Safety Seminar

Chijuan Hu
Assistant Professor of Practice
Department of Chemical Engineering

Abstract

Good safety practice is of paramount importance because it prevents injuries and fatalities, property and environmental damage, as well as associated cleanup costs and regulatory fines. Everyone plays a critical role day to day in implementing safety practice to ensure a safe working environment for themselves and other people. A hands-on activity is integrated into the safety seminar by providing the seminar attendees an opportunity to conduct a mock safety survey in a real lab setting. In the seminar, a discussion will be held to talk about the findings observed from the mock survey and revisit the good safety practices that must be used. Emergency response protocols and recent lab incidents are also to be reviewed.
