TX is the Best & Worst

Did you know that Texas is the leading wind energy producer AND highest carbon emitter in the U.S.? Read Dr. Katharine Hayhoe's blog post as she explains that it is time to stop our dirty ways of producing energy and replace them with clean energy sources. There are many cities across the U.S. taking action to go 100% renewable. For example, Georgetown, TX announced in 2015 to power their entire city from renewables. Communities across Texas are beginning to commit and invest in clean energy to help combat this problem. [LEARN MORE](#)

Video Of The Week

In an episode of one of our [Climate Witness videos](#), Rowdy Bolen explains how he has adapted his vineyard to accommodate climate change and drought seasons. Rowdy remodeled his irrigation system by putting in an underground drip, allowing water to directly reach the grapevines' roots. He is very proud of his vineyard not just because of the great wine that he produces, but also because of the amount of water he saves. [WATCH NOW](#)
