As a collaborate team with architects and landscape architects the site's design reflects a close connection between buildings and nature. Natural elements throughout provide opportunities to gain health and wellness through the indoor and outdoor environments. The decision to provide a public park for the community helps integrate patients with society and is a substantial benefit to the adjoining neighborhood.
SITE DRAINAGE

A hydrologic limitation is that a significant portion of the site lies within the 100-year floodplain. Stormwater from the parking lot is conveyed through bioswales that remove contaminants. Additionally, the water runoff from the roof is stored in cisterns and can be used for landscape irrigation.

- Bioswale
- Small Detention Pond
- Water Feature Overflow
- Water Harvesting Tank
- Existing Creek
- Detention Pond

PLANTS FOR THE BLACKLAND PRAIRIES

Selected species include the region’s native and adaptive vegetation.
This private space is where patients can relax and reflect during their healing process. The gentle water movement makes a soothing melody and allows visitors to be surrounded by a naturalistic landscape.
This public space is designed for the nearby community and patients from the rehabilitation center to play sports, have celebrations or hold special events such as a local farmers market.
