

How do I add an image to a test question?

When you create or edit a test question, you can insert an image in the question text or in the answer text.

1. Edit the Test, then edit the test question or answer.
2. In the content editor, click the 3 dots if you only see one row of tool options, then click the plus sign.

3. Click **Insert Local Files** (to select an image file on your computer) or **Insert from Content Collection** (to select an image file from the course's Content Collection), then browse for and open the image file.
4. Add an image description for ADA compliance: right-click on the image in the content editor and select **Image**, then enter an image description in the **Alternative description** textbox and click **Save**. (When students hover over the image, they will see the image description, so don't give the answer in the description.)

5. Click **Submit**.
