

How to Start a Citrix App Using Citrix Workspace

1. Click an app icon once. If you double click an app icon, you will receive an error because you can only run one instance of the same application at a time.
2. A connection box will appear displaying the progress of the application launch.
3. Once the connection is established, a window will appear with a message warning about unauthorized access. Click the **OK** button to continue launching the app.
4. The Windows sign-in window will disappear, and you will see the app splash screen appear.

Important note: It may take several seconds for the app splash screen to appear and the application to launch.

Important note: The length of time it takes for an application to load will depend on the state of your internet connection.
