BIOHAZARDOUS AGENTS REQUIRING IBC PROTOCOL REGISTRATION

INSTRUCTIONS: When registering hazardous biological or chemical agents, the IBC Protocol Registration Application form (http://www.ttuhschool.edu/Admin/safety/lab/e_regform_7-04.doc) must be completed first. For any biological agent found on this list, **Addendum A** of the IBC Registration must **also** be completed and submitted for review. Please see the following link for **Addendum A** (http://www.ttuhschool.edu/Admin/safety/lab/e_regform_7-04_A.doc).

DEFINITION: The IBC defines “biohazardous materials” as all infectious organisms (bacteria, fungi, parasites, prions, rickettsiae, viruses) that can cause disease in humans or cause significant environmental or agricultural impact, in addition to all human or non-human primate tissues, fluids, and primary cell lines, all transgenic animals and plants, recombinant DNA, and all natural or genetically-engineered human and animal cell lines that are pathogenic to humans.

CDC/NIH/USDA “select agents” are highlighted in **green** for quick reference. The federal government decides which agents are at high risk of being used in terrorist activities and refers to them as “select agents”. Select agents can either be pathogens (listed below) or biological toxins. Even though biological toxins are derived from animals and plants, they are included in the highly hazardous chemical list because they have no pathogenic potential.

NOTE: The following list should be used as a reference and does not necessarily reflect ALL BSL-2 and higher agents or materials that require IBC protocol approval.

NOTE: BSL-1 and non-hazardous biological agents will be exempt from IBC protocol registration, as described above. However, a complete inventory list of biologicals must be submitted to the IBC before any use of these materials will be approved. There are no forms to fill out. The Excel file should be named as follows and submitted with the rest of the application:
LastName_FirstName_Biologicals_Year

Hard copies of this inventory may be kept in the lab for documentation and use, but should **not** be submitted as part of this registration. Please sort entries alphabetically before submitting electronically.

NOTE: If you are registering for the first time, you should submit a *proposed* biological inventory for the year.

These materials require an approved IBC protocol for possession or use*

HUMAN and non-HUMAN PRIMATE MATERIALS

- Primary cell lines **
- Blood or blood products
- Fluids surrounding internal organs, the joints, or a fetus and semen or vaginal secretions

HAZARDOUS TOXICANTS AND TOXINS REQUIRING IBC PROTOCOL REGISTRATION

INSTRUCTIONS: When registering a hazardous biological or chemical agent, the IBC Protocol Registration Application form (http://www.ttuhs.edu/Admin/safety/lab/e_regform_7-04.doc) must be completed first. For any chemical toxicant or biotoxin found on this list, **Addendum B** of the IBC Registration must also be completed and submitted for review. Please see the following link for **Addendum B** (http://www.ttuhs.edu/Admin/safety/lab/e_regform_7-04_B.doc).

DEFINITION: The hazardous toxicants and toxins which require an approved IBC protocol are now defined as any chemical or toxin which is a: highly toxic, hazardous chemical = LD50 (oral/rat) of ≤ 50 mg/kg. Some of these chemical agents are listed in the chart below. Note that this is not an all-inclusive list.

NOTE: Investigational quantities of most standard lab chemicals will now be exempt from IBC protocol registration, as described above. However, a complete inventory list of lab chemicals must be submitted to the IBC before any chemical use will be approved. There are no forms to fill out. The inventory can be submitted online through EH&S at <http://www.ttuhs.edu/admin/safety/chemlist> (contact Laboratory Safety in Lubbock for details) or in an Excel file. Entries in the Excel file should be sorted alphabetically and include quantities and CAS numbers if available. The file should be named as follows and submitted electronically with the rest of the application:

LastName_FirstName_Chemicals_Year

Hard copies of this inventory may be kept in the lab for documentation and use, but should not be submitted as part of this registration.

NOTE: If you are registering for the first time, you should submit a *proposed* chemical inventory for the year.

KEY:

All Yellow and several of the Green highlighted agents meet the criterion of ≤ 50 mg/kg LD50 (rat, oral)

- All SELECT AGENTS are highlighted in Green.
- LD50 values are indicated if current tox data is available

- “Number Ratings 1-4” of HEALTH, FLAMMABILITY, REACTIVITY, or OXY (Specific Hazard measurements of hazard severity (“4” is most severe) established by the NFPA (National Fire Protection Association) rating symbols.
IARC1 (UN International Agency for Research on Cancer) = sufficient evidence of carcinogenicity in humans
IARC2B= limited evidence of carcinogenicity in humans
NTP (National Toxicology Program) = is known to be or assumed to be a human carcinogen
SELECT AGENT = select agents as designated by the CDC/NIH and/or USDA.
CDC CHEM AGENT = agents designated by the CDC as potential chemical warfare agents.
EPA = on the EPA’s extremely hazardous substances list.
