

4 courses (12 crs)

# User Experience (UX) Design Certificate

**Learn** and apply the principles of modern user-centered design. **Create** a UX portfolio that showcases your design skills and problem-solving strategies. **Build** a rewarding career in UXD.

## User Experience Research

This course introduces students to foundational principles and theories of UX and prepares them to perform basic user research and usability testing of user-facing documents.

Our internationally renowned UX faculty members are experts in the field who understand industry trends and student needs.

## Information Design

This course covers principles of visual design to help designers effectively organize and present information across interfaces. Students will practice designing with Adobe Creative Suite.

By completing the courses required for this certificate, you will build a foundation to meet the challenges and opportunities in UX research and design.

## Instructional Design

This course introduces students to the processes involved in developing instructional content for professional settings, including user and task analysis, learning methods, and usability evaluation.

Throughout the courses, students will learn and apply human-centered design methods and develop a compelling portfolio that showcases their problem-solving expertise.

## Interaction Design

This course invites students to explore the way design and prototyping shift in dynamic situations. Students will build projects that accommodate a technology to users and their situations for use.
