crossland is a very energetic teacher. She makes her students want to attend class and you can definitely see a difference in success if they do show up for class. I learned a lot from this course and would recommend this professor to other students.

(Whitney Crossland) No comments great class

(Whitney Crossland) the professor was great at teaching materials, and providing us with great sources to study for exams. the lectures were fun and engaging, as she really knew what she was talking about and would go off of the lecture

(Whitney Crossland) The course was tough good and I was able to learn what I needed to learn from the notes.

(Whitney Crossland) Doctor Crossland is good teacher, one of my favorite classes this semester, however it's one of the toughest classes I have. One of the things that I dislike about the class is taking the exam which consist of 100 questions and you have 50 minutes to answer them. It makes it tough to process each question, since you have around 30 seconds to answer each question. After each exam, Doctor Crossland is very good at grading the exams the next day. So you don't have to sit and wait to see what you made. Overall I really like the class, lots of useful information that I can use in my degree. Crossland will do everything in her power to help you and to make the class fun and interesting!

(Whitney Crossland) She was funny, and she cared about her students passing the class

(Whitney Crossland) She was very efficient and got the point across. Overall she taught what we needed to know and challenged us with the exams. Great teacher!

(Whitney Crossland) I LOVED Dr. Crossland. She is an incredible professor and I enjoyed her class very much.

(Whitney Crossland) This instructor created a great learning environment that was relatable and fun while still being an effective learning and teaching experience.

(Whitney Crossland) A class I learned a lot in and enjoyed what we learned. Crossland is an amazing professor and super fun to have

(Whitney Crossland) I loved the way this class was taught and it was a very beneficial learning experience. The self assessment quizzes were very useful as well as the notes and videos given to us.

(Whitney Crossland) I really enjoyed this class and how it was taught. It was helpful that the slides were posted and the self assessments helped a lot when studying.

(Whitney Crossland) Dr. Crossland is an amzaing professor as long as you read the pwoerpoints and provided study information you will do well.

(Whitney Crossland) Great course!

(Whitney Crossland) I have never enjoyed a science class more than I enjoyed this class. It was fun yet terrifying knowing how delicate the body is, and yet how it can adapt so quickly. She made the material fun with her sarcastic attitude and fun stories to really integrate the class into the lecture. I was most excited to attend this class out of all my classes. I enjoyed how in-depth she would go in order for her students to understand the material. One thing I liked about the instructor was her quizzes and reviews for the exams. It helped me feel prepared for every exam and I could make flashcards on the quizzes to help me remember. Another thing I liked was how all the material was for viewing at the beginning of the semester for us to look at before classes began. I could look over lecture slides and create flashcards and study sets even before she lectured on them. It almost felt like we could learn at our own pace but still have the guidance of a teacher. My favorite interactive activity was making a "rumen" out of a bottle and a balloon. It was so cool watching everyone get involved and use it as an extra credit opportunity as well.

(Whitney Crossland) I enjoyed this class

(Whitney Crossland) Overall a good class and the instructor did very well.

(Whitney Crossland) Really enjoyed this class. She kept me engaged the whole semester and she is one of the teachers here that I felt truly cared about her students. She is very good at getting the material across clearly. I would recommend her as a teacher to anyone!!

(Whitney Crossland) I find the notes extremely helpful!! I also feel did she did really well when it came to teaching us the material during lectures I would recommend her to other students

(Whitney Crossland) Professor Crossland was an amazing professor and excelled at teaching this course efficiently. Thanks to her, I have a new appreciation for nutrition

(Whitney Crossland) Dr. Crossland was amazing! Always engaging with the class and had plenty of helpful study/quiz materials to fully prepare us for exams

(Whitney Crossland) This class was very interesting and I enjoyed taking it. I do wish I had gone to more classes, but the distance from my dorm and my morning habits affected my attendance more than I wanted.

(Whitney Crossland) I learned so much and this is my favorite professor I have had at Texas Tech.

(Whitney Crossland) I really liked the instructor you could tell she cared about teaching and she made her lessons more listenable by engaging with the class. She was also very nice to everyone and offered extra credit.

(Whitney Crossland) Dr. Crossland is brilliant and made a course I wasn't very excited about something to look forward too. Her Exams were not easy but she provided everything her students needed to take them successfully. I leave this class more knowledgable about nutrition and would love to take a course with Dr. Crossland again.

(Whitney Crossland) Good class and teacher overall

(Whitney Crossland) Oustanding course with an excellent learning model

(Whitney Crossland) Nice straight forward class. Lectures and assignments were good. Overall I enjoyed the class, Dr. Crossland does a good job being engaging during the lectures.

(Whitney Crossland) Well rounded class and a good professor.

(Whitney Crossland) Great Instructor!

(Whitney Crossland) Dr. Crossland is a great teacher and makes us really dive into the discussion of ruminant nutrition. Very well-taught class.

(Whitney Crossland) Dr. Crossland is an excellent professor, and I loved her class!

(Whitney Crossland) Dr. Crossland is a really good instructor and I am glad that I was able to take that class with her.

(Whitney Crossland) Instructor was great I could really tell she knew the material she was talking about

(Whitney Crossland) The instructor was very informative and lecture were easy to follow

(Whitney Crossland) Dr. Crossland is one of the best professors I have had. She treats her students like people and not a paycheck and genuinely wants them to learn the content and make a good grade.

(Whitney Crossland) Loved this professor. She needs a raise. She is the best!

(Whitney Crossland) Information was presented clearly and in an interesting way.

(Whitney Crossland) Dr. Crossland was a great professor and managed to make Feeds and Feeding a very interactive course with an open space to ask questions. Taking the new course in stride, her material was always fair on exams and if you attended class there would be no reason why you could not succeed. I do appreciate that attendance was not mandatory, because sometimes life happens, or you have an exam to study for and you just need that extra time. I did not think I would enjoy feeds as much as I have, and I owe that to Dr. Crossland.

(Whitney Crossland) n/a

(Whitney Crossland) Class was fine until around a month and a half in, then she started showing up to class with no notes/power points, had no notes for us to use to do our homework that had difficult math, and was just disorganized, never mentioned we had a lab final until week of, mood determines how will go

(Whitney Crossland) Dr.Crossland is amazing and makes the class easy to get an A in. Thank you!!

(Whitney Crossland) I enjoy hearing her talk about how what we are learning applies to society

(Whitney Crossland) I love that the instructor did pop quizzes for candy and had many extra credit opportunities.

(Whitney Crossland) Professor came to class unprepared to teach more than a few times

(Whitney Crossland) Very intelligent and does all she can to make sure the students understand the material.

(Whitney Crossland) I really enjoyed this class. I love the way Crossland teaches.

(Whitney Crossland) I absolutely loved this class and recommended all of my friends take this course because it was such a great experience.

(Whitney Crossland) She did a great job preparing us for exams and clarifying what she expected from us

(Whitney Crossland) She was extremely fair with exams and communicated what information needed to be studied

(Whitney Crossland) I thoroughly enjoyed the course. There was a lot of notes but it was straight forward and the self assessments and quizzes helped a lot. I feel like I learned a lot and I am glad I took this course.

(Whitney Crossland) I loved this course and the layout of it. I enjoyed how crossland taught it helped me obtain information even weeks later.

(Whitney Crossland) always willing to help

(Whitney Crossland) Having not mandatory attendance helped me when i was struggling with health issues. I helped me not have to worry so much.

(Whitney Crossland) Dr Crossland is an amazing professor and I am looking forward to taking another class of hers next semester.

(Whitney Crossland) Amazing and straight to the point.

(Whitney Crossland) She is very knowledgeable and I felt there wasn't someone more qualified to teach this course. She made it fun with her personality and that kept my interest in learning nutrition.

(Whitney Crossland) This is a really fast course and the teacher also teaches very fast so for someone with a learning difference, It is very hard to keep up.

(Whitney Crossland) Dr. Crossland was a good professor, she was strict and clear on her expectations. I appreciate her reviewing topics in the following lecture and giving positive reinforcement. Her offering candy as positive reinforcement encouraged me to pay attention so that I could participate. I also appreciate the extra credit opportunities she offers.

(Whitney Crossland) n/a

(Whitney Crossland) I loved having Dr. Crossland as my general animal science teacher. She made learning fun and I really enjoyed all of the content in this course. Thank you, Dr. Crossland, for being a great teacher.

(Whitney Crossland) Always engaging defefintly one of my favorite classes this semester.

(Whitney Crossland) The instructor made the class very enjoyable and engaging. I really enjoyed taking the class and I feel like I learned more than I expected to learn during this course.

(Whitney Crossland) This course felt challenging with limited resources for help.

(Whitney Crossland) I love this professor. Crossland actually cares for her students and how they learn.

(Whitney Crossland) I am currently a junior and Whitney Crossland is one of the best professors I've had going to Texas Tech. Crossland is very interactive with the class and comes up with different ways for students to participate. She cares about her students and only wants the best for everyone in her class. She is very innovative with her experiments to help show what is going on in the body visually. I would definitely take this course again and recommend it to anyone who is willing to learn about Nutrition. I have learned a lot from this course and will apply it to my future.

(Whitney Crossland) Great class

(Whitney Crossland) I enjoyed the conversational style lectures and how the class focused a lot on real world application not just memorizing or reading a textbook. I also appreciated how understanding Dr. Crossland was when a class had to be missed.

(Whitney Crossland) I think the test are difficult and need some lessons tying directly to what is on the test.

(Whitney Crossland) She was amazing. I have no background in animal science and had to take this class because I needed a science credit. She was so understanding and amazing.

(Whitney Crossland) I adored this teacher. She makes sure you understand the course, offers extra credit, and as long as you go to class most days and study the slides she posts and the quizzes she offers, girl you'll be more than fine.

(Whitney Crossland) Dr. Crossland made class fun but very informative all at the same time. She often explained all of the topics very well and thoroughly. I would definitely take her class again.

(Whitney Crossland) I LOVED learning from Dr. Crossland in this class. Not only is she very intellectual and experienced in animal nutrition, she is able to explain complex topics in an interesting, comprehensible manner. I am very glad I was able to take nutrition with her. I truly learned so much and have grown a great interest in animal nutrition because of her!

(Whitney Crossland) I regularly attended the class because I truly enjoyed Dr. Crossland's lectures. She is engaging, funny, knowledgeable, and you can really tell she has a passion for what she teaches. I feel like I truly learned a lot from this course. I would not change much about this course, except maybe consider mandatory attendance only because I think Dr. Crossland's lectures are truly informative AND enjoyable. It is also not fair to Dr. Crossland who gives her time to lecture and only 1/4 of her class shows up.

(Whitney Crossland) Dr WHITNEY CROSSLAND is an effective instructor, we are pleased to have this class. Her TEACHING concepts and methods involves everyone in the class. Overall the course is an learning asset to the Master student which could strength their profile

(Whitney Crossland) N/A

(Whitney Crossland) N/A

(Whitney Crossland) Very good at breaking complex concepts into smaller more simple ideas. Also really liked the reviews of previous lectures at the beginning of each day.

(Whitney Crossland) I recommend Ms. Crossland

(Whitney Crossland) The course was well organized and easy to follow.

(Whitney Crossland) very good teacher, sticks to schedule and teaches content well.

(Whitney Crossland) I like this instructor and how everything way laid out I recommended her.

(Whitney Crossland) I loved this class and really like Dr. Crossland. I did not ever think before this class that I would be so interested in nutrition and now I am thinking of studying it for my master's degree thanks to Dr. Crossland and her dedication to providing us with knowledge.

(Whitney Crossland) maybe make the practice quizzes extra credit.

(Whitney Crossland) Dr. Crossland is a great instructor and is very informative. Both lecture and lab were fun and I enjoyed taking this class!

(Whitney Crossland) Great teacher in a difficult subject.

(Whitney Crossland) I did not like using proctorio. I would have rather taken my exams in person in class.

(Whitney Crossland) Made the class super interactive and fun! Amazing professor

(Whitney Crossland) I liked her, she was to the point, shared relevant stories that helped me understand certain points, and i loved her small demonstrations like the fermentation balloon and the lipid zip block activities.

(Whitney Crossland) Dr. Crossland is a very knowledgeable professor, and she did a great job this semester, my only issue was that she talks pretty fast so it was hard to keep up with notes when she switches the powerpoint slides too fast.

(Whitney Crossland) Crossland is easygoing and makes the information understandable and accessable for students to really take in what is being taught. Great teacher, made taking the class fun!

(Whitney Crossland) I loved this course. I found it engaging and I really felt like I learned the material. Professor Crossland was great instructor. She made sure to highlight what was important in the course. Also, they way the tests are set up really help to learn the material because you don't always know what she will ask for the short answer questions.

(Whitney Crossland) Dr. Crossland was a great professor, you could tell she really loved teaching this course. In addition, she was always willing to help in any way she could.

(Whitney Crossland) Professor Crossland was a great professor who went out of her way to make the content we learned interesting. She also was incredibly helpful and truly wished the best for her student's success.

(Whitney Crossland) Overall a great instructor.

(Whitney Crossland) I have never been fond of nutrition, but Dr. Crossland made this class fun and engaging. She explains the course material in interesting ways that allow you to memorize it easily. I liked having the notes available on Blackboard but attending class is very beneficial because it is easier to learn when she explains it!

(Whitney Crossland) My lab TA for the class, Carly, was so great. One of the most fun and most effective classes/lab I have taken. I enjoyed going to lab and lecture! Thank you Dr. Crossland for the environment you provide for your students.

(Whitney Crossland) She very explained all of my questions very well and made topics easy to understand.

(Whitney Crossland) I enjoyed the class. I would have liked the answers to be shown after submitting the self assessments and quizzes so I could've used it later for studying.

(Whitney Crossland) The lab that goes along with this lecture is one of the most fun classes I have taken. The information was valuable and Allie Martin made the labs easy to understand and was organized in her instructions.

(Whitney Crossland) N/A

(Whitney Crossland) Professor Crossland was a very engaging professor and I really enjoyed her experiments in class that allowed us to get a better understanding of each concept.

(Whitney Crossland) it was a great class and learned a lot

(Whitney Crossland) Professor Crossland obviously knew what she was talking about, but there were several times she didn't respond to my emails. Obviously I can't expect her to respond every time due to her position, but an acknowledgement of some sort would've been appreciated.

(Whitney Crossland) Dr. Crossland was very understanding when I had to miss class and lab due to a death in the family. She was an amazing professor!

(Whitney Crossland) I enjoyed the course and also the lectures. I specifically liked how rewards were given for answering questions.

(Whitney Crossland) The course material was thoroughly explained in lecture, and the assignments/assessments matched up very well. All expectations were very clear and easy to follow. This is easily my favorite course that I have taken so far.

(Whitney Crossland) I absolutely loved this class! Dr. Crossland was an amazing professor and was amazing at explaining topics! The class was always interesting and I will for sure take another class by her

(Whitney Crossland) n/a

(Whitney Crossland) This class was phenomenal. Dr. Crossland is a great teacher and explains the material in a way that is easy to understand. I throughly enjoyed this class and learned a lot. Lectures were great.

(Whitney Crossland) loved this teacher and class!

(Whitney Crossland) I really enjoyed this course and learned a lot from it. I liked the structure of the class. It is also nice that the final is optional.

(Whitney Crossland) Dr. Crossland is super knowledgeable and an engaging instructor. Though I wish that when she lectured it was less off of the slides, some days it felt like we were just reading the PowerPoint. This wasn't every class, as some days we had great discussions, but I feel like that is the cause for sporadic class attendance (I only missed class twice so I could see the progression of which students showed up).

(Whitney Crossland) would recommend her class

(Whitney Crossland) I always love taking classes with this instructor, she is not only a really good teacher in terms of the content but she makes it fun.

(Whitney Crossland) Good class but based upon self-assessments and exams class attendance is not necessary.

(Whitney Crossland) The lecture was great I learned a lot and it was fun to go to. The lab, on the other hand, was not so great. We would just skim over the lab notes and then have to go and do the lab. Help was not given when questions were asked, it was just "figure it out". We also never got to see if we were doing the lab correctly on paper. I could have been doing the health portion completely wrong this whole time but I have no clue. So I probably failed the practicum part of the lab final because I don't know if I was doing anything correct or not.

(Whitney Crossland) I loved my instructor for this course. She made the class very engaging and always made the class fun.

(Whitney Crossland) Very nice and understanding

(Whitney Crossland) I LOVED this class. The self assessments were very helpful and I learned a lot.

(Whitney Crossland) The instructor is great. She is patient and her teaching style is very easy to comprehend.

(Whitney Crossland) great teacher and fun class, really enjoyed her personality and being in her course

Distance learning comments

(Whitney Crossland) Dr. Crossland did an amazing job keeping me engaged in the class with her energy and lecture topics. She was able to explain complex topics in a smooth way and help me study throughout the semester. Overall, I think she was able to adjust to being completely online effortlessly. The power-points that were shown in lecture (and online to study) were greatly detailed. This. along with having the self assessments and quizzes was a very useful tool in narrowing my studying focuses. This class was a great learning experience and well done by Dr. Crossland!
(Whitney Crossland) I really enjoyed taking this class! The information was given in a way that was easy to understand, but also difficult enough to make you think and solve the issue. The content was great, and Dr. Crossland made sure to explain the material and present in a way that was understandable, and not unnecessarily difficult like other animal science courses. I am confident that I can take the information learned in this class and apply it in the near future when I become an ag teacher!
(Whitney Crossland) I feel this was a good course and a very understanding professor. Dr. Crossland did anything to help. Is harder to make your self attend class with no mandatory attendance but she does record all lectures to view later.
(Whitney Crossland) I feel this was a good course and a very understanding professor. Dr. Crossland did anything to help. Is harder to make your self attend class with no mandatory attendance but she does record all lectures to view later.
(Whitney Crossland) Dr. Crossland is an amazing professor. She knows how to relate to the students and understand us.
(Whitney Crossland) good
(Whitney Crossland) Dr. Crossland made a great effort to make the class fun and engage students
(Whitney Crossland) Great course! Maybe a weekly meeting over zoom or some platform would have been helpful, but great professor and very interesting course!
(Whitney Crossland) This course was rigorous, thorough, detailed, effective, and challenging. This course stood out among my course load as one of the few that required critical thought, and for that I am very grateful. Thank you, Dr. Crossland, for what you do and the principles by which you abide-- they are admirable and make for a high quality learning experience.
(Whitney Crossland) Over reacting to the china virus
(Whitney Crossland) Dr. Crossland was awesome, super knowledgeable and enthusiastic
(Whitney Crossland) This class was one of my favorite courses this semester.
(Whitney Crossland) I enjoyed the organization and the presentation of the materials for this class. Dr. Crossland is very helpful and terrific professor. I have no complaints about her or this class.
(Whitney Crossland) Dr. Crossland is a great professor and is great at keeping lectures interesting by telling us real life instances in which she has applied what we are learning. She incorporated hands on activities even though we were online, which I really appreciated! Additionally, she did mini experiments to demonstrate things that pertained to our lectures and showed them to us via Blackboard Collaborate Ultra. I appreciate that attendance was not required because one time I had tot meet my ferrier and I had to miss a class, but due to it being recorded I could easily catch up.
(Whitney Crossland) N/A
(Whitney Crossland) I really enjoyed Dr. Crossland. She is passionate and knowledgeable about what she teaches and she has fun with class. Often times there were fun things that were said that was the best part of my day, I just wish I could have had this class face to face.
(Whitney Crossland) I enjoyed Professor Crossland lectures everyday. It was a lot of information but she explained in a way where it was easy to understand. Any issues I had she was always willing to help me understand. I hope to have her as a professor again if possible.
(Whitney Crossland) Everything is very accessible for me, and I like the fact that I can finish my assignments before due dates.
(Whitney Crossland) Clear with teaching! wonderful course.
(Whitney Crossland) Dr. Crossland is an outstanding professor and this was the most interesting class I took this semester.

(Whitney Crossland) Dr. Crossland managed and taught this online class perfectly. Probably the most smooth flowing online class I have ever taken as well as I felt like I was truly able to learn and retain material rather then having to teach myself.

(Whitney Crossland) Amazing professor! Would take again if she offered more classes!

(Whitney Crossland) Dr. Crossland is amazing! Loved taking her class!

(Whitney Crossland) Posting lectures might not be enough for the difficulty and amount of material for this class. It would be much more effective in person.

(Whitney Crossland) I learned a lot from Dr. Crossland. She was able to properly deliver information to myself, when I had questions, off the top of her head which really showed how knowledgeable she is with the subject. At times when I was confused about similar topics in my other classes Dr. Crossland's class cleared everything up for me. I really enjoyed Dr. Crossland's online course and have already recommended it to several friends who are planning on attending Texas Tech. Attending Dr. Crossland's class was the highlight of my day because I was learning, but most importantly I was understanding every bit of knowledge being presented. I never left her class feeling confused. Thank You Dr. Crossland.

(Whitney Crossland) Great instructor.

(Whitney Crossland) Dr. Crossland goes above and beyond! Very understanding and helps constantly.

(Whitney Crossland) Professor was extremely knowledgeable on the topics + pieced each unit together to create an understanding of the bigger picture.

(Whitney Crossland) I enjoyed this class and learned a lot by taking it. Dr. Crossland answered all emails in a reasonable time frame and the exams were on a flexible schedule. You were allowed to work ahead in the class and that was very helpful when taking a summer class. Crossland tonight very effectively and communicated clearly with the class as a whole. Definitely would take from her again.

(Whitney Crossland) Conner was a very nice and helpful TA!

(Whitney Crossland) Dr. Crossland was a great professor and amazing at explaining topics. Her exams made sense without completely stumping me and I have gained so much knowledge just from this one course.

(Whitney Crossland) I really enjoyed the material of this course and felt that the videos explaining processes in the GIT were extremely helpful.

(Whitney Crossland) Overall, I love the way that the course was set up as it was very well-organized and easy to navigate. Dr. Crossland was very helpful and responsive to potential questions or issues that arose throughout the course. However, I really wish that there had been weekly scheduled check-ins or scheduled office hours for people to attend. I find the group office hours much more helpful than by apt. The exam reviews were very helpful and I wish there would have been more interaction such as this.

(Whitney Crossland) he was amazing throughout the semester.

(Whitney Crossland) Great class but difficult!

(Whitney Crossland) Learned a lot and really enjoyed it.

(Whitney Crossland) Loved the class!

(Whitney Crossland) Loved this class and learned so much information. Was able to grasp all the concepts.

(Whitney Crossland) This course was very informational and super easy to learn the content. I would highly recommend this class to anyone!

(Whitney Crossland) Overall the format of the course for distance learning was very accessible and helpful; especially for those of us working through the summer. The reminders and notes were also helpful. As I'm perhaps a 'mature student' I did actually miss required textbook materials, but I really appreciated the video diagrams Dr. Crossland shared as well as the fermentation activity. The visuals for anatomical parts also helped make up for wet lab experience.

(Whitney Crossland) The instructor takes the time to make sure all of the material is easy for us to access and does her best to help us succeed.

(Whitney Crossland) This class helped me learn how to study effectively!

(Whitney Crossland) This course was okay. I struggled a little because there is so much information on the PowerPoints and at times I didn't know what to study for assessments. However, I like that the assessments are open notes and that most of the test comes from the assessments. That really helped me figure out what part of the notes to focus on and study.

(Whitney Crossland) chill class

(Whitney Crossland) Overall very well ran. Dr.Crossland was more than helpful throughout taking her class and went above and beyond to insure that I was able to perform to the best of my abilities!

(Whitney Crossland) This was a fantastic online course and I would take this course again.

(Whitney Crossland) The instructor made it clear what students needed to do in order to succeed. The instructor also worked with students and helped students understand the material.

(Whitney Crossland) I really enjoyed this course! Dr Crossland did a great job communicating our assignments and is a wonderful instructor. I really liked how the class was asynchronous. Being able to take exams early was immensely helpful because I was taking another summer class and working.

(Whitney Crossland) Loved this class with Dr. Crossland! Everything was laid out very well from online materials, notes, and assignments. The reviews were extremely helpful as well as the discussion board.

(Whitney Crossland) Great class and very educational!
