The **Ph.D. in Higher Education** requires 90 hours including dissertation. A total of 30 hours from a master's degree or professional doctorate program (any discipline) may count as graduate-level transfer coursework toward this total with program approval. The remaining 60 hours of doctoral-level coursework must be taken at Texas Tech University. As part of the credit hour requirements, candidates are required to demonstrate proficiency in independent research in higher education culminating in the completion of a dissertation. The Ph.D. will prepare students for professional careers as institutional researchers and planners; higher education administrators with an orientation towards research, sponsored programs, or grant proposal writing; program assessment-evaluation specialists; research associates; and faculty members.

The **Doctor of Philosophy (Ph.D.) in Higher Education Research*** is designed for advanced theoretical practitioners and researchers who want to acquire the ability to contribute to the knowledge base of research, education, and leadership through a thorough grounding in the conduct of research. The Ph.D. will prepare students for professional careers as institutional researchers and planners; higher education administrators with an orientation towards research, sponsored programs, or grant proposal writing; program assessment-evaluation specialists; research associates; and faculty members. * *Note: This program is being phased out and is no longer accepting new students.*

Graduate Certificate Programs

College Student Counseling

The 15-hour Graduate Certificate in College Student Counseling does not represent licensure or certification in mental health, but it will enhance professionals who work in student counseling, mentoring, advising, personnel, and student affairs perform their duties more effectively.

- Required: EPCE 5354, 5355, 5357, 5364
- Electives (one of the following): EPCE 5094, 5360, 5369, 5371, 5372, 6366; any course in the student's degree area that is related to college student counseling

Contact: Dr. L.J. Gould | 806.834.4224 | lj.gould@ttu.edu

Fundamentals of Teaching and Learning

The 15-hour graduate certificate in the Fundamentals of Teaching and Learning is offered by the Educational Psychology program in the College of Education at Texas Tech University. The certificate is for working professionals and graduate students who wish to learn more about the psychology of teaching and learning and how research-based psychological principles can enhance teaching and learning in formal and informal educational settings. Additionally, this certificate program may be of interest to current Texas Tech University graduate students who aspire to teach in higher education but may not have the opportunity to participate in professional development activities for future faculty.

- Required: EPSY 5330, 5332, 6330, 6349 (Taken twice: once as Classroom Assessment and once as Practicum in Applied Educational Settings)
- Alternates: EDCI 5333; EDHE 5342; EDIT 5390

Higher Education Administration and Leadership

The 15-hour Graduate Certificate in Higher Education Administration and Leadership provides the opportunity for higher education professionals and those who seek administrative positions to develop and reinforce their knowledge base in current trends, leadership, methodologies, administration, and strategic management.

- Required: EDHE 5300, 5321, 6305 or 6315, 6323 or 5310 (Budgeting and Resource Management in Higher Education)
- Elective (3 hours from the following Higher Education program coursework or other Higher Education coursework with program approval): EDHE 5301, 5313, 5341, 6325

Contact: Mr. David Jones | 806.834.0989 | djones.jones@ttu.edu

Institutional Research and Institutional Effectiveness (IRIE)

The 15-hour graduate certificate in Institutional Research and Institutional Effectiveness (IRIE) focuses on program evaluation in higher education as well as discovery, testing, cataloging, and dissemination of IRIE best practice. Geared toward professionals in higher education as well as students interested in doctoral programs in higher education, curriculum and instruction, and educational psychology.

- Required: EPSY 5360, 5370, 5381 (or higher), 6379, 5093

Contact: Dr. Kwanghee Jung | 806.834.0023 | kwanghee.jung@ttu.edu

Mental Health Counseling

The 15-hour Graduate Certificate in Mental Health Counseling is a post-master's certificate designed for counseling professionals who wish to expand their training to a specialization in the mental health area.

- Required: EPCE 5364, 5366, 5372, 5373

- Elective: EPCE 5094, 5354, 5355, 5357, 5360, 5370, 5371

Contact: Dr. L.J. Gould | 806.834.4224 | lj.gould@ttu.edu

Mixed Methods Research

The 15-hour Certificate in Mixed Methods Research (MMR) is a graduate-level certificate offered by the Educational Psychology program in the College of Education at Texas Tech University. This certificate program allows current Texas Tech University graduate students the opportunity to deepen their knowledge and skills related to process of developing a mixed methods research, grant, or program evaluation proposal and producing publishable mixed methods studies. The certificate is also for working professionals who wish to learn about mixed methods research and its application in the social and behavioral sciences. The MMR certificate will consist of coursework in the research design, measurement, and statistics.

- Required: EPSY 6349 (Taken twice: once as Foundations of Mixed Methods Research and once as Practicum in Mixed Methods Research), 6379
- Electives: EPSY 5381, 5382, 6302, 6303, 6305, 6307

Contact: Dr. Mary Hershberger | 806.834.6626 | mary.hershberger@ttu.edu

Program Evaluation and Assessment

The Certificate in Program Evaluation is a 15-hour graduate-level certificate program offered by the Educational Psychology program in the College of Education at Texas Tech University. The certificate program aims to develop students' expertise to design and implement evaluation research that examines the effectiveness of educational programs and training. The credential may benefit a wide range of professionals who are involved in grant project evaluation, educational programs for K-12 and higher education, and professional development for various organizations.

- Prerequisites: EPSY 5380 (or equivalent), 6379 (or equivalent)
- Required (12 hours): EDHE 5341; EPSY 7000, 5381 (or equivalent), 5382 (or equivalent)
- Elective (3 hours): EPSY 6302, 6307, 6320, 5383, 6301; EDIT 5326

Contact: Dr. Kwanghee Jung | 806.834.0023 | kwanghee.jung@ttu.edu

School Psychology

The 15-hour Graduate Certificate in School Psychology is a post-master's certificate designed for those with graduate degrees in educational psychology, psychology, or related fields who wish to expand their training to the practice of psychology in the schools. The certificate is limited to 15 graduate hours and individual course requirements are dependent on previous coursework completed that align with the state credentialing requirements. Most will expect to take EPSY 5390: Ethics and Law for School Psychologists, EPSY 5356: Educational and Psychological Assessment and Decision Making, EPSY 5391: Assessment and Intervention in Schools, EPSY 5392: Practicum in School Psychology, and EPSY 5093: Internship in Education. Courses in the School Psychology Graduate Certificate sequence include: EPSY 5390, 5356, 5391, 5392, 5093, 5340, 5389, and 5395.

stephanie.barbre@ttu.edu

Student Development and Academic Advisement

This certificate will help fill a need of educating professionals on supporting and advising graduate students in topics relevant to the complex nature of student affairs. The 12-hour graduate certificate in Student Development and Academic Advisement is offered by the Higher Education program, Department of Educational Psychology, Leadership, & Counseling in the College of Education at Texas Tech University. The certificate is for working professionals and graduate students who wish to focus on holistic development of students in higher education and learning contexts with emphasis on student success interventions such as academic advisement.

- Required (12 hours): EDHE 5301 5334, 5332 or 5321, 5310

Undergraduate Course Descriptions

Higher Education (EDHE)

- 4001—Higher Education Practicum (V1-6).** Supervised practice in the profession of student affairs with an emphasis on real-world settings in higher education. May be repeated for credit.
- 4300—Higher Education as a Profession (3).** Introduces students to higher education as a profession through discussing the history of American higher education, illustrating the multiple institutional structures of higher education systems, outlining the administrative processes utilized, and focusing on the careers available to aspiring professionals in higher education.

Educational Psychology (EPSY)

- 2301—iGeneration: Living and Learning on the Internet (3).** Examines how the Internet transforms our social behavior and how we learn. Fulfills core Social and Behavioral Sciences requirement.
- 3331—Adolescent Development: Applications for Middle-Level Classrooms (3).** Study of physical, intellectual, social, and emotional development of and environmental influences on the development of young adolescents.
- 3380—Introduction to Educational Statistics (3).** Emphasizes descriptive and basic inferential statistics on univariate measures for analyzing educational data and how certain variables lead to and are related to changes in others.
- 4000—Quantitative Methods (V3-9).** Enhances skills in research methodology, data analysis, and statistical inference and prepares students for graduate school.
- 4381—Intermediate Educational Statistics (3).** Methods of educational research. Methods of obtaining, processing, interpreting, and using significant educational data.
- 4383—Data Management and Processing in R (3).** Introduces students to the R programming language. Covers data management, data structures, programming, graphics, and basic statistical analysis.

Graduate Course Descriptions

Counselor Education (EPCE)

- 5001—Advanced Workshop in Counseling (V1-6).** Prerequisite: Consent of instructor. Workshop and field experience assignments in counseling-related activities. A maximum of 6 hours of credit may be earned.
- 5093—Internship I (V1-3).** Prerequisite: Admission to the Texas Tech University Graduate School and Counselor Education Program. Internship I. Students cannot enroll in more than 3 semester hours each semester, including summer sessions.
- 5094—Internship II (V1-3).** Prerequisites: EPCE 5360 and admission to the EPCE program. Students cannot enroll in more than 3 semester hours of EPCE 5094 each semester, including summer sessions.
- 5352—Child and Adolescent Counseling (3).** Philosophy, principles, and practices of counseling children and young adolescents in school and clinical mental health settings.
- 5353—Introduction to Mental Health Counseling (3).** Overview of the activities of mental health counseling, nature of specific populations, program development and evaluation, planning for client services, and public policy issues.
- 5354—Group Counseling (3).** An overview of the principles, practices, and approaches to group counseling in school and clinical mental health settings.
- 5355—Introduction to Career Counseling (3).** Overview of career theories, assessment procedures, techniques, and counseling processes used with adolescents and adults in school and clinical mental health settings.
- 5357—Techniques of Counseling (3).** Prerequisite: Admission to the EPCE program. Theory, simulation, and practice of counseling techniques used in school and clinical mental health agency settings.
- 5358—Introduction to School Counseling (3).** Designed to equip students with skills and knowledge to develop, implement, manage, and assess components of a comprehensive developmental school counseling program.
- 5360—Practicum in Counseling (3).** Prerequisites: Admission to Graduate School, admission to the EPCE program, and completion of EPCE 5353 or EPCE 5358, EPCE 5352 or EPCE 5366, EPCE 5354, EPCE 5357, EPCE 5364. Two of the following may be taken concurrently if others are completed: EPCE 5367, EPCE 5370, EPCE 5371, and either EPCE 5376 or EPSY 5356. Assignment in a school or clinical mental

health agency setting. Dual majors must enroll in 6 hours of EPCE 5360 and 12 hours of EPCE 5094.

- 5362—Pharmacology for Licensed Professional Counselors (3).** Prerequisites: EPCE 5353 or EPCE 5358, EPCE 5364. Provides an overview of commonly prescribed psychopharmacological medication including basic classifications, identified side effects, and appropriate use.
- 5364—Theories of Counseling (3).** Overview of theories and paradigms of counseling.
- 5365—Dysfunctional Behavior of Children and Youth (3).** Overview and analysis of dysfunctional behavior, including substance abuse and disorders affecting children and youth in educational and counseling settings.
- 5366—Dysfunctional Behavior Across the Lifespan (3).** Overview and analysis of dysfunctional behavior, diagnosis criteria and tools, and mental and emotional disorders across the lifespan in counseling and educational settings.
- 5367—Marriage and Family Counseling for Professional Counselors (3).** Theory and practice of marriage and family counseling for licensed professional and school counselors.
- 5369—Seminar in Counseling (3).** Prerequisite: Consent of instructor. A critical investigation of counseling topics related to school and clinical mental health agencies. May be repeated as topic varies.
- 5370—Ethical and Legal Issues in Counseling (3).** An investigation of legal and ethical issues in the counseling profession. Focus on schools and clinical mental health agencies.
- 5371—Counseling Diverse Populations for Licensed Professional Counselors (3).** Overview of counseling theory as it applies to diverse groups including gender, geriatric, racial, ethnic, and exceptionality issues.
- 5372—Addictions: An Overview for School and Mental Health Counselors (3).** Overview of addictions theory, issues, and practice. The course's focus is on clinical mental health and school counseling.
- 5373—Advanced Addictions Counseling (3).** Screening, assessment, diagnosis, and counseling techniques used in treatment of co-occurring mental health and substance use disorders for counselors in school and clinical mental health agencies.
- 5374—Techniques of Counseling II (3).** An overview of advanced counseling techniques.
- 5375—Counselor Supervision (3).** Prerequisite: Counselor practicum or consent of instructor. Provides an overview of counselor supervision and coursework for the Licensed Professional Counselor-Supervisor.
- 5376—Assessment for Professional Counselors (3).** Assessment principles for professional counselors in both clinical and school settings.
- 5377—Crisis Intervention Counseling (3).** Analysis and application of short-term counseling intervention strategies in trauma and crisis situations, with special attention to emergency preparedness.
- 5382—Ethical and Legal Issues in Counseling II (3).** Prerequisite: EPCE 5370. Provides an investigation of legal and ethical issues in the counseling profession with focus on records management, online counseling, and professional practice issues.
- 6001—Advanced Study of Special Topics in Counselor Education (V1-6).** Prerequisites: Consent of instructor and admission to doctoral program in counselor education. An organized course to foster in-depth study of a current topic in counselor education. Course work will focus on one major current topic. May be repeated for credit.
- 6093—Doctoral Internship I (V1-3).** Prerequisite: Admission to the Texas Tech University Graduate School and Counselor Education Program. Doctoral internship I. Students cannot enroll in more than 3 semester hours each semester, including summer sessions.
- 6094—Doctoral Internship II in Counseling (V1-3).** Prerequisites: EPCE 6360 and EPCE 6366. Supervised employment or field experience in a school or clinical mental health agency setting. May be repeated for credit. Students cannot enroll in more than 3 hours of this course each semester.
- 6330—Introduction to Scholastic Writing for Counselors and Counselor Educators (3).** Prerequisite: Admission to the Texas Tech University Graduate School and the Counselor Education Program. Students will gain proficiency in the fundamentals of scholarly writing, including grammar, voice, and form, as well as APA rules.
- 6335—Advanced Counseling Theory and Techniques (3).** Prerequisites: EPCE 5357, EPCE 5364, and admission to doctoral program in counseling. Analysis of major approaches to counseling with integration of the techniques in clinical practice.
- 6336—Advanced Consultation, Diversity, Social Justice, and Advocacy (3).** Prerequisites: EPCE 5371 and admission to the doctoral program in counseling. Analysis of consultation, diversity, social justice, and advocacy theories, models, and ethics focused on leadership in mental health.
- 6337—Advanced Ethics and Legal Issues in Counseling (3).** Prerequisites: EPCE 5370 and admission to the doctoral program in counseling.

Analysis of ethical and legal issues in counseling with emphasis on counseling, supervision, teaching, scholarship, and leadership and advocacy.

- 6350—Doctoral Seminar in Counseling (3).** Prerequisite: Consent of instructor. Special topics in counseling covering both research and practice. May be repeated for credit.
- 6354—Advanced Theory and Practice of Group Leadership (3).** Prerequisite: EPCE 5354, EPCE 5364, or consent of instructor. Survey of major theoretical paradigms and their application in leading small groups. Supervised practice to integrate theory and application.
- 6355—Scholastic Writing and Teaching (3).** Prerequisite: Admission to the doctoral program in counseling. Emphasis on gaining and evaluating effective writing skills, teaching methods, and leadership methods for counselor educators.
- 6360—Advanced Practicum in Counseling (3).** Prerequisites: Admission to Graduate School, admission to the counseling program, completion of all EPCE 5000-level practica, and consent of instructor. Supervised laboratory and field experience in schools and clinical mental health agencies. Emphasis on integration of theory and practice. May be repeated for credit with the instructor's consent.
- 6366—Advanced Supervision in Counselor Education (3).** Prerequisites: Admission to the Graduate School, admission to the Ph.D. counseling program, completion of all EPCE 5000-level practica, EPCE 6360 and EPCE 6335, or consent of instructor. Emphasis on supervision theory, training, and experience in the supervision of counselors.
- 7000—Research (V1-12).**
- 8000—Doctor's Dissertation (V1-12).**

Educational Leadership (EDLD)

- 5001—Advanced Education Workshops in Teaching and Administration (V1-6).** Prerequisite: Consent of instructor. Advanced workshop activities and experiences in administration. A maximum total of 6 hours of credit may be earned either simultaneously or in different semesters.
- 5306—School-Based Leadership (3).** Examines the major theories, concepts, and empirical findings related to school-based leadership.
- 5310—Instructional Supervision (3).** Principles, planning, organizations, and processes of supervision in both elementary and secondary schools, including TAP.
- 5320—Data-Driven Communication and Decision Making (3).** An in-depth exploration of the use of data and data communication strategies for decision making by principals.
- 5325—Decision Making in Educational Leadership (3).** An in-depth exploration of decision making within the context of school leadership. Explores the irrationality of decision making, the role of emotion, heuristics and biases, and decision making under uncertainty, which includes bounded rationality.
- 5330—Staff Development (3).** Principles and procedures of organizing programs of school improvement through comprehensive and ongoing staff development.
- 5340—Educational Law (3).** Introduction to the legal aspects of educational organizations, focusing on the school building level and emphasizing the rights and responsibilities of students, teachers, and administrators. [AGED 5340]
- 5350—School Personnel and Fiscal Management (3).** Introduction to the concepts of fiscal and human resource management with an emphasis on site-based decision making.
- 5351—Communication for School Leaders (3).** Study and application of interpersonal communication theory and research as related to organizational, social, and environmental contexts. Individual conferencing, informational and employment interviewing, and group dynamics are included.
- 5361—Process of Educational Change (3).** A study of the knowledge base of change management in education. Application of the cognitive understandings to national change models and local settings.
- 5370—Implementation Challenges in Educational Leadership (3).** Involves students in implementation challenges in their internship school. Working with host ISD administration, students focus on how to implement change and overcome implementation challenges through instructional leadership, data-driven leadership, communications, etc.
- 5381—School District Resource Management (3).** Critical analysis of the business services of school districts, emphasizing planning, budgeting, resource management, fiscal operations, and accountability.
- 5385—Teams in Educational Leadership (3).** An in-depth application of how principals form teams, work as team members, lead teams that result in building relationships that achieve results, and manage people/processes and climate.
- 5391—School and Community (3).** Explores the development of collaborative culture at school, enlist community support, and form partner-

ships with businesses, universities, and parents. Addresses improved communication among increasingly diverse members of the school staff, parents, students, community members, and media.

- 5392—Principal Internship in Education (V3-6).** Prerequisite: The internship can only be taken as the final course in the principal certification program. Guided experiences in principalship. May be repeated for credit with a maximum of 6 credit hours.
- 5394—Superintendent Internship in Education (3).** Prerequisite: Admission to superintendent certification program. Guided experiences in central office administration under the supervision and direction of a central office administrator and a university professor. The internship can only be taken as the final course in the superintendent's certification program.
- 6001—Advanced Study of Special Topics in Educational Administration (V1-6).** Prerequisite: Consent of instructor and admission to doctoral program. An organized course to foster in-depth study of a current topic in Educational Leadership. Course work will focus on one major current topic. May be repeated for credit.
- 6300—Organizational Theory in Education (3).** Theories and paradigms to determine implications for theory development, for research activities, and for practical applications.
- 6301—EC-12 Learning and Performance in District Organizations (3).** An in-depth application of how senior executive leadership and campus leaders improve school district performance by analyzing the role of leadership as it influences student achievement.
- 6302—Education Policy Foundations Seminar (3).** Provides an introduction to various topics, issues, and approaches that are core to education policy including relevant policy issues, theories, research, and methodologies.
- 6305—Social Justice Leadership Praxis (3).** Examines complex challenges school leaders face in addressing inequitable educational outcomes experienced by marginalized children and youth in K-12 school systems.
- 6307—Inquiry I: Designing Problem-Based Research in Educational Leadership (3).** Knowledge and skill development in conceptualizing and designing problem-based inquiry in PreK-12 school district settings.
- 6308—Inquiry II: Designing Problem-Based Research in Educational Leadership (3).** Applied skill development experiences in designing, conducting, and evaluating problem-based inquiry in PreK-12 school district settings.
- 6310—Educational Leadership Ethics (3).** Exploration of philosophical platforms, ethical/intuitive decision-making processes, secular ethics, and the interplay between cultural and personal value shifts that impact educational leadership.
- 6312—Issues in Educational Leadership: Accountability (3).** Examines processes of evaluating K-12 school and district performance using student and campus performance measures.
- 6314—Issues in Educational Leadership: Curriculum, Assessment, and Interventions (3).** Provides practicing educational leaders with knowledge and applicable skills for leading critical improvements in curriculum, assessment, and intervention.
- 6316—Leadership for School Reform (3).** Explores the future of school reform through examining state and federal efforts to bring about system change in the American public education system.
- 6321—Educational Finance (3).** Prerequisite: Admission to doctoral program. The development and content of public school finance policy in the United States focusing on the fiscal, political, legal, and economic and normative dimensions.
- 6330—Educational Leadership, Democracy, and Schools (3).** Exploration of democratic principles, philosophy, and past and present cultural influences on our democracy and schools.
- 6340—Educational Policy and the Law (3).** The interplay of the law and public policy emphasizing the relationship between legal decisions and educational practices from the perspectives of the governing board and central administration.
- 6341—Legal Issues with Special Populations (3).** Prerequisite: EDLD 5340 or consent of instructor. Prepare educational leaders for legislative and litigating aspects of working with special populations.
- 6342—Education Policy Communication (3).** Raises questions about and practical approaches to how education stakeholders should, or can, communicate research findings or advocate for specific policies.
- 6343—Education Policy-to-Practice (3).** Prepares students to identify and understand the basic components of education policymaking and apply this understanding to policy problems and priorities.
- 6345—The Education Policy Process (3).** Examination of the political processes that create education policies and influence the implementation of those policies.
- 6346—Economics of Education (3).** Introduces the theoretical and empirical methods used in modern economic analysis of education.
- 6348—Education Policy Analysis Methods (3).** Introduces standard frameworks and methods of education policy analysis with a focus on contemporary policy issues facing education systems at all levels.
- 6351—Organizational Communication in Education (3).** Prerequisite: Admission to doctoral program. The study of organizational communication theory and research as related to theoretical issues, environments, and patterns in education. Organizational communication methodology and process are included.
- 6361—Doctoral Seminar in Educational Administration (3).** Prerequisite: Admission to doctoral program. Advanced analysis and synthesis of research and practice concerning problems and issues in educational leadership. May be repeated for credit.
- 6381—Development of Human Capital and Resources (3).** Examines strategic efforts to lead human capital and the effective management of resources in K-12 schools to meet the needs of district improvement work.
- 6385—Research in Educational Administration (3).** Prerequisite: Admission to doctoral program. Survey of educational leadership research focusing on contemporary issues, techniques in research design and methodology (qualitative and quantitative), and grantsmanship.
- 6392—Doctoral Internship in Educational Leadership (3).** Prerequisite: Admission to doctoral program and consent of instructor. The application of reflective practice to problems of leadership in a school setting. Expert practitioners and University professors coach students through a process of thinking about the definition and solution of problems as they develop and test plans for action.
- 7000—Research (V1-12).**
- 8000—Doctor's Dissertation (V1-12).**

Educational Psychology (EPSY)

- 5093—Internship in Education (V1-6).** Supervised internships in applied educational settings.
- 5310—Philosophy of Education (3).** Major western social philosophies and their application to the field of education in the United States.
- 5312—Philosophy of Qualitative Research (3).** Study in philosophical perspectives informing qualitative research and their applications in educational research.
- 5314—History of Education (3).** A study of the development of Western education with emphasis on pedagogical leaders and reformers.
- 5323—Cultural Foundations of Education (3).** Analysis of linkages between school and community with special reference to the impact of the selection and allocation functions of schooling on minority groups.
- 5330—Motivation in Educational Settings (3).** Reviews various theories in motivation and their applications in education with an emphasis on the cognitive perspective of motivational processes.
- 5331—Human Development in Education (3).** Interrelationships of social and psychological development through the lifecycle and implications for teaching and learning.
- 5332—Educational Psychology and Learning (3).** Emphasis on the application of educational psychological principles to learning at all levels.
- 5333—Adolescent Learners (3).** Environmental, social, developmental, and cognitive factors influencing learning in adolescence; application of learning theory to classroom environment and instructional design for adolescent learners.
- 5340—History and Systems in Educational Psychology (3).** Study of the history and philosophies undergirding educational psychology. Includes examinations of emergent problems as they apply to school and educational psychology.
- 5349—Seminar in Educational Psychology (3).** Research analysis and synthesis in the field of educational psychology. May be repeated for credit.
- 5356—Educational and Psychological Assessment and Decision Making (3).** Analysis and administration of techniques and measures used in the practice of school psychology.
- 5360—Practical Educational Program Evaluation (3).** Emphasis on providing knowledge and skills related to understanding and evaluating the effectiveness of educational programs.
- 5370—Seminar in Institutional Research and Institutional Effectiveness (3).** Seminar exploring the foundations of institutional research and institutional effectiveness using case studies and educational psychology theories.
- 5379—Introduction to Educational Research (3).** Introduction to the nature of research and its relationship to educational thought and practice. Focus on preparing research consumer.
- 5380—Introduction to Educational Statistics (3).** An introductory course in statistics with major emphasis on univariate measures for analyzing educational data.
- 5381—Intermediate Educational Statistics (3).** Prerequisite: EPSY 5380 or STAT 5302. Topics include multiple regression, analysis of variance

and covariance, multiple comparison tests, and additional non-parametric tests.

- 5382—Qualitative Research in Education (3).** Study in theoretical perspectives informing qualitative research in education including relevant issues and methodological criteria.
- 5383—Data Analysis With Statistical Software (3).** Hands-on analysis of quantitative educational data using statistical software.
- 5389—Individual Intelligence Testing (3).** Use of individual appraisal instruments and techniques (WJ III, WISC IV) in educational evaluation of children, youth, and adults.
- 5390—Ethics, Standards, and Best Practices in School Psychology (3).** Analysis of ethics, APA and NASP standards, and legislations, including IDEA, Section 504, and case law relevant for practice in settings in which school psychologists work.
- 5391—Assessment and Intervention in Schools (3).** Assessment, evidence-based intervention development and implementation, and progress monitoring to promote social-emotional functioning, mental health, academic skills, and learning in schools.
- 5392—Practicum in School Psychology (3).** Field-based integrative experience for school psychology students. Includes opportunities to learn and practice skills in assessment, intervention, consultation, and counseling. May be repeated.
- 5393—Counseling Interventions for School Psychologists (3).** Introduction and practice of treatment modalities used to intervene in the emotional, mental, and academic problems of youth and adolescents.
- 5394—Advanced Evidence Based Interventions (3).** Evaluation of cutting-edge, evidence-based interventions and contextualization of such interventions to unique settings, especially schools.
- 5395—Consultation in Schools (3).** Practical application of consultation theory, models, and interventions to school-based issues to promote positive social and academic development and good mental health.
- 5396—Biological Bases for Learning Behavior (3).** The understanding of the nature of neurodevelopmental dysfunction in youth and its implications for behavioral, academic, and social-emotional development, especially in educational settings.
- 5398—Social Bases of Behavior (3).** Advanced topics in social and personality development relevant to educational situations, including parent-child relationships, peer impact, competition and cooperation, "social competence," morality, and aggression.
- 6000—Master's Thesis (V1-6).**
- 6100—Professional Seminar in Educational Psychology (1).** This course will orient EPSY Ph.D. students to the field of educational psychology, scholarly bodies of work, and program faculty and their research agendas.
- 6301—Structural Equation Modelings (3).** Prerequisite: EPSY 5381 or consent of instructor. Study of multivariate techniques for analyzing educational data, including such topics as factor analysis and structural equation modeling.
- 6302—Survey Research in Education (3).** The design and implementation of survey methodology in educational settings. Coverage of sampling techniques. Questionnaire design, analysis of data, and strategies for dissemination of findings to specific audiences.
- 6303—Educational Measurement (3).** Study of psychometric theory, test and instrument development, and use of standardized instruments in educational research.
- 6304—Qualitative Research Methods (3).** Prerequisite: EPSY 5382. Study of qualitative methods used in educational research. Includes application and problems.
- 6305—Qualitative Data Analysis in Education (3).** Study of methods used in the analysis of data gathered through qualitative research methods and of ways of reporting these research findings.
- 6306—Longitudinal Data Analysis (3).** Prerequisite: EPSY 6301 or consent of instructor. Study of techniques for analyzing longitudinal data, including panel designs and growth curve designs. Analyses may include longitudinal structural equation modeling, latent growth curve modeling, and advanced longitudinal techniques.
- 6307—Case Study Research in Education (3).** Study in design methods, issues, and applications of case study research in education.
- 6310—Meta Analysis (3).** Emphasis on producing integrative reviews of research.
- 6320—Foundations of Mixed Methods Research (3).** Prerequisites: Previous coursework in research design, statistics, and qualitative research. An introduction to the foundations of mixed methods research and its application across disciplines.
- 6330—Cognition and Instruction (3).** An exploration of the theories in cognitive psychology and their implications for instructional and assessment practices in K-12 and post-secondary educational settings.

- 6332—Advanced Educational Psychology (3).** Emphasis on the research and theories of educational psychology and the evaluation and synthesis of psychology theories.
- 6349—Doctoral Seminar in Educational Psychology (3).** Prerequisite: Admission to doctoral program. Several topics in research and analysis in educational psychology. May be repeated for credit.
- 6379—Foundations of Educational Research (3).** Methods of educational research; methods of obtaining, processing, interpreting, and using significant educational data.
- 6385—Causal Inference in Research (3).** Prerequisite: EPSY 5381 or consent of instructor. Threats to causal inference and how experimental and quasi-experimental research designs and analytic strategies address these threats.
- 7000—Research (V1-12).**
- 8000—Doctor's Dissertation (V1-12).**

Higher Education (EDHE)

- 5300—The History of Higher Education in the United States (3).** An examination of the development of the American system of higher education, its origin, major characteristics, trends, and distinctive features.
- 5301—Crisis Management and Legal Aspects of Higher Education (3).** Focuses on how laws and regulations are developed, interpreted, and enforced to influence higher education policies, practices, and crisis management.
- 5302—Comparative Higher Education (3).** A comparative study of systems of higher education throughout the world and their counterparts in the United States.
- 5303—Access and Equity in American Higher Education (3).** An examination of perspectives on equity and access, excellence, and efficiency concerns in higher education.
- 5310—Seminar in Higher Education (3).** A special topics course designed to acquaint students with current research, theory, policies, and/or practices in higher education. May be repeated for credit.
- 5311—Higher Education Master's Seminar (3).** Seminar dedicated to the development of academic writing, critical thinking, and research methods. Students learn to craft academic arguments.
- 5313—The Comprehensive Community College (3).** An introductory course to acquaint students with the purposes, programs, people, organization, control, and resources of these colleges.
- 5321—The Administration of Higher Education (3).** Examines administration of higher education at institution and unit level. Addresses organizational culture and behavior, as well as management and leadership studies.
- 5322—Strategic Planning and Institutional Effectiveness (3).** An examination of the principles of institutional effectiveness focused on the processes and implications for accreditation, strategic planning, and evaluation of programs and services that result in continuous improvement.
- 5324—Higher Education and the Law (3).** A study of constitutional, statutory, and case law concerning public and private college and university boards, administrators, faculty, and students.
- 5332—Student Services in Higher Education (3).** Focuses on the theoretical bases of the profession, roles and models for practice and competencies, and techniques of student services.
- 5334—College Student Development (3).** Provides an in-depth study of developmental theories that are unique to college-aged students. Implications for practice will also be included.
- 5335—Higher Education Capstone (3).** The culminating class for master's students in the Higher Education program. Students develop a curricular or extracurricular program/service proposal.
- 5341—Program Assessment and Evaluation in Higher Education (3).** An examination of the philosophy and practice of assessment and evaluation in higher education with particular emphasis on assessment of programs/services and/or students.
- 5342—College Teaching (3).** An exploration of the nature of college teaching and the teaching-learning process, including a review of major issues and problems.
- 5343—Budget and Resource Management (3).** Introduces students to the various issues related to resource management concepts of American higher education, including revenue sources, expenditure types, and budgeting practices.
- 5393—Internship in Higher Education (3).**
- 6000—Master's Thesis (V1-6).** Prerequisite: Instructor permission. Involves completing the master's thesis in higher education under the supervision of a thesis advisor from the higher education program.
- 6305—Leadership, Entrepreneurship, and Change (3).** An examination of leadership perspectives and theory and their application in the four-year college and university environment. Addresses organiza-

tion culture and behavior, management and leadership studies, and entrepreneurial and change leadership.

6310—Higher Education Special Topics (3). A series of seminars dedicated to the development of student research proposals, Manuscripts, and grant applications. The seminars bridge the gap between theory and practice. May be repeated for credit.

6311—Higher Education Doctoral Seminar (3). A seminar dedicated to the development of conceptual and theory-based research of Ph.D. students. May be repeated for credit.

6315—Community College Leadership (3). A study of different leadership styles, strategies, and theories applicable to the community college sector.

6323—Funding Higher Education (3). A study of the requirements for a sound institutional development program, including mission and objectives, budgeting, organization and planning. Relationships with constituencies and proposal preparation is analyzed.

6325—Policy Analysis and Issues in Higher Education (3). Examines the relationship between colleges and universities and policies developed by boards and governments. Explores prevalent issues facing higher education from a policy perspective.

6370—Dissertation Proposal Seminar (3). Required culminating class for both Ph.D. and Ed.D. students. Students will prepare a draft of chapters one through three of their dissertations. At the end of the class, students will have a working draft of their dissertation proposal.

7000—Research (V1-12).

8000—Doctor's Dissertation (V1-12).

Department of Special Education

Joseph Claudet, Ph.D., Chairperson

Professors: Banda, Carter, Griffin-Shirley, Lock, Poggrund, Richman

Associate Professors: Brendle, Hamrick, Okungu

Assistant Professor: Niland

Associate Professor of Practice: Brown

CONTACT INFORMATION: 105 Education Building | Box 41071

Lubbock, TX 79409-1071 | T 806.742.1958 | F 806.742.2179

<https://www.depts.ttu.edu/education/graduate/special-education/>

About the Department

The department offers programs leading to advanced degrees, professional certificates, and associated supplemental certification. Information on admission standards, program requirements, and other matters concerning graduate programs in the department may be obtained from the department office, the Office of Graduate Education in the College of Education, and online at www.educ.ttu.edu. For more information on programs offered by the department, visit the Graduate Programs section of the catalog.

This department supervises the following degree programs and certificates:

- Master of Education in Special Education
- Doctor of Philosophy in Special Education
- Graduate Certificate in Applied Behavior Analysis
- Graduate Certificate in Autism
- Graduate Certificate in Deafblindness
- Graduate Certificate in Sensory Impairment and Autism Spectrum Disorders

The following non-degree programs in the department also offer coursework for eligibility for certification through state or national agencies or organizations:

- Teacher of Deaf or Hard of Hearing
- Orientation & Mobility Specialist
- Supplemental Visual Impairment

Graduate Programs

Special Education, M.Ed.

The Master of Education in Special Education degree is a 36-hour program that includes the following areas of concentration: autism, applied behavior analysis, educational diagnostician, generic-supervision special education, orientation and mobility, visual impairment, deafblindness, and deaf education. In conjunction with the State of Texas, the special education program provides for coursework in the certification areas of educational diagnostician, visual impairment, and deaf education. To obtain a professional certification in the state of Texas, students must pass TExES examination(s) for their area as well as meet other State Board for Educator Certification requirements. Additional national certifications are available in orientation and mobility and applied behavior analysis.

A minimum of 36 hours is required for the master's degree. Additional hours are required for certain certificates. Students may select to write a thesis or complete the non-thesis route. Most of the courses in the master's program in special education are available online.

Special education program applicants for the graduate certificates or master's concentrations must complete an application found at www.depts.ttu.edu/education/graduate/. Acceptance to the master's program does not guarantee later acceptance to the doctoral program. For additional information, visit www.educ.ttu.edu.

Program of Studies for Special Education Master's Degree (Non-thesis)

- Core Courses: EPSY 5379, EPSY course selected from approved list
- Special Education Core: EDSP 5300, 5307

- Specialization Courses (21 hours specific to individual program areas)

Special Education, Ph.D.

The Doctor of Philosophy (Ph.D.) in Special Education offers both online and limited face-to-face programming requiring 90 credit hours. Courses in the doctoral core are generally available throughout the year, including the summer sessions. Doctoral courses are available online. Students may choose one of the following focus areas including autism, applied behavior analysis, assessment/generic, orientation and mobility, visual impairments, deaf/blindness, or deaf education.

Special education program applicants for the doctoral program must complete an application found at www.depts.ttu.edu/education/graduate/. Acceptance to the master's program does not guarantee later acceptance to the doctoral program. For additional information, visit www.educ.ttu.edu.

- Research Methodology Tool Courses (21 hours): EPSY 5380, 5381, 5382; EDSP 5345; Plus an additional 9 hours selected from an approved list
- College Foundations Core (6 hours): Selected from an approved list.
- Special Education Doctoral Core (21 hours): EDSP 6301, 6302, 6303, 6304; EDLD 6341; EDSP 7000, 6093
- Additional Courses in Special Education Area of Specialization (24 hours): Selected from an approved list.
- Interdisciplinary Core (6 hours)
- Dissertation (12 hours minimum)

Graduate Certificate Programs

Applied Behavior Analysis

The 15-hour Graduate Certificate in Applied Behavior Analysis serves as a course of study for students who want to take the Board Certified Behavior Analyst coursework but may not want to complete the entire national certification process. Required courses are EDSP 5303, 5345, 5346, 5347, and 5348.

Contact: Melanie Teague | 806.834.2552 | melanie.teague@ttu.edu

Autism

The 15-hour Graduate Certificate in Autism allows students to specialize in the area of autism while developing additional skills in working with children with autism spectrum disorders. The certificate can be undertaken during a master's or post-baccalaureate certification program or as a stand-alone certificate. This certificate is internal to TTU only; it does not lead to any form of state or national certification, nor does it result in any form of teacher certification. Courses required (all are web-based): EDSP 5303, 5306, 5320, 5344, 5345.

Contact: Dr. David Richman | 806.834.4960 | d.richman@ttu.edu

Deafblindness

Aligned with CEC standards for teachers of students who are deaf and blind. Program emphasis is on communication, evaluation, teaching strategies, and current issues and trends for students with deafblindness. The certificate can be undertaken during a master's or post-baccalaureate certification program, or as a stand-alone certificate. Courses required (all are offered online): EDSP 5383 (requires one weekend in Lubbock, TX), 5388, 5389, 5394, 5395.

Contact: Dr. Phoebe Okungu | 806.834.0286 | phoebe.okungu@ttu.edu

Sensory Impairment and Autism Spectrum Disorders

The 15-hour Graduate Certificate in Sensory Impairment and Autism Spectrum Disorder provides graduate students with specialized knowledge and strategies to use with the growing population of students with autism who also have a sensory impairment (visual impairment, hearing impairment, or deaf-blindness). This certificate can be undertaken during a master's or post-baccalaureate certification program, or as a stand-alone certificate.

- Required: EDSP 5303, 5345, 5393

- Electives (6 hours from): EDSP 5383, 5389, 5391, 5392, 5394; HPSH 5344, 5345

Contact: Dr. Nora Griffin-Shirley | 806.834.0025 | n.griffin-shirley@ttu.edu

Undergraduate Course Descriptions

Special Education (EDSP)

- 3000—Autism Teaching and Research Practicum (V1-3).** Students will receive experience in conducting autism intervention and research through practicum experience in the Burkhardt Center for Autism Education and Research.
- 3100—Special Education Inclusion Methods I (1).** Introduces the teacher candidate to skills needed to communicate about individual student progress in class and on the Individualized Education Program (IEP).
- 3135—Exceptional Children and Youth in Middle Level I (1).** Prepares teacher candidates for collaboration, differentiation, and instructional planning for diverse learners in middle-level general education inclusion classrooms. Requires field-based experience.
- 3200—Special Education Inclusion Methods II (2).** Prepares the teacher candidate to communicate, collaborate, and co-teach using differentiated instructional methods.
- 3205—Learning and Special Populations (2).** Examines the psychological, sociological, and educational implications of both high and low incidence populations of exceptionality for middle level classrooms. Field-based experience required.
- 3235—Exceptional Children and Youth in Middle Level II (2).** Enhances candidate skills for collaboration, differentiation, and instructional planning for diverse learners in middle-level general education inclusion classrooms. Accompanies student teaching and includes classroom applications.
- 3300—Exceptional Children and Youth (3).** Prepares teacher candidates for collaboration, differentiation, and instructional planning for diverse learners in general education inclusion classrooms. Field-based experience is required.
- 3301—Introduction to Teaching Exceptional Children and Youth (3).** Introduces special education teacher candidates to the fundamentals of teaching, including instructional principles and lesson planning.
- 3302—Assessment and Program Planning for Exceptional Children (3).** Appraisal instruments and techniques employed by relevant disciplines in determining appropriate educational placement and programming for exceptional children. Field-based experience required.
- 3303—Methods for Teaching Students With Mild Disabilities (3).** Gives preservice teachers a foundation in best practice methodology for teaching basic academic skills, social skills, and content area subjects for students with mild disabilities in inclusion classrooms. Field-based experience required.
- 4304—Methods for Teaching Students with Severe Disabilities (3).** Best practice methodology for teaching basic daily living, communication, behavioral, vocational, community living skills and content to students with low incidence disabilities. Field-based experiences required.
- 4305—Behavior Management for Students with Disabilities (3).** Focuses on research-based strategies for effective behavior management for children in the classroom. The strategies for effective management will involve curriculum, instruction, organization of time, and assessment to minimize and/or prevent problem behaviors. Field-based experience required.

Graduate Course Descriptions

Special Education (EDSP)

- 5093—Internship in Special Education (V1-3).** Prerequisite: Consent of instructor.
- 5094—Advanced Internship in Special Education (V1-3).** Prerequisites: B or higher in EDSP 5093 and EDSP 5396. The arranged internship gives students practical experience in an area of specialization.
- 5300—Exceptional Children and Youth (3).** Major categories of exceptional children and youth; psychological, sociological, and educational implications of exceptionality.
- 5301—Educational Appraisal of Exceptional Children (3).** Appraisal instruments and techniques employed by relevant disciplines in determining appropriate educational placement and programming for exceptional children.
- 5303—ABA I: Applied Behavior Analysis in Special Education (3).** Use of applied behavior analysis in special education programs. Included are

techniques for observing and recording behavior testing intervention, effects, and use in learning environment.

- 5304—Instructional Strategies for Teaching Students With High Incidence Disabilities (3).** Covers strategies for supervising the teaching of learners with various disabilities using differing models of instruction and approaches, including materials development and evaluation.
- 5306—Instructional Strategies for Teaching Students With Low Incidence Disabilities (3).** Covers strategies for supervising educators who teach students with severe disabilities appropriate functional skills across the domains to improve educational outcomes.
- 5307—Collaborative Problem Solving in Special Education (3).** Prepares students to identify and address current problems and future trends in special education using collaborative skills and strategies.
- 5308—Authentic Assessment for Students with Exceptionalities (3).** Authentic appraisal strategies and techniques to document the strengths and needs of students with exceptionalities in a naturalistic setting.
- 5310—Gifted and Talented Children and Youth (3).** Psychological, sociological, and educational implications of higher level intelligence and intellectual ability as well as various talents.
- 5320—Children and Youth with Low Incidence Disabilities (3).** The characteristics and psychological, sociological, and educational implications of severe disabilities including intellectual disabilities, autism, serious emotional disturbance, dual sensory impairment, and multiple disabilities.
- 5330—Children and Youth With High Incidence Disabilities (3).** Covers the development of Special Education supervisory skills for leading educators who teach students with high incidence disabilities, including learning disabilities, behavior disorders, and intellectual disabilities.
- 5342—ABA 1 – Concepts and Principles of Applied Behavior Analysis (3).** Covers the basic foundations of applied behavior analysis as recommended by Behavior Analyst Certification Board (BACB), 5th Edition Task List.
- 5343—ABA 2 – Single-Subject Designs in Applied Behavior Analysis (3).** Prerequisite: B- or better in EDSP 5342. Provides an overview of single-subject research designs and research ethics in applied behavior analysis.
- 5344—Augmentative and Alternate Communication (3).** Prepares graduate students to address issues associated with augmentative and alternative communication systems for use by individuals who do not have or are limited in spoken language.
- 5345—ABA II: Data Collection Methods and Single-Subject Designs (3).** Teaches the basic data collection procedures and implementation of single-subject research designs in applied settings.
- 5346—ABA III: FBA and Function Based Interventions (3).** Prerequisites: EDSP 5303 and EDSP 5345. Provides teachers and related service providers strategies for conducting functional behavioral assessments in applied settings and for planning and implementing interventions.
- 5347—ABA IV: Behavior Change Procedures (3).** Prerequisites: B or better in EDSP 5303, EDSP 5345, EDSP 5346. Offers strategies designed to increase appropriate behaviors and decrease inappropriate behaviors.
- 5348—ABA V: Advanced Issues in Applied Behavior Analysis (3).** Prerequisites: EDSP 5303, EDSP 5345, EDSP 5346, EDSP 5347. Provides an expansion of the principles and procedures of ABA through assessment and treatment procedures, including precision teaching and verbal analysis of behavior.
- 5349—ABA VI: Ethical and Professional Conduct (3).** Prerequisite: B or better in EDSP 5303 and EDSP 5345. Based on the BACB Professional Disciplinary and Ethical Standards, the course addresses the behavior analyst code of ethics and focuses on practical, cultural, and social issues related to ethics in behavior analysis.
- 5350—Foundations and Psychosocial Aspects of Students Who Are Deaf or Hard of Hearing (3).** Overview of historical and contemporary issues, individual assessment, academic placement, achievement, deaf culture, and educational controversies for students who are deaf or hard of hearing.
- 5351—Emergent Language and Literacy for Students Who Are Deaf or Hard of Hearing (3).** Development of communication, language, and emergent literacy in students who are deaf or hard of hearing. Addresses all modes of communication, including speech, ASL, and MCE.
- 5352—Oral Communication for Students Who Are Deaf or Hard of Hearing (3).** Theories and developmental stages of speech acquisition in students who are deaf or hard of hearing with emphasis on effects of audition and cochlear implants.
- 5353—Educational Strategies for Advanced Language and Literacy for Students Who Are Deaf or Hard of Hearing (3).** Focus on strategies and methods of promoting literacy for deaf or hard of hearing students, including assessment, systematic instruction, and all modes of communication.
- 5354—Accessing the General Education Curriculum for Students Who Are Deaf or Hard of Hearing (3).** Focuses on the use of materials, technology, and visual strategies to help students who are deaf or hard of hearing succeed in general curriculum courses.
- 5360—ABA 7 – Behavior Analytic Supervision and Management of Personnel (3).** Prerequisites: B- or better in EDSP 5342, EDSP 5343, EDSP 5346, and EDSP 5347. Covers advanced clinical topics for applied behavior analysts as recommended by the Behavior Analyst Certification Board (BACB), 5th Edition Task List.
- 5361—ABA-Philosophical Underpinnings of Applied Behavior Analysis (3).** Focuses on the philosophical principles and conceptual framework that practitioners need to engage in the science and technology of applied behavior analysis.
- 5380—Programs and Services for Individuals With Visual Impairments (3).** Introduction to educational programs and services for students with visual impairments, including history, developmental characteristics, psychological needs, and legislation.
- 5381—Instructional Strategies for Individuals With Visual Impairments (3).** Strategies for teaching and adapting instruction in content areas, independent living, career-vocational, P.E., and leisure. Includes a theoretical framework, assessment strategies, and research applications.
- 5382—Braille Code for Teaching Individuals With Visual Impairments (3).** Knowledge and skills in reading and writing the literary Braille code, Nemeth mathematics code, and formatting rules for Braille transcription.
- 5383—Anatomy and Functions of the Visual System (3).** Structure and function of the eye, causes and implications of eye conditions, clinical and functional vision assessments, relationship to other disabilities, and neurological aspects of visual impairment.
- 5384—Basic Orientation and Mobility Skills (3).** Exploration of space in the home and school environment and the wider community according to individual needs; appreciation and understanding of professional mobility instruction programs.
- 5386—Intermediate Orientation and Mobility Training for Individuals Who Are Blind/Visually Impaired (3).** Development of orientation and mobility skills for individuals who are blind or visually impaired.
- 5387—Advanced Orientation and Mobility Training for Individuals Who Are Blind/Visually Impaired (3).** Development of advanced orientation and mobility skills for individuals who are blind or visually impaired.
- 5388—Programs and Services for Students with Deafblindness (3).** Overview of psychological, sociological, and educational implications of deafblindness, including appropriate community, educational, and social services.
- 5389—Strategies for Students with Multiple Disabilities and Visual Impairments or Deaf-blindness (3).** Curricular adaptations, assessment, and intervention for students with multiple disabilities and visual impairments or deaf-blindness.
- 5390—Seminar in Special Education (3).** Recent research practices and problem areas in special education. May be repeated for credit.
- 5391—Intermediate Seminar in Orientation and Mobility (3).** Focuses on research practices and problem areas in intermediate orientation and mobility services for students with visual impairments and additional disabilities.

- 5392—**Advanced Seminar in Orientation and Mobility (3)**. Focuses on research practices and problem areas in advanced orientation and mobility services for students with visual impairments and additional disabilities.
- 5393—**Sensory Impairments and Autism Spectrum Disorders (3)**. Studies the characteristics and psychological, sociological, and educational implications for students with sensory impairments and autism spectrum disorder. Addresses intervention strategies and curricula adaptations.
- 5394—**Communication for Individuals with Deaf-blindness (3)**. Covers evaluation and instruction of communication methods for individuals with deaf-blindness.
- 5395—**Anatomy and Functions of the Auditory System for Students with Deafblindness (3)**. Covers anatomy and functions of the auditory system impacting individuals with deafblindness, hearing evaluations, amplification, and the effects on accessing the environment.
- 5396—**Standardized Cognitive and Achievement Assessment (3)**. Prerequisite: B or higher in EDSP 5093. Use of standardized individual appraisal instruments and techniques in educational evaluation of children, youth, and adults for disability identification and academic assessment.
- 6000—**Master's Thesis (V1-6)**.
- 6093—**Doctoral Internship in Special Education (V1-3)**. Individualized, field-based, sustained professional practice experience in research, teacher education, and/or program evaluation to match the student's career goal.
- 6301—**Grant Writing for Special Education (3)**. Strategies and procedures specific to the field of special education for identifying sources of external funding and applying for externally funded grants.
- 6302—**Program Evaluation in Special Education (3)**. Prepares doctoral students to develop, implement, and evaluate education and rehabilitation programs for individuals with disabilities.
- 6303—**Contemporary Issues in Special Education (3)**. Prepares students to use a variety of research strategies to identify, understand, articulate, and manage contemporary issues for individuals with disabilities. May be repeated once for credit.
- 6304—**Preparing Leadership Personnel for Special Populations (3)**. Prepares doctoral-level students to develop a leadership and managerial style and to address effectively the role of the professor in an academic setting.
- 6305—**Advanced Issues in the Experimental Analysis of Behavior (3)**. Three units that correspond to Parts I-III of the Catania textbooks and one unit that consists of a selection of readings that challenge and extend students' understanding of the concepts covered in the first three units.
- 6308—**The Nature and Practice of ABA (3)**. Covers one or more topics in each of the content areas of applied behavior analysis. Students should be familiar with the basic principles of operant conditioning and at least some of their applications.
- 7000—**Research (V1-12)**.
- 8000—**Doctor's Dissertation (V1-12)**.

Department of Teacher Education

Fanni Coward, Ph.D., Interim Chairperson

Professor: Flores, Hamman, Valle

Associate Professors: Coward, Wang

Assistant Professors: Brice, Carrizales, Greenlees, Joseph, Lammert, Yi

Instructors: Anderson, Balk, Beatty, Bedolla, Brito, Burke, Cowart, Daniel, Dennis, Durham, Garcia, Griner, Guillen, Halsey, Heider, Hickman, Jenkins, Jimenez, Keene, Lamm, Lay, Lopez, Mahan, Marquez, Matthews, McClure, Mitchell, Nelson, Pollart, Ray, Reeves, Salinas, Sneed, Southard, Spears, Torres, Tristan, Urrutia, A. Williams, S. Williams, Zavala

About the Department

This department supervises the following degree programs (see Program Offerings for list of available concentrations):

- Bachelor of Science in Education
 - Elementary
 - Middle-Level English Language Arts
 - Middle-Level Math
 - Middle-Level Science
 - Middle-Level Social Studies
 - Secondary English
 - Secondary Math
- Bachelor of Science in Multidisciplinary Science
 - Composite Science

Undergraduate Programs

Program Requirements

Core Curriculum Requirements. The university has established core curriculum requirements for all students. These requirements will ensure breadth in each academic program. Students should consult their academic advisor regarding specific course requirements. Students are urged to seek advisement prior to their first enrollment to avoid losing credit. Students may find a listing of core curriculum requirements in the Academic Requirements section of the catalog.

Advisory Program. The advisory program is designed to provide aid to each student in planning and completing the appropriate degree and teacher certification program. The academic advisor is responsible for (1) assisting the student in planning a program and in updating degree plans, (2) helping the student in selecting the proper areas of certification and/or teaching fields, and (3) advising the student in meeting admission and retention standards of teacher education and student teaching. The College of Education has a mandatory advising requirement for each semester of enrollment.

Admission to the Bachelor of Science Degree Program and Admission to the Teacher Certification (Education) Program. The college seeks to maintain rigorous academic programs to produce outstanding educators for Texas and the nation. Admission to college degree and certification programs is open to all individuals on the basis of academic preparation, ability, and availability of space in the program selected. When there are more qualified applicants than can be adequately instructed by available faculty or accommodated in available facilities, the college will control enrollment in specific programs by limiting the admission of new students. The number of students accepted into the undergraduate programs is limited. Therefore, admission into a teacher education program is competitive and based on GPA and other criteria. A complete description of eligibility requirements is available in the Certification Office in the College of Education. (Entrance criteria may be subject to change.) Admission to a college degree program does not ensure admission to an upper-division teacher certification program. See "Educator Certification" to read about

admission requirements for the teacher certification program, information on the Texas Examinations of Educator Standards (TExES), recommendations for teacher certification, admission to student teaching, and transferability.

Academic Foundations. During their freshman and sophomore years, students complete their general degree requirements for the Bachelor of Science. This is a combination of core and content courses that support the student gaining appropriate knowledge to teach in their certification area. Coursework in professional education and advanced courses, particularly in academic concentrations or teaching fields, is taken in the junior and senior years.

Professional Education. Teacher education programs in the College of Education are field-based. Students will complete observations and activities in public school settings. These field experiences may require time in addition to class time to complete. Students should refer to the handbook on the College of Education website for dates and time requirements.

Full-Year Student Teaching. Teacher candidates will be assigned to a classroom for a full year of student teaching. Appropriate coursework will accompany both semesters of student teaching. Candidates will follow the calendar for the school district they are assigned. This will likely mean beginning and ending outside the semester calendar set by TTU. Candidates should plan accordingly. All students seeking initial certification at Texas Tech must successfully complete a series of competency-based performance assessments to be recommended by the university for a teaching certificate.

Field Experiences. TechTeach is a field-based teacher education program. In the semesters prior to student teaching, teacher candidates will spend one day each week in a public-school setting. Field experience begins in Block 1 (fall term), typically the first semester of the junior year, and continues through Block 2 (spring term). Assignments to apply and evaluate what candidates have learned in the courses will be completed in the school settings. Students seeking a secondary education should consult with an education advisor concerning field experience requirements.

Student Load. The maximum load for a student in the College of Education is 19 semester hours. No student will be permitted to enroll in more than 18 semester hours without written approval from the department chair or associate dean. During the student teaching semester, the maximum load is 12-15 semester hours. Requests to take more than 15 hours must be approved by the certification officer.

Course Rotation. The coursework for the Bachelor of Science in Education and Bachelor of Science in Multidisciplinary Science is a prescribed curriculum. The coursework required supports the attainment of knowledge and information to be successful in teaching the content and attaining required knowledge for the state certification exam. Exceptions for listed coursework are very limited and should be discussed with an education advisor. Coursework related to the educator preparation program may not be taken prior to admission and must be completed as sequenced on the degree/certification plan. Requirements may be subject to change based on rule changes made by the state of Texas.

Length of Degree Program. The Bachelor of Science degree can be completed in approximately eight semesters. The education major requires 120 hours, and the multidisciplinary science major requires 125 hours. A student may be required to attend summer term to complete all requirements. Assistance in completing the degree and certification plan is provided by advisors in the College of Education. An Intent to Graduate form should be filed one year prior to graduation.

Pass/Fail Option. Courses used to meet stated degree plan requirements may not be taken pass/fail. Up to 13 hours of courses that are taken as free electives to total 133 hours and are not used to meet any other degree requirement may be taken pass/fail. Courses that are designated pass/fail by departmental policy rather than student choice do not count in the 13-hour limit on elective courses that may be taken pass/fail. A student on probation is not allowed the pass/fail option.

Education, B.S. (with Elementary EC-6 Certification) Recommended Curriculum

FIRST YEAR

Fall

- ☐ MATH 1320 - College Algebra (3 SCH)
- ☐ Earth Science Elective (4 SCH) (*ASTR 1400/ASTR 1401, ATMO 1300/ATMO 1100, GEOG 1401, GEOL 1303/GEOL 1101*)
- ☐ HIST 2310 - History of Texas (3 SCH)
- ☐ EDLL 2300 - Early Literacy in the School Setting (3 SCH)
- ☐ EDTP 1100 - Teach Like Your Hair is on Fire: Sem. for First Year Ed. Students (1 SCH)

TOTAL: 14

Spring

- ☐ ENGL 1301 - Essentials of College Rhetoric (3 SCH)
- ☐ MATH 2370 - Elementary Analysis I (3 SCH)

Teacher Certification

All students in the TechTeach program will be prepared to teach at their certification level (elementary, middle, or secondary) and in their selected content area as well as English as a second language (ESL) and Special Education (Sped). Students selecting middle level or secondary will select a content area in math, English, social studies (middle level only), or science.

Students completing the program requirements will achieve an initial certificate in their selected content area and will be eligible to add supplemental certificates in both ESL and Special Education.

All coursework on the degree plan must be completed with a grade of C or above. Students must meet all program benchmarks detailed in the student handbook as well as pass all state certification requirements to be eligible for teacher certification.

Concentrations

English as a Second Language. Students wishing to become certified with supplemental certification in English as a second language (ESL), will seek a B.S. in Education. Students will learn skills/strategies necessary to work with children whose first language is not English. It is not necessary to speak a language other than English to become ESL certified. Students will complete four semesters of professional education work with field experience in classrooms with ESL identified students.

Special Education. Students wishing to become certified with supplemental certification in Special education (Sped), will seek a B.S. in Education. Students will learn skills/strategies necessary to work with children who are identified as in need of services by the local school district. Students will complete four semesters of professional education work with field experience in classrooms with Sped identified students.

Education, B.S.

Completion of this coursework will lead to a Bachelor's degree AND certification in the major content area. Students may also choose to complete certification in English as a Second Language (ESL) and certification in Special Education (SPED). In addition, Coaching coursework and training are available for students pursuing Middle-Level education. **Note:** Students selecting the coaching pathway are not eligible for ESL and SPED certification through TTU but may add those certifications after the initial certificate is received.

Elementary-Level Education. This specialization within the B.S. in Education is designed primarily for individuals seeking teacher certification in grades pre-kindergarten through sixth grade. Degree plans are a sequence of four semesters of professional education courses (including two student teaching semesters). All courses include field experiences scheduled outside of class time. Due to the nature of the program and state requirements, the start and end schedule may vary from the university schedule. Students are required to begin student teaching on the first day of their assigned district.

Middle-Level Education. This concentration within the B.S. in Education is designed primarily for individuals seeking teacher certification in grades four to eight. Students may choose certification in English Language Arts, Social Studies, Science or Math*. Students should consult with an advisor in the college to determine which degree plan best suits their career aspirations. Degree plans leading to the different certificates will include subject area coursework and a sequence of four semesters of professional education courses (including two student teaching semesters). All courses include field experiences scheduled outside of class time. Due to the nature of the program and state requirements, the start and end schedule may vary from the university schedule. Students are required to begin student teaching on the first day of their assigned district's K-12 calendar.

* The Middle-Level Math concentration is currently not accepting new students.

Secondary-Level Education. This concentration within the B.S. in Education is designed primarily for individuals seeking teacher certification in seventh through twelfth grade. Degree plans are a sequence of four semesters of professional education courses (including two student teaching semesters). All courses include field experiences scheduled outside of class time.

Communication Literacy Requirement. Communication Literacy courses for the Education major are broken into Elementary and Middle/Secondary levels. Elementary: EDEL 3300, 4000; EDLL 3352. Middle/Secondary: EDSE 3300, 4000, 4320.

Multidisciplinary Science, B.S.

Individuals completing the B.S. in Multidisciplinary Science—both the baccalaureate requirements and the certification requirements—are eligible for certification to teach all sciences grades seven to 12 in Texas. This major requires 43 hours of Science for a Composite Science certification. Students may add a minor to specialize in a qualified science area such as chemistry, biology, etc. Two semesters of a single foreign language are considered leveling work for this program but may be waived if the student had two years of high school foreign language.

Communication Literacy Requirement. Communication Literacy courses for the Multidisciplinary Science major are EDSE 3300, 4000, and 4320.

Secondary-Level Education. This specialization within the B.S. in Multidisciplinary Science is designed primarily for individuals seeking teacher certification in grades seventh through twelfth grade. Degree plans are a sequence of four semesters of professional education courses (including two student teaching semesters). All courses include field experiences scheduled outside of class time.

Undergraduate Minors

Secondary Education

Students seeking secondary certification may major in Education in the areas of English, Math, or Science. In addition, students seeking secondary certification in other content areas may minor in secondary education. The following courses may be used by students who complete student teaching as undergraduates:

- Required for all content areas: EDSE 3300, 4323; EDIT 3318; EDLL 4381; EDTP 3304.
- Also required is one of the following based on the student's content certification area: EDML 3361 (Social Studies), EDML 3370 (Mathematics), EDML 3375 (Science), EDLL 3354 (English), EDSE 4320 (All other content areas). You may visit with a College of Education Advisor if you have questions about the content methods course.
- In addition to the 18 hours listed, students must complete 12 hours of EDSE 4000 (Student Teaching) to be eligible for teacher certification. Program requirements include a semester of field experience with a minimum of 2 full days per week of field experience and 5 full days student teaching. Due to the nature of the program and state requirements, the start and end schedule may vary from the university schedule. Students are required to begin student teaching on the first day of their assigned district.

The minimum number of hours for a minor in secondary education is 18. Other education courses may be used in the minor with the permission of an academic advisor in the College of Education.

Special Populations

Students seeking the special populations minor should have a general focus on teacher certification. These courses are based on gaining knowledge in the area of English as a Second Language and Special Education. The following courses may be used to complete the minor in special populations: EDTP 3301, 3303, 3304, 3305, 4302, 4380. The minimum number of hours for the minor is 18.

Undergraduate Course Descriptions

Bilingual Education (EDBL)

- 3135—**Teaching Linguistically and Culturally Diverse Students in the EC-6 Classroom I (1).** Application of knowledge and skills concerning culture, linguistics, and instructional practices for teachers of linguistically and culturally diverse students.
- 3205—**Bilingual Programs and Language Issues at the Middle Level (2).** Overview of bilingual programs, issues, and second language research related to middle level students. Field experience required.

- 3235—**Teaching Linguistically and Culturally Diverse Students in the EC-6 Classroom II (2).** Application of knowledge and skills concerning culture, linguistics, and instructional practices for teachers of linguistically and culturally diverse students in classroom settings during student teaching.
- 3300—**Introduction to Teaching in a Bilingual/ESL Classroom (3).** Introduces bilingual/ESL teacher education candidates to the fundamentals of teaching, including instructional principles and lesson planning.
- 3310—**Spanish for Bilingual Teachers (3).** Prerequisite: Admission to bilingual program or instructor consent. Proficiency and instructional skills for bilingual classrooms. Emphasis on academic language.
- 3320—**Content Area Instruction in Spanish for Dual Language Classrooms (3).** Teacher-training course taught entirely in Spanish. Instructional language for bilingual education across content areas in dual language classrooms.
- 3332—**Foundations of Bilingual Studies (3).** Overview of history, philosophy, assessment processes, research, and legal aspects related to bilingual education.
- 3334—**Dual Language and Cognitive Development in Bilingual Programs (3).** Skills, attitudes, psycholinguistic knowledge related to first and second language acquisition. Field experience required.
- 3335—**Teaching Linguistically and Culturally Diverse Students in EC-6 Mainstream Classrooms (3).** Skills, attitudes, cultural, and psycholinguistic knowledge relevant for second language acquisition and development in relation to teaching practices for linguistically and culturally diverse students.
- 3336—**Instruction and Management in Bilingual and Multilingual Settings (3).** Developing instruction and management skills in bilingual and multilingual classrooms.
- 3337—**Content Area Development for English as a Second Language Populations (3).** Adapting the school curriculum for English as a second language (ESL) students with emphasis on developing appropriate teaching materials for content areas.
- 3338—**Methods for Teaching English Language Learners (3).** Rationale, theories, and goals of a comprehensive curriculum program for English language learners.
- 4321—**Teaching Literacy/Biliteracy in Elementary Dual Language Programs (3).** Emphasizes the current perspective of the biliteracy process, English literacy, native-language literacy, biliteracy, and the impact of educational policies and programs for English language learners.

Educational Curriculum and Instruction (EDCI)

- 3325—**Honors Seminar: Trends and Issues in Educational Policy and Practice (3).** A seminar course that involves the analysis and synthesis of current trends in educational policy and practices.

Elementary Education (EDEL)

- 2300—**Schools, Society, and Diversity (3).** [EDUC1301, 1325] Historical, philosophical, sociological, and ideologic foundations of education: Purposes and roles of schools in a pluralistic society. Contemporary issues and reform trends in American public schools.
- 3099—**Independent Study (VI-3).** Prerequisite: Instructor consent. Independent study of special aspects or topics of elementary education. May be repeated for up to 3 hours credit.
- 3100—**Introduction to Teaching I (1).** Introduces teacher education students to fundamentals of teaching, including teaching ethics and principles and state and national standards for student learning.
- 3200—**Introduction to Teaching II (2).** Introduces teacher education students to fundamentals of teaching, including instructional planning and assessment.
- 3300—**Introduction to Teaching (3).** Provides new teacher candidates information, access, and skills needed to successfully complete the teacher education program. (CL)
- 4000—**Student Teaching Elementary Level (VI-12).** Prerequisite: Attainment of admission standards to student teaching. Supervised teaching involving a period of major responsibility for instruction and learning in an elementary classroom of an accredited school. Course graded credit (CR) or no credit (NC). (CL)
- 4330—**Capstone Course (3).** Emphasizes diagnostic teaching and learning, philosophies of education, current issues, classroom organization, professional portfolios, and teacher assessment.
- 4360—**Teaching Social Studies (3).** Design and organization of content, materials, and instructional strategies for social studies programs in elementary schools. Field-based course.
- 4370—**Teaching Mathematics (3).** Application of content, materials, and instructional strategies in teaching elementary school mathematics. Field-based course.

- 4373—**Mathematics Methods II (3)**. Application of content, materials, and instructional strategies for teaching upper elementary school mathematics in efforts to prepare children for middle school mathematics. Field-based course.
- 4375—**Teaching Science (3)**. Methodology of teaching appropriate science learning experiences to elementary school children. Field-based course.
- 4376—**Advanced Science Teaching (3)**. Provides prospective teachers of Grades K-8 with the advanced knowledge and skills for teaching elementary/middle-school science.
- 4393—**Internship in Elementary Education I (3)**. Prerequisite: Admission to teacher education. Directed experiences in various roles at the elementary level.
- 4394—**Internship in Elementary Education II (3)**. Prerequisites: C or better in EDEL 4393 and admission to teacher education. Directed experiences in various roles at the elementary school level.

Educational Instructional Technology (EDIT)

- 3328—**Computational Thinking in Education (3)**. Introduces computational thinking for educators. Explores how to teach/integrate computational thinking skills with coding, robotics, and other activities.

Language Literacy (EDLL)

- 2300—**Early Literacy in the School Setting (3)**. Focuses on understanding and implementing instructional practices for children's early literacy development with classrooms and community agencies as the contexts for service-learning.
- 3350—**Children's Literature (3)**. Texts appropriate for children under 15, including standards of evaluation and criteria for selection. Includes field experiences.
- 3351—**Foundations of Reading Instruction (3)**. Overview of reading development, methods of reading instruction, scope and sequence of programs. Field-based course.
- 3352—**Language Literacy Acquisition (3)**. Study of the acquisition and development of language learning; study of curriculum, instruction, and exemplary classroom practices that foster literacy development. Field-based course. (CL)
- 3353—**Reading at the Middle Level (3)**. Selection of materials and methods for understanding and developing reading requirements, skills, and strategies for middle level students in grades 4-8. Field experiences required.
- 3354—**Reading Processes and Practices at the Middle Level (3)**. Overview of reading development, methods of reading instruction, and sequence of instruction for the middle-level classroom.
- 4349—**Adolescent Literature (3)**. Study of classic and current adolescent literature, selection of materials, and methods for use in middle and secondary level classrooms. Field experiences required.
- 4350—**Linguistics for the Classroom (3)**. Students will explore language development from a linguistic perspective that recognizes implications for professional teaching practice.
- 4351—**Foundations in Reading for English Language Learners (3)**. Evaluation and reflections of second-language literacy by examining its philosophy, theory, and examples of classroom-based practices.
- 4355—**Response to Literacy Intervention (EC-12) (3)**. Prerequisites: EDLL 3351 or EDLL 3352 or EDLL 3354 (may be taken concurrently). In this course teacher candidates will learn to assess students' literacy and use the results to determine and implement appropriate strategies for struggling readers.
- 4381—**Literacy in the Content Areas for Middle Level (3)**. Understanding literacy in the content areas and planning instruction to promote learning of students in grades 4-8.
- 4382—**Adolescents, Multiliteracies, and Content Area Learning (3)**. Developing literacy practices to learn in content area disciplines aimed at grades 8-12.

Education Middle Level (EDML)

- 3325—**Assessment for Middle-Level Educators (2)**. Focuses on understanding the purposes and practices of assessment in the middle-level classroom. Teacher candidates examine ways to assess learning formatively and summatively. They collect, manage, and analyze data to guide instructional decisions.
- 3320—**Middle-Level Curriculum and Philosophy (3)**. An overview of sociological, historical, and philosophical foundations of the middle school movement. Focus is on unique characteristics of a middle school interdisciplinary curriculum and instruction. Field experience required.
- 3361—**Teaching Social Studies at the Middle Level (3)**. Social studies curriculum principles and development, organization of materials,

instructional techniques, and evaluation process unique to middle level social studies. Field experience required.

- 3370—**Teaching Mathematics at the Middle Level (3)**. Emphasizes the content, learning and instruction, assessment, and professional development in teaching middle-school mathematics. Field experience required.
- 3375—**Teaching Science at the Middle Level I (3)**. A field-based course emphasizing teaching methods and techniques, lesson organization, assessment, and classroom management. Field experience required.
- 4000—**Student Teaching Middle Level (V1-12)**. Prerequisite: Attainment of admission standards to student teaching. Supervised teaching involving a period of major responsibility for instruction and learning in a middle level classroom of an accredited school.
- 4230—**Capstone for Middle-Level Teachers (2)**. Focuses on teacher effectiveness in instruction, skills in classroom management, reflective practices from real-life situations in student teaching, and becoming a professional educator.
- 4325—**Classroom Organization and Management for the Middle Level (3)**. Emphasizes theories of teaching and learning with a focus on classroom organization and management techniques for grades 4-8. Accompanies student teaching.
- 4362—**Interdisciplinary Language Arts and Social Studies Methods at the Middle Level (3)**. Content, instructional strategies, and technologies for middle school English language arts and social studies with emphasis on integration through interdisciplinary projects. Field experience required.
- 4375—**Integrated Mathematics and Science Methods (3)**. Prerequisite: Junior standing. A field-based course emphasizing teaching methods and techniques, lesson organization, assessment, and classroom management. Field experience required.
- 4381—**Middle Level Capstone (3)**. Contributes to the overall competency of teacher candidates by focusing on aspects of teaching and learning that have the greatest impact on middle-level students' achievement. Accompanies student teaching.

Secondary Education (EDSE)

- 2300—**Schools, Society, and Diversity (3)**. Historical, philosophical, sociological, and ideologic foundations of education; purposes and roles of schools in a pluralistic society. Contemporary issues and reform trends in American public schools.
- 3100—**Introduction to Teaching in Secondary Schools (1)**. Introduces teacher education students to fundamentals of teaching, including teaching ethics and principles as well as state and national standards for student learning.
- 3300—**Introduction to Teaching (3)**. Provides students at the secondary certification level with an overview of the structures and processes of TechTeach. (CL)
- 4000—**Student Teaching in the Secondary School (V1-12)**. Prerequisite: Meet admission standards to student teaching. Supervised teaching involving a period of major responsibility for instruction in an accredited secondary school. (CL)
- 4310—**Schooling and the Adolescent (3)**. Psychological, social factors that create and affect adolescents in school. Special attention given to instructional strategies and influences on students' school participation. Field experiences required.
- 4311—**Curriculum Planning, Development, and Evaluation (3)**. Foundations and principles of curriculum planning, development, implementation, and evaluation in secondary schools; issues in curriculum development. Field-based course.
- 4312—**Secondary Classroom Management and Learners with Disabilities (3)**. Prepares teacher candidates for effective classroom management as well as for working with students who have learning disabilities. Teaches collaboration and differentiated instruction and organization of social and academic systems in the classroom.
- 4313—**Contributing to Student Success in Professional Learning Communities (3)**. Supports participation in a professional learning community and provides opportunities to acquire skills in data analysis and instructional planning aimed at improving student achievement.
- 4315—**Learning and Technology (3)**. Introduces teacher candidates to current instructional technology and the use of technology integration strategies based on learning theories.
- 4316—**Content Planning and Strategies in the Inclusive Secondary Classroom (3)**. Principles of curricular planning and development in the secondary classroom. Methods, techniques, and evaluation procedures appropriate to the core content areas and technologies that support those procedures.
- 4320—**Instructional Methods (3)**. Strategies for teaching evaluation and classroom management. Field-based course. (CL)

- 4322—Diversity and the Classroom Learning Environment (3).** Organization of social and academic systems in the classroom that are responsive to student learning styles, students' ethnic and cultural backgrounds, and students with special needs. Field-based course.
- 4323—Teaching Diverse Students in the Secondary Classroom (3).** Organization of social and academic systems in the classroom that are responsive to student learning styles, students' ethnic and cultural backgrounds, and students with special needs.
- 4330—Capstone for Secondary Students (3).** Taught with student teaching. Focuses on instructional management, organization for teaching, student assessment, and political and ethical dimensions.
- 4351—Teaching Grammar, Composition, Spelling, and Listening (3).** Preparation for teaching grammar, usage, punctuation, composition, spelling, critical thinking, and listening in secondary schools. Field-based course.
- 4360—Teaching the Social Studies in the Secondary School (3).** Methods, techniques, and evaluation procedures appropriate to teach various subjects in the area of social studies. Includes supervised practice in the selection of materials, visuals, and microteaching. Field-based course.
- 4376—Methods in Science Teaching (3).** Focus on the curriculum, methods, and materials related to science instruction in the secondary schools. Field-based course.
- 4393—Internship in Secondary Education (3).** Prerequisite: Admission to teacher education. Directed experiences in various roles at the secondary level.
- 4394—Internship in Secondary Education (3).** Prerequisite: C or better in EDSE 4393 and admission to teacher education. Directed experiences in various roles at the secondary school level.
- 4399—Individual Study (3).** Independent study focusing on curriculum development and teaching strategies.
- 3300—Introduction to Teaching (3).** Provides new teacher candidates at all certification levels with an overview of the structures and processes of the TechTeach program.
- 3301—Programs and Services for Special Populations (3).** Overview of eligibility, services, and academic programs for special populations, including ethical and professional educator responsibilities for teaching special populations that include students receiving services.
- 3303—Foundations of Inclusions and Differentiation for Special Populations (3).** Emphasizes how to develop a positive learning environment that supports the inclusion of diverse learners and students with exceptionalities in mainstream settings.
- 3304—Behavior Management in General and Special Population Classrooms (3).** Emphasizes classroom design, management, routines, social-emotional learning practices, strategies for creating learning environments for students with exceptionalities and English language learners.
- 3305—Designing Assessments for General and Special Populations EC-12 (3).** Appraisal techniques, including formal and informal assessments, employed by relevant disciplines in determining appropriate educational programming for students with exceptionalities and English language learners.
- 3311—Introduction to AVID Instruction Strategies (EC-12) (3).** Provides teacher candidates with foundational knowledge of AVID instructional strategies. Teachers will develop skill in using the WICOR framework to plan and implement lessons.
- 3312—Advanced Application of AVID Instructional Strategies (EC-12) (3).** Provides teacher candidates with knowledge and skills associated with advanced applications of AVID teaching and learning strategies.
- 3313—Topics in Education Today (3).** Seminar in education topics designed to review current agenda that affect teaching and the education process.
- 3314—Schools are MORE than Teaching (3).** Seminar in education topics designed to review current agenda that affect teaching and the education process.
- 3400—Fundamentals of Physics (4).** The fundamentals of physics, understanding content and models for alignment with the Texas Essential Knowledge and Skills.
- 4000—Clinical Teaching (V1-12).** Prerequisite: Completion of all program requirements prior to clinical teaching. Supervised teaching involving a period of major responsibility for instruction in an elementary, middle level, or secondary level classroom of an accredited school. May be repeated.
- 4302—Advanced Methods for Special Populations EC-12 (3).** Rationale, theories, and best practice methodology for teaching basic academic skills, social skills, and content area subjects for special populations.
- 4303—Professional Ethics, Standards, and High Leverage Practices for Special Education (3).** Prerequisites: EDTP 3301, EDTP 3303, EDTP 3304, EDTP 3305, EDTP 4380, EDTP 4302, EDTP 1102. Reflection and synthesis of learning experiences, professional practice standards, ethical principles, and policy standards required for special educators.
- 4331—Rural Matters (3).** A process-oriented course focused on the intricacies of teaching in a rural setting.
- 4376—Reasoning in STEM, Advanced Methods in Science Teaching (3).** Provides prospective teachers of grades K-8 with advanced knowledge and skills for teaching elementary/middle-school science.
- 4380—Content Area Development for Special Populations (3).** Adapting the school curriculum for Special Populations with an emphasis on developing appropriate teaching materials for content areas.

Education Teacher Preparation (EDTP)

- 1100—Teach Like Your Hair is on Fire: Seminar for First Year College of Education Students (1).** Provides freshmen in the College of Education information, access, and skills needed to successfully complete the MDS degree and teacher education program.
- 1102—Special Populations for Community College Transfer (1).** Prerequisite: Students are required to have transferred EDUC 2301 from the community college to take this course. An overview of services, programs and eligibility for special populations, including ethical and professional responsibilities.
- 1103—Estacado Early College High School: First Year Seminar (1).** Prerequisite: Student must be a participant in the Early College High School program. Provides freshmen in the Estacado Early High School Program information, access, and skills needed to prepare students for college success.
- 2301—The Education Effect: Why American K-12 Education Really Matters (3).** Considers costs and benefits of American education and exposes students to issues in education at a deeper level by tutoring in public schools. Fulfills core Social and Behavioral Sciences requirement.
- 2303—Health and Physical Education for EC-6 Instruction (3).** A process-oriented course focused on planning and implementing developmentally appropriate health and physical education programs in elementary schools.
- 2377—Mathematics for K-8 Curriculum (3).** Basic geometry (lines, angles, area, volume), probability, and statistical concepts for understanding of K-8 Texas Essential Knowledge and Skills.

Edward E. Whitacre Jr. College of Engineering

Roland Faller, Ph.D., Dean

100 Engineering | Box 43103 | Lubbock, TX 79409-3103
T 806.742.3451 | F 806.742.3493 | www.coe.ttu.edu

About the College

The Edward E. Whitacre Jr. College of Engineering (WCOE) is an internationally recognized research institution ranked among the best in the nation. Award-winning faculty, interactive classes, and hands-on learning experiences combine to empower students with the knowledge and experience they will need for a future in engineering.

By blending math, science, and creative thinking, engineers design solutions that improve society and transform the world. Each academic program includes not only an education in the basic sciences, mathematics, humanities, and social sciences, but also the technical knowledge needed to solve the technological problems confronting society.

The Chemical Engineering BS, Civil Engineering BS, Computer Engineering BS, Construction Engineering BS, Electrical Engineering BS, Industrial Engineering BS, Mechanical Engineering BS, and Petroleum Engineering BS are accredited by the Engineering Accreditation Commission of ABET, www.abet.org. The Computer Science BS is accredited by the Computing Accreditation Commission of ABET, www.abet.org.

The Environmental Engineering MEV is accredited by the Engineering Accreditation Commission of ABET, www.abet.org, and is administered in the Department of Civil, Environmental and Construction Engineering.

Graduate Programs

For information on graduate programs offered by the Whitacre College of Engineering, visit the Graduate Programs section of the catalog on page 329.

Academic Programs

Degree Programs

Undergraduate Degrees. The Edward E. Whitacre Jr. College of Engineering offers the following professional engineering curricula, each leading to a BS degree in the respective engineering fields: chemical, civil, computer, construction, electrical, industrial, mechanical, and petroleum. A degree in computer science is offered by the Department of Computer Science and supports teaching and learning in the areas of languages, systems, hardware, software, and related studies. Graduates are prepared to continue their formal study or work in a variety of industries.

A cooperative program between the Colleges of Engineering and Architecture leads to dual degrees from both colleges: a B.S. in Architecture and a Civil Engineering BS. The Department of Civil, Environmental and Construction Engineering coordinates the program for WCOE.

WCOE is divided into instructional departments that offer coursework and supervise degree programs. These departments are presented on the following pages along with a descriptive list of the courses offered by each department. The courses listed in individual curriculum tables are prescribed for the various degrees. The course arrangement for the freshman, sophomore, junior, and senior years is the recommended sequence of courses, whether students begin in the summer or during a long session. Before registration for each semester, a student should check course

prerequisites carefully to include courses that are prerequisite to those needed the next semester.

Accelerated Bachelor's to Master's Program. The college offers accelerated bachelor's to master's programs in selected departments that allow students eligible for graduate school to earn both a BS and an M.S. degree with approximately 150 hours. Students are allowed to use graduate work that closely matches the subject requirements of the undergraduate degree to substitute for undergraduate courses. Application should be made during the first semester of the junior year following procedures available from graduate program coordinators in the department. Students interested in this program must apply to the Graduate School prior to taking graduate courses. Early planning and contact with the department advisors is essential because in some cases students may be able to connect undergraduate research experience to their thesis work in graduate school.

Advanced Degrees in Engineering. Programs are available through WCOE leading to Master of Science and Doctor of Philosophy degrees in the fields of computer science and chemical, civil, electrical, industrial, mechanical, and petroleum engineering. These programs are discussed within the catalog section of each department. The Master of Environmental Engineering is a 154-hour freshman-to-master's degree. In addition, the college offers a Master of Science in Bioengineering degree and also a Master of Engineering degree designed especially for practicing engineers desiring to continue their professional education. Admission to the Graduate School is based upon an above average undergraduate record and satisfactory standing on the Graduate Record Examination.

Global Experience. It is strongly recommended that undergraduate students complete a global experience before they graduate. Examples of recommended global experience include:

- Academic Study Abroad (TTU-approved faculty-led programs, traditional reciprocal exchange agreements, or third-party programs, a minimum of 4 weeks and 3 course credit hours). Maymester or summer programs, semester or year abroad.
- Internship, research, or service abroad.

Scholarships are available specifically for global experience options.

WCOE Distance Learning Program. The WCOE Distance Learning Program offers educational opportunities to students, engineers, and science professionals interested in pursuing graduate coursework in engineering without the requirement to relocate to Lubbock. The WCOE Distance Learning Program is designed to meet the needs of both practicing engineers and industry. The graduate degrees and graduate certificate offered are:

- Doctor of Philosophy in Systems and Engineering Management
- Master of Engineering
- Master of Science in Bioengineering
- Master of Science in Chemical Engineering
- Master of Science in Civil Engineering
- Master of Science in Industrial Engineering
- Master of Science in Manufacturing Engineering
- Master of Science in Mechanical Engineering
- Master of Science in Petroleum Engineering
- Master of Science in Software and Security Engineering
- Master of Science in Systems and Engineering Management
- Graduate Certificate in Software Engineering

The goal in the WCOE Distance Learning program is to offer a high-quality education. Distance learning classes are available asynchronously, and because they are held each semester concurrently with the face-to-face students, the students have the benefit of having the same experienced professors, curriculum, projects, and assignments. There is no distinction between on-campus and off-campus students. Questions regarding these programs can be addressed by the Associate Dean of Graduate Studies and Research or the Distance Learning Director.

Departmental Minors. Review the catalog for each department's required course selection for the departmental minors. Each department will specify the required courses and number of hours that constitute a minor. Information on approved minors, if offered, is available from each department chair. No letter grades of D, F, nor pass/fail will be accepted for any engineering minor courses (C or better only). Non-engineering majors are subject to GPA requirements outlined in "Coursework for Non-Engineering Majors" below.

Coursework for Non-Engineering Majors. Students from other colleges within the university must have a Texas Tech University institutional GPA of 2.75 or higher and additionally cannot enroll in engineering courses until after all declared engineering majors in the Whitacre College of Engineering have registered/enrolled (which also includes new student orientations completed for each term).

Admissions to Foundational Curriculum and Degree Programs

The engineering degree programs consist of a foundational curriculum followed by a department-specific upper-division program. The criteria for admission to the Whitacre College Foundational Curriculum requires that a first-time student (earned fewer than 30 hours) must be accepted to the university according to assured admission criteria, or according to test optional admissions criteria when applicable, and must be Texas Success Initiative (TSI) compliant. Transfer students must be accepted to the university with assured admission status (defined by 24 hours of transfer credit and a 2.75 GPA) and must be Texas Success Initiative (TSI) compliant.

Students who do not meet the assured admissions requirements, or the test optional criteria when applicable, may enter the Texas Tech University eXplore STEM Program and then work to qualify as a Foundational Engineering Student per the "Internal Transfer Admission to WCOE" section. Upon completion of the foundational curriculum, a student must apply and be successfully admitted to the program of their concentration. Students who do not qualify for the program associated with their concentration may apply to another program within the WCOE or transfer out of the college.

External Transfer Admission to WCOE Foundational Curriculum. A transfer student with fewer than 12 hours of transferable coursework must meet first-time freshmen assured admission standards. For admission to the foundational curriculum with an engineering degree program concentration, transfer students must have 24 or more hours of transferable coursework and have a minimum cumulative GPA of 2.75 that includes the work at all previous institutions. External transfer students must complete a minimum of 12 hours of Texas Tech engineering degree program coursework before application to the upper division. Eligibility for admission to the upper division is based exclusively on the cumulative GPA earned at Texas Tech specified by department.

Second Degree. A student who has completed the requirements for a first bachelor's degree with a 2.75 GPA or greater from Texas Tech University or another institution may acquire a second degree by completing the second program with the following restriction: at least 30 hours of the second degree requirements must be from courses not counted in attaining the first degree and must be taken at Texas Tech.

Internal Transfer Admission to WCOE. Current Texas Tech students must have completed at least Calculus I with a C or better, have a Texas Tech University institutional GPA of 2.75 or higher, and must have completed the required math, science, and core curriculum for each degree program in preparation for entering the Whitacre College of Engineering as a foundational student in a major. These students will become foundational students upon acceptance to the WCOE. Texas Tech non-engineering college majors cannot enroll in Whitacre College of Engineering courses until after transfer paperwork has been officially processed.

eXplore STEM (for Engineering). The eXplore STEM student must have completed Calculus I with a C or better and have a Texas Tech University institutional GPA of 2.75 or higher. eXplore STEM students cannot take more than 4 hours of engineering courses while under the "eXplore TSTM" designation but should complete the required math, science, and core curriculum for each degree program to prepare the student for entering into the Whitacre College of Engineering as a foundational student in a major. Texas Tech non-engineering college majors cannot enroll in Whita-

cre College of Engineering courses until after transfer paperwork has been officially processed.

Admission to a WCOE Degree Program. All newly admitted students work to complete a foundational curriculum consisting of CHEM 1107, CHEM 1307; ENGL 1301, ENGL 1302; MATH 1451, MATH 1452; PHYS 1408; ENGR 1110, ENGR 1330, ENGR 2392, and ENGR 1320 or ENGR 1340.

When the foundational curriculum has been completed, students apply for admission to the upper division of their degree program. The acceptance criterion is based exclusively on a Texas Tech cumulative GPA that includes a minimum of 12 hours of coursework from the foundational curriculum. The specific GPA standard varies among the degree programs and may change from one academic year to the next as necessary to align enrollments with educational resources.

Students must be prepared to make an alternate choice of major if their foundational curriculum GPA does not qualify them for their preferred major. Students must make progress appropriate to their classification in their alternate choice of major as determined by each department for their degree programs. Students who are not admitted successfully to an upper-division degree program are not allowed to enroll in engineering courses and must transfer out of WCOE.

Refer to the program descriptions in this catalog for the specific foundational curriculum and upper-division GPA admission standards.

WCOE Academic Standards and Requirements

Progress Towards a Degree. WCOE students are expected to maintain good engineering academic standing (specified by department). Engineering students are expected to maintain continuous progress toward completion of their degree program regardless of catalog year. Specifically, a full-time student must achieve a C or better in 18 hours of coursework included in the degree program each year (two long semesters). Students are required to complete the foundational curriculum within three long semesters. Part-time students defined as students taking fewer than 12 hours in a long semester are not subject to the 18 hour progress towards a degree nor foundational curriculum completion in three long semesters. These students will work with the department to ensure forward academic progress. Non-full-time students must achieve a C or better in all degree courses. Continued acceptance within WCOE for students who do not maintain this level of progress is subject to the discretion of the Dean of the college.

Students not compliant with the 18 hours of coursework in two long semesters and completion of the foundation curriculum (see Admission to a WCOE Degree Program) will follow the guidelines specified in WCOE Removal.

Recommended Foundational Curriculum For Engineering--All Majors

FIRST YEAR

Fall

- ☐ ENGR 1330 - Computational Thinking with Data Science (3 SCH)
- ☐ ENGR 1110 - Engineering Seminar (1 SCH)
- ☐ ENGL 1301 - Essentials of College Rhetoric (3 SCH)
- ☐ MATH 1451 - Calculus I with Applications (4 SCH)
- ☐ CHEM 1307 - Principles of Chemistry I (3 SCH)* **AND**
- ☐ CHEM 1107 - Experimental Principles of Chemistry I (1 SCH)*

TOTAL: 15

Spring

- ☐ ENGR 1320 - Bio-Inspired Design for Engineers (3 SCH) **OR**
- ☐ ENGR 1340 - Introduction to Engineering Design (3 SCH)
- ☐ ENGR 2392 - Engineering Ethics and Its Impact on Society (3 SCH)
- ☐ ENGL 1302 - Advanced College Rhetoric (3 SCH)
- ☐ MATH 1452 - Calculus II with Applications (4 SCH)
- ☐ PHYS 1408 - Principles of Physics I (4 SCH)†

TOTAL: 17

Dean's List. Full-time students who maintain a semester GPA greater or equal to 3.5 with at least 12 semester hours are placed on the Dean's List.

WCOE Probation. Students whose cumulative Texas Tech GPA falls below 2.5 are placed on "WCOE academic probation." The student may not enroll for more than 15 hours without prior approval from their advisor or the Academic Dean. A student on WCOE probation (below 2.5 GPA) will be allowed to take no more than two engineering courses per semester (up to 6 hours of engineering course work), and those courses should be eligible for grade replacement (attempted previously and resulting in grades of D or F).

WCOE Continued Academic Probation. A probationary student whose current GPA is 2.5 or higher but whose cumulative Texas Tech GPA is below 2.5 will be placed on "WCOE continued academic probation" until the cumulative Texas Tech GPA is 2.5 or higher. The student may not enroll for more than 15 hours without prior approval from an advisor or Academic Dean. Students will not be allowed to be on WCOE academic probation for more than one full term (fall, spring, or summer). Failure to meet the conditions established will result in WCOE Removal. Please note, "WCOE continued academic probation" is separate from a student's official university academic standing. A student's academic performance may result in removal from WCOE, but the student may choose to enroll in another college as long as they remain eligible to enroll under the university academic standing policy.

WCOE Removal. A student on WCOE probation who has a current or cumulative GPA below 2.5 at the end of two consecutive semesters will be on WCOE Removal unless grade replacements for courses completed at that time raise the cumulative GPA above 2.5. A student on WCOE Removal is not permitted to take engineering courses.

Students may return to WCOE after a WCOE Removal with a 2.75 Texas Tech cumulative GPA and completion of the WCOE Student Removal Petition form with approval from the department and the Engineering Dean's office. Students are not eligible to enroll in engineering classes due to their GPA.

Former and/or removed engineering students may petition to return to engineering after earning a 2.75 Texas Tech cumulative GPA. The return to WCOE is subject to a review and approval by the engineering departmental chair and WCOE advisors and the office of the Engineering Dean after changing the major for a minimum of one full term (fall, spring, or summer).

Transfer Students. If a transfer student needs to complete the foundational curriculum upon arrival at Texas Tech, the student will follow the process outlined in the "Admission to a WCOE Degree Program" section and must comply with processes outlined in the "WCOE Academic Standards" section of this catalog. Students who have completed the foundational curriculum prior to transferring and have a Texas Tech cumulative GPA less than 2.5 their first semester at Texas Tech will be placed on WCOE probation and will follow the guidelines specified in the "WCOE Academic Standards" section of this catalog.

Academic Integrity and Misconduct. WCOE will not tolerate academic dishonesty and behavior incongruent with behaviors acceptable for professional engineers and computer scientists. Please refer to the "Academic Integrity" section of this catalog; the Code of Student Conduct, Part X, B3 of the *Student Handbook*; and [Operating Policy 34.12](#) regarding academic integrity, cheating, and plagiarism. Also, please refer to the National Society of Professional Engineers Code of Ethics (www.nspe.org/resources/ethics/code-ethics) for ethical behavior expected of professional engineers and computer scientists. Ignorance provides no protection from the consequences and all students are expected to review and understand the academic integrity standards and professional ethical code behavior expected of professional engineers. WCOE has adopted the following policy:

Instances of academic dishonesty will be submitted to the Office of Student Conduct. The student will, at minimum, receive a grade of F for the assignment or exam, and/or may receive an F for the course. Also, students will be subject to the disciplinary sanctions as prescribed by the Office of Student Conduct. For students found responsible of an academic integrity violation or behavior not consistent with the professional code of ethical behavior and the disciplinary action is suspension from the university, the student will be removed from their degree program and the WCOE with no opportunity to return.

Core Curriculum Requirements. The university has established a set of core courses required for all students. These requirements ensure breadth in each academic program. Students should consult their departmental advisors regarding specific requirements. These requirements are incorporated into the curriculum of each major or concentration in the college. Students are required to seek advisement prior to their first enrollment to avoid losing credit. A listing of core curriculum requirements is in the Academic Requirements section of this catalog.

Chemistry and Math Placement Exams. Students enrolling in the college must take placement exams in chemistry and math unless they pass MATH 1451, CHEM 1307, and CHEM 1107 by university-approved exam score or transferable equivalent coursework with a grade of C or better.

Prerequisites. In scheduling courses, students must comply with the degree required prerequisites and corequisites that are mandatory.

Repeated Courses. Students will only be allowed to attempt any engineering course three times to obtain a grade of C or better. The grades of D, F, and DG require another attempt. Additionally, if a student earns a grade of D or F in a prerequisite to a required course, the student must retake the prerequisite course before enrolling in the required course. If the student's third attempt at an engineering course does not result in a passing grade, the student will not be permitted to continue studies in an engineering program.

Students may repeat up to three engineering courses during their program of study. Upon the need to repeat their fourth course, students will not be permitted to continue studies in an engineering program. Students will follow the guidelines specified in WCOE Removal.

Maximum Course Load. A normal course load for engineering students is 16 to 18 credit hours. Students must have a Texas Tech GPA of 2.5 or higher to obtain approval from their academic advisors to take more than 19 hours during a long semester or more than 8 hours during a summer term.

Computer Requirements. All students in the college are required to have access to a personal laptop.

Course Credit

Cooperative Education. A Cooperative Education academic credit for engineering students may be available with specific departmental advisor approval.

Transfer Course Evaluation. Courses transferred from another institution will be evaluated for use in a given degree program. Course equivalency between Texas Tech and other institutions is found on the Texas Tech University transfer equivalency website which can be accessed from the main Texas Tech University homepage. Students should contact the institution where credit resides for any approved articulation agreement with WCOE.

Grades for Transfer Courses. A minimum grade of C is required for all courses on any engineering or computer science degree plan.

Course Substitutions. Any substitution of courses specified in a degree program requires the written approval of the student's major department. Students must visit with the departmental advisor to discuss options and process for approval.

Pass/Fail. All courses used to satisfy the degree program requirements must be taken for a grade. The pass/fail option is not allowed.

Scholarships

All WCOE scholarships are awarded for one year only and students must reapply each year. The award may not be deferred to future semesters. Current students apply through the TTU Main Scholarship "Current Students" application. The deadline to apply for a WCOE scholarship is February 1 for any given year. For WCOE scholarships, students must be enrolled as a full-time student (a minimum of 12 semester credit hours per semester) in accordance with their engineering degree plan, achieve a cumulative Texas Tech GPA of either 3.25 or 3.50 (dependent on the stipulations of the particular scholarship) and provide a letter of appreciation to the sponsor. Many scholarships have higher GPA requirements. Failure of the recipient to submit the letter of appreciation to the sponsor by the date stated in the offer letter will result in forfeiture of the scholarship. For

departmental scholarships, students must be full-time students and meet the department's scholarship requirements. In the event of a break in studies for any reason (including coops, internships, removal from the college, etc.), the scholarship will be forfeited.

Students must make satisfactory academic progress toward their degree to remain eligible for college-level scholarships. Failure to complete coursework successfully with passing grades by the end of each period of enrollment will put both current and future financial aid eligibility at risk. Violation of Texas Tech's academic integrity policies will result in loss of scholarship.

Graduation

Graduation Requirements. To fulfill graduation requirements, a student must complete each course specified in the degree program with a grade of C or higher. Course substitutions may be used to fulfill degree program requirements as approved by department.

Application for Degree. Students must submit a "Confirmation of Graduation Date" electronically in their student dashboard on RaiderLink at least six months before the anticipated date of graduation. All requirements for an undergraduate degree must be completed within seven years of the date of the catalog chosen or the catalog must be changed.

Undergraduate Minors

Engineering

This minor consists of a minimum of 18 hours of engineering coursework with at least 6 hours completed at the junior level or above (3000- or 4000-level courses) and taken at WCOE. Because each degree program may have different requirements for upper-level courses, students should verify the requirements with either the WCOE lead advisor or WCOE representative. The WCOE Academic Dean must approve all programs of study for this minor. No letter grades of D, F, nor pass/fail will be accepted for any engineering minor courses (C or better only). Non-engineering majors are required to have a 2.75 GPA to pursue the minor.

Project Engineering

A minor in Project Engineering consists of 18 hours of coursework that includes CONE 4324, CONE 4322 or IE 3329, ENGL 2311 or ENGL 3365, IE 4320, IE 4322 or BA 3303, and SCM 3353. This minor is open to all engineering majors. Many engineering students will have opportunities to include two or three of these courses within the major as well as the minor. The project engineering minor prepares students to plan and coordinate technical engineering initiatives to ensure completion on time and on budget.

Robotics

The minor in Robotics is a college-level interdisciplinary minor hosted by the Edward E. Whitacre Jr. College of Engineering (WCOE) with the commitment and support from involved departments, including Mechanical Engineering (ME), Electrical and Computer Engineering (ECE), Computer Science (CS), and Industrial, Manufacturing and Systems Engineering (IMSE). This minor consists of 18 hours of coursework, at least 6 of which must be completed at the junior level or above (3000- or 4000-level courses). A maximum of 9 hours is allowed to be taken from the list of courses required for the student's engineering degree. Course selections must be approved by the Coordinator of Minor in Robotics.

- The required course for the Robotics minor is ENGR 4001.
- The following courses must have robotics relevance. This list includes design, internship, competition, outreach, and research courses. Select at least one course: CS 4000, 4331, 4366; ECE 4331, 4332, 4333; IE 4120, 4331, 4333; ME 4000, 4331, 4371; and ECE 4334
- Select up to four courses from: CS 2413, 3364, 3366, 3368; ECE 2372, 3301, 3302, 3331, 3353, 4363, 4367, 4375, 4379, 4380; IE 3352, 4301, 4306, 4316, 4358; ME 2302, 3333, 3365, 4330, 4334, 4335, and 4370.

Bioengineering, M.S., Accelerated Degree

Undergraduate students at Texas Tech University who are majoring in Chemical Engineering, Computer Engineering, Computer Science, Electrical Engineering, and Mechanical Engineering may apply to our accelerated BS/M.S. in Bioengineering program. This program is intended for our

best undergraduates who wish to stay on for a master's degree. Students in the program get an early start on master's work by taking three graduate courses in their senior year, in place of three senior elective courses, to complete their BS degree. They then take the remaining graduate courses the following year and can carry out their thesis research to complete their M.S. in Bioengineering degree. Work on laboratory projects during the senior year may provide background for the thesis.

Undergraduate Course Descriptions

Course descriptions for the college's various engineering concentrations can be found within the catalog information for each department. Courses with an ENGR prefix are common to many disciplines within the college and can be viewed below.

Bioengineering (BIOE)

- 3101—Bioengineering Laboratory (1).** Covers laboratory topics strongly related to chemical and biological engineering background, including tissue engineering, microscopy, industrial biotechnology, and drug design.
- 3202—Bioinstrumentation and Bioinformatics Laboratory (2).** Covers laboratory topics strongly related to chemical and biological engineering background, including tissue engineering, microscopy, industrial biotechnology, and drug design.
- 4301—Bioengineering System Design (3).** Covers systematic design processes, engineering economics, FDA requirements, safety engineering ethics, design failures, and sustainability through the design of biomedical and biotechnological devices.

Engineering (ENGR)

- 1105—Strategies for Success in Engineering (1).** Laboratory course to provide engineering majors with practice in skills to improve academic performance. Topics include study skills and habits, note taking, collaborative learning and teamwork, test-taking skills, and time management.
- 1106—Math Fundamentals for Engineering Students (1).** Prerequisites: MPE score of 4-6 and department approval.
- 1108—General Chemistry Bridge Course for Engineers (1).** Prerequisite: 43% or higher on Chemistry Placement Exam. Review/preview of high school/college chemistry designed to increase preparedness for CHEM 1307 while allowing co-registration in the ConocoPhillips Academic Success Bridge Program. [CHEM 1101]
- 1110—Engineering Seminar (1).** Introduction of all first year and transfer students to the practice and career paths of engineering majors.
- 1301—Engineering Design for Sustainability (3).** Emphasizes energy, environment, creativity, engineering design, innovation, entrepreneurship and teamwork. Teams design projects focused on conceptualization of sustainable transportation and/or building systems for the future.
- 1315—Introduction to Engineering (3).** [ENGR1201] Prerequisite: MATH 1451 (may be taken concurrently). Introduction to the engineering profession, including the distinction between different majors, engineering problem solving, MatLab programming, Excel basics, professionalism and ethics, and experiences in team design projects.
- 1320—Bio-Inspired Design for Engineers (3).** Prerequisites: A score of at least 4000 on the STA2, 530 on the SATM and composite score of 1010 or a score of at least 19 on the ACTM and composite score of 23, or TSI Math of 350 or TSI2.0 Math of 950 or TSI2.0 Math Diagnostics 6, or a C or better in either MATH 0302, REF 0302, TSI 0502, TSI 0330, or TSI 0340. Designed to introduce students to and give a basis for bio-inspired design. Students will learn about various biomimetic methods and projects.
- 1330—Computational Thinking with Data Science (3).** Prerequisites: A score of at least 4000 on the STA2, 530 on the SATM and composite score of 1010 or a score of at least 19 on the ACTM and composite score of 23, or TSI Math of 350 or TSI2.0 Math of 950 or TSI2.0 Math Diagnostics 6, or a C or better in either MATH 0302, REF 0302, TSI 0502, TSI 0330, or TSI 0340. Introduces Python programming, its relevant modules and libraries, and computational thinking for solving problems in Data Science. Students will learn data science approaches to importing, manipulating, and analyzing data as well as modeling and visualizing real-world data sets in various science and engineering disciplines.
- 1340—Introduction to Engineering Design (3).** First-year, project-based, hands-on engineering design process course emphasizing developing oral and written communication skills. Students work in teams to design, implement, and test prototypes or solutions relevant to their engineering discipline.

- 2331—**Professional Communication for Engineers (3)**. Prerequisite: ENGL 1302. Rhetorical theory and conventions applied to communication strategies for engineering practice in the global workplace, addressing collaboration, ethical situations, community service, and electronic communication. Fulfills core Communication (Oral) requirement.
- 2340—**Introduction to Robotics (3)**. Prerequisites: C or better in PHYS 1408, ENGR 1330, MATH 1451, MATH 1452. Fundamentals for understanding modern robotics in industrial applications with hands-on experience.
- 2392—**Engineering Ethics and Its Impact on Society (3)**. Development of ethical reasoning and enhancing critical thinking skills using theory and case studies with applications to engineering practice, including international issues. Available in classroom and by online distance learning. Fulfills core Language, Philosophy, and Culture requirement.
- 2393—**Environmental Literacy and Ethics (3)**. Familiarizes students with some of the contemporary challenges they are likely to face as professionals as the concepts and practices of environmental literacy and sustainability become more prevalent in their industries.
- 3000—**Engineering Cooperative Education (V1-6)**. Prerequisite: Approval by the Engineering Associate Dean. Global Internships. Alternately, field course for supervised pre-professional educational employment experiences in industry and/or government involving assignments in the student's major.
- 3303—**Fundamentals of Mechanics (3)**. Prerequisite: PHYS 1408. Introduction to the principles of mechanics, including statistics, dynamics, and mechanics of solids.
- 3321—**Fundamentals of Thermal Science (3)**. Prerequisite: PHYS 1408. Introduction to the principles of the thermal sciences, including thermodynamics, fluid mechanics, and heat transfer.
- 4001—**Special Topics in Engineering (V1-6)**. Prerequisite: Departmental approval. Special topics in engineering. May be repeated for credit.
- 4361—**Global Regulatory and Legal Requirements of Quality (3)**. Regulatory requirements for the healthcare industry from an engineering perspective. [ENGR 5361]
- 4362—**Product Development and Validation (3)**. Prerequisite: ENGR 4361. Product development and validation targeted to the healthcare industry. [ENGR 5362]
- 4363—**Risk and Failure Analysis (3)**. Prerequisite: ENGR 4361. Regulations that apply to consumer health products risk and failure. [ENGR 5363]

Department of Chemical Engineering

Rajesh Khare, Ph.D., Chairperson

Horn Distinguished Professors and Maddox Distinguished

Engineering Chairs: Chen, Reible

Whitacre Endowed Chair in Sustainable Energy, Director of CASFER: Botte

Bryan Pearce Bagley Regents Chair in Engineering: Vanapalli

Whitacre Endowed Chair of Science & Engineering: H. Gill

Professors: Botte, H. Gill, Khare, Vanapalli,

Associate Professors: Li, Malmali, Marston, Vaughn

Assistant Professors: Gauthier, Gomez-Pastora, Howe, Lu, Zeng

Associate Professor of Practice: Hu

Assistant Professor of Practice: P. Gill

Instructors: Hikal, Hui, Tekin

About the Department

This department supervises the following degree programs:

- Bachelor of Science in Chemical Engineering
- Master of Science in Chemical Engineering
- Doctor of Philosophy in Chemical Engineering

Vision. The Department of Chemical Engineering will be globally renowned for excellence in chemical engineering, discovery, and innovation.

Mission. The Department of Chemical Engineering educates, conducts pioneering research, and disseminates chemical engineering knowledge and innovation through internationally recognized programs for the benefit of society.

Program Educational Objectives. The undergraduate program educational objectives embody the expected accomplishments of graduates during their first few years following graduation. The program educational objectives of the Department of Chemical Engineering (CHE) as adopted by the CHE faculty, with advice from students, alumni, and the CHE External Advisory Board are as follows:

- Graduates will be successful in chemical engineering-related careers and other diverse career paths.
- Graduates will continue professional development and will pursue continuing education opportunities relevant to their careers.
- Some graduates will pursue advanced degrees.

Student Outcomes. Student outcomes are statements of the expectations for the knowledge and skills that students should possess when they graduate with a Chemical Engineering BS from Texas Tech University.

Graduates of the program must demonstrate the following:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply the engineering design process to produce solutions that meet specified needs with consideration for public health and safety, and global, cultural, social, environmental, economic, and other factors as appropriate to the discipline.
3. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
4. An ability to communicate effectively with a range of audiences.
5. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
6. An ability to recognize the ongoing need to acquire new knowledge, to choose appropriate learning strategies, and to apply this knowledge.
7. An ability to function effectively as a member or leader of a team that establishes goals, plans tasks, meets deadlines, and creates a collaborative and inclusive environment.

Program Overview. The profession of chemical engineering combines the principles of physical and chemical sciences with the discipline of engineering to solve modern technological problems and be of effective service to society. The chemical engineer is largely responsible for the continual development of new processes and new products that have a direct impact on improving the quality of life and the environment. To this end, the department provides a broad-based program with individual, academic, and professional counseling.

The importance of professionalism in engineering cannot be overemphasized. Chemical engineering students are presented with a code of professional behavior and ethics at each academic level and are required to adhere to it. Copies of these codes are available on request.

The chemical engineering curriculum is sufficiently general that upon completion the student is prepared for a career in any of the process industries that involve chemical transformations. Employment opportunities cover a wide spectrum that includes, among others, petroleum, plastics production, basic chemicals, petrochemicals, pharmaceuticals, metals, textiles, semiconductors, and various biomedical and biological specialties. Many chemical engineers also are directly involved in the design of systems to minimize pollution of the environment or are active with governmental regulatory agencies that set environmental standards.

Continuing advances in the practice of chemical engineering include extensive use of computer simulation and computer control of chemical processes. The Department of Chemical Engineering at Texas Tech has well-established programs in both of these areas. All chemical engineering students must have access to a personal laptop computer running the Windows operating system, including Microsoft Word, Microsoft Excel, and Python software. Many on-campus classes have their own Internet sites, and some classes are available only on the Internet. For this reason, access to an Internet provider is strongly recommended. Access to camera and microphone is also recommended to get access to hybrid teaching modality courses when available and/or required.

To be prepared for professional training as well as to practice chemical engineering professionally, it is essential that the prospective engineer have a good background in the physical sciences, namely mathematics, physics, and chemistry, in addition to the engineering sciences. Summer experience in a chemical processing industry is strongly recommended as part of the preparation for professional practice. To illustrate the application of engineering principles, visits to processing installations may be required as part of academic coursework.

Graduate Programs

For information on graduate programs offered by the Department of Chemical Engineering, visit the Graduate Programs section of the catalog on page 328.

Undergraduate Programs

General Standards and Requirements. Admission requirements and academic standards for the Department of Chemical Engineering are consistent with the plan for the Edward E. Whitacre Jr. College of Engineering. Refer to the introduction to the Whitacre College of Engineering section of this catalog for a description of the criteria for initial admission to the Whitacre College of Engineering and the lower-division foundational curriculum: ENGL 1301, ENGL 1302; MATH 1451, MATH 1452; CHEM 1307/CHEM 1107; PHYS 1408; ENGR 1110, ENGR 1330, ENGR 2392, and ENGR 1320 or ENGR 1340. Completion of this curriculum with a minimum GPA of 2.5 is required for formal admission to the Department of Chemical Engineering.

A student may apply for admission to the upper division of a degree program upon completion of the foundational curriculum and a minimum of 12 credit hours of Texas Tech coursework. The acceptance criterion is based exclusively on a cumulative GPA for coursework completed at Texas Tech. The specific GPA standard varies among the degree programs and may change from one academic year to the next as necessary to align enrollments with the educational resources. Students entering the Texas Tech chemical engineering upper-division degree program must have a minimum 2.5 GPA.

The academic standards required by the Whitacre College of Engineering and the Department of Chemical Engineering are given in the introduction to the Whitacre College section of the catalog and summarized below. Exceptions to these standards are at the discretion of the Dean of the Whitacre College of Engineering.

- A grade of C or better is required for all courses in an engineering degree plan.
- A grade of C or better must be achieved in all prerequisites before the subsequent course may be attempted.
- A minimum 2.5 GPA is required to maintain academic good standing and continued membership in the Whitacre College of Engineering.
- A full-time student must achieve a C or better in 18 credit hours of coursework in the degree plan in each year (fall and spring).
- An engineering course may be repeated only twice after a course drop, withdrawal, or failure to achieve a C or higher. A maximum of three engineering courses may be repeated.

Assessment. The department uses outcome assessment to monitor quality. In addition to activities that contribute to course grades, students should expect periodic assessment of technical competence, including a comprehensive examination in their senior year.

Scholarships. In addition to scholarships offered through the university's Financial Aid Office and the Whitacre College of Engineering, the Department of Chemical Engineering offers scholarships to qualified students.

Curriculum. The first curriculum table in this section gives an eight-semester sequence of required courses that must be taken in the order shown as partial requirements for the BSChE degree. The remaining requirements can be taken as the student's load permits, provided all prerequisites are met. Specification of prerequisites implies all prior prerequisites must have been met. Oral communication is included in CHE 2306 and CHE 4455. Communication literacy courses include CHE 2306, CHE 3232, CHE 4232, and CHE 4455.

The department also offers a combined BS and M.S. curriculum in which completion of degree requirements leads to the awarding of two degrees (see curriculum table).

Minors. Along with the BSChE degree, a student may declare a minor in a field of his or her choice. Any required or elective courses in the chemical engineering curriculum may be applied toward the minor, with the approval of the minor department. While declaration of a minor is not required, it is strongly recommended. Minors in bioengineering and in polymers and materials are offered by the department. A minor in chemistry or mathematics can also be earned with very few additional hours.

Undergraduate Minors

Bioengineering

A minor in bioengineering requires a minimum of 21 hours in biology, chemistry, and bioengineering courses. Required courses include BIOL 1403; CHEM 1308/CHEM 1108; CHEM 3306/CHEM 3106 or BIOL 1404 or MBIO 3400; CHE 4363 or ECE 5356. Two courses from the approved list of bioengineering electives must also be completed.

Chemical Engineering

A minor in chemical engineering consists of 18 or more hours in chemical engineering courses, including CHE 2310, 2321, 3315, 3322, 3326, and one additional CHE course. Prerequisites for all of these courses will be enforced.

Polymers and Materials

The minor in polymers and materials consists of 18 hours, six of which must be taken outside of the student's major. Two courses are required: CHE 4344 Polymers and Materials Laboratory and a course in materials science and engineering (either CHE 3330 or ME 3311). The remaining four courses should be selected from the following list: CHEM 3306, 4310; CHE 4340, 4341, 4342, 4346; ECE 4381; ME 3228.

Chemical Engineering, BS
Recommended Upper-Division Curriculum**SECOND YEAR***Fall*

- ☐ MATH 2450 - Calculus III with Applications (4 SCH)
- ☐ CHEM 1308 - Principles of Chemistry II (3 SCH) **AND**
 - ☐ CHEM 1108 - Experimental Principles of Chemistry II (1 SCH)
- ☐ CHE 2310 - Introduction to Chemical Process (3 SCH)
- ☐ PHYS 2401 - Principles of Physics II (4 SCH)

Undergraduate Course Descriptions**Chemical Engineering (CHE)**

- 1121—Chemical Engineering Seminar (1).** Prerequisite: For chemical engineering majors only. Readings and discussion of the chemical engineering profession; history, ethics, career paths, and research opportunities.
- 1305—Engineering Analysis I (3).** Prerequisite: CHE 1121 or departmental approval. Prerequisite or corequisite: MATH 1451. Synthesis and analysis of typical engineering problems emphasizing the use of computing tools, spreadsheet and compiler programming.
- 2306—Exposition of Technical Information (3).** Prerequisite: ENGL 1302. Organization and presentation of experimental data, and research interpretation and conclusions. Computer-aided preparation of engineering reports. Fulfills core Communication (Oral) requirement. (CL)
- 2310—Introduction to Chemical Process (3).** Prerequisites: ENGR 1330, CHEM 1307, ENGL 1301, MATH 1451, and PHYS 1408 (concurrent enrollment allowed). Units and conversions, process variables, material and energy balances, process flow sheet analysis, phase equilibrium, elementary transient balances.
- 2321—Chemical Engineering Thermodynamics I (3).** Prerequisite: CHE 2310 (or co-requisite with department approval). Prerequisite or corequisite: MATH 2450. Properties of pure substances, ideal gas behavior, heat effects in industrial reactions, first and second law analyses, energy conversion and power cycles.
- 3232—Chemical Engineering Transport Laboratory (2).** Prerequisites: CHE 3315 and CHE 3326. Prerequisite or corequisite: CHE 2306, CHE 3341, and CHE 4372. Experiments in mass, momentum, and heat transport; statistical analysis of data. (CL)
- 3315—Fluid Mechanics (3).** Prerequisites: 2.5 TTU GPA; CHE 2310 (or corequisite with department approval). Prerequisite or corequisite: MATH 3350. Principles of momentum transport. Application to laminar and turbulent flow, metering, porous media, and settling.
- 3322—Chemical Engineering Thermodynamics II (3).** Prerequisite: C or better in CHE 2321, CHE 2310, and CHEM 3305 concurrent enrollment allowed), and MATH 3350. Solution thermodynamics, phase and chemical equilibria, analysis of processes.
- 3323—Chemical Reaction Engineering (3).** Prerequisites: CHE 3322 and CHE 3326. An introduction to the kinetics of chemical conversion processes and the design of chemical reactors.
- 3326—Heat Transfer (3).** Prerequisites: CHE 2321, CHE 3315, and MATH 3350. Principles of energy transport. Application to heat conduction, convection, and radiation. Design and performance of heat exchangers and furnaces.
- 3330—Engineering Materials Science (3).** Prerequisites: CHE 2321, CHEM 1308, and MATH 1452. Engineering properties of metals, ceramics, and polymers; molecular, crystal, and microstructure configurations; selection of materials for applications.
- 3341—Mass-Transfer Operations (3).** Prerequisite: CHE 3322. Theory and practice of mass transfer. Particular emphasis on the operations of distillation, absorption, and extraction.
- 4000—Special Problems in Chemical Engineering (V1-6).** Prerequisite: Departmental approval. Individual studies in chemical engineering areas of special interest. May be repeated for credit.
- 4020—Internship (V1-6).** Individual supervised work experience in an industrial setting, or external industrial or government laboratory location.
- 4121—Chemical Engineering Research Seminar (1).** Prerequisite: Senior standing in chemical engineering. External speakers focus on their current research in chemical engineering and related fields.
- 4153—Process Control Laboratory (1).** Prerequisite: CHE 4353. Experiments with control equipment and the minicomputer. Professional practice course.
- 4232—Unit Operations Laboratory (2).** Prerequisites: CHE 3232 and senior standing in chemical engineering. Laboratory experiments illustrating the basic principles of unit operations. Includes instruction on experimental methods, equipment scale up, and technical communication. (CL)
- 4315—Experimental Techniques in Fluid Dynamics (3).** Prerequisite: CHE 3315. Prerequisite or corequisite: CHE 3232. Experimental techniques for fluid dynamics, including flow visualization, fluid characterization, image processing and analysis. Analytical modeling and statistical treatment of experimental data. Significant laboratory component.
- 4322—Chemical Engineering Review (3).** Prerequisite: 2.5 TTU GPA; senior standing in chemical engineering, C or better in IE 2324. Corequisite: CHE 4353. Review of chemical engineering and science courses. Preparation for Chemical Engineering FE exam. Design and computer simulation of process units.
- 4330—Advanced Topics in Chemical Engineering (3).** Prerequisites: Junior or senior standing in Chemical Engineering or department approval. Advanced topics in chemical engineering areas of special interest. Approved departmental elective. May be repeated for credit. [CHE 5330]
- 4335—Intermediate Transport Phenomena (3).** Prerequisites: CHE 3326, CHE 3341; MATH 3350 or MATH 3354; or instructor consent. Mass, momentum, and energy transport; Fick's law; solution of partial differential equations in time and space; interfacial transport; applications to separations.
- 4340—Polymer Processing (3).** Prerequisite: CHE 3315. Structure, processing, and properties for industrial plastics processing operations, including extrusion, mixing, calendaring, blow molding, thermoforming, fiber spinning, compression molding, injection molding, and recycling.
- 4341—Polymerization Engineering (3).** Prerequisites: CHEM 3305 and MATH 2450. Polymerization reactions, mechanisms and kinetics, control of properties through reaction and processing, polymerization reactor and process design, degradation reactions.
- 4342—Polymer Physics and Engineering (3).** Prerequisite: CHE 3330. Fundamentals of polymer science and engineering. Solution properties, chain conformation and molecular mass characterization. Rubber elasticity and viscoelastic behavior. Crystalline polymers and morphology.
- 4344—Polymers and Materials Laboratory (3).** Prerequisite or corequisite: CHE 3330, or ME 3311. Synthesis and properties of materials including polymers, polymerization, transitions, phase separation, mechanical properties, and processing.
- 4346—Polymer Viscoelasticity (3).** Prerequisites: MATH 3350 and CHE 3330 or consent of instructor. Linear viscoelasticity, Boltzmann superposition, experimental methods, molecular theory, and mechanical properties of solid polymers.
- 4353—Process Control (3).** Prerequisites: Senior standing; CHE 3315, CHE 3341, CHE 3323; MATH 3350 or MATH 3354. Study of the principles of process dynamics and control and their applications to feedback control.
- 4356—Process Safety (3).** Prerequisite: CHE 3315 and CHE 3341 or consent of instructor. Introduction to hazards associated with chemical, physical, and biological processes. Prepares students for future industrial employment.
- 4363—Biochemical Engineering (3).** Prerequisite: CHE 3323 (may be taken concurrently), CHEM 3305, MATH 2450, PHYS 1408. Introduction to biochemical engineering, including design of processes that involve biological organisms; cellular, molecular and tissue engineering; biomaterials and biotransport.

- 4364—**Chemical Engineering Applications in Biological Systems (3)**. Prerequisite: MATH 3350 or MATH 3354. Transport phenomena and chemical reactions at the molecular and cellular level in biological systems.
- 4365—**Biotransport (3)**. Prerequisites: CHE 3315, MATH 3350 or MATH 3354, or consent of instructor. Mass and momentum transport in living systems.
- 4366—**Biomicrofluidics (3)**. Prerequisite: CHE 3315. Fluid phenomena at small scales. Science and engineering of miniaturized lab-on-chip devices for applications in chemical, biomolecular, and cellular analysis.
- 4372—**Engineering Experimentation (3)**. Prerequisite: Senior standing in science or engineering. Strategy in experimentation; planning efficient experiments; analysis of data and interpretation and presentation of results; and Six Sigma methodology.
- 4375—**Analysis of Electrochemical Systems (3)**. Prerequisites: CHE 3315, CHE 3322, and CHE 3326; or instructor approval for other engineering majors. Application of thermodynamics, transport phenomena, and reaction engineering to design, describe, and understand the performance of electrochemical systems and processes. Applications include electrolysis, batteries, and fuel cells. [CHE 5375]
- 4378—**Sustainable Chemical Engineering: Concept and Design (3)**. Prerequisites: CHE 3326 and CHE 3341, or consent of instructor. Students will learn to apply the concepts of sustainable engineering into design of chemical processes. Discussion will focus on the use of renewable energy and storage. [CHE 5378]
- 4381—**Numerical Techniques for Chemical Engineering Problems (3)**. Prerequisite: MATH 3350. Numerical methods for integration, solution of systems of algebraic equations, initial- and boundary-value problems, and optimization.
- 4385—**Bioprocess Control (3)**. Prerequisites: MATH 3350 or MATH 3354 and CHE 4353 or consent of instructor. Problems and solutions associated with optimization and control of bioprocesses.
- 4390—**Fundamental Concepts in Heterogeneous Catalysis (3)**. Prerequisites: CHE 3322 or CHE 3323 or CHEM 3308 or instructor consent. Introduction to modern heterogeneous catalysis and electrocatalysis; phase and surface equilibria; rates of surface reactions with analogy to homogeneous processes; electronic structure effects in catalysis. [CHE 5390]
- 4391—**Chemical Engineering Application in Energy Science (3)**. Prerequisite: Senior standing in chemical engineering. An introduction to conventional and renewable energy sources with an emphasis on chemical engineering applications, enhanced oil recovery techniques, and renewable energy technologies.
- 4392—**Entrepreneurship for Chemical Engineers (3)**. Business plan preparation, types of enterprises and initial steps including key permits necessary to start a chemical engineering enterprise.
- 4393—**Colloid Science and Engineering (3)**. Prerequisite: Senior standing in CHE. Introduction to fundamentals of colloid science, interfacial phenomena, suspensions and complex fluids, engineering and assembly of colloidal materials, and enhanced oil recovery.
- 4394—**Soft Matter Engineering (3)**. Prerequisites: CHE 3315, CHE 3322, and CHE 3330; or consent of instructor. Introduction to fundamentals of soft matter physics, engineering structured fluids based on microscopic structure-function relationship for practical applications in food, consumer products, and pharmaceuticals.
- 4455—**Chemical Process Design and Simulation (4)**. Prerequisites: C or better in CHE 3322, CHE 3341, CHE 4353; IE 2324. Design of chemical processes and equipment using computer simulation, flow sheeting, optimization and process synthesis techniques. (CL)
- 4555—**Chemical Process Design and Simulation (5)**. Prerequisites: CHE 3323, CHE 3341, CHE 4322, CHE 4353, IE 2324. Design of chemical processes and equipment using computer simulation, flow sheeting, optimization, and process synthesis techniques.

Department of Civil, Environmental and Construction Engineering

W. Andrew Jackson, Ph.D., P.E., Chairperson

Horn Distinguished Professors: Mehta, Reible

Donovan Maddox Distinguished Engineering Chair: Reible

Professors: Chen, Fedler, Jackson, Liu, Nejat, Shankar, Song, Walker, Won, Zuo

Associate Professors: Cleveland, Ghebrab, Guelfo, Na, Seo

Assistant Professors: Bae, Betha, Deng, Deonaraine, Gray, Lin, Lu, Matinpour, Millerick, Park, Polaczyk, Wang

Research Assistant Professor: Bailoo

Instructors: Bundock, Carter, Fei, Germany, Gurley, Phillips, Robinett, Spears

CONTACT INFORMATION: 911 Boston | Box 41023

Lubbock, TX 79409-1023 | T 806.742.3523 | F 806.742.3488

About the Department

This department supervises the following degree programs:

- Civil Engineering BS
- Construction Engineering BS
- Master of Science in Civil Engineering
- Master of Environmental Engineering
- Doctor of Philosophy in Civil Engineering
- Graduate Certificate in Construction Engineering and Management

Dual Degree Program

- Civil Engineering BS / Architecture, B.S.

Vision. The vision of the Department of Civil, Environmental and Construction Engineering is to be nationally and internationally recognized for producing well-prepared graduates, developing visible research programs, and advancing knowledge through public outreach and professional service.

Mission. The mission of the department has four elements:

- To provide excellent instruction and design experiences essential for graduates to enter the practice of civil, environmental and construction engineering and pursue lifelong professional development.
- To provide research opportunities for students that generate, communicate, and apply new knowledge for the betterment of society.
- To provide graduates who are well-educated in both the technical disciplines and the humanities and are prepared to contribute to society and excel in a diverse and highly competitive global workforce.
- To foster a spirit of service and leadership among students and faculty and assist the public in addressing issues concerning the use of resources, protection of the environment, and development of infrastructure.

Program Educational Objectives. The undergraduate program educational objectives embody the expected accomplishments of graduates during their first few years following graduation. The program educational objectives of the Department of Civil, Environmental and Construction Engineering as adopted by the faculty and the Advisory Council are as follows:

Civil Engineering BS Program

- Graduates will meet the expectations of employers of civil engineers.
- Graduates will continue their professional development through graduate study if qualified and continuing education.

Construction Engineering BS Program

- Graduates will attain leadership positions in their professional careers.
- Graduates will advance their profession through continued study, professional registration, and involvement in professional development activities.

- Graduates will engage in activities that contribute to global and local community development.

Environmental Engineering MEV Program

- Graduates will meet the expectations of employers of environmental engineers.
- Graduates will continue their professional development through continuing education.

These objectives are published in the university's catalog and on the Department of Civil, Environmental and Construction Engineering website.

Student Outcomes. Student outcomes are statements of the expectations for the knowledge and skills that students should possess when they graduate with a Civil Engineering BS, Construction Engineering BS, or the Environmental Engineering MEV degree from Texas Tech University.

Graduates of the program must demonstrate the following:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

By the time of graduation, civil engineering students should also demonstrate the following civil engineering program-specific criteria:

1. Apply knowledge of mathematics through differential equations, calculus-based physics, chemistry, and one additional area of science.
2. Apply knowledge of four technical areas appropriate to civil engineering.
3. Conduct civil engineering experiments and analyze and interpret data.
4. Design a system, component, or process in more than one civil engineering context.
5. Explain basic concepts in management, business, public policy, and leadership.
6. Explain the importance of professional licensure.

By the time of graduation, construction engineering students should also demonstrate the following construction engineering program-specific criteria:

1. Apply knowledge of mathematics through differential and integral calculus, probability and statistics, general chemistry, and calculus-based physics.
2. Analyze and design construction processes and systems in a construction engineering specialty field, applying knowledge of methods, materials, equipment, planning, scheduling, safety, and cost analysis.
3. Explain basic legal and ethical concepts and the importance of professional engineering licensure in the construction industry.
4. Explain basic concepts of management topics such as economics, business, accounting, communications, leadership, decision and optimization methods, engineering economics, engineering management, and cost control.

By the time of graduation, environmental engineering students should also demonstrate the following environmental engineering program-specific criteria:

1. Proficiency in mathematics through differential equations, probability and statistics, calculus-based physics, general chemistry earth science, biological science, and fluid mechanics.

2. Knowledge of environmental issues associated with air, land, and water systems and associated environmental health impacts.
3. An ability to conduct laboratory experiments and critically analyze and interpret data.
4. Performed engineering design by means of design experiences integrated throughout the professional component of the curriculum.
5. Proficiency in advanced principles and practice relevant to the program objectives.
6. Understanding of professional practice concepts and the roles and responsibilities of public institutions and private organizations pertaining to environmental engineering.

As required for masters' programs, the graduates of the Environmental Engineering MEV degree must demonstrate an ability to apply advanced knowledge of wastewater treatment analysis and design.

The Civil Engineering BS, the Construction Engineering BS, and the Environmental Engineering MEV are accredited by the Engineering Accreditation Commission of ABET, www.abet.org.

Graduate Programs

For information on graduate programs offered by the Department of Civil, Environmental and Construction Engineering, visit the Graduate Programs section of the catalog on page 329.

Undergraduate Programs

General Standards and Requirements. Admission requirements and academic standards for the Department of Civil, Environmental and Construction Engineering are consistent with the enrollment plan for the Edward E. Whitacre Jr. College of Engineering. Refer to the introduction to the Whitacre College of Engineering section of this catalog for a description of the criteria for initial admission to the Whitacre College of Engineering and the lower-division foundational curriculum. The recommended foundational curriculum for civil, environmental and construction engineering consists of ENGL 1301, ENGL 1302; MATH 1451, MATH 1452; CHEM 1307/CHEM 1107; PHYS 1408; ENGR 1110, ENGR 1330, ENGR 2392, and ENGR 1320 or ENGR 1340.

A student may apply for admission to the upper division of a degree program upon completion of the foundational curriculum and a minimum of 12 credit hours of Texas Tech coursework. The acceptance criterion is based exclusively on a cumulative GPA for coursework completed at Texas Tech. The specific GPA standard varies among the degree programs and may change from one academic year to the next as necessary to align enrollments with the educational resources. Students entering Texas Tech after June 1, 2012, must have a minimum 2.5 GPA.

The academic standards required by the Whitacre College of Engineering and the Department of Civil, Environmental and Construction Engineering are given in the introduction to the Whitacre College section of the catalog and summarized below. Exceptions to these academic standards are at the discretion of the Dean of the Whitacre College of Engineering.

- A grade of C or better is required for all courses in an engineering degree plan.
- A grade of C or better must be achieved in all prerequisites before the subsequent course may be attempted.
- A minimum 2.5 GPA is required to maintain academic good standing and continued membership in the Whitacre College of Engineering.
- A full-time student must achieve a C or better in 18 credit hours of coursework in the degree plan in each 12-month period.
- An engineering course may be repeated only three times after a course drop, "DG," or failure to achieve a C or higher.

Students are required to plan their program in consultation with faculty and staff academic advisors. Emphasis on communication skills requires the inclusion of a core curriculum oral communications course. All students must have a personal computer, which should be a laptop at a minimum, and should check with the department to obtain recommended specifications.

The required undergraduate programs for civil, environmental and construction engineering are contained in the curriculum tables shown in this section.

The broad Civil Engineering BS curriculum includes structural, geotechnical, environmental, water resources, and transportation topics to prepare the graduate for multiple career options. The Construction Engineering BS curriculum emphasizes both construction management and engineering and structural engineering. The undergraduate courses in the integrated Environmental Engineering MEV curriculum provide strong preparation in environmental and water resources engineering, as well as biology and chemistry. The curriculum in construction engineering consists of a basic core of about 63 semester hours of specified courses. These courses in basic science, humanities, social studies, mathematics, and applied science give a foundation in engineering, technology, and general education. BSCE, BS ConE, and MEV graduates are prepared to move toward professional licensure in any state with the proper combination of examinations (FE, PE) and experience required by that state.

The department requires students to conduct a degree audit in their junior year. Following this audit, they must meet with their academic advisors and faculty to discuss all courses remaining for completion of their degree. To graduate, the student must complete the specified minimum number of hours in each of these subject areas and have a C or better in all degree program courses. Changes in the degree plan or exceptions to the above conditions require written approval of the chairperson of the Department of Civil, Environmental and Construction Engineering. Forms and information pertaining to departmental regulations are available in the Department of Civil, Environmental and Construction Engineering office.

Minors. Civil, environmental, and construction engineering majors may pursue a minor in any field of study at Texas Tech. A minor consists of 18 hours of coursework, with at least 6 hours at the junior or senior level.

Students interested in obtaining both the Civil Engineering BS and the Bachelor of Science in Architecture degrees should refer to the dual degree curriculum listed in the Huckabee College of Architecture section of this catalog.

Internship. The department believes that its students benefit greatly from participation in an internship program. One of the major benefits is improved full-time employment opportunities after graduation. Accordingly, **all construction engineering students** are required to complete at least the equivalent of three months of full-time work of an appropriate nature to graduate. However, part-time work of an appropriate nature conducted during the regular semester also will be considered. Students must enroll in CONE 4100 to obtain internship credit.

Communication Literacy Requirement. CL courses for the Civil Engineering major are CE 3341, 3354, 3372, 4430. CL courses for the Construction Engineering major are CONE 4300 and 4324.

Undergraduate Minors

Civil Engineering

The basic core courses for a civil engineering minor are CE 2301, 3303, and 3305. The last 9 hours should consist of courses from geotechnical, transportation, structures, water resources, or environmental engineering topics.

Construction Engineering

A minor in construction engineering is available by completing 18 hours of selected construction engineering courses. See the departmental website for more information. Students must have a 2.75 GPA or higher and completed the prerequisite of passing MATH 1451 to declare a construction engineering minor.

Environmental Engineering

The basic core course for an environmental engineering minor is CE 3305. The remaining 15 hours should consist of courses approved by the environmental faculty advisor.

Accelerated Bachelor's to Master's Degree

Environmental Engineering MEV

The Environmental Engineering MEV is accredited by the Engineering Accreditation Commission of ABET, www.abet.org, and is a 154-hour integrated freshman-to-master's program focusing on environmental engineering.

The major focus areas of water supply resources, environmental chemistry, wastewater management, solid waste management, hazardous waste management, air pollution control, and environmental health are included in specific advanced and graduate-level courses within the curriculum. Students choosing the MEV degree are formally admitted to the upper-division courses after faculty review at the end of the second curriculum year. Students must meet the university's Graduate School admission requirements, which include a GPA of 3.0 or above, before enrolling in graduate-level courses. Further information about the curriculum and assessment procedures can be found at www.depts.ttu.edu/ceweb.

Undergraduate Course Descriptions

Civil Engineering (CE)

- 1207—Engineering Graphics: Software B (2).** Prerequisite: Must be accepted to the Whitacre College of Engineering. For students majoring in civil engineering and construction engineering. Provides a background in orthographic projection, selected topics of descriptive geometry, engineering drawing techniques, and computer-aided design and drafting software.
- 2201—Materials for Constructed Facilities (2).** Prerequisites: PHYS 1408, MATH 1452. Materials science and engineering: properties, economics, quality and sustainability. Metals, aggregates, Portland cement and asphalt concrete, mix design. Wood, masonry, novel materials, semester project.
- 2301—Statics (3).** [ENGR2301, ENGR2401] Prerequisites: MATH 1452, PHYS 1408 (may be taken concurrently). Equilibrium of particles and rigid bodies, friction, centroids, and moments of inertia.
- 3103—Mechanics of Solids Laboratory (1).** Prerequisite: CE 3303. Laboratory measurements and observation of behavior of solid materials.
- 3105—Mechanics of Fluids Laboratory (1).** Prerequisite: CE 3305. Experimental studies of fluid behavior.
- 3121—Geotechnical Engineering Laboratory (1).** Corequisite: CE 3321. Laboratory determination and engineering evaluation of the physical properties of soils.
- 3171—Environmental Engineering Laboratory I (1).** Corequisite: CE 3309. Performance of standard analytical methods used to measure water and wastewater quality. Evaluation of limits to data produced by standard methods.
- 3302—Dynamics (3).** Prerequisites: MATH 2450 (may be taken concurrently) and either CE 2301 or ME 2301. A study of motions of particles and rigid bodies.
- 3303—Mechanics of Solids (3).** Prerequisites: CE 2301 or ME 2301. Theory of stress and strain in elastic and inelastic bodies subject to various conditions of loading.
- 3305—Mechanics of Fluids (3).** Prerequisites: CE 2301 or ME 2301. Hydrostatics; dynamics of viscous and nonviscous fluids; resistance to flow; flow in pipes and open channels.
- 3309—Environmental Engineering (3).** Prerequisite: CHEM 1308 and CE 3305. Corequisite: CE 3171. Water and wastewater characteristics and system design for water and wastewater treatment. Introduction of techniques of solid hazardous waste management and air pollution control.
- 3321—Introduction to Geotechnical Engineering (3).** Prerequisite: CE 3303. Physical properties of soils; theories of soil strength, consolidation, and settlement; soil stabilization; slope stability analysis; selected design topics.
- 3340—Structural Analysis I (3).** Prerequisite: CE 3303. Introduction to the analysis of statically determinate and indeterminate structures.
- 3341—Principles of Structural Design (3).** Prerequisite: CE 3340. Fundamental principles of structural design with consideration for the selection of materials and systems. Team approach to design; oral and written presentations. (CL)
- 3354—Engineering Hydrology (3).** Prerequisite: CE 3305. Analysis and design methods related to the occurrence and distribution of surface and groundwater; precipitation, infiltration, runoff, and frequency analysis. (CL)

Technical Electives (choose from): CE 5331, 5361, 5364, 5366, 5383; CHE 5363; ENTX 6445, 6371; other course with advisor approval.

- 3361—Transportation Engineering (3).** Prerequisite: CONE 2302. Transportation modes; basic design and analysis concepts of highway systems; transportation planning; traffic engineering; intersection control; geometrics; pavement engineering.
- 3372—Water Systems Design (3).** Prerequisite: CE 3305. Hydraulic analysis and design of municipal water distribution, stormwater collection, and wastewater collection systems. Oral and written presentations. (CL)
- 4000—Special Studies in Civil Engineering (V1-6).** Individual studies in civil engineering areas of special interest. May be repeated for credit.
- 4200—Professional Engineering Practice Issues (2).** Prerequisite: Must be within two long semesters of graduation. A study of engineering body of knowledge to prepare students for engineering practice including: licensure, the FE Exam, leadership, and responsible engineering practice. May be repeated.
- 4321—Geotechnical Engineering Design (3).** Prerequisite: CE 3321. Design and construction of foundation systems, geotechnical site investigation, bearing capacity and settlement analysis for shallow foundations, types of deep foundations, axial load capacity of driven piles, drilled shafts, and auger-cast piles, group behavior of piles.
- 4331—Special Problems in Civil Engineering (3).** Individual studies in civil engineering. May be repeated for credit.
- 4333—Special Problems in Water Resources (3).** Prerequisite: CE 3340 or instructor consent. Individual studies in water resources. May be repeated for credit.
- 4340—Structural Analysis II (3).** Prerequisite: CE 3340 or instructor consent. Analysis of structures by matrix methods.
- 4342—Design of Steel Structures (3).** Prerequisites: CE 2201 and CE 3340. A course in design of structural steel systems by the LFRD method.
- 4343—Design of Concrete Structures (3).** Prerequisite: CE 2201 and CE 3341. A course in design of reinforced concrete systems by strength design methods.
- 4351—Pavement Materials and Design (3).** Prerequisite: CE 2201, CE 3303, CE 3321. Pavement system, material properties and selection, analysis of layered structures, pavement design, life-cycle cost, pavement performance evaluation, management of pavement systems. S.
- 4353—Design of Hydraulic Systems (3).** Prerequisite: CE 3305 and CE 3354. Design of open channel and closed conduit conveyance systems for water; includes introduction to HEC-RAS.
- 4363—Groundwater Hydrology (3).** Prerequisite: CE 3354 or instructor consent. Groundwater flow; well hydraulics, development, and management of groundwater resources; water quality; mathematical modeling with available software. Introduction to design of wells and well fields.
- 4371—Geometric Design of Highways (3).** Prerequisite: CE 3361 or instructor consent. Study of geometric design of highways and streets, sign and marking of roadways, and application of computer software in highway design.
- 4430—Design of Engineering Systems (4).** Prerequisites: CE 3341; senior standing; should be taken in last long semester. Interdisciplinary team approach to the design of complex engineering systems; should be taken during last semester of undergraduate program. Oral and written presentations. (CL)

Construction Engineering (CONE)

- 1100—Introduction to Construction (1).** Seminar designed to provide an introduction to the construction industry. Contains a general overview of the industry and the various career paths that are available within the industry as a whole.
- 2200—Construction Methods and Drawings (2).** Introduction to construction methods, processes, and working plans and specifications. Class exercises are used to develop critical drawing interpretation skills.
- 2302—Surveying (3).** Prerequisite: C or better in MATH 1321 or MATH 1451 or MATH 1452 or MATH 2450. Care and use of modern surveying equipment, differential leveling, area calculations, horizontal and vertical curves, and effects of observation errors.
- 3300—Construction Equipment (3).** Corequisite: IE 2324. Introduction to construction equipment including types of equipment, ownership and operational costs, estimating equipment costs, equipment scheduling and selection, and fleet management.

- 3302—MEP Systems and Design for Construction (3).** Prerequisite: At least junior standing in construction engineering or instructor consent. Introduces students to mechanical, electrical, and plumbing systems in buildings. Includes basic design principles, conservation measures, and green building practices.
- 3304—Sustainable Building Design and Construction (3).** Techniques and methods of sustainable construction and design. Addresses the importance of team effort among owners, developers, architects, engineers, and contractors. USGBC and LEED process will be studied.
- 3312—Construction Foundations and Earthwork (3).** Prerequisite: CE 3303. Identifies fundamentals of soil properties and addresses principles of soil mechanics and the design of foundations for structures.
- 4031—Special Topic in Construction Engineering (V1-3).** Elaborates on a special topic of current interest in construction engineering. May be repeated for credit.
- 4100—Construction Internship (1).** Prerequisites: At least junior status in the construction engineering program and consent of the department chairperson. Practical work experience in the construction or engineering industry. The practicum includes a written report and an oral presentation addressing work experience. Requires a minimum work commitment of 3 months.
- 4220—Construction Capstone (2).** Prerequisites: CONE 4300, CONE 4320, and CONE 4322. Prerequisite courses may be taken concurrently with consent of instructor. Design and development of real world construction projects. Projects require cost estimate, project schedule, site safety plan, and onsite preconstruction planning. Written proposals and oral presentations required.
- 4300—Construction Safety (3).** Prerequisites: At least junior status in the construction engineering program or instructor consent. Management of safety and health programs for the construction company, including OSHA regulatory requirements. Students earn a 30-hour OSHA card upon successful completion of OSHA requirements. (CL)
- 4305—BIM Application in Construction Engineering and Management (3).** Prerequisite: At least junior status in the Construction Engineering Program or instructor consent. Students learn how to use building information modeling (BIM) for various managerial applications such as cost optimization, scheduling, and 4D visualization. [CONE 5332]
- 4312—Construction Concrete Structures (3).** Common practices and terminology of construction and design of concrete structures. ACI 318-Strength method emphasizes design, fabrication, and installation of concrete elements. Formwork design is also emphasized.
- 4314—Masonry Construction (3).** Prerequisite: CE 3303. A study of material properties and common practices of design and construction of masonry structures. Use of MSJC code (ACI 530/ASCE 5/TMS 402).
- 4320—Construction Cost Estimating (3).** Prerequisites: At least junior status in the construction engineering program or consent of the department chairperson. Construction drawings and specs used to quantify material, labor, overhead, and equipment for bid preparation. Computer software used to develop construction bid in project simulation and case study.
- 4322—Construction Management (3).** Prerequisite: At least junior status in the construction engineering program or consent of the department chairperson. Addresses modern methods for managing construction projects including CPM scheduling, resource allocation, and funds flow. Practical application made through project simulations.
- 4324—Construction Contracts and Specifications (3).** Prerequisite: At least junior status in the construction engineering program or consent of the department chairperson. Principles and analysis of construction contracts and project specifications as well as contract law, negotiations, and ethics. (CL)

Engineering Graphics (EGR)

- 1206—Engineering Graphics: Software A (2).** [ENGR1204] Prerequisite: Must be accepted to the Whitacre College of Engineering. For students majoring in mechanical and industrial engineering. Provides a background in orthographic projection, selected topics of descriptive geometry, engineering drawing techniques, and computer-aided design and drafting software.

Environmental Engineering (ENVE)

- 1100—Environmental Engineering Seminar (1).** Introduction of first year and transfer students to the practice of environmental engineering.
- 3301—Fundamentals of Environmental Engineering (3).** Prerequisites: CHEM 1308; 2.5 GPA or higher. Prerequisite or corequisite: CE 3305. Introduces fundamental physical, chemical, and biological principles used to understand complex natural systems and design engineered systems. Students acquire the tools to analyze and/or design systems across the breadth of environmental engineering fields. First course of the two-course sequence of Fundamentals of Environmental Engineering.
- 3302—Application of Environmental Engineering (3).** Prerequisites: ENVE 3301; minimum 2.5 TTU GPA. Surveys the technologies and practice of the major fields of environmental engineering and associated environmental issues. Second course of the two-course sequence of Fundamentals of Environmental Engineering.
- 4107—Advanced Physical and Chemical Municipal Water Treatment (1).** Prerequisite: Instructor consent. Prerequisite or corequisite: ENVE 4307. Characterization of water using alkalinity, pH, BOD, and solids concentrations. Students will conduct column tests and filtration studies and analyze water quality data.
- 4185—Microbial Applications in Environmental Engineering Lab (1).** Prerequisite: Instructor consent. Determine concentration of coliforms, nutrients, and organic pollutants in water; analyze water quality data.
- 4191—Advanced Water Treatment Lab (1).** Prerequisite: Instructor consent. Prerequisite or corequisite: ENVE 4391. Design and conduct flocculation, coagulant doses, sedimentation, and disinfection studies; assess impact on water quality.
- 4307—Physical and Chemical Municipal Wastewater Treatment (3).** Prerequisites: CE 3309 or ENVE 3302; instructor consent. Characterization of municipal wastewaters and the application of physical and chemical design procedures to remove and dispose of criteria pollutants in wastewater.
- 4314—Membrane Treatment Processes (3).** Prerequisite: CE 3309 or instructor consent. Introduces the fundamental principles and applications of various membrane processes (MF, UF, NF, and RO) in water and wastewater treatment and quality control.
- 4315—Environmental Chemistry for Pollution Management (3).** Prerequisite: CE 3309 or instructor consent. Introduces the fundamental knowledge of reaction kinetics and chemical equilibria relevant to water quality in natural and engineered processes.
- 4385—Microbial Applications in Environmental Engineering (3).** Prerequisite: BIOL 1402. Presents information regarding bacterial cell structure and microbial genetics, metabolism and the role of microbes in the design of treatment processes and water/wastewater reuse issues. [ENVE 5385]
- 4391—Advanced Water Treatment (3).** Prerequisite: ENVE 4307; instructor consent. Water chemistry and microbiology; design procedures for municipal water treatment; advanced methods of quality control, renovation, and reuse.
- 4399—Biological Municipal Wastewater Treatment (3).** Prerequisite: ENVE 4307 or CE 3309 or instructor consent. Municipal wastewater treatment methods, including suspend and attached growth biological systems, nitrification, denitrification, phosphorous removal, sludge stabilization, and treated effluent and sludge disposal.

Computer Science****Yong Chen, Ph.D., Interim Chairperson****Professors:** Chen, Siame-Namin, Zhang**Associate Professors:** Dang, Lim, Mengel, Morshed, Serwadda, Sheng, Shin, Wei**Assistant Professors:** Ji, Liao, Liu, Pan, Salman, Tiomkin, Yao, Zhan**Professor of Practice:** Zhou**Associate Professor of Practice:** Franklin**Assistant Professors of Practice:** Amjad, Chinta**Instructors:** Alam, Ikram, Pathirage, Rees**CONTACT INFORMATION:** Suite 102, Engineering Center | Box 43104
Lubbock, TX 79409-3104 | T 806.742.3527 | www.cs.ttu.edu**About the Department**

The Computer Science department offers the following degree programs and certificates:

- Computer Science BS
- Master of Science in Computer Science
- Master of Science in Software and Security Engineering
- Doctor of Philosophy in Computer Science
- Graduate Certificate in Security
- Graduate Certificate in Software Engineering

Dual Degree Program

- Computer Science, BS / Mathematics, B.S.

The computer science program will provide students with a broad-based understanding of the computing discipline and prepare them for a productive professional career and/or pursuit of advanced degrees in the field. The computer science curriculum places a strong emphasis on professional skills, hands-on experience, writing, communications, and ethical concerns.

At the completion of a graduate degree, computer science graduates also should have the ability to work in multidisciplinary environments with cross-functional teams, perform modeling and experimental analysis on challenging research problems, and investigate current advances in computing research for the purpose of making innovative contributions that are particularly expected at the Ph.D. level.

Mission Statement. The Department of Computer Science engages in the research, education, and service activities required to create and disseminate the knowledge of problem-solving using computers.

Program Educational Objectives. Within a few years of graduation, Computer Science BS graduates are expected to:

- Practice in a computing-related profession and/or pursue advanced studies.
- Function as responsible professionals with the ability to progress within their organizations.
- Continue professional development through education, training, and/or participation in computing-oriented events and organizations.

Student Outcomes. Computer Science BS graduates of Texas Tech University should attain the ABET Computing Accreditation Commission Criterion 3 Student Outcomes 1-6 and should have an ability to:

1. Analyze a complex computing problem and apply principles of computing and other relevant disciplines to identify solutions.
2. Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.
3. Communicate effectively in a variety of professional contexts.
4. Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
5. Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline.
6. Apply computer science theory and software development fundamentals to produce computing-based solutions.

The Computer Science BS degree program is accredited by the Computing Accreditation Commission of ABET, www.abet.org.

Graduate Programs

For information on graduate programs offered by the Department of Computer Science, visit the Graduate Programs section of the catalog on page 331.

Undergraduate Programs

General Standards and Requirements. Admission requirements and academic standards for the Department of Computer Science are consistent with the dynamic enrollment plan for the Edward E. Whitacre Jr. College of Engineering. Refer to the introduction to the Whitacre College of Engineering section of this catalog for a description of the criteria for initial admission to the Whitacre College of Engineering and the lower-division foundational curriculum. The recommended foundational curriculum for computer science consists of ENGL 1301, ENGL 1302; MATH 1451, MATH 1452; CHEM 1307, CHEM 1107; PHYS 1408; ENGR 1110, ENGR 1330, ENGR 2392, and ENGR 1320 or ENGR 1340.

A student may apply for admission to the upper division of a degree program upon completion of the foundational curriculum and a minimum of 12 credit hours of Texas Tech coursework. The acceptance criterion is based exclusively on a cumulative GPA for coursework completed at Texas Tech. The specific GPA standard varies among the degree programs and may change from one academic year to the next as necessary to align enrollments with the educational resources. Students must have a minimum 2.5 GPA for admission to the computer science upper-division degree program.

The academic standards required by the Whitacre College of Engineering and the Department of Computer Science are given in the introduction to the Whitacre College section of the catalog and summarized below. Exceptions to these standards are at the discretion of the Dean of the Whitacre College of Engineering.

- A grade of C or better is required for all courses in an engineering degree plan.
- A grade of C or better must be achieved in all prerequisites before the subsequent course may be attempted.
- A minimum 2.5 GPA is required to maintain academic good standing and continued membership in the Whitacre College of Engineering.
- A full-time student must achieve a C or better in 18 credit hours of coursework in the degree plan in each 12-month period.
- An engineering course may be repeated only two times after a course drop, withdrawal, or failure to achieve a C or higher. A maximum of three engineering courses may be repeated.

All students entering the computer science degree program are expected to follow the sequence of courses shown in the curriculum table in this section. Students demonstrating satisfactory performance may deviate from the specified sequence of courses only with the express approval of a computer science undergraduate advisor and only when such deviation is required to obtain a normal load of coursework for the student.

Communication Literacy Requirement. Communication literacy in a computer science program will be achieved through learning foundational communication skills for understanding, implementing, and evaluating computer-based programs and functions for solving problems in computer science. To obtain and practice these communication skills, students will be trained and evaluated in the following courses: CS 1382, 1412, 3365, and 4366.

Concentrations. Computer science majors can optionally elect to pursue concentrations in Software Engineering, Cybersecurity, and Data Science with Artificial Intelligence and Machine Learning within their degree program. A concentration requires 15 credit hours with two required courses (6 credit hours) and 3 electives (9 credit hours) within the concentration. A student must declare a concentration no later than their junior year. A student interested in pursuing a concentration must discuss this with his/her undergraduate advisor.

The **Cybersecurity concentration** focuses on the design, development, and deployment of comprehensive solutions and algorithms to protect cyber-infrastructure from attacks. This concentration creates the opportunity for students to achieve a fundamental level of understanding in cybersecurity through two core courses and three elective courses. Students pursuing their BS in Computer Science can apply for this optional concentration

after officially declaring their major. Students must complete a minimum of 15 credit hours (five 3-hour courses) in the concentration area. Core classes to complete the cybersecurity concentration are CS 3350 and 4352. Elective classes to complete the cybersecurity concentration include CS 4328, 4380, 4392, 5340, 5342, 5352, 5353, 5361, 5364, 5380, and 4331 when the topic is related to cybersecurity.

The **Data Science with Artificial Intelligence and Machine Learning concentration** focuses on discovering insights out of data using a combination of software tools, programming techniques, and methodologies. This concentration creates the opportunity for students to achieve a fundamental level of understanding in data science, artificial intelligence (AI), and machine learning (ML) through two core courses and three elective courses. Students pursuing their BS in Computer Science can apply for this optional concentration after officially declaring their major. Students must complete a minimum of 15 credit hours (five 3-hour courses) in the concentration area. Core classes to complete the Data Science with AI and ML concentration are CS 3361 and 3364. Elective classes to complete the Data Science with AI and ML concentration include CS 3366, 3368, 4391, 5368, 5388, 5391, 5392, and 4331 when topic is related to data science, artificial intelligence, or machine learning.

The **Software Engineering concentration** focuses on software design, development, testing, and maintenance. This concentration creates the opportunity for students to achieve a fundamental level of understanding in software engineering through two core courses and three elective courses. Students pursuing their BS in Computer Science can apply for this optional concentration after officially declaring their major. Students must complete a minimum of 15 credit hours (five 3-hour courses) in the concentration area. Core classes to complete the Software Engineering concentration are CS 3365 and 3383. Elective classes to complete the Software Engineering concentration include CS 4365, 4395, 4397, 5320, 5341, 5357, 5363, 5373, 5374, and 4331 when the topic is related to software engineering.

Dual Degree. Computer science is part of a dual-degree program in which students can earn a Computer Science BS from the Whitacre College of Engineering and a B.S. in Mathematics with a minor in Computer Science from the College of Arts & Sciences. This degree program follows all requirements mandated for the Bachelor of Science degrees for both the Whitacre College of Engineering and the College of Arts & Sciences. Students are advised by an academic advisor in each college and may declare either college as their primary college. The five-year dual-degree curriculum table is listed in this section.

Accelerated Bachelor's and Master's Programs. The department offers two accelerated Bachelor of Science and Master of Science programs. In both cases, completion of the degree requirements leads to the awarding of two degrees. In one, the degrees awarded are the Computer Science BS and the Master of Science in Computer Science; in the other, the degrees are the Computer Science BS and the Master of Science in Software and Security Engineering. The accelerated program allows qualified students to earn both degrees in a cost-effective and timely manner. Students in the program get an early start on master's work by taking three graduate courses in their senior year, in place of three senior elective courses, to complete their bachelor's degree. They then take the remaining graduate courses the following year to complete their master's degree with a thesis or non-thesis option. In other words, the accelerated program allows dual counts of nine credit hours (three courses) to bachelor's and master's degrees. Students choosing the accelerated program should apply for the graduate component of the program, usually during the student's third year of study.

Minors. Computer science majors are not required to have a minor field. However, many students choose to pursue a minor. Minors can be pursued in virtually any field of study offered at Texas Tech. The minor must consist of a minimum of 18 hours, with at least six of those hours at the 3000 or 4000 level. A minor may require additional hours of study, depending on the particular minor field.

The Department of Computer Science offers two minors, including an Artificial Intelligence minor and a Computer Science minor, to non-computer science major students.

Computer Science, BS
Recommended Upper-Division Curriculum

SECOND YEAR

Fall

- CS 1412 - Programming Principles (4 SCH)
- CS 1382 - Discrete Computational Structures (3 SCH)
- MATH 2450 - Calculus III with Applications (4 SCH)
- ECE 2372 - Modern Digital System Design (3 SCH)
- ENGL 2311 - Introduction to Technical Writing (3 SCH)

TOTAL: 17

Spring

- CS 2413 - Data Structures (4 SCH)
- CS 3350 - Computer Org. & Assembly Language Programming (3 SCH)
- MATH 2360 - Linear Algebra (3 SCH)
- POLS 1301 - American Government (3 SCH)
- PHYS 2401 - Principles of Physics II (4 SCH)

Foreign Language Elective: A student must complete the Texas Tech University foreign language requirement as outlined in the Texas Tech University Undergraduate and Graduate Catalog.

Elective (CS): Choose from any 3000- or 4000-level computer science courses that are not required for the CS major.

MATH Breadth Course: With advisor approval, choose one from MATH 3356, 3430, 4000, 4310, 4312, 4330, 4331, 4342, 4343, 4351, 4354, 4356, 4360, 4362, 4363.

MATH Depth Course: With advisor approval, choose one from MATH 4343, 4351, 4354, 4360.

Elective (Core Curriculum): Courses needed to fulfill the university core curriculum requirements, including 6 hours of U.S. History, 3 hours of Creative Arts, and 3 hours of Social and Behavioral Sciences electives. For details, consult the core curriculum requirements.

Undergraduate Minors

Artificial Intelligence

A minor in Artificial Intelligence (AI) consists of 20 hours of coursework that includes ENGR 1330, CS 1382, CS 1412, CS 2413, CS 3368, and CS 4391. Minor courses require pre-approval of the undergraduate advisor. A minimum of 6 hours of CS coursework must be taken at the 3000 level or above. A minimum of 9 hours must be taken in the Department of Computer Science at Texas Tech for the minor. In addition to the course prerequisites, students outside of the Whitacre College of Engineering applying for a minor must have a Texas Tech GPA of 2.75 or higher from a math-oriented major or a 3.5 or higher from a non-math major.

Computer Science

A minor in Computer Science (CS) consists of 20 hours of coursework that includes CS 1382, CS 1412, CS 2413, CS 2365, and two 3-hour 3000/4000 CS core/elective courses. Minor courses require pre-approval of the undergraduate advisor. A minimum of 6 hours of CS coursework must be taken at the 3000 level or above. A minimum of 9 hours must be taken in the Department of Computer Science at Texas Tech for the minor. In addition to the course prerequisites, students outside of the Whitacre College of Engineering applying for a minor must have a Texas Tech GPA of 2.75 or higher from a math-oriented major, or a 3.5 or higher from a non-math major.

Computer Engineering, BS / Computer Science, M.S.

Undergraduate students at Texas Tech University who are majoring in Computer Engineering may apply to our accelerated BS/M.S. in Computer Science. This program is intended for our best undergraduates who wish to stay on for a master's degree. Students in the program get an early start on master's work by taking three graduate courses in their senior year, in place of three senior elective courses, to complete their BS degree. They then take the remaining graduate courses the following year and can carry out their thesis research or coursework to complete their M.S. in Computer Science degree. Work on laboratory projects during the senior year may provide background for the thesis.

Computer Science, BS / M.S.

Undergraduate students who major in Computer Science may apply to our accelerated B.S. / M.S. in Computer Science program. The Accelerated Bachelor's to Master's in Computer Science allows qualified students to earn both degrees in a cost-effective and timely manner. Students in the program get an early start on master's work by taking three graduate courses in their senior year, in place of three senior elective courses, to complete their B.S. degree. They then take the remaining graduate courses the following year to complete their M.S. degree with a thesis or non-thesis option. In other words, the accelerated program allows dual counts of 9 credit hours (three courses) to bachelor's and master's degrees. Students choosing the accelerated program should apply for the graduate component of the program, usually during the student's third year of study.

Computer Science, BS / Software and Security Engineering, M.S.

Undergraduate students who major in Computer Science may apply to our accelerated B.S. in Computer Science and M.S. in Software and Security Engineering program. The Accelerated Bachelor's in Computer Science to Master's in Software and Security Engineering allows qualified students to earn both degrees in a cost-effective and timely manner. Students in the program get an early start on master's work by taking three graduate courses in their senior year, in place of three senior elective courses, to complete their B.S. degree. They then take the remaining graduate courses the following year to complete their M.S. degree with a thesis or non-thesis option. In other words, the accelerated program allows dual counts of 9 credit hours (three courses) to bachelor's and master's degrees. Students choosing the accelerated program should apply for the graduate component of the program, usually during the student's third year of study.

Undergraduate Course Descriptions

Computer Science (CS)

- 1300—Computers and Modern Society (3).** Survey of computers, their uses, and their impact on society. Brief introduction to computer programming and the use of word processor, spreadsheet, and data base application software. Credit may not be applied toward a computer science major or minor.
- 1303—Programming and Data Analysis in Matlab (3).** The course will focus on basic programming skills in the C/C++ language. This course cannot be used for a CS major or minor.
- 1305—Introduction to Computer Science (3).** [COSC1315, 1330; ENGR2304] An introduction to the field of computer science for majors. Computer ethics issues facing computer science professionals are addressed. Students will also learn concepts of computer programming with an emphasis on problem solving, critical thinking, logical reasoning, design and implementation techniques.
- 1382—Discrete Computational Structures (3).** Prerequisite: C or better in ENGR 1330 and MATH 1451 and a 2.5 TTU GPA. Sets, functions, counting principles, basic probability, logic, proof methods, and graphs. (CL)
- 1411—Programming Principles I (4).** [COSC1320, 1336, 1415, 1436] Prerequisite: Department approval. Corequisite: MATH 1451. Procedural programming. Discipline of computer science; analysis, design, implementation, debugging, and testing of software. Introduction to field for majors.
- 1412—Programming Principles (4).** [COSC1337, 1437] Prerequisite: C or better in ENGR 1330 and a 2.5 TTU GPA. Advanced procedural programming. Topics include recursive functions, parameter passing, structures, records, memory allocation, exception handling, and abstract data types. (CL)
- 2365—Object-Oriented Programming (3).** Prerequisite: CS 2413. Introduction to object-oriented programming. Topics include object-oriented design and analysis, classes, inheritance, polymorph data abstraction, and user interface design principles.
- 2413—Data Structures (4).** [COSC2315, 2336, 2436] Prerequisite: C or better in CS 1412, 2.5 TTU GPA. Comparative study of the interaction of data and procedural abstractions. Data structures, lists, stacks, queues, trees, graphs. Algorithms: searching, sorting, parsing, hashing, graph traversals.
- 3350—Computer Organization and Assembly Language Programming (3).** [COSC2325, 2425] Prerequisites: 2.5 TTU GPA; C or better in CS 1412, ECE 2372. Introduction to the organization of single-processor computer systems via Assembly Language. Topics addressed include basic concepts of computer architecture and organization, assembly programming, interfacing assembly with High Level Languages, sub-procedures and macros, I/O devices, interrupts, and multitasking issues.
- 3352—Introduction to Systems Programming (3).** Prerequisites: CS 3350 or ECE 3362 and CS 2413. Introduction to system software including assemblers, linkers, loaders, and compilers. Other topics addressed include design of utility and networking software, shell programming, and script languages.
- 3361—Concepts of Programming Languages (3).** Prerequisite: CS 2413. Study of programming language design. The investigation and comparison of different programming language paradigms.
- 3364—Design and Analysis of Algorithms (3).** Prerequisites: CS 2413, CS 1382 and MATH 2360. A theoretical course focusing on the design and analysis of computer algorithms.
- 3365—Software Engineering (3).** Prerequisite: C or better in CS 2365 and MATH 3342 or equivalent. Introduces theory and practice for software engineering. Topics include software life cycle, requirements, specification and analysis, software architecture and detailed design, and testing. (CL)
- 3366—Human Computer Interaction (3).** Prerequisite: CS 2413. Focuses on design, development, and evaluation of computer systems that interact with people. Topics include interaction design models, interface components, and usability testing.
- 3368—Introduction to Artificial Intelligence (3).** Prerequisite: C or better in CS 1382 and CS 2413. Provides introduction to theory, design, and implementation of intelligent systems.
- 3375—Computer Architecture (3).** Prerequisite: CS 3350 or ECE 3362. Introduction to the functional components of computer systems; their hardware implementation and management at different levels; their interaction, characteristics, and performance as well as their practical implications for computer programming.
- 3383—Theory of Automata (3).** Prerequisite: CS 1382. The relationship between language, grammars, and automata. Deterministic and nonde-

terministic machines. Pushdown automata and Turing machines. Limits of computability.

- 4400—Individual Studies in Computer Science (V1-6).** Prerequisites: Advanced standing and departmental approval. Individual studies in computer science areas of special interest. May be repeated for credit.
- 4311—Senior Project Design (3).** Prerequisites: CS majors only; C or better in CS 3365, CS 3364, and COMS 2358 or ENGR 2331; 12 additional hours of upper-division computer science coursework; senior standing. A project-oriented course intended not only to consolidate most theoretical aspects of software engineering, but also to emphasize team work and foster communication skills. Projects are formulated, formally proposed, designed, implemented, tested, documented, and demonstrated.
- 4328—Scientific Computing (3).** Prerequisites: CS 2413 and MATH 1452. Numerical techniques for interpolation, integration, and the solution of systems of algebraic and differential equations with special emphasis on hardware limitations.
- 4331—Special Topics in Computer Science (3).** Prerequisites: Advanced standing and CS 3375. Advanced study in computer science topics.
- 4352—Operating Systems (3).** Prerequisites: CS 3364 and CS 3375. Concepts and design of different components of operating systems. Topics addressed include process management, scheduling and resource management, file systems, I/O, and security issues.
- 4354—Concepts of Database Systems (3).** Prerequisite: CS 3364. Overview of a database system and its components; physical organization of data; data models; relational databases; and query processing.
- 4365—Software Engineering II (3).** Prerequisite: CS 3365. Advanced theory and practice for software engineering. Topics include project management, configuration management, process improvement, software security, software reuse, and quality management.
- 4366—Senior Capstone Project (3).** Prerequisite: C or better in CS 3365. A project-oriented course intended not only to consolidate most theoretical aspects of software engineering, but also to emphasize team work and foster communication skills. Projects are formulated, formally proposed, designed, implemented, tested, documented, and demonstrated. (CL)
- 4379—Parallel and Concurrent Programming (3).** Prerequisites: CS 3364 and CS 3375. Introduction to multi-threaded programming, data parallelisms, and message passing techniques. Topics include concurrent and parallel execution environments, user-programmed parallelism, and compiler-based parallelism. Applications addressed involve numerical algorithms familiar to senior-level students.
- 4380—Embedded Systems (3).** Prerequisites: 2.5 TTU GPA; C or better in CS 3350. Introduction of special purpose embedded processor-based systems and their applications.
- 4391—Special Topics in AI (3).** Prerequisite: Senior standing. In-depth treatment of one or more topics in artificial intelligence. Such topics include robotics, knowledge representation, or automated reasoning.
- 4392—Computer Networks (3).** Prerequisite: CS 2413. Digital transmission fundamentals, local area networks, network protocols, and common Internet applications.
- 4395—Introduction to Computer Graphics (3).** Prerequisite: CS 3364. Focus on basic principles and methods for designing, implementing, and applying graphics packages. Methods for manipulating and displaying two- and three-dimensional objects.
- 4397—Computer Game Design and Development (3).** Prerequisite: CS 3364. Underlying science, technology, and art or computer games. Specific topics include design planning, interactive graphics, autonomous agents, multi-user interaction, and game engine construction.
- 4398—Theory and Practice of Logic Programming (3).** Prerequisites: CS 1382 and CS 2413. Formal syntax and semantics of logics of programming languages, practical application of such languages, and linking GUI interfaces written in imperative languages.

Department of Electrical and Computer Engineering

Michael Giesselmann, Dr. Ing., P.E., Interim Chairperson

John R. Bradford Chair: Bayne

Charles Bates Thornton Professor: J. Dickens

Ed and Linda Whitacre Fellow: R. He

Edward E. Whitacre Jr. Endowed Chair: Jiang

Whitacre Endowed Chair in Electrical Engineering: C. Li

Keh-Shew Lu Regents Chair: Lie

Linda F. Whitacre Endowed Chair: Lin

AT&T Distinguished Professor: Neuber

Butler Distinguished Educator Fellow: Nutter

Horn Distinguished Professors: Jiang, Lin, Neuber

Professors: Baker, Bayne, Bernussi, Dallas, J. Dickens, Giesselmann, R. He, Jiang, Joshi, C. Li, Lie, Lin, Mankowski, Neuber, Pal, Sari-Sarraf

Associate Professors: M. He, Karp, Nguyen, Nutter, Saed, Stephens

Assistant Professors: Kim, Pereira, Wu

Professor of Practice: Conner

Lecturer: Johnston

Instructors: Bilbao, M. Dickens, Ghamkhari, Haustein, Hemmert, Kelley, McArthur, Parmar, Storrs

Research Professor: J. Li

CONTACT INFORMATION: 224 Electrical Engineering Building
Box 43102 | Lubbock, TX 79409-3102 | T 806.742.3533

About the Department

The Department of Electrical and Computer Engineering supervises the following degree programs:

- Electrical Engineering BS
- Computer Engineering BS
- Master of Science in Electrical Engineering
 - Thesis Option
 - Non-Thesis Option
- Master of Science in Computer Engineering
 - Thesis Option
 - Non-Thesis Option
- Doctor of Philosophy in Electrical Engineering

Vision. The Department of Electrical and Computer Engineering will be the undergraduate electrical and computer engineering department of choice in Texas and will be recognized as one of the top research and graduate engineering departments in the nation.

Mission. The Department of Electrical and Computer Engineering educates, conducts research, and disseminates knowledge through nationally recognized programs in electrical and computer engineering for the benefit of society.

Bachelor of Science in Electrical / Computer Engineering Program Educational Objectives:

- Demonstrate growth in careers related to Electrical/Computer Engineering and become productive engineers.
- Some graduates will pursue advanced degrees.
- Engage in professional development activities to adapt to evolving technical challenges and career opportunities and succeed in a wide range of specialties.
- Understand and recognize the strengths of diversity.

Student Outcomes for Bachelor of Science in Electrical / Computer Engineering:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must

consider the impact of engineering solutions in global, economic, environmental, and societal contexts.

5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze, and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Program Overview. The fields of electrical and computer engineering are very broad and include many specialty areas. To allow students to become more familiar with these areas, the programs offer a wide range of technical specialties consistent with the breadth of electrical and computer engineering and inclusive of recent developments in the field.

Students pursuing a BS in Electrical Engineering may gain a concentration in the following areas:

- Analog VLSI – ECE 4310, 4314, 4321
- MEMS – ECE 4381, 4385, 4386
- Power Systems – ECE 4316, 4343, 4391
- Signal Processing – ECE 4363, 4364, 4367
- Communication Systems – ECE 4323, 3325, 4344
- Digital Systems – ECE 4375, 4380, 4382
- Electromagnetics – ECE 4341, 4342, 4344

An important contribution to accomplish these objectives is the four-course sequence of stand-alone project laboratories. In each of the project laboratory courses, students are given a brief description of a complex, open-ended project. The students, usually working in teams, are required to design, develop, construct, and evaluate a system to satisfy the requirements for the project. Faculty/corporate advisors evaluate the project on the basis of finished products, demonstrations, required written reports, and oral presentations. By its very structure, the project laboratory sequence gives students considerable experience in dealing with open-ended design problems. Students also gain experience in working closely with others and in written and oral communication.

The material presented in the electrical and computer engineering lecture courses is incorporated into the project laboratory course sequence. The projects, however, are real-world problems that require students to go beyond the basic knowledge learned in the classroom. Through these experiences, students gain the technical maturity necessary to succeed in their chosen careers. In addition, the project laboratory courses address topics in engineering ethics and professionalism and help students develop the skills needed for life-long learning.

The result of the overall curriculum is to prepare graduates who are sensitive to the consequences of their work, both ethically and professionally, for a productive professional career. A broad educational background has been incorporated into these curricula and personalized advising plays an important role in its implementation.

Graduate Programs

For information on graduate programs offered by the Department of Electrical and Computer Engineering, visit the Graduate Programs section of the catalog on page 333.

Undergraduate Programs

General Standards and Requirements. Admission requirements and academic standards for the Department of Electrical and Computer Engineering are consistent with the dynamic enrollment plan for the Edward E. Whitacre Jr. College of Engineering. Refer to the introduction to the Whitacre College of Engineering section of this catalog for a description of the criteria for initial admission to the Whitacre College of Engineering and the lower-division foundational curriculum. The foundational curriculum for all engineering students consists of ENGL 1301, ENGL 1302; MATH 1451, MATH 1452; CHEM 1307/CHEM 1107; PHYS 1408; ENGR 1110, ENGR 1330, ENGR 2392, and ENGR 1320 or ENGR 1340.

A student may apply for admission to the upper division of an engineering degree program upon completion of the foundational curriculum and a minimum of 12 credit hours of Texas Tech coursework. The acceptance criterion is based exclusively on a cumulative GPA for coursework completed at Texas Tech. The specific GPA standard varies among the degree programs and may change from one academic year to the next as necessary to align enrollments with the educational resources.

The academic standards required by the Whitacre College of Engineering and the Department of Electrical and Computer Engineering are given in the introduction to the Whitacre College section of the catalog and are summarized below. Exceptions to these standards are at the discretion of the Dean of the Whitacre College of Engineering.

- A grade of C or better is required for all courses in an engineering degree plan.
- A grade of C or better must be achieved in all prerequisites before the subsequent course may be attempted.
- A minimum 2.5 TTU GPA is required to maintain academic good standing and continued membership in the Whitacre College of Engineering.
- A full-time student must achieve a C or better in 18 credit hours of coursework in the degree plan each year.
- An engineering course may be repeated two times after a course drop, withdrawal, or failure to achieve a C or higher. A maximum of three engineering courses may be repeated.
- Courses for degree credit cannot be taken pass/fail.

The required undergraduate programs are contained in the curriculum tables shown in this section. The undergraduate curriculum gives students a broad education in electrical and computer engineering and enables them to pursue all career options in a fast-changing technical environment. In addition, students may select from a wide variety of elective courses in electrical and computer engineering and other related disciplines allowing them to specialize at the senior level. If a student wishes, specialization options are available, including analog VLSI, MEMS, power systems, signal processing, communication systems, digital systems, and electromagnetics.

The Bachelor of Science in Electrical Engineering and the Bachelor of Science in Computer Engineering are accredited by the Engineering Accreditation Commission of ABET, www.abet.org, which accelerates the additional exam and experience requirements that must be met later in the engineer's career. Further information can be found at <https://pels.texas.gov> and <https://www.ncees.org>.

Licensing as a Professional Engineer (PE) allows an engineer to perform engineering services for the public and to supervise the design and construction of public works. Students who wish to eventually earn a PE license should pass the Fundamentals of Engineering (FE) exam while seniors. The Electrical Engineering BS offers interested students the opportunity to take up to two elective courses from other engineering departments that teach material tested by the FE. A list of these courses is maintained by the ECE department.

Success in engineering courses is highly dependent on knowledge and skills in mathematics. It is strongly recommended that students be prepared to take calculus classes when they arrive at Texas Tech. Students who are not adequately prepared for calculus, chemistry, and/or physics must take appropriate courses before enrolling in MATH 1451, CHEM 1307, CHEM 1107, and/or PHYS 1408. Students will be responsible for arranging a course of study with an advisor's counsel and approval. Students whose high school courses include physics, chemistry, mathematics through analytical geometry, and at least two credits of a single foreign language are expected to follow the sequence of courses shown in the curriculum. Any students who lack credits in any of these areas of study in high school should consult with departmental advisors to determine a suitably adjusted first-year schedule. The exceptionally well-prepared student should consult the section of this catalog on credit by examination.

Students seeking an electrical engineering or computer engineering degree must take a minimum of 18 hours at the 3000 level or above in the Department of Electrical and Computer Engineering at Texas Tech.

Combined Bachelor's and Master's Programs. Accelerated programs are available for outstanding students wanting to earn both a BS and an M.S. degree. The possible combined BS / M.S. degrees awarded would include:

1. BS in Electrical Engineering / M.S. in Electrical Engineering
2. BS in Computer Engineering / M.S. in Electrical Engineering

Computer Engineering, BS
Recommended Upper-Division Curriculum

SECOND YEAR

Fall

- ☐ ECE 2305 - C Programming with Hardware Applications (3 SCH)
- ☐ ECE 2372 - Modern Digital System Design (3 SCH)
- ☐ ECE 3302 - Fundamentals of Electrical Engineering (3 SCH)
- ☐ MATH 2450 - Calculus III with Applications (4 SCH)
- ☐ MATH 3350 - Higher Mathematics for Engineers and Scientists I (3 SCH)

TOTAL: 16

Spring

- ☐ ECE 3362 - Microcontrollers with Assembly (3 SCH)
- ☐ ECE 3308 - Probability, Statistics, and Discrete Math (3 SCH)
- ☐ ECE 3303 - Signals and Systems (3 SCH)
- ☐ CS 2413 - Data Structures (4 SCH)
- ☐ PHYS 2401 - Principles of Physics II (4 SCH)

TOTAL: 17

THIRD YEAR

Fall

- ☐ ECE 3331 - Robotics Project Lab (3 SCH)
- ☐ ECE 3311 - Electronics (3 SCH)
- ☐ ECE 3325 - Computer Networks (3 SCH)
- ☐ CS 2365 - Object-Oriented Programming (3 SCH)
- ☐ POLS 1301 - American Government (3 SCH)
- ☐ Oral Communication (3 SCH)

TOTAL: 18

Spring

- ☐ ECE Group B Elective
- ☐ ECE 4375 - Microprocessor Architecture (3 SCH) (*Offered spring only.*)
- ☐ ECE/CS/MATH 33--/43-- Tech Elective
- ☐ CS 3365 - Software Engineering (3 SCH)
- ☐ POLS 2306 - Texas Politics and Topics (3 SCH)
- ☐ Social & Behavioral Sciences (3 SCH)

TOTAL: 18

FOURTH YEAR

Fall

- ☐ ECE Group B Elective
- ☐ ECE 4380 - Embedded Systems (3 SCH) (*Offered fall only.*)
- ☐ ECE/CS/MATH 33--/43-- Tech Elective
- ☐ HIST 2300 - History of the United States to 1877 (3 SCH)

TOTAL: 12

Spring

- ☐ ECE 4333 - Capstone Project Lab (3 SCH)
- ☐ ECE/CS 43-- Tech Elective
- ☐ ECE/CS 43-- Tech Elective
- ☐ HIST 2301 - History of the United States since 1877 (3 SCH)
- ☐ Creative Arts (3 SCH)

TOTAL: 15

TOTAL HOURS: 128

All students must satisfy the university foreign language requirement with two years of foreign language credit from high school (same language) or two semesters of college credit (same language).

Electives must be selected from approved lists to ensure that ABET, core curriculum, departmental, and state legislative requirements are satisfied.

Core Curriculum: HIST 2300, 2301 (or approved HIST); POLS 1301, 2306; ENGR 2392 (satisfies the Language, Philosophy, & Culture credit), and choose from Core Curriculum course list found in catalog (or DegreeWorks) to fulfill Oral Communication, Social & Behavioral Sciences (IE 2324), and Creative Arts requirement. Two opportunities exist for courses to fulfill additional core requirement.

Group B: Project Lab in Focus Area (CHOOSE TWO): ECE 3332, 3333, 3334, 3335, 3336, 3337, 3338 – prerequisites vary.

ECE/CS/MATH Tech Elective: Choose from departmentally approved list.

Electrical Engineering, BS
Recommended Upper-Division Curriculum

SECOND YEAR

Fall

- ☐ ECE 2305 - C Programming with Hardware Applications (3 SCH)
- ☐ ECE 2372 - Modern Digital System Design (3 SCH)
- ☐ ECE 3302 - Fundamentals of Electrical Engineering (3 SCH)
- ☐ MATH 2450 - Calculus III with Applications (4 SCH)
- ☐ MATH 3350 - Higher Mathematics for Engineers and Scientists I (3 SCH)

TOTAL: 16

Group B: Project Lab in Focus Area (CHOOSE TWO): ECE 3332, 3333, 3334, 3335, 3336, 3337, 3338 – prerequisites vary.

ECE/OEE Tech Elective: Select from departmentally approved list.

3. BS in Electrical Engineering / M.S. in Bioengineering
4. BS in Computer Engineering / M.S. in Bioengineering
5. BS in Computer Engineering / M.S. in Computer Science

This program is intended for our best undergraduates who wish to stay on for a master's degree. Students in the program get an early start on master's work by taking three graduate courses in their senior year, replacing three senior elective courses, to complete their BS degree. They then take the remaining graduate courses the following year and can carry out graduate research to complete their M.S. degree. Work on laboratory projects during the senior year often provides background for advanced study.

Students interested in these programs should inform their academic advisor during the first semester of their junior year and apply when they are within 15 hours of completing their undergraduate degree. Students admitted to a combined BS / M.S. program may apply up to 9 graduate credit hours toward the BS degree requirements, but only if they choose the non-thesis option.

Communication Literacy Requirement. CL courses for the Computer Engineering and Electrical Engineering majors are ECE 3331 and 4333 and two from ECE 3332, 3333, 3334, 3335, 3336, 3337, or 3338.

Electrical Engineering, Undergraduate Minor

A minor in electrical engineering consists of 18 hours of coursework that includes ECE 2372, ECE 3302 (or ECE 3301), ECE 3303, ECE 3311, ECE 3331, ECE 3362 (or ECE 3363). Minor courses require approval of the undergraduate advisor. A minimum of 9 hours of ECE coursework must be taken at the 3000 level or above and must be taken in the Department of Electrical and Computer Engineering at Texas Tech for the minor.

Computer Engineering, BS / Electrical Engineering, M.S. or Electrical Engineering, BS / M.S.

Two accelerated programs are available for outstanding students wanting to earn both a B.S. and an M.S. degree. The degrees awarded would include (1) the B.S. in Computer Engineering and the M.S. in Electrical Engineering (thesis and non-thesis options) or (2) the B.S. and M.S. in Electrical Engineering (thesis or non-thesis options). Students interested in these programs should inform their academic advisor during the first semester of the junior year and apply when they are within 30 hours of completing their undergraduate degree. Students admitted to a combined B.S./M.S. program may apply up to 9 graduate credit hours toward the B.S. degree requirements.

Undergraduate Course Descriptions

Electrical and Computer Engineering (ECE)

- 1105—Strategies for Success in Engineering: ECE Recovery and Time Management (1).** Laboratory course to provide ECE majors with practice in skills to improve academic performance. Topics include study skills and habits, note taking, collaborative learning and teamwork, test-taking skills, and time management.
- 1304—Introduction to Electrical and Computer Engineering (3).** Prerequisite: 2.5 TTU GPA; C or better in MATH 1451 (may be taken concurrently). Introduction to the electrical and computer engineering disciplines including familiarization with relevant design tools. Overview of the profession, contemporary issues, and ethics.
- 1305—Introduction to Engineering and Computer Programming (3).** Prerequisite: 2.5 TTU GPA; C or better in MATH 1451 (may be taken concurrently). An introduction to the fundamentals of computing and structured programming for electrical engineering.
- 2305—C Programming with Hardware Applications (3).** Prerequisites: 2.5 TTU GPA; C or better in MATH 1451 (may be taken concurrently) and ENGR 1330. For majors only or departmental consent. An introduction to the fundamentals of computing and structured programming with applications to hardware.
- 2372—Modern Digital System Design (3).** Prerequisites: 2.5 TTU GPA; C or better in MATH 1451 (may be taken concurrently) and ENGR 1330. An introduction to combinational and sequential digital systems. Description of digital circuits using Verilog.

- 3301—General Electrical Engineering (3).** Prerequisite: CE, CHE, CONE, CS, ENVE, IE, ME, and PETR majors only; 2.0 TTU GPA; C or better in MATH 1452. Analysis of electric circuits. Introduction to electronic instrumentation and electromechanics. For non-majors only.
- 3302—Fundamentals of Electrical Engineering (3).** Prerequisites: 2.5 TTU GPA; C or better in MATH 1452, majors only. Principles of electric circuits. DC, transient, and sinusoidal steady-state analysis.
- 3303—Signals and Systems (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3302, MATH 3350 (may be taken concurrently), and ENGR 1330 or ECE 1304. For majors only or departmental consent. Concepts of signal and system analysis in time and frequency domains as applied to electric circuits. Fourier series, Fourier transform, and Z transform techniques are stressed.
- 3304—Discrete-Time Signals and Systems (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 3303. For majors only or departmental consent. Discrete-time signal processing, sampling, z-transform, discrete and fast Fourier transforms, infinite and finite impulse response digital filter design and implementation.
- 3306—Network Analysis (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 3302. For majors only or departmental consent. Continuation of methods of circuit analysis, including higher order circuits, filter circuits, inductively coupled circuits, three-phase circuits, and two-port networks. Includes Laplace analysis techniques and frequency (Bode) plots, as well as computational methods for analysis like MatLab and PSPICE.
- 3308—Probability, Statistics, and Discrete Math (3).** Prerequisites: 2.5 TTU GPA; C or better in MATH 1452. For majors only or departmental consent. Introduction to the basic concepts of probability, random variables, statistics, reliability, and discrete math. Topics include Probability, Random Variables, Markov Processes, Statistical Analysis, and Discrete Math.
- 3309—Advanced Mathematics and Linear Algebra (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3303, ECE 3308, MATH 2450, and MATH 3350. For majors only or departmental consent. Advanced concepts in linear algebra, complex number mathematics, partial differential equations, coordinate systems, and the wave equation with specific applications to electrical engineering.
- 3311—Electronics (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 3302. For majors only or departmental consent. Introduction to electronic devices, amplifiers, and electronic systems. Principles of electronic circuit design and analysis.
- 3312—Advanced Electronics (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3311, ECE 3303, and MATH 3350. For majors only or departmental consent. Analysis and design of special-purpose amplifiers and oscillators.
- 3323—Principles of Communication Systems (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3306 and ECE 3308. For majors only or departmental consent. Random processes and spectral densities. Fourier Transforms and linear systems concepts. Amplitude, phase angle, and pulse modulation communication systems.
- 3325—Computer Networks (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3303 and ECE 3308. For majors only or departmental consent. Networking protocols and standards. Data and voice network architectures. Computer, cellular, satellite, and telephone networks. Network modeling, queuing theory, and optimization.
- 3331—Robotics Project Lab (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 1305 or ECE 2305; ECE 2372, ECE 3302 ECE 3311 (may be taken concurrently), and ENGL 1302. For majors only or departmental consent. A laboratory course to develop design and debugging skills with robotics systems. (CL)
- 3332—Microcontroller Project Lab (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3331, ECE 3311, and ECE 3362 or ECE 3363. For majors only or departmental consent. A laboratory course to develop design and debugging skills with microcontroller systems. (CL)
- 3333—RF Communications Project Lab (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3331, ECE 3312, and ECE 3323. For majors only or departmental consent. A laboratory course to develop design and debugging skills with analog high-frequency communication systems. (CL)
- 3334—Digital Communications Project Lab (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3331, ECE 3303, ECE 3308, ECE 3311, and ECE 3362 or ECE 3363. For majors only or departmental consent. A laboratory course to develop design and debugging skills with digital communication systems. (CL)
- 3335—Power Systems Project Lab (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3331, ECE 3303, ECE 3311, and ECE 3341. For majors only or departmental consent. A laboratory course to develop design, debugging, and modeling skills with power systems. (CL)

- 3336—Software Development Project Lab (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3331 and CS 3365. For majors only or departmental consent. A laboratory course to develop design, debugging, and modeling skills with software systems. (CL)
- 3337—Electromagnetics Project Lab (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3331, ECE 3306, and ECE 3342 (may be taken concurrently). For majors only or departmental consent. A laboratory course to develop design, debugging, and modeling skills with electromagnetic systems and devices. (CL)
- 3338—Computer Networks Project Lab (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3331, ECE 3325 or ECE 4325. For majors only or departmental consent. A laboratory course to develop design, modeling, and troubleshooting skills with computer networked systems. (CL)
- 3341—Electromagnetic Fields I (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3303; PHYS 2401, MATH 2450, and MATH 3350. For majors only or departmental consent. Vector calculus, Electrostatics, Faraday's law of induction, and Maxwell's equations.
- 3342—Electromagnetic Fields II (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3341 and MATH 3351 or ECE 3309. For majors only or departmental consent. Waves in unbounded lossless media. Waves in unbounded lossy media. Waves interacting with planar boundaries. Waveguides and transmission lines. Special topics in electromagnetics.
- 3353—Control System Analysis and Design (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3306. For majors only or departmental consent. An introduction to the analysis and design of automatic control systems. Control system concepts. Controller design and digital control.
- 3362—Microcontrollers with Assembly (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 1305 or ECE 2305 or CS 1412 and ECE 2372 (may be taken concurrently). For majors only or departmental consent. Advanced digital systems design. Assembly language programming, interfacing, and applications of microcontrollers.
- 3363—Microcontrollers with C (3).** Prerequisites: EE majors only; 2.5 TTU GPA; C or better in ECE 1305 or ECE 2305 or CS 1412 and ECE 2372 (may be taken concurrently). Advanced digital systems design. C language programming, interfacing, and applications of microcontrollers.
- 4120—ECE Seminar (1).** Readings and discussion of the electrical and computer engineering professions, history, ethics, career paths, and research opportunities.
- 4132—Special Topics in Electrical Engineering (1).** Prerequisite: Minimum 2.5 TTU GPA, majors only or departmental consent. Elaboration on a special topic of current interest in electrical engineering. May be repeated for credit.
- 4232—Special Topics in Electrical Engineering (2).** Prerequisite: Minimum of 2.5 TTU GPA, majors only or departmental consent. Elaboration on a special topic of current interest in electrical engineering. May be repeated for credit.
- 4310—Introduction to VLSI Design (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 3311. For majors only or departmental consent. A basic introduction to very large-scale integrated design of circuits and devices. Geometrical patterns of semiconductor devices on a chip, MOS circuits, masking and patterning, and automation tools.
- 4314—Solid State Devices (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3311, ECE 3341, and CHEM 1307. For majors only or departmental consent. Principles and properties of semiconductor devices and optical devices. Thyristors and other switches. Integrated circuit devices. Device modeling.
- 4316—Power Electronics (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3311 and ECE 3353. For majors only or departmental consent. Switch-mode power conversion, power supplies, inverters, motor drives, power semiconductor devices, and magnetics. System analysis, design, and modeling.
- 4321—Applications of Analog Integrated Circuits (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3312 and ECE 3353. For majors only or departmental consent. Principles involved in designing analog integrated circuits. Device physics, small-signal and large-signal models. Biasing and basic circuit building blocks. Applications.
- 4323—Modern Communication Circuits (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3312 and ECE 3323. For majors only or departmental consent. Analysis and design techniques for modern communication circuits.
- 4325—Telecommunication Networks (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3304 or ECE 3323. For majors only or departmental consent. Networking and standards. Data and voice network architectures, cellular, satellite and telephone networks. Protocols. Network modeling and optimization. Queuing theory.
- 4331—Individual Studies in Electrical Engineering (3).** Prerequisite: 2.5 TTU GPA, instructor consent. For majors only or departmental consent. For majors only or departmental consent. Individual study involving a rigorous theoretical investigation of some aspect of an electrical engineering problem of current interest. Formal written and oral reports are required. May not be repeated for credit.
- 4332—Topics in Electrical Engineering (3).** Prerequisite: 2.5 TTU GPA, majors only or departmental consent. Elaboration on a special topic of current interest in electrical engineering. May be repeated for credit.
- 4333—Capstone Project Lab (3).** Prerequisites: 2.5 TTU GPA; C or better in any two of the following Group B Project Labs: ECE 3332, ECE 3333, ECE 3334, ECE 3335, ECE 3336, ECE 3337, ECE 3338. For majors only or departmental consent. A capstone laboratory course to accompany fourth-year courses in electrical or computer engineering. (CL)
- 4334—Advanced Capstone Project Lab (3).** Prerequisites: 2.5 TTU GPA; C or better in any two of the following Group B Project Labs: ECE 3332, ECE 3333, ECE 3334, ECE 3335, ECE 3336, ECE 3337, ECE 3338. For majors only or departmental consent. A capstone laboratory course to accompany fourth-year courses in electrical or computer engineering.
- 4340—Steady-State Analysis of Power Systems (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3306. For majors only or departmental consent. Power network modeling, power flow analysis, fault analysis, system protection, steady-state operations of power systems. [ECE 5340]
- 4341—Microwave Engineering (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 3342. For majors only or departmental consent. Analysis and design of microwave passive components, including transmission lines, waveguides, resonators, hybrids, couplers, attenuators, filters, circulators, switches, and phase shifters.
- 4342—Microwave Solid-State Circuits (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 3312. For majors only or departmental consent. Review of transmission-line and waveguide theory, scattering matrix, impedance matching, resonators, passive three- and four-port devices, filters, active circuits.
- 4343—Introduction to Power Systems (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 3341. For majors only or departmental consent. Electrical power transmission and distribution systems; power generation systems, system modeling, planning, management and protection.
- 4344—Antennas and Radiating Systems (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 3342. For majors only or departmental consent. Antenna fundamentals, uniformly spaced arrays, wire antennas of various types, aperture radiation, antennas for special applications.
- 4349—Modern Radar Circuits and Systems (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3341. For majors only or departmental consent. Analysis and design of radar systems including Doppler, ultra-wideband, frequency shift keying, and frequency-modulated continuous-wave radars.
- 4354—Power Semiconductor Devices (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 4314. For majors only or departmental consent. An introduction to the design and simulation of power semiconductor devices. Covers the operation of power diodes, power MOSFETs, and IGBTs. Power devices will be modeled using a physics-based simulator.
- 4360—Fiber Optic Systems (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3341. For majors only or departmental consent. Optical fibers, couplers, sources, and detectors; applications to communications and sensing.
- 4362—Modern Optics for Engineers (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3341. For majors only or departmental consent. Modern concepts in optics related to engineering applications. Geometrical optics; matrix methods in optics; polarization, interference, coherence, and lasers; Fourier optics; Fresnel and Fraunhofer diffraction.
- 4363—Pattern Recognition (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3308; MATH 3350, MATH 2360; and ENGR 1330. For majors only or departmental consent. Foundational topics in pattern recognition, linear discriminant functions, support vector machines, generalized decision functions, Bayes classifier, and various clustering techniques.
- 4364—Digital Signal Processing (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 3303. For majors only or departmental consent. An introduction to digital signal processing. Sampling, z-transform, discrete and fast Fourier transforms, flowgraphs, design techniques for digital filters, effects of finite word length, and applications.
- 4365—Parametric and Functional Device Testing (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 3331 and ECE 3308 or MATH 3342 or IE 2341. For majors only or departmental consent. Fundamentals of semiconductor device chip and wafer testing. Parametric and functional tests, test philosophy, C programming for testing, and commercial wafer level testers.
- 4366—Testing of Digital Systems (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 3331 and ECE 3308 or MATH 3342 or IE 2341. For majors only or departmental consent. High level test synthesis, fault modeling and diagnosis, design for test, built-in self test, test code generation, and applications.

- 4367—Image Processing (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 3308; MATH 3350, MATH 2360; and ENGR 1330. For majors or departmental consent. Imaging fundamentals. Linear operations in both spatial and frequency domains. Image enhancement and restoration techniques. Analysis and coding of images.
- 4369—Security of Industrial Control Systems (3).** For majors only or departmental consent. Cyber risks, vulnerabilities, network attacks and exploits, intrusion detection and defense in depth methodologies for industrial control systems and critical infrastructure.
- 4370—Machine Learning (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3308; MATH 3350, MATH 2360; and ENGR 1330. For majors only or departmental consent. Foundational and current topics in machine learning that include linear models for regression, kernel methods, neural networks, and deep learning. [ECE 5370]
- 4372—Renewable Power Generation and Integration (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3311. Concepts of renewable (solar PV, wind) energy conversion, renewable integration into bulk power systems and microgrids. [ECE 5372]
- 4373—Synchrophasor Applications for Utility Grid Integration (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3306. Provides students an overview of the basic principles of the synchrophasor—power measurement unit (PMU) and their applications in utility grid monitoring and operations. [ECE 5373]
- 4375—Microprocessor Architecture (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3362 or ECE 3363 or CS 3350, and ECE 3311. For majors only or departmental consent. An introduction to the architecture, organization, and design of microprocessors. Hardware design related to various microprocessors. Analysis of current microprocessors and applications.
- 4377—Innovation and Entrepreneurship (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3331. For engineering majors only or departmental consent. Provides a working knowledge of technology commercialization through a systematic concept refinement process. Prototypes are developed and evaluated by potential customers.
- 4378—Solar Energy (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3331. Provides an overview of photovoltaic materials, devices, and systems. Students learn to analyze performance based on available solar light. Design projects provide practical experience.
- 4379—Unmanned Aircraft Systems (3).** Prerequisites: 2.5 TTU GPA; for engineering majors or departmental consent. An introduction to UAVs (drones) and their commercial and military applications. Topics include flight dynamics, electronic and mechanical components, sensor systems, and regulations. [ECE 5379]
- 4380—Embedded Systems (3).** Prerequisites: 2.5 GPA; C or better in ECE 3362 or ECE 3363 or CS 3350; ECE 3303 or ECE 3304. For majors only or departmental consent. Control of peripherals. Maintain continuous data streams. Real-time operating systems. [ECE 5380]
- 4381—VLSI Processing (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3311, PHYS 2401 and MATH 3350. For majors only or departmental consent. Introduction to the physical principles, techniques, and technologies involved with the fabrication of very large scale integrated circuits (VLSI).
- 4382—Digital IC Analysis and Design (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3311 and ECE 3362. For majors only or departmental consent. Design of VLSI digital integrated circuits including basic device theory and processing technologies.
- 4385—Introduction to Microsystems I (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3303 and ECE 3311. For majors only or departmental consent. Fundamentals of microelectromechanical (MEMS) and microfluidic systems. Project-based course introduces microsystem design, analysis, simulation, and manufacture through several case studies using representative devices.
- 4386—Introduction to Microsystems II (3).** Prerequisite: 2.5 TTU GPA; C or better in ECE 4385. For majors only or departmental consent. Application of microfabrication to create microsensor systems. Integration of optics, optoelectronics, and microfluids. Includes other MEMS projects.
- 4391—Electric Machines and Drives (3).** Prerequisite: 2.5 TTU GPA. Prerequisites or corequisites: C or better in ECE 3341 and ECE 3353. For majors only or departmental consent. Analysis and control of DC machines and induction machines. Space vector theory. Field oriented control. Modeling of machine and controller dynamics.
- 4395—Metamaterials and Integrated Nanophotonics (3).** Prerequisites: 2.5 TTU GPA; C or better in ECE 3342. Covers the fundamentals of metamaterials and integrated nanophotonics and overviews the recent research activities in these areas. [ECE 5395]

Department of Industrial, Manufacturing and Systems Engineering

Bryan A. Norman, Ph.D., Chairperson

Professor: Norman

Associate Professors: Cong, Cross, Du, Matis, Xu

Assistant Professors: Bu, Liang, Son, Validi, Wei

Lecturer: Sheikhezraei

CONTACT INFORMATION: 232 Industrial, Manufacturing and Systems Engineering Building | Box 43061 | Lubbock, TX 79409-3061

About the Department

This department supervises the following degree programs:

- Industrial Engineering BS
- Master of Science in Industrial Engineering
- Master of Science in Systems and Engineering Management
- Master of Science in Manufacturing Engineering
- Doctor of Philosophy in Industrial Engineering
- Doctor of Philosophy in Systems and Engineering Management

Mission. The mission of the department is to provide the highest quality of industrial, manufacturing and systems engineering education by stimulating discovery, integration, application, and communication of knowledge.

Program Educational Objectives. Within a few years of graduation, Industrial Engineering BS graduates are expected to:

- Assume professional, technical managerial, or leadership roles within organizations and/or pursue advanced study.
- Apply knowledge through discovery, synthesis, and integration for the betterment of their organization or society at large.

These objectives are published in the university's catalog and on the Department of Industrial, Manufacturing and Systems Engineering website.

Student Outcomes. Student outcomes are statements of the expectations for the knowledge and skills that students should possess when they graduate with an Industrial Engineering BS from Texas Tech University.

Graduates of the program must demonstrate the following:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

The Industrial Engineering BS is accredited by the Engineering Accreditation Commission of ABET, www.abet.org.

Program Overview. Modern industrial engineering is a combination of basic engineering knowledge and quantitative analysis techniques to support managerial decision making. Industrial engineers use the information and techniques from physical, mathematical, biological, behavioral, and engineering sciences to plan, control, design, and manage complex

organizations and systems. Just as the other branches of engineering use the laws of physical sciences in designing and operating a product, industrial engineering applies these same laws to designing and operating systems in which these products are produced or in which services are provided. The major distinction between industrial engineering and other branches of engineering is that the industrial engineer must consider not only the behavior of inanimate objects, as they are governed by physical laws, but also the behavior of people as they interface with inanimate objects and as they operate together in organizations, whether these organizations be simple or complex.

The curriculum provides students with an opportunity to apply their engineering, mathematical, and science knowledge to design systems (production or processes) and solve engineering problems. Students learn to function on teams, communicate effectively, design and conduct experiments, and utilize current engineering tools. Students gain an understanding of their professional and ethical responsibilities as they examine contemporary issues and the impact of engineering solutions in the global workplace. Perhaps most importantly, students learn to learn so that they can continue to update their industrial engineering skills throughout their careers.

The curriculum is continually evaluated by faculty, students, alumni, and industry to provide a contemporary industrial engineering program that meets the needs of customers. A variety of assessment tools are utilized in the evaluation process. Program changes are implemented on an ongoing basis.

Graduate Programs

For information on graduate programs offered by the Department of Industrial, Manufacturing and Systems Engineering, visit the Graduate Programs section of the catalog on page 336.

Undergraduate Programs

General Standards and Requirements. Admission requirements and academic standards for the Department of Industrial, Manufacturing and Systems Engineering are consistent with the dynamic enrollment plan for the Edward E. Whitacre Jr. College of Engineering. Refer to the introduction to the Whitacre College of Engineering section of this catalog for a description of the criteria for initial admission to the Whitacre College of Engineering and the lower-division foundational curriculum. The recommended foundational curriculum for industrial engineering consists of ENGL 1301, ENGL 1302; MATH 1451, MATH 1452; CHEM 1307/CHEM 1107; PHYS 1408; ENGR 1110, ENGR 1330, ENGR 2392, ENGR 1320 or ENGR 1340.

A student may apply for admission to the upper division of a degree program upon completion of the foundational curriculum and a minimum of 12 credit hours of Texas Tech coursework. The acceptance criterion is based exclusively on a cumulative GPA for coursework completed at Texas Tech. The specific GPA standard varies among the degree programs and may change from one academic year to the next as necessary to align enrollments with the educational resources. For students who entered Texas Tech prior to June 1, 2012, a minimum 2.0 GPA is required for admission to the industrial engineering upper-division degree program. Students entering Texas Tech after June 1, 2012, must have a minimum 2.5 GPA.

The academic standards required by the Whitacre College of Engineering and the Department of Industrial, Manufacturing and Systems Engineering are given in the introduction to the Whitacre College section of the catalog and summarized below. Exceptions to these standards are at the discretion of the Dean of the Whitacre College of Engineering.

- A grade of C or better is required for all courses in an engineering degree plan.
- A grade of C or better must be achieved in all prerequisites before the subsequent course may be attempted.
- A minimum 2.5 GPA is required to maintain academic good standing and continued membership in the Whitacre College of Engineering.
- A full-time student must achieve a C or better in 18 credit hours of coursework in the degree plan in each 12-month period.

- Students will only be allowed to attempt any engineering course three times to obtain a grade of C or better.

Students entering the industrial engineering program are assigned a faculty advisor for professional and career advice and a staff advisor for arranging a course of study. The curriculum is designed to provide a comprehensive education in industrial engineering and to develop effective engineers by balancing the breadth and depth of instruction.

A minimum of 130 hours is required for graduation. The courses are offered so that progress through the program is efficient and flexible to accommodate the needs of individual students. An advisor assists each student with his or her individual program on a semester-by-semester basis.

The department follows the general standards and requirements of the Whitacre College of Engineering. Any student requesting an exception must submit a written request and any supporting documentation to the Industrial, Manufacturing and Systems Engineering Undergraduate Curriculum Committee for its approval.

Communication Literacy Requirement. Communication Literacy courses for the industrial engineering major are IE 2401 and 4333.

Combined Bachelor's and Master's Programs. The IMSE department offers a program for outstanding students to complete both the Bachelor of Science in Industrial Engineering (BSIE) degree and Master of Science in Industrial Engineering (MSIE) degree in approximately five years. The combined program allows dual counting of up to nine IE graduate credits toward both the BS degree IE electives and the M.S. degree required IE courses or IE electives. BSIE students interested in the program should inform their academic advisor as soon as possible but no later than the beginning of the first semester of their junior year. Students should formally apply to the selected program during the semester before they are within 30 hours of completing their BSIE (for most students, this means the application should be submitted during the first or second semester of their junior year). Students must meet all university and departmental requirements for M.S. program admission before enrolling in graduate-level courses. Students will receive their BSIE degree upon completion of all BS requirements, which will typically occur prior to their completion of the M.S. requirements. Students interested in learning more about the program and the application process should consult with their academic advisor, the IMSE departmental website, and the IMSE graduate admissions coordinator.

Industrial Engineering, Undergraduate Minor

A minor in industrial engineering consists of 18 hours of IE courses. Required courses are IE 2341, IE 2311, IE 2401, and IE 2324; electives are two 3000- or 4000-level courses, excluding IE 4331 and IE 4333. Some deviations from these lists of courses may be permitted depending on a student's interests and academic background. Students should consult with an academic advisor in the department for development of a minor program if they request deviations from the prescribed minor courses.

Industrial Engineering, BS / M.S.

Students in the Industrial Engineering BS program at TTU are assigned a staff advisor and are responsible for arranging a course of study with the advisor's counsel and approval. Programs leading to a combined BS/M.S. degree are available. Students interested in these programs should inform their academic advisor during or before the first semester of the junior year of the Industrial Engineering BS curriculum. Students must meet all Graduate School admission requirements (www.depts.ttu.edu/gradschool) and non-thesis degree requirements. Students must complete an application through the Graduate School to be admitted into the M.S. IE program during their junior year.

Students can apply up to 9 hours of graduate-level coursework to their Industrial Engineering BS Degree.

Undergraduate Course Descriptions**Industrial Engineering (IE)**

- 1385—Computing Principles for Industrial and Systems Engineers (3).** Computational problem solving, abstraction, algorithm design, global impact of computing, professionalism and ethics, team design.
- 2311—Computing for Industrial Engineers (3).** Prerequisite: C or Better in ENGR 1330. Covers programming with a view toward industrial engineering applications. Topics include control flow, object-oriented programming, algorithm design, and data structures.
- 2324—Engineering Economic Analysis (3).** Prerequisite: MATH 1451. Evaluation of economics of engineering proposals for cost and profitability. Fulfills core Social and Behavioral Sciences requirement.
- 2341—Engineering Statistics I (3).** Prerequisite: MATH 1452. Descriptive statistics, probability, conditional probability, random variables, discrete and continuous probability distributions, sampling distributions, point and interval estimation, hypothesis testing for a single sample.
- 2401—Work Design for Production Operations (4).** Prerequisite: IE 2341. Fundamentals of work design for production operations, including work measurement, methods engineering, improvement methodologies, product and workstation design, and engineering design team operations. (CL)
- 3244—Engineering Data Analysis (2).** Prerequisite: C or better in IE 2341. Techniques for data collection from engineering systems, analysis of data for modeling and system description. Data graphing and presentation.
- 3311—Deterministic Operations Research (3).** Prerequisite: C or higher in MATH 2360. Prerequisite or corequisite: IE 2311. Introduction to operations research, linear programming, dynamic programming, integer programming, traveling salesman problem, transportation, and assignment problems.
- 3312—Probabilistic Operations Research (3).** Prerequisite: C or higher in IE 2311, IE 2341, and IE 3311. Fundamental probabilistic models, with application to operations research, industrial systems, and processes with uncertainty.
- 3328—Manufacturing Systems Control (3).** Prerequisite: C or better in IE 2341 and IE 3311. Production control systems, production planning, forecasting, scheduling, materials and inventory control systems and models, learning curves, critical path methods of PERT and CPM.
- 3329—Fundamentals of Project Management (3).** Prerequisite: IE 2341. Fundamentals of project management for engineers, including project selection, planning, scheduling, budgeting, risk management, resource allocation, control, team operations, evaluation, and closure.
- 3342—Engineering Statistics II (3).** Prerequisites: IE 2341, MATH 2360, MATH 2450. Statistical inference for two samples, analysis of variance, simple and multiple linear regression, design of experiments.
- 3346—Quality Assurance and Engineering Statistics (3).** Prerequisite: C or better in IE 2341. Quality assurance systems, quality control and statistical quality control (including control charting, acceptance sampling, quality costs, and loss functions), multiple linear regression, goodness of fit testing, and introduction to experimental design.
- 3351—Manufacturing Engineering I (3).** Prerequisite: C or better in ME 2207, ME 3311, and CE 2301 or ME 2301. Properties of materials as related to manufacturing. Processing methods for metals, plastics, ceramics, semiconductors, and composites. Process selection, planning, and economics.
- 3352—Manufacturing Engineering II (3).** Prerequisite: IE 3351 or consent of instructor. Introduction to computer-aided manufacturing. Computer-aided process planning; control and monitoring of processes. Numerical control and industrial robots.
- 3361—Work Analysis and Design (3).** Prerequisite: C or better in IE 2341; may be taken concurrently. Principles and techniques of work measurement, methods engineering, workplace design, work sampling, and predetermined time systems. Basic ergonomic principles applied to workplace design and physiological work measurement.
- 4120—Internship and Coop (1).** Prerequisite: Senior standing. For students on an approved internship or coop experience. Credits cannot be used towards graduation.
- 4301—Engineering Design for People (3).** Prerequisite: IE 2401 and ME 2301 or CE 2301. Focuses on the performance of human-machine systems with primary emphasis on human information processing, occupational biomechanics, digital human modeling, and accidents and safety. [IE 5301]
- 4306—Advanced Systems Safety Engineering (3).** Prerequisite: IE 2401. Fundamentals of occupational safety, regulatory requirements, qualitative and quantitative hazard evaluation, human reliability, product

safety, incident investigation, and best practices to reduce occupational injuries. [IE 5306]

- 4316—Simulation Systems Modeling (3).** Prerequisite: C or better in IE 2341 and IE 3312. Fundamentals of Monte Carlo methods. Systematic development, programming, and analysis of computer simulation models using a high-level simulation language such as Arena.
- 4320—Fundamentals of Systems (3).** Prerequisite: IE 3329. Basic foundations and applications of general systems theory applied to engineering and organizational enterprises addressing systems efficiency, effectiveness, productivity, economics, innovation, quality, and QWL.
- 4322—Financial Systems for Engineers (3).** Prerequisite: Junior standing. Cost control techniques for management, methods of financial statement analysis, capital and expense budgets, cost ratios, cost behavior, pricing methods, and overhead allocation methods.
- 4325—Lean Methods (3).** Productivity and performance improvement including efficiency, effectiveness, quality, QWL, innovation, profitability, and budget ability theories, techniques, analysis, and applications for industrial systems. [IE 5325]
- 4326—Healthcare Management Engineering (3).** Prerequisite: IE 2341. Students will apply tools to solve problems in healthcare and receive a certificate in Quality and Safety from the IHI upon completion.
- 4331—Individual Studies in Industrial Engineering (3).** Prerequisite: Advanced standing and departmental approval. May be repeated.
- 4333—Senior Design Project (3).** Prerequisites: Industrial engineering senior and last long semester before graduation. Individual industrial engineering design project. Applications of systems thinking, oral and written communications, professionalism, and ethics. (CL)
- 4351—Facilities Planning and Design (3).** Prerequisites: C or higher in IE 2324 and IE 2341. Prerequisite or corequisite: C or higher in IE 3311 and IE 3351. Modern plant layout and materials handling practices, stressing the importance of interrelationships with management planning, product and process engineering, methods engineering, and production control.
- 4356—Product Innovation (3).** Prerequisite: IE 3351. Focuses on design and manufacturing for the biomedical device industry, providing skills in biomedical device research and development, teamwork, and interdisciplinary knowledge.
- 4358—3D Printing and Additive Manufacturing, Fundamentals and Practices (3).** Prerequisite: IE 3351. Provides detailed principles, theories, and applications of additive manufacturing (AM) techniques. Design, development of state-of-the-art, and future directions also covered.
- 4361—Engineering Design for People (3).** Prerequisite: IE 3361. Design of systems for human use, including human sensory and information processing abilities, human-machine system design processes and principles, and reduction of human error in systems design.
- 4362—Industrial Ergonomics (3).** Prerequisite: IE 3361. Advanced ergonomics principles. Emphasis on physiological, biomechanical, and psychological assessment of work. Establishing human capabilities and limitations.
- 4380—Information Systems Engineering (3).** Prerequisite: Junior or senior standing. Information systems design for decision support, data modeling, database design and access, internet data, data security, data mining and warehousing, social and ethical issues.
- 4381—Introduction to Critical Infrastructure (3).** Prerequisite: Junior or senior standing. Introduction to the analysis and implementation of critical infrastructure and analysis of their security and resilience.
- 4382—Cybersecurity for Information Systems (3).** Prerequisite: Junior or senior standing. Countermeasures for combating risks, threats, and vulnerabilities of information technology, access control, security policy, audits, testing, monitoring, cryptography, networking principles and defenses, compliance laws/standards.
- 4383—Industrial and Networked Control Systems (3).** Prerequisite: Junior or senior standing. Introduction to the analysis and implementation of networked control systems, including applications in critical infrastructure.
- 4384—Security for Systems and Software (3).** Prerequisite: Junior or senior standing. Provides a comprehensive understanding of a secure systems and software development process.
- 4385—Cyber Attacks (3).** Prerequisite: Junior or senior standing. Provides a comprehensive understanding of cyber attacks that include systems engineering and software/hardware/network environments for national infrastructure.
- 4386—Requirement Engineering for Systems and Software (3).** Prerequisite: Junior or senior standing. Introduces the definition of and rationale for systems and software requirements engineering processes. Includes the fundamentals, principles, and techniques for requirements engineering.

Department of Mechanical Engineering

Song-Chang Kong, Ph.D., Chairperson

Horn Distinguished Professor and J.W. Wright Regents Chair: Pantoya
President's Endowed Distinguished Chair: Hussain

Professors: Blawdziewicz, Christopher, Chyu, Ekwaro-Osire, Hussain, Idesman, Kong, Ma, Ren, Yang, Yeo

Associate Professors: Su, Bhattacharya, He, Hong, Maldonado

Assistant Professors: Ahmad, Buaria, Chen, Docimo, Egan, Khamvilai, J. Liu, M. Liu, X. Liu, Roy, Srivastava, Tang

Associate Professor of Practice: Aquino

Senior Lecturers: Han, Hanson, Mosedale

Instructors: Baturalp, So, Bhattacharya, Branson, Chirico, Fanning, Gray, Shturman, Zhang

About the Department

This department supervises the following degree programs:

- Mechanical Engineering BS
- Master of Science in Mechanical Engineering
- Doctor of Philosophy in Mechanical Engineering

Vision. The vision of the department is to achieve international recognition as a leading mechanical engineering program, empowering students to excel in fundamentals and teamwork to create a sustainable future.

Mission. The mission of the department is to provide students with exceptional educational opportunities rooted in the fundamental principles of mechanical engineering and state-of-the-art technology. Our programs actively support scientific discovery and technological innovation to enhance the quality of lives and livelihoods. Faculty and students undergo vital professional development through engaging in advanced research, design projects, and related endeavors. We foster a collaborative and collegial environment that promotes teamwork, ensuring a well-rounded educational experience.

Program Educational Objectives. The current educational objectives of the mechanical engineering program are:

- Graduates will meet or exceed the expectations of employers of mechanical engineers.
- Qualified graduates will continue their professional development by pursuing advanced study if they so desire.
- Graduates will continue their professional development by pursuing leadership positions in their profession and/or communities.

Student Outcomes. Student outcomes are statements of the expectations for the knowledge and skills that students should possess when they graduate with a Mechanical Engineering BS from Texas Tech University.

Graduates of the program must demonstrate the following:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

The Mechanical Engineering BS program is accredited by the Engineering Accreditation Commission of ABET, www.abet.org, under the General Criteria and Program Criteria for the Mechanical and Similarly Named Engineering Programs.

Program Overview. Mechanical engineering is the broadest of the engineering disciplines with a curriculum providing a strong foundation in mathematics and the physical sciences of chemistry and physics followed by an in-depth education in four of the principal engineering sciences—design and manufacturing, thermo fluid engineering, mechanics and materials, and dynamics and controls. The program in mechanical engineering provides students with the ability to apply their engineering, mathematics, and science knowledge to design mechanical systems and to solve engineering problems. Students learn to design and conduct experiments, to communicate effectively, to function in teams, and to utilize modern engineering tools. Students gain an understanding of their professional and ethical responsibilities as engineers. Perhaps most importantly, students are prepared for the lifelong learning necessary to function effectively as the practice of engineering evolves.

Graduates with a degree in mechanical engineering will find employment opportunities covering a wide spectrum, including aerospace, automotive, petroleum production and refining, petrochemicals, electrical power, electronics, semiconductors and computers, manufacturing, and healthcare, as well as research positions in industry and government laboratories. Problem-solving techniques learned in the mechanical engineering curriculum are also applied to continued educational pursuits or graduate study in engineering, as well as in areas such as law, medicine, business administration, and other professions.

Each student is required to have a scientific calculator for use in the classroom. The department requires students to have laptop computers for use in the classroom and at home. At a minimum, this computer should support high-level programming languages such as C and application packages such as word processing, spreadsheets, and mathematical analysis software.

Graduate Programs

For information on graduate programs offered by the Department of Mechanical Engineering, visit the Graduate Programs section of the catalog on page 338.

Undergraduate Programs

General Standards and Requirements. Admission requirements and academic standards for the Department of Mechanical Engineering are consistent with the dynamic enrollment plan for the Edward E. Whitacre Jr. College of Engineering. Refer to the introduction to the Whitacre College of Engineering section of this catalog for a description of the criteria for initial admission to the Whitacre College of Engineering and the lower-division foundational curriculum. The foundational curriculum for mechanical engineering consists of ENGL 1301, ENGL 1302; MATH 1451, MATH 1452; CHEM 1307/CHEM 1107; PHYS 1408; ENGR 1110, ENGR 1330, ENGR 2392, and ENGR 1320 or ENGR 1340.

A student may apply for admission to the upper division of a degree program upon completion of the foundational curriculum first-year courses and a minimum of 12 credit hours of Texas Tech coursework. The acceptance criterion is based exclusively on a cumulative GPA for coursework completed at Texas Tech. The specific GPA standard varies among the degree programs and may change from one academic year to the next as necessary to align enrollments with the educational resources. Students entering Texas Tech after June 1, 2016, must have a minimum 2.75 GPA.

The academic standards required by the Whitacre College of Engineering and the Department of Mechanical Engineering are given in the introduction to the Whitacre College section of the catalog and summarized below. Exceptions to these standards are at the discretion of the Dean of the Whitacre College of Engineering.

- A grade of C or better is required for all courses in an engineering degree plan.

- A grade of C or better must be achieved in all prerequisites before the subsequent course may be attempted.
- A minimum 2.5 GPA is required to maintain academic good standing and continued membership in the Whitacre College of Engineering.
- A full-time student must achieve a C or better in 18 credit hours of coursework in the degree plan in each 12-month period.
- An engineering course may be repeated only twice after a course drop, withdrawal, or failure to achieve a C or higher.

Combined Bachelor's–Master's Degree Program. An accelerated program is available for outstanding students to pursue a combined BSME–M.S.M.E. degree in five years. Students interested in this program while pursuing a BSME degree should inform their academic advisor during the first (fall) semester of the junior year, follow the suggested curriculum in the next (spring) semester, and apply before the beginning of the fourth year. Students opting to pursue the M.S.M.E. degree may apply up to 9 graduate credit hours to the BSME degree requirements.

Co-Op Program. Mechanical engineering students are encouraged to consider the Whitacre College of Engineering Co-op program. This involves multiple work assignments in industry for a cumulative duration of two semesters. These work assignments are normally completed prior to the start of the senior year. The Co-op experience of the Whitacre College of Engineering requires departmental approval prior to beginning Co-op studies and may be used to satisfy a 3-credit hour department elective requirement through ME 4000 course credit. Co-op students gain valuable real-world engineering experience that enhances the academic experience on campus and provides experience for a career in industry.

General Academic Requirements. Students are expected to follow the course sequence presented in the mechanical engineering curriculum table. Students whose high school courses do not include chemistry, physics, mathematics through analytical geometry, and at least two years of a foreign language will be required to take additional coursework during an adjusted first year of study. All students must earn a grade of C or better in all courses applied toward the mechanical engineering degree. The department rigorously enforces prerequisite requirements for all courses.

Minors. BSME students who are interested in obtaining a minor can do so through the application of the electives and dual credit towards the 18-hour minor's requirement. The department encourages minors in the following areas: aerospace engineering, bioengineering, civil engineering, environmental engineering, computer science, geology, mathematics, physics, and robotics. For more detailed information on how to incorporate a minor into the mechanical engineering degree, contact the department advisor.

Communication Literacy Requirement. Communication Literacy courses meeting the CL requirement for the Mechanical Engineering major are ME 4370 and 4371.

Mechanical Engineering, BS: Aerospace Concentration

Aerospace is a growing and popular field in engineering that focuses on the design, development, testing, and operation of aircraft and spacecraft. This concentration area creates the opportunity for students to achieve a basic level of understanding in this field across several courses, projects, and/or internship opportunities. Students within Mechanical Engineering can apply for this optional concentration once joining the department from the Foundational Engineering program. Students must complete a minimum of 12 credit hours in the concentration area. Students may also substitute one 3 hour course with ME 4000 for participation in an approved Aerospace internship. All course substitutions are to be approved by the Associate Chair for Undergraduate Studies in Mechanical Engineering.

this optional minor once joining the department from the Foundational Engineering program.

A minor in Aerospace Engineering consists of 18 hours of fundamental and elective courses covering topics related to the aerospace field. The fundamental courses required are ME 3370 - Fluid Mechanics and ME 4334 - Control of Dynamic Systems. The proposed minor sequence consists of ME 3370, ME 4334, and four courses from a list of electives that are being offered: ME 4352 - Aerospace Materials, ME 4353 - Compressible Flow, ME 4355 - Aircraft Propulsion, ME 4356 - Aerodynamics, ME 4357 - Aircraft Design and Structure, ME 4358 - Combustion Engineering, ME 4361 - Aerodynamics of Wind Turbines. Additional electives are also planned, including ME 4330 - (Flight Dynamics) and ME 4330 - (Systems Engineering). Students may also substitute one 3-hour course with ME 4000 for participation in an approved aerospace engineering industry internship. All course substitutions are to be approved by the Associate Chair for Undergraduate Studies in Mechanical Engineering. Students outside of WCOE applying for the proposed minor must have a TTU GPA of 3.0 or higher and meet the prerequisites to take the proposed courses.

Mechanical Engineering

A minor in mechanical engineering consists of 18 or more hours of mechanical engineering coursework, including 6 credit hours of upper-division courses beyond any mechanical engineering or equivalent courses already required by the student's home department. The minor sequence consists of ME 2301, ME 2302, ME 2322, ME 3311, ME 3322, and one of ME 3370 or ME 3403. Additional courses for the minor may only be taken if approved by the undergraduate director for mechanical engineering. Students outside of WCOE applying for a minor must have a TTU GPA of 3.0 or higher.

Undergraduate Course Descriptions

Mechanical Engineering (ME)

- 2115—**Introduction to Programming Lab (1)**. Introduction to programming fundamentals needed for basic engineering analyses through laboratory exercises; focuses on text-based programming.
- 2207—**Engineering Design Graphics (2)**. 2-D and 3-D computer-aided design and drafting in mechanical engineering using CAD software. Topics include geometric constructions, multiview sketching, drawing constraints, dimensioning, tolerances, and drafting.
- 2301—**Statics (3)**. Prerequisites: MATH 1452, PHYS 1408. Analyses of particles, rigid bodies, trusses, frames, and machines in static equilibrium with applied forces and couples.
- 2302—**Dynamics (3)**. Prerequisites: C or better in MATH 2450 and ME 2301. Kinematics and kinetics of particles and rigid bodies.
- 2315—**Computer-Aided Analysis (3)**. Prerequisites: MATH 1452, PHYS 1408, and ENGR 1315 or ENGR 1330. Introduces numerical methods used in the solution of typical engineering problems. Includes design activity.
- 2322—**Engineering Thermodynamics I (3)**. Prerequisites: PHYS 1408, MATH 1452. Properties of pure substances, ideal gas behavior, first and second law analysis, and applications to energy conversion and power cycles.
- 3164—**Finite Element Analysis (FEA) (1)**. Prerequisite: ME 3403 (may be taken concurrently). Introduces students to the use of finite element analysis software to perform load and stress analysis on mechanical components.
- 3165—**Computational Fluid Dynamics (1)**. Prerequisite: ME 3370. Introduces students to computer-based analysis and design of fluid/thermal systems.
- 3215—**Numerical Methods (2)**. Prerequisites: ME 2215, MATH 3350. Majors only. Introduction to numerical methods used in the solution of engineering problems.
- 3228—**Materials and Mechanics Laboratory (2)**. Prerequisites: ME 2301 and ME 3311, PHYS 2401. Evaluating and reporting the characteristics of materials and mechanical systems.
- 3264—**Computational Techniques (2)**. Prerequisites: ME 3403 or ME 3303, and ME 3370. ANSYS software-based Finite Element Analysis (FEA) and Fluent software-based Computational Fluid Dynamics (CFD) techniques will be introduced; in addition to Medical applications of Data Science and Machine Learning (ML), Genetic algorithm-based Optimization techniques will be covered.
- 3303—**Solid Mechanics (3)**. Prerequisite: ME 2301. Analysis of engineering components for determination of stresses, strains, deformations using classical mechanics approach.
- 3311—**Materials Science (3)**. Prerequisites: CHEM 1307, CHEM 1107. Fundamental and applied knowledge of the structure and properties of materials.
- 3322—**Engineering Thermodynamics II (3)**. Prerequisite: ME 2322. Principles of thermodynamics for general systems, cycle analysis, availability and irreversibility, thermodynamics of state, thermodynamics of nonreacting and reacting mixtures. Includes design activity.
- 3333—**Dynamic Systems and Vibrations (3)**. Prerequisites: MATH 3350, ECE 3301 or ECE 3302, PHYS 2401, ME 2302, and ME 3215 or ME 2315. Modeling and analysis of dynamic systems, equilibrium, stability and linear systems theory, introduction to mechanical vibrations.
- 3365—**Introduction to Design (3)**. Prerequisites: ME 3403 or ME 3303 and PHYS 2401. Analysis, design, and evaluation of mechanical elements.
- 3370—**Fluid Mechanics (3)**. Prerequisites: ME 2301 and ME 2322 or CE 2301. Basic principles of fluid statics, fluid dynamics, ideal and viscous flows, and turbo-machinery. Includes design activity.
- 3371—**Heat Transfer (3)**. Prerequisites: PHYS 2401, ME 3370, and ME 3215 or ME 2315. Introduction to heat transfer by the mechanisms of conduction, convection, and radiation. Includes design activity.
- 3403—**Mechanics of Solids (4)**. Prerequisites: ME 2301 or CE 2301. Analysis of structures to determine stresses, strains, and deformations.
- 4000—**Special Topics in Mechanical Engineering (V1-6)**. Prerequisite: Departmental approval. Individual studies of special topics in mechanical engineering. May be repeated for credit.
- 4100—**Fundamentals of Engineering Examination Review (1)**. Review for NCEES Fundamentals of Engineering Examination.
- 4234—**Control of Dynamic Systems Laboratory (2)**. Corequisite: ME 4334. Hands-on experience in the modeling and control of dynamic systems.
- 4251—**Thermal-Fluid Systems Laboratory (2)**. Prerequisites: ME 3370, ME 3322, ME 3371. Measurements, testing, performance evaluation, and documentation of thermal-fluid systems.
- 4330—**Advanced Topics in Mechanical Engineering (3)**. Prerequisite: Departmental approval. Advanced topics in mechanical engineering. Approved departmental elective. May be repeated for credit.
- 4331—**Individual Study in Mechanical Engineering (3)**. Prerequisite: Departmental approval. Individual study in advanced mechanical engineering areas. Approved departmental elective. May be repeated for credit.
- 4334—**Control of Dynamic Systems (3)**. Prerequisite: ME 3333. Introduction to analysis and design of control systems, including applications to electromechanical systems.
- 4335—**Robot and Machine Dynamics (3)**. Prerequisite: ME 4334 (may be taken concurrently). An overview of planar mechanism (cams and linkages) and set analysis and synthesis. Introduction to spatial mechanisms and robotics kinematic and dynamic analysis and control. Approved departmental elective.
- 4342—**Failure Analysis/Forensic Engineering (3)**. Prerequisite: ME 3311. Applies engineering and scientific principles to root-cause failure analysis and to the understanding of how engineering materials and components fail. Discusses failure modes and mechanism, design and manufacturing integrity, materials selection, legal problems, and product liability issues. Approved departmental elective.
- 4345—**Probabilistic Mechanical Design (3)**. Prerequisite: ME 3365. Application of probabilistic approaches in mechanical design. Techniques for the quantification of uncertainty and risk inherent in mechanical systems. Mechanical reliability methods. Approved departmental elective.
- 4352—**Aerospace Materials (3)**. Prerequisites: CHEM 1307, CHEM 1107, PHYS 1408. Corequisite: ME 3311. Fundamental and applied knowledge of the structure and properties of aerospace materials.
- 4354—**Sustainable Transportation Design (3)**. Prerequisite: ME 3371. Application of engineering processes to design creative, innovative, and economically viable fuels, powertrains, vehicles, and transportation systems that promise to significantly reduce the use of fossil fuels and the production of greenhouse gasses. Approved departmental elective.
- 4355—**Aircraft Propulsion (3)**. Prerequisites: ME 3370. An introduction to aircraft propulsion, including characteristics and performance of aerospace propulsion systems, rocket and air breathing propulsion systems performance and behavior, and designs of rocket or air breathing propulsion systems. Approved departmental elective.
- 4356—**Aerodynamics (3)**. Prerequisite: ME 3370. An introduction to aerodynamics, including wing and airfoil theory, aircraft performance, and aircraft stability and control. Approved departmental elective.
- 4358—**Combustion Engineering (3)**. Prerequisite: ME 3322 and ME 3371. Introduction to combustion kinetics; the theory of premixed flames and diffusion flames; turbulent combustion; dynamics of detonations and deflagrations. Approved departmental elective. [ME 5326]
- 4359—**Flight Dynamics and Control (3)**. Prerequisite: ME 3333. Fundamental and applied knowledge of flight vehicle dynamics comprising modeling, simulation, and stability characteristics.

- 4360—Sustainable Energy (3).** Prerequisites: ME 2322, MATH 3350. Exploration of the global energy demand and its environmental impact for continued human development. Alternative and petroleum-based fuels will be examined for near-term and long-term solutions. Includes researching, developing presentations, and participating at a high level of activity. Approved departmental elective.
- 4361—Aerodynamics of Wind Turbines (3).** Analyze the influence of lift and drag coefficients of turbine blades on the performance of wind turbines using Blade Element Momentum (BEM) method.
- 4370—Engineering Design I (3).** Prerequisites: ME 3311, ME 3365, ME 3371 (may be taken concurrently). Design problems characteristic of mechanical engineering, including consideration of cost, design optimization, codes and standards, and ethics. (CL)
- 4371—Engineering Design II (3).** Prerequisite: ME 4370. Design projects characteristic of mechanical engineering, including consideration of cost, design optimization, codes and standards, and ethics. (CL)
- 4375—HVAC System Design (3).** Prerequisites: ME 3322 and ME 3371. The determination of loads and the design of heating, ventilating, and air conditioning systems. Approved departmental elective.
- 4376—Manufacturing Processes (3).** Introduction to the fundamental industrial manufacturing processes. A hands-on approach will be utilized to develop an applications-oriented understanding of basic manufacturing and production methods.
- 4377—Innovation, Discovery, and Commercialization (3).** Develops and applies specialized, real-world, interdisciplinary opportunity creation and discovery skills to technology commercialization using integrated processes for projects with technical and business content.
- 4385—Introduction to Microsystems I (3).** For majors only or with departmental consent. Fundamentals of microelectro-mechanical (MEMS) and microfluidic systems. Project-based course introduces microsystem design, analysis, simulation, and manufacturing through several case studies using representative devices. Approved departmental elective.
- 4386—Introduction to Microsystems II (3).** Prerequisite: ME 4385. For majors only or with departmental consent. Application of microfabrication to create microsensor systems. Integration of optics, optoelectronics, and microfluids. Includes other MEMS projects. Approved departmental elective.
- 4390—Foundations of Nuclear Energy (3).** Prerequisites: PHYS 2401, MATH 2450. Survey of nuclear engineering concepts and applications, including nuclear reactions; radioactivity; and radiation interaction with matter and reactor physics with applications in medicine, industry, and research. Approved departmental elective.

About the Department

This department supervises the following degree programs:

- Petroleum Engineering BS
- Master of Science in Petroleum Engineering
 - Thesis Option
 - Non-Thesis Option
- Doctor of Philosophy in Petroleum Engineering

Mission. The mission of the Bob L. Herd Department of Petroleum Engineering has four elements:

- To provide excellent instruction and design experiences essential for graduates to enter the practice of petroleum engineering and pursue life-long professional development.
- To conduct research that generates, communicates, and applies new knowledge for the betterment of society.
- To foster a spirit of service and leadership among students and faculty and assist the public in addressing issues concerning the use of resources, protection of the environment, and development of infrastructures.
- The department fulfills an obligation to the people of the state of Texas and the nation in making available the technical expertise for the safe and efficient development, production, and management of petroleum reserves.

Program Educational Objectives. The Bob L. Herd Department of Petroleum Engineering supports the mission of the university and the college through its undergraduate program by providing students with an appropriate curriculum and educational experience.

The course selection and content remain current through continuous assessment by faculty, students, alumni, Petroleum Industry Advisor Board (PIAB) members, and industry employers.

To accomplish this mission, the petroleum engineering faculty, with advice from students, alumni, PIAB members, and industry employers, endorse program educational objectives to generate petroleum engineering graduates who will accomplish the following during the first few years after graduation:

- Be successful in diverse career paths in the petroleum industry.
- Continue professional development through participation and leadership in professional organizations (SPE, SPEE, ASEE, API, AADE, SPWLA).
- Continue lifelong learning through continuing education or post-graduate education (professional meetings, short courses, graduate courses).
- Progress to professional registration so that some individuals graduate from an ABET-accredited degree plan, pass the Fundamentals of Engineering Exam, work in increasingly responsible engineering positions, and pass the Professional Exam.

These objectives are published in the university's catalog and on the Bob L. Herd Department of Petroleum Engineering website.

Student Outcomes. Student outcomes are statements of the expectations for the knowledge and skills that students should possess when they graduate with a Petroleum Engineering BS from Texas Tech University.

Graduates of the program must demonstrate the following:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Petroleum Engineering BS Program Specific Criteria

The curriculum must provide both breadth and depth across the range of engineering topics implied by the title and objectives of the program. The curriculum must include:

1. Mathematics through differential equations, probability and statistics, fluid mechanics, strength of materials, and thermodynamics;
2. Design and analysis of well systems and procedures for drilling and completing wells;
3. Characterization and evaluation of subsurface geological formations and their resources using geoscientific and engineering methods;
4. Design and analysis of systems for producing, injecting, and handling fluids;
5. Application of reservoir engineering principles and practices for optimizing resource development and management; and
6. The use of project economics and resource valuation methods for design and decision making under conditions of risk and uncertainty.

Program Overview. The department is uniquely located in the Permian Basin, where approximately 41 percent of the nation's petroleum resources and 82 percent of Texas' petroleum resources lie within a 175-mile radius.

Petroleum engineering is the practical application of the basic and physical sciences of mathematics, geology, physics, and chemistry and all of the engineering sciences to the discovery, development, production, and transportation of petroleum. Petroleum is the most widely used form of mobile energy and now supplies approximately three-fourths of the total energy used in the United States. It is also a major raw material from which a wide variety of products are manufactured.

The department strongly encourages students to experience at least one summer internship for professional growth. Intern students will be assessed externally. The department has conferred over 3,130 BS degrees since the program's inception in 1946.

The department is heavily involved in assisting students to find employment—both summer internships and full-time positions—upon graduation. An interview and resume workshop for the fall and spring semesters is conducted through the Dean's office to assist students with interviewing and resume writing skills as an additional effort to maintain petroleum engineering's outstanding placement rate through the Dean's office. The curriculum is under continuous review, and revisions are made as needed to maintain accreditation and ensure employability of students. Faculty participation with ABET and the SPE Education and Accreditation Committee ensure the department is current on engineering education. In addition, faculty have attended and been principal planners in all Colloquiums on Petroleum Engineering Education since the first meeting in 1991. Changes in the petroleum engineering curriculum have been implemented by the Petroleum Engineering Curriculum Committee after due consider-

ation of input from the Petroleum Industry Advisory Board, ABET recommendations, and the department's planning and assessment tools.

The department assists students to obtain summer internships. This provides invaluable and highly recommended industry experience to students. The increasing department involvement in industrial research provides an opportunity for undergraduate students to participate actively in the research experience on campus.

The Petroleum Engineering BS is accredited by the Engineering Accreditation Commission of ABET, www.abet.org.

Graduate Programs

For information on graduate programs offered by the Department of Petroleum Engineering, visit the Graduate Programs section of the catalog on page 340.

Undergraduate Programs

General Standards and Requirements. Admission requirements and academic standards for the Department of Petroleum Engineering are consistent with the dynamic enrollment plan for the Edward E. Whitacre, Jr. College of Engineering. Refer to the introduction to the Whitacre College of Engineering section of this catalog for a description of the criteria for initial admission to the Whitacre College of Engineering and the lower-division foundational curriculum.

Admission to the petroleum engineering upper-division degree program is very competitive. Consequently, only 98 students in any academic year will be allowed to transition from the lower-division foundational program to the upper-division petroleum degree program, no later than between the third and fourth semesters. The 98-student limit to the petroleum engineering degree program was effective in Spring 2018 and thereafter.

Students must meet ALL of the following requirements:

- completion of the First Common Year curriculum.
- completion of 12 credit hours of Texas Tech University coursework.
- minimum institutional GPA of 3.0.

Students meeting all of the required criteria will be considered for admission to the petroleum engineering program based on their institutional GPA. Where necessary to distinguish among students, math, science, and engineering coursework GPAs will be weighted higher than other courses in the core or foundational curriculum. Once the enrollment cap of 98 has been reached for any given academic year, no additional students will be admitted to the petroleum engineering upper-division program for that year. Students meeting all of the required criteria who are not among the 98 admitted students may declare majors in any other department in the Whitacre College of Engineering, provided standards for those majors are met.

Upon acceptance into the upper-division petroleum degree program students will be placed on the most current catalog and upper-division degree plan to fulfill graduation requirements in place at that time.

A high-priority goal is to produce quality BS graduates measured by the following:

- Student average starting salaries near the top of the national average in accredited U.S. petroleum engineering departments.
- Provide summer intern opportunities and experiences within the industry.
- Recruitment of quality undergraduates.
- Accreditation by the Engineering Accreditation Commission of ABET, www.abet.org.
- Petroleum Industry Advisory Board recommendation on curriculum and graduates.
- An independent assessment of capstone senior courses.

All students in the department are required to have a Windows-based laptop computer, safety glasses, and steel-toed boots. Many instructors require students to transfer homework via email. Some instructors transfer information to students using the Internet. Students should check the department website for hardware and software recommendations; most petroleum-based software applications will run only on Windows-based PCs. The department has laptop accessible classrooms. Computer labs are not provided for normal coursework. A computer lab with geo-worksta-

Petroleum Engineering, BS
Recommended Upper-Division Curriculum

SECOND YEAR

Fall

- ☐ CE 2301 - Statics (3 SCH) **OR**
- ☐ ME 2301 - Statics (3 SCH)
- ☐ PETR 2324 - Geology for Petroleum Engineers (3 SCH) *(Fall only.)*
- ☐ MATH 2450 - Calculus III with Applications (4 SCH)
- ☐ ME 2322 - Engineering Thermodynamics I (3 SCH) **OR**
- ☐ PETR 2325 - Thermodynamics for Petroleum Engineers (3 SCH)
- ☐ PHYS 2401 - Principles of Physics II (4 SCH)

TOTAL: 17

Spring

- ☐ CE 3303 - Mechanics of Solids (3 SCH) **OR**
- ☐ ME 3303 - Solid Mechanics (3 SCH)
- ☐ ME 3370 - Fluid Mechanics (3 SCH) **OR**
- ☐ PETR 2327 - Fluid Mechanics for Petroleum Engineers (3 SCH)
- ☐ MATH 3350 - Higher Mathematics for Engineers and Scientists I (3 SCH)
- ☐ PETR 2303 - Petroleum Geology (3 SCH) *(Spring only.)*
- ☐ PETR 2326 - Petroleum Methods (3 SCH) *(Spring only.)*
- ☐ PETR 2302 - Reservoir Engineering I (3 SCH) *(Spring only.)*

TOTAL: 18

THIRD YEAR

Fall

- ☐ PETR 3304 - Formation Evaluation (3 SCH) *(Fall only.)*
- ☐ PETR 4324 - Data Analytics in Petroleum Engineering (3 SCH)
- ☐ PETR 3303 - Reservoir Rock Properties (3 SCH) *(Fall only.)* **AND**
- ☐ PETR 3103 - Reservoir Core Lab (1 SCH) *(Fall only.)*
- ☐ PETR 3306 - Reservoir & Carbon Utilization & Storage Engineering (3 SCH) *(Fall only.)*
- ☐ Oral Communication (3 SCH)*

TOTAL: 16

Spring

- ☐ ECE 3301 - General Electrical Engineering (3 SCH)
- ☐ PETR 3107 - Drilling I Rheology Lab (1 SCH) *(Spring only.)* **AND**
- ☐ PETR 3307 - Drilling I (3 SCH) *(Spring only.)*
- ☐ GEOL 4334 - Structural Analysis in Hydrocarbon Systems (3 SCH) *(Spring only.)*
- ☐ PETR 3105 - Petroleum Field Trip (1 SCH) *(Spring only.)*
- ☐ PETR 4303 - Petroleum Production and Carbon Storage Methods (3 SCH) *(Spring only.)*
- ☐ PETR 3350 - Basic Land Practices (3 SCH)

TOTAL: 17

FOURTH YEAR

Fall

- ☐ PETR 4222 - Petroleum Design I (2 SCH) *(Fall only.)*
- ☐ IE 2324 - Engineering Economic Analysis (3 SCH)
- ☐ PETR Senior Elective I (3 SCH) *(Fall only.)*
- ☐ PETR Senior Elective II (3 SCH) *(Fall only.)*
- ☐ HIST 2300 - History of the United States to 1877 (3 SCH)*
- ☐ POLS 1301 - American Government (3 SCH)*

TOTAL: 17

Spring

- ☐ PETR 4305 - Production and Carbon Storage Facilities and Processing (3 SCH) *(Spring only.)*
- ☐ PETR 4121 - Petroleum Design II (1 SCH) *(Spring only.)*
- ☐ PETR Senior Elective III (3 SCH) *(Spring only.)*
- ☐ HIST 2301 - History of the United States since 1877 (3 SCH)*
- ☐ POLS 2306 - Texas Politics and Topics (3 SCH)*
- ☐ Creative Arts (3 SCH)* *(ART 1309)*

TOTAL: 16

TOTAL HOURS: 133

One year (two semesters) of a single foreign language required if student did not successfully complete two years of foreign language in high school.

* Students must complete the university's core curriculum consisting of ENGL 1301 and 1302; HIST 2300 and 2301; POLS 1301 and 2306; and 3 hours each from Creative Arts, Social and Behavioral Sciences, and Oral Communication.. ENGR 2392 fulfills the university's core Language, Philosophy, and Culture requirement.

Senior Electives:

Operations Concentration - PETR 4307 and 4107, 4314, 4309.

Reservoir Concentration - PETR 4306, 4308, 4319, 4326.

Petroleum Grad level electives (Limit 2) - Departmental and faculty approval required.

Petroleum Engineering, BS + M.S.
Recommended Curriculum

FOURTH YEAR

Fall

- ☐ PETR 4222 - Petroleum Design I (2 SCH)
- ☐ IE 2324 - Engineering Economic Analysis (3 SCH)
- ☐ Creative Arts (3 SCH)
- ☐ Graduate Core Course (3 SCH)

TOTAL: 11

Spring

- ☐ PETR 4121 - Petroleum Design II (1 SCH)
- ☐ Graduate Core Course (3 SCH)
- ☐ Graduate Elective Course (3 SCH)
- ☐ PETR 4305 - Production and Carbon Storage Facilities and Processing (3 SCH)
- ☐ HIST 2301 - History of the United States since 1877 (3 SCH)

TOTAL: 6

TOTAL HOURS: 154

One year (two semesters) of a single foreign language required if student did not successfully complete two years of foreign language in high school.

Students must maintain a 3.0 GPA to continue in the program.

Core Curriculum: Students must complete the university's core curriculum consisting of ENGL 1301 AND 1302; HIST 2300 AND 2301; POLS 1301 AND 2306; 3 hours each from Language, Philosophy, and Culture; Creative Arts; Social and Behavioral Sciences; Oral Communication.

tions is available for geo-modeling software utilized throughout the three-year curriculum.

The academic standards required by the Whitacre College of Engineering and the Bob L. Herd Department of Petroleum Engineering are given in the introduction to the Whitacre College section of this catalog and summarized below. Exceptions to these academic standards are at the discretion of the petroleum engineering faculty in concurrence with the Dean of the Whitacre College of Engineering. The standards are as follows:

- A grade of C or better must be achieved in all prerequisites before the subsequent course may be attempted.
- A minimum 2.5 GPA is required to maintain academic good standing and continued membership in the Whitacre College of Engineering.
- A full-time student must achieve a C or better in 18 hours of coursework included in the degree program in two long semesters.
- Students will only be allowed to attempt any engineering course three times to obtain a grade of C or better.
- A maximum of three different engineering courses may be repeated.

The department requires students in their junior year to conduct a degree audit. Following this audit, they must meet with their academic advisors to discuss all courses remaining for completion of their degree. To graduate, students must complete a total of four senior electives in conjunction with their other required senior-level courses.

Undergraduate Course Descriptions

Petroleum Engineering (PETR)

- 2302—Reservoir Engineering I (3).** Prerequisites: PETR 2324; CHEM 1307 and CHEM 1107; and MATH 2450. Corequisites: PETR 2303 and PETR 2326. Estimate reservoir fluid properties, including PVT behavior of hydrocarbon systems. Investigation of the nature, methods of estimation, and use of reservoir fluid properties in reservoir and production calculations. Laboratory PVT demonstrations. (Design Course)
- 2303—Petroleum Geology (3).** Prerequisites: PETR 2324 and MATH 2450. Corequisites: PETR 2326 and PETR 2302. Introduction to petroleum systems and principles of using geologic data for creating and interpreting subsurface maps and cross-sections used in hydrocarbon exploration and production. A Saturday field trip is required to pass the course.
- 2324—Geology for Petroleum Engineers (3).** Prerequisites: MATH 1452; departmental approval. Survey of geology with emphasis on concepts and processes important for hydrocarbon exploration and extraction.
- 2325—Thermodynamics for Petroleum Engineers (3).** Prerequisites: MATH 1452, PHYS 1408. Corequisite: PHYS 2401. Thermodynamic study of pressure/volume/temperature/composition relationships in oil and gas mixtures. Provides students with the fundamentals and applications of thermodynamics in petroleum engineering.
- 2326—Petroleum Methods (3).** Prerequisites: PETR 2324 and MATH 2450. Corequisites: PETR 2303 and PETR 2302. Introduction to petroleum engineering emphasizing the relationship between geology, formation evaluation, drilling, completion, reservoir analysis and economic evaluation. A Saturday field trip to pertinent oil field related facilities is required to pass the course.
- 2327—Fluid Mechanics for Petroleum Engineers (3).** Prerequisites: PETR 2325, CE 2301, or ME 2301. Applications of mass, heat, and momentum balances to fluid flow problems; single and multiphase flow in drilling and production systems.
- 3103—Reservoir Core Lab (1).** Corequisite: PETR 3303. Reservoir rock properties and core lab. Design and conduct experiments in order to analyze and interpret data. (CL)
- 3105—Petroleum Field Trip (1).** Prerequisites: PETR 2303, PETR 3303, and PETR 3304. Corequisite: PETR 4303. Weekend field trip to study geological outcroppings. A weekend lab/field trip and report are required to pass the course.
- 3107—Drilling I Rheology Lab (1).** Corequisite: PETR 3307. Rotary drilling and rheology lab. Design and conduct experiments in order to analyze and interpret data. (Design course) (CL)
- 3303—Reservoir Rock Properties (3).** Prerequisites: ME 2322; ME 2301 or CE 2301; PETR 2303, PETR 2326, PETR 2302; PHYS 2401. Corequisites: PETR 3103, PETR 3304. Basic properties of reservoir rocks and their relation to the storage and production of oil and gas. Concepts such as heterogeneity, capillary pressure, relative permeability, resistivity are included as part of the course. (CL)
- 3304—Formation Evaluation (3).** Prerequisites: ME 2322; ME 2301 or CE 2301; PETR 2303, PETR 2326, PETR 2302; PHYS 2401. Corequisites: PETR 3303, PETR 3103. Evaluation of petrophysical properties using mud logs, wireline logs, core and wireline formation test to determine lithology, porosity, permeability and hydrocarbon content in conventional and unconventional reservoirs.
- 3306—Reservoir and Carbon Utilization and Storage Engineering (3).** Prerequisites: ME 2322; ME 2301 or CE 2301; PETR 2303, PETR 2326, PETR 2302; PHYS 2401. Corequisites: PETR 3303, PETR 3304. Understanding the fundamentals of fluid flow through porous media, reservoir types and recovery mechanisms. Estimation of hydrocarbon in place for oil and gas reservoirs. Application of material balance calculations for various reservoir types and applications of fluid flow through porous media in predicting production performance.
- 3307—Drilling I (3).** Prerequisites: ME 3403 or ME 3303 or CE 3303, ME 3370, PETR 3303, PETR 3103. Corequisites: PETR 3107 and PETR 4303. Rotary drilling, well completion practices, including casing, cementing, hydraulics, perforating and workover design. Design and use of equipment. (Design Course) (CL)
- 3350—Basic Land Practices (3).** Prerequisite: PETR 2326. Corequisite: PETR 4303. An overview designed to provide the non-specialist with foundation knowledge of the business and legal aspects of the oil and gas industry.
- 4000—Special Studies in Petroleum Engineering (V1-6).** Prerequisites: 3.0 TTU GPA; department and instructor consent. Individual studies in petroleum engineering areas of special interest. Can be used for practical curriculum training, but petroleum engineering majors may not use it as a substitute for PETR 4331 or PETR elective. May be repeated for credit.

Curriculum. Petroleum engineering applies the curriculum management of the Whitacre College of Engineering. Because of the rigidity of the upper-division petroleum degree program, students should be aware of the implications of not successfully completing coursework as prescribed in the degree plan. Students must remain aware of the Fall Only and Spring Only courses throughout the upper division curriculum. If the student receives a course grade of D or F in these courses, they may not continue with the degree program until that course is successfully passed the next time it is offered. If a student has a grade of D and received faculty approval, retakes may be taken as a corequisite only in the subsequent semester of a failing grade if the class is being offered in the following semester.

Per the Academic Advising and Support section of this catalog, students should “notify their advisor immediately when receiving a course grade of D or F” before dropping a course, or when withdrawing from the university in order to gain a full understanding of the implications of such an action and develop a plan for the future.

Minors. Currently, petroleum engineering does not offer a minor. In conjunction with the Petroleum Engineering BS degree, students may declare a minor (18 hours in a subject) in a different field of their choice. While declaration of a minor is not required, it is strongly recommended. All minors must be approved by both the minor department and petroleum department advisors. Suggested minors are, but not limited to, mechanical engineering, geosciences, and mathematics. These minors can be earned with some additional hours.

Communication Literacy Requirement. Communication Literacy courses for the Petroleum Engineering, BS are: PETR 3303, 3103, 3307, 3107, 4121, and 4222.

Carbon Capture Utilization Storage, Undergraduate Certificate

The United Nations Intergovernmental Panel on Climate Change and the International Energy Agency agree that Carbon Capture Utilization Storage (CCUS) is one of the most important low-carbon technologies required to achieve societal climate goals at the lowest cost. Consequently, CCUS will touch every sector and industry, from agriculture to finance, manufacturing to transportation, and, of course, petroleum. Now is the time to start building the in-depth knowledge to understand, develop, and implement CCUS projects because, as petroleum engineers, new career opportunities will become available if we have the necessary skills and knowledge.

This certificate will help students develop these skills and knowledge by understanding the sub-surface aspects of sustainable CCUS projects.

After completing this certificate, students will be able to:

- Understand CO₂ phase behavior and flow in the subsurface
- Learn how to create sustainable CCUS projects
- Learn more about the physics of CO₂ transport, injection, and storage modeling studies
- Know the practical aspects of CO₂ flooding
- Assess CO₂ capacity and migration
- Understand Class VI CCUS wells and EPA permitting.

The required courses for this certificate are: PETR 3306, 4303, 4305, and 4326.

Petroleum Engineering BS / M.S.

(Apply to the Graduate School prior to the start of May 1 of the junior year of Petroleum BS curriculum.)

Students in the BS petroleum engineering program at TTU are assigned a faculty advisor and are responsible for arranging a course of study with the advisor's counsel and approval. Programs leading to a combined BS/M.S. degree are available. Students interested in these programs should inform their academic advisor during the first semester of the junior year of the Petroleum BS curriculum. Students must meet all Graduate School admission requirements (www.depts.ttu.edu/gradschool) and non-thesis degree requirements.

- 4107—Drilling Simulation (1).** Prerequisites: C or better in PETR 3307, PETR 3107, PETR 3105, PETR 3306, PETR 3350; GEOL 4334; and CE 3302 or ME 2302. Corequisites: PETR 4307 and PETR 4222. Techniques and methods which are used to drill vertical and deviated wells.
- 4121—Petroleum Design II (1).** Prerequisite: C or better in PETR 4222. Corequisites: PETR 4308 and PETR 4314. Design projects characteristic of petroleum engineering, including consideration of cost, design optimization, codes and standards, and ethics. (CL)
- 4222—Petroleum Design I (2).** Prerequisites: PETR 3307, PETR 4303, PETR 4324, PETR 3350, ECE 3301, GEOL 4324. Corequisites: 6 PETR elective hours. Design projects characteristic of petroleum engineering, including consideration of cost, design optimization, codes and standards, and ethics. (CL)
- 4300—Petroleum Property Evaluation and Management (3).** Prerequisites: 3.0 TTU GPA; C or better in GEOL 4324, GEOL 4334, CE 3303 or ME 3403, CE 3305 or ME 3370, PETR 3304, PETR 3306. Corequisites: PETR 4121; 6 PETR elective hours in PETR 4306, PETR 4307, PETR 4314, PETR 4321 or PETR 4324. Economic, physical, analytical, and statistical evaluation of hydrocarbon-producing properties, emphasizing relative worth of investments based on engineering judgment, business strategy, and risk analysis using actual oil properties in team projects. (Design course)
- 4303—Petroleum Production and Carbon Storage Methods (3).** Prerequisites: ME 3403 or ME 3303 or CE 3303, ME 3370, PETR 3306. Corequisites: PETR 3350, PETR 3105, ECE 3301. Wellbore design, completions, inflow performance relationship, tubing performance relationship, artificial lift methods, wellbore stimulation, acidizing, hydraulic fracturing and production operations. (Design Course)
- 4305—Production and Carbon Storage Facilities and Processing (3).** Prerequisites: PETR 4303 and departmental approval. The design and understanding of surface facilities for the processing and disposition or sale of Carbon (for storage), oil, gas, and water. Field trips required.
- 4306—Enhanced Oil Recovery Processes (3).** Prerequisites: PETR 3306 and departmental approval. Introduction to EOR processes mechanisms, frontal advance theory and application, mechanisms of water-flooding and miscible processes and application to reservoir performance prediction.
- 4307—Drilling II (3).** Prerequisites: PETR 3307, PETR 3107, and departmental approval. Well control, pore pressure and fracture pressure calculations, casing design, cementing, directional drilling tools and calculations, drilling string design, drilling problems, drilling bits.
- 4308—Advanced Reservoir Engineering (3).** Prerequisites: PETR 3306 and departmental approval. Solution to the diffusivity equation in hydrocarbon reservoirs. Well testing methods. Analysis and interpretation of buildup, drawdown and interference tests. Application to naturally and hydraulically fractured reservoirs and to unconventional oil and gas reservoirs. Type curve and derivative approach.
- 4309—Well Completion and Stimulation (3).** Prerequisites: PETR 4303 and departmental approval. Downhole equipment, conformance – diagnostics and control, production testing, production logging, well maintenance, completion techniques, sand control and sand management, hydraulic fracturing and acidizing. (Design Course)
- 4314—Nodal Analysis and Artificial Lift (3).** Prerequisites: PETR 4303 and departmental approval. Production issues, including fluid reservoirs, new wellbore conditions, well flow performance, perforations, well deliverability, material balance, and lift techniques.
- 4319—Simulation Methods (3).** Prerequisites: PETR 3306 and departmental approval. Theory and development of basic finite difference and reservoir simulation fluid flow equations. Includes use of commercial reservoir simulation software for model and workflow development.
- 4321—Drilling Simulation (3).** Prerequisites: PETR majors only, C or higher in PETR 4121, PETR 4300, PETR 4307, PETR 4314. Corequisites PETR 4222 and either PETR 4309 or PETR 4305. Well control techniques and methods used to control kicks during operation. (Design Course)
- 4324—Data Analytics in Petroleum Engineering (3).** Prerequisites: ENGR 1330, MATH 2450, PHYS 2401. Introduces the common statistical methods and data analytic techniques used in petroleum engineering, covering three major topics: the fundamentals of statistics; the introduction of Python, including installation and setup, NumPy, pandas, and Matplotlib for data analysis; and the use of statistical methods and Python.
- 4326—Geoenergy and Carbon Management (3).** Prerequisite: Departmental approval. Fundamentals of geoenergy and carbon capture utilization and storage: geothermal, hydrogen generation and storage in formation, carbon capture, carbon storage, and utilization CO₂ (EOR). Theory and practical aspects covered.
- 4331—Special Problems in Petroleum Engineering (3).** Prerequisites: PETR majors only with a senior standing; 3.0 TTU GPA; consent of instructor and department. Corequisites: C or better in PETR 4121 or PETR 4222. Individual studies in advanced engineering areas of special interests. May be repeated for credit.
- 4385—Multinational Energy, Environment, Technology and Ethics (3).** Prerequisites: C or better in ENGL 1301, ENGL 1302, MATH 1320 and 3 hours of oral communications; junior or senior standing; departmental approval. Energy use in modern society and the consequences of past, current, and future energy use patterns.
- 4386—Petroleum Geology, Exploration, Drilling and Production (3).** Prerequisites: PETR majors only; 3.0 TTU GPA; C or better in ENGL 1301, ENGL 1302 and MATH 1320 or higher; junior or senior standing; departmental approval. Exposes students to both engineering and geological aspects of the petroleum business and enables them to operate in an oil company team environment or independently.

Edward E. Whitacre Jr. College of Engineering Graduate Programs

The Edward E. Whitacre College of Engineering offers programs of instruction and research leading to Master of Science and Doctor of Philosophy degrees with majors in chemical, civil, computer science, electrical, industrial, mechanical, and petroleum engineering. Details about these programs are in the catalog texts for individual departments. In addition, the college has the following multidisciplinary graduate programs:

- Master of Science in Bioengineering
- Master of Engineering
- Engineering, M.Engr. / J.D.

Bioengineering, M.S.

The Master of Science in Bioengineering is a thesis or non-thesis option program with five interdisciplinary concentrations:

- Biomechanics (Department of Mechanical Engineering)
- Biomedical Signals and Systems (Department of Electrical and Computer Engineering)
- Biochemical Processes (Department of Chemical Engineering)
- Occupational Bioengineering (Department of Industrial, Manufacturing and Systems Engineering)
- Environmental Bioengineering (Department of Civil, Construction and Environmental Engineering)

Faculty in the bioengineering area are heavily involved with research activities that require collaboration from scientists and clinicians in the Texas Tech University Health Sciences Center.

Students are required to take 24 credit hours of coursework and perform six credit hours of research for the thesis option or 30 hours of coursework for the non-thesis option. At least half of the coursework hours must be taken in the Whitacre College of Engineering. The remaining courses can be taken within, or outside, of the college of engineering since this is intended as an interdisciplinary master's degree. At least one higher level math course must be taken at the graduate level.

Engineering, M.Engr.

In addition to the specialized degree programs offered in each department, the college offers a 36 credit (12 course) interdisciplinary Master of Engineering degree that may be completed either on campus or fully online. Students are required to take courses in at least three different disciplines, with no more than five courses in any one engineering discipline. The program has one required course, a Reports Course, which is taken during the final semester. The other eleven courses are selected by the student to best meet personal educational and career goals. Students can receive credit for up to 9 of the required 36 semester hours completed at another accredited graduate school. All work credited toward the online degree program must be completed within nine calendar years. Regular on-campus students admitted to the Master of Engineering degree program must complete their degree in the regular six-year time limit. In addition to the regulations governing admission to the Graduate School, a baccalaureate degree in engineering or its equivalent is required for entrance to the Master of Engineering program. The student may be required to take (without graduate credit) such undergraduate leveling courses as may be designated by the college.

Master of Engineering / Doctor of Jurisprudence

The college participates in a dual program with the Texas Tech School of Law that enables a student to earn both the Doctor of Jurisprudence (J.D.) and Master of Engineering (M.Engr.) degrees in three years of academic work. Interested students must already be accepted and enrolled in the School of Law program and declare their intent to pursue the dual degrees no later than their third semester in law school. The program is designed for students interested in the areas of intellectual property (particularly patents) and law and science. A student may complete both degrees with 126 hours of law and engineering courses. This is possible by allowing 12 hours of approved law courses to transfer as elective credit towards the

Graduate Course Descriptions

Engineering (ENGR)

- 5000—Special Topics in Engineering (V1-12).** Prerequisite: Graduate standing in engineering. Individual study of advanced interdisciplinary topics in engineering under the guidance of one or more members of the engineering faculty.
- 5301—Introduction to Bioengineering I (3).** Prerequisites: BIOL 2120 or CHEM 3311 or permission of instructor. Presents a basic introduction to bioengineering, covering fundamental concepts of biology, biomolecular chemistry, biomedical engineering, biosensors, and therapeutic devices.
- 5302—Tissue Engineering 1 (3).** Prerequisites: BIOL 2120 or instructor permission. The aim of this course is to provide a fundamental understanding of tissue engineering, cell theory, cell growth and differentiation, and cell interactions with biomaterials. [ENGR 4001]
- 5321—Electric Power Systems CUSP Curriculum (3).** Prerequisite: Bachelor's degree in Engineering or a closely related field or consent of Instructor. Electric power generation, transmission, and distribution with an integrated focus on a set of courses on electric energy systems with an emphasis on sustainability as part of the CUSP (Consortium of Universities for Sustainable Power) curriculum.
- 5322—Advanced Electric Power Systems CUSP Curriculum (3).** Prerequisites: Bachelor's degree in Engineering or a closely related field, ENGR 5321, or consent of instructor. Power system protection, power system grid management, power system planning, demand forecasting, and distribution system engineering.
- 5323—Power Generation, Operation and Control CUSP Curriculum (3).** Prerequisites: Bachelor's degree in Engineering or a closely related field, ENGR 5321, or consent of instructor. Fundamentals of electric power generation, economic dispatch, locational marginal pricing and electricity markets, scheduling of generation units, optimal power flow.
- 5324—Electricity Markets CUSP Curriculum (3).** Prerequisites: Bachelor's degree in Engineering or a closely related field, ENGR 5321, or consent of instructor. "Locational marginal pricing" model of "organized" or "centralized" day-ahead and real-time electricity markets in the ERCOT market. Power flow, optimal dispatch, transmission and unit commitment issues, transmission price risk hedging, network models, and capacity adequacy.
- 5325—Power System Protection CUSP Curriculum (3).** Prerequisites: Bachelor's degree in Engineering or a closely related field, ENGR 5321, or consent of instructor. Main, back up and redundant relay protection; protection zones; proper instrumentation transformers; calculate fault currents; power system equipment in fault programs; relay and fuse settings; auto restoration methods.
- 5326—High Voltage Technology CUSP Curriculum (3).** Prerequisites: Bachelor's degree in Engineering or a closely related field, ENGR 5321, or consent of instructor. Students are expected to have basic knowledge of electric circuit analysis, transient and steady state response, electromagnetics and an introductory course on power system components and operation. Sources of overvoltages in power systems, methods of generating and measuring high voltages, insulating materials, electric field and stress control, insulation coordination, and protective devices.
- 5331—Power Electronics CUSP Curriculum (3).** Prerequisites: Bachelor's degree in Engineering or a closely related field or consent of Instructor. Power electronics and power conditioning with an integrated focus on electric energy systems with an emphasis on sustainability as part of the CUSP (Consortium of Universities for Sustainable Power) curriculum.
- 5332—Advanced Power Electronics I CUSP Curriculum (3).** Prerequisites: Bachelor's degree in Engineering or a closely related field, ENGR 5331, or consent of instructor. Integrated focus on electric energy systems with an emphasis on sustainability as part of the CUSP (Consortium of Universities for Sustainable Power) curriculum.
- 5333—Advanced Power Electronics II CUSP Curriculum (3).** Prerequisites: Bachelor's degree in Engineering or a closely related field, ENGR 5332, or consent of instructor. Devices used in power electronics and their protection: semiconductor physics review, power diodes, thyristors and GTOs, JFETs and FETs, MOSFETs, IGBTs, wide bandgap devices, snubbers, heat sinks, magnetic component design, and electromagnetic compatibility.
- 5341—Electric Machines and Drives CUSP Curriculum (3).** Prerequisite: Bachelor's degree in Engineering or a closely related field, or consent of instructor. Structure and applications of electric drive systems,

mechanical systems, power electronics, switch-mode converters and PWM, magnetic circuits, energy conversion, control of induction and synchronous machines, energy efficiency.

- 5342—Electric Machine Design CUSP Curriculum (3).** Prerequisites: Bachelor's degree in Engineering or a closely related field, ENGR 5341, or consent of instructor. Design process for electric motors and generators based upon fundamental theories. Supplements electric machine theory for advanced courses in electric machines and provides a thorough knowledge of design procedures in design of electric machines. Topics include mechanical, manufacturing and future challenges for machine design.
- 5343—Vector Control of Drives CUSP Curriculum (3).** Prerequisites: Bachelor's degree in Engineering or a closely related field, ENGR 5341, or consent of instructor. Accurate torque, speed and position control; dynamic analysis and modeling of induction machines; vector control of induction motor drives; parameter errors; direct-torque control; PM and SRM drives.
- 5344—FEA for Machine Design CUSP Curriculum (3).** Prerequisites: Bachelor's degree in Engineering or a closely related field, ENGR 5341, or consent of instructor. Introduces students to modern and classical methods used by engineers to design electromagnetic devices such as electric machines and transformers. Finite element analysis techniques, winding analysis and material modelling, and problem solving using commercial finite element analysis software.
- 5351—Wind Energy Essentials CUSP Curriculum (3).** Prerequisite: Bachelor's degree in Engineering or a closely related field, or consent of instructor. Various essential aspects in harnessing wind energy and its conversion and delivery as electricity. Broad understanding of essential elements in wind-electric systems: turbines, wind-plant development and their integration into the utility grid, environmental impacts, wind forecasting and more.
- 5352—Advanced Engineering Analysis for Bioengineers (3).** Overview of concepts in mathematics and computational methods relevant to bioengineering. Review of differential and integral calculus and vector calculus; introduction to ordinary differential equations, special functions, Fourier and Laplace methods, linear algebra, complex numbers, and other topics. Intended for graduate students in engineering who do not have an undergraduate degree in engineering, mathematics, or physics.
- 5360—Fundamentals of Engineering Science (3).** An overview of physical, mathematical, and engineering concepts; including electronics, materials, statistics, C programming, digital logic, microprocessors, and project management.
- 5361—Global Regulatory and Legal Requirements of Quality (3).** Regulatory requirements for the healthcare industry from an engineering perspective. [ENGR 4361]
- 5362—Product Development and Validation (3).** Prerequisite: ENGR 5361. Product development and validation targeted to the healthcare industry. [ENGR 4362]
- 5363—Risk and Failure Analysis (3).** Prerequisite: ENGR 5361. Regulations that apply to consumer health products risk and failure. [ENGR 4363]
- 5380—Renewable Electric Power Systems (3).** Fundamentals of electric power systems, generation, transmission, distribution, system control, and protection with a focus on integration of renewables and long-term sustainability.
- 5392—Ethics in Engineering Practice and Research (3).** Prerequisite: Bachelor's degree. Applications of professional ethics to engineering practice and research in fields of education and technology-related industry. May also be taken by distance learning.
- 6330—Master's Report (3).** Prerequisite: Graduate standing. Formal technical report on an interdisciplinary topic under guidance of faculty from one or more departments.

Department of Chemical Engineering

All doctoral candidates are required to register for CHE 7121, CHE 7122, or CHE 7123 each long semester unless exempted by the chairperson. Master's students are encouraged to take up to three semesters credit of CHE 7121, CHE 7122, or CHE 7123 in their program of study.

Chemical Engineering, M.S.Che.E.

The Master of Science in Chemical Engineering is a structured program requiring CHE 5310, CHE 5312, CHE 5321, CHE 5323, and CHE 5343.

The graduate student will be required to take three credit hours of seminars and two additional elective courses as specified by his or her advisory committee. A written thesis and a minimum of 24 hours of graduate-level coursework, exclusive of thesis, are required for the master's degree. In addition, a final oral exam in defense of the completed thesis will be administered by the candidate's thesis committee.

Non-Thesis Option. The master's program may also be completed without a thesis. Graduate students in this non-thesis option are required to take 30 credit hours of graduate coursework, inclusive of seminars and research, and must pass a comprehensive examination. The coursework for each student must meet approval of the department's graduate committee.

Chemical Engineering, Ph.D.

In addition to the five core courses and to regulations established by the Graduate School, applicants for candidacy for the doctoral degree are required to demonstrate high proficiency in a single research area. Certification of the research proficiency will be based on a record of accomplished research that demonstrates the required level of competence in the research area. The record must be substantiated by published articles, final research reports, and papers presented at meetings of learned societies. Ph.D. students are required to have 60 hours, exclusive of dissertation hours.

Graduate Course Descriptions

Chemical Engineering (CHE)

- 5000—Advanced Topics in Chemical Engineering (V1-6).** Prerequisite: Approval of department chairperson. Individual study of topics of current interest under the guidance of a member of the staff. May be repeated for credit on different topics.
- 5020—Internship (V1-3).** Prerequisite: Instructor approval. Individual studies in chemical engineering through an industrial work experience.
- 5310—Advanced Chemical Engineering Techniques (3).** Application of ordinary and partial differential equations for solution of mass, momentum, and/or energy transfer and transport problems. Primary emphasis is on the mathematical analysis of unsteady state systems and chemical-reaction systems: models, solutions, and model validation. One of five courses required in the master's program.
- 5312—Fluid Transport Principles and Analysis (3).** Fundamental relations governing mass, momentum, and energy transfer within fluids, with special emphasis on simultaneous transport, process applications, and numerical methods of analysis. One of five courses required in the master's program.
- 5315—Experimental Techniques in Fluid Dynamics (3).** Experimental techniques for fluid dynamics, including flow visualization, fluid characterization, image processing and analysis. Analytical modeling and statistical treatment of experimental data. Significant laboratory component.
- 5321—Advanced Chemical Engineering Thermodynamics (3).** In-depth study of fundamental laws of thermodynamics, property relations for pure material and mixtures, and phase and chemical equilibrium principles. One of five courses required in the master's program.
- 5323—Digital Computation for Chemical Engineers (3).** The development of current numerical methods for application to modeling of chemical engineering systems. Primary emphasis is placed upon steady state and unsteady state chemical reaction systems. One of five courses required in the master's program.
- 5330—Advanced Topics in Chemical Engineering (3).** Advanced graduate topics in chemical engineering areas of special interest. For engineering graduate students with solid mathematics and/or engineering background and basic computer literacy. Approved departmental elective. [CHE 4330]
- 5335—Intermediate Transport Phenomena (3).** Prerequisites: CHE 5312 and CHE 5310, or consent of instructor. Mass, momentum, and energy transport; Fick's law; solution of partial differential equations in time and space; interfacial transport; applications to separations.
- 5340—Polymer Processing (3).** Polymer processing and fabrication technology for thermoplastic and thermoset polymers. The science and art of manufacturing with plastic materials.
- 5341—Polymer Chemistry and Processing (3).** Polymerization reactions, mechanisms, and kinetics, large-scale synthesis, scope of polymer processing, and fabrication technology.
- 5342—Polymer Physics and Engineering (3).** Fundamentals of polymer science and engineering. Solution properties, chain conformation and

molecular mass characterization. Rubber elasticity and viscoelastic behavior. Crystalline polymers and morphology.

- 5343—Reaction Kinetics (3).** Analysis and design of chemical reactor operations with multiple reactions; semibatch operations and other complex reactor configurations. Determination of kinetic parameters from operating data. Economic-based optimization, characterization and modeling of non-ideal reactors. One of five courses required in the master's program.
- 5344—Polymers and Materials Laboratory (3).** Synthesis and properties of materials, including polymers, polymerization, transitions, phase separation, mechanical properties, and processing.
- 5346—Polymer Viscoelasticity (3).** Linear viscoelasticity, Boltzmann superposition, experimental methods, molecular theory, and mechanical properties of solid polymers.
- 5347—Polymer Crystallization and Morphology (3).** Prerequisite: C or better in CHE 5342. Structure and properties in semicrystalline polymers; mechanisms, thermodynamics, and kinetics of crystallization; morphology and crystal structure; thermal analysis, X-ray diffraction, and FTIR spectroscopy.
- 5348—Materials Applications for Scanning Probe Microscopy (3).** The science and technology of scanning probe techniques, including scanning tunneling microscopy, near field scanning optical microscopy, and atomic force microscopy, applied to materials characterization.
- 5356—Process Safety (3).** Introduction to hazards associated with chemical, physical, and biological processes, regulations, and risk assessment and management.
- 5363—Biochemical Engineering (3).** Introduction to biochemical reaction engineering and separations. Kinetics of biomass and product information and substrate utilization. Biotransport phenomena, bioenergetics, downstream separation, and purification process.
- 5364—Chemical Engineering Applications in Biological Systems (3).** Prerequisite: MATH 3350 or MATH 3354. Transport phenomena and chemical reactions at the molecular and cellular level in biological systems.
- 5365—Biotransport (3).** Mass and momentum transport in living systems.
- 5366—Biomicrofluidics (3).** Fluid phenomena at small scales. Science and engineering of miniaturized lab-on-chip devices for applications in chemical, biomolecular, and cellular analysis.
- 5372—Engineering Experimentation (3).** Course emphasizes strategy in experimentation, planning efficient experiments, analyzing and interpreting data, presenting results, and Six Sigma methodology.
- 5375—Analysis of Electrochemical Systems (3).** Prerequisite: Instructor approval for students from other engineering majors. Application of thermodynamics, transport phenomena, and reaction engineering to design, describe, and understand the performance of electrochemical systems and processes. Applications include electrolysis, batteries, and fuel cells. [CHE 4375]
- 5378—Sustainable Chemical Engineering: Concept and Design (3).** Students will learn to apply the concepts of sustainable engineering into design of chemical processes. Discussion will focus on the use of renewable energy and storage. [CHE 4378]
- 5381—Molecular Thermodynamics for Chemical Engineering (3).** Prerequisite: CHE 5321. Molecular theories for properties of gases and condensed phase systems. Emphasis will be on free energy changes, phase equilibria, and transport properties.
- 5382—Methods of Molecular Simulations (3).** Theory and applications of computational methods for simulating the statistical mechanics of complex molecular systems. Discusses thermodynamic, transport, and dynamic properties.
- 5383—Machine Learning for Chemical Engineering (3).** Prerequisites: Background in linear algebra, probability, single- and multi-variable calculus, and Python coding are recommended. Introduces math foundations, statistical machine learning, and deep learning theory and methods, with emphasis on their applications in chemical engineering.
- 5385—Bioprocess Control (3).** Problems and solutions associated with optimization and control of bioprocesses.
- 5390—Fundamental Concepts in Heterogeneous Catalysis (3).** Prerequisites: CHE 3322 or CHE 3323 or CHEM 3308 or permission of instructor. Introduction to modern heterogeneous catalysis and electrocatalysis; phase and surface equilibria; rates of surface reactions with analogy to homogeneous processes; electronic structure effects in catalysis.
- 5391—Chemical Engineering Application in Energy Science (3).** An introduction to conventional and renewable energy sources with an emphasis on chemical engineering applications, enhanced oil recovery techniques, and renewable energy technologies.
- 5392—Entrepreneurship for Chemical Engineers (3).** Business plan preparation, types of enterprises and initial steps including key permits necessary to start a chemical engineering enterprise.
- 5393—Colloid Science and Engineering (3).** Introduction to fundamentals of colloid science, interfacial phenomena, suspensions and complex

fluids, engineering and assembly of colloidal materials, and enhanced oil recovery.

- 5394—Soft Matter Engineering (3).** Introduction to fundamentals of soft matter physics, engineering structured fluids based on microscopic structure- function relationship for practical applications in food, consumer products, and pharmaceuticals.
- 5635—Advanced Topics in Transport Phenomena (6).** Current research topics in transport phenomena, including turbulent flow characterization, atmospheric chemistry and transport, and rheology, with an emphasis on computational modeling.
- 6000—Master's Thesis (V1-12).**
- 7000—Research (V1-12).**
- 7121—Doctoral Seminar (1).** Open discussions of recent advanced findings in any field of endeavor, with special attention to their relationship to the philosophy of chemical engineering. May be repeated for credit.
- 7122—Polymer and Materials Seminar (1).** Discussion and presentation of current research.
- 7123—Bioengineering Seminar (1).** Discussion and presentation of current research in bioengineering.
- 8000—Doctor's Dissertation (V1-12).**

Department of Civil, Environmental and Construction Engineering

The Department of Civil, Environmental and Construction Engineering offers a Doctor of Philosophy in Civil Engineering and two master's degrees: Master of Science in Civil Engineering (M.S.C.E.) and Master of Environmental Engineering (M.Env.E.). The M.Env.E. degree program is a direct first-year to graduate degree and includes a two-semester capstone team design project, but no thesis.

For the M.S. and Ph.D. degrees in civil engineering, students may choose one or more of several areas of concentration including environmental engineering, water resources engineering, structural engineering, wind engineering, engineering mechanics, geoenvironmental engineering, geotechnical engineering, transportation engineering, and construction engineering and management. Professors and instructors reserve the right to restrict the use and type of calculators used during class hours and tests.

Admission. Students with a baccalaureate degree in engineering may enter the graduate program by having their entrance credentials evaluated by both the Graduate School and the department. For applicants with a baccalaureate degree in science or mathematics, certain leveling courses in engineering normally are required. Persons entering the graduate program in civil engineering must consult with a graduate advisor within their program.

Civil Engineering, M.S.C.E.

The Department of Civil, Environmental and Construction Engineering offers a 30-hour Master of Science in Civil Engineering (M.S.C.E.).

Students working toward a M.S.C.E. focus on one of the principal sub-disciplines of civil engineering (e.g., environmental engineering, structural engineering, geotechnical engineering, transportation engineering, water resources engineering, or construction engineering and management) in this degree program. The thesis option allows students to complete 24 hours of coursework, perform 6 credit hours of independent research, and write a thesis based on the findings of the research. Requirements for the non-thesis option are as follows:

- Students enrolling in a non-thesis master's program may fulfill the degree requirements by either (a) completing 27 credit hours of graduate-level coursework and 3 credit hours of CE 6330, Master's Report; or (b) completing 30 credit hours of graduate-level coursework and a comprehensive exam.
- Students will not be allowed to use credit/non-credit courses (e.g., CE 7000) to fulfill the required 30 credit hours.

Civil Engineering, Ph.D.

Doctoral studies consist of selected courses and independent research culminating in a dissertation (minimum 60 coursework hours plus 12 dissertation hours). Each student's degree plan is individually formulated through consultation with a faculty advisory committee. Applicants to the program must apply to one of the following doctoral tracks:

- Construction Engineering
- Environmental Engineering
- Geotechnical Engineering
- Structural Engineering
- Transportation Engineering
- Water Resources Engineering

Students with graduate degrees in non-engineering sciences initially may be accepted subject to completing specified leveling courses in civil engineering. Students with master's degrees in civil or environmental engineering who have not completed courses equivalent to the core courses required for the master's degree in civil engineering will be required to complete the missing core courses satisfactorily at the earliest opportunity. Doctoral degree plans are individually prepared in consultation with a faculty advisor and usually comprise courses listed with CE or ENVE prefixes, but the degree plan often includes courses outside the Department of Civil, Environmental and Construction Engineering and the Whitacre College of Engineering.

Graduate Course Descriptions

Civil Engineering (CE)

- 5102—Environmental Engineering Graduate Seminar (1).** Exposes students to current state-of-practice and state-of-art research in environmental engineering through student presentations, internal faculty and non-faculty speaker presentations, and outside speaker presentations. May be repeated once for credit.
- 5185—Microbial Applications in Environmental Engineering Lab (1).** Prerequisite: Instructor consent. Determine concentration of coliforms, nutrients, and organic pollutants in water. Analyze water quality data.
- 5191—Advanced Water Treatment Lab (1).** Prerequisite: Instructor consent. Design and conduct flocculation, coagulant dose, sedimentation, and disinfection studies and assess impact on water quality.
- 5310—Numerical Methods in Engineering (3).** Prerequisite: MATH 5310 or instructor consent. Numerical techniques for the formulation and solution of discrete and continuous systems of equilibrium, eigenvalue and propagation problems.
- 5311—Advanced Mechanics of Solids (3).** Stress and strain at a point; theories of failure; unsymmetrical bending; curved flexural members; beams on continuous support; experimental and energy methods.
- 5313—Theory of Elastic Stability (3).** Theory of the conditions governing the stability of structural members and determination of critical loads for various types of members and structural systems.
- 5314—Theory of Plates and Shells (3).** Stress analysis of plates and shells of various shapes; small and large deflection theory of plates; membrane analysis of shells; general theory of shells.
- 5315—Probabilistic Methods for Civil Engineers (3).** Prerequisites: Graduate standing. MATH 4342 or equivalent knowledge of statistical and probability fundamentals. Examination and application of probabilistic methods in Civil Engineering.
- 5318—Finite Element Methods in Continuum Mechanics (3).** Prerequisite: CE 5310 and CE 5311 or instructor consent. Theory of the finite element method—constant strain elements; plane stress or strain for axisymmetric problems; application to plates and shells, torsion, heat transfer and seepage problems.
- 5319—Machine Learning for Civil Engineers (3).** Prerequisites: Graduate standing; CE 5315 or permission of the instructor. Application of machine learning concepts and algorithms in Civil Engineering.
- 5321—Advanced Soil Engineering I (3).** Prerequisite: CE 3321 (or equivalent) or instructor consent. Introduction to physio-chemical properties of soils; soil structure; soil classification; permeability; principle of effective stress; stress-deformation; stress paths and strength characteristics; partly saturated soils; advanced consolidation theory; secondary consolidation; field instrumentation.
- 5322—Geotechnical Site Characterization (3).** Prerequisite: CE 3321 (or equivalent) or instructor consent. Modern methods for subsurface site characterization, investigation design, soil strength, groundwater monitoring, data presentation, risk/uncertainty issues.
- 5323—Advanced Foundation Engineering (3).** Prerequisite: Computer programming skills and instructor consent. Advanced foundation engineering theory and practice, bearing capacity, settlement analysis, piles and pile groups, drilled piers, wave equation analysis.
- 5324—Geotechnical Practice for Expansive Soils (3).** Prerequisite: CE 3321 (or equivalent). Expansive soil characterization, shrink/swell movement prediction methods, design applications, including foundations, pavements, and earth structures.
- 5326—Stability Analysis and Design of Slopes and Embankments (3).** Prerequisite: CE 3321 (or equivalent). Principles of stability analysis and design as applied to earth dams, embankments, fills, cuts, and natural slopes; short-term and long-term stability; slope remediation.
- 5328—Design and Analysis of Earth Retaining Structures (3).** Prerequisite: CE 3321 (or equivalent). Types of earth retaining structures; wall selection; lateral earth pressure theories; design of conventional, MSE, soil nail, tied-back, and drilled shaft walls.
- 5329—Advanced Design of Bridge Structures (3).** Instructor consent. Advanced structural design of highway/railway/guideway bridges using the LRFD design method.
- 5331—Advanced Work in Specific Fields (3).** Nature of course depends on the student's interest and needs. May be repeated for credit.
- 5333—Advanced Work in Water Resources (3).** Individual studies in advanced water resources. May be repeated for credit.
- 5340—Advanced Structural Analysis I (3).** Prerequisite: Proficiency in basic structural analysis techniques and computer programming. Fundamentals and applications of modern methods of structural analyses using computers.
- 5341—Structural Reliability (3).** Prerequisite: CE 5315. Reliability theory and application; failure probability estimation; parameter sensitivity analysis; measures of variable importance; simulation and machine learning methods.
- 5342—Advanced Design of Steel Structures (3).** Prerequisite: CE 4342 or instructor consent. Advanced design of structures, utilizing LRFD design concepts.
- 5343—Advanced Reinforced Concrete Design (3).** Prerequisite: CE 4343 or instructor consent. Understanding advanced concrete design concepts and discussion of new concrete material technology.
- 5344—Design of Steel Structures (3).** A course in design of structural steel systems by the LRFD method.
- 5346—Structural Dynamics I (3).** Dynamic response of single and multidegree of freedom systems; modal analysis of lumped and continuous mass systems.
- 5347—Structural Dynamics II (3).** Prerequisite: CE 5346 or instructor consent. Design consideration for structures subjected to time-varying forces including earthquake, wind, and blast loads.
- 5348—Wind Engineering (3).** Prerequisite: Instructor consent. Understanding the nature of wind related to wind-structure interaction, and wind loads on structures. Design loads for extreme winds, tornadoes, and hurricanes.
- 5349—Performance-Based Engineering (3).** Prerequisite: CE 5315. Performance-based engineering and decision making; hazard and damage prediction; system performance—expected loss and other metrics; using Hazus database and GIS tools.
- 5351—Advanced Pavement Materials (3).** Materials science, microstructure, engineering properties, life-cycle, constitutive models, tests, constructability and performance of soils, aggregates, granular materials, stabilized materials, bituminous binders and asphalt concrete, mix design, sustainability.
- 5352—Advanced Flexible Pavement Design (3).** Analysis and design of flexible pavement systems, pavement life-cycle, distresses, non-destructive evaluation, failure criteria, management systems, mechanistic-empirical pavement design, sustainable pavements, design project.
- 5354—Advanced Concrete Materials (3).** Portland cement production, chemistry and hydration, concrete constituents, aggregates, mineral and chemical admixtures, mix design, dimensional stability, early-age and hardened concrete, construction, durability, forensic evaluation.
- 5355—Advanced Rigid Pavement Design (3).** Pavement types, highways, airports, design factors, materials, traffic, analysis of pavement system, drainage, design methods, performance, evaluation, repair, overlay design, mechanistic-empirical design, design project.
- 5356—Sustainable Material Systems and Engineering Design (3).** Engineering design process, infrastructure systems, principles of ecology and sustainability, industrial ecology, design for sustainability, sustainability metrics, material selection, material flow, life-cycle assessment, design project.
- 5360—Open Channel Hydraulics (3).** Channel geometry and parameters. Uniform and varied flow.
- 5361—Surface Water Hydrology (3).** Advanced study of hydrologic cycle: hydrologic abstractions, surface-runoff mechanics, hydrographs, baseflow separation, data analysis, reservoir and channel routing, and an introduction to rainfall-runoff modeling.
- 5362—Surface Water Modeling (3).** Prerequisite: CE 5360 or instructor consent. Theory and application of one-dimensional hydrodynamics models. Theory and application of watershed models.

- 5363—Groundwater Hydrology (3).** Prerequisite: Instructor consent. Groundwater flow; well hydraulics, development, and management of groundwater resources; water quality; mathematical modeling with available software. Design of wells and well fields.
- 5364—Groundwater Transport Phenomena (3).** Prerequisite: Instructor consent. Study of sources and fates of contamination in groundwater. Mathematical modeling of reactive and nonreactive pollutant movement. Aquifer restoration strategies.
- 5366—Water Resources Management (3).** Prerequisite: Instructor consent. Models and other technical elements of water resources systems in context of the political, social, and other environments in which they exist.
- 5368—Surface Water Quality Modeling (3).** Contaminant transport and fate in surface water. Engineering methods assessing surface water and transport for water and sediment quality. Modeling dissolved oxygen, chemicals, water-borne substances.
- 5371—Advanced Geometric Design of Highways (3).** Prerequisite: Instructor consent. Advanced study of geometric design of highways and streets, signage and marking of roadways. Advanced instruction in the application of computer software in highway design.
- 5372—Advanced Traffic Engineering I: Highway Capacity Analysis (3).** Prerequisite: CE 3361 or instructor consent. Study of the concepts and methodologies for assessing the capacity and level of service of various surface transportation facilities.
- 5373—Advanced Traffic Engineering II: Traffic Flow Theory and Control (3).** Prerequisite: CE 5372. Fundamentals of macro and microscopic traffic flow characteristics, continuum flow models, control of signalized intersections, and traffic simulation.
- 5383—Bioremediation of Wastes in Soil Systems (3).** Factors impacting microbiological treatment of organic wastes in surface and subsurface soil environments will be examined for implications in system design and operation.
- 5391—Advanced Water Treatment (3).** Water chemistry and microbiology; design procedures for municipal water treatment; advanced methods for quality control, renovation, and reuse.
- 5393—Unit Processes Laboratory (3).** Demonstrates fundamental equilibrium, kinetic and transport processes to describe basic environmental systems and processes, including design of an experiment relating to these concepts and analysis of data using appropriate models.
- 5394—Natural Systems for Wastewater Treatment (3).** Examination of tertiary systems for municipal wastewater; natural systems (land application, wetlands, and aquaculture) and modular facilities incorporating unit operations, biological, and chemical processes.
- 5395—Solid and Hazardous Waste Treatment (3).** Prerequisite: Instructor consent. Treatment and disposal of municipal and industrial solid and hazardous wastes.
- 6000—Master's Thesis (V1-6).**
- 6330—Master's Report (3).**
- 7000—Research (V1-12).**
- 8000—Doctor's Dissertation (V1-12).**

Construction Engineering (CONE)

- 5301—Independent Study in Construction (V1-3).** Prerequisite: Graduate student standing in engineering. Explores advanced construction engineering topics not covered by current curriculum.
- 5302—Construction Safety and Risk Management (3).** Prerequisite: Graduate standing or instructor consent. A study of risk assessment and management techniques, methods, and models used in the construction industry to minimize and control various risk.
- 5304—Sustainable Building Design and Construction (3).** Prerequisite: Graduate standing or instructor consent. Design and construction of high-performance buildings with the basis on which sustainability can be evaluated.
- 5314—Masonry Design and Construction (3).** Prerequisite: Graduate standing or instructor consent. Design and construction of masonry structures per current Joint Standards Masonry Committee Building Code Requirements and Specifications. Focus is on clay and concrete block masonry.
- 5320—Construction Cost Estimating and Control (3).** Prerequisite: Graduate standing or consent of instructor. Study of advanced topics in cost estimating and control, including methods, knowledge, and computer tools for project bidding, budgeting, financing, and accounting.
- 5322—Construction Management (3).** Prerequisite: Graduate standing or instructor consent. Study of advanced topics in construction management, including methods, knowledge, and computer tools for project planning and administration.
- 5331—Special Topics in Construction Engineering (3).** Prerequisite: Departmental approval. Elaborates on a special topic of current interest to

graduate students with an interest in construction engineering. May be repeated for credit.

- 5332—BIM and 4D Modeling (3).** Prerequisite: Graduate standing or instructor consent. Introduction to building information modeling and its applications in the construction industry.
- 6000—Master's Thesis (V1-6).**
- 6330—Master's Report (3).**
- 7000—Research (V1-12).**
- 8000—Doctor's Dissertation (V1-12).**

Environmental Engineering (ENVE)

- 5107—Advanced Physical and Chemical Wastewater Treatment Lab (1).** Prerequisite: Instructor consent. Characterization of alkalinity, pH, BOD, and solids concentrations. Students will conduct column tests and filtration studies. Analyze water quality data.
- 5303—Design of Air Pollution Control Systems (3).** Engineering analysis procedures techniques for the selection, application, and operation of air pollution control methods in various operational situations.
- 5305—Environmental Systems Design I (3).** Student teams evaluate a waste problem, select and develop a treatment alternative in a feasibility study, and then finalize their design selections in technical memorandums.
- 5306—Environmental Systems Design II (3).** Student teams evaluate a waste problem, select and develop a treatment alternative in a feasibility study, and then finalize their design selections in technical memorandums.
- 5307—Advanced Physical and Chemical Municipal Wastewater Treatment (3).** Characterization of municipal wastewaters and the application of physical and chemical design procedures to remove and dispose of criteria pollutants in wastewater.
- 5314—Membrane Treatment Processes (3).** Prerequisite: CE 3309 or instructor consent. Introduces the fundamental principles and applications of various membrane processes (MF, UF, NF and RO) in water and wastewater treatment and quality control.
- 5315—Environmental Chemistry for Pollution Management (3).** Prerequisite: CE 3309 (or equivalent) or instructor consent. Introduces the fundamental knowledge of reaction kinetics and chemical equilibria relevant to water quality in natural and engineered processes.
- 5316—Environmental Nanotechnology (3).** Fundamental physicochemical principles to design and fabricate engineering nanomaterials, the formation of natural nanomaterials, and prediction of their transport, transformation, and toxicity in the environment.
- 5325—Environmental Organic Chemistry (3).** Prerequisites: CHEM 1307 and CHEM 1308 and ENVE 5315 or equivalent. Chemical and physical interactions determining the fate of organic chemicals in environmental systems. Emphasis on partitioning and reactions involving anthropogenic organic contaminants in aquatic systems. Application of qualitative and quantitative tools to explain chemical processes determining the fate of organic contaminants in the environment.
- 5384—Microbial Application in Environmental Engineering (3).** Examination of bacterial cell structure and microbial genetics, metabolism and the role of microbes in the design of treatment processes and water/wastewater reuse issues. [ENVE 4385]
- 5385—Advanced Microbiological Applications in Environmental Engineering (3).** Advanced examination and applications of bacterial cell structure and microbial genetics, metabolism and the role of microbes in the design of treatment processes and water/wastewater reuse issues.
- 5390—Advanced Mathematics for Environmental Engineers (3).** Prerequisite: Undergraduate mathematics through differential equations. Mathematical foundations of environmental engineering, processing of data, formulation of mathematical models, applications of ordinary and partial differential equations, and computer methods to environmental engineering.
- 5392—Environmental Chemodynamics (3).** Prerequisite: ENVE 5390. Environmental chemodynamics; interphase equilibrium, reactions, transport processes and related models for anthropogenic substances across natural interfaces (air-water-sediment-soil) and associated boundary regions.
- 5399—Biological Municipal Wastewater Treatment (3).** Municipal wastewater treatment methods, including suspend and attached growth biological systems, nitrification, denitrification, phosphorous removal, sludge stabilization, and treated effluent and sludge disposal.

Department of Computer Science

The Department of Computer Science offers M.S. and Ph.D. degrees in Computer Science, an M.S. degree in Software and Security Engineering, and certificates in security and software engineering. The graduate

programs cover cutting-edge and active research areas in cyber-security, artificial intelligence, machine learning, data science, software engineering, computer networks, blockchains, quantum computing, high-performance computing, parallel and distributed computing, cyber-physical systems, visualization, and robotics. Students also should refer to the Graduate School section of the catalog and general rules/regulations for graduate degrees. Students who do not have a background in computer science are required to take leveling courses that cannot be counted as the required hours for graduation. Students in other departments at Texas Tech who wish to transfer to computer science must first complete all leveling courses or show that they have taken the equivalent courses at another university before their application will be considered. Please see the Department of Computer Science website for additional details and requirements of the Graduate Program and admissions (www.cs.ttu.edu).

The department offers the following M.S. degrees: a Master of Science in Computer Science (M.S.C.S.) and a Master of Science in Software and Security Engineering (M.S.S.S.E.). The M.S.C.S. is a degree program designed to strengthen knowledge in advanced computer sciences areas spanning from theory to hardware systems, software systems, and applied computing. The M.S.S.S.E. is a degree program with an emphasis on advanced security and software engineering concepts including information and computer security, software design and quality assurance methodologies, and practices in security and software production. All M.S. degree programs require following the degree program present in DegreeWorks and passing the Final Comprehensive Evaluation as required by the university.

Please see the department website for additional details and requirements of the Graduate Program and admissions (www.cs.ttu.edu).

Computer Science, M.S.C.S.

The Master of Science in Computer Science (M.S.C.S.) is a degree program designed to strengthen knowledge in advanced computer science areas spanning from theory to hardware systems, software systems, and applied computing. The degree program present in DegreeWorks must be followed from the first semester of study, and the student must pass the Final Comprehensive Evaluation as required by the university. The program requires students to complete a minimum of 30 credit hours, with both thesis and non-thesis options available.

The degree plan for students pursuing a Master of Science in Computer Science must include two theory courses chosen from CS 5381, CS 5383, and CS 5384 as well as two systems courses chosen from CS 5352, CS 5375, and CS 5368. The thesis plan requires an additional four CS graduate elective courses (one of which may be CS 7000) and 6 hours of CS 6000. The non-thesis project/report option requires an additional five CS graduate elective courses (one of which may be CS 7000) and 3 hours of CS 6001/CS 6002. The non-thesis exam option requires an additional six CS graduate elective courses. All students pursuing a Master of Science in Computer Science must take CS 5120 Computer Science Graduate Seminar with submission of required seminar summaries in their first or in their second semester.

Software and Security Engineering, M.S.S.S.E.

The Master of Science in Software and Security Engineering (M.S.S.S.E.) is a degree program with an emphasis on advanced security and software engineering concepts including information and computer security, software design and quality assurance methodologies, and practices in security and software production. The degree program available in DegreeWorks must be followed from the student's first semester of study, and the student must pass the Final Comprehensive Evaluation as required by the university. The program requires students to complete a minimum of 30 credit hours, with both thesis and non-thesis options available.

The degree plan for students pursuing a Master of Science in Software and Security Engineering must include CS 5373 and CS 5340. All students must take a seminar course CS 5120 in their first year, three courses from the Security Electives (see the course list below), two courses from the Software Engineering Electives, and one more course either from the Software Engineering Electives or from Other Electives (see the course list below). The total credit hours of CS 7000 must not be over 3 hours. A student in this program must choose either the thesis option or the (non-thesis) project option. The thesis option requires 6 hours of CS 6000 (thesis). The non-

thesis project option requires 3 hours of CS 6001 (project) and one additional course from the Software Engineering Electives and Other Electives.

- **The plan for both options must include:** CS 5373, 5340.
- **Software Engineering Electives:** CS 5332, 5363, 5374; One software engineering elective may be replaced with CS 7000.
- **Security Electives:** CS 5342, 6343, 6378, 6345, 6359, 5333; One security elective may be replaced with CS 7000.
- **Other Electives:** CS 5331, 5379, 5356, 5377, 5364; IE 5316, 5319, 5320.

Computer Science, Ph.D.

For the Ph.D. degree, students are required to demonstrate general knowledge in several areas of computer science and proficiency in a single research area. Certification of research proficiency will be based on a record of accomplished research. The record must be substantiated by published peer-reviewed articles and papers presented at conferences and workshops. The Ph.D. degree requires a minimum of 60 hours of graduate coursework and 12 hours of CS 8000 - Doctor's Dissertation. In addition, students must write a dissertation as well as pass a qualifying examination and a public oral final examination as required by the university. All students pursuing a Ph.D. in Computer Science must take computer science seminars each year.

Graduate Course Descriptions

Computer Science (CS)

- 5000—Practicum of Computing (V1-3).** Industrial training in an approved field of graduate studies. Can be used only as an additional requirement on degree program.
- 5120—Computer Science Graduate Seminar (1).** Discussion of current research in computer science and other topics of interest to computer scientists.
- 5302—Foundations of Computer Science II (3).** Accelerated concepts of computer science. Topics may include programming languages, design and analysis of computer algorithms, and performance.
- 5303—Foundations of Computer Science III (3).** Accelerated concepts of computer science. Topics may include computer architecture, software engineering, and operating systems.
- 5311—Programming with R for Data Analysis and Machine Learning (3).** Prerequisite: Must be a graduate student at Texas Tech. A hands-on exploration of R programming including its applications in data analytics and machine learning in various application domains for science, business and engineering students. Open to all graduate students across campus.
- 5320—Principles of Computer Graphics (3).** Techniques and methods for creating realistic images using graphic programming languages. Topics include visible surface determination rendering, surface modeling, and particle systems.
- 5328—Scientific Computing (3).** Provides an overview of numerical methods that are essential to computing. Topics include matrix computations, statistical methods, numerical integration, and multiresolution methods.
- 5331—Special Problems in Computer Science (3).** Study in advanced computer science and technology.
- 5332—Special Topics in Software Engineering (3).** Prerequisite: Consent of instructor. Studies in advanced software engineering.
- 5333—Special Topics in Security (3).** Security and privacy are rapidly emerging as critical research areas in computer science. This course addresses the basic concepts and issues related to the discipline and profession.
- 5340—Introduction to Information and Computer Security (3).** Explores the theory and practices of information and computer security. Topics include security concepts, threats, vulnerabilities, risk management, and security assurance. [CS 4331]
- 5341—Pattern Recognition (3).** Traditional and current approaches to the general problem of recognizing patterns in images, signals, and other domains. Includes Bayes decision theory, supervised learning, and nonparametric techniques.
- 5342—Network Security (3).** Introduces the basic theory and practices of network security and strategies for network defenses against security risks, threats, and cyber-attacks in infrastructure-based networks.
- 5352—Advanced Operating Systems Design (3).** Topics on distributed operating systems, such as synchronization, communication, file systems, and memory sharing are discussed. Several programming projects are implemented.

- 5353—Compiler Construction (3).** Implementation aspects of compiler construction, automata for formal grammar, semantics of procedural languages, automatic generation of parser, and assembly code generation. A prototype of a compiler is developed.
- 5356—Advanced Database Management Systems (3).** Systems aspects of relational databases are emphasized. Topics include relational database design, index and access structures implementation and performance evaluation, query processing and optimization, transaction management, and concurrency control.
- 5357—Multimedia Systems (3).** Multimedia digital audio processing; image and video data compression; and processing for multimedia presentations. Time-based media representation and synchronization; multimedia communication systems; and hypertext and programming.
- 5358—Software Studio I (3).** Capstone design and implementation experience of a major software project applying comprehensive software engineering techniques.
- 5361—Theory of Computing Languages (3).** General language theory with emphasis on computing languages. Chomsky typology, syntactical and semantic specifications. Current research on translation of natural language instructions to machine instructions.
- 5363—Software Project Management (3).** Explores the principles of software project management and their effective application. Topics include project, risk, process, and resource management and improvement techniques.
- 5364—Information Retrieval (3).** Introduction to information retrieval. Topics include query formation, query processing, choice and form of search terms, document organization and indexing, and evaluating search results.
- 5365—Principles of Multiple-Processor Systems (3).** Comprehensive introduction to the field of parallel and distributed computing systems. Algorithms, architectures, networks, systems. Theory and applications.
- 5368—Intelligent Systems (3).** Comprehensive introduction to the field of artificially intelligent computer based systems. Theory and applications in artificial intelligence.
- 5370—Introduction to Machine Learning (3).** Introduces principles, algorithms, and applications of machine learning through modeling and prediction and includes formulation of learning problems and concepts of representation, over-fitting, and generalization.
- 5371—Introduction to Quantum Computing (3).** Introduces the mathematical foundation of finite-dimensional density matrix formalism of quantum mechanics relevant to quantum computing, quantum algorithms, and quantum information.
- 5373—Software Modeling and Architecture (3).** Introduces the theory and practice for software development and covers software requirements, analysis, software architecture and detailed design.
- 5374—Software Verification and Validation (3).** Introduces how to implement effective test and measurement programs as well as how to apply this knowledge to the production of low-defect software.
- 5375—Computer Systems Organization and Architecture (3).** Introduction to the architecture, organization, and design of computer systems. Topics include processor, control and memory design, computer arithmetic, I/O, and a brief introduction to multiprocessors.
- 5376—Communication Networks (3).** Networks in the context of parallel and distributed systems. Information theory applied to networks. Network topology. Problems and approaches in design, development, and management of communications networks.
- 5377—Distributed Computing (3).** Introduction to distributed systems. Topics include communications, distributed operating systems, fault-tolerance, and performance issues. Case studies and term projects supplement this course.
- 5379—Parallel Processing (3).** Introduction to parallel processing in theory, performance evaluation of parallel machine-algorithm ensemble, parallelization techniques of sequential codes, parallel algorithm design, and parallel API.
- 5380—Fault-Tolerant Computer Systems (3).** Introductory course to methodologies for specifying, designing, and modeling fault-tolerant computer systems. Includes fault classification, design techniques for fault detection and recovery, and reliability modeling techniques.
- 5381—Analysis of Algorithms (3).** Theoretical analysis of algorithms for sorting, searching, sets, matrices, etc.; designing efficient algorithms for data structures, recursion, divide-and-conquer, dynamic programming; nondeterminism, NP-completeness and approximation algorithms.
- 5383—Theory of Automata (3).** Structured grammars, relation between grammars and automata, deterministic, and nondeterministic finite automata, push-down store, and linear-bounded automata, and Turing machines.

- 5384—Logic for Computer Scientists (3).** An introduction to mathematical logic. The course includes proofs of several basic theorems and discusses the application of logic to different areas of computer science.
- 5386—Wireless Networking and Mobile Computing (3).** Wireless networks and mobile computing at the level of the link, network, and transport layers. Focus on the special topics in each layer.
- 5388—Neural Networks (3).** Neural network theory, models, and implementation. Applications to real-time systems, robotics, pattern recognition, computer vision, and event driven systems.
- 5391—A I Robotics (3).** Programming of artificially intelligent robots. Topics include sensing, navigation, path planning, and navigating with uncertainty.
- 5392—Reinforcement Learning (3).** Introduction to reinforcement learning and Markov decision processes and their applications for making optimal decisions.
- 5393—Bioinformatics (3).** Computational analysis of biological sequences gene expression and protein structures. Topics include sequence alignment, gene expression data analysis, and geometric analysis of protein structure.
- 5398—Theory and Practice of Logic Programming (3).** Formal syntax and semantics of logics of programming languages, practical application of such languages, and linking GUI interfaces written in imperative languages.
- 5401—Foundations of Computer Science I (4).** Accelerated concepts of computer science. Topics may include high-level languages, control, software design, basic data structures, file organization, and machines.
- 6000—Master's Thesis (V1-12).**
- 6001—Master's Project (V1-6).**
- 6002—Master's Report (V1-6).**
- 6343—Cryptography (3).** Explores foundational principles of cryptography and in-depth discussion of cryptosystems. Topics include symmetric/asymmetric encryptions, hashing algorithms, message authentication, digital signatures, and various cryptosystems.
- 6345—Digital Forensics (3).** Introduces the basic concepts and techniques usually employed in digital forensics and malware analysis.
- 6359—Data Security and Privacy (3).** Addresses the basic concepts and issues underlying data security and privacy. Topics include data security, privacy, data storage and analysis, etc.
- 6378—Software Security (3).** Covers security aspects in software engineering. Topics include threat analysis, secure software requirements specification and analysis, secure software design, coding, and testing.
- 7000—Research (V1-12).**
- 8000—Doctor's Dissertation (V1-12).**

Department of Electrical and Computer Engineering

The Department of Electrical and Computer Engineering offers students the opportunity of graduate study under the direction of faculty members in an atmosphere of enthusiasm for learning. Master's and doctoral degrees are awarded to students completing a comprehensive program of courses, examinations, and thesis or dissertation. Courses provide breadth and depth of knowledge; thesis and dissertation projects are an important expression of creative research activity. A non-thesis option is available for master's students.

The department hosts a number of large research centers and labs. The research ranges from pulsed power to solid state device research. Many of the Ph.D. students are supported by outside grants for carrying out the research. The Ph.D. students are complemented by postdocs and undergraduate assistants. ECE hosts the following centers and labs: The Center for Nanophotonics conducts research and development on manipulation of photons-electrons in nano-scale materials for innovative photonic devices and emerging technologies. The Center's research areas cover a broad spectrum, ranging from basic to applied, and dealing with state-of-the-art nano-scale material synthesis, fundamental physics, device fabrication, and testing. The Center for Pulsed Power and Power Electronics performs research work on generating very short and high voltage and current pulses. The Nano Tech Center works on very small devices including MEMS and optical devices. The RF System-on-a-Chip Laboratory performs research into advanced efficient RF amplifiers for cellular phones. The Applied Vision Laboratory uses pattern recognition to exam properties and defects in all types of materials. The Biomedical Integrated Devices and Systems (BIDS) Laboratory emphasizes multidisciplinary research in mathematical modeling and algorithms for signal and image processing. The

Neuro-Imaging, Cognition and Engineering Laboratory develop models of perception, memory, neurological diseases, and language as they relate to the underlying structure and neural circuitry of the human brain. A rapidly expanding world class research facility with assets related to renewable power systems valued at over \$20 Million at Reese Technology Center (10 miles west of Texas Tech University campus) has recently been established. It hosts the newly established GLEAMM (Global Laboratory for Energy Asset Management and Manufacturing) initiative. This work is coordinated by the National Wind Institute.

The department offers a Master of Science in Electrical Engineering (M.S.E.E.) and a Master of Science in Computer Engineering (M.S.Cmp.E.). The master's degree programs prepare students for successful professional careers in electrical and computer engineering based on a broad foundation and specialized technical expertise.

Students working toward the M.S.E.E. or the M.S.Cmp.E. degree have the option of writing a thesis or taking additional courses. During their first semester, students must declare a thesis or non-thesis option. Later, if desired, they may switch from the thesis to the non-thesis option with the permission of their thesis advisor. However, thesis credit hours they may have earned will not count toward the non-thesis degree. Alternatively, students may switch from the non-thesis to the thesis option with permission of the graduate advisor. For more information visit www.depts.ttu.edu/ece/grad/ms/.

Computer Engineering, M.S.Cmp.E.

Non-Thesis Option. Students must take 36 credit hours (plus 1 credit hour per semester of graduate seminar) of coursework. Eighteen of the 36 credit hours consist of ECE 5371, ECE 5380, ECE 5375, ECE 5332 (Advanced Design Lab), CS 5352, CS 5377. Eighteen of the 36 credit hours consist of electives selected from a list available through the ECE graduate advisor. Six of the 36 credit hours may be ECE 5331 - Individual Studies in Engineering Applications. Students must pass the Fundamentals of Engineering Examination or a comprehensive oral examination.

Thesis Option. Students must take 30 credit hours (plus 1 credit hour per semester of graduate seminar), including 24 credit hours of coursework and 6 credit hours of ECE 6000 - Master's Thesis. Eighteen of the 24 credit hours consist of ECE 5371, ECE 5380, ECE 5375, ECE 5332 (Advanced Design Lab), CS 5352, CS 5377. Six of the 24 credit hours consist of electives selected from a list available through the ECE graduate advisor. Three of the 24 credit hours may be ECE 5331 - Individual Studies in Engineering Applications. Students must complete a thesis, deliver an oral presentation of the results, and pass the Fundamentals of Engineering Examination or a comprehensive oral examination.

Electrical Engineering, M.S.E.E.

Non-Thesis Option. Students must take 36 credit hours (plus 1 credit hour per semester of graduate seminar) of coursework. At most 9 of the 36 credit hours may be pre-approved non-ECE courses and 6 of the 36 credit hours may be ECE 5331 individual study courses. Students must pass the Fundamentals of Engineering Examination or a comprehensive oral examination.

Thesis Option. Students must take 30 credit hours (plus 1 credit hour per semester of graduate seminar), including 24 credit hours of coursework and 6 credit hours of ECE 6000 thesis. At most 6 of the 24 credit hours may be pre-approved non-ECE courses and 3 of the 24 credit hours may be ECE 5331 individual study courses. Students must complete a thesis, deliver an oral presentation of the results, and pass the Fundamentals of Engineering Examination or a comprehensive oral examination.

Electrical Engineering, Ph.D.

The doctoral degree program prepares students for engineering-based leadership roles in society involving the solution of important technological problems and the advancement and dissemination of knowledge.

The doctorate demands substantial depth and breadth of study in the major subject, electrical engineering. Students must take at least 60 credit hours (plus 1 credit hour per semester of graduate seminar until the student becomes a candidate) of graduate coursework exclusive of the dissertation, with no more than 18 hours of individual study courses. Such courses involve a special arrangement between a student and a faculty member in which the student carries out assignments in a subject not available in a

regular course. Students are not required to take a formal minor subject, but if a minor is declared, it must include at least 15 credit hours outside the department. The minor must be represented by a faculty member from the minor department on the student's advisory committee. For more information, see www.depts.ttu.edu/ece/grad/phd/.

Graduate students can find thesis and dissertation topics in a variety of areas, with research conducted in the following multidisciplinary centers, laboratories, and industry-sponsored programs:

- Center for Pulsed Power and Power Electronics (P3E)
- Nano Photonics Center
- NanoTech Center (NTC)
- Wireless Communication Systems Laboratory
- Biomedical Integrated Devices and Systems (BIDS) Laboratory
- Applied Vision Laboratory (AVL)
- Micro-Electric-Mechanical Systems (MEMS) Laboratory
- Microwave and Antenna Laboratory
- Program for Semiconductor Product Engineering (PSPE)

Before being recommended for admission to a degree program, Ph.D. students may be required to take (without graduate credit) undergraduate leveling courses designated by the department.

A Ph.D. student must pass the FE exam to fulfill the "Preliminary Exam" requirements. A Ph.D. student must provide a written proposal and oral presentation of proposed research work to a committee of faculty members for examination to fulfill the "Qualifying Exam" requirements.

Graduate Course Descriptions

Electrical and Computer Engineering (ECE)

- 5120—Electrical Engineering Graduate Seminar (1).** Discussion will concern present research conducted in electrical engineering and other topics of interest to electrical engineers.
- 5310—Introduction to VLSI Design (3).** A basic introduction to very large-scale integrated (VLSI) design of circuits and devices. Geometrical patterns of semiconductor devices on a chip, MOS circuits, masking and patterning, and automation tools.
- 5312—Low Power VLSI (3).** Advanced and low power CMOS processes and devices, modeling and simulation, low power design, power management, systems-on-a-chip integration issues.
- 5314—Solid State Devices (3).** Semiconductor materials and band theory of solids. Physics of semiconductor devices, charge transport, PN junctions, diodes, bipolar junction transistors, optoelectronic devices, and MOS devices.
- 5316—Power Electronics (3).** Switch mode power conversion, converters and inverters, power supplies and regulators, and power semiconductor circuits.
- 5320—DC-DC Converter Design and Test (3).** Focuses on the design and testing of low-power DC converters, including Buck, Boost, Buck-boost, and LDOs. Covers steady state and transient performance and includes a lab component.
- 5321—Design and Analysis of Analog Integrated Circuits (3).** Principles involved in designing analog integrated circuits. Device physics, small signal, and large signal models. Biasing and basic circuit building blocks. Applications.
- 5322—Random Signals and Systems (3).** Modeling and analysis of uncertainty or randomness; applying probability, random variables, and random processes to a variety of applications.
- 5323—Modern Communication Circuits (3).** Analysis and design techniques for modern communication circuits.
- 5325—Telecommunication Networks (3).** Networking and standards. Data and voice network architectures, cellular, satellite and telephone networks. Protocols. Network modeling and optimization. Queuing theory.
- 5331—Individual Studies in Engineering Applications (3).** Prerequisites: Graduate standing in engineering and consent of instructor. An individual study course involving a rigorous theoretical investigation of some aspect of an engineering problem of current interest. A formal report is required. May be repeated for credit.
- 5332—Topics in Electrical Engineering (3).** Elaborates on a special topic of current interest in electrical engineering. May be repeated for credit.
- 5340—Steady-State Analysis of Power Systems (3).** Power network modeling, power flow analysis, fault analysis, system protection, steady-state operations of power systems. [ECE 4340]
- 5341—Microwave Engineering: Passive Components (3).** Analysis and design of microwave passive components, including transmission

- lines, waveguides, resonators, hybrids, couplers, attenuators, filters, circulators, switches, and phase shifters.
- 5342—Microwave Solid State Circuits (3).** Review of transmission-line and waveguide theory, scattering matrix, impedance matching, resonators, passive three- and four-port devices, filters, active circuits.
- 5343—Power Systems Engineering (3).** Electrical power transmission and distribution systems; power generation systems; system modeling, planning, management and protection.
- 5344—Antennas and Radiating Systems (3).** Prerequisite: ECE 3342. Antenna fundamentals, uniformly spaced arrays, wire antennas of various types, aperture radiation, antennas for special applications.
- 5345—Pulsed Power (3).** Prerequisite: ECE 3342. Fundamentals of pulsed power circuits, components, and systems. Pulse forming lines, energy storage, voltage multipliers, switching, materials, grounding and shielding, measurements, and applications.
- 5346—Plasma Engineering: An Introductory Course in Plasma Physics and Technology (3).** Prerequisite: Instructor consent. Fundamentals of plasma physics and technology, including gas discharge processes, plasma surface treatment, role of non-thermal plasmas, material processing, and biomedical treatment.
- 5347—Laser Diagnostic Techniques (3).** Prerequisite: Instructor consent. Fundamentals of basic problems in laser physics and laser diagnostic techniques, specifically non-linear laser spectroscopy methods and applications, including environmental sensing and plasma diagnostics.
- 5348—Computational Electromagnetics (3).** Computational electromagnetics in guided-wave structures, wave scattering, and radiation. Emphasizes finite difference time domain and frequency domain methods and moment methods.
- 5349—Modern Radar Circuits and Systems (3).** Analysis and design of radar systems including Doppler, ultra-wideband, frequency shift keying, and frequency-modulated continuous-wave radars.
- 5350—Introduction to Medical Instrumentation (3).** Biomedical instrumentation, transducers, signals, circuits and filters, utilization of biopotential techniques in respiration, cardiac, and audiology.
- 5351—Biomedical Signal Processing (3).** An overview of conventional and modern signal processing techniques and their applications taught in the context of biomedical signals and signal models.
- 5352—Medical Imaging (3).** Medical imaging techniques including radiography and ionizing radiation, computer aided tomography, PET, MRI, and image reconstruction and processing techniques.
- 5353—Gaseous Electronics (3).** Kinetic theory of gases, collisions, emission processes, self sustained discharge, paschen law, glow discharge, arc discharge, streamers, spark discharge, corona discharge, gas lasers.
- 5354—Power Semiconductor Devices (3).** Prerequisite: ECE 5314. Introduction to the design and simulation of power semiconductors. Topics include high voltage breakdown, high current density, and temperature effects.
- 5355—Genomic Signal Processing and Control (3).** An introduction to genomics with techniques from signal processing and control. Intergene relationships, classification of disease, genetic regulatory networks, and dynamic behavior.
- 5356—Biosensors and Bioelectronics (3).** Biosensors and semiconductor devices, cells, and other biomaterials. Bio-Micro-Electro-Mechanical Systems (Bio-MEMS) and low-power wearable/implantable medical devices.
- 5358—Semiconductor Material and Device Characterization (3).** Prerequisite: Instructor consent. Introduction to the physical principles and techniques involved with the semiconductor processing of different electronic and optoelectronic devices.
- 5360—Fiber Optic Systems (3).** Optical fibers, couplers, sources, and detectors; applications to communications and sensing. Integrated optics.
- 5361—Advanced Communication Systems (3).** Information transmission in electronic systems. Random variables and stochastic processes, noise in analog and digital modulation systems, and optimal receivers.
- 5362—Modern Optics (3).** Modern concepts in optics related to engineering applications. Geometrical, physical, and quantum optics; Fourier optics, holography, and image processing.
- 5363—Pattern Recognition (3).** Foundational topics in pattern recognition. Linear discriminant functions, support vector machines, generalized decision functions, Bayes classifier, and various clustering techniques.
- 5364—Digital Signal Processing (3).** An introduction to digital signal processing. Sampling, z-transform, discrete and fast Fourier transforms, flowgraphs, design techniques for digital filters, effects of finite word length and applications.
- 5365—Parametric and Functional Device Testing (3).** Fundamentals of semiconductor device chip and wafer testing. Parametric and functional tests, test philosophy, C programming for testing, and commercial wafer level testers.
- 5366—Testing of Digital Systems (3).** High level test synthesis, fault modeling and diagnosis, design for test, built-in self test, test code generation, and applications.
- 5367—Image Processing (3).** Imaging fundamentals. Linear operators in spatial and spatial-frequency domains. Image enhancement and restoration techniques. Analysis and coding of images.
- 5368—Advanced Control Systems (3).** An introduction to advanced control systems. Optimal, adaptive, and robust control of linear and nonlinear systems. Fuzzy logic and neural network applications to control systems.
- 5369—Security of Industrial Control Systems (3).** Cyber risks, vulnerabilities, network attacks and exploits, intrusion detection and defense in depth methodologies for industrial control systems and critical infrastructure.
- 5370—Machine Learning (3).** Foundational and current topics in machine learning that include linear models for regression, kernel methods, neural networks, and deep learning. [ECE 4370]
- 5371—Engineering Analysis (3).** Application of mathematical methods and algorithms to engineering problems, stochastic linear system models, vector spaces and operators, orthogonality principle and its applications, adaptive filtering, matrix factorizational application of eigendecomposition methods.
- 5372—Renewable Power Generation and Integration (3).** Concepts of renewable (solar PV, wind) energy conversion, renewable integration into bulk power systems and microgrids. [ECE 4372]
- 5373—Synchrophasor Applications for Utility Grid Integration (3).** Provides students an overview of the basic principles of the synchrophasor—power measurement unit (PMU) and their applications in utility grid monitoring and operations. [ECE 4373]
- 5375—Computer Architecture (3).** An introduction to the architecture, organization and design of microprocessors. Hardware design related to various microprocessors. Analysis of current microprocessors and applications.
- 5376—System Modeling and Simulation (3).** Mixed-signal system specification, behavioral modeling and analysis, functional modeling and analysis, mixed-signal system design, and evaluation.
- 5377—Innovation and Entrepreneurship (3).** Provides a working knowledge of technology commercialization through a systematic concept refinement process. Prototypes are developed and evaluated by potential customers.
- 5378—Solar Energy (3).** Provides an overview of photovoltaic materials, devices, and systems. Students learn to analyze performance based on available solar light. Design projects provide practical experience.
- 5379—Unmanned Aircraft Systems (3).** An introduction to UAVs (drones) and their commercial and military applications. Topics include flight dynamics, electronic and mechanical components, sensor systems, and regulations. [ECE 4379]
- 5380—Embedded Systems (3).** Control of peripherals. Maintain continuous data streams. Real-time operating systems. [ECE 4380]
- 5381—Introduction to Semiconductor Processing (3).** Introduction to the physical principles, techniques, and technologies involved with the fabrication of very large scale integrated circuits (VLSI).
- 5382—Advanced Digital System Design (3).** Advanced VLSI design. Computer arithmetic. High speed computation. Digital hardware design. CAD tools for VLSI design.
- 5383—Communication Integrated Circuits Design I (3).** Covers the fundamentals of RF-SoC (Radio-Frequency System-on-a-Chip) design. For students interested in RF/analog IC and SoC design, semiconductor products testing, and device/process engineering.
- 5384—Communication Integrated Circuits Design II (3).** Theory and design of RF/analog block-level IC and RF-SoC architectural design. Hands-on design projects for students to gain IC and SoC experience.
- 5385—Introduction to Microsystems I (3).** Fundamentals of microelectromechanical (MEMS) and microfluidic systems. Project-based course introduces basic microsystem design, analysis, simulation, and manufacture through several case studies using representative devices.
- 5386—Introduction to Microsystems II (3).** Prerequisite: ECE 5385. Application of microfabrication to create microsensor systems. Integration of optics, optoelectronics and microfluids. Includes other MEMS projects.
- 5387—Advanced Semiconductor Processing and Process Characterization (3).** Prerequisite: ECE 5381. Stresses process flow; yield management; specific device processing steps; and process control, packaging and back-end processing.
- 5388—Solid-State Energy Devices I (3).** Prerequisite: ECE 5314 or ECE 5381. Introduction to fundamentals of solar cells, including thin film, tandem, and nanostructured solar cell materials and devices.
- 5389—Solid-State Energy Devices II (3).** Prerequisite: ECE 5314 or ECE 5381. Introduction to fundamentals of solid-state energy devices beyond solar cells, including materials and devices for thermoelectrics for

converting heat to electricity, betavoltaics and alphavoltaics as long-life batteries, fuel cells and super-capacitors for energy storage, and hydrogen generation and storage.

- 5390—Functional Materials (3).** Prerequisite: ECE 5314 or ECE 5381. Introduction to functional materials and their applications, including sustainability, bio-inspired materials, and nano-structured materials.
- 5391—Electric Machines and Drives (3).** Analysis and control of DC machines and induction machines. Space vector theory. Field oriented control. Modeling of machine and controller dynamics.
- 5392—Nanophotonics (3).** Introduction to light-matter interaction in nanostructures, quantum wells, wire and dots, photonics crystals, negative index and meta materials, nano-emitters and detectors, nano-plasmonics and biophotonics.
- 5393—Detectors and Sensors I (3).** Fundamentals of solid-state photo detectors and sensors for THz through EVU, including principles, performances, and applications.
- 5394—Detectors and Sensors II (3).** Fundamentals of solid-state radiation detectors and sensors, including principles, performances, and applications.
- 6000—Master's Thesis (V1-6).**
- 6360—Computer Vision and Image Reconstruction (3).** Theories of image formation and reconstruction. Reconstruction problems in tomography, magnetic resonance imaging, synthetic aperture radar, and other modalities of imaging.
- 6363—Advanced Pattern Recognition (3).** Adaptive approaches to the design of discriminant functions for pattern classification and recognition. Statistical, syntactic, neural networks, and fuzzy-set based optimization constraints for discriminants.
- 6365—Topics in Advanced Communications (3).** Applications of detection and estimation theory in the design of optimum communication systems. All courses used to satisfy the degree program requirements must be taken for a grade. The pass/fail option is not allowed.
- 7000—Research (V1-12).** All courses used to satisfy the degree program requirements must be taken for a grade. The pass/fail option is not allowed.
- 8000—Doctor's Dissertation (V1-12).** All courses used to satisfy the degree program requirements must be taken for a grade. The pass/fail option is not allowed.

Department of Industrial, Manufacturing and Systems Engineering

The Master of Science in Industrial Engineering (M.S.I.E.), Master of Science in Systems and Engineering Management (M.S.SYEM), Master of Science in Manufacturing Engineering (M.S.Mfg.E.), Doctor of Philosophy in Industrial Engineering, and Doctor of Philosophy in Systems and Engineering Management programs prepare competent industrial engineers and engineering managers for industry, consulting, university teaching, and research.

With the counsel of a graduate advisor, students are expected to design individualized academic programs. The doctoral program requires a minimum of 60 hours of coursework beyond the bachelor's degree, of which up to 15 hours can be IE 7000 (Research) credit. The doctoral program may also include up to 15 hours constituting a minor area taken outside of industrial engineering. At least 12 hours of doctoral dissertation (IE 8000) enrollment are also required for the doctoral degree. Transfer credits from a master's degree program are determined by a graduate advisor, with a maximum of 30 hours of transfer credit allowed.

Master's and Ph.D. programs incorporate courses taken in each of the five specialty areas below.

Systems and Engineering Management: Systems theory, decision theory, industrial cost analysis, advanced engineering economics, performance improvement in organizations, project management, and productivity management.

Ergonomics and Human Factors Engineering: Occupational biomechanics, work physiology, industrial ergonomics, cognitive engineering, human performance, human computer interaction, and occupational safety.

Manufacturing: Manufacturing engineering and design, computer integrated manufacturing/CAD/CAM, additive manufacturing, biomanufacturing, process analysis and economics, automated manufacturing and process planning, programmable control systems.

Operations Research and Data Science: Simulation modeling, scheduling and sequencing, just-in-time production systems, inventory and production control, linear and nonlinear programming, network analysis, machine learning, and data analytics.

Statistics and Quality Assurance: Design of experiments, statistical data analysis, reliability and maintainability, on-line and off-line quality assurance, and total quality assurance.

The Master of Science in Industrial Engineering (M.S.I.E.), the Master of Science in Systems and Engineering Management (M.S.SYEM), the Master of Science in Manufacturing Engineering (M.S.Mfg.E.), and the Ph.D. in Systems and Engineering Management (Ph.D.SYEM) programs are offered both on campus and by distance education and are designed to prepare graduates for positions in technical management. The Doctor of Philosophy in Industrial Engineering is offered on campus only. Details regarding admission and degree requirements are available from the department.

Industrial Engineering, M.S.I.E.

The Master of Science in Industrial Engineering (M.S.I.E.) program prepares competent industrial engineers for industry and consulting.

The master's level programs consist of two options: (1) a 30-hour thesis option, including 6 credit hours of thesis research, and (2) a 30-hour non-thesis option. The course selection may include a minor in an area and up to six hours outside industrial engineering.

Students must complete one course from each area listed below (1-5) to satisfy the core credit requirements for completion of the M.S. IE Degree. Remaining coursework to satisfy the 30-hour degree requirement is to be determined with a graduate advisor.

1. Operations Research – IE 5311 or IE 5318
2. Systems and Engineering Management – IE 5320
3. Manufacturing – IE 5351, IE 5352, IE 5355, or IE 5356
4. Statistics – IE 5342 or IE 5344
5. Human Factors/Ergonomics – IE 5301 or IE 5306

Manufacturing Engineering, M.S.Mfg.E.

The Master of Science in Manufacturing Engineering (M.S.Mfg.E.) is a degree program designed to strengthen knowledge and marketable skills applicable to the successful development of advanced, biomedical, and sustainable manufacturing. The program requires students to complete 30 credit hours with both thesis and non-thesis options.

Thesis option. Students are required to take five core manufacturing courses (IE 5351, IE 5352, IE 5355, IE 5356, and IE 5357) and 6 hours of thesis research (IE 6000). At most two courses can be taken outside of the Whitacre College of Engineering. Students must complete a thesis and deliver an oral presentation of the results.

Non-thesis option. Students are required to take five core manufacturing courses (IE 5351, IE 5352, IE 5355, IE 5356, and IE 5357). At most two courses can be taken outside of the Whitacre College of Engineering. Students must pass a comprehensive oral examination.

The Master of Science in Manufacturing Engineering (M.S.Mfg.E.) is offered both on campus and by distance education. Details regarding admission and degree requirements are available from the department.

Systems and Engineering Management, M.S.SYEM

The Master of Science in Systems and Engineering Management (M.S.SYEM) program prepares competent industrial engineers and engineering managers for industry and consulting.

The master's level programs consist of two options: (1) a 30-hour thesis option, including 6 credit hours of thesis research, and (2) a 30-hour non-thesis option. The course selection may include a minor in an area and up to six hours outside industrial engineering. Students should refer to the IMSE Graduate Handbook for the most updated departmental policies and procedures.

Students must complete one course from each area listed below (1-5) to satisfy the core credit requirements for completion of the M.S. SYEM degree. Remaining coursework to satisfy the 30-hour degree requirement is to be determined with a graduate advisor.

1. IE 5320
2. IE 5321, IE 5322, IE 5324, or IE 5325
3. IE 5323 or IE 5329
4. IE 5311 or IE 5318
5. IE 5316, IE 5319, or IE 5346

In addition to the 15 hours of core credits, the degree requires 15 hours of elective credits.

Graduate Course Descriptions

Industrial Engineering (IE)

- 5000—Short Courses in Industrial Engineering (VI-2).** Prerequisite: Instructor consent. Classroom-based. Coverage of special topics in industrial engineering that require fewer than three credit hours.
- 5035—Practicum in Industrial Engineering (VI-3).** Prerequisite: Consent of instructor. Application of concepts, principles, and techniques of industrial engineering graduate education in a fieldwork context.
- 5100—Industrial Engineering Graduate Seminar (1).** Exposes students to current state-of-practice and state-of-art research in industrial engineering through student presentations, internal faculty and non-faculty speaker presentations, and outside speaker presentations.
- 5301—Advanced Industrial Ergonomics (3).** Functional anatomy and physiology of the musculoskeletal system and their applications in work design. Introduction to work physiology, kinesiology, and anthropometry and their applications.
- 5304—Biomechanics and Work Physiology (3).** Theoretical and experimental fundamentals, including musculoskeletal health, structure and function, work physiology, motor control, experimental method, movement simulation and modeling, muscle fatigue and analysis.
- 5305—Advanced Cognitive Engineering (3).** Cognitive usability concepts relevant to the design of human-machine systems, emphasizing on how the scientific research is apt to design complex products and work systems.
- 5306—Advanced Systems Safety Engineering (3).** Fundamentals of occupational safety, regulatory requirements, qualitative and quantitative hazard evaluation, human reliability, product safety, incident investigation, and best practices to reduce occupational injuries.
- 5310—Stochastic Processes (3).** Prerequisite: Understanding of probability and basic statistics. Review of probability theory, renewal processes, poisson processes, discrete-time Markov chains, continuous-time Markov chains. Applications of these topics from inventing, reliability, quality control, queuing.
- 5311—Principles of Optimization (3).** Prerequisite: Previous courses in operations research that emphasize the modeling of optimization problems, a strong understanding of multi-variable calculus and linear algebra, and the ability to read and write rigorous mathematical proofs. Linear optimization models: theory and application. Includes simplex, revised simplex, dual, and primal-dual algorithms, sensitivity and parametric analysis, duality theory, decomposition, linear complementarity problem, assignment and transportation problems, and Karmarkar's algorithm.
- 5312—Queueing Theory (3).** Prerequisite: IE 5310 or equivalent. Modeling and analysis of simple and complex service systems. Includes single and multiple server Markov queues, queues with general arrival processes and service times, bulk and batch queues, priority queues, and queueing networks.
- 5313—Decision Making Under Uncertainty (3).** Prerequisite: Understanding of basic probability and statistics. Dynamic decision making under uncertainty using Markov Decision Process (MDP) framework, models, theory, and applications of MDPs within supply chain, financial engineering, manufacturing, healthcare, etc.
- 5314—Optimization II (3).** Prerequisite: IE 5311. This is the second course in a two course sequence covering the foundations of optimization theory. The sequence will introduce linear, nonlinear, and integer programming.
- 5315—Activity Scheduling (3).** Deterministic sequencing of single machine, parallel machines, flow shops, and job shops. Theory of complexity. Optimization and heuristic algorithms for combinatorial sequence generation.
- 5316—Simulation Models for Operations Analysis (3).** Prerequisite: Any scientific programming language. Application of simulation techniques to analysis of large scale operations. Production-distribution models; model construction; validation of simulation models; limitations of simulation techniques; programming with simulation languages.
- 5317—Statistical Analysis for Digital Simulation (3).** Prerequisite: Proficiency in a current discrete event simulation language. Generation of

random variants. Statistical tests for randomness in random number streams. Collection and analysis of data for input parameters and distributions. Detection and removal of transients in simulation model data. Computation of variance of simulation model output; variance reduction techniques.

- 5318—Principles of Operations Research (3).** Deterministic and probabilistic methods and models in operations research.
- 5319—Risk Modeling and Assessment (3).** Probabilistic risk models; probability distributions for risk modeling; input data for risk modeling; low probability events; risk modeling software; and analysis of risk modeling results.
- 5320—Systems Theory (3).** Examines theoretical foundations of general systems theory applied to engineering and organizational enterprises addressing issues of systems efficiency, effectiveness, productivity, economics, innovation, quality, and QWL.
- 5321—Decision Theory (3).** Philosophy, theory, and practice of management; decision theory and social responsibility.
- 5322—Advanced Financial Systems for Engineers (3).** Cost analysis and/or control of industrial enterprises. Economic budgeting, planning, decision making, and financial analysis for engineering and engineering management.
- 5323—The Engineering Management Environment (3).** Management of research and development; the legal, financial, and professional interrelationships of engineers and their environment in relation to the modern production organization.
- 5324—Advanced Economics of Systems (3).** Prerequisite: Course in basic engineering economy. Design analysis and sensitivity of complex economic systems with evaluation of economic system performance measures and modeling.
- 5325—Productivity and Performance Improvement in Organizations (3).** Productivity and performance improvement (including efficiency, effectiveness, quality, QWL, innovation, profitability, and budget ability theories, techniques, analysis, and applications for industrial systems. [IE 4325])
- 5329—Project Management (3).** Technical, organizational, and personnel project management examination including planning, estimating, budgeting, scheduling, resources management, control. Risk analysis and management using software for project performance evaluation.
- 5331—Special Topics in Industrial Engineering (3).** Prerequisites: Consent of instructor and departmental approval. Elaborates on a special topic of current interest in industrial engineering. May be repeated.
- 5332—Individual Studies in Industrial Engineering (3).** Prerequisites: Consent of instructor and departmental approval. Individual study of advanced topic selected on the basis of instructor recommendation. May be repeated.
- 5342—Design of Experiments (3).** Prerequisite: Understanding of basic probability and statistics. Single factor, factorial, blocked, split plot designs. Means comparisons, contrasts, estimates of variation. Confounding and fractional factorials.
- 5344—Statistical Data Analysis (3).** Prerequisite: Understanding of basic probability and statistics. Exploratory data analysis, graphical displays and analysis. Linear and nonlinear regression, response surfaces. Selected mainframe and microcomputer packages.
- 5345—Reliability Theory (3).** Prerequisite: Understanding of basic probability and statistics. System level reliability, redundancy, maintainability, and availability analysis and modeling. Life testing, acceleration, preventive maintenance, parametric, and nonparametric models.
- 5346—Total Quality Systems (3).** Prerequisite: Understanding of basic probability and statistics. Total quality philosophy, customer definition and demands, quality strategies, planning and integration, benchmarking, team structures and interaction, supplier qualification, and quality audits.
- 5351—Advanced Manufacturing Processes (3).** Advanced topics in manufacturing materials and processes, including metal, ceramic, and plastic materials and their fabrication, materials' testing, heat treatment, powder metallurgy, and nontraditional machining.
- 5352—Advanced Manufacturing Systems (3).** Advanced topics in different advanced manufacturing systems, including additive manufacturing systems, energy manufacturing systems, semiconductor manufacturing systems, composites manufacturing systems, and cyber manufacturing systems.
- 5353—Sustainable Manufacturing (3).** Prerequisite: Consent of instructor. Life Cycle Assessment for product design and manufacturing process design; three-dimensional sustainability; environmental, social, and economical aspects.
- 5355—Computer-Aided Manufacturing (3).** Computer usage in manufacturing systems, CAD/CAM, numerical control, CNC, DNC, computer-aided process planning, manufacturing engineering database systems,

industrial robot applications, flexible manufacturing systems, and integration of CAD and CAM.

- 5356—**Biomedical Design and Manufacturing (3)**. Introduction to concepts and issues in biomedical design and manufacturing, including biomaterials and nanomaterials, medical devices, body mechanics, design requirements, manufacturing, quality control, and ethics.
- 5357—**Manufacturing Facilities Planning and Design (3)**. Theory and application of the location, layout, and design of modern manufacturing facilities, including materials handling practice, manufacturing systems layout, and warehouse operations.
- 5358—**Nanomanufacturing (3)**. Introduction to principle and application in nanomanufacturing, including self-assembly, nano-molding and embossing, nanotransfer printing, scanning probe lithography, and synthesis of nanostructured materials.
- 5370—**Engineering Data Analytics (3)**. Prerequisite: Understanding of basic probability and statistics and basic programming skills. Data analysis techniques, tools, and applications, including dimensionality, reduction, regression classification, clustering, support vector machine, neural network, etc. with engineering applications.
- 5372—**Quantum Information and Computation (3)**. Introduces basics of quantum information and computation, as well as new developments in algorithms, physical realization, and application.
- 5373—**Quantum Algorithms (3)**. Quantum linear algebra, quantum calculator, quantum walk, quantum algorithms for optimization, machine learning, and stochastic processes, and quantum simulation.
- 5380—**Information Systems Engineering (3)**. Information systems design for decision support, data modeling, database design and access, internet data, data security, data mining and warehousing, social and ethical issues.
- 6000—**Master's Thesis (V1-6)**.
- 6320—**Systems Dynamics (3)**. Prerequisite: Consent of instructor. Theoretical and applied foundations of systems dynamics (SD) analysis and modeling of engineering and organizational enterprises, including SD software, stock-and-flow diagramming, and complex systems analysis.
- 6323—**Systems Management Global Environment (3)**. Prerequisite: Admission to the doctoral program. Explores the critical quantitative as well as qualitative issues shaping the practice and research of systems-technical management.
- 6325—**Foundations of Engineering/Technology Management Knowledge (3)**. Prerequisite: Consent of instructor. Historical and current concepts in the foundations of knowledge concerning industrial engineering and technology management, including organizational culture, decision-making, theory of knowledge, and related topics.
- 6329—**Systems Management Seminar (3)**. Prerequisite: Admission to the doctoral program. Doctoral research seminar exploring the latest trends in systems engineering and technical management research.
- 6331—**Advanced Industrial Engineering Topics (3)**. Prerequisites: Doctoral degree status and departmental approval. Advanced theoretical and/or empirical studies in industrial engineering, ergonomics-human factors, quality or manufacturing engineering, or OR-engineering systems management. May be repeated.
- 6399—**Research Methods in Science and Technology (3)**. Prerequisites: Doctoral degree status and design of experiments or equivalent. Examines the research process and differing methodological approaches to research in laboratory, industrial, field work, and case study settings.
- 7000—**Research (V1-12)**.
- 8000—**Doctor's Dissertation (V1-12)**.

Department of Mechanical Engineering

Students seeking master's or doctor's degrees should consult the department graduate advisor about their plans of study before enrolling for any courses. The department has no specific foreign language requirement. Research tools are included as an integral part of the degree program in the leveling, minor, or major courses of each student. All courses are determined by the student's advisory committee. Students are required to take ME 5120 in their first full-time graduate semester. For the rest of their program, students are required to attend a number of seminars. The seminar course does not count toward fulfilling credit hour requirements. Departmental guidelines for coursework, advisory committee, seminar course, technical papers, and the final evaluation can be obtained from the department graduate advisor.

Admission. Before being recommended for admission to a master's degree program with a major in this department, the student may be requested to take a preliminary examination to determine proficiency in background for

graduate work or may be required to take (without graduate credit) such undergraduate leveling courses as may be designated by the department.

Mechanical Engineering, M.S.M.E.

Two general plans of study are available for the master's degree: (1) the thesis option consisting of 24 hours of graduate coursework and 6 hours of credit for the master's thesis; and (2) the non-thesis coursework only option consisting of 30 hours of graduate coursework. The decision on which plan to follow is made jointly by the student and the advisor. Each option has a set of required core courses and a set of elective courses that are selected in consultation with the student's advisor. Each of the two options requires a final comprehensive evaluation during the semester of intended graduation.

An alternative plan of study to obtain a master's degree is the accelerated BS/M.S. program. ME undergraduate students are eligible to apply in the semester where they will obtain 90 credit hours in their BS degree. Students must satisfy both M.S. and BS degree course requirements; however, they can count 9 credit hours of graduate-level courses toward M.S. and electives in their BS degrees. Students who chose to take BS/M.S. cross-listed courses while applying for the accelerated BS/M.S. program must choose the M.S. course option to use it toward their graduate hour total.

Mechanical Engineering, Ph.D.

In addition to regulations established by the Graduate School for the Doctor of Philosophy degree, students are required to demonstrate high proficiency in a single research area through a record of accomplishments. The student may wish to emphasize coursework and research activities in any one of the following areas: thermo/fluids and heat transfer, dynamics and controls, design, or mechanics and materials. As part of this record, students should have at least two technical papers published or accepted for publication in an archival journal relevant to their field of expertise, prior to the defense of their thesis. Individual faculty advisors may choose to require more than two journal publications. The Ph.D. degree requires a minimum of 60 hours of graduate coursework, 12 hours of ME 8000 (Doctor's Dissertation), the Ph.D. qualifying exam, the Ph.D. thesis proposal, and public Ph.D. defense. The graduate coursework includes at least 12 lecture courses (36 credit hours) and research courses. A maximum of 6 graduate-level courses (18 credit hours) can be transferred from a prior master's degree earned outside the Mechanical Engineering department at Texas Tech University.

Graduate Course Descriptions

Mechanical Engineering (ME)

- 5120—**Graduate Seminar (1)**. Discusses mechanical engineering research topics. Teaches written and oral communication techniques for professional engineers. Registration is required first semester for all ME graduate students.
- 5301—**Analysis of Engineering Systems (3)**. Prerequisite: MATH 3350 or consent of instructor. Analytical techniques for solving ordinary and partial differential equations frequently occurring in advanced mechanical engineering.
- 5302—**Numerical Analysis of Engineering Systems (3)**. Prerequisite: ME 3215, MATH 3350, or consent of instructor. Numerical analysis of ordinary and partial differential equations and other advanced topics applied to mechanical engineering problems.
- 5311—**Advanced Dynamics (3)**. Prerequisite: ME 3333 or consent of instructor. Newtonian dynamics of particles and rigid bodies, rotating coordinate systems, coordinate and inertia property transformations, Lagrangian and Hamiltonian mechanics, Gibbs-Appell equations, and gyroscopic mechanics.
- 5312—**Control Theory I (3)**. Prerequisite: MATH 2360, MATH 3354, MATH 4351, or consent of instructor. Linear dynamical systems, stability, frequency response and Laplace transform, feedback, state space description, and geometric theory of linear systems. [MATH 5312]
- 5313—**Control Theory II (3)**. Prerequisite: MATH 5312, MATH 5316, MATH 5318, or consent of instructor. Quadratic regulator for linear systems, Kalman filtering, nonlinear systems, stability, local controllability, and geometric theory of nonlinear systems. [MATH 5313]
- 5314—**Nonlinear Dynamics (3)**. Prerequisite: ME 5311 or ME 5316. Nonlinear oscillations and perturbation methods for periodic response; bifurcations and chaotic dynamics in engineering and other systems.

- 5316—Advanced Vibrations (3).** Prerequisite: ME 3333 or consent of instructor. Vibration of single and multiple-degree of freedom systems, continuous systems, FE formulation, computer sided modal analysis, random vibrations.
- 5317—Robot and Machine Dynamics (3).** An overview of planar mechanisms (cams and linkages) and set analysis and synthesis. Introduction to spatial mechanisms and robotics kinematic and dynamic analysis and control. An extended and in-depth project is required.
- 5321—Thermodynamics (3).** Prerequisite: ME 3322 or consent of instructor. Classical macroscopic theory with an emphasis on availability concepts in nonreacting, reacting, single phase, and multicomponent systems.
- 5322—Conduction Heat Transfer (3).** Prerequisite: ME 3371 or consent of instructor. Fundamental principles of heat transmission by conduction. Multidimensional steady and transient analysis using various analytical and computational methods.
- 5325—Convection Heat Transfer (3).** Prerequisite: ME 3371 or consent of instructor. Fundamental principles of heat transmission by convection; theoretical, numerical, and empirical methods of analysis for internal and external flows.
- 5326—Combustion Engineering (3).** Prerequisites: ME 3322 and ME 3371. Introduction to chemical thermodynamic combustion kinetics; the theory of premixed flames; turbulent combustion; formation of air pollutants in combustion systems; liquid and solid phase reactions; and examples of combustion devices which include internal combustion engines, gas turbines, furnaces and waste incinerators; alternative fuel sources. [ME 4358]
- 5327—Advanced Heat Transfer (3).** Introductory graduate course presenting advanced topics in conduction, convection, and radiation.
- 5328—Advanced Combustion (3).** Prerequisite: ME 4358 or ME 5326. Provides students with a theoretical understanding of combustion, linking reactions to energy transport processes. Students will be introduced to advanced methods of analysis.
- 5329—Computational Modeling for Engineering Systems (3).** Covers the theory and application of modeling and simulations approaches including quantum-mechanical electronic structure methods (DFT), FE, and MD.
- 5330—Boundary Layer Theory (3).** Prerequisite: ME 3370 or consent of instructor. Fundamental laws of motion for Newtonian viscous fluids in steady laminar and turbulent boundary layers. Utilization of analytical and approximate methods to obtain solutions for viscous flows.
- 5334—Gas Dynamics (3).** Prerequisite: ME 3370 or consent of instructor. Development of basic equations for compressible flow, normal and oblique shocks, flow-through nozzles and ducts, external flows.
- 5335—Mathematical Models of Turbulence (3).** Prerequisite: ME 5330. Nature of turbulence, the Reynolds equations, and the transport equations for Reynolds stresses. Different kinds of closure models and their application to boundary layer flows.
- 5336—Computational Fluid Dynamics (3).** Prerequisite: ME 5302 or equivalent. Simultaneous solution of momentum, heat, and mass transfer problems by applying various computational techniques.
- 5337—Mechanics and Processing of Nanomaterials (3).** The testing and evaluation of mechanical properties for nanostructured materials are considered in relationship to their synthesis and processing.
- 5338—Introduction to Advanced Fluid Mechanics (3).** Basic laws, fundamental theories, and engineering applications in fluid mechanics, including Stokesian dynamics, lubrication theory potential flow, vortex dynamics, boundary layers and turbulence.
- 5339—Transmission Electron Microscopy (3).** Prerequisite: ME 3311. Introductory course in theory and practical use of the transmission electron microscope (TEM) as a research tool. Provides background information for designing research protocols and using instrumentation for recording and analyzing images.
- 5340—Elasticity (3).** Prerequisite: Consent of instructor. Stress, deformation, and strain; basic equations; analytical solutions; energy principles and principles of virtual displacements; finite element; and solutions of problems with elements of design.
- 5341—Legal Aspects of Forensic Science and Engineering (3).** Legal doctrines of liability, associated standards of proof in products liability, premises liability and patent infringement cases. Examples of real-world forensic engineering case studies.
- 5342—Fracture and Failure Analysis (3).** Engineering aspects of failure. Failure mechanisms and related environmental factors. Principles of fracture mechanics and fractography. Techniques for failure analysis and prevention.
- 5343—Contact Mechanics of Engineering Materials (3).** Prerequisite: Departmental approval. Knowledge of material science, engineering mechanics, and MATLAB programming. Introduction and advanced knowledge of surface interactive forces and interface contact mechanics of engineering materials.
- 5344—Introduction to High Pressure Science and Technology (3).** Prerequisite: ME 3311. Behavior of materials under high pressure. Material synthesis, equation of state, phase diagram, phase transformations. Design and application of high pressure apparatus.
- 5345—Computational Mechanics I (3).** Prerequisite: One or more of the following courses ME 5311, ME 5340, ME 5343. Finite element method for elastic problems, Galerkin weighted residual and variational approaches to numerical solutions of mechanical problems, error estimates and adaptive FE refinement, iterative algorithms for nonlinear problems, static elastoplastic and elastoviscoplastic problems, general purpose finite element codes.
- 5346—Computational Mechanics II (3).** Prerequisite: One or more of the following courses ME 5311, ME 5340, ME 5343. Finite element method for dynamic elastic problems, time integration schemes for dynamic problems, iterative algorithms for nonlinear dynamic problems, heat transfer analysis, coupled thermomechanical problems, accuracy analysis, general purpose finite element codes.
- 5347—Phase Transformation I (3).** Prerequisites: ME 3311 and ME 5340. Shape memory effect, pseudoeasticity, pseudoplasticity. Crystallography, continuum thermodynamics, and kinetics of phase transformations. Constitutive equations for phase transformations in elastic materials.
- 5348—Safety Considerations in Forensic Engineering (3).** Safety considerations and methodologies associated with sound engineering design and product development. Examples of real-world forensic engineering case studies to demonstrate consequences of non-compliance.
- 5351—Advanced Engineering Design (3).** Prerequisite: Consent of instructor. Design analysis and synthesis of multicomponent systems. Application of fatigue, fracture mechanics, random vibration, acoustic and anisotropic materials to component design.
- 5352—Probabilistic Design (3).** Application of probabilistic approaches in engineering design. Techniques for the quantification of uncertainty and risk inherent in mechanical systems.
- 5353—Fundamentals of Transdisciplinary Design and Process (3).** The fundamental aspects of design and process which cut across the boundaries of all disciplines and provide a means for solving complex problems.
- 5354—Systems Engineering Principles (3).** An overview of the systems engineering design process focusing on defining both the business and the technical needs and required functionality early in the development cycle, documenting requirements with design synthesis and system validation is presented.
- 5355—Complexity Theory for Design and Process (3).** Prerequisites: ME 5353. Fundamentals of complexity theory to apply to engineering designs, processes, and systems to improve control and reliability.
- 5356—Digital Human Modeling for Human-Centric Design (3).** Prerequisite: Departmental approval. Knowledge of kinematics and dynamics, vector and matrix algebra, C programming. Introduction to human anatomy, skeletal model, anthropometry, human modeling packages, kinematics of human multibody system, posture prediction and dynamic motion prediction.
- 5357—Transdisciplinary Discovery and Innovation (3).** Process of scientific discovery and technology development, integrated tools and processes for engineering innovation, and theoretical foundations and current topics in transdisciplinary engineering and science.
- 5358—Biomaterials (3).** Prerequisite: Materials Science. Develops an understanding of structure and manufacturing-dependent properties for both synthetic and natural biomaterials used in biomedical engineering.
- 5360—Bio-Fluid Mechanics (3).** Prerequisite: Knowledge of basic fluid mechanics. Teaches fundamentals of blood flow mechanics, blood rheology, blood vessel tissue mechanics, blood flow measurements, cardiovascular disease and therapeutic techniques related to blood flow, hemodynamics in main organs, and airflow in the airway.
- 5361—Engineering Biomechanics (3).** Develops quantitative understanding of biophysical processes in biological and human physiological systems. Applies engineering concepts to such systems.
- 5366—Healthcare Engineering (3).** Principles of engineering and advanced topics involved in all major aspects of healthcare delivery processes and systems.
- 5385—Introduction to Microsystems (MEMS) I (3).** Fundamentals of micro-electromechanical (MEMS) and microfluidic systems. Project-based course introduces basic microsystem design, analysis, simulation, and manufacture through several case studies using representative devices.
- 5386—Introduction to Microsystems (MEMS) II (3).** Prerequisite: ME 5385. Application of microfabrication to create microsensor systems. Integration of optics, optoelectronics and microfluids. Includes other MEMS projects.

5387—Introduction to Microsystems (MEMS) III (3). Prerequisite: ME 5386 or consent of instructor. Leadership of a design team in an interdisciplinary environment. Simulation and computer-aided MEMS design and analysis.

6000—Master's Thesis (V1-6).

6301—Master's Report (3).

6330—Advanced Topics in Mechanical Engineering (3). Expose students to new and advanced technology pertaining to topics in the mechanical engineering field with the most current research information available.

6331—Theoretical Studies (3). Prerequisite: Consent of instructor. Theoretical study of advanced topics selected on the basis of the departmental advisor's recommendation. May be repeated for credit in different areas.

7000—Research (V1-12).

8000—Doctor's Dissertation (V1-12).

Bob L. Herd Department of Petroleum Engineering

Graduate studies in petroleum engineering prepare the engineer to assume responsibility in technical and managerial areas within the oil and gas industry. Historically, the graduate can expect to be challenged quickly and in areas of strong potential for personal and professional growth. The Petroleum Engineering Department at Texas Tech prepares the advanced student with the technical skills required to meet the challenges of the field. All students are required to have a Window-based laptop computer.

All graduate-level petroleum engineering courses must be taken for credit. No more than six hours of PETR 6300 may appear on a master's/doctoral degree plan without approval of the Graduate Dean. All PETR 6300 courses must receive graduate advisor approval.

The curriculum is organized into four petroleum engineering areas as specified in the Society of Petroleum Engineering nomenclature. In each area, the courses are divided into core courses and elective courses. The master's degree plan will include at least one course from each of the core areas. Please see Master of Science in Petroleum Engineering section for more detail in the requirements. The doctoral degree plan will include an additional two core courses, beyond the master's requirements. Please see Petroleum Engineering Ph.D. section for more detail in the requirements. Core courses for each area are outlined below.

- **Drilling Engineering:** PETR 5303, 5315
- **Production Engineering:** PETR 5316, 5317
- **Reservoir Engineering:** PETR 5308, 5320
- **Formation Evaluation:** PETR 5304, 5305

Non-Petroleum Students Admission in the Graduate Programs. Graduate students who have the approval of the graduate committee and do not have a degree in petroleum engineering are required to complete the following four leveling courses as a prerequisite for enrolling in the graduate programs: PETR 5380, 5381, 5383, and 5385.

Petroleum Engineering, M.S.P.E.

Thesis Option. The department graduate coordinator will meet, advise, and approve courses for the degree each semester. In addition to the written thesis, the candidate's thesis committee will administer a final oral exam/defense of the completed thesis. This thesis option requires a minimum of 30 credit hours comprised of 24 hours of coursework (12 hours of core courses and 12 hours of elective courses) and 6 hours of PETR 6000 (thesis). PETR 5121 (seminar) is required during the first semester of enrollment. Please see departmental master's handbook for more information and requirements.

Up to 6 hours of transfer credit can be applied to the master's program with approval from graduate and faculty advisor.

Non-Petroleum Students Admission in the Graduate Programs. Graduate students who have the approval of the graduate committee and do not have a degree in petroleum engineering may be required to complete the following courses before enrolling in other graduate courses: PETR 5380, 5381, 5383, and 5385.

Non-Thesis Option. The graduate program for a non-thesis master's candidate is specifically tailored for that candidate's educational background, industry experience, and individual interest. For the non-thesis program, a final comprehensive examination is required by the department and the Graduate School. The policy governing the comprehensive examination is available with the departmental graduate coordinator. The non-thesis

option requires a minimum of 33 credit hours comprised of 30 hours of coursework (9 hours of core courses and 21 hours of elective courses) and 3 hours of PETR 6001 (report). PETR 5121 (seminar) is required during the first semester of enrollment. Please see the departmental master's handbook for more information and requirements.

Petroleum Engineering, Ph.D.

The objectives of the Ph.D. program are to provide students opportunities to reach a critical understanding of the basic scientific and engineering principles underlying their fields of interest and to cultivate their ability to apply these principles creatively through advanced methods of analysis, research, and synthesis.

The Ph.D. degree is awarded primarily based on the student's research contributions. Applicants for the doctoral degree must have a degree in an engineering discipline and must meet the approval of the department's graduate committee. Ph.D. students must take the qualifying exams within the first three semesters of matriculation. These qualifying examinations consist of two parts. The first part covers the four disciplines of petroleum engineering: production, drilling, reservoir engineering, and formation evaluation. Students have two opportunities to take and successfully pass the first part of the qualifying exams. If students cannot pass the exams in all four disciplines by the second attempt, the student will have to drop the Ph.D. program. The second part of the qualifying examination is an oral defense of the dissertation proposal.

In addition to regulations established by the Graduate School, applicants for candidacy for the doctoral degree are required to complete a minimum of 72 credit hours comprised of 60 hours of coursework (which will include at least 24 hours of 7000-level research). The remaining 12 required hours will consist of 12 hours of PETR 8000 (dissertation). During their coursework, students are required to demonstrate high proficiency in one of the four areas mentioned above. The coursework of each student must also meet any additional recommendation of the student's dissertation committee and/or graduate committee. Doctoral students are required to attend department seminars (PETR 5121). Please see the department doctoral handbook for more information and requirements.

The departmental graduate coordinator determines course content and transferable hours from previous Master of Science in Petroleum Engineering programs, if any. No more than 24 hours can be transferred. Transfer equivalencies must be approved by the Graduate Program Committee or graduate advisor during the first semester of enrollment. The graduate faculty advisor, who is in contact with the graduate faculty, will be the final decision maker when matters require.

Graduate Course Descriptions

Petroleum Engineering (PETR)

5121—Graduate Seminar (1). Prerequisite: Department approval. Discussions of petroleum engineering research and special industry problems. Required each semester for all graduate students. May be repeated for credit.

5301—Teaching Experience in Petroleum Engineering (3). Prerequisite: PETR majors only, department approval. On-the-job training in teaching petroleum topics. Students prepare and present lectures, grade problem sets, and prepare laboratory experiments. Students and instructor evaluate performance.

5302—Petroleum Environmental Engineering (3). Prerequisite: Department approval. A unified treatment of all aspects of petroleum environmental well planning processes, pollution prevention and safety, management practices and self-assessment process, environmental oil and gas law.

5303—Advanced Drilling Techniques (3). Prerequisite: PETR majors only, department approval. A unified treatment of all aspects of well planning and the optimization of oil and gas drilling processes.

5304—Advanced Well Log Analysis (3). Prerequisite: Prerequisite: PETR majors only, department approval. Methods of analyzing various types of well logs to obtain quantitative hydrocarbon reservoir parameters.

5305—Advanced Formation Evaluation (3). Prerequisites: PETR 5304; department approval. Must have graduate standing in petroleum engineering. Application of both conventional and new formation evaluation tools and techniques to non-vertical wells, unconventional reservoirs, and legacy log files.

- 5306—Advanced Artificial Lift Methods (3).** Prerequisite: Department approval. Study of the design and analysis of current mechanisms for lifting oil from the reservoir to surface facilities including optimization theory.
- 5307—Enhanced Oil Recovery (3).** Prerequisite: PETR majors only, department approval. Fundamental relations governing displacement of oil for improved and enhanced recovery. Repurposes the skills learned for CO₂ and hydrogen geological storage.
- 5308—Pressure Transient Analysis (3).** Prerequisite: Department approval. Pressure transient analysis and solutions for various types of oil and gas reservoirs. Design and interpretation of well testing procedures with field examples. Application to naturally and hydraulically fractured reservoirs.
- 5309—Hydrocarbon Reservoir Simulation (3).** Prerequisite: Department approval. The development of unsteady state fluid flow equations for hydrocarbon reservoirs and the application of finite difference methods to obtain solutions to the equations. Petroleum engineering students only.
- 5310—Advanced Simulation Techniques (3).** Treatment of advanced concepts of reservoir simulation for multidimensional, multiphase flow in hydrocarbon reservoirs.
- 5311—Thermal Oil Recovery (3).** Prerequisite: Department approval. Study of the recovery of oil by thermal methods, including steam injection and in situ combustion.
- 5312—Contemporary Enhanced Oil Recovery Processes (3).** Prerequisite: Department approval. Contemporary enhanced oil recovery (EOR) processes, such as EOR in shale and tight reservoirs and CO₂ EOR. The covered EOR process may change with current industry EOR practices and students' research interests.
- 5313—Numerical Applications in Petroleum Engineering (3).** Prerequisite: Department approval. Least squares, solving first and second order partial differential equations; backward, central, forward difference solutions, matrix, Gaussian, Adams, Runge-Kutta solutions.
- 5314—Nodal Analysis and Well Optimization (3).** Prerequisite: Department approval. Inflow performance relationships, well design, theory of the reservoir flow, flow restrictions, completion effects, multiphase phase flow, and use of computer programs for complex solutions. Petroleum engineering students only.
- 5315—Horizontal Well Technology (3).** Prerequisite: Department approval. Topics include why horizontal, incremental cost, historical prospective, drilling change, completion modification, production difference, reservoir aspects, pressure transient, and analysis adjustment.
- 5316—Advanced Production Engineering (3).** Prerequisite: Department approval. Advanced study of production operations, well deliverability, inflow performance, gas lift design, production system analysis and optimization, downhole equipment and surface facilities design.
- 5317—Advanced Well Completion and Stimulation (3).** Prerequisite: Department approval. Casing string plan; Tubing String plan. Inflow-tubing-and Flowline performance Relationships. Skin calculations for gravel pack, perforation completion, and formation damage. Nodal analysis of well flow. Acid stimulation—matrix, wormhole, cavity and fractured. Borehole extension by hydraulic fracturing, abrasive/jet perforation with CT-unit, fish-bone type multilateral drain holes.
- 5318—Gas Production Engineering (3).** Prerequisite: Department approval. Design of processing, transportation, distribution, and flow measurement systems; gas storage reservoirs, flow in porous media, tubing, and pipelines; phase behavior of gas condensates; and coal bed methane.
- 5319—Multiphase Fluid Flow in Pipes (3).** Prerequisite: Department approval. Introduction to CFD software (simulator), OLGA/TM. Multiphase flow vertical, inclined, horizontal conduits. Transient multiphase pipeline flow analysis. Comparison of CFD-steady-state flow and Empirical correlations for vertical and horizontal flows. Multiphase flow metering. Slug flow analysis in pipeline. Concept of flow assurance.
- 5320—Advanced Reservoir Engineering (3).** Prerequisite: Department approval. Develop equations governing the flow of slightly incompressible, compressible, highly compressible fluids in various porous media under different boundary conditions. Application of water-flooding, aquifer, EOR processes. Material balance equations. Decline curve analysis.
- 5322—Computational Phase Behavior (3).** Prerequisite: Department approval. Advanced PVT and EOS characterization, tuning EOS by regression, gas condensate reservoirs, use of laboratory experiments and correlation to obtain PVT data, pseudization and use of PVT programs.
- 5323—Advanced Phase Behavior (3).** Prerequisite: Department approval. Thermodynamics of equilibria, volumetric phase behavior, Gibbs and Helmholtz energy, chemical potential, phase diagram, modeling paraffins, asphaltene, hydrates and mineral deposition, use of PVT software.
- 5324—Geostatistics for Reservoir Engineers (3).** Prerequisite: Department approval. Flow in porous media, reservoir characterization, geostatistics, estimation, simulation, case studies, quantifying uncertainties, geological simulation, data integration, grid block properties, and geostatistics software.
- 5325—Water Flooding Techniques (3).** Prerequisite: Department approval. Frontal advanced theory for multiphase flow, immiscible flow, capillary cross flow, pseudofunctions, streamlines, measures of heterogeneity, field case studies, pattern flooding, and use of black oil reservoir simulators.
- 5326—Geoenergy and Carbon Management (3).** Fundamentals of geoenergy and carbon capture utilization and storage: geothermal, hydrogen generation and storage in formation, carbon capture, carbon storage, and utilization CO₂ (EOR). Theory and practical aspects covered.
- 5328—Advanced Property Evaluation (3).** Prerequisite: Department approval. Statistical evaluation of hydrocarbon producing properties, risk analysis, economic analysis of production forecasts and reserve estimation, and cash flow analysis.
- 5329—Advanced Core Analysis (3).** Prerequisite: Department approval. Rock properties relating to production of oil and gas, multiphase fluid flow, micro- and macro-interaction of fluids and reservoir rocks, Archie parameters and well logs, modeling saturations with permeability.
- 5331—Drilling Simulation (3).** Prerequisites: PE majors only. Corequisite: PETR 5121. Well control techniques and methods used to control kicks during operation. (Design Course) [PETR 4321]
- 5380—Drilling Engineering Methods (3).** Prerequisite: Department approval. Drilling equipment, components, description, operation; drilling fluids; hydraulic calculations; casing design; hole problem; cost control, penetration rate, well planning; pressure control; directional drilling; bit; cement. (Leveling program course)
- 5381—Production Engineering Methods (3).** Prerequisite: Department approval. Artificial lift, inflow performance relationships, well design and application of stimulation practices, processing equipment, separator problems, emulsions, treating, and transmission systems. (Leveling program course)
- 5382—Well Logging Fundamentals (3).** Prerequisite: Department approval. Use of open-hole logs, survey of induction and lateral log suites to determine reserves. (Leveling program course)
- 5383—Reservoir Engineering Fundamentals (3).** Prerequisite: Department approval. Reservoir performance predictions, computation of in place gas, condensate and oil reservoirs, applications of ME for reservoir mechanisms, decline curves, EOR methods, fluid flow in porous media. (Leveling program course)
- 5384—Fluid Properties (3).** Prerequisite: Departmental approval. Reservoir fluids; fluid sampling; phase behavior; hydrocarbon gas-liquid fractions; z-factors; equations of state; flash and differential calculations; formation volume factors for gas, oil, and water. (Leveling program course)
- 5385—Rock Properties (3).** Prerequisite: Consent of instructor. Reservoir rock properties, sampling, core analysis, rock/fluids interaction, concepts of porosity, permeability, saturations, capillary, pressure and compressibility for gas-oil production. (Leveling program course)
- 5390—Petroleum Geology and the Reservoir (3).** Prerequisite: MSIS Energy program students only. Integrations of geological, petrophysical, and geophysical data used to explore hydrocarbon reservoirs. Course will help the non-technical professional develop a better awareness of the multidisciplinary approach to petroleum exploration and production.
- 5391—Reservoir Engineering and Project Evaluation (3).** Prerequisites: Knowledge of college algebra and technical writing are recommended prior to enrolling; MSIS Energy program students only. Covers basic reservoir engineering involving reservoir performance, OOIP, decline curve analysis, EOR, and fluid flow in the reservoir. Reservoir engineering will then be applied to assessing project economics and resources/reserves classification.
- 5392—Drilling, Completion, and Production Methods (3).** Prerequisites: Knowledge of college algebra and technical writing are recommended prior to enrolling; MSIS Energy program students only. Drilling, completion, and production design, equipment, and activities will be taught that deliver safe, environmentally responsible field operations. Learnings reinforced in field development project.
- 6000—Master's Thesis (V1-6).**
- 6001—Master's Report (V1-6).**
- 6300—Studies in Advanced Petroleum Engineering Topics (3).** Prerequisite: PETR majors only. Study of topics of current interest under the guidance of instructional faculty. May be repeated for credit on different topics or areas of interest.
- 6331—Proposal/Project Communication (3).** Prerequisite: Admission to doctoral program. Guide to research, technical report, project planning, problem definition, grant proposals, thinking, talking, and

writing in research, writing technical journal, review articles, and technical presentations.

7000—Research (V1-12).

8000—Doctor's Dissertation (V1-12).

Graduate Certificates

Applied Forensic Engineering

The Graduate Certificate in Applied Forensic Engineering is designed to be a flexible plan that allows students the opportunity to study engineering and its effect on product safety, welfare, and the laws governing the practice of engineering in society. Students are encouraged to develop a study plan in particular areas of interest and to communicate regularly with the program director, Professor Jahan Rasty in the Mechanical Engineering Department.

Students must complete 6 hours of required courses as well as 6 hours of engineering courses from an approved list of engineering elective courses. In addition to the 12 hours of coursework, students must work on and complete a real-world forensic engineering project, the scope of which will be co-developed and approved by the student and the program director. Upon completion of the final project, the results will be submitted to the program director in the form of a technical report and an oral presentation.

- Required Courses: ME 6330, 5342, 7000
- Elective Courses (two courses or six hours): ME 5327, 5339, 5352, 5361; CE 5321, 5323, 5329, 5348; ECE 5366, 5367; IE 5301, 5304, 5305, 5306, 5319

Contact: Dr. Jahan Rasty | 806.834.6751 | jahan.rasty@ttu.edu

Construction Engineering and Management

The Department of Civil, Environmental and Construction Engineering offers a 12-hour graduate certificate in Construction Engineering and Management. The certificate is designed for professionals who have a bachelor's degree in civil engineering, architecture, landscape architecture, interior design, or business and are seeking a senior management position in the construction industry. It is ideal for students interested in pursuing graduate study without committing to a full master's program. Course selection will be reviewed and approved by the graduate advisor.

- Required: CONE 5320, 5322
- Electives (choose two of the following): CONE 5302, 5304, 5314, 5332

Contact: Dr. Ali Nejat | 806.834.4065 | ali.nejat@ttu.edu

Security

The Graduate Certificate in Security is intended for those who do not need or wish to have a full graduate degree in security or computer science. In particular, the certificate is directed toward working professionals and graduate students who are interested in security. In addition to any leveling requirements, coursework for the certificate requires 12 credit hours.

- Required Security Core Course: CS 5340
 - Security Elective Courses: CS 5342, 6343, 6378, 6345, 6359, 5333.
- One of the three courses may be replaced with one of the following:
CS 5331, 5379, 5356, 5377, 5364; IE 5316, 5319, 5320.

Software Engineering

The Graduate Certificate in Software Engineering is intended for those who do not need or wish to have a full graduate degree in software engineering or computer science. In particular, the certificate is directed towards working professionals and graduate students who are interested in systematic software development. In addition to any leveling requirements, coursework for the certificate requires credit 12 hours.

- Required Software Engineering Core Course: CS 5373
- Software Engineering Elective Courses: CS 5332, 5363, 5374. One of three courses may be replaced with one course in the following: CS 5379, 5356, 5377, 5364; IE 5316, 5319, 5320.

Honors College

Jill Hernandez, Ph.D., Dean

103 McClellan Hall | Box 41017

Lubbock, TX 79409-1017

T 806.742.1828 | F 806.742.1805

honors@ttu.edu | www.honors.ttu.edu

Although Honors courses are taught by award-winning faculty in departments and colleges throughout the university, the following faculty have appointments exclusively with the Honors College.

Horn Distinguished Professor: Bradatan

Professors: Caswell, Hernandez, Wong

Associate Professors: Carrell, Giemza, Hodes, Smith, Tomlinson

About the College

The Honors College provides highly motivated and academically talented students opportunities to maximize their potential and develop skills for global citizenship. The Honors College combines the personal attention and instruction of a small liberal arts college with the diversity of course offerings, extra-curricular activities, and intellectual opportunities of a major research university. Honors courses are small, student-centered, and discussion-oriented. Honors seminar classes are interdisciplinary and often examine connections among related areas of study. Honors courses provide a learning experience that complements and expands on any academic major or career path. The goal is for students to see relationships among different areas of study, develop analytical thinking abilities, obtain research experience, learn a foreign language, gain international exposure, and obtain communication skills that will allow them to become informed and independent thinkers and successful practitioners in whatever career path they choose.

With the exception of students who enroll in the Honors Sciences and the Humanities (HSH) major, students accepted into the Honors College are also enrolled concurrently in the college that houses their major area of study. Enrollment in the Honors College provides a number of benefits for students, including early registration, housing in an Honors residence hall and learning community (on a first-come, first-served basis), extended library privileges, opportunities to expand their intellectual awareness, study abroad scholarships, and opportunities to do research. The College also schedules a variety of special events such as speakers, recreational activities, and cultural performances. The Honors College is able to award scholarships for high-achieving students as well as those qualifying on the basis of need.

Honors students are encouraged to engage in the greatest possible range of educational experiences during their time at the university, including (1) the Honors Undergraduate Research program, which enables and compensates students to take part in undergraduate research with faculty in many disciplines and prepares them for more advanced work at the graduate level; (2) international study, which enhances marketability and fosters personal growth and acquisition of cultural knowledge and language skills; (3) personalized academic advisement; (4) externships, which provide co-curricular and professional on-the-job networking opportunities; and (5) internships, which are longer credit-based experiences.

Honors students who complete at least 24 hours of honors credit (including one 3000-level Honors seminar and one 4000-level Honors seminar) graduate “with Honors from the Honors College,” a distinction that is noted on transcripts and diplomas and receives special recognition in the graduation program. Those who also complete six additional hours of senior thesis work graduate “with Highest Honors from the Honors College.”

Degree Programs

The college offers programs leading to the following degrees:

- Bachelor of Arts in Honors Sciences and the Humanities:
Environmental Science and the Humanities Concentration
- Bachelor of Arts in Honors Sciences and the Humanities:
Politics, Philosophy, Economics, & Law Concentration
- Bachelor of Science in Honors Sciences and the Humanities:
Environmental Science and the Humanities Concentration
- Bachelor of Science in Honors Sciences and the Humanities:
Humanities Driven STEM Concentration
- Bachelor of Science in Honors Sciences and the Humanities:
Medicine, Global Health, and the Humanities Concentration

Academic Program

The Honors College encourages interdisciplinary work and presents a range of courses and programs that offer such opportunities. At the heart of the Honors College experience is a series of departmental classes taught by some of the university's most talented professors. These courses include those fulfilling both core curriculum and specific major or minor requirements. They are generally limited to 20 students and while curricularly they parallel their regular-section counterparts, due to the more intimate learning environment, classes are faster paced, more interactive, more writing intensive, and more tailored to the interests of the students. The Honors program also offers a variety of seminars on special topics that explore specific subject areas in depth and with an interdisciplinary focus.

Applying for Admission

Admission into the Honors College is competitive and occurs separately from admission into Texas Tech. Students must make special application to be considered for admission to the Honors College either as an entering freshman or as a continuing Texas Tech or transfer student. The Honors College reviews each application holistically, and students may apply test-optional. In general, application averages for incoming freshmen are a composite Revised SAT score (reading and math only) of 1370 or above, a composite ACT score of 32 or better, and/or graduation in the top 10 percent of the high school class. However, the Honors College applies a kaleidoscope approach to student admission by considering in the admission process such factors as application and entrance exam essays; a portfolio; recommendations; student activities; and special skills, abilities, or experiences. Therefore, students whose SAT, ACT, or class standing do not meet the threshold requirement may still gain admission, just as students who surpass those requirements may not be admitted.

For continuing Texas Tech or transfer students, eligibility to apply is based on a cumulative college GPA of 3.5 or better. Admission is competitive and contingent upon the pool of applicants for any given year. Admission deadlines and information are posted online at www.honors.ttu.edu.

Transfer students who are currently enrolled in a university-level Honors College or program are especially encouraged to apply. Transfer student applications will receive decanal review, and up to 12 semester credit hours (SCH) of Honors credit earned may be applied to the 24 SCH required for fulfillment of Honors credit at Texas Tech.

To remain in good standing in the Honors College, students must maintain a minimum 3.5 cumulative GPA while at Texas Tech and demonstrate adequate progress toward completion of the Honors degree requirements. For more details, visit the *Honors Student Handbook*.

TTUHSC School of Medicine Early Acceptance Program

The joint Texas Tech University–Texas Tech University Health Sciences Center Early Acceptance Program offers an exciting opportunity to select Honors College students by allowing them to waive the Medical College Admission Test (MCAT) and apply early (typically the junior year) to the School of Medicine (SOM) at TTUHSC. Successful applicants to the Early Acceptance Program are notified of their acceptance to the medical school in late January and must complete their baccalaureate degree prior to admission to the SOM.

The primary goal of this special program is to encourage Honors students to broaden their educational experiences before they enroll in their professional studies. The waiver of the MCAT allows students to include coursework or other experiences in areas such as languages, the humanities, mathematics, and business, thus enabling them to become more well-rounded professionals.

General Requirements for Application. Early acceptance is available to Honors students within any major, so long as the requirements for entry to the School of Medicine are met and the students are judged to be exceptional candidates by the SOM Admissions Committee in the circumstances under which they apply. Students who are eligible to apply must meet the following criteria:

- Enroll officially in the Honors College
- Enter Texas Tech as first-year students (students classified as transfer students upon entering Texas Tech are ineligible)
- Be legal residents of the state of Texas
- Be U.S. citizens or permanent residents
- Graduated from a high school in Texas
- Have earned a composite score of at least 1360 on the SAT (verbal and math portions only) or at least 30 on the ACT upon matriculation at Texas Tech (the composite score must be earned in one test administration)
- Submit a “checklist” form to the Honors College during their semester of application to the SOM

Visit www.honors.ttu.edu for further information.

School of Law Early Acceptance Program

Early Decision Plan. The Honors College and the Texas Tech University School of Law cooperate in an Early Decision Plan that allows exceptional Law School applicants who are Honors College students in good standing to receive notification of their acceptance during their third year at Texas Tech. Enrollment in the School of Law does not occur until after the student receives a baccalaureate degree.

To be eligible to apply for Early Decision, applicants must meet the following criteria:

- An undergraduate GPA of at least 3.5
- An LSAT score that places them in the top half nationwide
- An SAT score of at least 1300 (verbal and math only) or an ACT of at least 29
- Enrollment in the Honors College, making satisfactory progress toward a baccalaureate degree with a diploma designation in Honors Studies
- Submit an Honors certification form to the Honors College at the time of application to the School of Law

Students must apply during the fall semester of their third year and must take the LSAT by December of that year. Students who receive and accept an Early Decision offer must commit to enroll at the Texas Tech School of Law and may not apply to other law schools. The School of Law Admissions Committee applies the same standards and procedures for Early Decision applicants and applicants reviewed under the traditional admission process.

Visit www.honors.ttu.edu for further information.

TTUHSC School of Health Professions Provisional Admission Decision Initiative

Provisional Admission Decision Initiative for Entry-Level Clinical Educational Programs in the Department of Rehabilitation Sciences. The School of Health Professions (SHP) at Texas Tech University Health Sciences Center (TTUHSC) and the Honors College at Texas Tech University (TTU) will cooperate in an Early Admission Decision initiative to

allow exceptionally well-qualified TTU Honors students to apply for and be considered for early admission to one of the following three graduate programs within the Department of Rehabilitation Sciences: Master of Athletic Training (MAT), Doctor of Occupational Therapy (OTD), or Doctor of Physical Therapy (DPT). An Early Admissions Decision applicant may only apply to one of these programs. Enrollment in the selected program does not occur until after the student earns a baccalaureate degree with honors from the TTU Honors College and meets the requirements listed below. Students must graduate with a baccalaureate degree from TTU in any field as a member in good standing of the Honors College.

To be eligible to apply for early admission, the following criteria must be met by the applicant at the time of application:

1. Enrolled in TTU Honors College
2. Completed at least 60 credit hours
3. Completed a minimum of 6 credit hours in Honors
4. Possess a cumulative undergraduate GPA of 3.70 or higher
5. Possess a GPA of 3.70 or higher in prerequisite courses for the relevant SHP program
6. Clinical observation hours: Complete at least 50 percent of the relevant program's clinical observation hours

All eligible *Early Admissions Decision* applicants will be interviewed by members of the Admissions Committee of the relevant program. Applicants who pass the interview will be offered provisional early admission to that program with the following stipulations:

1. The applicant must complete all of the program's required prerequisite coursework as a component of their TTU baccalaureate degree.
2. The applicant must maintain their enrollment in the TTU Honors College, with the applicant making satisfactory progress toward a baccalaureate degree with a diploma designation in Honors Studies from the Honors College.
3. At the end of the fall semester of the senior year (defined as having completed at least 18 hours of the required credit hours in courses designated with an (H) attribute, leaving no more than 6 hours of Honors designated SCH to graduate with Honors (of the required 24 hours in Honors)), the applicant must have
 - a. A cumulative undergraduate TTU GPA of 3.70 or higher; and
 - b. A TTU GPA of 3.70 or higher in prerequisite coursework for the relevant program.
4. In the case of applicants who are granted provisional early admission to the DPT program, a GRE score at or above 50th percentile ranking in Verbal and Quantitative sections and a score of at least 3.5 in the Analytic Writing section must be obtained by the end of the fall semester of their senior year.

The Admissions Committees for the MAT, OTD, and DPT programs will apply the same prerequisite requirements, clinical observation hours, standards, and procedures to all applicants, including Early Admission Decision applicants. Applicants who receive and accept a provisional early admission offer must commit to enroll in the designated TTUHSC SHP program and may not apply to similar programs at another university or college. Applying to a similar program at another university or college will nullify their early admission offer to the designated TTUHSC SHP program.

Early Admission Decision applicants are encouraged to review application requirements for the MAT, OTD, and DPT programs. This information is available at the TTUHSC website and the SHP catalog.

Visit www.honors.ttu.edu for further information.

Undergraduate Programs

The Bachelor of Arts and Bachelor of Science degrees in Honors Sciences and the Humanities (HSH) are designed for capable, curious students who are pursuing a broad and challenging course of study that will prepare them for a variety of careers and a lifetime of active citizenship. Most university graduates change careers several times during their lives. Therefore, this degree emphasizes “portable skills” such as critical thinking and problem solving that equip students with career flexibility. HSH also leads to knowledge and skills that qualify students for admission to graduate and professional programs such as law and medical schools. Students who seek a career in certain health professions can complete their science requirements while pursuing the HSH major.

The HSH major emphasizes a broad, humanistic approach to understanding the world. Students pursuing an HSH major must be admitted to the Honors College. With required completion of an Honors Thesis, HSH leads to graduation with the distinction of Highest Honors. Students in HSH must complete one of the following concentrations: Medicine, Global Health, & the Humanities; Humanities Driven STEM; Environmental Science & the Humanities; or Politics, Philosophy, Economics, & Law. For further information about HSH see www.honors.ttu.edu.

HSH majors are strongly encouraged to include a study abroad experience as part of their education and are required to take a foreign language through the second year, which is good preparation for study in a foreign country. Study abroad may be at one of the Texas Tech University overseas campuses or anywhere else in the world where it can be arranged. Students may study abroad in any semester; however, most may benefit from opting to study abroad in the summer to avoid interrupting the sequence of required courses.

Students who are admitted to the Honors College are encouraged to connect directly with the staff Program Director of the HSH program if they are interested in pursuing the Honors Sciences and the Humanities degree. Students are invited to discuss the degree requirements and recommended first-year courses at any time; however, students are only eligible to officially declare HSH (as a primary degree program or as a secondary degree program) following completion of their first semester at TTU and only if the cumulative GPA is 3.5 or higher.

Communication Literacy Plan. The Honors Sciences and the Humanities (HSH) major provides a solid foundation of humanities-based coursework. This coursework emphasizes holistic communication skills which include oral and written mastery emanating from close reading of primary and secondary texts, critical analysis, preparation of oral and written arguments, receiving criticism, and re-writing. Communication Literacy coursework for the Honors Sciences and the Humanities major includes ENGL 2391, HONS 4302 (or an approved 4000-level Seminar substitution), HONS 3300, and HONS 4300.

Honors Sciences and the Humanities, B.A.: Environmental Science and the Humanities Concentration

The Bachelor of Arts degree (B.A.) in Honors Sciences and the Humanities (HSH) with a concentration in Environmental Science and the Humanities is designed for capable, curious students who are interested in pursuing a broad and challenging course of study that will prepare them for a variety of careers and a lifetime of active citizenship. With its foundation in the humanities, the degree focuses on the study of the human relationship to the environment. Courses draw upon philosophy, literature, writing, the arts, and science and engineering. Honors students delve profoundly into the humanities through the historic relationship between human beings and their surroundings. Many university graduates change careers several times during their lives. Therefore, this degree also emphasizes marketable skills that are portable, such as critical thinking, writing, and problem solving, that ready students for a broad range of career options.

Students who are admitted to the Honors College are encouraged to connect directly with the staff Program Director of the HSH program if they are interested in pursuing the Honors Sciences and the Humanities degree. Students are invited to discuss the degree requirements and recommended first-year courses at any time; however, students are only eligible to officially declare HSH (as a primary degree program or as a secondary degree program) following completion of their first semester at TTU and only if the cumulative GPA is 3.5 or higher.

Honors Sciences and the Humanities, B.A.: Politics, Philosophy, Economics, & Law Concentration

The Bachelor of Arts degree (B.A.) in Honors Sciences and the Humanities (HSH) with a concentration in Politics, Philosophy, Economics, & Law is designed for capable, curious students who are interested in pursuing a broad and challenging course of study that will prepare them for a variety of careers and a lifetime of active citizenship. The degree is designed to offer students the opportunity to gain a solid sense of the human-constructed world, where it came from, and where it may be going. The degree explores the world's greatest intellectual and cultural achievements, as well as the struggles and tensions that are always part of politics, power, and privilege. Honors students will hone their skills in writing, multimodal communication, scholarly research, and critical analysis, better preparing them for graduate school and/or a broad range of careers in law, business, communication, education, and advocacy. Many university graduates change careers several times during their lives. Therefore, this degree also emphasizes marketable skills that are portable, such as critical thinking, writing, and problem solving, that ready students for a broad range of career options.

Students who are admitted to the Honors College are encouraged to connect directly with the staff Program Director of the HSH program if they are interested in pursuing the Honors Sciences and the Humanities degree. Students are invited to discuss the degree requirements and recommended first-year courses at any time; however, students are only eligible to officially declare HSH (as a primary degree program or as a secondary degree program) following completion of their first semester at TTU and only if the cumulative GPA is 3.5 or higher.

† Course offered regularly in an Honors section.

natural resources, and life cycle analysis the opportunity to contextualize construction, manufacturing, and industrial practices within a discourse on human and natural environments. Students engage with complex questions in the areas of sustainability, marketing, and fabrication even as they connect to the historic and social impacts of the scientific, industrial, and technological revolutions. Many university graduates change careers several times during their lives. Therefore, this degree also emphasizes marketable skills that are portable, such as critical thinking, writing, and problem solving, that ready students for a broad range of career options.

Students who are admitted to the Honors College are encouraged to connect directly with the staff Program Director of the HSH program if they are interested in pursuing the Honors Sciences and the Humanities degree. Students are invited to discuss the degree requirements and recommended first-year courses at any time; however, students are only eligible to officially declare HSH (as a primary degree program or as a secondary degree program) following completion of their first semester at TTU and only if the cumulative GPA is 3.5 or higher.

Honors Sciences and the Humanities, B.S.: Medicine, Global Health, and the Humanities Concentration

The Bachelor of Science degree (B.S.) in Honors Sciences and the Humanities (HSH) with a concentration in Medicine, Global Health, and the Humanities is designed for capable, curious students who are interested in pursuing a broad and challenging course of study that will prepare them for a variety of careers and a lifetime of active citizenship. The degree encourages pre-med Honors students to broaden their educational experiences in order to become more competitive applicants to medical schools and eventually more employable professionals. While targeted to a pre-med audience, it could also have relevance to other Honors students pursuing related pre-health occupations (i.e., nursing school, physician's assistant studies, healthcare administration). Through a profound exploration of the intersections between health, healing, and the humanities, graduates will be able to better communicate the compassion, creativity, and innovation of scientific thinking in humanistic terms. Many university graduates change careers several times during their lives, and the field of medicine is not exempt from this reality. Therefore, this degree also emphasizes marketable skills that are portable, such as critical thinking, writing, and problem solving, that ready students for a broad range of career options.

Students who are admitted to the Honors College are encouraged to connect directly with the staff Program Director of the HSH program if they are interested in pursuing the Honors Sciences and the Humanities degree. Students are invited to discuss the degree requirements and recommended first-year courses at any time; however, students are only eligible to officially declare HSH (as a primary degree program or as a secondary degree program) following completion of their first semester at TTU and only if the cumulative GPA is 3.5 or higher.

Undergraduate Minors

Honors Sciences and the Humanities

To earn a minor in Honors Sciences and the Humanities (HSH), Honors students must complete 18 hours of coursework from the following requirements, consisting of 9 upper-level hours and 9 lower-level hours.

Four required courses (12 Hours):

- ENGL 2391 (Honors section)
- HONS 4302 or approved 4000-level Honors Seminar (Any section)
- Upper-level Humanities (choose one): Any 3000-level ENGL, HIST, or PHIL course
- Upper-level Honors Seminar (choose one): HONS 3301, HONS 3302, HONS 3304, or HONS 3305

Two courses from two different disciplines listed below (6 Hours):

- Art History: ARTH 1301 or ARTH 2302
- Economics: ECO 2301, ECO 2302, or ECO 2305

- Ethics: PHIL 2320, PHIL 2330, ENGR 2392, **or** ENGR 2393
- Geography: GEOG 2300 **or** GEOG 2351
- History: HIST 1300, HIST 1301, HIST 2322, **or** HIST 2323
- Humanities: HUM 2301, HUM 2302, PHIL 2350, **or** any 2000-level CLAS course

To receive credit toward graduation, HSH minor coursework must be passed with a minimum grade of C and may not be taken pass/fail or by correspondence. A maximum of 3 hours of transfer credit may be applied to the minor.

robert.peaslee@ttu.edu

Humanities

The purpose of the humanities minor is to provide the inquiring and curious student a flexible and interdisciplinary program to explore the creative works of human beings—literary, musical, philosophical, religious, theatrical, and artistic. The minor encourages a broad-based and overarching approach to the investigation of human accomplishment that expresses visions of life and values for living which offer both delight and wisdom.

For students majoring in the sciences or professions, the interdisciplinary humanities minor offers an enriching educational experience. For students already majoring in a single discipline among the humanities, this minor provides a broader awareness of the background of ideas and arts that shape our world. The introductory humanities courses also fulfill core curriculum requirements or provide elective credit.

In the humanities 19-hour minor, the student takes two 3-hour foundation courses, HUM 2301 and HUM 2302. Under the director's guidance, the student chooses to focus on one of three concentrations: Ancient, Medieval/Renaissance, or Modern. The student then selects one course from each of three categories within each concentration (Art and Architecture, Language and Culture, and History and Philosophy) as well as an additional course from a category of the student's choice. The student's experience culminates with completion of a one-hour capstone course which requires an essay that summarizes the ways in which the courses within the selected concentration relate. The final course of study must be approved by the director.

Undergraduate Course Descriptions

Environment and the Humanities (EVHM)

- 1302—Introductory Fieldcraft: Nature as Text (3).** Development of field skills and interpretation of landscape. Weekly field trips and outside projects required. Special field trip fee.
- 2302—The Literature of Place (3).** An introduction to the literature of place through a series of writing and reading workshops. Fulfills core Language, Philosophy, and Culture requirement.
- 3300—Research Methods: Writing the Natural World (3).** Writing for publication. A writing workshop in creative nonfiction focused on the relationship between people and nature. Field trips required.
- 3305—Ecology (3).** An introduction to the ecology of individuals, populations, and ecosystems. Special field trip fee.
- 3306—Course Readings in Natural History (3).** An exploration of contemporary writers whose focus is primarily the relationship of people with nature.
- 3350—Advanced Fieldcraft: Nature as Text (3).** An advanced exploration of location. Research of literature, culture, and ecology of a region in preparation for immersion in a field experience. Field trip required.
- 4300—EVHM Senior Portfolio (3).** Prerequisite: Proposal Approval. Individual project work under the guidance of a faculty member.
- 4302—EVHM Summit Experience (3).** Field experience in Green River, UT. Students will develop leadership skills as they explore canyons. Fee required. Must be taken for Honors Summit credit.

Honors Studies (HONS)

- 1101—FYE Learning Community Group (1).** Required learning community group provides orientation to Honors College and university for students in Honors College First Year Experience classes.
- 1301—Honors First-Year Seminar in Humanities (3).** Prerequisite: Enrollment in the Honors College or approval of the Honors Dean. An introductory course for first-year Honors students emphasizing the development of critical thinking and oral and written communications

skills through the framework of a humanities discipline. Topics vary. Fulfills core Language, Philosophy, and Culture requirement.

- 1302—Honors First-Year Seminar in Sciences (3).** Prerequisite: Enrollment in the Honors College or approval of the Honors Dean. An introductory course for first-year Honors students emphasizing the development of critical thinking and oral and written communications skills through the framework of a technology and applied science discipline. Topics vary.
- 1303—Honors First-Year Seminar in Social Sciences (3).** Prerequisite: Enrollment in the Honors College or approval of the Honors Dean. An introductory course for first-year Honors students emphasizing the development of critical thinking and oral and written communications skills through the framework of a social and behavioral science discipline. Topics vary. Fulfills core Social and Behavioral Sciences requirement.
- 1304—Honors First-Year Seminar in Fine Arts (3).** Prerequisite: Enrollment in the Honors College or approval of the Honors Dean. An introductory course for first-year Honors students emphasizing the development of critical thinking and oral and written communications skills through the framework of a visual and performing arts discipline. Topics vary. Fulfills core Creative Arts requirement.
- 2101—Inquiry and Investigation (1).** Prerequisite: Instructor consent. An introductory and integrated exposure to inquiry and investigation in different disciplines.
- 2301—Honors Experience in Fine Arts I (3).** Prerequisite: Enrollment in the Honors College or approval of the Honors Dean. Course surveys highlights of human experience in the arts from the ancient world to the Middle Ages. Sculpture, architecture, music, painting, music theatre and dance emphasized through hands-on participation experiences. No previous experience required, but an enthusiastic openness for new experiences is essential. May be repeated as the topic varies with permission of the Honors Dean.
- 2311—Seminar in International Affairs (3).** Humanistic approach to study of international concerns such as migration, trade, environment, population change, economic development, religion, and diplomacy with special reference to cultural values. May be repeated as the topic varies with permission of the Honors Dean. Fulfills core Language, Philosophy, and Culture requirement.
- 2314—Honors Seminar in International Cinema (3).** Analysis of foreign and ethnic cinema as an expression of human values and creativity viewed through the lens of a distinctive culture or cultures. May be repeated as the topic varies with permission of the Honors Dean. Fulfills core Creative Arts requirement.
- 2405—Honors Integrated Science I (4).** Prerequisite: Enrollment in the Honors College or approval of the Honors Dean. An integrated science course introducing students, in an interdisciplinary way, to physics and chemistry. Part of a two-semester integrated presentation. Not open to science majors. Partially fulfills core Life and Physical Sciences requirement.
- 2406—Honors Integrated Science II (4).** An integrated science course introducing students in an interdisciplinary way to biology and geosciences. Part of a two-semester integrated presentation. Not open to science majors. Partially fulfills core Life and Physical Sciences requirement.
- 3300—Individual Honors Research (3).** Prerequisite: Enrollment in the Honors College and approval from the Honors Dean. Contents will vary to meet the needs of students. Independent work under the individual guidance of a faculty member, who must be either a member of the graduate faculty or approved by the Honors Dean. May be repeated once for credit. (CL)
- 3301—Honors Seminar in Humanities (3).** Prerequisite: Enrollment in the Honors College or approval from the Honors Dean. An in-depth study of major literary works emphasizing the interrelationships of literature and philosophy. May be repeated as the topic varies with permission of the Honors Dean.
- 3302—Honors Seminar in Sciences (3).** Considers the developments and applications of modern science as they affect life today, directed toward cultivating sound individual judgments in the contexts of a technological, scientific, or medical environments. May be repeated as topic varies with permission of the Honors Dean.
- 3303—Honors Seminar in Social Sciences (3).** Prerequisite: Enrollment in the Honors College or approval from the Honors Dean. Study of techniques, principles, and methodology of the social sciences as applied to a central topic to demonstrate the interrelationships of the various disciplines. May be repeated as the topic varies with permission of the Honors Dean.
- 3304—Honors Seminar in Fine Arts (3).** Prerequisite: Enrollment in the Honors College or approval from the Honors Dean. Study of the history, development, and terminology of the fine arts, emphasizing functional relationships between disciplines in an effort to provide

bases for aesthetic evaluation of specific artistic entities. May be repeated as the topic varies with permission of the Honors Dean.

- 3305—European Fine Arts (3).** Hands-on survey of European fine arts, including visual arts, architecture, music, theatre, and dance. May be repeated as the topic varies with permission of the Honors Dean.
- 3322—Modern Middle East (3).** Prerequisite: Honors students only. Explores the modern Middle East from the fall of the Ottoman Empire in World War I to the American war in Afghanistan and Iraq as well as the revolutions that swept across the region in 2010 and 2012.
- 3324—Buddhist Life and Thought (3).** Prerequisite: Honors students only. Introduction to and survey of Buddhism from its inception in ancient India to its many varieties worldwide today.
- 3331—Epidemiology of Infectious Disease (3).** Prerequisite: Honors students only. Introduces basic principles and methods used in epidemiology and its application to public health issues and practices and will explore various methods that can be utilized to carry out epidemiological investigations, including surveillance and analytical studies.
- 3333—Medicine and Narrative Tradition (3).** Prerequisite: Honors students only. Examines the emergence of medicine from myth in classical antiquity and ancient China.
- 3334—Patents, Innovation, Science Policy (3).** Prerequisite: Honors students only. Topical course that covers scientific and engineering discoveries from research and development, intellectual property and patent application, and licensing to entrepreneurship and commercialization.
- 4000—Honors Independent Study (V1-4).** Independent study by a student with a designated instructor.
- 4001—Honors Internship Credit (V1-3).** Prerequisite: Honors students only. Permits Honors students to apply the concepts, principles, and techniques learned in the classroom. Up to 3 hours of internship can be applied toward Honors College requirements.
- 4100—Leadership and Ethics (1).** Provides an overview of leadership, leadership strategies and styles and leadership related principles in the context of ethics.
- 4300—Individual Honors Research (3).** Prerequisite: Enrollment in the Honors College and approval from the Honors Dean. Contents will vary to meet the needs of students. Independent work under the individual guidance of a faculty member, who must be either a member of the graduate faculty or approved by the Honors Dean. May be repeated once for credit. (CL)
- 4301—Honors Selected Topics in the Sciences (3).** Prerequisites: Senior standing. Honors students only. Special topics in the sciences taught by a faculty member in the TTUHSC. Content will vary depending on term and section. May be repeated for credit up to two times.
- 4302—Honors College Summit Experience Course (3).** Provides the opportunity for development and enhancement of skills that are essential to a well-rounded education as honors students from various disciplines meet to complement and augment each other. Taken in the senior year. (CL)
- 4311—Pop Culture: Mystery Science Theatre 3000 (3).** Prerequisite: Honors students only. Discusses the art of the movie-going experience, what makes something iconic, and what it means to be funny.
- 4312—Pop Culture: DC Universe (3).** Prerequisite: Honors students only. Examines the history of DC as well as key moments in the DC universe.
- 4313—Pop Culture: Marvel Universe (3).** Prerequisite: Honors students only. Studies the history of Marvel, key artists and writers, Marvel films and television (including Marvel Studios and the Cinematic Universe), and some of the key stories in the Marvel Universe.
- 4322—Jungle Book to Bollywood (3).** Prerequisite: Honors students only. Introduces students to the civilization of India and explores the religions, history, and politics of the subcontinent starting from the dawn of the Indus river valley civilization.
- 4323—Arab-Israeli Conflict (3).** Prerequisite: Honors students only. Seeks to chart the historical and political development of the Arab-Israeli conflict by analyzing key events and controversies that have shaped the struggle.
- 4324—Modern Middle East II (3).** Prerequisite: Honors students only. Explores a deeper review of the modern Middle East from the fall of the Ottoman Empire in World War I to the American war in Afghanistan and Iraq as well as the revolutions.
- 4325—World Religions and Modern Politics (3).** Prerequisite: Honors students only. Introduces students to some of the world's major religions. It will begin with the Abrahamic faiths, looking first at Judaism, then Christianity and Islam.
- 4327—Writing Your Life (3).** Prerequisite: Honors students only. Students will practice writing nonfiction about their lives.
- 4328—Word and Image Big Questions in Literature, Philosophy, Film (3).** Prerequisite: Honors students only. This interdisciplinary course seeks to address a number of major philosophical issues through a combination of film viewing and close readings of philosophical and literary texts.
- 4329—Try Again, Fail Again (3).** Prerequisite: Honors students only. In this interdisciplinary summit, we will address questions around failures, successes, and other similar areas, using a mix of philosophy, fiction and non-fiction prose, plays, and art house cinema.
- 4331—Epidemiology of Infectious Disease II (3).** Prerequisite: Honors students only. Introduces advanced principles and methods used in epidemiology and its application to public health issues and practices.
- 4332—Principles of Public Health (3).** Prerequisite: Honors students only. Covers principles of evidence-based public health and tools for implementation, including health communication and informatics; applications of social and behavioral sciences; and health policy, law, and ethics.
- 4361—Science Fiction and Science (3).** Prerequisite: Honors students only. Examines the scientific basis in various aspects of popular culture.
- 4362—Sustainable Futures (3).** Prerequisite: Honors students only. Students will learn about the complexity of sustainability as it relates to the environment, economy, and society.
- 4401—Selected Topics in Honors (4).** Special areas of interest not commonly included in other courses. Content normally different each time offered. May be repeated for credit up to two times.

Humanities (HUM)

- 1300—Humanities in the 21st Century (3).** Integrates material from many areas of the humanities. Intended to orient beginning students to humanities content, theories, and approaches. Fulfills core Language, Philosophy, and Culture requirement.
- 2301—Introduction to Global Humanities I (3).** [HUMA1301] Examines the development of global civilization from the dawn of humankind to the present and explores the great challenges humanity has faced. Fulfills core Language, Philosophy, and Culture requirement.
- 2302—Introduction to Global Humanities II (3).** [HUMA1302] Charts the development of humankind from the age of enlightenment to the present. It is the second part of HUM 2301 part 1. Fulfills core Language, Philosophy, and Culture requirement.
- 4100—Humanities Capstone (1).** Under the guidance of the Humanities Director, independent work by the student to summarize the relationships between the courses in the student's selected Humanities Minor track (Ancient, Medieval/Renaissance, or Modern)

Graduate Course Descriptions

Honors Studies (HONS)

- 5300—Honors Selected Topics in Law (3).** Prerequisite: Must have successfully completed 90 undergraduate hours. Must apply through Honors for approval. Special topics in law taught by a faculty member in the TTU School of Law. Content will vary depending on term and section. May be repeated for credit up to two times.
- 5400—Honors Selected Topics in Law (4).** Prerequisites: Must have successfully completed 90 undergraduate hours. Must apply through Honors for approval. Special topics in law taught by a faculty member in the TTU School of Law. Content will vary depending on term and section. May be repeated for credit up to two times.

College of Health and Human Sciences

“Improving and enhancing the human condition”

Tim Dodd, Ph.D., Dean

142 Human Sciences | 1301 Akron Ave. | Box 41162
Lubbock, TX 79409-1162

hs.advising@ttu.edu | www.hs.ttu.edu

About the College

Mission Statement. The College of Health and Human Sciences provides multidisciplinary education, research, and service focused on individuals, families, and their environments for the purpose of improving and enhancing the human condition.

Overview. Texas Tech University human sciences programs at the baccalaureate, master's, and doctoral levels are innovative in focus, relevant to the needs of a rapidly changing society, and designed to prepare professionals for employment in broad career options.

The College of Health and Human Sciences is a professional college, requiring the highest expectations for its graduates. Though a D is considered a passing grade, most programs require a C or better in major and support courses. See individual program sections for details. College programs are accredited by nine national accrediting agencies. Additionally, the college offers courses of significance to the general and professional education of students majoring in other colleges and provides continuing education for professionals in fields related to health and human sciences.

Degree Programs. Undergraduate degree programs lead to the Bachelor of Science degree unless otherwise noted. Majors offered for all programs within the college include the following:

- Apparel Design and Manufacturing
- Applied Personal Finance
- Counseling and Addiction Recovery Sciences
- Early Childhood Education (teacher certification, EC-3 and EC-6)
- Early Childhood Education (non-teacher certification, Bachelor of Applied Arts and Sciences)
- Event Management (Bachelor of Science or Bachelor of Applied Arts and Sciences)
- Family and Consumer Sciences Education (teacher certification, 6-12)
- Fashion Merchandising (Bachelor of Science or Bachelor of Applied Arts and Sciences)
- Human Development and Family Sciences
- Human Sciences (Bachelor of Science or Bachelor of Applied Arts and Sciences)
- Interior Design (Bachelor of Interior Design)
- Nutrition
- Nutritional Sciences and Dietetics
- Personal Financial Planning
- Restaurant, Hotel, and Institutional Management (Bachelor of Science or Bachelor of Applied Arts and Sciences)
- Retail Management

For additional information about undergraduate degree programs in the various departments, contact the office of Advising and Retention, 159 Human Sciences, 806.742.1180.

The college offers a dynamic curriculum, a well-qualified faculty, outstanding facilities, and a commitment to excellence. All degree programs offer applied and experiential learning opportunities to prepare graduates to contribute in their professional and broader communities. In addition to undergraduate majors, the college offers Master of Science and Doctor of Philosophy degrees with majors in all departments. Specific information regarding graduate degrees may be found in the Graduate Program sections.

Graduate Programs

For information on graduate programs offered by the College of Human Sciences, visit the College of Human Sciences Graduate Programs section of the catalog on page 389.

Undergraduate Programs

General Standards and Requirements

Students are expected to assume responsibility for knowing the rules, regulations, and policies of the college and university; to learn the requirements pertaining to their degree program; and to consult the catalog, registration guidelines, and degree plans for their major.

Financial Aid to Students. Numerous scholarships and assistantships are available to provide financial assistance and valuable experience to capable students. Write to the scholarship coordinator of the College of Health and Human Sciences, Box 41162, Texas Tech University, Lubbock, Texas 79409-1162. The college scholarship application deadline is December 1. Emphasis will be on leadership, service, high school and transfer grade point averages, test scores, and need. Multi-year merit scholarships are available to high-achieving incoming freshmen and transfer students. Please contact hs.studentservices@ttu.edu or visit the Health and Human Sciences website for details. To receive full-time financial aid, students must be enrolled for a minimum of 12 hours. Some programs allow enrollment in less than full-time hours, but students must check with the Financial Aid Office concerning eligibility for these programs.

Catalog Selection. Students must use the catalog issued for the year in which they were first officially admitted to the college or a more recent catalog if approved. However, if they are not enrolled at Texas Tech for one academic year or have transferred to another college at Texas Tech or another institution, they must be readmitted to the College of Health and Human Sciences and use the catalog in effect at the time of readmission. For graduation purposes, a catalog expires after seven years.

Academic Advising and Retention. The purpose of Academic Advising and Retention is to provide quality service to the faculty and students in the college. The advising staff is responsible for assisting students from orientation to graduation. Students should visit www.depts.ttu.edu/hs/current_students/advising.php to obtain information and updates prior to advance registration periods. Schedule of classes, registration, adding and dropping classes, payment of fees, and individual degree audits are available on Raiderlink.ttu.edu. Students needing additional assistance may visit with an advisor. To make an appointment, visit appointments.ttu.edu, call Advising and Retention at 806.742.1180, or visit the advising office in Human Sciences 159. Office hours are from 8 a.m. to 5 p.m., Monday through Friday.

Graduation. Graduation is attained by fulfilling the requirements for a bachelor's degree using an acceptable catalog edition. The student is responsible for fulfilling all catalog requirements. At least one year prior to the graduation semester, the student must confirm their graduation date in the student dashboard. After submission of the form, an official degree audit will be emailed to the student. Thereafter, students will follow the audited list of remaining courses. Substitutions and minor forms must be filed prior to or at the same time as the graduation confirmation. The degree audit will be reviewed prior to the last semester for any discrepancies that may prevent graduation. However, students are expected to regularly review their degree audit and be familiar with graduation requirements. Any change in graduation date must be communicated to the Advising and Retention office.

Last 30 Hours. The last 30 hours prior to graduation must be taken in residence at Texas Tech. "In residence" is defined as any course taught under a

Texas Tech number, including distance education courses and those taught at locations other than the Lubbock campus.

Credit by Examination. A matriculated student may attempt credit by examination (see Undergraduate Admissions catalog section).

Course Load. The normal course load for a semester is 15 hours or above. The maximum load for a semester is 19 hours (8 hours for a summer term). Minimum full-time status is 12 hours.

Ineligible Registration. The College of Health and Human Sciences reserves the right to drop any ineligibly registered student from a course for reasons such as lower- or upper-division rule infractions, lack of prerequisites, and GPA requirements. Courses taken ineligibly are not applied to the degree program.

Minor. The student should consult with the academic advising office of the department of the intended minor and have a Minor Approval form signed. Declared minors can be filed either before or at the same time as the Intention to Graduate form. Grades of C or better are required in each course. Specific minors are listed in the departmental areas.

Pass/Fail. A maximum of 13 hours may be taken pass/fail. The pass/fail option may be used for free elective courses. If an ineligible course is taken pass/fail, it must be replaced by the next higher course. Pass/fail hours are excluded in determining eligibility for the Dean's Honor or President's List. No student on probation is allowed the pass/fail option.

Selection of a Major. Introductory level human sciences courses will be helpful in clarifying career goals. See an academic advisor for additional information.

Department of Interdisciplinary Human Sciences

Nichole Morelock, Ph.D., LMFT, Interim Chairperson

Professor: Alexander

Associate Professor: Dodd

Assistant Professors: Miller, Rioux, Roberson, Velez-Gomez

Assistant Professors of Practice: Brown, Holland, Houy, Schmitt

Research Assistant Professor: Park

Lecturer: Tuliao

About the Department

The mission of the Department of Interdisciplinary Human Sciences is to unify health and human sciences through education and practice, and to equip students with knowledge, skills, and abilities to foster healthy human connections.

This department supervises the following degree programs:

- Bachelor of Science in Family and Consumer Sciences Education
- Bachelor of Applied Arts and Sciences in Human Sciences
- Bachelor of Science in Human Sciences
- Master of Science in Family and Consumer Sciences Education
- Master of Science in Human Sciences
- Doctor of Philosophy in Family and Consumer Sciences Education

Graduate Programs

For information on graduate programs offered by the College of Human Sciences, visit the College of Human Sciences Graduate Programs section of the catalog on page 387.

Undergraduate Programs

Family and Consumer Sciences Education, B.S.

The family and consumer sciences education program is designed to prepare students for teaching careers in middle and high school family and consumer sciences; adult- and community-based education; Extension Service; educational support services such as curriculum development and media, business, government, human services; and other fields. It includes coursework in all family and consumer sciences content areas and required professional education courses.

The program meets Texas standards for the Family and Consumer Sciences Composite Certificate that qualifies individuals to teach all family and consumer sciences courses offered in Texas secondary schools. Texas has a critical shortage of teachers, and the demand for family and consumer sciences teachers remains strong.

Students seeking teacher certification must meet all requirements outlined in the College of Education section of the catalog. Admission requirements for the Educator Preparation Program include completion of a minimum of 60 semester hours (including current enrollment) with a 2.75 or better overall GPA and college-level skills in reading, oral and written communication, critical thinking, and mathematics. To be recommended for certification, graduates must maintain a 2.75 or better overall GPA and also a 2.75 or better GPA in all professional education courses and in the teaching field. In addition, graduates must complete a fingerprint background check, complete 50 hours of field experience, complete clinical student teaching, and achieve a satisfactory level of performance on the appropriate TExES examinations prescribed by the State Board for Educator Certification.

Students also may earn the Family and Consumer Sciences Composite Certificate as part of a major in human development and family sciences. A Specialized Family and Consumer Sciences Certificate in Hospitality,

Nutrition, and Food Sciences is available as part of a major in nutrition or in restaurant, hotel, and institutional management. For more information, see the catalog sections for the Department of Human Development and Family Sciences, the Department of Hospitality and Retail Management, and the Department of Nutritional Sciences. A Specialized Family and Consumer Sciences Certificate in Hospitality, Nutrition, and Food Sciences (RHIM or Nutrition) or a Specialized Family and Consumer Sciences Certificate in Human Development and Family Sciences can be obtained through the Bachelor of Science in Human Sciences. While FCS teacher certification coursework can be completed through distance education, face-to-face components are required, including clinical field experiences and student teaching. Clinical student teaching must be completed in an accredited Texas school district with a licensed family and consumer sciences teacher who is approved by the FCSE Program for placement supervision.

Family and consumer sciences education students may take online courses through the Texas Family and Consumer Sciences Distance Education Alliance. For more information, see www.fcsalliance.org or contact an FCSE advisor. Permission is required to enroll in these courses.

All teacher certification programs at Texas Tech University are accredited by the Texas Education Agency.

Communication Literacy Requirement. Communication literacy in the Bachelor of Science in Family and Consumer Sciences Education degree is evidenced by competence in analytical, aural, interpersonal, oral, written, and visual communication. The B.S. degree will use a sequence of four courses to help students achieve expected communication literacy in this program. The courses should be taken in the sequence indicated to build upon the skills and knowledge acquired in the previous courses. The required communication courses in this degree are FCSE 3301, FCSE 4325, FCSE 4302, FCSE 4012.

Human Sciences, B.A.A.S.

The Bachelor of Applied Sciences in Human Sciences is offered face-to-face and online. The degree serves individuals who complete an Applied Arts and Sciences (A.A.S.) degree in Human Sciences-related academic areas from an accredited community college. The program is an interdisciplinary human sciences degree for those who prefer flexibility in their degree plan. In addition to general education and other requirements, students complete 54 hours in three interrelated areas (18 hours each). One area is the transferred academic focus in the A.A.S. degree, one is Human Sciences, and one is selected from other minors offered by the College of Health and Human Sciences. The degree plan will be the same for on-campus students and online students, except the selection of the third area for online students will be limited to those offered online. The three areas of study must form a coherent degree program that is not available elsewhere in the university as an organized plan of study. This degree is available only to students who have completed the A.A.S. degree and are not enrolled in a B.A. or B.S. degree program at Texas Tech.

The program is administered by the College of Health and Human Sciences Department of Interdisciplinary Human Sciences and interested students should contact the Health and Human Sciences Academic Advising and Retention Office at 806.742.1941.

Upon completion of the B.A.A.S. in Human Sciences degree, students should be able to integrate material from three related academic disciplines into a cohesive and meaningful plan of study and use that study to analyze the human condition, address issues regarding human life and activities, and design changes that improve and enhance the human condition.

Communication Literacy Requirement. Students entering the Human Sciences B.A.A.S. degree will have completed foundational courses from their A.A.S. degree that helped develop communication skills. The College continues to develop those skills, so that graduates are able to communicate to a vast array of stakeholders in various methods. Communication literacy in the B.A.A.S. degree is evidenced by competence in speaking, reading, writing, and engaging in interdisciplinary and integrative studies. This degree uses a sequence of three courses to help students achieve expected communication literacy in this program. The courses should be taken in sequence to build upon the skills and knowledge acquired in the previous courses. In addition to communication literacy designated courses that may be in program areas, the required communication courses in this degree are HUSC 1100, HUSC 2310, and HUSC 4350.

Human Sciences, B.S.

The Bachelor of Science in Human Sciences is designed for students who wish to pursue multiple fields of study within the College of Health and Human Sciences. It provides flexibility for students to explore specific areas of interest, work toward career goals, or prepare for graduate or professional study.

Students are required to select three areas of study (minors). Each minor consists of a minimum of 18 semester hours for a total of 54 minimum hours. Two minors must be in the College of Health and Human Sciences. Students are also required to complete the core curriculum required by the university for a total of 120 semester hours.

Communication Literacy Requirement. Communication literacy in the Bachelor of Science in Human Sciences degree is evidenced by competence in speaking, reading, writing, and engaging in interdisciplinary and integrative studies. The B.S. degree will use a sequence of three courses to

help students achieve expected communication literacy in this program. The courses should be taken in sequence to build upon the skills and knowledge acquired in the previous courses. In addition to communication literacy designated courses that may be in program areas, the required communication courses in this degree are HUSC 1100 (face-to-face and online), HUSC 2310 (face-to-face and online), and HUSC 4350 (face-to-face and online).

For additional information about the requirements and course offerings, see an academic advisor in the College of Health and Human Sciences.

Minors in the College of Human Sciences may be selected from the following:

- Addictive disorders and recovery studies
- Apparel design and manufacturing
- Biobehavioral health and wellness
- Community, family, and addiction sciences
- Family and consumer sciences extension education
- Human development and family sciences
- Human sciences
- Interior design
- Nutritional sciences
- Personal financial planning
- Restaurant, hotel, and institutional management
- Retail management
- Studies in personal finance
- Youth development

For information on other minor areas, see individual program sections of the catalog.

A Specialized Family and Consumer Sciences Certificate in Hospitality, Nutrition, and Food Sciences (RHIM or Nutrition) or a Specialized Family and Consumer Sciences Certificate in Human Development and Family Sciences can be obtained through the Bachelor of Science in Human Sciences. While FCS teacher certification coursework can be completed through distance education, face-to-face components are required, including 50 hours of clinical field experience and student teaching. Clinical student teaching must be completed in an accredited Texas school district with a licensed family and consumer sciences teacher who is approved by the FCSE Program for placement supervision. Students seeking teacher certification must meet all requirements outlined in the College of Education section of the catalog. Admission requirements include completion of a minimum of 60 semester hours (including current enrollment) with a 2.75 or better overall GPA and college-level skills in reading, oral and written communication, critical thinking, and mathematics. To be recommended for certification, graduates must maintain a 2.75 or better overall GPA and also a 2.75 or better GPA in all professional education courses and in the teaching field. In addition, graduates must complete a fingerprint background check, complete 50 hours of field experience, complete clinical student teaching, and achieve a satisfactory level of performance on the appropriate TExES examinations prescribed by the State Board for Educator Certification. Please follow the appropriate BSHS degree plan detailing the requirements for the specialized FCS teacher certifications.

Human Sciences with FCSE Specialized Teacher Certification in HDFS, Grades 8-12, B.S.

This concentration offers a career path for Human Sciences majors interested in teaching family and consumer sciences courses at the eighth grade and high school levels. Students complete three prescribed areas of study along with 50 hours of field experience and clinical student teaching that lead to teacher certification. Graduates will be eligible to teach in Texas public schools (Grades 8-12). Students seeking certification must meet all requirements outlined in the College of Education section of this catalog. Admission requirements for the teaching program include the completion of approximately 60 hours with an overall 2.75 GPA or better and a satisfactory level of performance on an approved basic skills assessment. Other requirements include a 2.75 GPA or better in professional education courses in the teaching field and a grade of C or better in all required concentration and support courses. To be recommended for certification, graduates must complete a fingerprint background check, 50 hours of field experience, and clinical student teaching in an accredited Texas school

district with a licensed FCS educator and achieve a satisfactory level of performance on the TExES examinations prescribed by the State Board of Education.

Human Sciences with FCSE Specialized Teacher Certification in HNFS (Nutrition), Grades 8-12, B.S.

This concentration offers a career path for Human Sciences majors interested in teaching nutrition at the eighth grade and high school levels. Students complete three prescribed areas of study along with 50 hours of field experience and clinical student teaching that lead to teacher certification. Graduates will be eligible for a Specialized Certificate in Hospitality, Nutrition, and Food Science (Grades 8-12). Students seeking certification must meet all requirements outlined in the College of Education section of this catalog. Admission requirements for the teaching program include the completion of approximately 60 hours with an overall 2.75 GPA or better and a satisfactory level of performance on an approved basic skills assessment. Other requirements include a 2.75 GPA or better in professional education courses in the teaching field and a grade of C or better in all required concentration and support courses. To be recommended for certification, graduates must complete a fingerprint background check, 50 hours of field experience, and clinical student teaching in an accredited Texas school district with a licensed FCS educator and achieve a satisfactory level of performance on the TExES examinations prescribed by the State Board of Education.

Human Sciences with FCSE Specialized Teacher Certification in HNFS (RHIM), Grades 8-12, B.S.

This concentration offers a career path for Human Sciences majors interested in teaching hospitality at the eighth grade and high school levels. Students complete three prescribed areas of study along with 50 hours of field experience and clinical student teaching that lead to teacher certification. Graduates will be eligible for a Specialized Certificate in Hospitality, Nutrition, and Food Science (Grades 8-12). Students seeking certification must meet all requirements outlined in the College of Education section of this catalog. Admission requirements for the teaching program include the completion of approximately 60 hours with an overall 2.75 GPA or better and a satisfactory level of performance on an approved basic skills assessment. Other requirements include a 2.75 GPA or better in professional education courses in the teaching field and a grade of C or better in all required concentration and support courses. To be recommended for certification, graduates must complete a fingerprint background check, 50 hours of field experience, and clinical student teaching in an accredited Texas school district with a licensed FCS educator and achieve a satisfactory level of performance on the TExES examinations prescribed by the State Board of Education.

Undergraduate Minors

Biobehavioral Health and Wellness

The Biobehavioral Health and Wellness minor offers interdisciplinary preparation designed to integrate biological, behavioral, and social science approaches to the study of human health and illness. The minor provides students with the opportunity to study how biological, psychosocial, nutritional, and environmental factors affect health and disease. Students will choose courses from disciplines in the College of Health and Human Sciences and related fields to create a holistic basis for understanding human health and wellness.

The 18-hour curriculum integrates courses based on the following learning outcomes: behavioral change theories; diseases; mental, relational, and emotional health; health and wellness across the lifespan; and research. A 2.0 minimum GPA is required, but students must also satisfy the GPA requirements for specific courses. Minor can be completed online. Prerequisites may apply.

- Required courses (6 hours): NS 3332, 4301
- Guided electives

- Mental, Relational, and Emotional Health (3 hours): ADRS 3327, 4329; CARS 4331; PSY 4305
- Health and Wellness Across the Lifespan (6 hours): FCSE 3303, 4325; HDFS 3321, 3326, 4343; HUSC 3325; ID 2383; NS 3340; PFI 1305
- Research (3 hours): HDFS 3390; NS 4360; ID 4381; or a student-initiated undergraduate research experience in health-related topic in HUSC 4000, ADRS 4000, CFAS 4000, HDFS 4320, ID 4000, NS 4000, or PFP 4000.

Family and Consumer Sciences Extension Education

The 18-hour family and consumer sciences extension education minor consists of extension-based program development and evaluation, including an internship. A 2.0 GPA minimum is required, but students must also satisfy the GPA requirements for specific courses. Required courses are FCSE 3301, 3303 or 4302, 3350, 4307, 4308, 4325.

Human Sciences

The 18-hour interdisciplinary minor in human sciences guides and encourages students to understand the foundation of enhancing and improving the human condition. The curriculum integrates courses based on three specific learning outcomes: Human Condition, Communicate Life, and Create Change. A 2.0 GPA minimum is required, but students must also satisfy the GPA requirements for specific courses.

- Required courses (12 hours): ADRS 2310; HDFS 3324; PFI 2301; NS 1325.
- Elective options (6 hours): Any 6 hours of upper-level coursework offered in the College of Human Sciences. No more than 3 hours from one major may apply.

Nursing

The 19-hour minor consists of human sciences and nursing courses to satisfy the dual degree requirements for the dual B.S. in Human Sciences and B.S. in Nursing. This minor is only available to dual degree students. Required courses are HDFS 2303; HUSC 3221; NURS 3322, 3502, 4103, 4105, 4407.

Accelerated Bachelor's to Master's Degree

Family and Consumer Sciences Education, B.S. / M.S.

This program is designed for students completing the Bachelor of Science in Family and Consumer Sciences Education (FCSE) and intending on pursuing a Master of Science degree in Family and Consumer Sciences Education. Undergraduate students will submit an application for graduate school enrollment. If approved for admission, students will take 9 credit hours of graduate-level FCSE coursework in the final year of their undergraduate degree and prior to their clinical student teaching—FCSE 5303, FCSE 5309, FCSE 5311. The 9 hours will fulfill graduation requirements at the undergraduate level as well as apply to the 36 hours of credits required for the M.S. in Family and Consumer Sciences Education.

Students interested in this program should contact the College of Health and Human Sciences Advising & Retention office or Family and Consumer Sciences Education for additional information regarding eligibility and graduation planning.

Family and Consumer Sciences Education, B.S: FCSE Composite Teaching Certification / Family and Consumer Sciences Education, M.S.

This program is designed for students completing the Bachelor of Science in Family and Consumer Sciences Education and intending on pursuing a Master of Science degree in Family and Consumer Sciences Education as well as the FCSE Composite Teaching Certification (grades 8-12). Undergraduate students will submit an application for graduate school

Human Sciences, B.S. / Nutritional Sciences, M.S. Recommended Curriculum

FIRST YEAR

Fall

- ☐ HUSC 1100 - Introduction to Human Sciences (1 SCH)
- ☐ ENGL 1301 - Essentials of College Rhetoric (3 SCH)
- ☐ POLS 1301 - American Government (3 SCH)
- ☐ Creative Arts (3 SCH)*
- ☐ Mathematics (3 SCH)*
- ☐ NS 1410 - Science of Nutrition (4 SCH)

TOTAL: 17

Spring

- ☐ ENGL 1302 - Advanced College Rhetoric (3 SCH)
- ☐ POLS 2306 - Texas Politics and Topics (3 SCH)
- ☐ MATH 2300 - Statistical Methods (3 SCH)
- ☐ Social & Behavioral Sciences (3 SCH)*
- ☐ HUSC 2310 - Foundations of Human Sciences (3 SCH)

TOTAL: 15

SECOND YEAR

Fall

- ☐ HIST 2300 - History of the United States to 1877 (3 SCH)
- ☐ Language, Philosophy, & Culture (3 SCH)*
- ☐ CHEM 1307 - Principles of Chemistry I (3 SCH) **AND**
 - ☐ CHEM 1107 - Experimental Principles of Chemistry I (1 SCH)
- ☐ NS 3340 - Nutrition in the Lifecycle (3 SCH)
- ☐ Secondary Concentration (3 SCH)

TOTAL: 16

Spring

- ☐ HIST 2301 - History of the United States since 1877 (3 SCH)
- ☐ CARS 2300 - Communication, Civility, and Ethics (3 SCH)

- ☐ NS Elective (3 SCH) (GR)

TOTAL: 13

FIFTH YEAR

Remaining graduate courses for the M.S. in Nutritional Sciences will be chosen in consultation with the Nutritional Sciences graduate advisor.

TOTAL HOURS: 153-156

* Choose from core curriculum requirements.

enrollment. If approved for admission, students will take 9 credit hours of graduate-level Family and Consumer Sciences Education coursework in their final year of their undergraduate degree—FCSE 5303, FCSE 5309, FCSE 5311. The 9 hours will fulfill graduation requirements at the undergraduate level as well as apply to the 36 hours of credits required for the M.S. in Family and Consumer Sciences Education.

Graduates will also be eligible for the FCSE Composite Teaching Certification (Grades 8-12). Students seeking certification must meet all requirements outlined in the College of Education section of this catalog. Admission requirements for the teaching program include the completion of approximately 60 hours with an overall 2.75 GPA or better and a satisfactory level of performance on an approved basic skills assessment. Other requirements include a 2.75 GPA or better in professional education courses in the teaching field and a grade of C or better in all required concentration and support courses. The 2.75 GPA requirement is aligned with the minimum requirements from TEA for certification. **As a reminder, all graduate courses (and final graduation with the degree) require a minimum of a 3.0 GPA as specified in TTU Graduate School policies.** To be recommended for certification, graduates must complete a fingerprint background check, 50 hours of field experience, and clinical student teaching in an accredited Texas school district with a licensed FCS educator and achieve a satisfactory level of performance on the TExES examinations prescribed by the State Board of Education.

Human Sciences, B.S. / Human Sciences, M.S.

This program is designed for students completing the Bachelor of Science in Human Sciences intending on pursuing a Master of Science degree in Human Sciences. Undergraduate students will submit an application for graduate school enrollment. If approved for admission, students will take 9 credit hours of graduate level Human Sciences coursework in their final semester of their undergraduate degree. The 9 hours will fulfill graduation requirements at the undergraduate level as well as apply to the 30 hours of credits required for the MS in Human Sciences.

Students interested in this program should contact the College of Health and Human Sciences Advising & Retention office for additional information regarding eligibility and graduation planning.

Human Sciences, B.S. / Nutritional Sciences, M.S.

This program is designed for students completing the Bachelor of Science in Human Sciences, with minors in Nutrition and Chemistry, intending on pursuing a graduate degree in Nutritional Sciences. Students are required to complete certain leveling courses at the undergraduate level, have a minimum 3.0 GPA, and submit a formal application to the Nutritional Sciences department for admission. The Nutrition minor requires a minimum of 9 hours of upper-level NS courses and a total of 18 hours of undergraduate courses. If approved for admission, students will take 9 credit hours of graduate level Nutritional Sciences coursework in their final semester of their undergraduate degree. The 9 hours will fulfill graduation requirements at the undergraduate level as well as apply to the 31 hours of credits required for the M.S. in Nutritional Sciences.

Students interested in this program should contact the College of Health and Human Sciences Advising & Retention office for additional information regarding eligibility and graduation planning.

Human Sciences, B.S. / Family and Consumer Sciences Education, M.S. with : FCSE Specialized Teaching Certification in HDFS or HNFS (Hospitality or Nutrition), Grades 8-12

This program is designed for students completing the Bachelor of Science in Human Sciences and intending on pursuing a Master of Science degree in Family and Consumer Sciences Education as well as one of the following teaching certifications: (1) human development and family sciences, (2) hospitality, or (3) nutrition. Undergraduate students will submit an application for graduate school enrollment. If approved for admission, students will take 9 credit hours of graduate-level Family and Consumer Sciences Education coursework in their final year of their undergraduate degree—

FCSE 5303, FCSE 5309, FCSE 5311. The 9 hours will fulfill graduation requirements at the undergraduate level as well as apply to the 36 hours of credits required for the M.S. in Family and Consumer Sciences Education.

Graduates will also be eligible for the Family and Consumer Sciences teaching certification (Grades 8-12). Students seeking certification must meet all requirements outlined in the College of Education section of this catalog. Admission requirements for the teaching program include the completion of approximately 60 hours with an overall 2.75 GPA or better and a satisfactory level of performance on an approved basic skills assessment. Other requirements include a 2.75 GPA or better in professional education courses in the teaching field and a grade of C or better in all required concentration and support courses. The 2.75 GPA requirement is aligned with the minimum requirements from TEA for certification. **As a reminder, all graduate courses (and final graduation with the degree) require a minimum of a 3.0 GPA as specified in TTU Graduate School policies.** To be recommended for certification, graduates must complete a fingerprint background check and achieve a satisfactory level of performance on the TExES examination prescribed by the State Board of Education.

Students interested in this program should contact the College of Human Sciences Advising & Retention office for additional information regarding eligibility and graduation planning.

Undergraduate Course Descriptions

Family and Consumer Sciences Education (FCSE)

- 1302—Introduction to Apparel Construction in Family and Consumer Sciences (3).** Application of basic apparel construction knowledge and skills. Emphasis on resources and strategies for teaching clothing construction in the fashion design career pathway addressed through family and consumer sciences education.
- 2102—Introduction to Family and Consumer Sciences (1).** For human sciences students only. Exploration of family and consumer sciences programs in traditional and nontraditional settings, including family and consumer sciences extension, adult education, business and community agencies, and public schools. Includes field experience.
- 2300—Adulting 101: Real Skills for Real Life (3).** Covers key topics necessary for successful adulthood including responsible choices, job readiness, healthy food choices, budgeting, coping with stress, wellness, problem-solving, and other applicable skills.
- 3301—Foundations of Family and Consumer Sciences Education (3).** Prerequisites: 2.5 TTU GPA; C or better in FCSE 2102 (concurrent enrollment allowed), and application and/or admission to the Teacher Education Program. Introduction to programs in secondary schools and other settings. (CL)
- 3303—Educational Processes for Community Engagement (3).** Designed for nonmajors. Focus on the teaching-learning process in professional settings outside the traditional classroom.
- 3315—Practical Reasoning and Ethical Decision-Making in Human-Centered AI (3).** Examine ethical decision-making in artificial intelligence (AI) through the application of practical reasoning to human well-being and intersections of technology with social and cultural values.
- 3350—Special Topics in Family and Consumer Sciences (3).** Study of a specific topic pertinent to the family and consumer sciences profession. May be repeated (different topics) for a maximum of 12 credit hours.
- 4000—Individual Study (VI-6).** Prerequisite: Instructor consent. May be repeated for credit.
- 4012—Clinical Student Teaching in Family and Consumer Sciences (VI-12).** Prerequisites: C or better in FCSE 4306 and FCSE 4308. Supervised clinical teaching in an approved secondary family and consumer sciences program. (CL)
- 4302—Methods of Teaching in Family and Consumer Sciences (3).** Prerequisite: C or better in FCSE 3301; 2.75 GPA; must be admitted to the educator preparation program. Methods of teaching family and consumer sciences content and skills in secondary classrooms. Includes roles and responsibilities of FCS teachers through field experience and observation in schools, participation in FCCLA and 4-H activities, and other professional development opportunities. (CL) [FCSE 5311]
- 4304—Instructional Management in Family and Consumer Sciences (3).** Prerequisite: C or higher in FCSE 4302; 2.75 GPA. Corequisites: FCSE 4306 and FCSE 4308. Principles and procedures for managing the family and consumer sciences classroom. Designed to support the student teaching experience.

- 4306—Career Preparation in Family and Consumer Sciences (3).** Prerequisite: C or better in FCSE 4302. Application of family and consumer sciences knowledge and skills in career preparation programs. Includes state and federal requirements regarding work-based learning and safety.
- 4307—Internship in Family and Consumer Sciences (3).** Prerequisites: 2.5 TTU GPA; C or better in FCSE 3303 or FCSE 4302 or FCSE 4325. Supervised experiences in family and consumer sciences positions in extension, business, or related areas. May be repeated once for credit.
- 4308—Research and Evaluation in Family and Consumer Sciences (3).** Prerequisite: C or better in FCSE 3303 or FCSE 4302. Introduction to methods of research and evaluation in family and consumer sciences. Includes practical applications.
- 4325—U.S. Family Issues and Social Advocacy (3).** Prerequisites: 2.5 TTU GPA; C or better in ENGL 1302; junior or senior standing. Designed to help students critically examine private and public family and related community issues and appropriate social advocacy in a democratic culture. (CL)

Human Sciences (HUSC)

- 1100—Introduction to Human Sciences (1).** Overview of the College of Human Sciences and instruction on how to study within the college can help prepare a student for academic and personal success. Topics include personal and family relationships, personal finance, nutrition, academic advising, etc. Required first semester. (CL)
- 2000—Special Studies (V1-6).** A course for lower-level human sciences majors for individual study or special problems.
- 2310—Foundations of Human Sciences (3).** Prerequisite: HUSC 1100. Introduces Bachelor of Science in Human Sciences majors to foundational skills, concepts, and theories relevant to academic and professional development in Human Sciences. (CL)
- 3221—Introduction to the Nursing Profession (2).** An introduction to the health care delivery system and the nursing profession.
- 3325—Comprehensive Wellness for Adolescents (3).** Prerequisite: Sophomore or higher standing. Focuses on physiological and psychosocial development during adolescence through a comprehensive wellness perspective. Examine existing theories and explores practical ways to integrate wellness concepts into promoting healthy behaviors characterized by self-leadership and self-care.
- 3350—Special Topics in Human Sciences (3).** Topics will rotate to meet needs of undergraduate students majoring in an interdisciplinary human sciences program. May be repeated for credit.
- 3353—AI Fundamentals in Health and Human Sciences Applications (3).** Reviews history of AI, how these tools are made, and how they work; investigates ethical considerations for their use and development; and exposes students to relevant use cases.
- 4000—Individual Study in Human Sciences (V1-6).** Prerequisite: Instructor consent. Topics will vary to meet curriculum needs of students in interdisciplinary/human science programs.
- 4308—Developing and Evaluating Health and Wellness Programs (3).** Expand knowledge and skills in developing and evaluating health and wellness programs in extracurricular learning contexts and/or community settings. Utilizes community-engaged teaching practices.
- 4320—Research in Interdisciplinary Human Sciences (3).** Prerequisite: HUSC 2310. Supervised faculty-initiated research experience in selected areas. May be repeated twice for credit.
- 4341—Leadership Skills for Human Sciences Professionals (3).** Prerequisite: Senior standing or consent of instructor. Principles, theories, and development of competencies essential to the exercise of effective leadership in the human sciences professions.
- 4350—Capstone in Human Sciences (3).** Prerequisite: Senior standing in B.S. in Human Sciences degree program. Students will integrate their diverse areas of studies, reflect on their connections, produce a professional portfolio, and develop professional career strategies. (CL)

Department of Community, Family, and Addiction Sciences

Douglas B. Smith, Ph.D., Chairperson

George C. Miller Family Regent's Professor: Kimball

Kitty S. Harris Professorship: Tuliao

Eating Disorders Professorship: Munn-Chernoff

Associate Professors: Brown, Cravens Pickens, Fife, Kimball, Mills, Munn-Chernoff, Smith, Soloski, Tuliao, Webb

Professors of Practice: Morelock, Piland

Associate Professor of Practice: Comiskey

Assistant Professor of Practice: Austin-Robillard

Lecturers: Eades, Jefferson

CONTACT INFORMATION: 271 Human Sciences Bldg. | 1301 Akron Ave.
Box 41250 | Lubbock, TX 79409-1250 | T 806.742.3060 | F 806.742.0053

About the Department

The department supervises the following degree programs:

- Bachelor of Science in Counseling and Addiction Recovery Sciences
- Master of Science in Couple, Marriage, and Family Therapy
- Doctor of Philosophy in Couple, Marriage, and Family Therapy
- Doctor of Philosophy in Addictive Disorders and Recovery Studies

Vision. The vision of the Department of Community, Family, and Addiction Sciences (CFAS) is to enrich the lives of individuals, families, and communities. To achieve this vision, the department offers programs of study in counseling sciences, addictive disorders and recovery sciences, and couple, marriage and family therapy.

Within the department, there are opportunities to collaborate with faculty members in research; to experience different aspects of programs through internships, classroom apprenticeships, independent studies, and study abroad; and to participate in student organizations and activities. The department is committed to being an active and contributing member of the college, university, and surrounding communities. As a result, faculty, staff, and students are engaged with many university groups, community groups, and agencies in an effort to enhance the student experience and improve the quality of life for others.

The Center for Family Systems Research and Intervention and the Center for Collegiate Recovery Communities are housed in the department.

Commitment to Clinical Training and Research. The Center for Family Systems Research and Intervention (CFSRI) at Texas Tech provides unique clinical training experiences and supports advanced clinical research. The CFSRI operates two community mental health clinics, the Family Therapy Clinic on the TTU campus and the Children's Behavioral Health Clinic located in the UMC hospital medical office plaza. Both clinics offer sliding fee scale therapy services to the greater West Texas community, support the clinical development of CMFT graduate students, and provide unique research laboratories for cutting edge clinical research.

Commitment to Addiction Recovery. Established in 1986, the Center for Collegiate Recovery Communities (CCRC) at Texas Tech assists individuals recovering from drug and alcohol addiction and eating disorders with their pursuit of a college education. The CCRC has created a community support and relapse prevention program, which provides an environment in which recovering students can focus on staying sober without delaying their educational goals. The CCRC was selected to receive support from the federal government to develop a model to replicate collegiate community support and relapse-prevention programs at other universities. In addition, the CCRC supports faculty and students in advanced research on addiction and recovery.

Counseling & Addiction Recovery Sciences, B.S.
Recommended Curriculum**FIRST YEAR****Fall**

- ☐ HUSC 1100 - Introduction to Human Sciences (1 SCH)
- ☐ ENGL 1301 - Essentials of College Rhetoric (3 SCH)
- ☐ Mathematics (3 SCH)*
- ☐ Language, Philosophy, and Culture (3 SCH)*
- ☐ POLS 1301 - American Government (3 SCH)
- ☐ CARS 2301 - Intro. to Counseling and Addiction Recovery Sciences (3 SCH)

TOTAL: 16

Spring

- ☐ ENGL 1302 - Advanced College Rhetoric (3 SCH) (*Prerequisites apply.*)
- ☐ PSY 1300 - General Psychology (3 SCH)
- ☐ Creative Arts (3 SCH)*
- ☐ ADRS 2310 - Understanding Alcohol, Drugs, and Addictive Behaviors (3 SCH)
- ☐ POLS 2306 - Texas Politics and Topics (3 SCH)

TOTAL: 15

SECOND YEAR**Fall**

- ☐ HIST 2300 - History of the United States to 1877 (3 SCH)
- ☐ Life & Physical Sciences (4 SCH)*
- ☐ CARS 2300 - Communication, Civility, and Ethics (3 SCH)
- ☐ CARS 2360 - Understanding Diversity (3 SCH)
- ☐ Mathematics (Choose from PSY 2400 or MATH 2300) (3 or 4 SCH)

TOTAL: 16

Spring

- ☐ HIST 2301 - History of the United States since 1877 (3 SCH)
- ☐ HDFS 2303 - Life Span Human Development (3 SCH)
- Life Skills Course: Choose from
 - ☐ PFI 2301 - Personal Financial Literacy (3 SCH) **OR**
 - ☐ FCSE 2300 - Adulting 101: Real Skills for Real Life (3 SCH)
- ☐ Life & Physical Sciences (4 SCH)*
- ☐ CARS 2390 - Understanding Research and Academic Writing (3 SCH)

TOTAL: 16

THIRD YEAR**Fall**

- ☐ CARS 3324 - Theories of Counseling and Recovery (3 SCH)
- ☐ HDFS 3326 - Families in Crisis (3 SCH)
- ☐ ADRS 3325 - Family Dynamics of Addiction and Recovery (3 SCH) (*Prerequisites apply.*)
- ☐ CARS 3320 - Ethics in Counseling and Addiction Recovery Sciences (3 SCH)
- ☐ Free Elective (3 SCH)

TOTAL: 15

Spring

- ☐ CARS 3325 - Interviewing and Relational Counseling Skills (3 SCH) (*Prerequisites apply.*)
- ☐ CARS 4330 - Professional Skills and Leadership (3 SCH) (*Prerequisites apply.*)

TOTAL: 3

FOURTH YEAR**Fall**

- ☐ Research Course: Choose one from HDFS 3390, PSY 3401, SOC 3392 (3 SCH) (*Prerequisites apply.*)
- ☐ CARS 4390 - Senior Capstone in CARS (3 SCH) (*Prerequisites apply.*)
- ☐ Guided Elective (3 SCH)†
- ☐ Guided Elective (3 SCH)†

TOTAL: 12

Spring

- ☐ Guided Elective (3 SCH)†
- ☐ Free Elective (3 SCH)
- ☐ Free Elective (3 SCH)
- ☐ Free Elective (3 SCH)

TOTAL: 12

TOTAL HOURS: 120

* Choose from core curriculum requirements.

† Choose from Guided Electives OR Concentration courses to equal 15 hours (to include at least 4 upper-level courses).

Guided Electives: Any ADRS, CARS, HDFS, PSY, FCSE, or SOC non-required course, SW 2301, SW 2311, OR other courses with departmental approval.**Applied Relational Counseling Concentration:** ADRS 3329, CARS 4331, one upper-level elective, then HDFS 2322 and HDFS 3324**Addictive Disorders and Recovery Studies Concentration:** ADRS 3327, 3329, 4324, 4325, 4329**Graduate Programs**

The CFAS department offers a Master's and Ph.D. in Couple, Marriage, and Family Therapy and a Ph.D. in Addictive Disorders and Recovery Studies. For information on graduate programs offered by the Department of Community, Family, and Addiction Sciences, visit the Graduate Programs section of the catalog on page 389 or visit www.cfass.ttu.edu.

Undergraduate Programs**Counseling and Addiction Recovery Sciences, B.S.**

The B.S. in Counseling and Addiction Recovery Sciences (CARS) prepares students for future careers in counseling, couple and family therapy, addiction counseling, or other human services fields. The CARS major also provides a strong foundation for students planning to pursue graduate-level education or health careers such as nursing, medicine, or physical therapy. Traditional face-to-face and online degree options are available. This plan of study places emphasis on professional readiness, development of basic clinical skills, and service delivery. All coursework is grounded in family systems theory and its applications in human services settings. An understanding of addiction in its various manifestations and the development of multicultural competence are also core elements of the curriculum.

CARS graduates develop a unique combination of skills in entry-level counseling, counseling theories, leadership, administration, professional ethics, and cultural competence. They are also trained to understand addiction, including prevention, assessment, treatment, and relationship dynamics.

Communication Literacy Requirement. In the CARS major, Communication Literacy is demonstrated by the use of verbal, aural, and written communication to create systemic change across a wide variety of contexts. For example, graduates will use focused oral and aural skills when working with clients, and professional writing skills to accomplish goals such as securing funding for an agency, developing new programs, or composing psychoeducational curriculum. The Communication Literacy courses are senior-level classes in which students synthesize knowledge and skills introduced throughout the curriculum to complete tasks that will be a part of their future career. In order to fulfill the CARS Communication Literacy requirement, majors must complete the following courses with a grade of C or higher. Courses in the Communication Literacy plan are CARS 3324, 3325, and 4390.

All upper-division CARS courses have a prerequisite of a 2.5 GPA. Students must earn a final letter grade of C or better in all CARS and ADRS courses, as well as any course accepted for CARS and ADRS courses that will be applied to graduation requirements. The program also requires a practicum in which students work with an existing human service organization during the summer between the junior and senior years.

Concentrations. The department offers two concentrations within the CARS major, (1) Applied Relational Counseling or (2) Addictive Disorders and Recovery Studies. All concentration courses must be completed with a grade of "C" or higher. Concentrations are only available to CARS majors.

Applied Relational Counseling. The Applied Relational Counseling Concentration provides a deeper exploration of relationship dynamics. This concentration is perfect for students who want to pursue a career in counseling, couple and family therapy, or other human services fields. Students may choose to complete a concentration in Applied Relational Counseling by completing ADRS 3329, CARS 4331, one upper-level elective, then HDFS 2322 and HDFS 3324 as guided electives.

Addictive Disorders and Recovery Studies. By completing this concentration, students interested in a career as a Chemical Dependency Counselor will gain a practical foundation for working with clients as they pursue recovery. The Addictive Disorders and Recovery Studies Concentration requires ADRS 3327, 3329, 4324, 4325, and 4329 as guided electives.

Undergraduate Minors

Addictive Disorders and Recovery Studies

The Department of Community, Family, and Addiction Sciences, the Addictive Disorders and Recovery Studies program, and the College of Arts & Sciences jointly offer an interdisciplinary minor in addictive disorders and recovery studies (ADRS). This minor is designed for students with professional, academic, or personal interest in addictive disorders. It will provide students with an understanding of the physiological, psychological, societal, and familial factors contributing to addiction and the recovery from addiction. The minor can also be utilized as a concentration for students completing the B.S. in Human Sciences. It is recommended that the 18 hours of coursework be taken in the order listed below:

1. First take ADRS 2310.
2. Then take ADRS 3325.
3. Choose at least one class from ADRS 3327, 3329; PSY 4325.
4. Choose one class from SOC 3383, CRIM 4325, SOC 4327, ADRS 4329, SOC 4381.
5. Take ADRS 4324.
6. Lastly, take ADRS 4325.

Community, Family, and Addiction Sciences

The CFAS department offers a minor in community, family, and addiction sciences (CFAS) that provides a basic understanding of family systems, addiction, recovery, and human services. It is designed for students who are interested in counseling, relationships, or human services. Courses for the minor are finalized and approved in conjunction with the student's major and minor advisors. All required and prerequisite courses must be completed with a grade of C or better. The minor requires 12 hours of foundational courses and 6 hours of prescribed electives. Electives are select upper-level courses that allow students to customize the minor based on their academic needs and career goals. The minor can also be utilized as a concentration for students completing the B.S. in Human Sciences and is available face-to-face or online. It is recommended that students complete the required coursework using the following guidelines:

1. First, take CARS 2301 and ADRS 2310.
2. Second, take ADRS 3325.
3. Third, choose two courses from ADRS 3329; CARS 3320, 3324, 3325, 4330.
4. Finally, take CARS 4331.

Undergraduate Course Descriptions

Addictive Disorders and Recovery Studies (ADRS)

- 2125—Collegiate Community Seminar (1).** Prerequisite: Consent of department. Philosophy and process of recovery from addiction. Intensive seminar and laboratory experience. May be repeated for credit.
- 2310—Understanding Alcohol, Drugs, and Addictive Behaviors (3).** Designed to provide students with an introduction to addiction, including the nature of addiction, its history, biology, inter/intra-personal, and social aspects. Fulfills core Social and Behavioral Sciences requirement.
- 3325—Family Dynamics of Addiction and Recovery (3).** Prerequisite or corequisite: C or better in ADRS 2310. An examination of the family system with specific reference to the causes and effects of chemical abuse, addiction, and the process of recovery.
- 3327—Substance Use Prevention (3).** Introduction to current research and methodologies addressing the risk and protective factors that lead to healthy or unhealthy lifestyles.
- 3328—Prevention Engaged (3).** Prerequisite: C or higher in ADRS 3327. Application of prevention practices. Partially meets the educational and practicum requirements for the Certified Prevention Specialist (CPS) certification as described by the Texas Certification Board.
- 3329—Addiction, Recovery, and Relationships (3).** Prerequisite or corequisite: C or better in ADRS 2310. Addicted persons may have difficulties with intimate relationships. Relationships can also be a specific addiction. Examines addiction, relationships, and addictive relationships.
- 4000—Individual Study (3).** Prerequisites: C or better in ADRS 2310 and written consent of supervising faculty member. Teaching assistantships, independent coursework, or student-initiated research experience. May be repeated once for credit.
- 4320—Research in Addictive Disorders (3).** Prerequisites: C or better in ADRS 2310 and written consent of supervising faculty member.

Supervised faculty-initiated research experience in selected areas. May be repeated twice for credit.

- 4324—Assessment and Testing in Addiction Recovery (3).** Prerequisite: ADRS 2310. Provides the basic knowledge and skills needed to perform a substance abuse evaluation, including relevant assessment tools and the basics of clinical interviewing.
- 4325—Treatment of Addictive Disorders (3).** Prerequisites: C or better in ADRS 2310 and ADRS 3325. Survey of the current treatment philosophies and programs designed to assist individuals and families affected by addictive disorders.
- 4329—Eating Disorders (3).** Prerequisite: C or better in ADRS 2310. Nature of eating disorders and approaches to prevention and intervention.

Community, Family, and Addiction Sciences (CFAS)

- 4300—Coaching Leaders (3).** Prerequisites: 2.5 GPA, junior or senior standing. Theories of leadership training and personal and professional development are presented with the goal of developing and cultivating effective leadership relationships within teams and other organizational groups.

Counseling and Addiction Recovery Sciences (CARS)

- 2300—Communication, Civility, and Ethics (3).** Provides students with a basic understanding of proper communication, civility, and ethics within professional and personal settings. Fulfills core Communication (Oral) requirement.
- 2301—Introduction to Counseling and Addiction Recovery Sciences (3).** Introduction to the field of counseling and addiction recovery, including an overview of family systems theory and its applications.
- 2360—Understanding Diversity (3).** Focuses on the interrelationships of race, class, and gender and their impact on community, family, and addiction services.
- 2390—Understanding Research and Academic Writing (3).** Prerequisites: C or higher in ENGL 1301 and ENGL 1302. Reviews APA academic writing style and basic research methods, including identifying credible sources, understanding research findings, and applying literature to a social sciences research question.
- 3320—Ethics in Counseling and Addiction Recovery Sciences (3).** Prerequisite: C or better in CARS 2301; sophomore standing. Explores ethical and legal issues within the field of human services and addiction recovery, with an emphasis on ethical standards and ethical decision-making.
- 3324—Theories of Counseling and Recovery (3).** Prerequisite: C or better in CARS 2301. Introduction to theories of counseling and addiction recovery, the process of creating change, personal development, effectiveness of therapy, and application of theories to diverse populations. (CL)
- 3325—Interviewing and Relational Counseling Skills (3).** Prerequisite: C or better in CARS 2301. Introduces fundamental communication skills necessary to develop therapeutic alliance including nonjudgmental listening, focusing and following, reflecting, assessment, goal setting, crisis management, basic interventions, and self-development. (CL)
- 4000—Individual Study (V1-6).** Prerequisites: GPA of 2.5, and written consent of supervising faculty member. Teaching assistantship, independent coursework, or student-initiated projects. May be repeated once for credit.
- 4314—Practicum in Counseling and Addiction Recovery Sciences (3).** Prerequisites: C or higher in CARS 2301 and CARS 3320; 2.5 GPA. Supervised experience working with a community agency or other entity relevant to the student's future career.
- 4320—Research in Counseling and Addiction Recovery Sciences (3).** Prerequisites: CARS 2301 with a grade of C or higher, 2.5 GPA, and consent of instructor. Supervised faculty-guided research experience in selected areas. May be repeated once for credit.
- 4330—Professional Skills and Leadership (3).** Prerequisites: C or higher in CARS 2301; junior standing; 2.5 GPA. Review and application of leadership and administrative skills, including effective leadership strategies, strategic planning, organizational management, team building, and basic financial principles.
- 4331—Introduction to Marriage and Family Therapy (3).** Prerequisite: 2.5 GPA. An overview of the history, conceptual foundations, clinical methods, research literature, scope, and future trends of marriage and family therapy.
- 4390—Senior Capstone in Counseling and Addiction Recovery Sciences (3).** Prerequisites: C or higher in CARS 2301, CARS 2390, and HDFS 3390, SOC 3392, or PSY 3401; 2.5 GPA. Development, completion, and presentation of a research or clinical project demonstrating accurate analysis and application of relevant literature. Emphasis will be placed on demonstrating professional writing skills and creating documents applicable to students' future career goals. (CL) Fall only.

Department of Design

Kristi Gaines, Ph.D., IIDA, IDEC, Chairperson

Professors: Gaines, Parkinson, Pati

Associate Professors: Anderson, Pearson, Rougeaux-Burnes

Assistant Professors: Balasubramanian, Ghiai, Guerrero

Assistant Professor of Practice: Wade

Lecturer: Lektzian

Instructors: Adams, Spaulding

CONTACT INFORMATION: 211 Human Sciences Bldg. | 1301 Akron Ave.
Box 41220 | Lubbock, TX 79409-1220 | T 806.742.3050 | F 806.742.1639

About the Department

The department supervises the following degree programs:

- Bachelor of Interior Design
- Bachelor of Science in Apparel Design and Manufacturing
- Master of Science in Environmental Design
- Doctor of Philosophy in Interior and Environmental Design

The Bachelor of Interior Design and Bachelor of Science in Apparel and Design Manufacturing degree programs are accredited by the National Association of Schools of Art and Design. The Bachelor of Interior Design degree program is also accredited by the Council for Interior Design Accreditation.

Mission. The Department of Design provides the highest standards of excellence in higher education in the fields of environmental design, apparel design and manufacturing, and interior design while contributing to new knowledge in these areas through meaningful research and community outreach.

Minor. Students in the Department of Design may choose to pursue a minor in related areas such as art history, studio art, fine arts photography, general business, architecture, or other related disciplines. Depending on their choice of minor, students are required to consult with an advisor from the respective program to complete a Minor Approval Form. Minors in interior design and apparel design and manufacturing are available to students from other departments.

Graduate Programs

For information on graduate programs offered by the Department of Design, visit the Graduate Programs section of the catalog on page 390.

Undergraduate Programs

Apparel Design and Manufacturing, B.S.

This program offers a comprehensive curriculum that prepares students for entry-level positions in the apparel industry or for continued study in graduate schools. The curriculum emphasizes creativity, technical skills, knowledge of textiles, apparel product management, custom design for individual consumers, and design for mass production. Students participate in extracurricular activities that provide additional learning opportunities, including Hi-Tech Fashion Group, fashion tours of major fashion centers, two yearly design competitions, and a Senior Fashion Exhibit runway show.

Communication Literacy Requirement. Communication Literacy (CL) in the Bachelor of Science in Apparel Design and Manufacturing is evidenced by competence in design skills (e.g., draping, flat patterns), competitive design, mastery of design communication skills (e.g., portfolio), and professional practice communication. The faculty members endorse a sequential approach to the CL plan with each course building on skills acquired in previous courses. The students begin their CL plan during the junior year. This positions them to be able to visualize and articulate their competitive design ideas to the profession. The CL sequence concludes with ADM 4498, the senior capstone studio where students apply design

Apparel Design and Manufacturing, B.S. Recommended Curriculum

FIRST YEAR

Fall

- ☐ ADM 1301 - Introduction to Apparel Design (3 SCH)†
- ☐ ADM 1303 - Clothing Construction (3 SCH)†
- ☐ ID 1381 - Introduction to Interior Design (3 SCH) **OR**
 - ☐ ART 1302 - 2D Design (3 SCH)
 - ☐ ART 1303 - Drawing I (3 SCH)
- ☐ HUSC 1100 - Introduction to Human Sciences (1 SCH)
- ☐ ENGL 1301 - Essentials of College Rhetoric (3 SCH)

TOTAL: 16

Spring

- ☐ ADM 1304 - Intermediate Clothing Construction (3 SCH)† (*Prerequisites apply.*)
- ☐ ADM 2308 - Flat Pattern Design (3 SCH)† (*Prerequisites apply.*)
- ☐ ART 2304 - Drawing II (3 SCH) (*Prerequisites apply.*)
- ☐ ENGL 1302 - Advanced College Rhetoric (3 SCH) (*Prerequisites apply.*)
- ☐ Mathematics and Logical Reasoning (3 SCH)*

TOTAL: 15

SECOND YEAR

Fall

- ☐ ADM 2310 - Design Through Draping (3 SCH) (*Prerequisites apply.*)
- ☐ ADM 2311 - Textiles (3 SCH) (*Prerequisites apply.*)
- ☐ ART 3323 - Drawing III: Life Drawing (3 SCH) (*Prerequisites apply.*)
- ☐ ADM 2300 - Communication, Civility, and Ethics (3 SCH)
- ☐ HIST 2300 - History of the United States to 1877 (3 SCH)

TOTAL: 15

Spring

- ☐ ADM 2302 - Fashion Illustration (3 SCH) (*Prerequisites apply.*)
- ☐ ADM 3308 - Advanced Flat Pattern Design (3 SCH) (*Prerequisites apply.*)
- ☐ ARTH 1301 - Art History Survey I (3 SCH)
- ☐ Life & Physical Sciences (4 SCH)*
- ☐ Mathematics or Logical Reasoning (3 SCH)*

TOTAL: 16

THIRD YEAR

Fall

- ☐ ADM 3305 - Computer Applications in Apparel Design (3 SCH) (*Prerequisites apply.*)
- ☐ ADM 3312 - History and Philosophy of Dress (3 SCH) (*Prerequisites apply.*)
- ☐ ADM 4309 - Surface Design (3 SCH) (*Prerequisites apply.*) **OR**
 - ☐ ADM 3310 - Knitted Textile and Apparel Design (3 SCH) (*Prerequisites apply.*)
- ☐ ARTH 2302 - Art History Survey II (3 SCH)
- ☐ POLS 1301 - American Government (3 SCH)

TOTAL: 15

Spring

- ☐ ADM 3314 - Digital Design Fashion (3 SCH) (*Prerequisites apply.*)
- ☐ ADM 4310 - Apparel Product Development (3 SCH) (*Required for competition participation; Prerequisites apply.*)
- ☐ ID 2382 - History of Interior Design (3 SCH) **OR**
 - ☐ ARTH 3303 - Art History Survey III (3 SCH)
- ☐ POLS 2306 - Texas Politics and Topics (3 SCH) (*Prerequisites apply.*)
- ☐ Social & Behavioral Sciences (3 SCH)*

TOTAL: 15

FOURTH YEAR

Fall

- ☐ ADM 4350 - Apparel Portfolio Development (3 SCH) (*Prerequisites apply. Portfolio presented to faculty.*)
- ☐ Guided Elective (3 SCH) (*ADM 3303 or ADM 3310*)
- ☐ Life & Physical Sciences (4 SCH)*
- ☐ HIST 2301 - History of the United States since 1877 (3 SCH)

TOTAL: 13

Spring

- ☐ ADM 4307 - Apparel Manufacturing (3 SCH) (*Prerequisites apply. Portfolio presented to faculty.*)
- ☐ ADM 4498 - Prof. Practices for Apparel Design & Manufacturing (4 SCH) (*Prerequisites apply.*)
- ☐ Language, Philosophy, and Culture (3 SCH)*
- ☐ Human Sciences Elective (3 SCH)

TOTAL: 13

Summer

- ☐ ADM 4390 - Internship in Apparel Design and Manufacturing (3 SCH) (*Prerequisites apply.*)

TOTAL: 3

TOTAL HOURS: 121

* Choose from core curriculum requirements.

† Concurrent enrollment required.

Interior Design, B.I.D. Recommended Curriculum

FIRST YEAR

Fall

- ❑ HUSC 1100 - Introduction to Human Sciences (1 SCH)
- ❑ ENGL 1301 - Essentials of College Rhetoric (3 SCH)
- ❑ Mathematics (3 SCH)*
- ❑ ID 1381 - Introduction to Interior Design (3 SCH)
- ❑ ID 1385 - Interior Design Studio I (3 SCH)
- ❑ ART 1303 - Drawing I (3 SCH)

TOTAL: 16

Spring

- ❑ ENGL 1302 - Advanced College Rhetoric (3 SCH)*
- ❑ ID 2382 - History of Interior Design
- ❑ ID 2381 - Interior Design Studio II (3 SCH)*
- ❑ POLS 1301 - American Government (3 SCH)
- ❑ ART 2309 - Technology in the Arts (3 SCH)

TOTAL: 15

SECOND YEAR

Fall

- ❑ ID 3381 - Lighting Systems (3 SCH)*
- ❑ ID 2487 - Computer Aided Drafting for Interior Designers (4 SCH)*
- ❑ CARS 2300 - Communication, Civility, and Ethics (3 SCH)
- ❑ ARCH 2311 - History of World Architecture I (3 SCH)
- ❑ ARTH 1301 - Art History Survey I (3 SCH) **OR**
- ❑ ARTH 2302 - Art History Survey II (3 SCH)

TOTAL: 16

Spring

- ❑ ID 2383 - Environment and Behavior (3 SCH)
- ❑ ID 3311 - Interior Design Materials (3 SCH)*
- ❑ ID 3483 - Building Information Modeling (BIM) for Interior Design (4 SCH)*
- ❑ ARCH 2315 - History of World Architecture II (3 SCH)
- ❑ HIST 2300 - History of the United States to 1877 (3 SCH)

* Prerequisites and restrictions apply.

techniques, implement design strategies, and present a design collection. Courses in the Communication Literacy Plan are ADM 3314, ADM 4307, ADM 4310, ADM 4350, and ADM 4498.

Laptop Computer Requirement. All incoming first-year and transfer students are required to have a laptop computer. Minimum specifications can be found at <https://www.depts.ttu.edu/hs/dod/adm/equipment.php>.

Equipment Requirement. All incoming first-year and transfer students are required to have an iron and sewing machine. Second-year students are required to purchase a serger. Minimum specifications may be found at <https://www.depts.ttu.edu/hs/dod/adm/equipment.php>.

Second-Year Review. At the end of the third semester, second-year students submit required representative work from specific studio courses (ADM 1304, 2308, and 2310). A consensus of opinion by the faculty is required for determining recommendations for the student.

Fourth-Year Portfolio Review. During the fall semester of the fourth year, students are required to present a portfolio to be reviewed by a jury of apparel design professionals. If a "conditional evaluation" is received, the recommendations of the jury must be met prior to graduation.

Program Policies. A minimum grade of C is required in all art and ADM courses, as well as any course accepted as a substitution for art or ADM core or elective courses. In addition, students must be registered in ADM 4000 or 4310 to enter the Fashion Group International design competitions in their junior or senior years. One design competition must be entered during the junior or senior years to meet program requirements.

Student Projects Policy. The Department of Design reserves the right to retain, exhibit, and reproduce design projects submitted by students. Work submitted for a grade is the property of the department and remains such until it is returned to the student.

Interior Design, B.I.D.

Accredited by the Council for Interior Design Accreditation, the Bachelor of Interior Design program provides a sound curriculum that prepares individuals as entry-level interior designers. The curriculum also may serve as preparation for continued study in graduate schools offering advanced degrees in interior design or related areas. The department also offers an accelerated bachelor to master's degree program. Please see the [department website](#) for more information.

Students participate in a wide range of design experiences: lectures, studios, seminars, group presentations and discussions, professional critiques, field trips, and field experiences. The interior design program has limited enrollment and emphasizes practical application of multidisciplinary principles to residential and nonresidential interior environments.

A grade of C or better is required in all ID and ARCH courses.

Communication Literacy Requirement. Communication literacy (CL) in interior design is evidenced by competence in design skills (e.g., design graphics), competitive design, mastery of design communications skills (e.g., portfolio), and professional practice communication. The faculty members endorse a sequential approach to the CL plan with each course building on skills acquired in previous courses. The students begin their CL plan during their sophomore year. This positions them to be able to analyze, interpret, and communicate solutions to design problems and to be prepared to work in the profession or to move forward to graduate studies. The CL sequence concludes with ID 4388, the senior capstone studio where students apply research, solve design problems, and graphically present a complex environment to meet the needs of specific clients that integrates all aspects of communication literacy. Courses in the Communication Literacy Plan are ID 4307, ID 3483, and 4388.

Laptop Computer Requirement. All incoming first-year and transfer students are required to have a laptop computer. Minimum specifications can be found at <https://www.depts.ttu.edu/hs/dod/id/computer.php>.

Second-Year Portfolio Review. At the end of the second semester, students submit a portfolio with work from their studio courses (ID 1385 and 2381). A consensus of opinion by the faculty and a cumulative GPA of 2.5 from all interior design courses is required for the student prior to being admitted to ID 2487 and 3381.

Fourth-Year Portfolio Review. Prior to the fourth year, students are required to present a portfolio to be reviewed by a jury of design profes-

sionals. This experience provides the student with practice in critically evaluating, organizing, and presenting work.

Student Projects Policy. The Department of Design reserves the right to retain, exhibit, and reproduce design projects submitted by students. Work submitted for a grade is the property of the department and remains such until it is returned to the student.

Admission Requirements. For admission to the interior design program, freshmen must meet assured admission requirements and transfer students must have at least a 2.7 GPA.

Undergraduate Minors

Apparel Design and Manufacturing

Students from other departments may minor in apparel design and manufacturing by completing 27 hours of selected coursework. Courses for the minor should be finalized and approved in conjunction with the student's major and minor advisors. Required courses and electives: ADM 1301, 1303, 1304, 2302, 2308, 2310, 2311, and two additional ADM electives.

Interior Design

Students from other departments may minor in interior design by completing 18 hours of selected coursework. Courses for the minor should be finalized and approved in conjunction with the student's major and minor advisors. All courses must be completed with a grade of C or better or the student will not be allowed to register for the next semester's Interior Design classes. Required courses and electives: ID 1381, 1385, 2381, 2382, 2383, and 3311.

Accelerated Bachelor's to Master's Degrees

Apparel Design and Manufacturing, B.S. / Environmental Design, M.S.

The accelerated bachelor's-to-master's degree program allows academically capable students to accelerate their undergraduate degree programs, begin graduate work in their fourth year, and finish both the bachelor's and master's degrees in a total of approximately five years. This is accomplished by allowing 4 hours of graduate coursework in the M.S. in Environmental Design to count toward both the master's degree and the undergraduate degree for either interior design or apparel design and manufacturing.

Interior Design, B.I.D. / Environmental Design, M.S.

The Department of Design offers this accelerated bachelor to master's degree program. Please see [department website](#) for more information.

Undergraduate Course Descriptions

Apparel Design and Manufacturing (ADM)

- 1301—Introduction to Apparel Design (3).** Corequisite: ADM 1303. Overview of apparel design room practices. Emphasis on the business, art, and craft of apparel design. F.
- 1302—Fundamentals of Clothing Techniques and Processes (3).** Emphasis on the development of techniques and processes that meet rigorous business and industry standards. Fundamentals of equipment, quality, and career applications for non-majors.
- 1303—Clothing Construction (3).** Corequisite: ADM 1301. Application of basic apparel assembly methods, including the fundamentals of fit and use of sewing machines and sergers. F.
- 1304—Intermediate Clothing Construction (3).** Prerequisites: C or better in ADM 1301 and ADM 1303. Corequisite: ADM 2308. Intermediate apparel assembly, alteration of patterns, and selection of appropriate fabrics. S.
- 2302—Fashion Illustration (3).** Prerequisites: C or better in ART 1303. Illustration techniques for the fashion figure and rendering of garment details using various media. Includes color theory applied to fashion drawing and portfolio development. S.

- 2308—Flat Pattern Design (3).** Prerequisites: C or better in ADM 1301 and ADM 1303. Corequisite: ADM 1304. Application of basic flat pattern techniques to bodices, skirts, sleeves, neckline, and bodice-sleeve combinations. S.
- 2310—Design Through Draping (3).** Prerequisites: C or better in ADM 1303, ADM 1304, ADM 2308. Introduction of the fundamental principles in developing basic silhouettes of skirts, blouses, bodices, and collars by draping techniques. Understanding of fabric characteristics and drapability and its effect on the development of silhouette and style. F.
- 2311—Textiles (3).** Prerequisites: C or better in ADM 1301 and ADM 1303. Selection, use, and care of textiles in relation to fiber characteristics, yarn, and fabric structure. F.
- 3303—Tailoring (3).** Prerequisites: C or better in ADM 1301, ADM 1303, ADM 1304, ADM 2302, ADM 2308, ADM 2310, and ADM 2311. Advanced patternmaking, fit, construction, assembly, and finishing techniques for lined, tailored apparel. Emphasizes jackets and coats. F.
- 3305—Computer Applications in Apparel Design (3).** Prerequisites: C or better in ADM 1301, ADM 1303, ADM 1304, ADM 2302, ADM 2308, ADM 2310, and ADM 2311. Computer-aided design methods for product development, including design, illustration, specification, costing, patternmaking, and plotting. Use of CAD in portfolio development. F.
- 3308—Advanced Flat Pattern Design (3).** Prerequisites: C or better in ADM 1304, ADM 2302, ADM 2308, ADM 2310, and ADM 2311. Application of advanced flat patterning techniques in apparel design. S.
- 3310—Knitted Textile and Apparel Design (3).** Prerequisites: C or better in ADM 1301, ADM 1303, ADM 1304, ADM 2302, ADM 2308, ADM 2310, and ADM 2311. Emphasis on knit structures, collection development, and methods for cut and sew knit fabrics. F.
- 3312—History and Philosophy of Dress (3).** Prerequisites: Junior or senior standing. Apparel throughout the ages as reflected in cultures of the past and as an influence on contemporary design. F.
- 3314—Digital Design Fashion (3).** Prerequisite: C or better in ADM 1301, ADM 1302, ADM 2302 and ADM 3305 with a grade of C or above. Prereq may not be taken concurrently. Illustration techniques using industry-relevant software to render fashion figures and garment details. Includes research, forecasting, and development of digital trend boards and apparel lines. (CL) S.
- 3325—Study Tour in Apparel Design (3).** Study of the development, practice, and effect a specific locale has had on the fashion design industry. Study and presentation in a seminar format and a trip to that area during spring break. Advisor permission. Trip fee non-refundable 48 hours after enrollment. S.
- 4000—Individual Study (VI-6).** Prerequisites: Consent of instructor. Individual study or research under the guidance of a fashion design faculty member to enhance the degree program. May be repeated for up to 6 hours credit. F, S, SSI, SSII.
- 4307—Apparel Manufacturing (3).** Prerequisites: C or better in ADM 1301, ADM 1303, ADM 1304, ADM 2302, ADM 2308, ADM 2310, ADM 2311, ADM 3305, and ADM 3308. Mass production strategies, including product development, sizing, grading, marking, costing, and manufacturing. Implementation of strategies for developing individual apparel collections. Partially fulfills the Communication Literacy requirement in the Apparel Design and Manufacturing major. (CL) S.
- 4309—Surface Design (3).** Prerequisites: C or better in ADM 1301, ADM 1303, ADM 1304, ADM 2302, ADM 2308, ADM 2310, ADM 2311 and ART 1302, ART 1303, ART 2304. Exploration of textile dyeing, digital printing, laser cutting, and manipulation with emphasis on composition using varied media and materials. F.
- 4310—Apparel Product Development (3).** Prerequisites: C or better in ADM 2302 (may be taken concurrently), ADM 2308, ADM 2311, and ADM 3308; junior standing. Research, planning, and development of an apparel collection for a target market, meeting relative workmanship, cost, and quality standards. May be repeated for up to 6 hours credit. (CL) S, F.
- 4350—Apparel Portfolio Development (3).** Prerequisite: C or better in ADM 2302, ADM 2308, ADM 2310, ADM 2311, ADM 3305, and ADM 3314. Preparation of portfolio for internship and senior portfolio review. Emphasizes use of computers for layout and professionalism. (CL) F.
- 4390—Internship in Apparel Design and Manufacturing (3).** Prerequisites: C or better in ADM 3305, ADM 3314, and ADM 4310. Applied problems in apparel design emphasizing student participation in business and industry. SSI, SSII.
- 4391—Internship in Apparel Design and Manufacturing (3).** Prerequisite: C or better in ADM 4390. Applied problems in apparel design emphasizing student participation in business and industry. SSI, SSII.
- 4498—Professional Practices for Apparel Design and Manufacturing (4).** Prerequisites: ADM 2302, ADM 2310, ADM 2311, ADM 3305, ADM 3308, ADM 3312, and ADM 4350 with a grade of C or higher; senior

standing. Prerequisite may not be taken concurrently. Preparation for internship. Planning and implementing strategies necessary for securing career positions in fashion design. Completion of capstone project. (CL) S.

Interior Design (ID)

- 1101—Introduction to Interior Design Graphics (1).** Prerequisites: Interior design majors only. Introduces the principles of hand drafting for interior design and the planning of interior design projects. F.
- 1381—Introduction to Interior Design (3).** A survey of basic principles and concepts, including aesthetics and processes relevant to the built environment using a holistic approach. Includes, but is not limited to, design elements and principles. F.
- 1385—Interior Design Studio I (3).** Corequisite: ID 1381. Introduces the principles and concepts dealing with two-dimensional design, design theory, color theory, and basic computer creative design. S.
- 2381—Interior Design Studio II (3).** Prerequisites: C or better in ID 1381 and ID 1385; interior design majors and minors only. Study and construction of three-dimensional design principles (manual and digital). Course includes a portfolio review. S.
- 2382—History of Interior Design (3).** Prerequisite: ID or ADM majors only. Introduces a global and cultural perspective to furniture and interior elements from the 15th century through present day. Emphasizes the elevation of forms, relationships, to previous historical periods, and implications for current and future designs. S.
- 2383—Environment and Behavior (3).** Adopts a cognitive-behavioral perspective on the intersection of people and both built and natural environments. Examines how environments may be designed to meet human cognitive, physical, and social needs across the lifespan. Applies theory to practice through environmental analysis. Fulfills core Social and Behavioral Sciences requirement.
- 2385—Interior Design Studio III (3).** Prerequisites: C or better in ID 2381 and an unconditional portfolio review. Corequisite: ID 2487. Interior design majors and minors only. Concentrates on the design and renovation of residential interiors through both hand and digital techniques. Explores historical and contemporary styles in residential design. S.
- 2487—Computer Aided Drafting for Interior Designers (4).** Prerequisite: C or higher in ID 2381. Corequisite: ID 3381. ID majors only. Introduction to computer-aided design and two-dimensional drafting for the interior designer and other uses of computers in the practice of interior design. Students must also be enrolled in ID 3381. F.
- 3311—Interior Design Materials (3).** Prerequisites: C or better in ID 2487. Corequisite: ID 3483. Selection of materials used in residential and commercial environments based on characteristics, composition, installation methods, and maintenance requirements. S.
- 3312—Commercial Materials (3).** Prerequisite: C or higher in ID 3311. Selection of materials used in commercial, hospitality, healthcare, or corporate environments based on characteristics, composition, installation methods, maintenance requirements, and codes.
- 3325—Study Tour in Interior Design (3).** Interior design majors and minors only. Examination of the influence of a selected city in shaping interior design and the built environment. Accomplished through research, presentation, and travel to the city. Advisor permission. Trip fee non-refundable 48 hours after enrollment. S.
- 3380—Advanced Studio I (3).** Prerequisites: C or better in ID 3483 and ID 2383. Corequisite: ID 4204. Interior design majors only. Introduction to the design of small commercial design projects using both hand and digital techniques. Explores commercial code and sustainable issues affecting current construction and design of commercial interiors. F.
- 3381—Lighting and Systems (3).** Prerequisites: C or higher in ID 2381. Corequisite: ID 2487. ID majors only. Survey of principles and applications of lighting and environmental systems in interior design, emphasizing their impact on human well-being in both residential and commercial spaces. F.
- 3385—Advanced Studio II (3).** Prerequisites: C or higher in ID 2487 and ID 3483, ID majors only. Emphasis on problem formulation, programming, design conceptualization, design development, specifications, schedules, furniture selection, layout and design presentation, ADA, life safety, and building codes. S.
- 3386—Studio Procedures and Professional Practices for Interior Designers (3).** Prerequisites: Junior standing, interior design majors only, enrollment in spring immediately preceding ID 4307. Corequisite: ID 3385. Preparation of business documents. Study of the ethics and business of professional practice for interior design. Preparation for interior design internship, career opportunities, job search, and interview strategies. S.
- 3483—Building Information Modeling (BIM) for Interior Design (4).** Prerequisites: C or better in ID 2487 and ID 3381. Corequisite: ID 3311. Examines BIM technology and its benefits and usage as a communication and collaboration tool. Discusses 3-D modeling and rendering as well as preparation of construction documents. (CL) F.
- 4000—Individual Study (VI-6).** Prerequisites: ID majors only and consent of instructor. May be repeated for up to 6 hours credit.
- 4204—Portfolio Seminar (2).** Prerequisite: C or better in ID 3483. Corequisite: ID 3380. Analysis of professional issues with emphasis on portfolio development and review. S.
- 4307—Internship in Interior Design (3).** Prerequisites: C or higher in ID 3385 and ID 3386, ID majors only. Supervised intern experiences in established career-related positions. May be repeated as ID 4000 - Individual Study. (CL) SSI.
- 4350—Sustainable Buildings and Communities (3).** Prerequisite: Junior or senior standing in interior design or consent of instructor. A review of concepts, strategies, and rating systems adopted by the Leadership in Energy and Environmental Design (LEED) program of the U.S. Green Building Council (USGBC).
- 4380—Sustainable Communities and Design (3).** Prerequisite: ID 3386. Examination of sustainability concepts related to design of communities, buildings, and interiors. [ENVD 5383]
- 4381—Design Research (3).** Prerequisites: C or better in ID 3385 and ID 3483. Directed research focusing on the development of the Bachelor of Interior Design capstone studio project in ID 4388. F.
- 4385—Design for Health (3).** Prerequisites: ID 3385 and ID 3483. Examination of the role of the physical design and environment in improving health and healthcare. [ENVD 5385]
- 4388—Advanced Studio III (3).** Prerequisites: C or better in ID 4406 and ID 4381. Department-approved senior interior design project. Advanced design of an interior environment of complex scope and scale to meet the needs of specific clients and prepare students for the practice of the profession. Addresses current issues of design and integrates all aspects of the curriculum. (CL) S.
- 4406—Collaboration Studio (4).** Prerequisites: ID 3385 and ID 3483 with a grade of C or higher, ID majors only. An interdisciplinary studio for the design profession that addresses the process and skills necessary for collaboration. F.

Department of Hospitality and Retail Management

Robert Paul Jones, Ph.D., Chairperson

Professors: Chang, Dodd, Fowler, Jai, Velikova, Yuan

Associate Professors: Adams, Blum, Jones, Lee

Assistant Professors: Choi, Cuevas, Huh, Koo, Li

Associate Professor of Practice: Danhof

Assistant Professor of Practice: Kleypas

Lecturer: Pauwels

Instructors: Filley, Hlavaty, Padgett

About the Department

This department supervises the following degree programs:

- Bachelor of Science in Event Management
- Bachelor of Applied Arts and Sciences in Event Management
- Bachelor of Science in Fashion Merchandising
- Bachelor of Applied Arts and Sciences in Fashion Merchandising
- Bachelor of Science in Restaurant, Hotel, and Institutional Management
- Bachelor of Science in Restaurant, Hotel, and Institutional Management with a Secondary FCSE Teacher Certificate
- Bachelor of Applied Arts and Sciences in Restaurant, Hotel, and Institutional Management
- Bachelor of Science in Retail Management
 - Concentrations: Fashion Merchandising, Store Management, and Corporate Retailing
- Master of Science in Hospitality and Retail Management
- Doctor of Philosophy in Hospitality, Tourism, and Retail Management

Accelerated Degree Programs

- Bachelor of Science in Restaurant, Hotel, and Institutional Management / Master of Science in Hospitality and Retail Management
- Bachelor of Science in Retail Management / Master of Science in Hospitality and Retail Management

Mission. The Department of Hospitality and Retail Management strives to provide the highest quality educational, research, and service experiences for all of the students, faculty, staff, industry partners, and communities it engages. Through that engagement, we seek to advance understanding and skill development that will enhance our disciplines, career trajectories of our students, and advancement of knowledge.

Graduate Programs

For information on graduate programs offered by the Department of Hospitality and Retail Management, visit the Graduate Programs section of the catalog on page 391.

Undergraduate Programs

Event Management, B.A.A.S.

Event management is an exciting and dynamic career choice. Texas Tech has designed the event management curriculum to provide graduates with the skills to succeed in this growing 4.8 billion-dollar industry in the U.S., which is expected to continue to grow. The field encompasses wedding planning, event planning, and venue management. This event management degree prepares graduates with skills used daily in the event management industry with a comprehensive curriculum including a business core focused on marketing, consumer behavior, sales, accounting, and finance

with the addition of courses focused on event and conference planning such as wedding planning, conference planning, introduction to venue management, catering, and food production. Students may study abroad, will complete internships, and learn from highly skilled faculty. Graduates of this department currently hold positions as event managers, event production managers, banquet managers, wedding coordinators, meeting and events coordinators, and event planners.

Communication Literacy Requirement. In Event Management it is vital that graduates can communicate to a vast array of stakeholders in various methods. The communication literacy plan includes communication in the following forms: verbal, written, analytical, and interpersonal interaction. Since each is distinctive, there is no specific sequencing, unless a prerequisite is in place. Communication literacy courses for this degree are HRM 3389 (interpersonal interaction), HRM 4322 (interpersonal and oral interaction), HRM 3321 (financial), HRM 3335 (written), and HRM 4322 (analytical).

Event Management, B.S.

Event management is an exciting and dynamic career choice. Texas Tech has designed the event management curriculum to provide graduates with the skills to succeed in this growing 4.8 billion-dollar industry in the U.S., which is expected to continue to grow. The field encompasses wedding planning, event planning, and venue management. This event management degree prepares graduates with skills used daily in the event management industry with a comprehensive curriculum, including a business core focused on marketing, consumer behavior, sales, accounting, and finance, with the addition of courses focused on event and conference planning such as wedding planning, conference planning, introduction to venue management, catering, and food production. Graduates of this department currently hold positions as event managers, event production managers, banquet managers, wedding coordinators, meeting and events coordinators, and event planners.

Communication Literacy Requirement. In Event Management it is vital that graduates can communicate to a vast array of stakeholders in various methods. The communication literacy plan includes communication in the following forms: verbal, written, analytical, and interpersonal interaction. Since each is distinctive, there is no specific sequencing, unless a prerequisite is in place. Communication literacy courses for this B.S. degree are HRM 3389 (interpersonal interaction), HRM 4322 (interpersonal and oral interaction), HRM 3321 (financial), HRM 3335 (written), and HRM 4322 (analytical).

Fashion Merchandising, B.A.A.S.

The Fashion Merchandising, B.A.A.S. serves as a completer program for individuals who earned an A.A.S. degree in fashion merchandising or fashion design from an accredited community college.

Fashion merchandising is an exciting and dynamic career choice. Texas Tech has designed the fashion merchandising curriculum to provide graduates with the skills to succeed in this growing multi-trillion-dollar global industry encompassing everything from apparel designers, wholesalers, retailers preparing fashion goods in apparel, footwear, and home design. This Fashion Merchandising degree prepares graduates with skills used daily in fashion retail stores and corporate offices with a comprehensive curriculum including a business core focused on marketing, consumer behavior, sales, accounting, and finance with the addition of courses focused on fashion merchandising such as visual merchandising, retail trends, retail buying, fashion design and analysis, study abroad, fashion styling, fashion history, and global sourcing. Students may study abroad, will complete internships, and will learn from highly skilled faculty. Graduates of this department currently hold positions in product development, buying, sourcing, store management, and visual merchandising.

The program of work includes up to 33 hours of core courses, fashion merchandising, or fashion design credits earned at the community college from which students received their A.A.S. degree. In addition, Texas Tech University and College of Health and Human Sciences core courses and 40 credits of fashion merchandising program core courses and electives are required, giving students a well-rounded fashion merchandising program. A required 300-hour fashion merchandising internship is required.

Human Sciences Core Elective. Choose 1 from: ADRS 2310; HDFS 2322; PFI 1305; PFI 3301

Communication Literacy Requirement. In the Fashion Merchandising, B.A.A.S degree, students have foundational courses from their Associate of Arts or Sciences degree that helped develop communication skills. The department continues to develop those skills so that graduates are able to communicate to a vast array of stakeholders in various methods. The communication literacy plan includes communication in the following forms: verbal, written, financial, analytical, and interpersonal interaction. Since each is distinctive, there is no specific sequencing, unless a prerequisite is in place. The CL courses for this B.A.A.S degree are HRM 3389, HRM 4332 (interpersonal and oral interaction), HRM 3321 (financial), HRM 3335 (written), and HRM 4322 (analytical).

Fashion Merchandising, B.S.

Fashion merchandising is an exciting and dynamic career choice. Texas Tech has designed the fashion merchandising curriculum to provide graduates with the skills to succeed in this growing multi-trillion-dollar global industry encompassing everything from apparel designers, wholesalers, retailers preparing fashion goods in apparel, footwear, and home design. This fashion merchandising degree prepares graduates with skills used daily in fashion retail stores and corporate offices with a comprehensive curriculum including a business core focused on marketing, consumer behavior, sales, accounting, and finance with the addition of courses focused on fashion merchandising, such as visual merchandising, retail trends, retail buying, fashion design and analysis, study abroad, fashion styling, fashion history, and global sourcing. Students may study abroad, will complete internships, and will learn from highly skilled faculty. Graduates of this department currently hold positions in product development, buying, sourcing, store management, and visual merchandising.

Communication Literacy Requirement. In Fashion Merchandising it is vital that graduates can communicate to a vast array of stakeholders in various methods. The communication literacy plan includes communication in the following forms: verbal, written, analytical, and interpersonal interaction. Since each is distinctive, there is no specific sequencing, unless a prerequisite is in place. Communication literacy courses for this B.S. degree are HRM 3389 (interpersonal interaction), HRM 4332 (interpersonal and oral interaction), HRM 3321 (financial), HRM 3335 (written), and HRM 4322 (analytical).

Restaurant, Hotel, and Institutional Management, B.A.A.S.

The Restaurant, Hotel, and Institutional Management (RHIM), B.A.A.S., the first of its kind in Texas, serves as a completer program for individuals who earned an A.A.S. degree in culinary sciences or hospitality management from an accredited community college. The program of work includes up to 33 hours of culinary or hospitality credits earned at the community college from which students received their A.A.S. degree. In addition, Texas Tech University and College of Health and Human Sciences core courses and 40 credits of RHIM program core courses and electives are required, giving students a well-rounded hospitality business education. A required 400-hour hospitality industry internship counts toward the 1,200-hour work experience needed to earn the B.A.A.S. degree.

Communication Literacy Requirement. In the RHIM, B.A.A.S degree, students have foundational courses from their Associate of Arts or Sciences degree that helped develop communication skills. The department continues to develop those skills, so that graduates are able to communicate to a vast array of stakeholders in various methods. The communication literacy plan includes communication in the following forms: verbal, written, financial, analytical, and interpersonal interaction. Since each is distinctive, there is no specific sequencing, unless a prerequisite is in place. The CL courses for this B.A.A.S degree are HRM 3389, HRM 4332 (interpersonal and oral interaction), HRM 3321 (financial), HRM 3335 (written), and HRM 4322 (analytical).

Restaurant, Hotel, and Institutional Management, B.S.

The mission of the restaurant, hotel, and institutional management (RHIM) program is to prepare individuals who will make a contribution

to the hospitality industry and to society as a whole through quality education, research, and service.

The RHIM program prepares students for management career opportunities in the hospitality industry. The curriculum includes courses in nutritional sciences, arts and sciences, and both core and elective courses in RHIM. An earned grade of C or better is required in all HRM, RHIM, or RETL core and elective courses as well as any course accepted as a substitution for HRM, RHIM, or RETL core or elective courses.

Students in the RHIM program have access to a variety of experiential, hands-on learning opportunities. The program has had a long relationship with the Overton Hotel and Conference Center, and students in the hotel operations and lodging management courses participate in labs and other activities at the hotel. The program also owns and operates the Skyviews of Texas Tech Restaurant, which recently underwent a \$1.3 million renovation. Skyviews is open to the public, and students have the opportunity to learn to prepare and serve food during the lunch and dinner series courses.

Classroom laboratory experiences keep pace with changes in the hospitality industry, and the required 1,200 hours of hospitality work experience allow students to become even more familiar with the industry. A required 400-hour hospitality industry internship that counts toward the 1,200-hour work experience is also required. Texas Tech's RHIM program, recognized as one of the top programs in the nation, offers a multidisciplinary approach to hospitality education. The curriculum is designed to prepare the student to meet both current and future hospitality needs. The program emphasizes problem solving and creativity in addition to strong practical laboratory experiences. The RHIM program is accredited by the Accreditation Commission for Programs in Hospitality Administration.

Communication Literacy Requirement. In Restaurant, Hotel, and Institutional Management, it is vital that graduates are able to communicate to a vast array of stakeholders in various methods. The communication literacy plan includes communication in the following forms: verbal, written, analytical, and interpersonal interaction. Since each is distinctive, there is no specific sequencing, unless a prerequisite is in place. Communication Literacy courses for this B.S. degree are HRM 3389, HRM 4332 (interpersonal interaction), HRM 3321 (financial), HRM 3335 (written), and HRM 4322 (analytical).

Restaurant, Hotel, and Institutional Management with Secondary FCSE Teacher Certificate in Hospitality, Nutrition, and Food Science, B.S.

This option offers a career path for those interested in teaching hospitality at the eighth grade and high school levels. Students complete a broad base of hospitality management courses as well as a 400-hour hospitality internship and 400 hours of hospitality work experience along with student teaching that leads to teacher certification. Graduates will be eligible for a Specialized Certificate in Hospitality, Nutrition, and Food Science (Grades 8-12). Students seeking certification must meet all requirements outlined in the College of Education section of this catalog. Admission requirements for the teaching program include the completion of approximately 60 hours with an overall 2.75 GPA or better and a satisfactory level of performance on an approved basic skills assessment. Other requirements include a 2.75 GPA or better in professional education courses in the teaching field and a grade of C or better in all required concentration and support courses. To be recommended for certification, graduates must complete a fingerprint background check and achieve a satisfactory level of performance on the TExES examination prescribed by the State Board of Education.

Communication Literacy Requirement. Communication literacy in the teacher certification option of the Bachelor of Science in Restaurant, Hotel, and Institutional Management degree is evidenced by competence in analytical, aural, interpersonal, oral, written, and visual communication. The teacher certification option of the B.S. degree uses a sequence of four courses to help students achieve expected communication literacy in this program. The courses should be taken in the sequence indicated to build upon the skills and knowledge acquired in the previous courses. The required communication courses in the teacher certification option of the B.S. degree are FCSE 3301, HRM 4316, FCSE 4302, and FCSE 4012.

Retail Management, B.S.

The retail management program prepares students to contribute to the retail industry and to society through excellence in education, research, and service. Focusing on the role of diverse and global consumers, the complex infrastructure of retailing goods and services, omni-channel, influencers, reviews, and social media, faculty members maintain and expand a partnership between the retail industry and academics. Retail management courses emphasize integration of theory with the managerial needs of e-commerce, category management, marketing, and sales, along with leadership, industry application, and career planning strategy. The degree includes an education in business fundamentals such as technology, communication, marketing, management, accounting, and economics. An internship program, industry-sponsored course projects, and a strong alumni base afford students the opportunity to interface with a dynamic combination of retail executives and organizations throughout their academic study. Students have the opportunity to study abroad either through an exchange or affiliated program or through a faculty-led program. RETL 4300 - Retailing Field Study Tour is offered each summer and may include tours in Scotland, Ireland, France, Italy, Spain, Taiwan, Japan, and South Korea. Students may take the course twice for credit. (See what students [had to say](#) about their [study abroad experience](#).)

In addition, the program assists students in seeking internship opportunities and career placement after graduation. A 10-week, 300- to 400-hour supervised internship in the retail industry is required of each student with a retail management major. The supervised internship experience is planned jointly by the faculty and student and is generally following their junior year. HRM 3389 - Professional Practices in Hospitality and Retail Management is required during the spring semester prior to enrollment in RETL 3395 - Internship in Retail Management. An earned grade of C or better is required in all RETL core and elective courses, as well as any course accepted as a substitution for RETL core or elective courses.

Concentrations in Retail Management. The retail management program offers concentrations in (1) Fashion Merchandising, (2) Store Management, and (3) Corporate Retailing to better meet the needs of students and the retail community by focusing on the specific skills needed for fashion retailers or store management or the technology and analytical skills necessary for corporate retailers. The **Fashion Merchandising*** concentration brings together textiles and fashion and retailing. This concentration includes the retail core courses as well as retail courses focused on fashion merchandising and courses from the Department of Design, including textiles, introduction to fashion design, and clothing construction. The **Store Management** concentration is designed to give students an overall perspective of retail management for large corporate stores to prepare students to own their own retail store. The **Corporate Retailing** concentration is focused on developing technology skills and data analysis required for those seeking positions in corporate retail such as retail buyers or category managers. **Fashion Merchandising** includes the retail core and 12 hours from the following: ADM 1302 or 1303, 2311; RETL 2320, 3310, 3370, 3385, 4300. Retail students focused on store management may choose six hours from the following courses for the **Store Management** concentration: RETL 3370, 3345, 3380; HRM 4355, and RETL 4350. The requirements for the **Corporate Retailing** concentration are a 2.8 GPA and RETL 3380, 4320, and 4330.

* The **Fashion Merchandising** concentration is no longer admitting students. Students are encouraged to pursue the Fashion Merchandising, B.S. instead.

Communication Literacy Requirement. In Retail Management it is vital that graduates are able to communicate to a vast array of stakeholders in various methods. The communication literacy plan includes communication in the following forms: verbal, written, analytical, and interpersonal interaction. Since each is distinctive, there is no specific sequencing, unless a prerequisite is in place. Communication literacy courses for this B.S. degree are HRM 3389 (interpersonal interaction), HRM 4332 (interpersonal and oral interaction), HRM 3321 (financial), HRM 3335 (written), and HRM 4322 (analytical).

* Choose from core curriculum requirements.

† Guided Elective: Any RHIM or RETL non-required course or other courses with departmental approval.

be finalized and approved in conjunction with the student's major and minor advisers.

- Required Courses: RETL 1320, 3310, 3350, 3385.
- Electives: HRM 4355; RETL 3370, 3380, 4300, 4350.

Hospitality and Retail Management

Students from other departments may minor in Hospitality and Retail Management by completing 18 hours of selected coursework. Courses for the minor should be finalized and approved in conjunction with the student's major and minor advisers.

Restaurant, Hotel, and Institutional Management

A student may minor in Restaurant, Hotel and Institutional Management by completing a minimum of 18 semester hours of RHIM coursework, including 12 hours of upper-level credit. Courses for the minor should be finalized and approved in conjunction with the student's major and minor advisers.

Retail Management

A student may minor in retail management by completing a minimum of 18 semester hours of selected coursework. Specific courses for the minor should be finalized and approved in conjunction with the student's major and minor advisers. Six hours may be lower-level courses; the remainder should be upper-level courses.

Undergraduate Certificates

Entrepreneurship in the Services Industry

The Department of Hospitality and Retail Management offers a certificate focused on entrepreneurship designed to provide individuals with a foundation or enhance their current skills to develop a business in the hospitality and/or retail business sectors. Students take four courses, one of which is required: HRM 4355. Students choose three of the following electives: HRM 3385, 3315, 3321, 3335, 4316, and 4352. Courses may be taken in any order.

Hotel Analytics and Management

The Hotel Analytics and Management Certificate supplements undergraduate students' experiential learning with valuable skills and knowledge needed for today's competitive job market. Courses encompass content from various aspects of hotel operations and management, including front office, sales and marketing, revenue management, and other managerial aspects of the hotel business. Required courses (should be taken in the following order): RHIM 2308, 4308, 4348. Elective (3 hours; may be taken any time): HRM 4313, 4316, 4332.

Tourism Administration

The Department of Hospitality and Retail Management offers a certificate focused on tourism designed to prepare individuals by providing them a foundation in multiple aspects of tourism. Students choose four courses from this list: RHIM 3355, 3350, 4310, 4335, 4343, 4350, and 4314. Courses may be taken in any order.

Wedding and Conference Management

The Department of Hospitality and Retail Management offers a certificate in wedding and conference planning designed to prepare individuals to become event planners. Students take two courses with the HRM prefix, HRM 4316 - Services Marketing and HRM 4355 - Entrepreneurship in the Services Industry. The remaining two courses, Wedding Planning (RHIM 4342 or RETL 4342) and Meeting and Convention Planning (RHIM 4345 or RETL 4345), may be taken either with the RHIM or RETL prefix. Courses may be taken in any order as long as prerequisites are met.

Wine Business

The Department of Hospitality and Retail Management offers a certificate focused on wine entrepreneurship designed to provide individuals with a foundation or to enhance their current skills to develop a business in the

hospitality and/or retail business sectors. Students may choose four of the following courses: HRM 4355, 2312, 4340, 4311, and 4350. Courses may be taken in any order as long as prerequisites have been met.

Accelerated Bachelor's to Master's Degree

The accelerated bachelor's-to-master's degree program allows academically capable students to accelerate their undergraduate degree programs, begin graduate work in their fourth year, and finish both the bachelor's and master's degrees in a total of approximately five years. This is accomplished by allowing 4 hours of graduate coursework in the M.S. in Hospitality and Retail Management to count toward both the master's degree and the undergraduate degree for either the B.S. in Restaurant, Hotel, and Institutional Management or the B.S. in Retail Management.

Undergraduate Course Descriptions

Hospitality and Retailing Management (HRM)

- 2310—Introduction to Hospitality and Retail Management (3).** Introduction to the services fields of hospitality and retail management.
- 3315—Social Media as Omni-Channel Marketing for Hospitality and Retailing (3).** Hospitality/Retail omni-channel marketing strategies. Brand message integration across all internet-based and traditional media platforms. Analytic measures such as Google will also be explored.
- 3321—Introduction to Accounting for Hospitality and Retailing (3).** Introduction to accounting activities and processes used to effectively manage hospitality and retail businesses. (CL)
- 3322—Financial and Managerial Accounting for Hospitality and Retail Management (3).** Development of skills and understanding in the effective use of accounting information for decision making in hospitality and retail management.
- 3335—Consumer Behavior in the Services Industry (3).** Analysis of psychological, sociological, and cultural aspects of human behavior affecting consumer's actions in the marketplace and of the consumer purchase decision process. (CL)
- 3348—Diversity Issues in the Services Industry (3).** Exploration of diversity viewpoints and their potential effects on our personal and work environments within the hospitality and retail industries.
- 3385—Introduction to Sales for the Services Industry (3).** Development of general sales skills. Particular focus on the use of data analysis to enhance sales performance for all service industry career goals.
- 3389—Professional Practices in Hospitality and Retail Management (3).** Prerequisite: RHIM 3370. Principles of professional practices focusing on legal, ethical, and human resource workplace issues. Resume writing, interviewing skills, and job search strategies are also introduced. (CL)
- 4313—Legal Aspects of the Services Industry (3).** Prerequisite: C or better in HRM 2310. A comprehensive study of the legal aspects of the hospitality and retail industries with an emphasis on compliance and prevention of liabilities.
- 4316—Services Marketing for Hospitality and Retailing (3).** Application of sales and marketing concepts, methods, and techniques in hospitality and retail management. On campus and distance. (CL) F, S.
- 4322—Financial Analysis for Hospitality and Retailing (3).** Prerequisite: HRM 3322. Development of skills and understanding in the effective use of financial information for decision making in hospitality and retail management. (CL)
- 4332—Leadership in the Services Industries (3).** Development of essential services industry leadership skills. Focuses on your understanding of your personality, emotions, values, ethics, and how they contribute to your leadership style. (CL)
- 4352—Operations Management (3).** Introduction to operations methods and management for single and multi-unit service operations.
- 4355—Entrepreneurship in the Services Industry (3).** Exploration and implementation of the basic principles, concepts, and practices in entrepreneurship. Development of business strategies and tactics in new business development.

Restaurant, Hotel, and Institutional Management (RHIM)

- 2308—Hotel Operations (3).** Principles and practices of managerial functions relating to the operation of lodging facilities.
- 2312—Learning Through Tasting: Spirits, Beer, and Wine (3).** Survey of spirits, beers, and wine includes tasting, production, storage, and serving. Emphasis on responsible beverage use in business and social settings.

- 2340—Latin American Culture and Cuisine (3).** Latin American foods and cuisine and the relationship to their cultures.
- 2345—Introduction to Event and Venue Management (3).** Overview of the event planning industry including meetings, incentive programs, conferences, and exhibitions. Also, a focus on venue management and design. [RETL 2345]
- 3300—Introduction to Internship in Hospitality (3).** Prerequisite: C or better in HRM 2310. Introduction to concepts and expectations of the internship experience. Students can interview with a large variety of companies for internship positions.
- 3308—Group Sales and Services (3).** Emphasis on the function of convention and meeting sales and service departments related to lodging and tourism operations. Explores factors involved in the management of large group sales.
- 3310—Food Truck Operations (3).** The study of operations and management of food service operations utilizing a culinary mobile vehicle including the application of live food production and service.
- 3320—Facilities Management (3).** Management principles and practices relative to the internal maintenance of public dining and lodging facilities. Systematic control of hospitality spaces to safeguard health and to use available aesthetic values. On campus and distance.
- 3330—Special Topics in Hospitality (3).** Prerequisite: Instructor consent. Semester-long study of a specific topic pertinent to the hospitality industry.
- 3345—Event Management in the Hospitality Industry (3).** Studies concepts and execution of event management in the hospitality industry. <https://youtu.be/DQ1DiGxLNtI>
- 3350—Geotourism (3).** An analysis of the economic and cultural impact of the international travel and tourism industry, including destination development, cultural integration, and demand for travel services.
- 3352—Culture and Cuisine in the Hospitality Industry (3).** Uses a global, multicultural approach to explain how historical events, the environment, and local customs and beliefs affect and define culinary traditions in different societies around the world. May be repeated up to 9 credit hours.
- 3355—Club and Resort Management (3).** Principles and practices of the general managerial procedures utilized in private clubs and resorts.
- 3360—Introduction to Food Production and Sustainable Practices (3).** Prerequisite or corequisite: FDSC 3303. Application of scientific food preparation and management principles to quantify food production focused on sustainable food practices. Includes laboratory experience in quantity food facility.
- 3362—Wedding Cakes and More: Special Occasions Foods (3).** Practice in the creation of specialty foods such as wedding cakes, petit fours, and more. Explore estimating special occasion food quantities and budgeting.
- 3363—Managing Catered Events (3).** Principles and practices regarding food safety, menu development and preparation, beverage selection, and other aspects involved in catering events.
- 3370—Restaurant Operations and Management (3).** Prerequisite: C or better in RHIM 3360. Optimum use of human, financial, and material resources by managers. Laboratory experiences include commercial food preparation and service.
- 3380—Managed Services in the Hospitality Industry (3).** Analysis of on-site food service management and its importance to the hospitality industry.
- 3390—Purchasing in the Hospitality Industry (3).** Prerequisite: C or better in HRM 3321 or HRM 3322 or consent of instructor. Current ethical, economic, legislative, and industrial developments related to purchasing food products and durable goods.
- 3395—Hospitality Internship (3).** Supervised applications of concepts, principles, and techniques learned in the classroom; emphasis on student participation in the hospitality industry. [RETL 3395]
- 4000—Individual Study (V1-6).** May be repeated for up to 6 hours credit.
- 4308—Lodging Operations Management (3).** Emphasizes the application of operating principles in lodging, from a middle- to upper-management perspective, including a strategic approach to problem solving at the individual and multi-property levels.
- 4310—Cruise and Shoreline Operations (3).** Provides an overview of the cruise and shoreline operations by examining its history, market, significance, geography, design, marketing, services and management, and destination tourism.
- 4311—Wines of the World (3).** Prerequisite: Must be of legal drinking age to enroll. Comprehensive exploration of wines of the world through Wine & Spirit Education Trust (WSET®) Levels 1 and 2 "Award in Wines" curriculum and sensory evaluation. [PSS 4311]
- 4312—Food and Beverage Operations Management (3).** An overview of the roles and responsibilities of managers in food and beverage operations in hospitality operations, including control, sales promotion, and profits. On campus and distance.

- 4314—Travel and Destination Management and Marketing (3).** Comprehensive coverage of management and marketing concepts applied to tourism industries including the roles of DMO, marketing strategy, consumer behavior, marketing research, and digital marketing.
- 4315—Dinner Series (3).** Prerequisites: FDSC 3303 and C or better in RHIM 3370. Assumption of maximum responsibility of management of actual food service operation based on sound managerial principles and successful food production and service techniques.
- 4325—Hospitality Field Study Tour (3).** Study of international/domestic hospitality operations. May be repeated once for credit.
- 4330—Contemporary Problems in the Hospitality Industry (3).** Prerequisite: Senior RHIM majors and instructor consent. In-depth examination of selected problems in the hospitality industry.
- 4335—Festival and Fair Organization and Management (3).** Provides an overview of fair and festival operations by examining the typology, functions and processes, and impact of the industry.
- 4340—Wine Marketing (3).** Provides a foundational understanding of general marketing principles as they apply to the wine industry.
- 4341—Hospitality Management (3).** Prerequisites: Junior standing; ENGL 1302; and C or better in HRM 2310. Factors involved in establishing hospitality operations, organization, administrative development, allocation of labor, and control. Examines hospitality organizations with emphasis on planning and problem analysis. F, S.
- 4342—Wedding Planning and Management (3).** Study of wedding planning and management. Students complete a portfolio for wedding plans. [RETL 4342]
- 4343—Sustainable Tourism (3).** Explores sustainable tourism principles, strategies, and best practices in environmental, socio-cultural, and economic dimensions for travel and hospitality industry.
- 4345—Foundations of Meeting, Conference and Convention Management (3).** In-depth analysis and guide for planning effective conventions, meetings, and exhibitions based on best practices in the meeting planning industry. [RETL 4345]
- 4348—Hospitality Revenue Management (3).** Prerequisites: C or better in RHIM 3360 or NS 2310. Focus on hospitality revenue management activities for strategic decision making, including pricing, forecasting, and trend analysis.
- 4350—Wine Tourism (3).** Examines the business of wine with specific focus on wine tourism. Addresses global tourism and local economic impact of the wine industry.
- 4360—Experimental Methods with Food (3).** Suggested prerequisites: C or better in RHIM 3360, RHIM 3370, or NS 2310. Investigation of food quality factors through laboratory experiences that conclude with a comprehensive research project. Online courses do not apply to certifications.

Retail Management (RETL)

- 1320—Fashion and Modern Culture (3).** Survey course analyzing the impact of modern culture on the fashion industry.
- 2320—Fashion Trends (3).** Explains how fashion trends develop in society and social media and how they emerge in the retail industry.
- 2345—Introduction to Event and Venue Management (3).** Overview of the event planning industry including meetings, incentive programs, conferences, and exhibitions. Also, a focus on venue management and design. [RHIM 2345]

- 3310—Fashion Styling in Retail (3).** Provides students with an understanding of what retail fashion style is and how to manage retail fashion styling.
- 3313—Taylor Swift and Fashion (3).** Focuses on the trajectory, key looks, and signature pieces of the fashion icon, Taylor Swift.
- 3345—Event Management in the Retailing Industry (3).** Study of concepts and execution of event management in the retailing industry. <https://youtu.be/DQ1DiGxLNtl>
- 3350—Visual Merchandising and Retail Promotion (3).** Comprehensive study of the principles and practices of merchandise communication through the interaction and coordination of sales promotion, personal selling, visual merchandising, advertising, special events, and public relations.
- 3370—Retail Management Analytics (3).** Application of various analytical and mathematical techniques for retailing.
- 3380—Retail Buying and Control (3).** The application of planning, purchasing, and controlling inventories. S.
- 3385—Fashion and Design Analysis (3).** Analysis of fashion products focused on the product life cycle, cost elements, and specifications.
- 3395—Internship in Retail Management (3).** Prerequisite: C or better in HRM 3389. Supervised applications of concepts, principles, and techniques learned in the classroom; emphasis on student participation in the retailing industry. Minimum of 300-400 hours of supervised retail employment at a departmental approved site. May be repeated for credit. [RHIM 3395]
- 4000—Individual Study (VI-6).** Individual study or research under the guidance of a retailing faculty member to enhance the degree program. May be repeated for up to 6 hours credit.
- 4300—Retailing Field Study Tour (3).** Study of international/domestic retailers and manufacturers. Trip fee non-refundable 48 hours after registration. May be repeated once for credit.
- 4320—Retail Category Management (3).** Prerequisite: 2.8 TTU GPA; Junior or senior standing. The application of planning, purchasing, and controlling inventories with emphasis on product selection, shelf merchandising, promotion, and pricing.
- 4330—Retail Management Research (3).** Prerequisite: 2.8 TTU GPA. Comprehensive overview of research in the retailing process; emphasis on application-oriented techniques and processes for implementation.
- 4335—E- and Mobile Commerce (3).** Practices in web-based retail management, digital tool engagement, and development of web-based resources.
- 4342—Wedding Planning and Management (3).** Study of wedding planning and management. Students complete a portfolio for wedding plans. [RHIM 4342]
- 4345—Meeting and Convention Management (3).** In-depth analysis and guide for planning effective conventions, meetings, and exhibitions based on best practices in the meeting planning industry. [RHIM 4345]
- 4350—Retail Global Sourcing (3).** Global sourcing refers to how and where manufactured goods or components will be procured. In the global softgoods industry, sourcing is a major competitive strategy for both manufacturers and retailers.
- 4360—Retail Management (3).** Capstone course with emphasis on inter-related functions in retail management examined through case study and problem-based academic service-learning team projects. Required discussion. May be repeated up to three times.
- 4392—Retail Externship (3).** Advanced supervised applications of concepts, principles, and techniques learned in the classroom; emphasis on student participation in the retailing industry.

About the Department

This department supervises the following degree programs and certificates:

- Bachelor of Science in Human Development and Family Sciences
 - Teacher Certification in Family and Consumer Sciences
- Bachelor of Science in Early Childhood Education
- Bachelor of Applied Arts and Sciences in Early Childhood Education
- Accelerated Bachelor's to Master's (ABM) Program in Human Development and Family Sciences
- Master of Science in Human Development and Family Sciences
- Doctor of Philosophy in Human Development and Family Sciences
- Graduate Certificate in Gerontology
- Graduate Certificate in Youth Development Specialist
- Graduate Certificate in Youth Program Management and Evaluation

Mission. The mission of the Department of Human Development and Family Sciences is to promote the health and well-being of individuals, families, and relationships across the life span through research, teaching, service, and community outreach and engagement.

Graduate Programs

For information on graduate programs offered by the Department of Human Development and Family Sciences, visit the Graduate Programs section of the catalog on page 393.

Undergraduate Programs

The Department of Human Development and Family Sciences (HDFS) offers a wide range of courses in the areas of early childhood, human development across the life span, interpersonal relationships, and family science. Graduates of the department become qualified to pursue a variety of careers in health professions (including physicians, nurses, physical therapists, occupational therapists, etc) education, human and social services, advocacy, public policy, and/or pursue graduate studies. Students interested only in selected aspects may elect to minor in the department curriculum, or they may choose electives while pursuing another major course of study. An earned grade of C or better is required in all HDFS or EC core and elective courses, as well as any course accepted as a substitution for HDFS or EC core or elective courses that are applied to graduation requirements for majors and minors.

Early Childhood Education, B.A.A.S.

The Bachelor of Applied Arts and Sciences with a major in Early Childhood Education is designed for students who have completed an Associate of Applied Science degree in Child Development or Early Childhood from an approved institution. The B.A.A.S. in Early Childhood Education

prepares students to work with children from infancy through sixth grade. A strong emphasis in child development provides the foundation for understanding the child as an individual within the context of the family, the peer group, and school settings. Students may consult the Early Childhood Education academic advisor for transfer credit evaluation.

Communication Literacy Requirement. Courses in the communication literacy plan for this degree are HDFS 3301, 3310, 3312, and 4314.

Early Childhood Education, B.S. Teacher Certification: Early Childhood to Sixth Grade

The Bachelor of Science in Early Childhood Education prepares professionals to work with children from infancy through sixth grade. A strong emphasis in child development provides the foundation for understanding the child as an individual within the context of the family, the peer group, and school settings.

The program meets current Texas requirements for teacher certification and is accredited by the State Board for Educator Certification. State teacher certification is granted for EC-6 (early childhood through the sixth grade). See an academic advisor for updated certification requirements that may occur from recent legislative mandates. Admission to teacher certification is competitive and is based on a GPA of 2.75 or higher. Students seeking teacher certification must meet all requirements outlined in the College of Education section of this catalog. To be recommended for certification, graduates must achieve satisfactory performance on the TExES Certification Exam, an examination prescribed by the State Board of Education.

The university teacher education program includes a full year of student teaching (two semesters of the senior year). Students wishing to obtain teacher certification should consult with the department's undergraduate advisor.

Communication Literacy Requirement. The Early Childhood Education major prepares students for many types of communication, including large and small group discussion with young children as well as written analyses of children's development and plans to support active learning. Students gain experience in collecting, examining, and reflecting upon scientific information and presenting their findings through formal and informal written communications as well as in oral presentations. The Early Childhood Education Communication Literacy courses are developed to fulfill all of the above needs. The CL courses for this degree are EC 3301 (scientific and graphical), EC 3310 and EC 3312 (written), and EC 3311 and EC 3313 (interpersonal and oral).

Human Development and Family Sciences, B.S.

From a foundation of research and theory, this degree focuses on development across the life span (prenatal to late adulthood) in the context of romantic, family, and peer relationships as well as community influences. This program focuses on intrapersonal (e.g., personality, cognition), interpersonal (e.g., relationship conflict, social support), and societal (e.g., social class, public policy) influences as they affect personal and family well-being and development.

Many courses offer perspectives on interpersonal and family behavior through cognitive, socioemotional, and physical development of the infant, child, adolescent, young adult (dating, identity development), middle-aged adult (divorce-remarriage, parenthood, work-life balance), and older adult (widowhood, grandparenthood). Some courses also focus on important social issues that affect individual and family functioning (e.g., family violence, public policies, health care). Courses at the upper-division level provide professional training for students seeking employment in such diverse occupations as health professions, child advocacy, early intervention, youth development, human resources, social services, and social justice. In addition, HDFS is an ideal foundation for further study in areas such as allied health, nursing, medicine, law, education, and other related graduate programs.

Service and research skills are also enhanced by opportunities to observe and interact with infants, toddlers, and young children in the Child Development Research Center and TTU Center for Early Head Start. The centers

Note: FCSE 3301 requires application and advisor approval. See advisor in HS 159.

are accredited by the National Association for the Education of Young Children. Students are required to pass a background check before working in these areas. Supervised practicum experiences with community groups provide opportunities for interaction with older children, adolescents, couples, families, and elderly adults. These experiences assist students in understanding developmental stages of human behavior and interpersonal relations as they occur in professional settings.

Communication Literacy Requirement. Successfully working with individuals, families, and professionals in a variety of settings requires many different forms of communication, including oral interactions and professional presentations, written reports, and communication of data. HDFS students gain experience in collecting, examining, and reflecting upon scientific information and presenting their findings through formal and informal written communications as well as in oral presentations. HDFS Communication Literacy courses are uniquely designed to help prepare graduates to communicate successfully in their careers working with individuals, families, and professionals in diverse settings. The CL courses for this program are HDFS 2303 (interpersonal and written), HDFS 3301 (scientific and graphical), and HDFS 3322 (community/ organizational/ spoken).

Undergraduate students may want to focus in one or more of the following areas:

- **Childhood:** HDFS 2305, 2311, 3306 OR EC 3306; HDFS 3310 OR EC 3310; HDFS 3312 OR EC 3312
- **Adolescence-Adulthood:** HDFS 3316, 3318, 3319, 3332
- **Intimate and Family Relationships:** HDFS 2322, 3320, 3321, 3322, 3324, 3326, 3331, 3350; EC 3350
- **Application/Research:** HDFS 2320, 3360, 4000, 4310, 4320, 4343, 4390, 3311 OR EC 3311; HDFS 3313 OR EC 3313; HDFS 4314 (*Requires site placement. Students are strongly encouraged to locate a practicum site the semester before the practicum. New sites must be approved through the instructor of HDFS 4314. More information can be found at www.depts.ttu.edu/hs/hdfs/career_paths/practicum.php.)*)

Human Development and Family Sciences with Teacher Certification in Family and Consumer Sciences, B.S.

Human development and family sciences majors can choose an option that includes teacher certification in family and consumer sciences. The concentration provides a background in all family and consumer sciences subject areas and a certification to teach in Texas public school systems grades six through twelve. Students seeking teacher certification must meet all requirements outlined in the College of Education section of this catalog. To be recommended for certification, graduates must achieve satisfactory performance on the TExES Certification Exam, an examination prescribed by the State Board of Education.

Communication Literacy Requirement. The primary goal of the B.S. in Human Development and Family Sciences with Teacher Certification in Family and Consumer Sciences is to prepare well-qualified educators who can successfully communicate in a variety of settings and with a variety of audiences. This degree will use a sequence of four courses to help students achieve expected communication literacy in this program. The courses should be taken in the sequence indicated to build upon the skills and knowledge acquired in the previous courses. The CL courses for the B.S. in Human Development and Family Sciences with Teacher Certification in Family and Consumer Sciences are FCSE 3301, 4302, 4325, and 4012, (or HRM 4316 for B.S. in Restaurant, Hotel, and Institutional Management students).

Human Development and Family Sciences, Undergraduate Minor

A student may minor in Human Development and Family Sciences by completing 18 hours of HDFS coursework, 9 hours of which must be upper level. Courses for this minor should be finalized and approved in conjunction with the student's major and minor advisors. A grade of C or higher is required for each course taken in this 18-hour minor.

Adult Health and Wellness, Undergraduate Certificate

The Human Development and Family Sciences department offers an Undergraduate Adult Health and Wellness Certificate. Students completing this certificate will have a broad understanding of adult health and wellness within physical, social, emotional, and cognitive domains. This certificate program will help students prepare to work with adult populations in professional health, education, and other settings. Courses may be taken in any order. Students must earn a C or higher in each course.

- Required courses (9 hours): HDFS 3318, 3319, and 3332
- Elective courses (Select 3 credit hours from the following): HDFS 2300, 2322, 3321; WGS 2301, 3321

Human Development and Family Sciences, B.S. / M.S.

The Accelerated Bachelor's to Master's (ABM) degree is a program option for students planning to pursue a variety of areas in the job market including, but not limited to, working with children, youth and families, social and human services, community development, extension services, health and wellness programs, patient experiences or advocacy, professional health careers, and higher education. Qualified undergraduate students are provided the opportunity to complete the graduate application process during their junior year when 90 hours with a GPA of 3.0 or higher have been successfully completed and, if accepted, begin graduate work during their senior year to finish both a bachelor's and master's degree in a total of five years. Students will complete 9 hours of graduate coursework in Human Development and Family Sciences that will count toward both the undergraduate and master's degree requirements. Both a thesis and non-thesis option are available. Undergraduate students are advised by the COHS Advising and Retention Office during their application and undergraduate course work. When students begin to take graduate courses during their fourth year, they will also be advised by a graduate program faculty member in HDFS.

Undergraduate Course Descriptions

Early Childhood (EC)

- 3301—Theories of Human Development and Family Sciences (3).** The major theories in human development and family studies. Course focuses on the meaning of theory to individual and family development over the lifespan. Implication of theory and program development and services are reviewed. (CL) [HDFS 3301] F, S.
- 3306—Understanding Child and Adolescent Behavior (3).** Development of strategies for promoting self-discipline, creative capacities, and positive relationships with children and adolescents. [HDFS 3306] F, S.
- 3310—Prenatal and Infant Development (3).** Study of how to promote the psychomotor, social-emotional, and cognitive-language development of infants from the prenatal period through the first two years in their interactions with caregivers, peers, and the environment. (CL) [HDFS 3310] F, S.
- 3311—Supervised Experiences with Infants and Toddlers (3).** Supervised experience with infants and toddlers. State law requires students to pass a background check. (CL) [HDFS 3311] F, S.
- 3312—Development During Childhood (3).** Examination of psychomotor, social-emotional, and cognitive-language development during childhood. (CL) [HDFS 3312] F, S.
- 3313—Supervised Experiences with Young Children (3).** Supervised experience with young children. State law requires students to pass a background check. (CL) [HDFS 3313] F, S.

Human Development and Family Sciences (HDFS)

- 2300—Gender Development: Life Span Perspectives (3).** Introduction to gender concepts and to the impact of gender on individual and family developmental processes. [WGS 2301] F, S.
- 2303—Life Span Human Development (3).** [PSYC2314] Introduction to the theories, processes, and enhancement of development for infants, young children, adolescents, and adults. Fulfills core Social and Behavioral Sciences requirement. F, S.
- 2305—Developmental Assessment of Young Children (3).** Discusses the goals, benefits, and uses of assessment techniques in tracking develop-

ment of young children. Emphasizes integration of family/professional perspectives in the development process. F, S.

- 2311—Introduction to Early Childhood (3).** [TECA1311] Introduction to the profession of early childhood focusing on developmentally appropriate practice, historical influences, program models, and current issues including legislation, public policy, and ethics. F, S.
- 2320—Basic Interpersonal Skills (3).** The study and application of interpersonal skills as they relate to various age levels and social contexts. F, S.
- 2322—Partnering: The Development of Intimate Relationships (3).** Intimate relationship development from adolescence through adulthood with an emphasis on relationship processes, diversity in types of partnering, and developmental/contextual variations in relationships. Fulfills core Social and Behavioral Sciences requirement. F, S.
- 3301—Theories of Human Development and Family Sciences (3).** The major theories in human development and family studies. Course focuses on the meaning of theory to individual and family development over the lifespan. Implication of theory and program development and services are reviewed. (CL) [EC 3301] F, S.
- 3306—Understanding Child and Adolescent Behavior (3).** Examines development and strategies for promoting social and emotional health and wellbeing and positive behavior and relationships with children and adolescents. [EC 3306] F, S.
- 3310—Prenatal and Infant Development (3).** Study of how to promote the psychomotor, social-emotional, and cognitive-language development of infants from the prenatal period through the first two years in their interactions with caregivers, peers, and the environment. (CL) [EC 3310] F, S.
- 3311—Supervised Experiences with Infants and Toddlers (3).** Supervised experience with infants and toddlers. State law requires students to pass a background check. [EC 3311] F, S.
- 3312—Development During Childhood (3).** Examination of psychomotor, social-emotional, and cognitive-language development during childhood. (CL) [EC 3312] F, S.
- 3313—Supervised Experiences with Young Children (3).** Supervised experience with young children. State law requires students to pass a background check. [EC 3313] F, S.
- 3316—Development in Adolescence (3).** Enhancing the psychosocial, social-emotional, and cognitive-language development of adolescents within their interactions with peers, adults, and the culture. S.
- 3318—Development in Young Adulthood (3).** Examination of individual developmental processes during the transition to adulthood and the first two decades of adult life.
- 3319—Development in Middle Adulthood (3).** Examination of individual developmental processes from the mid-life transition through the middle years of adult life.
- 3320—Contemporary Families (3).** Analysis of family interaction patterns with an introduction to family research. A study of family heritage, development, and networks. Emphasizing sociocultural variations of families. (CL) F, S.
- 3321—Human Sexuality from a Life Span Perspective (3).** Human sexuality from a life span perspective, with emphasis on developmental, familial, and societal factors that influence individual sexuality. [WGS 3321] F, S.
- 3322—The Family in the Community (3).** Study of community resources as they relate to welfare of children and families. F, S.
- 3324—Dynamics of Family Interaction (3).** Examination of interpersonal processes in the family and other intimate groups. Conceptual analysis of family interaction patterns (e.g., communication, roles, relationships, power, decision making, love, conflict). F, S.
- 3326—Families in Crisis (3).** Prerequisite: Sophomore or higher standing. Examination of theories and strategies for helping families deal productively with crises. Consideration of child exceptionality, child abuse, unemployment, divorce, rape, alcoholism, death, and other crisis events. F, S.
- 3331—Parenting (3).** Basic principles and skills for parent effectiveness. Includes strategies for inclusion of parents in the developmental-educational processes of the child.
- 3332—Aging in Families (3).** Examination of aging individuals in family context with emphasis on intergenerational relationships and needs that arise from life transitions, living arrangements, employment, and health. F, S.
- 3350—Development in Cross-Cultural Perspective (3).** Critical examination of developmental and family theory and research across a diverse range of cultures. (CL) F, S.
- 3360—Family Life Education and Ethics (3).** A problem-based approach to community family life education, with particular emphasis on teaching methodologies and professional ethics. F, S.
- 3370—Health, Safety, and Nutrition (3).** Covers planning, promoting, and maintaining healthy and safe learning/care environments. Topics include childhood illnesses, healthy lifestyles, first aid, food prepara-

tion, food allergies, and abuse. Offered online for GP-IDEA majors only.

- 3372—**Professional Development (3)**. Explores the professional role of teacher, administrator, or advocate in early childhood programs. Covers professionalism and ethics, identifying child abuse, and applying universal precautions. Offered online for GP-IDEA majors only.
- 3374—**Practicum I (3)**. Prerequisite: C or better in all Block 1 courses. Guided learning experience in an agency that provides services to children and families. Opportunity to implement theories and practices from early childhood classes. Offered online for GP-IDEA majors only.
- 3376—**Development of Curriculum for Children Ages Birth to Three (3)**. Prerequisite: C or better in all Block 1 courses. Covers assessment and documentation to inform curriculum, planning and evaluation of developmentally appropriate activities, and conveying curriculum information to families. Offered online for GP-IDEA majors only.
- 3378—**Development of Curriculum for Children Ages Four to Eight (3)**. Prerequisite: C or better in all Block 1 courses. Covers assessment and documentation to inform curriculum, planning and evaluation of developmentally appropriate activities, and conveying curriculum information to families. Offered online for GP-IDEA majors only.
- 3379—**Assessing Young Children and Their Environments to Enhance Development (3)**. Prerequisite: C or better in all Block 1 courses. Selection, evaluation, and use of appropriate tools for children birth through age eight. Emphasis is on ethics, validity, multicultural sensitivity, and use with special needs. Offered online for GP-IDEA majors only.
- 3380—**Understanding and Adapting for Developmental Differences (3)**. Prerequisite: C or better in all Block 1 courses. Knowledge of disability conditions, assessment and identification, interventions in inclusive environments, and collaborations among family members and service providers. Offered online for GP-IDEA majors only.
- 3381—**Practicum II (3)**. Prerequisite: C or better in all Block 2 courses. Guided learning experience in an agency that provides services to children and families. Opportunity to implement theories and practices from early childhood classes. Offered online for GP-IDEA majors only.
- 3383—**Diversity in the Lives of Young Children and Families (3)**. Prerequisite: C or better in all Block 2 courses. Exploration of cultural diversity in daily life and beliefs in families with young children. Offered online for GP-IDEA majors only.
- 3384—**Working with Families (3)**. Prerequisite: C or better in all Block 2 courses. Application of an ecological model to the understanding of variation in parental roles, perspectives, relationships, approaches, and challenges. Offered online for GP-IDEA majors only.
- 3385—**Technology and Young Children (3)**. Prerequisite: C or better in all Block 2 courses. Examines how technology impacts the development of young children and how technology can be used to enhance teaching and learning. Offered online for GP-IDEA majors only.
- 3390—**Research Methods in Human Development and Family Sciences (3)**. Introduction to methods of research in human development and family studies. F, S.
- 3686—**Practicum III: Capstone Experience (6)**. Prerequisite: C or better in Practicum I and II and all Block 1 and 2 courses. Application of developmentally appropriate teaching techniques and skills, actual teaching experience, and development feedback. Offered online for GP-IDEA majors only. (CL)
- 4000—**Individual Study (VI-6)**. Prerequisite: Consent of instructor. Teaching assistantships, independent coursework, or student-initiated research experience. F, S.
- 4301—**Child Life, Healthcare, and Families (3)**. Introduces students to the scope of child life practice, the impact of illness and injury on children and families, patient experiences, family centered care, therapeutic play, and psychological preparation for working in a variety of healthcare settings. Online course.
- 4306—**Preparing Environments for Children (3)**. Prerequisites: 2.5 TTU GPA and C or better in HDFS 3311 or HDFS 3313. Utilizing developmental principles acquired by the student in previous child development courses, this course focuses on the application of these principles to the design of environments for children. F, S.
- 4310—**Managing Early Childhood Programs (3)**. Prerequisite: 2.5 TTU GPA. Survey of principles and procedures for managing and implementing various types of childcare and early childhood programs.
- 4314—**Community Practicum in Human Development and Family Sciences (3)**. Prerequisites: C or better in HDFS 3322 and senior standing. Supervised experiences in established career-related positions; focus selected on basis of professional interest (some sites may require a background check). May be repeated once for credit. (CL) F, S.
- 4320—**Research in Human Development and Family Sciences (3)**. Prerequisite: C or better in HDFS 3390 or consent of instructor. Supervised faculty-initiated research experience in selected areas. May be repeated twice for credit. F, S.
- 4343—**Advanced Topics in Human Development and Family Sciences (3)**. Focuses on recent developments in theory, philosophy, research, and/or applied approaches to human development and family studies. May be repeated once for credit.
- 4390—**Program Development and Evaluation (3)**. Knowledge and experience in the practice of program development and evaluation. Class evaluates an ongoing program.

Department of Nutritional Sciences

Nikhil V. Dhurandhar, Ph.D., Chairperson

Horn Distinguished Professors: Dhurandhar, Moustaid-Moussa

Professors: Murimi, Oldewage-Theron

Associate Professors: Hegde, Niraula, Shin

Assistant Professors: Galyean, Hefner, Jun, Reddy

Associate Professors of Practice: Booe, Childress

Assistant Professors of Practice: Gandy, Kerin

Research Assistant Professor: Zu

Lecturer: Palacios

Adjunct Faculty: Simnacher

CONTACT INFORMATION: 402 Human Sciences Bldg. | 1301 Akron Ave.

Box 41270 | Lubbock, TX 79409-1270 | T 806.742.5270

www.depts.ttu.edu/hs/ns

About the Department

This department supervises the following degree programs:

- Bachelor of Science in Nutritional Sciences and Dietetics
- Bachelor of Science in Nutrition
 - Pre-Professional Health Careers Concentration
 - Secondary Teacher Certification in Hospitality, Nutrition, and Food Science Concentration
- Master of Science in Nutritional Sciences (Face-to-Face or Online)
- Master of Science in Nutrition and Dietetics (Online)
- Doctor of Philosophy in Nutritional Sciences

In addition to the regular degree programs, the department provides an eight-month post-baccalaureate dietetic internship that is accredited by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) of the Academy of Nutrition and Dietetics and meets the Commission on Dietetic Registration (CDR) eligibility requirements for dietetic registration. For more information, see <https://www.depts.ttu.edu/hs/intern/index.php>.

Mission. The Department of Nutritional Sciences endeavors to advance the field of nutritional sciences and equip individuals toward making a positive impact on the health of society through quality education, research, and service.

Transfers. Students must have a 3.0 overall GPA to transfer into the Nutritional Sciences and Dietetics degree or the Nutrition degree. This includes students who transfer from another university as well as from another program at Texas Tech University and second-degree students. Nutrition courses transferred into these degrees are at the discretion of the department and are approved case by case. Students who have successfully passed a basic nutrition course with a C or better are eligible to take the department exemption exam for NS 1410 - Science of Nutrition. Other nutrition courses can be evaluated upon submission with a course description and syllabus. Please see the advisor for details.

Communication Literacy Requirement. Communication literacy in Nutritional Sciences is evidenced by competence in locating, reading, interpreting, and presenting nutrition information. This is accomplished through critiquing scientific literature as well as mainstream publications and also through both written communication and public speaking to a variety of audiences with varied educational backgrounds. These communication skills are measured in three required courses. Courses in the CL plan are as follows: NS 2380, 4330, 4350.

Graduate Programs

For information on graduate programs offered by the Department of Nutritional Sciences, visit the Graduate Programs section of the catalog on page 394.

Undergraduate Programs

Nutrition, B.S.

This program emphasizes the role of nutrition in the health and well-being of people. Depending on the concentration chosen, the graduate will be prepared for nutrition and pre-professional health careers in hospitals, schools, colleges, business, and government agencies. Nutritional sciences courses also contribute to the science and health education of students who take the introductory level classes or take additional classes for a minor in nutrition. Students who graduate with this degree must earn a C or better in all major and supporting coursework. Any variation from this is subject to department approval.

Pre-Professional Health Careers Concentration. This concentration requires a strong science background supported with courses in chemistry, biochemistry, biology, human anatomy and physiology, and microbiology. Students will study science of nutrition, nutrition in the life cycle, medical terminology, medical nutrition therapy, community nutrition, and research methods in nutrition. Depending on the student's post-graduate plans, the degree plan may vary to ensure the student has completed all courses required for entrance into a chosen post-graduate program such as medical, dental, pharmacy, chiropractic, nursing, physical therapy, occupational therapy, optometry, physician assistant, etc.

Students must have a 3.0 overall GPA to transfer into this concentration. This includes students who transfer from another university as well as from another program at Texas Tech University and second-degree students. Nutrition courses transferred into these degrees are at the discretion of the department and are approved case by case. Students who have successfully passed a basic nutrition course with a C or better are eligible to take the department exemption exam for NS 1410. Other nutrition courses can be evaluated upon submission with a course description and syllabus. Please see an advisor for details.

Secondary Teacher Certification in Hospitality, Nutrition, and Food Science. This concentration offers a career path for those interested in teaching nutrition and food sciences at the middle school and high school levels (grades 8-12). Students complete a broad base of nutrition courses along with those that lead to teacher certification. Graduates will be eligible for a Specialized Certificate in Hospitality, Nutrition, and Food Science to teach nutrition and food sciences in secondary schools. Students seeking certification must meet all requirements outlined in the College of Education section of this catalog. Admission requirements for the teaching program include the completion of approximately 60 hours with an overall 2.75 GPA or better and a satisfactory level of performance on the Accuplacer test or equivalent. Other requirements include a 2.75 GPA or better in professional education courses in the teaching field and a grade of C or better in all required concentration and support courses. To be recommended for certification, graduates must achieve a satisfactory level of performance on the TExES examinations prescribed by the State Board of Education.

Nutritional Sciences and Dietetics, B.S.

The nutritional sciences and dietetics bachelor's degree is intended for students who plan to seek a graduate degree and post-graduate dietetic internship and eventually earn professional credentials as a Registered Dietitian / Registered Dietitian Nutritionist. As a registered dietitian, graduates will find opportunities to work within many types of organizations, including hospitals, clinics, community agencies, private consulting, sports nutrition, long-term care, extension services, food service operations, corporate wellness or fitness centers, research areas, pharmaceutical companies, and food and nutrition-related businesses and industries.

The Didactic Program in Dietetics at Texas Tech University is credentialed by the Accreditation Council for Education in Nutrition and Dietetics of the Academy of Nutrition and Dietetics, 120 South Riverside Plaza, Ste. 2190, Chicago, IL 60606-6995. More information can be found by visiting <https://www.eatrightpro.org/acend> or calling 800.877.1600 ext. 5400. The curriculum is designed to achieve the core knowledge and competencies necessary to prepare graduates for an internship program or to pursue careers in the food, wellness and health, nutrition, or food service industries, such as those listed above. This option requires a strong science background supported with courses in chemistry, biochemistry, human anatomy and physiology, and microbiology/food sanitation. Students will study the science

Nutrition, B.S. (Pre-Professional Health Careers Concentration) Recommended Curriculum

FIRST YEAR

Fall

- ☐ HUSC 1100 - Introduction to Human Sciences (1 SCH) **OR**
 - ☐ RRP 1100 - RaiderReady: First Year Seminar (1 SCH)
- ☐ ENGL 1301 - Essentials of College Rhetoric (3 SCH)
- ☐ CHEM 1307 - Principles of Chemistry I (3 SCH) **AND**
 - ☐ CHEM 1107 - Experimental Principles of Chemistry I (1 SCH)
(Concurrent enrollment is required.)
- ☐ POLS 1301 - American Government (3 SCH)
- ☐ MATH 1320 - College Algebra (3 SCH) (or higher)

TOTAL: 14

Spring

- ☐ ENGL 1302 - Advanced College Rhetoric (3 SCH) (Prerequisites apply.)
- ☐ HIST 2300 - History of the United States to 1877 (3 SCH)
- ☐ NS 1410 - Science of Nutrition (4 SCH)†
- ☐ CHEM 1308 - Principles of Chemistry II (3 SCH) (Prerequisites apply.)† **AND**
 - ☐ CHEM 1108 - Experimental Princ. of Chemistry II (1 SCH) (Prerequisites apply.)†
- ☐ POLS 2306 - Texas Politics and Topics (3 SCH)

TOTAL: 17

SECOND YEAR

Fall

- ☐ NS 2310 - The Science of Food (3 SCH)
- ☐ CHEM 3305 - Organic Chemistry I (3 SCH) (Prerequisites apply.)† **AND**
 - ☐ CHEM 3105 - Experimental Organic Chemistry I (1 SCH) (Prerequisites apply.)
- ☐ BIOL 1403 - Biology I (4 SCH)
- ☐ ZOOL 2404 - Human Anatomy and Physiology II (4 SCH)†

TOTAL: 15

Spring

- ☐ CARS 2300 - Communication, Civility, and Ethics (3 SCH)
- ☐ BIOL 1404 - Biology II (4 SCH) (Prerequisites apply.)
- ☐ CHEM 3306 - Organic Chemistry II (3 SCH)† **AND**
 - ☐ CHEM 3106 - Experimental Organic Chemistry II (1 SCH) (Prerequisites apply.)
- ☐ MATH 2300 - Statistical Methods (3 SCH) (Prerequisites apply.)
- ☐ HIST 2301 - History of the United States since 1877 (3 SCH)

TOTAL: 17

THIRD YEAR

Fall

- ☐ NS 4220 - Medical Terminology (2 SCH) (Prerequisites apply.)
- ☐ NS 3340 - Nutrition in the Lifecycle (3 SCH) (Prerequisites apply.)
- ☐ NS 3302 - Survey of Biochemistry (3 SCH) (Prerequisites apply.)
- ☐ PHYS 1403 - General Physics I (4 SCH)

TOTAL: 12

Spring

- ☐ PHYS 1404 - General Physics II (4 SCH) (Prerequisites apply.)
- ☐ NS 4320 - Nutritional Biochemistry (3 SCH) (Prerequisites apply.)
- ☐ NS 3310 - Intro. to Medical Nutrition Therapy (3 SCH) (Prerequisites apply.)
- ☐ HS Core: ADRS 2310, HDFS 2322, OR PFI 3301 (3 SCH)
- ☐ NS 4360 - Introduction to Nutrition Research (3 SCH) (Prerequisites apply.)

TOTAL: 16

FOURTH YEAR

Fall

- ☐ NS 4340 - Medical Nutritional Therapy I (3 SCH) (Prerequisites apply.)
- ☐ NS 4330 - Community Nutrition (3 SCH) (Prerequisites apply.)
- ☐ NS 2380 - Cultural Aspects of Food (3 SCH) (Restrictions apply.)
- ☐ NS 3325 - Sports Nutrition (3 SCH) (Prerequisites apply.) **OR**
 - ☐ ADRS 4329 - Eating Disorders (3 SCH) (Prerequisites apply.) **OR**
 - ☐ FCSE 3303 - Ed. Processes in Fam. & Consumer Sci. Professions (3 SCH)
(Prerequisites apply.)
- ☐ MBIO 3401 - Principles of Microbiology (4 SCH)

TOTAL: 16

Spring

- ☐ NS 4350 - Emerging Issues in Food Science and Nutrition (3 SCH)
(Prerequisites or restrictions apply.)
- ☐ NS 4341 - Medical Nutritional Therapy II (3 SCH) (Prerequisites apply.)
- ☐ Elective (1 SCH) (INTS 3110 or PFI 4101 is suggested.)
- ☐ Creative Arts (3 SCH)* (MCOM 2301 is suggested.)
- ☐ Language, Phil., & Culture Elective (3 SCH)* (MCOM 2330 is suggested.)

TOTAL: 13

TOTAL HOURS: 120

* Choose from core curriculum requirements.

† It is highly recommended that students enroll in the in-person class rather than the online section.

Nutrition, B.S. (Secondary Teacher Certification) Recommended Curriculum

FIRST YEAR

Fall

- ☐ HUSC 1100 - Introduction to Human Sciences (1 SCH) **OR**
 - ☐ RRP 1100 - RaiderReady: First Year Seminar (1 SCH)
- ☐ ENGL 1301 - Essentials of College Rhetoric (3 SCH)

Note: It is highly recommended that students enroll in the face-to-face (rather than the online) section of NS 1410, NS 3340, NS 4350, and ZOOL 2404.

of nutrition, nutrition in the life cycle, medical nutrition therapy, community nutrition, food science, and research methods in nutrition.

Acceptance into the Didactic Program in Dietetics (DPD) is granted after completing 60 hours and is based on an overall 3.0 GPA, an average of a 3.0 GPA after the first three NS courses, and a minimum of a 2.0 GPA in the first three chemistry courses required on the degree plan, as well as human physiology. A link to the exact courses and criteria for DPD acceptance may be found on the Texas Tech Nutritional Sciences and Dietetics webpage. Once accepted, students are eligible to complete upper-level NS courses. Students who successfully complete the academic program with a C or better in all major and supporting coursework receive a verification statement that qualifies them to apply for a dietetic internship (such as the post-baccalaureate internship offered at Texas Tech University).

Internship. The dietetic internship consists of a minimum of 1,000 hours of supervised practice to gain the competencies needed to practice as an entry-level dietitian. Upon completion of the internship and a graduate degree, graduates are eligible to take a national Examination for Dietitians administered by the Commission on Dietetic Registration (CDR) to obtain the credential of Registered Dietitian Nutritionist. Students who graduate with this degree must earn a C or better in all major and supporting coursework. Any variation from this is subject to department approval.

Nutrition, Undergraduate Minor

A student may minor in nutrition by completing a minimum of 18 hours of selected coursework. Specific courses for the nutrition minor are finalized and approved by the student in conjunction with the major and minor advisors. Required courses are NS 1410 - Science of Nutrition and NS 3340 - Nutrition in the Lifecycle and an additional four courses from the following list: NS 2310, 2330, 2380, 3310,* 3325, 3332, 4220, 4301, 4330, and 4350 to equal a minimum of 18 hours. A minimum of 9 upper-level hours must be completed for the minor in nutrition. This minor can be completed online. For additional information see <http://www.depts.ttu.edu/hs/ns/minor.php>.

* NS 3310 - Introduction to Medical Nutrition Therapy is highly recommended for those pursuing degrees with a pre-professional health focus. Students will acquire experience with patient assessment, reading labs, electronic charting, interprofessional health care interaction, and application of medical cases through case study scenarios.

Undergraduate Course Descriptions

Nutritional Sciences (NS)

1201—Introduction to Dietetics (2). Prerequisites: NS Dietetic majors only, 2.5 TTU GPA. Introduction to the field of dietetics including registration, ethical, legal, and professional issues.

1325—Nutrition, Foods, and Healthy Living (3). [BIOL1322, 1323; HECO1322] No nutrition or nutritional sciences and dietetics majors. An introduction to the nutrients, their content in food, energy utilization, and the role of diet in health and disease. F, S.

1410—Science of Nutrition (4). Study of the nutrients found in foods and utilization of those nutrients by the body. Designed to convey the basic principles of nutritional science. Partially fulfills core Life and Physical Sciences requirement. F, S, SS.

2310—The Science of Food (3). Prerequisite: Nutrition, nutritional sciences and dietetics majors, minors, and concentrations only. Fundamental chemical and physical scientific principles associated with foods. Basic principles underlying selection, preparation, and preservation of food in relation to quality standards and acceptability. F, S.

2330—Nutrition for Health, Fitness and Sport (3). Introduces students to nutrients, their content in food, energy utilization, and their role in health, fitness, and sports. Particular attention will focus on body weight, weight loss, and weight gain through nutrition and exercise.

2380—Cultural Aspects of Food (3). A study of the historical, social, psychological, economic, religious, and aesthetic significance of food customs in various cultures. (CL) F, S, SS.

3302—Survey of Biochemistry (3). Prerequisites: C or better in CHEM 2303 and CHEM 2103 or CHEM 3305 and CHEM 3105, nutrition and nutritional sciences and dietetics majors only. Survey of general biochemistry.

3310—Introduction to Medical Nutrition Therapy (3). Prerequisites: Nutrition majors or minors with a 2.75 TTU GPA; NS 1410, CHEM 1308/ CHEM 1108, ZOOL 2404 or instructor consent. Didactic Program in Dietetics approval. Role of dietitian in modern health care system,

including the legal aspects of the health care industry. Techniques of assessment, nutrition care planning, and documentation.

- 3325—**Sports Nutrition (3)**. Prerequisite: C or better in NS 1325 or NS 1410. Nutrition concepts and applied nutritional practices for the competitive and amateur athlete and physically active individual. F, S.
- 3332—**Fundamentals of Human Health Behavior Change (3)**. Behavioral and psychological theory that forms the basis for assisting and motivating people to make health behavior changes. S.
- 3340—**Nutrition in the Lifecycle (3)**. Prerequisites: Junior standing; C or better in NS 1410 or instructor consent. Didactic Program in Dietetics approval. Factors that affect diet and nutrition throughout the lifecycle. F, S.
- 3360—**Nutrition Education (3)**. Prerequisite: C or better in NS 1410. Nutrition education and resources for diverse populations across the lifespan. F.
- 4000—**Individual Study (V1-6)**. Prerequisite: Written consent of supervising faculty member. May be repeated for up to 6 hours credit.
- 4130—**Field Work in Food and Nutrition (1)**. Prerequisite: C or better in NS 1410 and NS 3340. Corequisite: NS 4330. Preplanned experiences with evaluation of student performance in developing, recording, delivering, and evaluating nutrition education lessons for different population groups throughout the life cycle.
- 4220—**Medical Terminology (2)**. Terminology in describing normal anatomical, physiological, and psychological conditions and those related to disease and its treatment. For students entering dietetic and allied health professions. F, S, SS. (online only)
- 4301—**Nutrition and Chronic Diseases (3)**. Prerequisite: C or better in NS 1410. Examines the link between nutrition and chronic diseases including contributing factors and management. Online. [NS 5310]
- 4311—**Dietetic Counseling Strategies (3)**. Prerequisites: NSCD majors only, C or better in NS 3310. Application of interviewing, counseling, and educational techniques in dietetics, including individual and group methods. S.
- 4315—**Professional Issues in Dietetics (3)**. Prerequisites: 3.0 TTU GPA; C or better in NS 3310 or instructor consent; nutrition majors only. Prepares students for professional careers in dietetics and/or dietetic internships. Final fall semester prior to graduation. F.
- 4320—**Nutritional Biochemistry (3)**. Prerequisite: C or better in NS 3302 or CHEM 3310 or instructor consent. Concepts of normal nutrition in relation to the chemistry and physiology of the human body.
- 4330—**Community Nutrition (3)**. Prerequisite: Senior standing, C or better in NS 1410 and NS 3340. Corequisite: NS 4130. Study of nutrition-related problems in the community and the various resources, activities, agencies, and programs involved in health promotion and disease prevention. (CL) F, S.
- 4340—**Medical Nutritional Therapy I (3)**. Prerequisites: C or better in NS 3310 or instructor consent. Prerequisite or corequisite: NS 4220. Nutritional assessment and oral, enteral, and parenteral nutritional support. Pathophysiology, medical management, nutritional assessment, and nutritional therapy as they relate to protein energy malnutrition; trauma; obesity; diabetes mellitus; and endocrine, pancreatic, and gallbladder disorders. F, S.
- 4341—**Medical Nutritional Therapy II (3)**. Prerequisites: C or better in NS 4340 or instructor consent. Pathophysiology, medical management, nutritional assessment, and nutritional therapy as they relate to disorders of the hepatic, gastrointestinal, cardiovascular, hematopoietic, immune, renal, and pulmonary systems; cancer; diseases of childhood; and pregnancy. F, S.
- 4350—**Emerging Issues in Food Science and Nutrition (3)**. Prerequisites: C or better in NS 1410. Readings, discussion, and analysis of trends and developments in food science and nutrition. (CL) F, S.
- 4352—**Nutrition Technology I-Physiology (3)**. Prerequisites: NS 3340, NS 4351 or instructor approval. Exploration of the relationship between human physiology and nutrition, emphasizing current management strategies and emerging technological solutions.
- 4353—**Nutrition Technology II-Pathology (3)**. Prerequisites: NS 4352 or instructor approval. Explores current and emerging technologies integrated into the management of nutrition-related diseases.
- 4360—**Introduction to Nutrition Research (3)**. Introduces students to the basics of research including purpose, design, analysis, interpretations, and the different approaches to nutrition research. F, S.
- 4370—**Institutional Food Service Management (3)**. Prerequisites: C or better in NS 3310 or instructor consent. Overview of management principles with an emphasis on strategic management, risk management, facility layout evaluation and equipment selection, human resources management, and financial management of food service systems.
- 4470—**Institutional Food Service Systems (4)**. Prerequisites: C or better in NS 3310 or instructor consent. Overview of institutional food service systems, with emphasis on menu planning, purchasing, quantity food production, delivery systems, meeting special diet needs, and quality improvement. Nutrition majors only.

About the School

The School of Financial Planning offers a robust and high-quality academic curriculum with a minor in Personal Finance; B.S. in Applied Personal Finance; and a B.S., M.S., and Ph.D. in Personal Financial Planning. An additional Professional M.S. in Personal Financial Planning is offered at TTU DFW. All Personal Financial Planning programs are registered with the Certified Financial Planner Board of Standards and meet the education requirement for the CFP® certification. All programs meet the education requirement for the AFC® certification. AFC® and CFP® certifications are nationally recognized and are not regulated by state licensure boards. Three dual graduate degrees are offered: J.D./M.S. in PFP, M.B.A./M.S. in PFP, and M.S.A. Tax/M.S. PFP, as well as graduate certificates in Charitable Financial Planning and Financial Health and Wellness and an accelerated PFP B.S. to M.S. program (ABM).

- Master of Science in Personal Financial Planning / Master of Science in Accounting
- Master of Science in Personal Financial Planning / Master of Business Administration

School and Program Purpose, Vision, and Mission. A purpose statement for the School and summary for each academic content area is outlined below.

School Purpose. To shape and advance the future of the personal financial professions.

School Vision. By 2030, we will be a global leader of innovative research, accessible education, and impactful outreach and engagement to support the personal financial professions and their communities.

School Mission. To educate students to the highest standards of excellence, foster growth, produce innovative research, and serve the global community through outreach and engagement.

Program Purpose and Summary

Personal Financial Planning. To shape and advance the future of the financial planning profession as the premier program for financial planning education, research, community engagement, and practice excellence.

Students majoring in personal financial planning at the B.S. and M.S. levels are prepared for careers and leadership positions in the financial planning profession. Dual degrees are offered in allied professions in business (M.B.A.), accounting (tax), and law (J.D.) to maximize impact and reach. The ABM program provides an accelerated pathway for B.S. students to earn their M.S. degree for a competitive advantage in management and leadership positions early in their career. The Ph.D. program prepares students to lead academic programs, teach, and conduct research in a higher education, corporate, or government setting which drives the creation of new knowledge in how we think, act, and communicate about the practice of financial planning on a global scale. The programs feature extensive coursework in financial planning, ensuring a strong foundation in financial planning content with direct connections to real-world professional applications. Students are then able to apply their new knowledge through many community-serving organizations which offer valuable experiential learning opportunities while also allowing students to make a positive impact in the world around them. CFP® certification is nationally recognized and is not regulated by state licensure boards.

Accelerated Bachelor's to Master's Degree Program. The accelerated bachelor's to master's degree program allows academically capable students to accelerate their undergraduate degree programs, begin graduate work in their fourth year, and finish both the bachelor's and master's degrees in a total of approximately five-and-a-half years if enrolled full time. This is accomplished by allowing 9 hours of graduate coursework in personal financial planning to count toward both the undergraduate degree and the master's degree.

Personal Finance. To enhance healthy financial futures through education and application.

A student who is interested in obtaining a strong foundation in Personal Finance can complete a Studies in Personal Finance (SPF) minor or a Bachelor of Science in Applied Personal Finance. This program is designed for students who wish to pursue career opportunities in various channels in the financial services industry. It provides flexibility for students to explore personal finance applications for consumer financial services companies, banks, credit unions, financial literacy education, non-profits, government/military, and private practice as an Accredited Financial Counselor (AFC®). AFC® certification is nationally recognized and is not regulated by state licensure boards.

Financial Health and Wellness. To equip professionals with the knowledge, skills, and practical tools necessary to promote well-being across dynamic settings.

The Financial Health and Wellness graduate certificate program focuses on creating feelings of contentment and achievement with one's current and future financial status. Courses teach both the personal skill sets and the discovery methodologies necessary to succeed as a practitioner of holistic financial planning.

Charitable Financial Planning. To equip financial and nonprofit professionals with an understanding of the technical strategies and client decision-making processes related to major and complex charitable gifts of wealth.

The Certificate in Charitable Financial Planning is intended for those who wish to develop a specialty in the area of planned giving, including complex techniques involving private foundations, charitable remainder trusts, charitable lead trusts, donor advised funds, life insurance, and remainder interests. Students also will review and discuss the latest academic research on charitable giving motivations and fundraising strategies.

Experiential Learning. Students who have taken specific coursework in personal financial planning have an opportunity to implement their skills in a practical setting through participation in outreach programs and student organizations. Student members have an opportunity to accumulate volunteer hours toward professional designations including the CFP® and AFC®. Red to Black® is dedicated to helping students and their families navigate finances with confidence. Our programs provide the tools, knowledge, and personalized support needed to make smart financial decisions now and in the future. With workshops, resources, and one-on-one coaching, Red to Black® can help you LEARN how to manage finances, PLAN for upcoming expenses, and ACT to build a strong financial future. Whether planning for college or managing current expenses, we are here to help you thrive financially! There are three levels of student membership: Financial Advocates (must be currently enrolled in or have completed at least one

PPF or PFI class), Financial Educators (must be currently enrolled in or have completed PFI 2301/PPF 5371), and Financial Coaches (must have completed PFP 3330/PPF 5377, PFI 3320 (PFI 3321*), PFI 3320/PFI 3322 or PFP 5371). For more information, email Red to Black at redtoblack@ttu.edu.

* PFI 3321 no longer offered.

The [KEY \(Knowledge Empowering You\) Outreach Program](#) utilizes Texas Tech University School of Financial Planning students to provide educational outreach and one-on-one financial coaching in the Lubbock community at the Charles Schwab Foundation Personal Financial Planning Clinic. KEY Outreach is comprised of Personal Financial Planning and Applied Personal Finance students who have completed specific coursework in the areas of financial planning, financial literacy, and financial communication as members of the organization. The members deliver educational programming and financial coaching to adults and children in the Lubbock community in the topic areas of cash, credit, coverage, college, and career. Students must commit to a one-year membership and be in good academic standing with the School of Financial Planning. KEY Educators must have completed PFI 2301 and/or PFP 2315, while KEY Coaches must have completed PFI 2301, PFP 2315, and PFI 3320 and/or PFI 3322 to be eligible to apply.

The Charles Schwab Foundation Personal Financial Planning Clinic at Texas Tech University is a community-based outreach endeavor of the School of Financial Planning focused on promoting family financial resiliency and empowerment by offering no-cost one-on-one financial coaching to all members of the Lubbock community. As a financial coach, financial planning students have the opportunity to develop and sharpen a wide range of skills, including communication, interpersonal skills, problem-solving, and empathy. These skills are not only essential for a career in financial planning but are also transferable to various other professional and personal contexts.

Graduate Programs

For information on graduate programs offered by the School of Personal Financial Planning, visit the Graduate Programs section of the catalog on page 396.

Undergraduate Programs

Applied Personal Finance, B.S.

The Bachelor of Science in Applied Personal Finance is designed for students who wish to pursue career opportunities in various channels in the financial management services industry. It provides flexibility for students to explore personal finance applications for consumer financial services companies, banks, credit unions, financial literacy education, non-profits, government/military, and private practice as an Accredited Financial Counselor (AFC®). AFC® certification is nationally recognized and is not regulated by state licensure boards.

Students are required to complete all major-related coursework and select one minor consisting of a minimum of 18 semester hours that complements their degree program. Students must complete the core curriculum required by the university for a total of 120 semester hours. This program is offered in an online format.

Students can select any minor they would like to satisfy the minor requirement. However, the following minors are recommended:

- Biobehavioral Health and Wellness (BBHW)
- Community, Family, and Addiction Sciences (CFAS)
- Family and Consumer Sciences Extension Education (FCSE)
- Human Development and Family Sciences (HDVF)
- Nutrition (NTRI)
- Personal Financial Planning (PPF)
- Retail Management (RTLM)
- Restaurant, Hotel, and Institutional Management (RHIM)
- Human Resource Development (HRDV)
- Organizational Leadership (ORGL)
- General Business (GB)

* Choose from core curriculum requirements.

Human Sciences Core Elective. Choose 1 course from: ADRS 2310; NS 1325; HDF5 2322.

For information on other minor areas, see individual program sections of the catalog.

Communication Literacy Requirement. Communication literacy in the Bachelor of Science in Applied Personal Finance is evidenced by competence in listening, writing, presenting, and reading. The required communication courses in this degree are PFI 1305, PFI 3322, and PFI 4330.

Personal Financial Planning, B.S.

Students majoring in personal financial planning are prepared for careers in financial planning in private practice, financial institutions, and governmental and social agencies. The program features extensive coursework in financial planning in addition to courses in business, accounting, economics, and communications. Students will develop a background for graduate study and for certifications as financial planners and counselors.

Students studying personal financial planning must earn a C or better in all support and major course requirements and maintain a 2.8 or better GPA to enroll in upper-division classes. The program also requires a paid residency in the financial planning/services industry, typically completed the summer prior to the senior year.

Communication Literacy Requirement. Communication literacy in Personal Financial Planning is evidenced by competence in writing, interacting verbally with individuals and groups, and communicating via technology and social media. The faculty endorse a sequenced approach to the Communication Literacy plan. Courses will include PFP 2315, 3198, 3330, and 4370.

Undergraduate Minors

Personal Financial Planning

A student may minor in personal financial planning (PFP) by completing a minimum of 28 hours to satisfy the education requirements set by CFP® Board of Standards. These courses include PFP 3350, 2315, 3330, 3374, 3385, 3378, 3486, 3397, and 4370. Prerequisites must be met prior to taking each course.

Studies in Personal Finance

A student who is interested in obtaining a strong foundation in Personal Finance can complete a Studies in Personal Finance (SPF) minor by completing a minimum of 18 hours from selected courses. Some of the minor is offered online only, and the entire minor can be taken online.

- Required course: PFI 2301
- Elective courses (Select 15 credit hours from the following): PFI 1302, 1305, 3320, 3322, 3341, 3361, 3381

Personal Financial Planning, B.S. / M.S.

The accelerated bachelor's to master's degree program allows academically capable students to accelerate their undergraduate degree programs, begin graduate work in their fourth year, and finish both the bachelor's and master's degrees in a total of approximately five-and-a-half years if enrolled full-time. This is accomplished by allowing 9 hours of graduate coursework in personal financial planning to count toward both the undergraduate degree and the master's degree.

Undergraduate Course Descriptions

Personal Finance (PFI)

- 1101—**Money for College Students (1).** Introduces basic financial decision-making regarding spending plans and use of consumer credit. Not for credit towards a PFP major. Distance and on campus.
- 1302—**Cultural and Gender Diversity in Personal Finance (3).** Introductory study of financial attitudes and behaviors affected by culture and gender, including financial issues related to career choice, debt accumulation, and expenditure patterns of affected groups in the United States.
- 1305—**Life, Love, and Money (3).** Examines the interconnected behaviors among various human relationships and money to improve decision-making abilities in the areas of money, relationships, time, and values. Fulfills core Social and Behavioral Sciences requirement. F, S, SS.
- 2101—**Money Management Basics: Major Purchases and Insurance (1).** Prerequisite: For nonmajors only. Introduction to basic financial deci-

sion making regarding the acquisition of transportation, housing, and other major purchases and ways to protect assets through the use of various types of insurance.

- 2301—**Personal Financial Literacy (3).** Focuses on developing a financially literate citizen who is capable of making sound financial decisions based on financial and life goals.
- 3101—**Money Management Basics: Personal Investing (1).** Not for credit towards the PFP major, PFP minor, or CFP® educational requirements. Introduces common savings and investment vehicles and strategies used by individuals and families to meet their financial goals.
- 3301—**Introduction to Personal Finance (3).** Introduction to personal finance, including goal setting, cash management, credit, insurance, taxes, housing, investment alternatives and retirement plans. Distance and on-campus. F, S, SS.
- 3320—**Consumer Financial Credit (3).** Prerequisite: PFI 2301. Introduces students to the various types of consumer credit, including credit cards, consumer loans, mortgages, student loans, an overview of consumer credit laws, and strategies to manage debt. Students will also learn about consumer finance legislation and resources surrounding credit, debt, and bankruptcy.
- 3321—**Personal Finance: Financial Counseling and Consumer Credit (3).** Prerequisite: C- or higher in PFI 2301, PFI 3301 or PFP 3301. Introduces students to the financial counseling process and provides a detailed examination of various types of consumer credit and strategies to manage debt. Distance, face-to-face, and service-learning. F, S, SS.
- 3322—**Consumer Financial Counseling (3).** Prerequisite: PFI 3320. Introduces students to the financial counseling profession, understanding money values, attitudes, and beliefs. A detailed examination of the financial counseling process, techniques, and strategies is included, along with communicating and applying counseling skills with clients.
- 3341—**Personal Finance: Financial Goal Strategies (3).** Prerequisite: PFI 2301, PFI 3301 or PFP 3301. Examines the process related to achieving major financial goals, including emergency fund planning, purchasing/leasing automobiles, buying/renting housing, and funding education and retirement. Distance. F, S, SS.
- 3361—**Personal Finance: Managing Risk (3).** Prerequisite: PFI 2301, PFI 3301 or PFP 3301. Focuses on the concepts of risk management and how to plan for managing risk, including building cash reserves, investing in human capital, and purchasing insurance. Also covers employee benefits, government entitlements, and estate planning. Distance. F, S, SS.
- 3381—**Personal Finance: Investing (3).** Prerequisite: PFI 2301, PFI 3301 or PFP 3301. Focuses on the fundamentals of personal investing to meet financial goals, including cash management, investing terminology, risk and return, tax implications of investments, stocks and bonds, mutual funds and exchange traded funds, portfolio management, and retirement income management. Distance. F, S, SS.
- 4101—**Getting Your First Job (1).** Introduces practical financial choices regarding employee benefits when starting a career, including basic understanding of job searching, tax planning, investment options, and risk management. Not for credit towards the PFP major, PFP minor, or CFP educational requirements. Distance and on campus. F, S, SS.
- 4330—**Consumer Finance Career Exploration (3).** Prerequisites: PFI 3361 and PFI 3381. Introduces students to various career channels available in consumer finance, including financial service companies, private practice, non-profit organizations, education/academia, and government/military. Certifications, licensing, other related designations, and professional organizations will also be covered.
- 4361—**Personal Finance: Advanced Topics and Case Studies (3).** Prerequisites: PFI 2301, PFI 3301 or PFP 3301; PFI 3321 or PFP 3321; PFI 3341; and PFI 3361 (concurrent enrollment) or PFI 3381 (concurrent enrollment). Students are expected to develop a sound financial plan; analyze information; justify financial decisions; and describe the process used to track, evaluate, and adjust financial plans to meet goals. Distance. F, S.

Personal Financial Planning (PFP)

- 2315—**Personal Financial Planning for Professionals (3).** Prerequisite: PFP majors, minors, and concentrations only; C or better in PFP 3301/PFI 3301 or PFI 2301. Prerequisite or corequisite: any 1000- or 2000-level MATH course, ECO 2301 or ECO 2302, and ENGL 2311 with a grade of C or better. Introduction to personal financial planning, including goal setting, cash management, credit, housing, education planning, and selected professional issues. (CL) F, S.
- 2330—**Financial Problem Solving (3).** Prerequisite or corequisite: PFP 2315. Methods and skills to assist individuals and families in resolving financial problems. Addresses personal and professional attitudes and behaviors toward money.

- 2333—Legal and Regulatory Aspects of Personal Financial Planning (3).** Prerequisite: C or better in PFP 2315; PFP majors and minors only. Application of law, ethics, and regulatory policies to personal financial planning. S.
- 3198—Professional Development in Personal Financial Planning I (1).** Prerequisites: 2.8 TTU GPA; PFP 2315. Topics on professional development in preparation for PFP 3399. Enrollment precedes PFP 3298 and PFP 3399. (CL) F.
- 3210—Professional Field Experience (2).** Prerequisites: 2.8 GPA, PFP 2315; PFP majors or minors only. Supervised attendance and participation in professional conferences, tours of professional practices, and seminars focusing on professional issues. May be repeated for up to 4 hours of credit. This is a pass/fail course. F, S.
- 3298—Professional Development in Personal Financial Planning II (2).** Prerequisite: 2.8 TTU GPA; C or better in PFP 3198. Preparation for internship experience. Advanced topics in business models, back office, and staffing. Includes 30 hours of volunteer work with VITA to give students client experience before professional residency. Enrollment precedes PFP 3399. S.
- 3301—Introduction to Personal Finance (3).** Introduction to personal finance, including goal setting, cash management, credit, insurance, taxes, housing, investment alternatives, and retirement plans. Distance and on campus. F, S, SS.
- 3302—Introduction to Cryptocurrency from a Financial Planning Perspective (3).** Explores cryptocurrency through the lens of imaginary human constructs. Concepts include Bitcoin, Ethereum, real-world applications, investment risks, and regulation. [PFP 5302]
- 3321—Personal Finance: Financial Counseling and Consumer Credit (3).** Prerequisite: C- or better in PFI 2301, PFI 3301 or PFP 3301. Introduces the financial counseling process and examines types of consumer credit. Distance and face-to-face. Service-learning. F, S, SS.
- 3330—Communication and Counseling Skills for Financial Planners (3).** Prerequisites: C- or better in PFP 2315 or PFI 3320 or PFI 3321 or PFP 3321, and ENGL 2311; 2.8 GPA; PFP majors or minors only. A self-discovery class, with an introduction to counseling and communication techniques, as well as interviewing strategies for use in financial counseling and planning settings. Emphasizes the importance of communication processes in helping individuals and families. (CL) F, S.
- 3350—Individual Tax Planning Topics (3).** Prerequisites: 2.8 GPA; C or better in PFP 2315. For majors or minors only. Study of the impact of federal and state taxation on personal financial planning decisions. S.
- 3374—Retirement Planning (3).** Prerequisites: 2.8 GPA; C or better in PFP 2315 and ACCT 3307 or PFP 3350. Prerequisite or corequisite: PFP 3486. A foundation course in retirement planning. Topics include corporate and individual retirement plans, planning strategies to meet client goals, and retirement income management. F, S.
- 3376—Fundamentals of Asset Management (3).** Prerequisites: 2.8 GPA, C or better in MATH 2345, PFP major, minor or instructor. consent. Focuses on the theory and practice of investment analysis with a special emphasis on the basic tools, techniques, and methodologies employed by financial planners. F, S.
- 3378—Estate Planning (3).** Prerequisites: 2.8 GPA; PFP 2315. Prerequisite or corequisite: PFP 3350. Application of estate planning methodologies and policies to personal financial planning. F.
- 3385—Behavioral Finance from a Personal Financial Planning Perspective (3).** Prerequisites: 2.8 TTU GPA; C or better in PFP 2315. An introduction to theory and research in the field of behavioral finance as it relates to consumer choice broadly and personal financial planning specifically. S.
- 3397—Risk Management and Insurance Planning (3).** Prerequisites: 2.8 GPA, C or better in PFP 2315, ENGL 2311. Explores the application of risk management and insurance planning for individuals in the personal financial planning environment. F, S.
- 3399—Professional Residency in Personal Financial Planning (3).** Prerequisites: C or better in PFP 3198 and PFP 3298, PFP 3374, PFP 3376 or PFP 3486, PFP 3350 or ACCT 3307, PFP 3378, and PFP 3397 or PFP 3497; 2.8 GPA. Supervised residency experiences in established career-related positions in the financial planning field. SS.
- 3486—Wealth Management (4).** Prerequisites: 2.8 GPA; C or better in PFP 2315. Focuses on the theory and practice of investments within the context of personal financial planning, including investment vehicle, analysis and selection, portfolio design and implementation, investor risk tolerance, tax management, and regulatory issues.
- 4000—Individual Study (V1-6).** Prerequisites: 2.8 GPA and consent of instructor. Individual study or research under the guidance of a family financial planning faculty member to enhance the degree program. May be repeated for up to 6 hours credit.
- 4175—Special Topics in Personal Financial Planning (1).** Prerequisites: PFP major; 2.8 GPA. Study of special topics in personal financial planning. May be repeated for up to 6 hours when topics vary. This is a pass/fail course. F, S.
- 4176—Security Industry Essentials for Financial Planning Professionals (1).** Prerequisites: C or better in PFP 3376 or PFP 3486. Focuses on the investment content area of financial planning and prepares students for the industry. Provides Security Industry Essentials (SIE) review.
- 4325—Introduction to Charitable Giving (3).** Prerequisite: 2.8 TTU GPA. Introduces students to the techniques and tax laws of charitable planning. F.
- 4328—Planned Giving Demographics and Decision Making (3).** Reviews practitioner-level summaries of research, theory, and demographics, and the resulting marketing implications related to sophisticated charitable financial planning and planned giving.
- 4370—Personal Financial Planning Capstone (3).** Prerequisites: 2.8 TTU GPA; C or better in PFP 3374, PFP 3376 or PFP 3486, PFP 3378, PFP 3298, PFP 3399, PFP 3397 or PFP 3497. Prerequisites or corequisites: C or better in PFP 3330 and PFP 4380. Techniques and methods for utilizing financial planning practice standards in the development of comprehensive financial plans for clients. (CL) F, S.
- 4377—Practicum in Personal Financial Planning (3).** Prerequisites: 2.8 GPA and consent of instructor. Supervised experience designed to prepare the student for a career in financial planning/counseling. May be repeated once for credit. F, S.
- 4380—Professional Technology in Personal Financial Planning (3).** Prerequisites: 2.8 GPA; C or better in ACCT 3307 or PFP 3350, PFP 3374, and PFP 3376 or PFP 3486. Advance coursework in professional software packages for financial planning and investment portfolio applications. F, SS.
- 4395—Comprehensive Financial Planning Review (3).** Prerequisites: 2.8 TTU GPA; C or better in PFP 3374, PFP 3376 or PFP 3486, PFP 3378, PFP 3298 or PFP 3398, PFP 3399, PFP 3397 or PFP 3497. Prerequisites or corequisites: C or better in PFP 3330 and PFP 4380. Corequisite: PFP 4370. Comprehensive review of all areas of financial planning in preparation for taking the Certified Financial Planner Certification Examination.

College of Human Sciences Graduate Programs

The College of Human Sciences offers graduate programs leading to the Master of Science and Doctor of Philosophy degrees. The graduate programs in the college are designed to educate scholars and leaders in areas that affect human development: nutrition; family sciences; environmental design; restaurant, hotel, and institutional management; personal financial planning; couple, marriage, and family therapy; and family and consumer sciences education.

Persons successfully completing graduate work in the college have traditionally been prepared to serve as leaders in the business world, private sector organizations, and academic institutions.

Master of Science Degree. The Master of Science degree has majors in environmental design; nutritional sciences; family and consumer sciences education; human development and family studies; human sciences; couple, marriage, and family therapy; personal financial planning; and hospitality and retail management.

Doctoral Degree. The Doctor of Philosophy degree has majors in interior and environmental design; nutritional sciences; family and consumer sciences education; hospitality administration; human development and family studies; personal financial planning; and couple, marriage, and family therapy.

Admission. Admission to master's and doctoral programs requires the recommendation of the department as well as approval of the graduate dean. Applicants should contact the program director or the chairperson of the department offering the specialization for college and departmental guidelines.

Distance Education. The College of Health and Human Sciences is a member of IDEA (Innovative Digital Education Alliance), formerly named Great Plains IDEA. This online higher education alliance offers students flexible, affordable programs in collaboration with other reputable universities.

The courses are taught by several universities, but students enroll and pay for all their courses through the university where they have been admitted. Students therefore have the advantage of receiving coordinated, diverse, high-quality instruction from topic experts at several universities without the hassle and expense of navigating each institution's admissions, enrollment, payment, and transcript transfer processes.

Three programs are offered through the collaboration of IDEA and the College of Health and Human Sciences. Students can specialize in gerontology or youth development within the M.S. in Human Development and Family Sciences or obtain an M.S. in Family Consumer Sciences Education. A graduate certificate in Early Childhood Education and Family Policy is also available.

For additional information, see graduate program listings for the Department of Human Development and Family Sciences or Family and Consumer Sciences Education.

For more information about the IDEA, its programs, and the participating institutions, visit https://www.depts.ttu.edu/hs/great_plains_interactive_distance_education/index.php.

Graduate students may obtain a teaching certificate in family and consumer sciences by completing coursework that meets the Texas standards for teacher certification.

Post-Baccalaureate Certification. Three post-baccalaureate options are available. The Family and Consumer Sciences Composite Certificate qualifies individuals to teach all family and consumer sciences courses offered in Texas secondary schools. Specialized certificates in human development and family studies and hospitality, nutrition, and food science qualify individuals to teach family and consumer sciences courses in the designated content areas. Post-baccalaureate certification students are eligible to complete a one-year paid teaching internship in lieu of clinical student teaching. Post-bac certifications must be completed as a part of a graduate degree in Family and Consumer Sciences Education. Selected graduate credits earned for certification may be applied toward a graduate degree in family and consumer sciences education (M.S. or Ph.D.). While FCS

teacher certification coursework can be completed through distance education, face-to-face components are required, including clinical field experiences and student teaching or an internship. Clinical student teaching must be completed in an accredited Texas school district with a licensed family and consumer sciences teacher who is approved by the FCSE Program for placement supervision. The teaching internship can only be completed in an accredited Texas school district. Students completing the internship are hired by a local school district and are assigned a mentor teacher who is also employed by the same school district. It is the responsibility of the post-bac student to secure an internship through the hiring process with a school district offering the internship. Students who desire to complete clinical student teaching instead of an internship will be placed by the FCSE Program in an appropriate Texas school district. Both the internship and clinical student teaching require enrollment in FCSE 5344 for the appropriate student credit hours, and these placements are supervised by the FCSE Program. Students seeking teacher certification must meet all requirements outlined in the College of Education section of the catalog. Admission to the post-bac program in FCSE requires a 2.75 GPA or higher in an undergraduate degree and at least 15 course credits in family and consumer sciences content.

Department of Interdisciplinary Human Sciences

The Department of Interdisciplinary Human Sciences administers the graduate programs in the area of Family and Consumer Sciences Education and Human Sciences.

Family and Consumer Sciences Education, M.S.

The Lubbock campus Master of Science in Family and Consumer Sciences Education (FCSE) is designed to prepare individuals for advancement in family and consumer sciences careers. A minimum of 36 semester hours is required for the degree and includes either a thesis option or professional portfolio option. Required coursework includes curriculum development, evaluation, educational leadership, and research methods. The thesis option requires three credits in statistics.

Texas Certification in Secondary Family and Consumer Sciences Education can also be pursued through the Lubbock campus master's degree program with inclusion of the post-baccalaureate requirements for the appropriate FCS teacher certification. Students desiring this certification are required to successfully complete 50 hours of field experience and clinical student teaching or a clinical teaching internship in Texas, as well as a background check and the state-required certification exams. Additional course credits in FCSE content may be necessary to complete the certification.

An online master's degree program with two options is offered in collaboration with the IDEA (Innovative Digital Education Alliance), a consortium of universities offering students the unique opportunity to take classes from multiple high-quality universities.

The first option is a non-thesis program designed for individuals who have a bachelor's degree in a family and consumer sciences content concentration or related area and are interested in obtaining initial certification/licensure for teaching family and consumer sciences at the secondary level in Texas. The online program consists of a minimum of 38 semester hours and includes the pedagogy courses required for certification. Additional course credits in FCSE content may be necessary to complete the certification. Students must meet the admission requirements for the educator preparation program (EPP) as well as the master's program admission requirements. Texas teacher certification in family and consumer sciences requires that either clinical student teaching or a clinical internship be completed in Texas, as well as a background check and the state-required TExES certification exams. Students are also required to complete a professional portfolio for the M.S. degree.

The second online option is designed for FCSE professionals who are certified teachers or who are working in educational settings, such as Cooperative Extension. This program consists of 36 semester hours and provides a thesis option or a professional portfolio option.

Students admitted to the IDEA program register for all courses at Texas Tech, but the courses may be taught by faculty at any of the participating institutions. Additional information is available at <https://www.depts.ttu.edu/hs/fcse/online-ms.php> or by contacting an FCSE advisor.

Family and Consumer Sciences Education, Ph.D.

The Doctor of Philosophy in Family and Consumer Sciences Education (FCSE) prepares individuals for faculty positions in higher education and other professional leadership roles. The Ph.D. requires a minimum of 60 semester hours, exclusive of dissertation. Admission to the FCSE doctoral program requires a master's degree from an accredited institution.

The FCSE doctoral program can be completed either on the Lubbock campus or at a distance. Both options require students to attend a two-day, face-to-face orientation at the beginning of the program. Additionally, distance students are required to defend their dissertations on campus.

The doctoral program includes a specialization in family and consumer sciences education (21 credits), a research component (15 credits), and other coursework designed to meet individual professional goals, including an 18-hour emphasis that meets the Southern Association of Colleges and Schools Commission on Colleges (SACSCOC) standard for coursework in a teaching discipline.

Texas Certification in Secondary Family and Consumer Sciences Education can also be pursued through the doctoral program with inclusion of the [post-baccalaureate](#) requirements. Students desiring this certification are required to successfully complete field experience and clinical student teaching or a clinical teaching internship in Texas, as well as a background check and the state-required certification exams. Additional course credits in FCSE content may be necessary to complete the certification.

Additional information is available at <https://www.depts.ttu.edu/hs/fcse/doctoral.php> or by contacting an FCSE advisor.

Human Sciences, M.S.

This interdisciplinary program is designed for learners interested in attaining a master's degree that can be tailored to meet their unique educational goals and/or to facilitate career advancement. Graduates of this program will possess a broad academic perspective and skills that can be transferred to a number of professional contexts. This program is available to both full- and part-time students.

The Master of Science in Human Sciences (MSHS) program requires a minimum of 30 graduate credit hours. The program of study is comprised of a 9-credit core curriculum as well as two elective areas of concentration (9-15 credit hours each). This degree has both a thesis and a non-thesis option. The thesis option involves original scholarly research and prepares students for further graduate studies. The non-thesis option culminates in a capstone learning experience that prepares students to market themselves professionally and articulate the unique skill set they gained through their studies.

Students will select two areas of concentration for their program of study. Potential options might include Community, Family, and Addiction Sciences; Interior and Environmental Design; Family and Consumer Sciences Education; Health Professions; Hospitality and Retail Management; Human Development and Family Sciences; Nutritional Sciences; and Personal Financial Planning.

Students also can choose to apply coursework from select Texas Tech University graduate certificates to fulfill degree requirements. Some possible choices include Charitable Financial Planning, Early Childhood and Family Policy, Gerontology, Human Sciences Education and Training, Youth Development Specialist, Youth Program Management and Evaluation, and Women's and Gender Studies. Depending on the concentrations selected by the student for their degree plan, the degree may be completed online.

Graduate Course Descriptions

Family and Consumer Sciences Education (FCSE)

- 5118—Seminar (1).** May be repeated for credit.
- 5301—Administration in Family and Consumer Sciences Education Professions (3).** Administration of family and consumer sciences programs with emphasis on leadership development in a variety of settings.
- 5302—Curriculum Development in Family and Consumer Sciences Education (3).** Development of family and consumer sciences programs for secondary schools, junior and senior colleges, and extension programs. Focus on theories of curriculum and recent trends affecting family and consumer sciences programs.
- 5303—Evaluation in Family and Consumer Sciences Education (3).** Assessment of individual achievement in all subject areas in family and consumer sciences. Development of instruments and interpretation of data assessments.
- 5304—Techniques of Research in Family and Consumer Sciences Education (3).** Methods of research in family and consumer sciences, including research design, proposal development, data collection and analysis, interpretation and reporting of results, and evaluation of published research.
- 5306—Practical Reasoning in Human Sciences (3).** Focuses on the topic of critical science, both as a theoretical framework and as a practical/rational process for addressing significant and complex problems facing families.
- 5307—Techniques of Supervision in Family and Consumer Sciences Education (3).** Methods and theories of supervision in family and consumer sciences educational settings.
- 5309—Career Education Programs in Family and Consumer Sciences (3).** Teaching methods in family and consumer sciences career preparation programs. Includes state and federal requirements regarding work-based learning and safety.
- 5311—Problems in Family and Consumer Sciences Education (3).** May be repeated for credit. [FCSE 4302]
- 5341—History and Philosophy of Family and Consumer Sciences Education (3).** Historical, philosophical, and legislative bases of family and consumer sciences education. Consideration of current and future roles of family and consumer sciences education in secondary, post-secondary, higher education, and other areas.
- 5342—Contemporary Adult and Continuing Education in Human Sciences (3).** Development and administration of adult and continuing education programs in human sciences. Emphasis on professional development, career redirection, and lifelong learning.
- 5344—Internship in Family and Consumer Sciences Education (3).** Prerequisite: Instructor consent. Supervised experiences in family and consumer sciences positions in extension, business, secondary schools, or related areas. May be repeated for credit.
- 5350—Special Topics in Family and Consumer Sciences Education (3).** Study of a specific topic pertinent to the family and consumer sciences education profession. May be repeated (different topics) for a maximum of 12 hours credit.
- 5355—Advanced Teaching Methods in Family and Consumer Sciences Education (3).** Application of theories of learning and human development to the selection of teaching strategies and instructional resources for FCS. Content includes long-range instructional planning, classroom management, laboratory management, student assessment, program evaluation, FCCLA, and models of teaching.
- 6000—Master's Thesis (V1-6).**
- 6305—Program Evaluation in Human Sciences (3).** Procedures for evaluation of programs in Human Sciences. Development of instruments for individual performance, program effectiveness, and data collection. Techniques for interpreting data and evaluations.
- 6307—Professional Issues in Family and Consumer Sciences Education (3).** Social, economic, and environmental issues impacting society and the response of family and consumer sciences professionals in higher education. May be repeated for credit.
- 6343—University Teaching in Human Sciences (3).** Synthesis and analysis of innovative educational strategies, humanistic evaluation, and faculty role in program governance.
- 6345—Publishing and Presenting in Human Sciences (3).** Addresses a critical aspect of academia—publishing and presenting your research.
- 7000—Research (V1-12).**
- 8000—Doctor's Dissertation (V1-12).**

Human Sciences (HUSC)

- 5300—Interdisciplinarity in the Human Sciences (3).** Reviews human sciences theories, knowledge, skills, concepts, and professions. This course also introduces students to the concepts and methods of interdisciplinary study.
- 5311—Problems in Human Sciences (3).** May be repeated for credit.
- 5345—History and Philosophy of Extension Education (3).** Historical and philosophical foundations of Extension education with emphasis given to origins and development of family and consumer sciences programs. Online delivery.
- 5350—Special Topics in Human Sciences (3).** Topics will rotate to meet the needs of graduate students majoring in an interdisciplinary human sciences program. May be repeated for credit.
- 6000—Master's Thesis in Human Sciences (VI-6).** Prerequisite: Successful completion of HUSC 5300 or approval of graduate advisor. This variable credit course develops a student's interdisciplinary research expertise and understanding of a Human Sciences-related question by engaging in an original research project.
- 6301—Interdisciplinary Human Sciences Capstone (3).** Prerequisite: Successful completion of HUSC 5300 or approval of graduate advisor. A culminating learning experience where students reflect on their learning and create a Capstone Project to showcase their skills and competencies.
- 7000—Research in Human Sciences (VI-12).** Prerequisite: Approval of graduate advisor. Supports students who have a particular interest in examining a research topic or process at a deeper level. Students and instructors work together to identify an appropriate focus and goals for the course.

Department of Community, Family, and Addiction Sciences

The Department of Community, Family, and Addiction Sciences supervises graduate degree programs in couple, marriage, and family therapy and addictive disorders and recovery studies. Applicants seeking information about admission requirements, programs of study, and financial assistance should contact the graduate advisor in the individual program. Admission to a graduate degree program requires both the recommendation of the department and the Graduate School.

The graduate degree programs in couple, marriage, and family therapy provide clinical and academic training to students who will function as couple, marriage, and family therapists at the highest level of clinical competence and who will make unique contributions to the field of couple, marriage, and family therapy through research, teaching, clinical practice, and other professional activities. For more information please go to www.depts.ttu.edu/hs/mft/.

The graduate degree program in addictive disorders and recovery studies is designed to produce graduates who will excel in academic, government, and private sector careers while fulfilling the increasing need for addiction recovery scientists. Of note, the graduate degree program in addictive disorders and recovery studies is not designed to produce clinicians. For more information please go to www.depts.ttu.edu/hs/cfas/addictive-disorders-recovery-studies.php.

Addictive Disorders, and Recovery Studies, Ph.D.

The Ph.D. program specializes in research related to substance abuse, substance dependence, and other behavioral addictions, and recovery from such.

Note: The program has received THECB and SACSCOC approval. Also, the ADRS Ph.D. program is not designed to fulfill any licensure-based requirements.

For more information, please visit www.depts.ttu.edu/hs/cfas/addictive-disorders-recovery-studies.php.

Couple, Marriage, and Family Therapy, M.S.

The M.S. degree is intended to meet the academic requirements leading to licensure as a couple, marriage, and family therapist in the state of Texas. Actual licensure requires additional post-master's degree clinical experience. The master's program is accredited by the Commission on Accreditation for Marriage and Family Therapy Education of the American Association for Marriage and Family Therapy. Students accepted for the master's

program have the option to complete the thesis track. Visit www.depts.ttu.edu/hs/mft/masters.php for more information.

Couple, Marriage, and Family Therapy, Ph.D.

The doctoral program prepares scientist practitioners with a focus on developing advanced clinical and research skills. The Ph.D. program is accredited by the Commission on Accreditation for Marriage and Family Therapy Education of the American Association for Marriage and Family Therapy. Visit www.depts.ttu.edu/hs/mft/doctoral.php for more information.

Graduate Course Descriptions**Addictive Disorders and Recovery Studies (ADRS)**

- 5310—Issues of Addiction and Recovery (3).** Provides students with an introduction to addiction, including the nature of addiction, epidemiology, history, models, lifespan issues, treatment, and recovery.
- 5311—Problems in Addictive Disorders and Recovery Studies (3).** Individual study in problems related to addictive disorders and recovery. May be repeated for credit.
- 6301—Couple and Family Dynamics of Addiction (3).** Study of the theory and research related to addictive behaviors and couple/family relationships. Focuses on systemic etiological factors and relational outcomes.
- 6315—Systemic Treatments and Addictions (3).** Study of systemically relevant treatment approaches and strategies for addictive behaviors. Focus is on treating addictions and compulsive behaviors using systemic-focused (e.g., couple and family) approaches.
- 6320—Adolescent Substance Use: Assessment, Treatment, and Recovery (3).** Through a didactic and interactional approach, students will examine a variety of topics related to the cause, assessment, treatment, and recovery of adolescent substance abuse.
- 6323—Structural Equation Modeling (SEM) in ADRS (3).** Provides in-depth exploration of Structural Equation Modeling (SEM), covering path analysis, mediation, factor analysis, and advanced SEM techniques. Includes practical demonstrations and guidance on effectively communicating SEM results.
- 6329—Eating Disorders: An Overview of Advanced Topics (3).** Provides an overview of advanced topics related to eating disorders. Topics range from their definitions in the current literature to a continuum of treatment options and recovery.
- 6330—Process Addictions (3).** Examines theories and research related to process/behavioral addictions. Etiology, research implications, assessment, diagnosis, and treatment of process addictions will be reviewed from a systemic perspective.
- 6342—Advanced Topics in Addictive Disorders and Recovery Studies (3).** Examination of specialized problems, topics, or current events in addictive disorders and recovery studies. May be repeated for credit as topic varies.
- 6395—Research Practicum in Addictive Disorders and Recovery Studies (3).** Provides the basic knowledge and skills to become a research leader in addiction recovery, including intense hands-on exposure to research theory, methods, and analysis.
- 7000—Independent Research in Addictive Disorders and Recovery Studies (VI-12).** Independent research in ADRS.
- 7395—Internship in Addictive Disorders and Recovery Studies (3).** Prerequisite: Consent of graduate advisor. Supervised experience in appropriate setting.
- 8000—Doctoral Dissertation in Addictive Disorders and Recovery Studies (VI-12).** Doctoral research in ADRS.

Couple, Marriage, and Family Therapy (CMFT)

- 5300—Introduction to Couple, Marriage, and Family Therapy Practice (3).** Prerequisites: CMFT majors only; consent of instructor. Analyses of and solutions for common problems in couple, marriage, and family therapy practice.
- 5302—Family Therapy II (3).** Prerequisites: CMFT majors only and consent of instructor. Survey and comparative analysis of modern and post-modern approaches to family therapy including work of Nagy, Satir, Whitaker, White, Tomm, Minuchin, Epston, de Shazer, and others. Both the theory and procedures of each modality will be addressed.
- 5304—Systemic Evaluation in Couple and Family Therapy (3).** Prerequisites: CMFT majors only and consent of instructor. Provides an in-depth examination of a systemic approach to clinical evaluations. Students receive training in administration and application of systemic assessment methods.

- 5305—Use of the DSM, Psychopathology, and Assessment in Marriage and Family Therapy (3).** Students will be trained to use the Diagnostic and Statistical Manual of Mental Disorders (DSM) in family therapy assessment and practice.
- 5322—Family Systems (3).** Prerequisites: CMFT majors only; consent of instructor. Examines the historical development, theoretical underpinnings, and clinical foundation of family therapy. Communications and systems theories will be introduced and connected to models of family therapy, with a focus on clinical application.
- 5330—Lifespan and Human Development (3).** Prerequisites: CMFT majors only and consent of instructor. Covers biopsychosocial and lifespan models for the assessment and treatment of individual and relational adjustment challenges from a systemic perspective. Child, adolescent, and elderly assessment methods and approaches for clinical intervention will be presented from BPS, human and family development, and health perspectives.
- 5350—Introductory Family Systems Statistics (3).** Introduction to clinical and systemic statistics applicable to the field of couples, marriage, and family therapy, including descriptive statistics, inferential statistics, t-statistics, ANOVA, correlations and nonparametric tests.
- 5351—Research Methods in Couple, Marriage, and Family Therapy (3).** Prerequisites: CMFT majors only and consent of instructor. Study of research strategies and methodologies relevant to couple, marriage, and family therapy, including experience in conducting research investigations.
- 5370—Issues in Professional Development (3).** Prerequisites: CMFT majors only; consent of instructor. An examination of the major issues for professionals in couple, marriage, and family therapy. Emphasis on ethical standards, professional identity, and private practice issues.
- 6000—Master's Thesis (V1-6).** Prerequisite: CMFT majors only.
- 6303—Family Therapy III (3).** Prerequisites: CMFT majors only and consent of instructor. Focuses on the theory and practice of couple therapy and sex therapy. Includes approaches to enhance couple relationships through therapeutic intervention.
- 6311—Contemporary Directions in Couple, Marriage, and Family Therapy (3).** Prerequisites: CMFT majors only and consent of instructor. An examination of postmodern thought on couple, marriage, and family therapy with emphasis on the collaborative and narrative approaches.
- 6320—Advanced SEM for Clinical and Systemic Research (3).** Focuses on advanced structural equation modeling for the statistical analysis of dyadic, relational, and longitudinal data.
- 6321—Longitudinal Modeling for Clinical and Systemic Research (3).** Applies advanced statistical analysis and growth curve modeling as related to systems theory and as applicable to clinical work and clinical evaluation.
- 6322—Advanced Research Design (3).** Prerequisites: Consent of instructor. Advanced research methodology with a special focus on systemic and clinical research design.
- 6323—Qualitative Research Methods in Couple, Marriage, and Family Therapy (3).** Prerequisites: CMFT majors only and consent of instructor. Focuses on qualitative research methodologies specifically related to couple, marriage, and family therapy research. Students will gain practical experience applying qualitative methods to their research with clinical populations and family therapy topics.
- 6342—Advanced Family Therapy Topics (3).** Prerequisites: CMFT majors only and consent of instructor. Advanced topics in the field of family therapy that may include family therapy with special populations and recent developments in family therapy theory and application. May be repeated for credit.
- 6370—Diversity in Couple, Marriage, and Family Therapy (3).** Prerequisites: CMFT majors only and consent of instructor. An examination of issues of race, ethnicity, and culture as they relate to family therapy. The course is designed to raise awareness and to train multicultural competent therapists.
- 6395—Practicum in Couple, Marriage, and Family Therapy (3).** Prerequisites: CMFT majors and consent of instructor. Supervised experiences designed to prepare the student for involvement in couple, marriage, and family therapy and family life education. May be repeated for credit up to 48 hours.
- 6396—Supervision of Couple, Marriage, and Family Therapy (3).** Prerequisites: Consent of instructor, CMFT majors only. Theory, research, and supervised practicum in supervision of family therapy.
- 6397—Supervision Practicum in Couple, Marriage, and Family Therapy (3).** Prerequisite: CMFT majors only and instructor consent. Course provides structured experience in supervision of couple, marriage, and family therapy students.
- 7000—Research (V1-12).** Prerequisite: CMFT majors only.
- 7395—Internship in Couple, Marriage, and Family Therapy (3).** Prerequisites: CMFT majors only; consent of director of Couple, Marriage,

and Family Therapy Program. Full-time supervised internship in an appropriate setting. May be repeated for up to 12 hours credit.

8000—Doctor's Dissertation (V1-12). Prerequisites: CMFT majors only and consent of instructor.

Department of Design

Admission into the master's and doctoral programs requires submission of the following:

- Grade point average
- Copy of official transcripts
- Three letters of recommendation
- A statement of intent including current research interests
- A design portfolio or examples of scholarly writing
- A resume
- TOEFL scores for international students

The master's and doctoral degrees are research- and studio-based programs; students entering without undergraduate degrees in interior design or architecture are advised that the graduate programs in the Department of Design do not prepare students for professional practice. Students who wish to practice as interior designers should enroll in the CIDA-accredited Bachelor of Interior Design degree program offered by the Department of Design.

To obtain departmental procedures and guidelines, students should contact the director of graduate programs or refer to

www.course.ttu.edu/hs-DesignGrad.

Environmental Design, M.S.

The Master of Science in Environmental Design requires a minimum of 31 credit hours. Courses are available face-to-face and through synchronous online formats. Successful completion of the environmental design master's degree increases the student's ability to positively contribute to the advancement of interior and environmental design research. The department offers the accelerated bachelor to Master of Science degree program for undergraduate students in the Department of Design. Please see the [department website](#) for more information.

Interior and Environmental Design, Ph.D.

The Doctor of Philosophy in Interior and Environmental Design requires a minimum of 73 hours (61 hours of graduate work plus a minimum of 12 dissertation hours). Students develop their program of study in consultation with a graduate advisory committee. Leveling coursework may be required. Following completion of all coursework, a qualifying examination for admission to candidacy for the Ph.D. degree will be conducted in accordance with the requirements of the Graduate School.

Graduate Course Descriptions

Environmental Design (ENVD)

- 5007—Internship (V1-3).** Supervised internship experiences in established career-related positions. May be repeated for credit up to 6 hours.
- 5101—Seminar in Environmental Design (1).** May be repeated for up to 3 hours credit.
- 5301—Graduate Research Seminar (3).** Introduction to philosophies, technologies, and processes involved in research and graduate study.
- 5305—Seminar in Design Thinking (3).** Design thinking uses iterative problem-solving to produce multiple solutions to problems. Interactive qualitative methods provide opportunities to create entrepreneurial human-centered innovations resulting in value creations.
- 5310—Readings (3).** A comprehensive and critical review of literature and research data related to current issues in the student's major area of specialization.
- 5311—Individual Study in Environmental Design and Consumer Economics (3).** May be repeated for credit.
- 5320—Writing for Scholarly Publication (3).** Teaches students to write effective scholarly publications in environmental design. Publication sources, submission requirements, and review processes will be discussed.
- 5340—3D CAD Pattern Design Systems (3).** Explore 3D CAD pattern design systems and the 3D virtual design process. Apply these systems to virtual fit product development research.

- 5341—**Aesthetic Analysis of Apparel Design Studio (3)**. Students will collect qualitative data on a chosen research topic and develop a personal design identity, which will be used to design a collection of clothing.
- 5342—**Sustainability for Fashion (3)**. Focuses on innovative ways of thinking about textiles, accessories, and garments based on sustainability values and an interconnected approach to design.
- 5378—**Research Methods I (3)**. Positivist, interpretive, and critical modes of research inquiry.
- 5380—**Human Factors: Ergonomics in Environmental Design (3)**. Study of human factors and the anthropometric aspects of ergonomics as applied to environmental design.
- 5382—**Environmental Design Systems (3)**. Study of systems used in the design and research of residential and nonresidential interiors.
- 5383—**Sustainable Communities and Design (3)**. Examination of sustainability concepts related to design of communities, buildings, and interiors. [ID 4380]
- 5384—**Advanced Lighting Systems (3)**. Advanced study and application of lighting systems.
- 5385—**Design for Health (3)**. Examination of the role of the physical design and environment in improving health and healthcare. [ID 4385]
- 5386—**Acute Care Design Research (3)**. Examination of important functions of and people working in major departments of typical community acute care hospitals in the United States.
- 5388—**Design for Inclusion (3)**. Adaptation and evaluation of proximate environments to meet the needs of people with disabilities.
- 6000—**Master's Thesis (V1-6)**.
- 6001—**Master's Report (V3-6)**. May be repeated for credit.
- 6310—**Research Design (3)**. Examination of topics associated with research quality in designing quantitative and qualitative studies.
- 6370—**Environmental Design Technology and Development (3)**. Examination of environmental design processes and related technologies. Analysis and synthesis of human factors, interior components, information systems, and the built environment.
- 6378—**Research Methods II (3)**. Prerequisites: ENVD 5378 and 3 credit hours of statistics with a grade of C or higher. Application of statistical packages to analyze data and interpret results.
- 6381—**Environment and Behavioral Design Analysis (3)**. Implications from the social sciences as applied to analyzing causes and arriving at possible solutions to problems related to interiors in contemporary society.
- 6389—**Environmental Design Studio (3)**. Development of and/or response to specific environmental design programs. Study of design processes, including visual presentations that exemplify design solutions. Students will exhibit design projects.
- 7000—**Research (V1-12)**.
- 8000—**Doctoral Dissertation (V1-12)**.

Department of Hospitality and Retail Management

The department offers accelerated bachelor's-to-master's programs, graduate certificates, on-campus and online master's degrees, and an on-campus Ph.D. program. The on-campus Master of Science in Hospitality and Retail Management is offered in both a thesis and non-thesis option. The thesis option is research-oriented and designed to prepare the student for their next step in pursuing a Ph.D. The Ph.D. program is research intensive and requires the completion of a dissertation. The master's programs are designed to advance students' careers in buying, planning, category management, market research, sales management, hotel administration, restaurant management, corporate management, and as trend analysts, marketing managers, resort directors, event managers, food service managers, operations directors, and more. The Ph.D. program is designed to prepare the student for a career as a professor in academia or in marketing research. Applicants for the graduate programs should contact the department concerning admissions requirements, programs of study, and financial assistance. Admission to a graduate degree program requires the recommendation of the department and the Graduate School.

Two graduate certificates are available through the department, and both are available online. One certificate is in Wedding and Conference Management. The other is in Advanced Entrepreneurship. Both certificates are designed to provide advanced knowledge and skills to individuals looking to start or build their own businesses. The on-campus master's program is technology intensive featuring collaborative work focused on problem solving with our industry partners. The department also offers an online Master of Science in Hospitality and Retail Management. This master's degree offering is provided in 8-week semesters. Both master's programs

require the completion of 33 credit hours. The Doctor of Philosophy in Hospitality, Tourism, and Retail Management is taught by an experienced faculty in both hospitality and retail. Students select the concentration that they will follow (hospitality, tourism, or retail) and focus on developing skills in their selected area. The concentration is noted on the student's diploma.

Faculty research interests in the HRM department are myriad and multidisciplinary, providing excellent support for graduate students to pursue their personal research interests. Faculty in the HRM department are skilled in both qualitative and quantitative research methods and have specialized skills in exploring our discipline through the use of big data, survey data, experimental design, fMRI research, interviews, focus groups, and more. Faculty research interests focus on consumer behavior, shopper behavior, social media, online retailing, sustainability, tourism, wine marketing, place branding, management and organizational behavior, cultural heritage, and more. Doctoral students will receive sophisticated and specialized training in theory, advanced statistical methods, software, and analyses, qualitative research methodologies, and curriculum development.

Hospitality and Retail Management, M.S.

The Master of Science in Hospitality and Retail Management degree requires a minimum of 33 semester hours, thesis or non-thesis. All master's degree students in hospitality and retail management must complete 16 hours of core coursework and at least 18 hours of electives. Students gain outstanding technology skills in this program. Students engage in hands-on learning in space planning, industry data, 3-D, augmented reality, virtual reality, and more. Students also have the opportunity to work with corporations on current industry problems. A GRE or GMAT score is required. Students without appropriate background in the chosen concentration will be required to take undergraduate leveling courses designed by the department. Both thesis and non-thesis plans are available. Concentrations are available in either hospitality management or retail management with specific courses required in both concentrations. For more information, visit www.depts.ttu.edu/hs/hrm/masters/index.php.

Hospitality, Tourism, and Retail Management, Ph.D.

The Hospitality, Tourism, and Retail Management, Ph.D. program enables students to build comprehensive skills and an impressive resume. They will be qualified for faculty positions at leading universities, with excellent opportunities for promotion to leadership positions and administrative roles such as dean.

The Hospitality, Tourism, and Retail Management, Ph.D. program at Texas Tech allows students to pursue their own path. Students select the track that will focus their future.

Hospitality Administration. Concentrate on management and marketing research associated with hospitality, including hotels, restaurants, institutional management, dynamic pricing, guest experience, and technology.

Tourism Administration. Concentrate on management and marketing research associated with tourism, including group and event management, experiential and wine tourism, and place branding.

Retail Management. Concentrate on management and marketing research associated with retailing, including branding, shopper and consumer behavior, pricing, service, and brandscape.

Degree Plan and Requirements. The Doctor of Philosophy in Hospitality, Tourism, and Retail Management degree requires 18 core curriculum credit hours. Additional requirements include 9 credit hours in research methods, 12 credit hours of statistics, and 21 credit hours of elective/cognate courses (9 of which need to be at Texas Tech University). Degree is completed with 12 dissertation credit hours. A GRE or GMAT score is required. Leveling coursework may also be required.

Graduate Course Descriptions

Hospitality and Retailing Management (HRM)

- 5001—**Internship in Hospitality and Retail Management (V1-6)**. Prerequisite: Instructor consent. Internship experience in career-related positions in the services industry.
- 5100—**Seminar in Hospitality and Retail Management (1)**. Familiarizes students with the Master of Science Program in Hospitality and Retail Management at Texas Tech University and prepares students for the work environment.
- 5300—**Hospitality and Retail Management Field Study Tour (3)**. Experiential study of international or domestic hospitality and retail management companies. May be repeated twice for credit.
- 5311—**Problems in Hospitality and Retail Management (3)**. Independent study.
- 5342—**Advanced Wedding Planning and Management (3)**. Study and execution of wedding planning and venue management.
- 5345—**Advanced Consumer Behavior in the Services Industries (3)**. Explores advanced topics which influence consumers and how they engage with the services industry.
- 5355—**Advanced Entrepreneurship in the Services Industry (3)**. Exploration and implementation of the basic principles, concepts, and practices in entrepreneurship. Development of business strategies and tactics in new business development.
- 5360—**Advanced Event Management (3)**. Study of the concepts and execution of event management in the hospitality and retailing industries.
- 5385—**Focus Group Research Methods (3)**. Exploration of focus group methodology to develop problem solving and decision-making skills.
- 6000—**Master's Thesis (V1-6)**. Thesis
- 6001—**Internship in Hospitality, Tourism, and Retail Management (V1-6)**. Prerequisite: Instructor consent. Managerial internship designed for doctoral students to experience the workplace environment to provide context of the services industries in academic pursuits.
- 6101—**Introduction to Hospitality, Tourism, and Retail Management Doctoral Program (1)**. Introduction to the facets of being a doctoral student in hospitality, tourism, and retail management. Responsibilities, expectations, teaching, research, service, and other relevant topics.
- 6102—**Introduction to Publishing in Hospitality, Tourism, and Retail Management (1)**. An introduction to publishing academic work in hospitality, tourism, and retail journals.
- 6103—**Faculty Expectations in Hospitality, Tourism, and Retail Management Academic Settings (1)**. Introduction to the expectations of junior faculty in hospitality, tourism, and retail management academic positions.
- 6311—**Ethical Decision Making in Hospitality, Tourism, and Retail Management (3)**. Explores ethical roles and responsibilities in customers facing decisions in the Hospitality, Tourism, and Retail industries. Focuses on data security, social, customer, and sustainability issues.
- 6315—**Curriculum Development in Hospitality and Retail Management (3)**. Study of the theories and frameworks underlying Hospitality and Retail Management and retail management education and curriculum development.
- 6316—**Advanced Marketing in Hospitality and Retail Management (3)**. Advanced investigation of theories, strategies, and marketing policies influencing the corporate-level decisions applied to the day-to-day operations of hospitality and retail companies.
- 6325—**Introduction to Research Methods for Hospitality, Tourism, and Retail Management (3)**. Analysis of issues and methods of research in hospitality, tourism, and retail management research design, measurement and scales, and ethical issues of conducting research.
- 6330—**Theoretical Developments in Hospitality, Tourism, and Retail Management (3)**. Review and analysis of the history of the theoretical developments in hospitality, tourism, and retail management including a comparison with other disciplines.
- 6332—**Advanced Accounting and Financial Concepts in the Services Industries (3)**. Investigation of strategic financial management processes that include managerial accounting and finance concepts relevant to hospitality, tourism, and retail management.
- 6333—**Quantitative Research Methods in Hospitality, Tourism, and Retail Management (3)**. Focuses on statistical methods in multivariate data analysis approaches while encouraging a critical approach to reviewing statistical findings and using statistical reasoning in decision making.
- 6345—**Consumer Behavior in the Services Industries (3)**. An examination of the current literature and theories related to trends and influences of consumer behavior in the hospitality, tourism, and retail industries.
- 6353—**Marketing Research in Hospitality and Retail Management (3)**. An overview of marketing research and its application in the hospitality and retail management industries.

- 6375—**Measurement Methods in Hospitality, Tourism, and Retail Management (3)**. Create standardized hospitality, tourism, retail, shopper, and consumer measures. Contextualize industry verbiage eliciting appropriate responses. Assess reliable and flexible scales for the services industry.
- 6378—**Advanced Statistical Methods for Services Industry Research (3)**. Multivariate data analysis techniques used in hospitality, tourism, and retail research utilizing consumer and industry data to establish a statistical basis for decision making.
- 6385—**Qualitative Research Methods in Hospitality, Tourism, and Retail Management (3)**. Exploration of qualitative research methods for hospitality, tourism, and retailing. Education and practice of qualitative methodologies including interviewing, focus group, observation, eth- and netnography.
- 6388—**Current Literature in Hospitality, Tourism, and Retail Management (3)**. Examination of contemporary literature in hospitality, tourism, and retail management. Focuses on developing research questions and conceptual frameworks for conducting new research studies.
- 7000—**Research (V1-12)**.
- 8000—**Doctor's Dissertation (V1-12)**.

Restaurant, Hotel, and Institutional Management (RHIM)

- 5305—**Hospitality Career Practicum (3)**. Students are provided the opportunity to interact and interview with industry professionals for their career search in hospitality management.
- 5309—**Leadership Practices in Hospitality Organizations (3)**. A review of hospitality leadership practices, strategies, and philosophies to motivate and inspire individual employees and teams.
- 5310—**Sensory Evaluation of Food Products (3)**. Principles and techniques of sensory evaluation of food products in personal and professional settings.
- 5345—**Wine Marketing and Tourism (3)**. An in-depth study of marketing and tourism in the wine industry. Wine products, brand development, and promotion are addressed.
- 5350—**Travel and Tourism (3)**. A study of principles and concepts of travel and tourism behavior. Emphasis on tourism theories, history, planning, development, and research techniques. Trip fee non-refundable 48 hours after enrollment.
- 5352—**Advanced Culture and Cuisine (3)**. Explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture and their impact on individuals from a global and multicultural perspective.
- 5370—**Food Systems Management (3)**. Examination of current trends in food service operations and technology. Emphasis on the functional subsystems of procurement, production, service and delivery, and sanitation and maintenance.
- 5375—**Operations Management for Service Industries (3)**. Integration of quantitative production, operations methods, and traditional qualitative management in both the unit and multi-unit service operations.
- 6308—**Advanced Lodging and Leisure (3)**. Examines the lodging industry from a strategic management standpoint. Discussions and research will focus on industry interrelationships with economic, social, political, and financial entities.
- 6322—**Financial Management in Hospitality Administration (3)**. Investigation of theories, strategies, and financial policies influencing corporate decisions in operations of domestic and international hospitality.
- 6335—**Managing Crisis in the Hospitality Industry (3)**. Examines various crisis management scenarios in the hospitality industry, including natural and man-made disasters. Provides future executives with the basic knowledge to handle these challenges.
- 6341—**Strategic Management in the Hospitality Industry (3)**. Examination of strategy formulation, content development, implementation, and evaluation at the unit and multi-unit level.
- 6350—**Advanced Travel and Tourism (3)**. An in-depth study of tourism supply, demand, policy, planning, development, and marketing at the local, regional, state, national, and international levels. Economic, social, political, and environmental considerations of tourism management and development will be a focus. Tourism-related research and experiences with tourism organizations and agencies are components of the course.
- 6370—**Advanced Food Systems Management (3)**. An examination of current technologies and processes in food industry related operations with emphasis on the subsystems of concept, and product development, production, and marketing.

Retail Management (RETL)

- 5320—**Advanced Retail Category Management (3)**. The application of space and category management strategy using industry software with emphasis on product selection, shelf merchandising, promotion, and pricing.
- 5335—**Advanced E- and Mobile Commerce (3)**. Advanced practices in web-based retail management, digital tool engagement, and development of web-based resources.
- 5350—**Advanced Retail Global Sourcing (3)**. Global sourcing refers to how and where manufactured goods or components will be procured.
- 5380—**Advanced Retail Buying and Control (3)**. The application of planning, purchasing, and controlling inventories.
- 5385—**Advanced Fashion and Design Analysis (3)**. Analysis of fashion products focused on the product life cycle, cost elements, specifications, and consumer research.
- 6305—**Professional Advancement (3)**. Analyzes leadership and the effect on organizational culture and change by examining leadership styles and developing a personal leadership philosophy.
- 6310—**Retail Trend Analysis (3)**. Study of theories and frameworks underlying trend analysis and the execution of trend forecasting.
- 6315—**Product Design, Development, and Evaluation (3)**. Issues and management strategies in designing and producing a competitively priced product including examining globalization, sustainability, and technology.
- 6320—**Promotional Strategies in Merchandising (3)**. Integrated marketing communications while fostering awareness of cultural and global issues, corporate social responsibility, and ethical decision-making in the disciplines of advertising and promotion.
- 6324—**Foundations of Sustainability in Apparel and Textiles (3)**. Theory, principles, and practices of sustainability. Examination of environmental, social, and economic sustainability at both the global apparel and textile industry levels.
- 6330—**Retail Theory and Current Practice (3)**. Theoretical and applied analysis of merchandising strategies; assessment of internal and external forces impacting strategic decisions by retail firms; synthesis of past and present trends.
- 6335—**Advanced Concepts in E-Commerce (3)**. Designed to examine current online retailing trends and marketing practices, as well as to assist students in maintaining an effective online retail website.
- 6340—**Merchandising Analytics (3)**. Focuses data from the merchandising industry to support managerial decision-making including Point of Sale (POS) and Enterprise Resource Planning (ERP) merchandising data.
- 6346—**Category Management (3)**. The role of category management strategies and best practices in the effective implementation of customer service in the retail industry.
- 6350—**Financial Merchandising Implications (3)**. The study of the financial merchandising implications applied to planning, developing, and presenting product lines.
- 6355—**Strategic Planning and Merchandising (3)**. Examines the strategic planning process, investigating external environmental trends, assessing current business strategies, and integrating sustainability into business models using triple bottom line approach.
- 6356—**International Retail Expansion (3)**. Focuses on theory, practices, and trends on international merchandise management by analyzing global retail systems and distribution to global consumers.
- 6365—**Retail Buying, Assortment Planning, and Allocation (3)**. Analytical study of the concepts and execution of retail buying and assortment planning.

Department of Human Development and Family Sciences

The department offers on-campus master's and doctoral degrees (including a post-baccalaureate Ph.D. option and an accelerated bachelor's-to-master's program, i.e., B.S./M.S.) in human development and family sciences (HDFS). These research-oriented on-campus graduate programs require a thesis and dissertation, respectively, although the thesis requirement is optional for accelerated bachelor's-to-master's students. These graduate programs prepare students for careers as university faculty, full-time researchers, data scientists, applied researchers in corporate and government settings, and human service providers. Applicants for the graduate programs should contact the department concerning admissions requirements, programs of study, and funding support. Admission to a graduate

degree program requires the recommendation of the department and the Graduate School.

The department also offers completely online master's degrees and graduate certificates in gerontology and youth development, and a graduate certificate in early childhood education and family policy through its membership in IDEA (Innovative Digital Education Alliance), a multiple-university association with online graduate programs.

Faculty research interests in the HDFS department are broad and multidisciplinary, with many areas of specialization for graduate students. Faculty in Human Development and Family Sciences conduct research that examines human development throughout the lifespan in the context of romantic relationships, families, communities, and public policies. Graduate students are able to study psychosocial and emotional development in children; positive youth development; educational attainment and cognitive abilities for typically and atypically developing children and youth; transitions and milestones for adolescents and emerging adults; gender and sexuality; development of and transitions within romantic relationships; parenting and intergenerational patterns; communication and stressors in close relationships and families; the impact of social inequities and health disparities on individuals and families. Graduate students receive sophisticated training in theories, statistical methods and analyses, and qualitative methodologies in addition to their area of specialization.

Human Development and Family Sciences, M.S.

The on-campus research-oriented Master of Science in Human Development and Family Sciences program requires a thesis and prepares students for careers in advocacy, full-time researchers in a variety of settings, and human and social service providers.

Students in the HDFS master's program take two theories courses (Theories of Human Development and Family Theories), research methods, two statistics courses, and an introductory course to HDFS. All Master's students are required to complete a research-based thesis and at least 6 hours of thesis research. Beyond these requirements, the remainder of the hours in the program (15 of 37) are electives allowing students to tailor the program to their own needs and interests.

Gerontology Concentration. The department is a member of the Innovative Digital Education Alliance (IDEA), a multiple-university association with online graduate programs. Through this organization, the department offers a Master of Science in Human Development and Family Sciences with a Concentration in Gerontology. The master's concentration requires a total of 30 hours. All courses are taught by distance and in collaboration with multiple universities through the IDEA consortium. This program is designed to prepare professionals who are either working directly with older people or involved in education and research related to aging adults.

Youth Development Concentration. Through the Innovative Digital Education Alliance (IDEA), the department offers an online Master of Science in Human Development and Family Sciences with a Concentration in Youth Development. The 36-hour master's degree includes 28 credit hours of coursework and 8 hours of a practicum, project, or thesis. All courses are taught by distance and in collaboration with multiple universities through the IDEA consortium. Once admitted to a home institution, students can take courses from any of the institutions with credit applied toward the appropriate degree. The IDEA youth development program is designed to prepare professionals who are working directly with adolescents and young adults or are involved in education and research related to youth.

Human Development and Family Sciences, Ph.D.

Students in the Doctor of Philosophy in Human Development and Family Sciences program may also complete the master's program requirements with the post-baccalaureate Ph.D. option. Doctoral students take two theories courses (Theories of Human Development and Family Theories), research methods, qualitative methods, an introductory course to HDFS and four statistics courses. In recognition of a likely future career as college faculty, Ph.D. spend two semesters in a college teaching practicum. Students are also required to (1) take the lead on a research project prior to becoming a doctoral candidate and (2) pass qualifying exams, and (3) complete a dissertation with at least 12 hours of dissertation research. At least eight courses (24 hours) must be related to the student's specialization, and as many as four courses may be taken outside of the HDFS depart-

ment. Up to 12 transfer hours may be applied toward doctoral program requirements upon approval of the student's committee and the Graduate School.

Graduate Course Descriptions

Human Development and Family Sciences (HDFS)

- 5000—Directed Studies (V1-6).** Supervised advanced studies involving capstone projects and portfolio development. Projects to be assessed by faculty committee.
- 5101—Teaching College Human Development and Family Sciences (1).** Strategies and direction in teaching college-level human development and family studies courses including supervision, advice and assistance, and review of teaching materials. May be repeated one time for credit. Pass/fail grading.
- 5110—Introduction to Graduate Studies in Human Development and Family Sciences (1).** Prerequisite: Consent of instructor. Presentations of current research and discussions of the profession by department and visiting faculty. May be repeated for credit.
- 5302—Introduction to Gerontology (3).** A multidisciplinary introduction to aging and gerontological issues.
- 5310—Theories of Human Development (3).** Introduction to the application of concepts and theories in human development.
- 5311—Problems in Human Development and Family Sciences (3).** May be repeated for credit.
- 5312—Early Childhood Education and Care: History, Child Development, and Equity (3).** Overview of research on young children and child development including issues of inequality and disproportionality with a focus on the need to develop early childhood policies grounded in research and practice, and the effectiveness and limitations of policies to address fundamental issues of inequality.
- 5313—Psychosocial Development (3).** In-depth study of social, emotional, and psychological growth with emphasis on the development of personal and interpersonal competency.
- 5314—Infant Development (3).** Analysis of empirical research regarding development processes during the first two years of life.
- 5317—Adolescent Development (3).** Multidisciplinary survey of adolescent development including theories, research, and enhancement strategies.
- 5319—Development in Adulthood (3).** Survey of theory and research concerning psychosocial development during adulthood and review of strategies for research with adult populations.
- 5320—Interpersonal and Family Dynamics (3).** Group processes; factors influencing personal and family adjustment.
- 5321—Family Theory (3).** A comprehensive exploration of theory in family studies. The role of theory in empirical investigation; conceptual frameworks; strategies of theory building; examination of systems theory and a spectrum of other models useful in the interdisciplinary study of individual, couple, and family behavior.
- 5331—Early Childhood Education and Care Today: Examining Practices, Policies, and Key Issues (3).** Provides in-depth understanding of equitable practices and policies affecting young children and their families. Develops understanding of practice and policy regarding ECEC and care in the U.S.
- 5332—Early Childhood Education and Care Policy: Theory, Analysis, and Research (3).** Provides an interdisciplinary perspective on ECEC policy, focusing on the systematic study, analysis, and interpretation of policy. Helps students understand the role of research, tools of analysis, and theoretical frames.
- 5333—Early Childhood Education and Care Today: Policy, Leadership, and Policy Advocacy (3).** Provides foundational knowledge of policy creation, design, and development, with an emphasis on policies that impact ECEC. Addresses public policy creation, types of funding, policy roles, ethics and leadership, and advocacy communication skills.
- 5341—Socialization Processes and Addiction (3).** Multidisciplinary survey of socialization processes throughout the life span with implications for understanding addictions.
- 5349—Quantitative Methods I in Human Development and Family Sciences (3).** An introduction to the quantitative methods and statistics necessary to conduct research with children and families through a developmental perspective.
- 5351—Research Methods in Individual and Family Sciences (3).** Study of research strategies and techniques relevant to human development, family studies, and marriage and family therapy including experience in conducting research investigations.
- 5352—Sex-Gender Development (3).** Survey of contemporary theory and research on sex/gender and the impact of sex and gender on psychosocial development and relationship processes.

- 5353—Issues and Research in Human Development and Family Sciences (3).** History, philosophy, and current issues relevant to the areas of family studies and human development. See website for topics. May be repeated for credit under various topics.
- 5361—Parent-Child and Peer Relationships (3).** Review of current research in parenting and peer relationships and implications for program development.
- 5380—Relationship Development (3).** Theory and research related to the formation of initial impressions of others and the development of interpersonal relationships.
- 6000—Master's Thesis (V1-6).**
- 6320—Seminar in Risk Taking (3).** Survey of theory and research in adolescent and adult risk-taking behaviors.
- 6330—Family Problems (3).** Examines theoretical and empirical contributions to the understanding of treatment of family problems within a family systems perspective.
- 6352—Quantitative Methods II in Human Development and Family Sciences (3).** Prerequisites: B or better in HDFS 5349 and 3.0 TTU GPA. The second course in a four-course sequence focusing on methods for conducting research through a developmental perspective. Family data and the general linear model will be explored.
- 6363—Advanced Topics in Human Development (3).** Current topics in human development across the life course. See website for topics. May be repeated for credit under various topics.
- 6365—Quantitative Methods III in Human Development and Family Sciences (3).** Prerequisites: 3.0 TTU GPA and B or better in HDFS 5349, HDFS 5351, and HDFS 6352. Largely focuses on structural equation modeling, but will also incorporate exploratory factor analysis (which fits with the SEM-based confirmatory factor analysis) and some advanced longitudinal analytic techniques.
- 6366—Qualitative Methods in Human Development and Family Sciences (3).** Prerequisites: 3.0 TTU GPA and B or better in HDFS 5349 and HDFS 5351. This course will provide students with an overview of qualitative research methods in HDFS and will include exposure to qualitative data collection and analyses of data from multiple family members.
- 6370—Quantitative Methods IV in Human Development and Family Sciences (3).** Prerequisite: C or better in HDFS 5351 and HDFS 6365; or consent of instructor. Statistical methods for analyzing individual and family change over time and time ordered processes of interactional data.
- 6371—Practicum in Human Development and Family Sciences (3).** Supervised experiences in professional positions. May be repeated for credit up to 9 hours.
- 6373—Advanced Topics in Family Sciences (3).** Current topics in family studies. See website for topics. May be repeated for credit.
- 6390—Program Development and Evaluation (3).** Reviews evaluation issues, critiques evaluation research, and undertakes evaluation of programs.
- 7000—Research (V1-12).**
- 8000—Doctor's Dissertation (V1-12).**

Department of Nutritional Sciences

The department supervises degree programs leading to the Master of Science and Doctor of Philosophy degrees described below. Applicants should contact the program graduate advisor concerning admission requirements and programs of study. Admission to a graduate degree program requires the recommendation of the department as well as the approval of the Graduate Dean.

Internship Program. The department offers an eight-month dietetic internship program, with an optional online M.S. in Nutrition and Dietetics. Completion of the M.S. degree, if completed concurrently with the dietetic internship, takes 18 months. This may vary depending on course load per semester. Participants are selected yearly via rolling admissions. Selected credits earned during the program may apply to a master's or doctoral degree. Eighteen hours of graduate credit in supervised experience in health and foodservice facilities are required. Upon completing the internship and a graduate degree, the student is eligible to take the Commission of Dietetic Registration written examination to become a registered dietitian. Visit www.depts.ttu.edu/hs/intern/index.php for more information.

Nutritional Sciences, M.S.

The Master of Science program in Nutritional Sciences (NS) prepares students to continue on with a Ph.D. to be qualified for faculty and post-doctorate positions as well as careers in various industry settings. Research

projects can be in clinical nutrition, community nutrition, basic science, or dietetics. This degree requires a minimum of 31 semester hours beyond a Bachelor of Science degree. For further information, see https://www.depts.ttu.edu/hs/ns/masters/masters_details.php.

Nutrition and Dietetics, M.S. – Online

The Department of Nutritional Sciences offers a practice-based online M.S. degree program. This 30-hour, non-thesis degree is for students who are in the combination M.S./Dietetic Internship program at Texas Tech University, students in a dietetic internship without an associated M.S. degree, students who already hold Registered Dietitian credentials, or students who have a didactic program in dietetics (DPD) verification statement. This degree is aimed at increasing knowledge and skills to be used in nutrition/dietetics practice and application of research in the work setting. It is designed to provide flexibility for students to earn their advanced degree while completing an internship or working full time. For students who are interested, this degree has three concentrations available: 1) Nutrition and Healthy Weight; 2) Nutrition and Sports; or 3) Nutrition in the Lifecycle. For further information, visit https://www.depts.ttu.edu/hs/ns/masters/online_masters_details.php and click on the degree plan section.

Nutrition and Healthy Weight Concentration. The Nutrition and Healthy Weight concentration is designed to develop skills and an understanding of the biological, cultural, environmental, psychosocial, physical, and economic factors associated with obesity and weight management. This concentration will enhance students' ability to critically review research in the field of obesity and weight management as well as work with individuals to develop successful strategies for weight management.

Required courses: NS 5338, 5339, 6365.

Nutrition and Sports. The Nutrition and Sports concentration is designed for people who seek to provide sports nutrition information to athletes and physically active individuals. Concepts include designing and implementing nutrition programs, interpreting research in the field of sports nutrition, counseling athletes, evaluating supplements and ergogenic aids, and working with special athlete populations.

Required courses: NS 5335, 6325, 6330.

Nutrition in the Lifecycle. This concentration is designed to provide a critical examination of behavioral, physiological, and public health issues impacting dietary and nutritional factors that support normal growth and development through the lifecycle.

Required courses: NS 5340, 5344, 6318.

Nutritional Sciences, Ph.D.

The Doctor of Philosophy program in Nutritional Sciences prepares students for faculty and post-doctorate positions as well as careers in various industry settings. The Nutritional Sciences doctorate degree has three tracks: 1) Community Nutrition, 2) Nutritional Biochemistry and Physiology, and 3) Clinical Nutrition. The degree requires a minimum of 72 hours (including 12 dissertation hours and at least 12 hours in the specialized track area) beyond a Bachelor of Science degree. A maximum of 30 hours of transfer credit from the student's master's program can be allowed. Limited financial assistance as scholarships, fellowships, and research or teaching assistantships is available. Faculty research interests include the role of nutrition in obesity, diabetes, Alzheimer's disease, cancer, inflammation, gut microbes, food insecurity, malnutrition, metabolic dysfunction, cardio metabolic disease, and culinary medicine. For more information about faculty research interests, visit

<http://www.depts.ttu.edu/hs/ns/research/index.php>. For the Ph.D. degree plan, visit <https://www.depts.ttu.edu/hs/ns/doctoral/docs/NS-PhD-Degree-Plan.pdf>.

Graduate Course Descriptions

Nutritional Sciences (NS)

- 5000—Independent Study in Nutrition (V1-6).** Independent study in nutrition. May be repeated for credit.
- 5118—Nutrition Communication Seminar: Professional Communication (1).** Introduction to professional communication and professionalism along with leadership and career development.

- 5301—Internship in Dietetics (3).** Prerequisites: Admission to dietetic internship program. Internship experience in the practice of dietetics in clinical health care, food systems, management, and community nutrition settings.
- 5310—Nutrition in Chronic Disease (3).** Examines the link between nutrition and chronic diseases including contributing factors and management. Intended for those with limited background in nutrition. Online. [NS 4301]
- 5311—Problems in Nutrition (3).** May be repeated for credit.
- 5313—Clinical Nutrition Applications (3).** Dietetic internship students present case studies related to their internship experiences.
- 5330—Introduction to Nutrition Research (3).** Introduction to and critical review of current research designs and methodology in survey and controlled experiments; proposal, writing, reporting, and interpretation of data.
- 5331—Issues in Nutrition (3).** Current issues in human nutrition with emphasis on interrelationships of nutrients in metabolism and their impacts on health.
- 5333—Leadership, Management, and Entrepreneurship (3).** An in-depth look at leadership principles, qualities, styles, and models, as well as principles of organization and management as they relate to dietetics and food service systems, development of managerial and motivational skills, and developing an idea into a new enterprise.
- 5334—Applied Medical Nutrition Therapy (3).** Application of medical nutrition therapy based on physiological and metabolic status, including biochemical and anthropometric indicators.
- 5335—Issues in Sports Nutrition (3).** Current issues in sports nutrition with emphasis on physiology of exercise, physical activity, and athletes.
- 5337—Nutrition Support (3).** Advanced concepts of enteral and parenteral nutrition support including indicators, assessment, and management of nutrition support. Application of nutrition support in critical care, disease management, and home care. Online.
- 5338—Bariatric Nutrition (3).** Nutrient needs after varying types of bariatric weight management surgery. Changes in macro- and micronutrient needs and appropriate nutrition interventions and supplementations. Online.
- 5339—Nutrition and Eating Disorders (3).** Investigation of the prevalence of risk factors contributing to eating disorders, associated health consequences, and evidence-based nutrition goals and intervention and therapies at varying level of treatment. Online.
- 5340—Pediatric Nutrition (3).** Nutrition practices from infancy to early adolescence to include pediatric conditions, terms and definitions, and evidence-based nutrition interventions. Pathophysiology, medical management, nutrition assessment and intervention for both normal and pediatric specific conditions. Online.
- 5341—Nutrition and Gastrointestinal Diseases (3).** Impact of impairments in gastrointestinal (GI) tract on proper nutrient digestion, absorption, and utilization along with appropriate nutrition interventions. Focus areas will include celiac disease, inflammatory bowel disease, and irritable bowel disease. Online.
- 5342—Biostatistics in Nutrition (3).** Planning nutritional research with good experimental design, quality data, and appropriate statistical analyses with an emphasis on broadly understanding what to do when and why in statistical analysis.
- 5343—Diabetes and Nutrition Management (3).** Advanced concepts of diabetes management including the pathophysiology of diabetes, nutrient metabolism, diagnostic criteria and monitoring, meal planning, exercise impact, medications usage, calculating insulin requirements and treating complications of diabetes.
- 5344—Nutrition and Geriatrics (3).** Nutritional requirements of the geriatric population, including both macronutrient and micronutrient changes and the metabolic changes that occur during aging.
- 5345—Nutrition and Sustainability of Global Food Supplies (3).** Examination of sustainable nutrition practices and global food issues such as starvation and malnutrition. Online.
- 5346—Clinical Applications: Carbohydrates, Protein and Lipids (3).** The structure, function, requirement, digestion, absorption, and metabolism of carbohydrates, proteins, and lipids and current research. Understanding of the macronutrients as it relates to the health practitioner to different disease states.
- 5347—Clinical Applications: Vitamins and Minerals (3).** An online course designed to provide students with a basic understanding of micronutrients as it relates to the health practitioner as it relates to different disease states.
- 5348—Lab Techniques (3).** Introduction to laboratory techniques and equipment that are fundamental for biological research such as cell culture and staining, western blot, PCR and RT-PCR analyses.
- 5349—Nutrition and Kidney Disease (3).** Examine etiologies, treatments, and prevention of kidney disease. Nutrition management of other

disorders associated with kidney disease and cutting-edge research implemented by healthcare professionals.

- 5350—Nutritional Pathophysiology (3).** An introduction to human pathophysiology with emphasis on the impact of nutritional influences.
- 5355—Culinary Medicine (3).** Explores the link between food and health, emphasizing applying foundations of nutritional science with traditional medical interventions and examining qualities in foods that can treat/manage health conditions.
- 5360—Advanced Community Nutrition (3).** Prerequisite: Consent of instructor. Study of community nutrition needs, resources, policies, programs, and applications of skills in health promotion.
- 5365—Vitamins and Minerals (3).** Sources and requirements, deficiencies and toxicities, vitamins and minerals in gene regulation and metabolism, DNA methylation, vitamins and minerals in health promotion and disease prevention.
- 5370—Carbohydrates, Proteins, and Lipids in Nutrition (3).** Structure, function, requirement, digestion, absorption, and metabolism of carbohydrates, proteins, and lipids; current research in carbohydrates, proteins, and lipids related to health and diseases.
- 5601—Internship in Dietetics (6).** Prerequisite: Admission to the dietetic internship program. Internship experience in the practice of dietetics in clinical health care, food systems management, and community nutrition settings.
- 6000—Master's Thesis (V1-6).**
- 6118—Nutrition Communication Seminar: Poster Presentation (1).** Nutrition communication with an emphasis on poster presentations.
- 6310—Nutrition Education (3).** Nutrition education and resources for diverse population across the lifespan. Online.
- 6315—Genetic Regulation of Metabolism (3).** Study of molecular-genetic regulation of metabolism with an emphasis on mammalian species, genetically modified animals, and human metabolic disease.
- 6318—Maternal and Child Nutrition (3).** Overview of the major nutrition issues, policies, and intervention programs for women and children in the United States and globally. Online.
- 6320—Nutritional Epidemiology (3).** Examines methodologies used in nutritional epidemiological studies and reviews the current state of knowledge regarding diet and other nutritional indicators as etiologic factors in disease.
- 6325—Nutrition, Exercise, and Sport (3).** The study and application of nutrition as it relates to the physiology of exercise, physical activity, and individual and team sport athletes.
- 6330—Nutritional Supplements and Ergogenic Aids (3).** The analysis, application, health, safety and efficacy of nutritional supplements and ergogenic aids which are used for exercise, physical activity, and individual and team sports.
- 6335—Motivating Health Behavior: Coaching Theory and Application (3).** The study of behavioral and psychological theory for assisting and motivating clients and the application of these theories in the context of health coaching with various patients.
- 6340—The Role of Nutrition in Diabetes and Obesity (3).** Analysis of current research in diabetes and obesity, including definition, classification, diagnosis, development, prevention, and treatment, and the role of nutrition in these diseases.
- 6341—The Role of Nutrition in Cardiovascular Disease and Cancer (3).** Examination of the risk factors, development, prevention, and treatment of cardiovascular disease and cancer, and the role of nutrition in these diseases.
- 6342—Application of Nutritional Biostatistics (3).** Prerequisites: NS 5342 or equivalent, or instructor approval. Provides hands-on statistical methods for nutritional sciences research, covering applications in basic science, clinical studies, and public health through practical, evidence-driven analytical techniques.
- 6345—Nutrition Immunology (3).** Topics include immune system, vitamins and minerals in immune function, nutrition, immunity and diseases, impact of alcohol and smoking on immune function, aging and immunity.
- 6350—Advanced Research Methods (3).** Presentations and discussions about research methods across various areas of nutrition and biological sciences.
- 6355—Neurobiology of Nutrition (3).** In-depth understanding of how the brain senses nutrients and nutrient-related hormonal signals, integrates information, and ultimately controls appetite, body weight, and how that influences nutrient processing.
- 6360—Issues of Food and Nutrition Security (3).** Overview of global food and nutrition security, including availability, access, consumption and stability, causes and consequences of food security. Application includes food security assessment and program planning.
- 6365—Obesity Management for the Clinical Practitioner (3).** Examines various etiologies, comorbidities, and treatments of obesity, and explores

the future of evidence-based research for non-traditional treatments with a focus for healthcare-related professions.

- 6370—Design of Clinical Trials in Human Nutrition (3).** Covers methodological design, execution, data analysis, reporting, critical review of human nutrition clinical trials and the contributions they make to evidence-based guidelines.
- 6375—Nutrition and Cardiovascular Disease (3).** Examination of the risk factors, development, prevention, and treatment of cardiovascular disease (CVD), and the role of nutrition in the prevention and treatment of CVD.
- 7000—Research (V1-12).**
- 7118—Nutrition Communication Seminar: Oral Presentation (1).** Nutrition communication with an emphasis on presenting to an audience.
- 8000—Doctor's Dissertation (V1-12).**

School of Personal Financial Planning

The School of Personal Financial Planning supervises degree programs leading to the Master of Science degree in Personal Financial Planning and the Doctor of Philosophy degree in Personal Financial Planning.

M.S. students must earn a C or better in all courses unless otherwise noted. Students must average a 3.0 program GPA in order to maintain good standing with the Graduate School and to graduate. Up to 6 hours of PFP courses can be transferred into the M.S. degree from another university. Ph.D. students are required to earn a B or better in all courses counted toward their degree.

Admission. Applicants may apply to a graduate program by visiting the [Graduate School website](#) or by visiting the [School of Personal Financial Planning website](#).

Graduate degree programs in personal financial planning are registered and regulated by the Certified Financial Planner Board of Standards, Inc. (CFP Board), a national recognition. The mark of CFP® identifies a financial planning professional who has met educational standards, passed the CFP® Certification Examination, satisfied a work experience requirement, and agreed to the CFP Board's Code of Ethics and Professional Responsibility. The terms CFP® professional and Certified Financial Planner™ represent the most respected professional certification in the financial planning profession. The "core required courses" are required for students to be educationally qualified to sit for the CFP® Certification Examination. Students with upper-division undergraduate, graduate, or certificate coursework in a CFP Board Registered Program are permitted to substitute the courses completed successfully in their prior education program with elective classes at the discretion of the M.S. Program Director in collaboration with the student upon review of the student's transcript and M.S. degree goals. Those with an active CFP® certification are eligible to substitute all "core required courses" with other classes.

Personal Financial Planning, M.S.

The non-thesis Master of Science in Personal Financial Planning requires a minimum of 30 hours.

Dual Degrees. Personal Financial Planning offers the following dual graduate degrees:

- M.S. in Personal Financial Planning / M.S. in Accounting
- M.S. in Personal Financial Planning / Doctor of Jurisprudence
- M.S. in Personal Financial Planning / M.B.A.

Accelerated Bachelor's to Master's Degree Program. The accelerated bachelor's to master's degree program allows academically capable students to accelerate their undergraduate degree programs, begin graduate work in their fourth year, and finish both the bachelor's and master's degrees in a total of approximately five-and-a-half years if enrolled full time. This is accomplished by allowing 9 hours of graduate coursework in personal financial planning to count toward both the undergraduate degree and the master's degree.

Contact: Dr. Sonya Lutter | 806.834.2709 | sonya.lutter@ttu.edu; or Esmeralda Torres | 806.834.1115 | esmeralda.torres@ttu.edu

Personal Financial Planning, M.S. / J.D.

The School of Law, in association with the Graduate School, offers a program that enables a student to earn both the Doctor of Jurisprudence

(J.D.) and Master of Science in Personal Financial Planning (PFP) degrees in three to four years of academic work. The program is designed principally for the student who wishes to supplement his or her legal training with a broad understanding of personal financial planning issues. This combination is particularly helpful to students intending to practice in financial areas such as taxation, estate planning, retirement planning, or employee benefit design.

For more information, visit the program's website:
www.depts.ttu.edu/law/academics/jdp/jdms-pfp.php.

Personal Financial Planning, M.S. / Accounting, M.S.

The School of Personal Financial Planning, in association with the School of Accounting, offers a program that enables a student to earn both the Master of Science in Accounting (M.S.A.) and the Master of Science in Personal Financial Planning (M.S.P.F.P.) degrees in as little as two years. Careers in financial and tax planning are expected to grow substantially over the next ten years. Completion of both programs qualifies students to sit for the following exams:

- [CFP] Certified Financial Planner
- [CPA] Certified Public Accountant

For more information, visit
<https://www.depts.ttu.edu/rawlsbusiness/graduate/dual-degree/msa-mspfp/>.

Personal Financial Planning, M.S. / M.B.A.

The School of Personal Financial Planning, in association with the Rawls College of Business, offers a program that enables a student to earn both the Master of Business Administration (M.B.A.) and the Master of Science in Personal Financial Planning (M.S.P.F.P.) degrees in as little as two years. The program is designed principally for a student who wishes to supplement his or her business training with a broad understanding of personal financial planning topics. For more information, visit <https://www.depts.ttu.edu/rawlsbusiness/graduate/dual-degree/mba/mba-mspfp/>.

Personal Financial Planning, Ph.D.

The School of Personal Financial Planning supervises degree programs leading to the Doctor of Philosophy in Personal Financial Planning. Students must earn a B or better in courses transferred into the degree program. Ph.D. students are required to earn a B or better in all courses counted toward their degree.

This doctoral degree requires a minimum of 60 semester hours of graduate work beyond the bachelor's degree, exclusive of credit for the dissertation. Up to 28 hours of leveling classes may be required for students who have not completed a CFP Board-Registered financial planning program (25 hours) and a statistics course that equips the student to pass a leveling statistics examination (3 hours). Students develop their courses of study in consultation with a graduate advisory committee. Following the completion of introductory (foundations), skills (statistics and theory), and application (research) collateral coursework, a qualifying examination for admission to candidacy for the Ph.D. degree will be conducted in accordance with the requirements of the Graduate School.

Graduate Course Descriptions

Personal Finance (PFI)

5322—Introduction to Applied Personal Finance (3). Survey course in personal financial planning for any students wanting to use this information in their personal and professional lives. Distance and on-campus. F, S, SS, Study Abroad.

Personal Financial Planning (PFP)

5000—Individual Study in Personal Financial Planning (V1-6). Prerequisite: Consent of instructor. Individual study or research under the guidance of a personal financial planning faculty member to enhance the degree program. May be repeated for up to 6 hours credit.

5175—Special Topics in Personal Financial Planning (1). Prerequisites: 3.0 GPA, PFP major, dual degree or consent of instructor. Study of special

topics in personal financial planning. May be repeated for up to 6 hours when topics vary. This is a pass/fail course. F, S.

5176—Security Industry Essentials for Financial Planning Professionals (1). Prerequisite: C or better in PFP 5382. Focuses on the investment content area of financial planning and prepares students for the financial services industry. Provides Security Industry Essentials (SIE) review.

5189—Professional Development in Personal Financial Planning I (1). Prerequisite: PFP major. An introductory course to the graduate PFP major. Topics will include advising, involvement in the program and profession, academic integrity, professionalism, student motivation, networking, and topics on professional development. Enrollment precedes PFP 5399. F, S.

5210—Professional Field Experience (2). Prerequisite: C or better in 6 hours of PFP course, PFP major, dual degree, or consent of instructor. Supervised attendance and participation in professional conferences, tours of professional practices, and seminars focusing on professional issues. May be repeated for up to 4 hours credit. This is a pass/fail course. F, S.

5289—Professional Development in Personal Financial Planning II (2). Prerequisite or corequisite: C or better in PFP 5371 and PFP 5189. Preparation for internship experience. Advanced topics in business models, back office staffing. Includes 30 hours of volunteer work with VITA to give students client experience before internships. Enrollment precedes PFP 5399. S.

5302—Introduction to Cryptocurrency from a Financial Planning Perspective (3). Explores cryptocurrency through the lens of imaginary human constructs. Concepts include Bitcoin, Ethereum, real-world applications, investment risks, and regulation. [PFP 3302]

5311—Independent Study in Personal Financial Planning (3). Prerequisite: Consent of instructor. Individual study or research under the guidance of a personal financial planning faculty member to enhance the degree program. May be repeated for credit.

5320—Legal and Regulatory Aspects of Personal Financial Planning (3). Prerequisite or corequisite: PFP 5371, PFP major, dual degree student, or consent of instructor. Application of law, ethics, and regulatory policies to personal financial planning.

5322—Introduction to Applied Personal Finance (3). Survey course in personal financial planning for any students wanting to use this information in their personal and professional lives. Distance, on-campus, and study abroad. F, S, SS.

5325—Introduction to Charitable Giving (3). Introduces students to the techniques of charitable planning as viewed from the perspective of donors, financial planners, and fundraising professionals. F.

5326—Charitable Planning for Large Estates (3). Review of sophisticated charitable planning techniques with a special emphasis on creative uses of private foundations, donor advised funds, charitable remainder trusts, and advanced charitable estate planning techniques. S

5327—Charitable Giving: Research, Theory and Marketing (3). Review of research findings and theoretical models of charitable giving from the academic literature. Focuses on determinants and motivations in charitable giving with an emphasis on applying these findings in a professional context for financial advisors and fundraising professionals. F.

5328—Planned Giving Demographics and Decision Making (3). Analysis of research findings, theoretical models, and marketing implications related to planned giving and sophisticated charitable financial planning including private foundations and charitable trusts.

5329—Data Analysis and Interpretation for Financial Advisors (3). Prerequisite: B or better in ISQS 5347. Introduce students to techniques used to analyze statistical data. Provide students with tools to interpret and critically analyze statistical analyses presented in media and academia.

5341—Economic Principles of Financial Decision Making (3). Covers the key microeconomic and macroeconomic principles related to financial decision making. F, SS.

5350—Individual Tax Planning Topics (3). Studies legal research skills and the impact of federal and state tax regulations on personal financial planning decisions. S, SS.

5360—Economics of Retirement (3). Prerequisite: PFP 5341. Analysis of individuals' retirement decisions from an economic perspective. Labor supply theory will be heavily utilized. Taxes, social security, and other government policies and programs will be discussed as they relate to individuals' decision making.

5362—Fundamentals of Asset Management (3). Prerequisite: PFP major, dual degree or consent of instructor. Investment management concepts in a personal financial planning context; client goals, expectations, and risk tolerance; capital markets; investment alternatives; security valuation; risk assessment; and portfolio management concepts. F, SS.

5365—Fundamentals of Life-Centered Financial Planning (3). Examines the role of the client's story and the relationship of that story to the numbers articulated in a financial plan. Broadened client discovery

techniques and various dialogues around fiscal philosophy, meaningful financial objectives and life transitions.

- 5367—Marketing, Sales, and Social Media in Personal Financial Planning (3).** Prerequisite: PFP 5371. Provides a global introduction to sales and marketing techniques available to advisors. Students will create a complete marketing strategy, including a web presence, marketing materials, and social media vehicles.
- 5371—Fundamentals of Personal Financial Planning (3).** Focus on the financial planning process and the profession, including the study of cash management, time value of money, education funding, and other planning areas. F, S, SS.
- 5373—Personal Financial Planning Capstone (3).** Prerequisites: C- or better in PFP 5371, PFP 5350, PFP 5394, PFP 5397, PFP 5398, PFP 5382. Techniques and methods for utilizing financial planning practice standards in the development of comprehensive financial plans for clients. F, S.
- 5377—Psychology of Financial Planning I (3).** Using self-discovery, students will explore and apply theory, counseling fundamentals, and communication techniques for effective interactive client communication in financial planning and counseling. Addresses personal relationships with money, including emotions, beliefs, and behaviors. F, S.
- 5378—Interdisciplinary Approaches in Financial Health and Wellness (3).** Multidisciplinary approaches are used to understand human behavior and promote client change in the context of financial planning. Addresses systemic relationships and group dynamics.
- 5379—Practice Management in Personal Financial Planning (3).** Prerequisite: PFP 5371. Provides a global introduction to the process of creating, developing, and managing a successful financial planning practice. Students will create a business and marketing plan, using real industry data and techniques as a case study for profitable practices.
- 5380—Professional Technology in Personal Financial Planning (3).** Prerequisite: PFP 5394. Prerequisite or corequisite: C or better in PFP 5382, PFP 5398 or LAW 6227; ACCT 5307 or LAW 6434; PFP major; dual degree student; or consent of instructor. Advanced studies in professional software packages for financial planning and investment portfolio applications. S, SS.
- 5382—Wealth Management (4).** Prerequisite: PFP 5371. Prerequisite or Corequisite: PFP 5350. Focuses on the theory and practice of investments within the context of personal financial planning, including investment vehicle, analysis and selection, portfolio design and implementation, investor risk tolerance, tax management, and regulatory issues. F, S.
- 5383—Financial Planning with Emotional Intelligence (3).** The fundamentals of emotional intelligence as applied to financial planning relationships and the role of personality in communication, negotiation, and service.
- 5385—Behavioral Finance from a Personal Financial Planning Perspective (3).** Introduces concepts in behavioral finance that relate to an individual's decision making within the area of personal financial planning. S.
- 5390—Practicum in Personal Financial Planning (3).** Prerequisites: Consent of instructor, 3.0 GPA. Supervised experience designed to prepare the student for a career in financial planning/counseling. May be repeated for up to 6 hours credit.
- 5394—Retirement Planning (3).** Prerequisites: C- or better in PFP 5371, PFP 5350, and PFP 5382. Advanced studies in retirement planning covering retirement plans in the corporate setting, personal retirement planning, and retirement income strategies. F, SS.
- 5395—Comprehensive Financial Planning Review (3).** Prerequisites: C- or better in PFP 5371, PFP 5350, PFP 5394, PFP 5397, PFP 5398, PFP 5382. Comprehensive review of all areas of financial planning in preparation for taking the Certified Financial Planner Certification Examination.
- 5397—Risk Management and Insurance Planning (3).** Prerequisite: PFP 5371. Explores the use of risk management in personal financial planning with an emphasis on advanced planning techniques. F, S.
- 5398—Estate Planning (3).** Prerequisite: C- or better in PFP 5371. Prerequisite or corequisite: C- or better in PFP 5350. PFP major, dual degree student, or consent of instructor. Application of estate planning methodologies and policies to personal financial planning. F, SS.
- 5399—Professional Residency in Personal Financial Planning (3).** Prerequisite: C or better in PFP 5189 and 5289. Supervised residency experiences in established career-related positions in the financial planning field. SS.
- 6301—Academic Leadership in Personal Financial Planning (3).** Prerequisite: Ph.D. student in PFP program or consent of instructor. Addresses a wide selection of topics and issues related to teaching, research, and service/outreach. F.
- 6305—Introduction to Ph.D. Studies in Personal Financial Planning (3).** Prerequisites: PFP major. Provides an introduction to doctoral study in personal financial planning. Includes an explanation of the unique program of study in PFP, culture, expectations, professional development, and the research process. F.
- 6310—Statistics for Financial Planning (3).** Introduces students to the basic ideas in statistical analysis of data in the field of financial planning.
- 6315—Regression Methods for Financial Planning (3).** Prerequisites: B- or better in PFP 6310. Introduces regression modeling for Ph.D. students in personal financial planning. Students will estimate, diagnose issues, and interpret regression models within financial planning research.
- 6320—Survey of Statistical Techniques in Financial Planning (3).** Prerequisite: B- or better in PFP 6310 and PFP 6315. Surveys statistical methodologies for Ph.D. students in personal financial planning. Students will discern between and apply various statistical techniques to generate proper inferences.
- 6330—Seminar in Research and Philanthropic Fund Development (3).** Prerequisite: PFP 6377. Exploration of processes for preparing research ideas for presentation to individuals, groups, and/or organizations. Study of research proposal characteristics, how proposals are reviewed, strategies for success, and public versus private funding sources.
- 6340—Development and Pedagogy of Distance Education Courses (3).** Prerequisite: Ph.D. student in PFP program or consent of instructor. Focuses on the development and pedagogy of classes specifically designed to enhance personal financial literacy and personal financial planning primarily within an online environment.
- 6350—Applied Research Methods I (3).** Prerequisites: B- or better in PFP 6305, PFP 6397, PFP 6310, PFP 6315. Corequisite: PFP 6301. Introduces students to academic writing for peer-reviewed journal publications and conference presentations. Students will prepare their scholarly work for submission to appropriate outlets.
- 6351—Applied Research Methods II (3).** Prerequisites: B- or better in PFP 6301, PFP 6305, PFP 6397, PFP 6310, PFP 6315, PFP 6350. Focuses on navigating the peer-review process, finalizing peer-reviewed journal articles, and best practices for disseminating work to a broader audience.
- 6373—Personal Financial Planning Capstone for Educators/Researchers (3).** Prerequisites: B- or better in PFP 5362, PFP 5371, PFP 5382, PFP 5394, PFP 5397, PFP 5398, ACCT 5307. Techniques and methods for utilizing financial planning practice standards in the development of comprehensive financial plans for clients and capstone teaching techniques. [PFP 5373]
- 6374—Consumer and Household Economic Theory (3).** Prerequisites: Doctoral standing in the PFP division. Introduces microeconomic concepts that will be applied to the actions of consumers and individuals within the household. S.
- 6377—Research Methods I (3).** Prerequisites: B- or better in PFP 6301 (concurrent enrollment allowed). Introduces doctoral students to the scientific research process. Various elements of the research process will be identified and analyzed, and students will have an opportunity to work with data and statistical software to engage in the research process. F.
- 6378—Research Methods II (3).** Prerequisite: PFP 6377. A continuation of Research Methods I. Students will finalize a manuscript using the Graduate School's dissertation formatting with an emphasis on results, discussion, and implications. S.
- 6381—Research Seminar in Asset Management (3).** Prerequisite: PFP 6374. Introduces the theory of investment, literature and theory describing the unique process of household investment decision-making, quantitative investment analysis and the instruments used to construct an efficient household portfolio.
- 6383—Seminar in Regulatory Policy (3).** Review of theory and academic literature related to the regulation of professional financial advice and analysis of the current regulatory structure governing financial planning services.
- 6384—Diversity, Equity, and Inclusion in Financial Planning Research (3).** Prerequisite: Must be enrolled in the Personal Financial Planning Ph.D. program. Introduces students to the contemporary topic of diversity, equity, and inclusion (DEI) in personal financial planning.
- 6394—Psychology of Financial Planning II (3).** Theories, methods, and assessments underpinning financial health and wellness research. Critically examine academic research articles within the psychology of financial planning using a variety of methodologies.
- 6395—Financial Planning Program Development Seminar (3).** Seminar focusing on the development and management of high-quality, university-level programs in personal financial planning.
- 6397—Research Seminar in Personal Financial Planning (3).** Prerequisites or corequisites: B- or better in PFP 6301 and PFP 6305. Doctoral seminar on theories and empirical evidence in personal financial planning and its areas of specialization. May be repeated for credit for up to 6 hours when topics vary.

- 6399—Residency in Financial Planning Research and Education (3).**
Prerequisite: Consent of instructor. Supervised residency teaching and conducting research in personal financial planning at cooperating universities. May be repeated for credit up to 6 hours.
- 7000—Research (V1-12).**
- 8000—Doctor's Dissertation (V1-12).**

Graduate Minor

Graduate minors administered by the College of Human Sciences include the following:

Nutritional Sciences

This minor program is designed for students who seek information about nutrition or diet in their education to supplement or complement their current program. It can be earned at either the master's or doctoral level. A minor in Nutritional Sciences will appear on your transcript as an additional area of study completed.

Required Courses: NS 5365, 5370

Students pursuing a master's degree must complete the required courses and one additional 3-hour Nutritional Sciences elective **for a total of 9 hours.**

Students pursuing a doctorate degree must complete the required courses and an additional 9 hours of Nutritional Sciences electives **for a total of 15 hours.**

See more at http://www.depts.ttu.edu/hs/ns/graduate_minor.php.

Graduate Certificates

Graduate certificates administered by the College of Human Sciences include the following:

Advanced Entrepreneurship in the Services Industry

The Department of Hospitality and Retail Management offers an advanced certificate focused on entrepreneurship designed to enhance current skills in business development in the hospitality and/or retail business sectors. Students take four courses: HRM 5355 (required), and three electives from HRM 6353, 6311, 5345, or RHIM 5375.

Advanced Wedding and Conference Management

The Department of Hospitality and Retail Management offers an advanced certificate in wedding and conference planning designed to prepare individuals to become event planners or enhance their skills. Students take four courses: HRM 6316 - Advanced Marketing in HRM, HRM 5355 - Advanced Entrepreneurship in the Services Industry, HRM 5342 - Advanced Wedding Planning, and HRM 5360 - Advanced Event Planning.

Charitable Financial Planning

About the Personal Financial Planning Graduate Certificates: The director of each certificate, in consultation with the director of graduate studies, will develop and specify a program of study appropriate for each student. If students decide to pursue studies beyond the certificate level, course credit earned toward the certificate can be considered toward a graduate degree.

Graduate certificates are intended to meet the supplemental post-baccalaureate education needs of professionals. A graduate certificate program is a set of courses that provides in-depth knowledge in a subject matter. The set of courses provides a coherent knowledge base.

A student applying for a graduate certificate program will be admitted with a "GCRT" designation. To take any graduate course, all prerequisite courses (including undergraduate courses) must be taken and necessary background obtained before attempting the course. A student will be required to have a baccalaureate degree to start a graduate certificate program. There is only one exception to having a baccalaureate degree. If an undergraduate student from Texas Tech University has a 3.0 GPA or better and is within 12 hours of completion of a baccalaureate degree, the student may start

taking graduate courses toward a graduate certificate. The student must have a baccalaureate degree to receive a graduate certificate.

Graduate credits earned while the student is enrolled in a graduate certificate program may not be applied toward a graduate degree unless the student enrolls as a fully accredited graduate student. After fulfilling all other admission requirements, a student may use the courses taken for a graduate certificate degree if the courses fulfill the requirements of the program of study for the degree.

Graduate students may pursue a graduate certificate that is outside their graduate program of study. No more than one transfer course (if approved by the advisor of the graduate certificate program and the Graduate School) will be allowed for a graduate certificate program. If a graduate student is in good standing and dropping out of the graduate program, the student may receive a graduate certificate if the necessary courses have been taken. To receive a graduate certificate, a student must have a GPA of 3.0 or better. No grade lower than a C will be accepted.

The 12-hour Graduate Certificate in Charitable Financial Planning is intended for those who wish to develop a specialty in the area of planned giving, including complex techniques involving private foundations, charitable remainder trusts, charitable lead trusts, donor advised funds, life insurance, and remainder interests. Students also will review and discuss the latest academic research on charitable giving motivations and fundraising strategies. Required courses: PFP 5325, 5326, 5327, 5328.

Early Childhood Education and Family Policy

The Early Childhood Education and Family Policy certificate program is a 12-hour inter-institutional program offered through the Innovative Digital Education Alliance (IDEA), a consortium of multiple high-quality universities. This program equips individuals who are committed to working on behalf of diverse children and families in pedagogical and non-pedagogical contexts to evaluate, inform, create, and advocate for quality policies. Students will study, analyze, and evaluate family policies relevant to young children and families including health care, education, childcare, family leave, mental health, child abuse and neglect, incarceration of parents, and minimum wage. The ECFP graduate certificate seeks to prepare a diverse workforce who will think differently, lead in new ways, and tackle the policy, infrastructure, and advocacy challenges inspired by the present era of early childhood efforts. The courses are web-based, intensive 8-week courses designed so that two courses may be completed each semester. Visit www.idea.edu for more information. Required courses: HDFS 5312, 5331, 5332, 5333.

Contact: Dr. Stephanie Shine, Early Childhood and Family Policy, Program Director, Human Development and Family Sciences
stephanie.shine@ttu.edu

Financial Health and Wellness

The Financial Health and Wellness graduate certificate program focuses on creating feelings of contentment and achievement with one's current and future financial status. Courses teach both the personal skill sets and the discovery methodologies necessary to succeed as a practitioner of holistic financial planning. The curriculum consists of 9 credit hours: PFP 5377, 5378, and 5385 or 6394.

Gerontology

The Graduate Certificate in Gerontology is a 12-hour inter-institutional program offered through the Innovative Digital Education Alliance (IDEA, formerly GPIEDA), a consortium of multiple high-quality universities. The program is designed to prepare professionals who are either working directly with older people or are involved in education or research related to aging adults. All the courses are web-based. To complete the certificate, students are required to complete the 6 credits from Block 1 (Foundations) plus any 6 credits from Blocks 2 (The Aging Individual), 3 (Aging in Context), or 4 (Translational Practice in Gerontology) of electives offered by universities participating in IDEA. Visit www.idea.edu for more information. Courses available at TTU are included below.

- HDFS 5311 - Problems in Human Development and Family Sciences: Available topics include:
 - Socioemotional and Cognitive Well-being through Adulthood

- Aging Policy and Advocacy
- Applied Research Methods and Evaluation of Aging Programs
- Contemporary Perspectives in Adult Development and Aging
- Creativity and Aging
- Family Relationships and Aging
- Foundations in Integrative Aging Studies
- Gerontechnology
- Implementation of Community Programs for Older Adults
- Interdisciplinary Perspectives in Environments for Aging
- Physical Health, Wellness, and Active Aging
- Sexuality and Aging
- Special Topics

Contact: Dr. Page Heisser, Instructor/Director, IDEA Gerontology Online Program | page.heisser@ttu.edu

Human-Centered Design

This 12-hour graduate certificate offers specialty courses in interior and environmental design to graduate students and design professionals. Courses provide fundamental, sustainable, and environmental concepts related to human interactions within the built interior environment including healthcare design and design for special populations (i.e., aging populations, diverse populations, physically and mentally challenged populations, etc.). ENVD 5378 Research Methods I will enable students to synthesize, interpret, and apply critical analysis as applied to human-centered design. Required courses: ENVD 5378, 5383, 5386, 5388.

Human Sciences Education and Training

The Graduate Certificate Program for Human Sciences Education and Training is designed for current and future graduate students in Human Sciences and Family and Consumer Sciences Education who want to enhance their knowledge, skillsets, and employment possibilities by adding expertise in education and training. The Human Sciences Education and Training Certificate incorporates a comprehensive understanding of the Family and Consumer Sciences (FCS) Body of Knowledge, a framework that serves as the foundation for the FCS profession and addresses basic human needs, as well as critical perennial/emerging societal issues relevant to the well-being of individuals, families, consumers, and communities. The Human Sciences Education and Training Graduate Certificate program offers 15 hours (minimum) of online courses with the intent to expose students to FCS-related theories and how to apply theoretical frameworks to education and training programs. Graduate students may substitute one or more courses if they have taken similar courses in another program. Through focused coursework, it will empower graduate students to become “change agents” as future instructors or corporate industry trainers in Human Sciences. Required courses: FCSE 5302, 5306, 5342, 6305, 6343. Alternate course: FCSE 6345.

Youth Agency Management & Administration

The 12-hour Graduate Certificate in Youth Agency Management and Administration is designed to prepare professionals who are either working directly with adolescents and young adults or are involved in education and research related to youth. The certificate is designed to assist youth professionals to develop and apply resources for successful implementation and management of youth-serving programs that give youth opportunities to learn, lead, connect, and serve. The program addresses the need for advanced education based on research and policy for optimal youth outcomes through a strengths-based curriculum. This certificate is available only through enrollment in the Innovative Digital Education Alliance (IDEA), a consortium of multiple high-quality universities. The program requires Foundations of Youth Development, Design and Evaluation of Youth Programs, Youth Development Personnel and Program Management, and one elective from the following topics:

- Grant Development and Management
- Youth Policy
- Youth Mental Health
- Positive Youth Development in Community Settings
- Using Technology for Positive Youth Development
- Youth Professionals as Consumers of Research

Contact: Dr. Ali Luempert, Youth Development, Program Director, Human Development and Family Sciences | ali.j.luempert@ttu.edu

Youth Practice Specialist

The 12-hour Youth Practice Specialist Graduate Certificate is designed to prepare youth professionals to equip individuals in the second decade of life with the skills necessary for a successful transition into adulthood. The target audience is professionals who are either working directly with adolescents and young adults or are involved in education and research related to youth. This certificate is available only through enrollment in the Innovative Digital Education Alliance (IDEA), a consortium of multiple high-quality universities. The program addresses the need for advanced education in youth issues and does so through a strengths-based curriculum and requires Foundations in Youth Development, Youth Development, and two electives from among the following topics:

- Adolescents and Their Families
- Youth in Cultural Contexts
- Youth, Sports, and Society
- Positive Youth Development in Community Settings
- Systems of Care for Youth at Risk
- Youth Policy
- Youth-Adult Relationships
- Adolescent Health and Sexuality
- Youth Mental Health

College of Media & Communication

Bey-Ling Sha, Ph.D., Dean

103 Media and Communication | Box 43082
Lubbock, TX 79409-3082 | www.depts.ttu.edu/comc
T 806.834.8582 | F 806.742.1085

About the College

Communication is essential to every successful industry, government agency, nonprofit and start up. The College of Media & Communication is one of the largest media and communication undergraduate programs in the United States. In each of the seven undergraduate degree programs, students can learn how to communicate effectively, think critically, solve problems, create media and communication content, and work in teams. The college also offers three master's degree programs and a doctoral degree in media and communication. Because of the graduate program options, students also can earn a B.A. and an M.A. degree within five years.

The college provides numerous advising and student success opportunities such as professional advising, career counseling, and internships. Students at all levels can get involved in one of the following innovative experiential learning experiences: Raidervision, The Bullet Ad Team, RaiderComm, The Hub@TTU, The Think Tank, KTXT-FM, MCTV, The TTU Debate Team and many others. In addition, students from every degree program can get involved with a student organization related to each of the majors.

Degree Programs

The college supervises the following degree programs:

- Bachelor of Arts in Advertising
- Bachelor of Arts in Communication Studies
- Bachelor of Arts in Digital Media and Professional Communication
- Bachelor of Arts in Creative Media Industries
- Bachelor of Arts in Journalism
- Bachelor of Arts in Media Strategies*
- Bachelor of Arts in Public Relations and Strategic Communication Management
- Master of Arts in Communication Studies
- Master of Arts in Mass Communications
- Master of Arts in Strategic Communication and Innovation (online only)
- Doctor of Philosophy in Media and Communication

*Program no longer accepting students

Graduate Programs

For information on graduate programs offered by the College of Media & Communication, visit the Graduate Programs section of the catalog on page 419.

Undergraduate Programs

Each undergraduate degree program in the college requires a minimum of 120 semester hours for a Bachelor of Arts degree. The college seeks to offer a curriculum that stays abreast of trends and changes in the field while providing a broad education in media and communication.

First-semester students enrolling in the college must meet the university-wide admission requirements. Students enrolled in other colleges at Texas Tech may transfer into the college after earning at least 12 semester credit hours (excluding CLEP courses) with a GPA of 2.0 or higher.

Basics of Writing Exam. Any student wishing to enroll in JOUR 2310 must pass the college's Basics of Writing exam with a grade of 70 or higher, complete ENGL 1301 and ENGL 1302 with at least a grade of C, and have a 2.5 TTU GPA prior to enrolling in JOUR 2310.

Catalog Selection. Students will use the catalog issued for the year in which they are first officially admitted to the college, or a more recent catalog if approved. For the former Texas Tech University student seeking readmission to the university, the student must come back under the same catalog year in which the student was first enrolled at the university, provided the catalog is active (in no case can a student complete a degree under a catalog that is more than seven years old). Former Texas Tech University students may choose a more recent catalog year if approved.

Course Load. A normal full-time course load is 15-19 hours per semester. Course loads in excess of 19 hours require approval by the Associate Dean for Undergraduate Affairs. The normal course load for a single summer term is 6-8 hours, not to exceed 16 hours for the full summer semester.

Students on academic warning, academic probation, academic suspension, or academic dismissal will be limited to no more than 16 semester hours in a long semester and 12 hours in a full summer semester. Students may have the course load lowered according to the Academic Recovery program agreement or contract.

Course Prerequisites. Prerequisites are governed by the catalog in effect when the course is taken. All prerequisites must be satisfied with a C or better for course enrollment.

Credit by Examination. A matriculated student may attempt credit by examination (described elsewhere in this catalog). Approval from the Associate Dean for Undergraduate Affairs is required if the student is classified as a senior, if the student is taking the exam for a second time before six months have elapsed, or if more advanced material in the same subject has already been completed.

Final 30 Credit Hours. The final 30 semester credit hours of a degree program must be completed with Texas Tech enrollment. Credit for courses taken without prior approval from the Associate Dean for Undergraduate Affairs may not be applied to degree program requirements. Approval will not be granted during a student's graduating semester.

First Year. Entering first-year students develop their programs in consultation with an academic advisor. Students report to their advisors for individual conferences or group meetings as needed for the purpose of orienting themselves to academic regulations and procedures, curricula, and degree requirements in their respective areas of interest.

Students are urged to take the required first-year courses, including MCOM 1300 and MCOM 1301, during their first year. During the sophomore year, students should complete MCOM 2350. Normally, university core curriculum requirements should be completed by the end of the sophomore year. First-year students should not enroll in junior/senior-level courses.

GPA Requirement. First-semester students enrolling in the college must meet the university-wide admission requirements. Students enrolled in other colleges at Texas Tech may transfer into the college after earning at least 12 semester credit hours (excluding CLEP courses) with a GPA of 2.0 or higher. For all writing courses, ADV 3312, JOUR 2310, and PRSC 3312, a GPA of 2.5 must be earned prior to the semester of enrollment in the course.

Grades of D. Semester credit hours for a course in which a grade of D is earned may not be applied toward fulfillment of the major, minor, certificate, concentration, or teaching field requirements for any degree program.

Grades of Incomplete. A grade of I (Incomplete) must be replaced by a letter grade within one calendar year. It may not be replaced with transfer credit.

Grading Practices. The college conforms to university grading practices as set forth in the Academic Requirements section of this catalog. In addition, the following regulations apply within the college. Except for those courses

designated “may be repeated for credit” in this catalog, no course may be used more than once to satisfy graduation requirements.

Graduation Confirmation. Students declare their major upon entering the College of Media & Communication. Students are eligible to confirm their graduation date in the student dashboard when at least 80 percent of requirements have been met. The student is responsible for fulfilling all catalog requirements and is expected to regularly review their DegreeWorks and be familiar with graduation requirements. Any change in graduation date must be communicated to the advisor.

Ineligible Registrations. The College of Media & Communication reserves the right to drop any ineligibly registered students from a course for reasons such as lower division/upper division rule infractions and lack of prerequisites, including the minimum GPA prerequisite for writing courses.

Sophomore standing (at least 30 hours) is required for entry into 3000-level courses in the college if prerequisites are not stated.

Laptop Computers. The College of Media & Communication does not have a laptop requirement or policy for students. However, the college recommends bringing or purchasing a personal laptop/computer, especially for students who anticipate creating, producing, or developing content for their personal and professional portfolios. Many courses offered in the College of Media & Communication use specialized technology and software, which is generally available in both College of Media & Communication classrooms and computer labs. For questions about technology requirements for a particular class, students should reach out to their course instructor.

Students who are looking to check out equipment or purchase a personal computer/laptop should go to <https://www.depts.ttu.edu/comc/students/current/technology/>.

Minors. The college offers minors in advertising, communication studies, creative media industries, journalism, professional communication, and public relations & strategic communication management. The requirements for each minor are discussed in the catalog section of the supervising department. Students with majors in the College of Media & Communication are not required to declare a minor or concentration unless majoring in Journalism. Although not required, students in the College of Media & Communication can choose to declare a minor either within the college or from outside the college.

Multiple Majors. Students who wish to pursue two or more majors within the College of Media & Communication must have a minimum of 24 unique hours in each major.

Nondegree Students. All prerequisites and academic regulations based on GPA apply to nondegree students. Courses taken while in nondegree status may not be used as part of a degree program.

Pass/Fail. Only free electives are eligible for the pass/fail option requested by the student. No course required by the college may be taken pass/fail unless required by a media and communication major-minor sequence.

Second Undergraduate Degree. Permission to enroll in courses to pursue a second bachelor's degree must be obtained from the Associate Dean for Undergraduate Affairs. No second bachelor's degree is conferred until the candidate has completed at least 24 semester credit hours in residence, in addition to the courses counted toward the first bachelor's degree. Credit by examination courses will not satisfy the 24-hour residence requirement. A second bachelor's degree sought by a student who did not graduate from a public Texas university must include the required core curriculum.

Teacher Education. Students who want to teach journalism in secondary schools must complete a degree in journalism and take the necessary courses in the College of Education to be certified to teach. Students should contact the Teacher Certification Office in the College of Education. The following courses constitute the required courses from the journalism secondary teaching field: JOUR 2300, 2310, 3312, 3350, 3380, 3390, 4350, 4370, 3-hour journalism elective; PHOT 2310; MCOM 1300, 3300, and 3320. Passing the Basics of Writing exam with a grade of 70 or higher, ENGL 1301 and ENGL 1302 with at least a grade of C, and having a 2.5 TTU GPA is required prior to enrolling in JOUR 2310.

Transfer Students. Students requesting permission to transfer from another academic institution must meet the university-wide admission requirements. No more than 21 hours of media and communication

courses will be accepted in transfer unless approved by the Associate Dean for Undergraduate Affairs. Students enrolled in other colleges at Texas Tech may transfer into the college after earning at least 12 semester credit hours (excluding CLEP courses) with a GPA of 2.0 or higher. In addition, they must provide the Office of the Registrar with a transcript of all academic work. Approval will be granted by the Transfer Evaluation Office. The college will determine the applicability of any transferred credit to academic programs within the college. All transfer students will enter under the catalog in force at the time of transfer. The last 30 hours prior to graduation must be completed at Texas Tech.

Transfer Work. Coursework taken at other institutions must be approved prior to enrollment. Credit from other institutions is not calculated into the student's Texas Tech GPA.

University Core Curriculum Requirements. The core curriculum requirements ensure breadth in each academic program. These requirements have been incorporated into the college's undergraduate degree programs as per the State of Texas requirements listed in the Academic Requirements section of this catalog. Students should consult their DegreeWorks and with an advisor prior to each registration period to ensure all requirements are being met in a manner consistent with timely graduation.

Students in majors in the college must earn a C or better in the following courses: MCOM 1300, 1301, and 2350. Students are also required to earn a C or better in two department-level global communication elective courses (students may also substitute any college-level foreign language in which a grade of C or higher was earned) and complete six hours of Communication Literacy courses from their major in the College of Media & Communication.

Courses listed for majors in the college may be counted toward fulfilling the college's general degree requirements (including university core requirements).

Warning/Probation/Suspension/Dismissal. See the Academic Requirements catalog section concerning academic standing policies.

General Degree Requirements

Requirements for the degree of Bachelor of Arts apply to all baccalaureate degrees offered through the college unless specifically shown to the contrary.

Bachelor of Arts. The curriculum established for this degree is designed to provide the foundation for media and communication courses through a well-rounded study of digital and social media, global communication, and oral and written communication, as well as courses in creative arts, history, mathematics, social and behavioral sciences, and natural sciences. It also provides the factual basis and insights requisite for specialized study and professional work in these fields.

General Requirements. See “Undergraduate Credit by Examination” in the Undergraduate Admissions section of this catalog for information on credit provided by test scores to meet these requirements. Students must take the specified number of hours in the areas listed below. A course may not be counted in two different areas of the general requirements but may be counted in both general requirements and major requirements.

Semester Hours

English6

The 6 hours of English must consist of ENGL 1301 and ENGL 1302.

Oral Communication3

Select COMS 2300, COMS 2358, MCOM 2310, or from other courses on the core curriculum requirements approved list.

Foreign Language/Global Communication 9-13

Texas Tech University policy is that any entering student who has not completed two years (four semesters) of a single foreign language in high school, or has not transferred at least two semesters of a single foreign language from another institution of higher learning, must complete at least two semesters or its equivalent of a single foreign language at the first-year college level as a graduation requirement. Students who did not complete two years of foreign language in high school will complete the following requirement:

- Complete first-year foreign language requirement (10 hours) with a C or better, and earn a C or better in MCOM 2350.

International students whose native language is not English and who graduated from a secondary school in their native country may satisfy the language option by providing their certificate of graduation to

the Office of the Registrar. Credit by examination is available for the following languages: French, German, Latin, and Spanish. Students who petition to complete the foreign language requirement via study abroad through a non-Texas Tech affiliated program will agree to have foreign language credit applied to their degrees based on scores of a language placement test upon their return from study abroad. Approval must be received in advance from the Associate Dean for Undergraduate Affairs.

Students who have met the minimum university foreign language requirement can choose to complete 9 hours of Global Communication credits (3 hours are fulfilled by MCOM 2350). In addition to MCOM 2350, global communication courses include ADV 4313, COMS 3332, CMI 3309, CMI 3355, CMI 3358, JOUR 3370, PRSC 4351, any approved international-focused special topics course, any course taken as a Study Abroad, and any foreign language course taken at the college level (earning a minimum of a C or higher).

Study Abroad and special topics courses must have department chair and Associate Dean for Undergraduate Affairs approval at least one semester prior to enrolling in the course.

Mathematics6

All mathematics courses 1300 and above (excluding junior and senior level) may be used. Only one of MATH 1300, MATH 1320, and MATH 1420 may apply. Only one of MATH 1330 and MATH 1430 may apply. AAEC 2301, EDIT 2318, PHIL 2310, or PSY 2400 may be used to satisfy 3 hours of this requirement. MATH 2300 or MATH 2345 is required for all advertising, creative media industries, journalism, media strategies, or public relations and strategic communication management majors. Communication studies and digital media and professional communication majors may take any two math credits that fulfill State of Texas core requirements.

Life and Physical Sciences8

Two courses including matching labs must be selected from the Life and Physical Sciences list in the core curriculum options.

Social and Behavioral Sciences3

All majors in the College of Media & Communication can complete this requirement with COMS 1301, COMS 1310, MCOM 1300, MCOM 1301, or other university-approved Social and Behavioral Science course. Please refer to department graduation requirements for other courses.

United States History6

Students may choose from HIST 2300, 2301, or 2310.

United States and Texas Government6

Students will enroll in POLS 1301 and POLS 2306. For more information, see the Department of Political Science section of this catalog. One course must be taken from a Texas college or university.

Language, Philosophy, and Culture3

Fulfilled by MCOM 2330, COMS 2310, or other university-approved Language, Philosophy, and Culture course. Please refer to department graduation requirements for elective courses.

Creative Arts.....3

Fulfilled by MCOM 2301 or other university-approved Creative Arts course. Please refer to department graduation requirements for elective courses.

Major and Electives. In addition to the above requirements, students must take major and elective courses to total a minimum of 120 semester credit hours (40 of which must be upper-level junior/senior to meet the university graduation requirement). Students will be required to complete a minimum of 39 hours (33 hours for Communication Studies majors) for their major subject, including 6 hours of courses in communication literacy. At least 18 hours of the major subject must be in courses at the junior/senior level.

Undergraduate Certificates

Entertainment Media

The College of Media & Communication offers a 12-hour Undergraduate Certificate in Entertainment Media for students focusing on pursuing careers in the entertainment industry. Students learn critical skills for jobs as directors, screenwriters, and producers of popular media. Interested students can select four courses, each with three units of credit, from a list of courses offered in various departments of the college. At least two of the courses must come from a department or program outside the student's major.

Students choose four courses from ADV 4301 (Film Trailers, Mad Men, Sex/Drugs and Rock n' Roll), COMS 2310, 3321, CMI 3340, 3345, 4301 (Issues in Global Film and Media), 4310, 4311, PRSC 4301/CMI 4301 (Production and Promotion – cross-listed and co-taught), CMI 4370, CMI 4375, CMI 4380, MCOM 3303, PRSC 3352, 4301 (Entertainment PR).

Students may also apply an internship (ADV 3390, COMS 4304, JOUR 3390, CMI 3390, MCOM 3390, or PRSC 3390) as long as there is an emphasis in entertainment media and communication.

Students may also apply 3 credit hours from activities courses, such as CMI 2000/JOUR 2000 or CMI 3100 or CMI 4300, which offer practicum credit for work in the entertainment media industry (department chair approval required).

Motion Picture Production

The College of Media & Communication and the Talkington College of Visual & Performing Arts have partnered to offer a 15-hour undergraduate certificate in Motion Picture Production. Students learn valuable skillsets in the areas of production and performance in motion picture films. This certificate prepares students for careers in a number of fields within and related to motion picture production, from directing, editing, and cinematography to acting, set design, and costume design, among others.

Students will select five courses:

- Two required courses from Media & Communication (JCMI 2301 and 2302).
- Two required courses from the School of Theatre and Dance (choose from THA 2305, 3311, 4335, 4336, 4337).
- One final course as an elective from either college (choose from CMI 3335, 4310, 4380, 4301; MCOM 2301, ART 4390, or a previously untaken THA course from the choices listed above).

Note: Courses generally can be taken in any order as long as any necessary prerequisites have been met.

Sports Media

The College of Media & Communication offers a 12-hour Undergraduate Certificate in Sports Media for students planning on media careers in the sports industry. Sports media jobs are often interdisciplinary, cutting across the traditional media disciplines of journalism, electronic media, public relations, and advertising. The certificate consists of four courses, each with three units of credit, taken from various college departments. Students can choose four courses from ADV 3350, 4301 (Olympics and Global Promotion), CMI 4301 (Producing for Sports), JOUR 4305, MCOM 1302, PRSC 3354, PRSC 4301 (Sports Media Production), PRSC 4301 (Global Sports Public Relations).

Students may also apply an internship (ADV 3390, COMS 4304, JOUR 3390, CMI 3390, or PRSC 3390) as long as there is an emphasis in sports media and communication.

Students also can choose 3 credit hours from activities courses, such as CMI 2000/JOUR 2000 or CMI 3100 or CMI 4300, which offer practicum credit for work in the sports media industry. These activities include, but are not limited to, college-sponsored programs, such as Raider Vision (TTU Athletics Broadcasting), the HUB, the Outpost, or Double T Insider (department chair approval required).

Students also can earn a maximum of 3 credit hours by taking one of two courses offered in the Department of Kinesiology and Sport Management, SPMT 4355 and SPMT 4356.

Undergraduate Course Descriptions

Course descriptions for the college's various specializations can be found within the catalog information for each department. Those courses with a MCOM prefix that are common to many disciplines within the college can be reviewed below.

Mass Communications (MCOM)

- 1100—Success in Media and Communication (1).** Introduces students to media and communications academic programs and professional career opportunities. Provides a structured approach to academic, social, and personal success in the university.
- 1300—Foundations of Media and Communication (3).** [COMM1307] A broad survey of media history, principles, and practices up to the modern era, with particular emphasis on print media, broadcasting, advertising, and public relations. Fulfills core Social and Behavioral Sciences requirement.
- 1301—Introduction to Digital and Social Media (3).** An introduction to online, interactive, digital and social media and how and why they affect individuals, society, and everything and everyone in the world, from war and politics, to love and relationships, to careers and hobbies, to news and entertainment.
- 1302—Introduction to Sports Media (3).** Explores the sports media industry and presents an overview of sports communication or media roles in an interdisciplinary sector that involves traditional media discipline skills, including journalism, broadcast, creative media, advertising, and public relations.
- 2301—Visual Storytelling (3).** Designed to immerse students in visual storytelling and help them learn to examine aesthetic, ethical, and intercultural issues related to the creative art of telling stories using a visual format. Fulfills core Creative Arts requirement.
- 2310—Business and Professional Communication (3).** Develops the communication skills used in business and organizations, including writing and delivering speeches, responding to requests for proposals, and creating multimedia presentations. Fulfills core Communication (Oral) requirement. (CL)
- 2320—Writing for Media and Communication (3).** Introduction to professional and academic writing for the media disciplines. Focuses on writing appreciation and mechanics, as well as specific writing strategies for journalism, the web, advertising, public relations, business, and the academy.
- 2330—Media Literacy (3).** Critiques and analyzes media, the audience, the mediated environment, media industry, digital media, and media professions, particularly advertising, electronic media, public relations, and journalism. Fulfills core Language, Philosophy, and Culture requirement. (CL)
- 2340—Social Media Influencing (3).** Covers social media influencing including determining viable social platforms and understanding name, image, and likeness (NIL) to develop a personal brand for professional use.
- 2350—Communicating in a Global Society (3).** Engages international and intercultural communication to enable students to become effective communicators with others in an increasingly diverse global society. (CL)
- 3300—Theories of Media and Communication (3).** Theory-based exploration of the relationship between the mass media and society, such as aggression and television violence.
- 3303—Sex and Violence in the Media (3).** Introduces issues surrounding the prevalence of sex and violence in the media, including free speech, viewer motivations, market forces, and media effects.
- 3320—Media and Communication Law (3).** A study of the legal problems facing media and communication practitioners, including libel, privacy, industry regulation, Internet communications, intellectual property/copyright, sex-themed media content, and ethical decision making in a globalized world.
- 3380—Research Methods in Media and Communication (3).** Prerequisite: C or better in MATH 2300 or MATH 2345. Comprehensive overview of mass communications research focusing on planning, designing, conducting, analyzing, interpreting, and applying research to address communication issues and problems.
- 3390—Internship in Media Strategies (3).** Prerequisites: 2.5 TTU GPA; C or better in MCOM 1300, MCOM 2310, MCOM 2320; and recommendation of faculty member and internship coordinator. Minimum of 160 hours of supervised employment in media or communication organization. Weekly reports, interviews, and term paper required.
- 4000—Special Problems in Media and Communication (VI-3).** Prerequisite: Consent of instructor. Individual research on approved problems or projects in mass communications areas. May be repeated for 3 hours credit.
- 4301—Special Topics in Media and Communication (3).** Considers selected topics in media and communication. May be repeated for credit when topic varies.

About the Department

Advertising Major

The Department of Advertising & Brand Strategy offers a 120-hour degree program leading to a Bachelor of Arts in Advertising. The program gives students the training and background to become leaders in advertising and brand communication.

The curriculum encourages students to think responsibly and connect advertising concepts with history as well as contemporary society. Students compare and critique advertising and brand communication as they analyze the integrated nature of the current media world. They are stimulated to think independently and work collaboratively in a professional manner. Oral and written communication is emphasized as students learn to create innovative advertising messages. The program combines a focus on skills training with creativity and critical thinking.

Students majoring in advertising gain detailed understanding of the creative and business-related aspects of advertising, ultimately preparing them for careers in account service, brand management, copywriting, sales, production, design and layout, digital strategy, media planning, and research. Students majoring in advertising take additional coursework from other departments within the college as well as approved electives outside the college.

The department also hosts industry professionals who speak to students about internships and careers in advertising. A variety of student organizations are available at the department and college level offering students hands-on experience. There are multiple opportunities to participate in local/national competitions.

Communication Literacy Plan. Communication literacy in the Advertising and Brand Strategy department is evidenced by competence in writing, speaking, and creating advertising content. A sequenced approach begins with a foundation in writing, then creative design work, and finally a capstone experience that incorporates synergy among written, oral, and creative communication skillsets. The following courses fulfill the plan for Communication Literacy in the Advertising major: ADV 3312, 3361, and 4412.

Advertising Undergraduate Minor

Students selecting a minor in advertising are required to pass ENGL 1301 and ENGL 1302 and have a 2.5 TTU GPA prior to enrolling in ADV 3312. A minor in advertising consists of a minimum of 21 hours. At least 12 of the 21 hours must be taken in residence. Specific requirements for the advertising minor include ADV 3310, 3320, MCOM 1301, and 12 hours of electives chosen from ADV 3312, 3318, 3330, 3340, 3350, 3351, 3361, 4000, 4300, 4301, 4304, 4306, 4313, 4320, and 4330.

Additional minors are listed in each College of Media & Communication department and are available in communication studies, electronic media and communications, journalism, professional communication, and public relations and strategic communication management.

Undergraduate Course Descriptions

Advertising (ADV)

- 1100—Success in Advertising and Brand Strategy (1).** Introduces majors to the degree, explores professionalism, and identifies career opportunities in the industry. Includes an overview of student organizations and advising process.
- 3310—Principles of Advertising (3).** An overview of the broad field of advertising. Acquaints students with the role of advertising in the American economy and social system and the procedures involved in planning advertising campaigns.
- 3312—Advertising Writing (3).** Prerequisites: Sophomore standing or higher, C or better in ADV 3310 and MCOM 2320, 2.5 TTU GPA. Principles and practice of writing for advertising. Includes writing for internal audiences as well as for various media to meet advertising goals to persuade and inform mass audiences. (CL)
- 3318—Advertising Research and Consumer Insights (3).** Prerequisites: C or better in MATH 2300 or MATH 2345. Inspiring communication ideas with audience and market insights to connect brands and consumers through authentic, relevant experiences.
- 3320—Advertising and Society (3).** Examines advertising's role in society and its relationship to consumers in historical and contemporary contexts. Considers the economic, legal, ethical, and social aspects of advertising.
- 3330—Advertising Theory (3).** Prerequisite: C or higher in ADV 3310. Examines the development and practical application of theories and models related to advertising effects, audience response, and return on investment.
- 3340—Internet and New Media Advertising (3).** Prerequisites: C or higher in ADV 3310 or PRSC 2310. Explores Internet and new media advertising issues and techniques. Includes evaluating and creating Internet and new media-based advertising campaigns.
- 3350—Sports Advertising (3).** A study of advertising in the sports industry with emphasis on theoretical and practical application to brand building, organizational recognition, sponsorship, and issues of controversy.
- 3351—Advertising Media Planning (3).** Prerequisites: C or higher in ADV 3310 or PRSC 2310, MATH 2300 or MATH 2345. A study of the various advertising media to provide students with a knowledge of the use of advertising media, methods of selection, and the skills and background required for media buying.
- 3361—Advertising Design and Branding (3).** Prerequisite or corequisite: C or higher in ADV 3312. Corequisite: Non-credit lab. Covers the creative aspects of advertising design, strategy, copy, layout, typography, and production in a variety of visual media. Provides practical training for planning and executing effective print and broadcast messages. Teaches computer proficiency with software packages such as Adobe Creative Suite, which includes Illustrator, InDesign, and Photoshop. (CL)
- 3390—Internship in Advertising (3).** Prerequisites: C or higher in ADV 3351, 2.5 TTU GPA, and recommendation of faculty member and internship coordinator. Minimum of 160 hours supervised employment in media or communications organization. Weekly reports, interviews, and term paper required. Must be taken pass/fail.
- 4000—Special Projects in Integrated Communications in Advertising (V1-6).** Prerequisite: Consent of instructor. A hands-on experience in developing and presenting an integrated communications campaign for a business problem or opportunity. May be repeated once for credit.
- 4300—Individual Study in Advertising (3).** Prerequisites may vary depending on course topic. May be repeated once for credit.

TOTAL: 13

TOTAL HOURS: 120

Students majoring in advertising are required to complete 64 semester hours within the college, including elective selections from Group A, Group B, Group C, and the following: ADV 3310, 3312, 3318, 3320, 3351, 3361, 4412; MCOM 1300, 1301, 2320, 2350.

Group A: 9 hours from: ADV 3330, 3340, 3350, 3390, 4000, 4300, 4301, 4304, 4306, 4313, 4320, 4330.

Group B: 12 hours from: COMS 1301, 3313, 3315, 3334, 3335, 3353; CMI 3308, 2310, 3315, 3333, 3335, 3380, 4301, 4315; JOUR 3317, 4301; MCOM 3300, 3303, 3320; PHOT 2310, 3310, 3330; PRSC 2310, 3311, 3312, 3341, 3351, 3352, 4301.

Group C: 9 hours from: ART 1302, 1303, 1309, 2309, 3325; BA 3301, 3304, 3305; ECO 2305; ENGL 2305, 2307, 2308, 2311, 2351, 2388, 3365; RRP 1100, 4100; PFP 3301; PSY 1300, 2304, 3306; SOC 1301; THA 2301, 2303.

Additional elective courses may be approved by the department chairperson.

MCOM Global Communication Courses: Choose from MCOM 2350, ADV 4313, COMS 3332, CMI 3358, JOUR 3370, PRSC 4351.

- 4301—Special Topics in Advertising (3).** Considers selected topics in advertising. May be repeated for credit when topic varies.
- 4304—Advanced Creative Strategy (3).** Prerequisite: C or higher in ADV 3361. Advanced formulation and techniques of creative strategy with emphasis on copywriting. May include participation in local, state, regional, and/or national advertising competitions.
- 4306—Advertising Typeface Appreciation (3).** Prerequisite: C or higher in ADV 3361. Explores use of appropriate typography in creating effective advertising. Fundamentals of typographic design examined as a tool to inform, disseminate ideas, and enhance visual aesthetics.
- 4313—International Advertising (3).** Prerequisites: C or higher in ADV 3310 or PRSC 2310. A study of the practices and procedures of advertising in the international market. (CL)
- 4320—Integrated Brand Management (3).** Prerequisite: C or higher in ADV 3310. Study of the relationship between advertising and successful brand management through integration of research, strategy, and creativity. Focus on consumer engagement to build brand equity.
- 4330—Advertising Sales (3).** Prerequisite: C or higher in ADV 3310. Study of media sales including radio, television, newspapers, magazines, and digital platforms. Will develop practical knowledge of sales and relationship building in advertising sales context.
- 4412—Advertising Campaigns (4).** Prerequisites: C or better in ADV 3318, ADV 3351, and ADV 3361. Integration of advertising research, message and media strategies and techniques, with special application to campaign planning and execution. Principles and applications of advertising campaign planning, preparation, and presentation taught in a problem-solving mode. (CL)
- 4601—Advertising Writing & Design (6).** Prerequisites: Sophomore standing or higher, C or better in ADV 3310 and MCOM 2320, 2.5 TTU GPA. Principles and practice of writing and designing for advertising. Covers strategic messaging and visual media for mass audiences. Practical training in computer design software.

About the Department

Communication studies is among the most popular and fastest-growing majors at colleges and universities across the country. Its majors are highly sought after by employers in a diverse array of fields because of their excellent oral and written communication skills, entrepreneurial spirit, capacity for critical thinking, collaboration and negotiation abilities, and relational and intercultural competence. Equipping students with such essential and transferable skills uniquely positions graduates to succeed in the rapidly changing, global information landscape of the 21st century.

The Department of Communication Studies at Texas Tech is committed to enriching and enhancing all aspects of students' lives: personal, professional, and public. Toward that end, it fosters a welcoming, student-centered environment. The Department features an array of award-winning teachers who are passionate, supportive, and inspiring.

Requirements for the Major. Students seeking an undergraduate degree in communication studies will complete a course of study that consists of 33 hours of COMS courses. A minimum of 120 total hours is required for the degree (including the university core and College of Media & Communication core courses). The department recognizes that each student has unique educational objectives and professional goals. Therefore, a flexible and individualized plan of undergraduate study is developed to be compatible with the student's aims. A total of 12 hours toward the major must be completed in residence at Texas Tech. All students who major in communication studies must complete four courses: (1) COMS 1310, (2) COMS 2300, (3) COMS 3302, and (4) either COMS 3301 or COMS 3310. The remaining 21 hours of coursework may be chosen from the list of COMS electives.

Communication Literacy Requirement. The Communication Literacy Plan for the B.A. in Communication Studies seeks to strike a balance between promoting an understanding of how communication works in specific contexts (theory) and practical skills development (practice). To achieve this crucial balance of theory and practice, the department has constructed a four-class cluster (12 credits) that promotes a critical understanding of communication in specific contexts along with basic skills development in oral and written communication. The four courses in the CL plan are identical to the four required classes in the degree program: (1) COMS 1310, (2) COMS 2300, (3) COMS 3302, and (4) either COMS 3301 or COMS 3310. So, any student who has met the degree requirements in communication studies has also completed the communication literacy requirement.

Teacher Certification. Students desiring secondary certification in speech communication must complete the following: COMS 1301, 1310, 2300, 3314, 3351; and 12 hours of electives in communication studies, 9 hours of which must be at the upper-division level. Students planning to become high school teachers should minor in secondary education. They must consult with an advisor in the College of Education to set their requirements for professional education courses and for student teaching.

Graduate Programs

For information on graduate programs offered by the Department of Communication Studies, visit the Graduate Programs section of the catalog on page 417.

Undergraduate Programs

Communication Studies, B.A.

Students seeking the Bachelor of Arts in Communication Studies will complete a course of study that consists of 33 hours of COMS courses. A minimum of 120 total hours is required for the degree (including state core and College of Media & Communication core courses). The department recognizes that each student has unique educational objectives and professional goals. Therefore, a flexible and individualized plan of undergraduate study is developed to be compatible with the student's aims. A total of 12 hours toward the major must be completed through Texas Tech instruction. All students who major in communication studies must complete four courses: (1) COMS 1310, (2) COMS 2300, (3) COMS 3302, and (4) either COMS 3301 or COMS 3310. The remaining 21 hours of coursework may be chosen from the list of COMS electives.

Communication Studies Undergraduate Minor

A minor in communication studies consists of 18 hours of COMS courses, at least 6 hours of which must be completed in residence at Texas Tech. Students who minor in communication studies must complete COMS 1310, COMS 2300 (or transfer credit for COMS 1300), and either COMS 3301 or COMS 3310. Of the remaining 9 hours, 6 must be in advanced courses.

Undergraduate Course Descriptions

Communication Studies (COMS)

- 1300—Introduction to Communication Studies (3).** [SPCH1311] A broad-based introduction to the field of communication studies, covering the major content areas in the discipline.
- 1301—Interpersonal Communication (3).** [SPCH1318] A study of the human communication process in one-to-one encounters. Fulfills core Social and Behavioral Sciences requirement.
- 1310—Fundamentals of Communication (3).** Introductory survey of the field of communication studies, including communication models, the rhetorical tradition, interpersonal and relational communication, and organizational and small group communication. Required for all communication studies majors and minors. Fulfills core Social and Behavioral Sciences requirement. (CL)
- 2300—Public Speaking (3).** [SPCH1315] Students learn to prepare and deliver effective presentations, adapt to various audiences, and adjust to different speaking contexts. Required for all communication studies majors and minors. Fulfills core Communication (Oral) requirement. (CL)
- 2310—Communication and Popular Culture (3).** Historically examines the social influence of U.S. popular culture from the 1960s to today, paying particular attention to the meanings communicated and the ideologies conveyed. Fulfills core Language, Philosophy, and Culture requirement.
- 2320—Communication in Nursing (3).** Survey of nursing communication issues preparing nurses to become competent communicators with patients and physicians and to navigate healthcare teams, patient education, and workplace conflict.
- 2358—Speaking for Business (3).** Preparation for communicating in businesses and organizations. Focuses on internal communication practices, including speeches, seminars, presentations, interviews, and consulting. Fulfills core Communication (Oral) requirement. (CL)
- 3102—Forensic Activities (1).** Offers students the opportunity to receive credit for extensive participation in forensic activities. May be repeated up to 4 semester hours; 2 semester hours may be applied toward communication studies major.
- 3301—Communication Theory (3).** Analysis and critique of communication theories in social-scientific, empiricist, interpretive, and humanistic research traditions. Required for all communication studies majors and minors. (CL)
- 3302—Communication Research (3).** Critique and application of research methods in communication studies research projects. Required for all communication studies majors. (CL)
- 3310—Rhetoric in Western Thought (3).** Explores theories of rhetoric ranging from ancient Greece to present day. Students examine different conceptions of how rhetoric negotiates public character, social truths, and power. (CL)
- 3313—Persuasion (3).** Analyzes representative theories and models of persuasive processes and their implications for communication behavior. Includes theories of public, interpersonal, and mass communication.

MCOM Global Communication Courses. Choose from MCOM 2350; ADV 4301, 4313; COMS 3332; CMI 3355, 3358; JOUR 3370; PRSC 4351, and any approved 4301 special topics course, approved Study Abroad course, and any foreign language taken at the college level in which a C or better was earned.

- 3314—**Argumentation and Debate (3)**. Surveys the evolution of argumentation with emphasis on modern viewpoints and application of theory to selected controversies.
- 3315—**Political Campaign Communication (3)**. Studies the strategies of communication and persuasion in American political campaigns, focusing on campaigns currently in progress.
- 3319—**Persuasion and Social Movements (3)**. Studies the role of persuasion in social movements, both historical and contemporary. Analyzes the various persuasive strategies employed as social movements evolve.
- 3320—**Media, Technology, and Society (3)**. Investigates the historical development of communication technologies and examines the complex ways they have shaped and transformed society.
- 3321—**The Rhetoric of Film (3)**. Treating film as a rhetorical art, this course focuses on the social, cultural, and political consequences of contemporary U.S. cinema.
- 3332—**Intercultural Communication (3)**. Explores communication and culture within global, national, and local contexts. Examines cultural group values, practices, and communicative behaviors from diverse perspectives. Applies topics such as cultural barriers, cultural similarities/differences, prejudice, and privilege to everyday communicative encounters. (CL)
- 3333—**Communication in Relationships (3)**. Surveys research concerning the role of communication in the development, maintenance, and decay of interpersonal relationships.
- 3334—**Gender and Communication (3)**. Examines gender in contemporary society, giving attention to gender roles, masculine and feminine communication styles, social institutions that shape gender, and everyday applications of gender in the lives of people. [WGS 3312]
- 3335—**Nonverbal Communication (3)**. Studies the origin, function, and control of nonverbal, symbolic elements inherent in communication.
- 3351—**Communication in Instruction and Training (3)**. Applies instructional communication theory to the processes of instruction, training, and performance in varied learning contexts. Students gain experience in assessing needs; developing objectives, a training plan, and presentational materials; delivering a training presentation; and reporting training outcomes.
- 3353—**Small Group Communication (3)**. Addresses group process and interaction; specifically, how to make group functional while focusing on factors such as leadership, diversity, conflicts, and other appropriate contemporary topics.
- 3355—**Communication in Organizations (3)**. An introduction to group process and interaction, the concepts of leadership, and effective participation.
- 3356—**Leadership and Communication (3)**. A broad-based theoretical approach to the study of leadership and communication. Application to a variety of settings will also be discussed.
- 3359—**Interviewing: Process and Procedures (3)**. Principles drawn from contemporary interpersonal communication theory are specifically applied to informational, employment, and persuasive interview situations. Practical application of theoretical concepts is encouraged through in-class role-playing interviews and through analysis of actual interviewing techniques.
- 3365—**Communication in Healthcare (3)**. Introductory survey of the influence of communication in health and healthcare delivery within interpersonal, organizational, and mass-mediated contexts.
- 4000—**Independent Research in Communication Studies (V1-3)**. Prerequisites: 18 hours of COMS courses and consent of instructor. Individual research in COMS area of student's choice under faculty member guidance. May be repeated once for credit up to 6 hours.
- 4304—**Internship in Communication Studies (3)**. Prerequisites: Junior standing or consent of instructor. Student internship, under supervision of Media and Communication coordinator, in a selected area of applied communication.
- 4310—**Special Topics in Rhetoric (3)**. Prerequisite: Junior or senior standing. Consideration of selected topics in rhetoric. May be repeated for credit.
- 4314—**Directing Speech and Debate Activities (3)**. Methods and principles involved in directing extracurricular speech activities such as debate, oral, interpretation, and public speaking.
- 4330—**Special Topics in Interpersonal Communication (3)**. Prerequisite: Junior or senior standing. In-depth analysis of selected areas and topics in interpersonal communication such as intimate relationships and family as well as the intersections of interpersonal and intercultural communication. May be repeated for credit.
- 4350—**Special Topics in Corporate-Organizational Communication (3)**. Consideration of selected topics in corporate-organizational communication. May be repeated for credit.

About the Department

The Department of Journalism & Creative Media Industries supervises the 120-hour Bachelor of Arts in Journalism and the 120-hour Bachelor of Arts in Creative Media Industries degree programs.

Undergraduate Programs

Creative Media Industries, B.A.

This program is designed to train storytellers proficient in convergent media forms who can exhibit excellence in the creation and analysis of creative media content in diverse U.S. and global media marketplaces. The creative media industries program offers professional courses in film, television, digital/interactive media, audio, photography, and writing to provide a broad and thorough liberal arts education. This is not simply a skills-oriented program. It is devoted to preparing students for leadership positions in creative media industries.

CMI degree graduates will:

1. Demonstrate and apply an understanding of the technical, cultural, and industrial history of creative media, and demonstrate proficiency in traditional storytelling forms and techniques.
2. Demonstrate proficiency in current, industry-standard digital storytelling techniques and modalities, with particular emphasis on serving diverse audiences, addressing clients' needs, and building one's professional portfolio.
3. Demonstrate the capacity to think critically and analytically, perform research and devise data-informed strategies, and anticipate the creative media forms and trends of the future.
4. Demonstrate effective collaborative and leadership skills, as well as effective interpersonal communication strategies.
5. Demonstrate the capacity to evaluate the aesthetic, cultural, ethical, and legal impact of creative media in the context of a global communication system.

Communication Literacy Requirement. Students majoring in Creative Media Industries are expected to demonstrate communication proficiency in courses across the degree curriculum. In particular, the Creative Media Industries faculty wish to ensure that students are first and foremost capable writers, but also that they are able to communicate visually, digitally, aurally, analytically, and among various cultural and social groups. The CL plan for creative media industries major comprises 18 credits (six courses): CMI 4320; JCOMI 2301, 2302; either JOUR 2310 or MCOM 2320; either CMI 3358 or 3335; and either CMI 3370 or 4370 or 4375.

Journalism, B.A.

The journalism degree program prepares students for meaningful careers in today's leading news organizations. Journalism classes are steeped in traditional journalism values and emphasize the importance of storytelling, clarity, conciseness, accuracy, and fairness in reporting.

Augmenting journalism education based in valued traditions, the College of Media & Communication journalism faculty and staff work with news organizations to provide students with meaningful internships and other career-advancing opportunities.

Texas Tech offers a multi-platform journalism program. All journalism majors study the unique attributes of print, broadcast, and online news content and production. Students have the opportunity to produce news using a variety of media including social, print, broadcast, and online.

Learning Outcome 1: Core Skills & Knowledge. Each student will master and demonstrate the skills and knowledge necessary for the responsible reporting, writing, editing, fact-checking, and presentation of news stories. Each student will demonstrate an understanding of the branches of government at the federal, state, and city/county levels.

Learning Outcome 2: Professional Standards. Each student will demonstrate knowledge of ethical journalistic practices and media law.

Learning Outcome 3: News Production and Dissemination Competence. Each student will demonstrate proficiency in producing news packages for print, broadcast, online, and social media in different contexts.

Learning Outcome 4: Reporting Technologies. Each student will master and demonstrate the skills of data journalism, public record use, information gathering through social media, and news curation.

Students choosing to major in journalism are required to pass the college's Basics of Writing (BOW) exam with a 70 or higher; pass ENGL 1301 and ENGL 1302 with at least a C; and have a TTU 2.5 GPA prior to enrolling in any JOUR course with a number higher than 2300.

In order to ensure expertise in a content area, journalism majors are required to choose either a 15-credit interdisciplinary concentration, an 18-21 credit minor, or a second major/degree. Suggested concentrations include strategic communication, media economics and management, visual communication, international/intercultural communication, education, social issues, political journalism, health/science/environmental studies, and digital/social media studies. Students may pursue additional cognates with advisor and department chair approval.

Communication Literacy Requirement. Students majoring in Journalism are expected to demonstrate communication proficiency in courses across the degree curriculum. In particular, the journalism faculty wish to ensure that students are first and foremost capable writers, but also that they are able to communicate visually, digitally, aurally, within an organization, and interpersonally among various professional constituencies. The CL plan for the journalism major is comprised of 15 credits (five courses): JOUR 2310, JOUR 3311, JOUR 3314, JOUR 4350; ADV 4313 or COMS 3332 or CMI 3358 or JOUR 3370 or PRSC 4351.

Journalism Concentrations

Digital and Social Media Studies

- Students must choose three (3) from: CMI 3315, 3370, 3373, 3375, 3377, 4315; ADV 3340; PRSC 3315; COMS 3320
- Students must choose two (2) from: CMI 3315 (if not chosen above), 3370 (if not chosen above), 3373 (if not chosen above), 3375 (if not chosen above), 3377 (if not chosen above), 4315 (if not chosen above); ADV 3340 (if not chosen above); PRSC 3315 (if not chosen above); ISQS 2340; CS 1300, 1305; ENGL 2312, 3367, 3368, 4369; PHIL 3340

Education and Social Issues

- Students must choose two (2) from: MCOM 3303; CMI 3355; COMS 3334; ADV 3320
- Students must choose three (3) from: MCOM 3303 (if not chosen above); CMI 3355 (if not chosen above); COMS 3334 (if not chosen above); ADV 3320 (if not chosen above); COMS 3319, 3351, 3359; GEOG 3350, 3351; PRSC 3351; POLS 3326; CRIM 2333; SOC 3336, 3337, 3394; ENGL 2371, 3382

Health, Science and Environmental Journalism

- Students must complete: COMS 3365

- Students must also choose four (4) from: ACOM 2302; BIOL 1305; GEOG 3310, 3353; GEOL 3322, 3323; HIST 3327, 3329, 3337; NRM 1300, 2307, 3303, 3304, 3306, 3307, 4311, 4320, 4401; PHIL 3322, 3325, 3330; PSY 4332; SOC 4312, 4381; ENGL 3386

International/Intercultural Communication

- Students must choose two (2) from: CMI 3358; JOUR 4380, 3370; COMS 3332
- Students must choose three (3) from: CMI 3358 (if not chosen above); JOUR 3370 (if not chosen above); COMS 3332 (if not chosen above); CMI 3309; PRSC 4351; ADV 4313; CMLL 2306; GLST 3300 (repeatable for 6 credits total); GEOG 2351; POLS 2371, 3360; PSY 3398; PHIL 2350; ANTH 2302, 2304; Any 3000- or 4000-level HIST course examining a multicultural or non-U.S. context; ENGL 3337, 3338, 3390, 3392, 3393, 3394, 3395

Media Economics and Management

- Students must complete: CMI 3340
- Students must choose four (4) from: CMI 4310; MCOM 3380; PCOM 4325; PRSC 3352, 4350; ECO 3333; POLS 3366

Political Journalism

- Students must choose two (2) from: JOUR 4330; COMS 3315, 3319; PRSC 3353
- Students must choose three (3) from: JOUR 4330 (if not chosen above); COMS 3315 (if not chosen above), 3319 (if not chosen above); PRSC 3353 (if not chosen above); HIST 3312; PHIL 3320, 4321; POLS 2361, 3312, 3319, 3323, 3346; PUAD 3352

Strategic Communication

- Students must choose two (2) from: ADV 3310; PRSC 2310; COMS 3313
- Students must choose three (3) from any 3000- or 4000-level ADV or PRSC courses

Visual Communication

- Students must choose two (2) from: MCOM 2301; CMI 3308; COMS 3321; JOUR 3314, 3360; PHOT 3330
- Students must choose three (3) from: ADV 3361; COMS 3321 (if not chosen above); JOUR 3360 (if not chosen above); PRSC 3341; PHOT 3330 (if not chosen above); 4300 (Field Photography); CMI 3308 (if not chosen above), 3335, 4313, 4380; MCOM 2301 (if not chosen above); ARTE 3365; CMLL 2306; ENGL 2388, 3388 (repeatable for up to six credits); ANY 2000-level or higher ART course; PHIL 4323

Undergraduate Minors

Creative Media Industries

Students selecting a minor in creative media industries are required to pass either MCOM 2320 or JOUR 2310 (students wishing to enroll in JOUR 2310 must pass ENGL 1301 and ENGL 1302 with a C or better, have a TTU GPA of 2.5 and pass the Basics of Writing exam with a 70 or higher). A minor in creative media industries consists of a minimum of 21 hours. At least 12 of the 21 hours must be taken in residence. Specific required courses include CMI 2310, JCMI 2301, 2302, and MCOM 2320 or JOUR 2310; 3 hours selected from CMI 3370, 4370, 4375; 3 hours selected from CMI 3300, 3309, 3315, 3355, 3358, 4320, or PHOT 3310; and 3 hours of electives from CMI or PHOT courses.

Journalism

Students choosing to minor in journalism are required to pass the college's Basics of Writing (BOW) exam with a 70 or higher; pass ENGL 1301 and ENGL 1302 with at least a C; and have a TTU 2.5 GPA prior to enrolling in any JOUR course with a number higher than 2300. A minor in journalism consists of a minimum of 21 hours. At least 12 of the 21 hours must be taken in residence. Additional minors are listed in each supervising department and are available in advertising, communication studies, creative media industries, professional communication, and public relations.

Creative Media Industries, B.A. Recommended Curriculum

FIRST YEAR

Fall

- ☐ MCOM 1300 - Foundations of Media and Communication (3 SCH)
(fulfills Social and Behavioral Sciences requirement)
- ☐ POLS 1301 - American Government (3 SCH)
- ☐ ENGL 1301 - Essentials of College Rhetoric (3 SCH)
- ☐ MATH 1320 - College Algebra (3 SCH) **OR**
☐ MATH 1330 - Introductory Mathematical Analysis I (3 SCH)
- ☐ Life and Physical Sciences (4 SCH) (choose from the university core curriculum)
- ☐ MCOM 1100 - Success in Media and Communication (1 SCH)

TOTAL: 17

Spring

- ☐ MCOM 1301 - Introduction to Digital and Social Media (3 SCH)
- ☐ ENGL 1302 - Advanced College Rhetoric (3 SCH)
- ☐ MATH 2300 - Statistical Methods (3 SCH) **OR**
☐ MATH 2345 - Intro. to Statistics with Application to Business (3 SCH) **OR**
☐ MATH 1331 - Introductory Mathematical Analysis II (3 SCH)
(If MATH 1330 is chosen for the first math requirement, MATH 1331 will satisfy the second math requirement.)
- ☐ JCMI 2301 - Introduction to Media Production and Composition (3 SCH)
- ☐ CMI 2310 - Introduction to Creative Media Industries (3 SCH)

TOTAL: 15

SECOND YEAR

Fall

- ☐ MCOM 2350 - Communicating in a Global Society (3 SCH)
- ☐ HIST 2300 - History of the United States to 1877 (3 SCH)
- ☐ JCMI 2302 - Foundations of Digital Post-Production and Workflow (3 SCH)
- ☐ ENGL 2000-Level Literature (3 SCH)
- ☐ Life and Physical Sciences (4 SCH) (choose from the university core curriculum)

TOTAL: 16

Spring

- ☐ ECO 2305 - Principles of Economics (3 SCH)
- ☐ POLS 2306 - Texas Politics and Topics (3 SCH)
- ☐ HIST 2301 - History of the United States since 1877 (3 SCH)
- ☐ MCOM 2301 - Visual Storytelling (3 SCH) (fulfills Creative Arts requirement)
- ☐ JOUR 2310 - News Writing (3 SCH) **OR**
☐ MCOM 2320 - Writing for Media and Communication (3 SCH)

TOTAL: 15

THIRD YEAR

Fall

- ☐ MCOM 2310 - Business and Professional Communication (3 SCH)
(fulfills Oral Communication requirement)
- ☐ MCOM 2330 - Media Literacy (3 SCH)
(fulfills Language, Philosophy, and Culture requirement)
- ☐ MCOM 3320 - Media and Communication Law (3 SCH)
- ☐ CMI 3308 - Visual Communications (3 SCH)
- ☐ Portfolio Development Elective (3 SCH)

TOTAL: 15

Spring

- ☐ MCOM 3300 - Theories of Media and Communication (3 SCH)
- ☐ Portfolio Development Elective (6 SCH)
- ☐ CMI 3340 - Commercial Practice in Creative Media (3 SCH)
- ☐ CMI Writing (3 SCH)

TOTAL: 15

FOURTH YEAR

Fall

- ☐ Portfolio Development Elective (9 SCH)
- ☐ MCOM Global Communication or Foreign Language (3 SCH)
- ☐ CMI 3355 - Ethnicity, Race, Gender in Media (3 SCH) **OR**
☐ CMI 3358 - International Creative Media Industries (3 SCH)

TOTAL: 15

Spring

- ☐ CMI 3380 - CMI Portfolio and Professional Development (3 SCH)
- ☐ CMI Free Electives (6 SCH)
- ☐ CMI 4320 - CMI Capstone (3 SCH)

TOTAL: 12

TOTAL HOURS: 120

Students majoring in creative media industries are required to complete 49 hours from the following core courses: MCOM 1100 or one-hour CMI practicum; MCOM 1300, 1301, 2350, 3300, 3320; MCOM 2320 or JOUR 2310; JCMI 2301, 2302; CMI 3308, 2310, 3315, 3340, 3380, 3390 or 4320 or 4312, 3355 or 3358, 3370 or 4370 or 4375.

Creative media industries majors are required to take 3 hours of ENGL credit beyond ENGL 1301 and ENGL 1302 and 3 hours of ECO credit. Creative Media Industries majors are also required to complete 21 hours of elective credit. A minimum of 15 hours of the electives must have a "Portfolio Development" (PDE) designation (see below).

Portfolio Development Electives (PDE) 12 hours from: CMI 3315, 3333, 3335, 3370, 3373, 3390, 4313, 4315, 4370, 4375, 4380, 4390; PHOT 2310, 3310, 3330, 4300.

CMI Free Electives 6 hours from: CMI 3300, 3309, 3345, 3355, 3358, 3375, 3377, 4301*, 4310, 4311; COMS 3321, 3356, 3359; JOUR 3317, 3355, 3370, 4305; MCOM 2301, 3380; Any PDE not taken for PDE credit.

* CMI 4301 may be taken as a PDE if it is skills- or production-driven. Department chair approval required.

MCOM Global Communication Courses: Choose from MCOM 2350; ADV 4313; COMS 3332; CMI 3309, 3355, 3358; JOUR 3370; PRSC 4351. Other courses, including special topics courses (any course listed as 4301), may be approved for Global Communication credit by the department chairperson in consultation with the College of Media & Communication Associate Dean for Undergraduate Affairs. Any foreign language taken at the college level in which a grade of C or better is earned will count as a Global Communication credit.

TOTAL: 12

TOTAL HOURS: 120

Students majoring in journalism are required to complete 49 hours from the following core courses: MCOM 1100 or one-hour JOUR practicum; MCOM 1300, 1301, 2350, 3320; JCMI 2301, 2302; JOUR 2300, 2310, 3312, 3314, 3355, 3380, 3390, 4385; and 9 hours of JOUR electives.

Journalism students must also choose either a 15-hour interdisciplinary concentration, an 18-hour minor, or a second major.

MCOM Global Communication Courses. Choose from MCOM 2350; ADV 4313; COMS 3332; CMI 3309, 3355, 3358; JOUR 3370; or PRSC 4351. Other courses, including special topics courses (any course listed as 4301), may be approved for Global Communication credit by the department chairperson in consultation with the College of Media & Communication Associate Dean for Undergraduate Affairs. Any foreign language taken at the college level in which a grade of C or better is earned will count as a Global Communication credit.

Specific course requirements include JOUR 2300, 2310, 3311, 3312, 3380, 4370, and three hours of upper-level electives from JOUR courses.

Game Design and Culture Undergraduate Certificate

Students in the Game Design and Culture certificate learn to use digital and physical interactive media as a form of expression. Students who complete the certificate will learn about the historical and theoretical contexts of games in society, practical production skills using a range of creation tools, and the media ecosystem produced by gaming culture.

Courses for the certificate are CMI 3370, 3373, 3375, 3377, and MCOM 2320. Courses can be taken in any order as long as prerequisites have been met.

Undergraduate Course Descriptions

Creative Media Industries (CMI)

- 2000—Electronic Media Activities (V1-3).** Prerequisite: Consent of instructor. Laboratory in broadcast and multimedia activities. Limited to 3 hours for majors and minors, 1 hour for others. Must be taken pass/fail.
- 2310—Introduction to Creative Media Industries (3).** Basic instruction in the origin, history, development, regulation, and social responsibilities of the creative media industries. Examines broadcast, streaming, and interactive media forms and producers.
- 3100—Electronic Media Activities (1).** Prerequisite: Consent of instructor. Laboratory in broadcast and multimedia activities. Limited to 3 hours for majors and minors, 1 hour for others. Must be taken pass/fail.
- 3300—Creative Media Industries and Society (3).** Current and emerging telecommunications technologies, their integration into modern society and impact on information transfer.
- 3308—Visual Communications (3).** An introduction to photographic techniques and visual design, including message interpretation, evaluation, recent trends, theories of visual perception, and use of images in media.
- 3309—Hispanic Media (3).** Exploration of Hispanic-oriented media in the United States from historical and contemporary perspectives.
- 3315—Introduction to Web Design (3).** Prerequisites: Sophomore standing. Students will put web usage into the context of human-computer interaction and discuss design principles, aesthetics, usability, and interactivity. Students will learn coding basics.
- 3333—Multimedia Development (3).** Prerequisites: C or better in JCMI 2301 and JCMI 2302. Using authoring tools and design software, students will create static and animated vector images for the purposes of multimedia production.
- 3335—Video Production and Editing (3).** Prerequisite: C or better in JCMI 2301 and JCMI 2302. Intermediate to advanced training in production and postproduction processes for creating, manipulating moving images for digital distribution. (CL)
- 3340—Commercial Practice in Creative Media (3).** Prerequisite: CMI 2310. Provides students with the media audience analysis skills, corporate literacy, and organizational acumen they will need to be successful, visionary creative media industry leaders.
- 3345—Analyzing Entertainment Media (3).** An introduction to scholarly media analysis that examines the historical, contemporary, and emerging scholarship behind entertainment media uses and effects.
- 3355—Ethnicity, Race, Gender in Media (3).** Examines issues surrounding ethnic, racial, and gender differences in media production and content from historical and contemporary perspectives. (CL)
- 3358—International Creative Media Industries (3).** Examines the social, political, and economic effects of international media and other topics related to the globalization of media companies. (CL)
- 3370—Interactive Media Storytelling (3).** Prerequisites: C or better in JOUR 2310 or MCOM 2320. Trains storytelling in interactive digital media, narrative structures involving choice and variable outcomes, and the expressive potential of emerging computing technologies. (CL)
- 3373—Introduction to Game Development (3).** Introductory training in creation of digital games and how video games are made and published.
- 3375—Digital Gaming Culture (3).** The form, content, culture, history, and impact of games and the gaming industry.
- 3377—Designing for Play (3).** Using “playcentric design,” students will learn the processes of rapid iteration and playtesting through the design of analog games.
- 3380—CMI Portfolio and Professional Development (3).** Prerequisite: Senior standing. Incorporates concepts related to branding and professional

representation/marketing and incorporates them with instruction on and application of strong portfolio production and presentation skills.

- 3390—Internship in Creative Media Industries (3).** Prerequisites: C or higher in MCOM 2320 or JOUR 2310; JCMI 2301 and JCMI 2302; 2.5 GPA. Minimum of 160 hours supervised employment in media or communications organization. Weekly reports, interviews, and term paper required. May be repeated for credit.
- 4300—Individual Study in Creative Media Industries (3).** Prerequisites: 9 hours of CMI courses with a grade of C or higher, and consent of instructor. May be repeated once for credit with different emphasis.
- 4301—Special Topics in Creative Media Industries (3).** Considers selected topics in electronic media. May be repeated for credit.
- 4310—The Blockbuster: the 21st Century Film Industry (3).** Investigates the history, structure, and dynamics of the American film industry through the lens of the “blockbuster.”
- 4311—Rock n’ Roll Media (3).** Surveys the growth of rock and roll with special emphasis on the media used in its production, promotion, distribution, and consumption.
- 4312—Senior Thesis in Creative Media Industries (3).** Students are required to seek out and establish a faculty advisor for academic guidance, to perform original Creative Media Industries research, and to publicly defend their findings.
- 4313—Adventure Media (3).** Prerequisites: JCMI 2301, JCMI 2302, or instructor permission. Offers students practical, creative, and strategic insight and experience in assessing and producing media associated with outdoor adventure.
- 4315—Advanced Web Production (3).** Prerequisite: CMI 3315 or instructor consent. Teaches advanced production tools to personalize and manage Web and/or mobile content.
- 4320—CMI Capstone (3).** Prerequisites: C or better in MCOM 2320 or JOUR 2310; CMI 3340, JCMI 2301, JCMI 2302, and senior standing. Capstone for the B.A. in Creative Media Industries. Demands proficiency in production and industry-oriented management skills. Emphasis is placed on storytelling, production management, and effective collaboration. (CL)
- 4370—Writing for Series Television (3).** Prerequisites: C or better in JOUR 2310 or MCOM 2320. Provides an introduction to the skills, standards, and creative challenges of scriptwriting for series television. (CL)
- 4375—Writing for Feature Films (3).** Prerequisites: C or better in JOUR 2310 or MCOM 2320. Provides an introduction to the basic skills, professional standards, and creative challenges of scriptwriting for feature films. (CL)
- 4380—Features and Documentaries (3).** Prerequisite: C or better in CMI 3335 or JOUR 3314 or consent of instructor. Teaches feature and documentary pre- and post-production activities from research to final video editing.
- 4390—Creative Media Industries Practicum (3).** A nonpaid supervised study opportunity is provided for the student to observe and analyze the methods, techniques, and creative processes of the media professional. May be repeated for credit. Must be taken pass/fail.

Journalism and Creative Media Industries (JCMI)

- 2301—Introduction to Media Production and Composition (3).** Introduces students to the basic technologies used to create media content, including still photography, video production, and audio production. (CL)
- 2302—Foundations of Digital Post-Production and Workflow (3).** Prerequisite: C or higher in JCMI 2301. Capitalizes on the objectives of JCMI 2301 by introducing students in the department to photography, video, audio, and design production and post-production software. (CL)

Journalism (JOUR)

- 2000—Journalism and Electronic Media Activities (V1-3).** Prerequisite: Consent of instructor. Laboratory in broadcast and multimedia activities. Limited to 3 hours for majors and minors, 1 hour for others. Must be taken pass/fail.
- 2300—Principles of Journalism (3).** [COMM2302] An overview of the broad field of journalism for journalism and non-journalism majors. Extensive use of current literature as springboards for discussion of trends, movements, and principles of journalism.
- 2310—News Writing (3).** Prerequisites: 2.5 GPA; C or higher in ENGL 0301 (if required), ENGL 1301, and ENGL 1302; pass the Basics of Writing exam with a grade of 70 or higher. Corequisite: Non-credit lab. Evaluation of news, newsgathering methods, and writing. (CL)
- 3310—Podcasting for Journalists (3).** Prerequisites: C or higher in JOUR 3380; pass the Basics of Writing Exam with a grade of 70 or higher; minimum 2.5 GPA. Students will learn the basics of narrative podcasting: evaluating pitches; identifying guests; audio interview-

ing techniques; creating and structuring episodes; script writing; and post-production mixing, scoring, and critical review.

- 3311—Digital Journalism Production (3).** Prerequisites: C or better in JOUR 2310, JCMI 2301, and JCMI 2302; pass the Basics of Writing exam with a grade of 70 or higher. Continued study and practice of using digital communication (i.e., digital and multimedia tools) for reporting, producing, and delivering news programs. (CL)
- 3312—Reporting (3).** Prerequisites: GPA of 2.5; C or higher in JOUR 2310, JOUR 2300, MATH 1300, JCMI 2301, and JCMI 2302; pass the Basics of Writing exam with a grade of 70 or higher. Discussion and practice in interviewing; reporting; and writing various types of stories, including meetings, conventions, accidents, and other general news stories.
- 3314—Broadcast Journalism (3).** Prerequisites: GPA of 2.5; C or higher in JOUR 3380; pass the Basics of Writing exam with a grade of 70 or higher. Teaches writing and editing news for radio and television. (CL)
- 3316—Magazine Writing (3).** Prerequisites: GPA of 2.5; C or higher in JOUR 3380; pass the Basics of Writing exam with a grade of 70 or higher. A study of the scope, influence, and responsibilities of the magazine as a cultural and social force. Survey of editorial problems; intensive writing practice and emphasis on marketing magazine articles.
- 3317—Public Affairs Journalism (3).** Prerequisites: GPA of 2.5; C or higher in JOUR 3380; pass the Basics of Writing exam with a grade of 70 or higher. Teaches students how local governments and courts work, how to obtain information from public institutions, and how to interact with local communities. Students learn to develop a beat by focusing on a particular area of government and the community.
- 3350—History of American Journalism (3).** Prerequisites: GPA of 2.5; C or higher in JOUR 3380; pass the Basics of Writing exam with a grade of 70 or higher. Study of the development of journalism in America from its European roots to the present and its interrelation with society.
- 3355—Media Ethics (3).** An exploration of the ethical principles and issues facing news media practitioners, philosophical and professional standards of reporting and editing for newspapers, broadcast, and online journalism.
- 3360—Visual Journalism (3).** Prerequisites: C or higher in JOUR 3380; pass the Basics of Writing Exam with 70 or higher; minimum 2.5 GPA. Students will gain an understanding of journalistic visual storytelling. Topics include principles of photojournalism and news design, best practices for visual social media, and use of explanatory infographics, such as interactive maps and timelines.
- 3370—Global Journalism Issues and Approaches (3).** The study of journalistic practice and professional norms from an international context. Students will discover how journalism is practiced under different political systems as well as how new transnational media outlets emerged within the last century. (CL)
- 3380—Editing (3).** Prerequisites: GPA of 2.5; C or higher in JOUR 3312; pass the Basics of Writing exam with a grade of 70 or higher. Advanced study of purposes and methods of preparing copy for media presentation, including headline writing and editing. Study and practice in print and online publishing.
- 3390—Internship in Journalism (3).** Prerequisites: GPA of 2.5; C or higher in JOUR 3380; pass the Basics of Writing exam with a grade of 70 or higher. Minimum of 160 hours supervised employment in media or communications organization. Weekly reports, interviews, and term paper required. Must be taken pass/fail.
- 4300—Individual Study in Journalism (3).** Prerequisites: C or higher in 9 hours of journalism courses, and consent of instructor.
- 4301—Special Topics in Journalism (3).** A rotating topics course examining unique relationships among news media organizations, employees, and the publics they serve. May be repeated twice.
- 4305—Sports and Media (3).** An examination of media issues and challenges regularly confronting those who participate in and cover sports.
- 4306—Sports Journalism (3).** Prerequisites: GPA of 2.5; C or higher in JOUR 3380; pass the Basics of Writing exam with a grade of 70 or higher. Students will learn the fundamentals of gathering, organizing, evaluat-

ing, and writing sports information in an accepted professional style across news media platforms. May be repeated for credit.

- 4330—Public Opinion and Propaganda (3).** The nature of public opinion and propaganda; the role of the press in its formation and how the press is influenced by public opinion.
- 4350—Longform Journalism (3).** Prerequisites: GPA of 2.5; C or higher in JOUR 3380; pass the Basics of Writing exam with a grade of 70 or higher. Teaches longform, journalistic production by journalists across subjects, audiences, and media platforms. (CL)
- 4360—Business Journalism (3).** Prerequisites: GPA of 2.5; C or higher in JOUR 3380; pass the Basics of Writing exam with a grade of 70 or higher. Teaches students how to report and write compelling stories about companies and businesses, telling audiences about new developments that will impact their wallets. May be repeated for credit.
- 4370—Advanced Reporting (3).** Prerequisites: C or better in JOUR 3311 and JOUR 3312; pass the Basics of Writing exam with a grade of 70 or higher. Teaches the interrelation and writing of news on social, political, and economic topics with emphasis on data journalism and investigative reporting.
- 4371—Investigative Journalism (3).** Prerequisites: GPA of 2.5; C or higher in JOUR 3380; pass the Basics of Writing exam with a grade of 70 or higher. Teaches investigative reporting with an emphasis on data journalism. Students learn to systematically uncover underreported social trends and potential wrongdoing by government agencies, corporate entities, or nonprofit organizations. May be repeated for credit.
- 4380—Foreign Correspondent Bootcamp (3).** Prerequisites: C or higher in JOUR 3380; pass the Basics of Writing Exam with 70 or higher; TTU GPA of 2.5. Prepares journalism students to report from foreign countries and to produce relevant news stories for U.S. and international audiences.
- 4385—Theories and Practice of Journalism (3).** Prerequisite: 2.5 GPA. Students will become acquainted with the current scholarship on the newsmaking process and the effects of news on individuals and society. Case studies will be discussed through the lens of theories of journalism.
- 4390—Journalism Practicum (3).** Prerequisites: Junior or senior standing; C or higher in JOUR 3311, JOUR 3312, and JOUR 3380; and recommendation of faculty member and internship coordinator. Minimum of 160 hours supervised employment in media or communications organization. Weekly reports, interviews, and term paper required.

Photography (PHOT)

- 2310—Principles of Photography (3).** [COMM1318] Covers the fundamentals of photography and photo appreciation. Students will need a digital 35mm SLR camera with manual capabilities.
- 3310—Photography I (3).** Prerequisite: Sophomore standing. This class will cover the use of a 35mm digital SLR camera with manual capabilities.
- 3330—Digital Photography I (3).** Students will learn to use image editing software specially tailored to the needs of photographers. Digital workflow will be discussed. This is a software class.
- 3390—Internship in Photocommunications (3).** Prerequisites: C or higher in PHOT 3310 and PHOT 3330, 2.5 GPA, and recommendation of faculty member and internship coordinator. Professional work in mass media. Minimum of 160 hours of supervised employment in media or communications organization. Weekly reports, interviews, and term paper required. Must be taken pass/fail.
- 4300—Special Problems in Photography (3).** Prerequisite: C or higher in PHOT 3310. This course is for individual or group study of areas of photography (i.e., documentary, advertising, history) or development of photography projects. May be repeated twice for credit when topics vary.

About the Department

The Department of Professional Communication offers a 120-hour degree program leading to a Bachelor of Arts in Digital Media and Professional Communication and a 120-hour degree program leading to a Bachelor of Arts in Media Strategies. Transfer students who graduate from accredited Texas two-year colleges with an Associate of Arts or Associate of Science degree and who are core complete may qualify for the Digital Media and Professional Communication 2+2 degree plan, which requires approximately 60 hours to graduate. The department and its degree programs serve students seeking a communication degree with a wide-ranging skill set. Graduates from the program will be trained to work as corporate and business communication specialists, coordinators, managers, and entrepreneurs. They will be able to run their own communication businesses or manage an organization's communication needs. Professional communication students' education will be marked by its breadth of study across communication disciplines, as opposed to depth within a single specialization.

Undergraduate Programs

Digital Media & Professional Communication, B.A.

The B.A. in Digital Media and Professional Communication is an undergraduate degree program in the College of Media & Communication. The degree prepares students with knowledge about the processes and audiences of media and communication. This 120-hour degree program is designed specifically to help graduates develop marketable communication skills critical for business in any industry. Employers recruit our graduates who are outstanding communicators, critical thinkers, ethical problem solvers, and flexible learners. Graduates of this program will be equipped with competencies required to navigate communication issues in a global society.

By the end of the program, graduates should have acquired the following educational objectives:

- Understand the processes of communication
- Analyze audiences
- Apply knowledge to solve communication problems in any media, communication, or business industry

Communication Literacy Requirement. The 9-hour Communication Literacy plan requires students to complete two foundational courses in professional communication speaking and presentation and professional communication writing (MCOM 2310 and PCOM 3373) and one additional course demonstrating an understanding of the diverse audiences of media and communication (PCOM 2310).

Media Strategies, B.A.

The B.A. in Media Strategies is an undergraduate degree program in the College of Media & Communication. This 120-hour degree allows students

to gain the skills needed to identify media insights, communicate data visually, and create new business opportunities in a rapidly evolving media environment. Graduates of this program will be equipped to drive business success across media and communication disciplines.

Courses in media insights and professional communication will enhance critical understanding of business and audiences and provide skills for pitching creative ideas to management and investors. Graduates will learn to think entrepreneurially, identify opportunities, work in teams, solve problems, communicate persuasively and effectively, and make impactful and meaningful decisions in media organizations.

Communication Literacy Requirement. Communication Literacy courses for the Media Strategies major are: MCOM 2310, 2330, 2350; PCOM 4325.

Professional Communication Undergraduate Minor

A minor in Professional Communication consists of a minimum of 21 hours. At least 12 of the 21 hours must consist of TTU courses. Specific courses include MCOM 1301; PCOM 2310, 2320, 3373, 3315, 3385 or 4301, and 4325 or 4373.

Undergraduate Course Descriptions

Professional Communication (PCOM)

- 1100—Introduction to Professional Communication (1).** This introductory course explores the skills that students majoring in Professional Communication will need and investigates career opportunities.
- 2310—Principles of Professional Communication (3).** A broad survey of communication functions and practices, types of internal and external professional communication, and competencies and literacies needed for success as a professional communicator. (CL)
- 2320—Corporate Citizenship (3).** A study of corporate culture that rewards production, ambition, and aptitude. Requires students to consider corporate communication in terms of ethics, valuable relationships between mentors and mentees, and leadership. (CL)
- 3315—Data Visualization for Media (3).** Examines the principles and applications of data visualization in professional and corporate communication. Investigates the processes involved in creating impactful graphics in professional and corporate communication.
- 3373—Applied Workplace Communication (3).** Prerequisites: Sophomore standing; C or better in ENGL 1301 and ENGL 1302; 2.5 GPA. Professional business communication focusing on audience, purpose, message, channels, and credibility. (CL)
- 3385—Media Insights and Data Analytics (3).** Focuses on the application of media research techniques to answer current questions relevant to media industries and the creation of compelling narratives to present data.
- 3390—Internship in Digital Media and Professional Communication (3).** Prerequisites: 2.5 TTU GPA; C or better in MCOM 1300, MCOM 2310, MCOM 2320; and recommendation of faculty member or internship coordinator. Minimum of 160 hours of supervised employment in media or communication organization. Weekly reports, interviews, and term paper required.
- 4300—Independent Study in Professional Communication (3).** Prerequisite: Consent of instructor. Individual research on approved problems or projects in Digital Media and Professional Communication or Media Strategies.
- 4301—Special Topics in Professional Communication (3).** Considers selected topics in professional communication. May be repeated for credit when topic varies.
- 4325—Media Entrepreneurship (3).** Prerequisites: Junior or senior standing; C or better in MCOM 2310, MCOM 2320, and either MCOM 3380 or PCOM 3385. An analytical study of media entrepreneurship in digital media industries. Includes examining market competition, technological innovation, and value creation in the production and distribution of digital media content. (CL)
- 4373—Digital Media and Professional Communication Capstone (3).** Prerequisite: Senior standing. Capstone for the B.A. in Digital Media and Professional Communication. Requires proficiency in project management and professional communication skills. Emphasis on workplace research, including communication audits, communication plans, and communication technologies.

About the Department

The Department of Public Relations & Strategic Communication Management offers a 120-hour degree program leading to a Bachelor of Arts in Public Relations and Strategic Communication Management.

Undergraduate Programs

Public Relations and Strategic Communication Management, B.A.

The B.A. in Public Relations and Strategic Communication Management is tailored to the needs of high performing undergraduate students who are interested in strategic communication management. The program doesn't just teach students how to create and deliver engaging written, digital, and face-to-face messages—we train students how to manage integrated communication programs, campaigns, and resources to effectively and ethically advocate for the organizations and causes that our students are passionate about.

We set ourselves apart from other programs by combining the diverse expertise of our professional and research faculty members to create a curriculum that develops students' proficiency in communication, leadership, media relations, global communication, diversity, ethics, data analysis, new technology, critical thinking, and strategic planning. Graduates will possess the tools and talent to launch promising careers in public relations, strategic communication, and related fields, as well as excel in a professional master's degree program.

Special topic courses enhance students' understanding of the public relations and strategic communication management functions as they relate to media relations, crisis communication, social media, community relations, sports communication, nonprofit organizations, public opinion, public affairs/government relations, international communication, and other practice areas.

Communication Literacy Requirement. Communication Literacy courses for the Public Relations and Strategic Communication Management major are PRSC 3312, 3341 or 3345, 4412.

Public Relations and Strategic Communication Management Undergraduate Minor

Students selecting a minor in public relations are required to complete ENGL 1301 and ENGL 1302 and have a 2.5 TTU GPA prior to enrolling in the writing course PRSC 3312. A minor in public relations consists of a minimum of 21 hours. At least 12 of the 21 hours must be taken in residence. Specific required courses include MCOM 1300; PRSC 3300 or MCOM 3300; PRSC 4380 or MCOM 3380 (prereqs include MATH 2300 or MATH 2345); PRSC 2310, 3311; and six hours of electives chosen from

PRSC 2330, 3351, 3352, 3353, 3354, 4301 (may be repeated when topics vary), and 4310.

Strategic Communication Management Undergraduate Certificate

Students in the Strategic Communication Management certificate learn the fundamental skills and principles of the management of communication between an organization and its stakeholders. Students who complete the certificate will learn strategic communication processes and develop strategic planning and message creation skills. Required courses include PRSC 2310 and 3311. Elective courses include any two of the following: PRSC 3312, 3315, 3353, 4301 (Special Topics in Public Relations: Business Foundations for Public Relations), 4301 (Special Topics in Public Relations: Media Relations), and 4350. For non-PR majors and minors only.

Undergraduate Course Descriptions

Public Relations and Strategic Communication Management (PRSC)

- 2310—Principles of Public Relations (3).** A study of the policies and procedures of creating and maintaining goodwill among organizations' various publics. Examines the many aspects of public relations as a staff and management function.
- 2330—Advocacy and Activism (3).** Examination of how strategic communication is used to advocate for change; build support; and promote causes, ideas, and innovations across professional, social, and political contexts.
- 3300—Applied Public Relations Theory and Concepts (3).** Prerequisite: C or better in ADV 3310 or PRSC 2310. Examination of public relations and relevant persuasion, media, and communication theories; practical application of theory for understanding and solving public relations problems and developing strategy.
- 3308—Public Relations Practice (3).** Prerequisite: C or better in PRSC 2310. Investigation of the professional world of public relations practice as it relates to personnel, program, and career management. Consideration of legal, financial, and ethical issues.
- 3311—Public Relations Strategies (3).** Prerequisite: C or better in PRSC 2310. Strategic management of public relations by analyzing the PR process as it relates to PR theory and practice.
- 3312—Public Relations Writing (3).** Prerequisites: C or better in ENGL 1301 and 1302, 2.5 TTU GPA, C or better in PRSC 3311 and either JOUR 2310 or MCOM 2320. An overview of audience analysis, media analysis, and the logic and language skills needed to construct persuasive messages used in the public relations profession. (CL)
- 3315—Digital Public Relations (3).** Prerequisites: C or better in PRSC 3311. Examination of online, mobile, and social media tools in public relations practice; consideration of issues related to monitoring, engagement, crisis and relationship management, and analytics.
- 3341—Public Relations Graphics and Production (3).** Prerequisite: C or better in PRSC 3311. Design, composition, layout, typography, and production applied to public relations; use of computer as a layout and design tool for visual communications. (CL)
- 3345—Public Relations Content Development (3).** Prerequisite: C or better in PRSC 3311. Development, design, management, and implementation of multimedia public relations content for organizational media; organizational storytelling; content strategy and creation for mobile, social, and web distribution. (CL)
- 3351—Public Relations for Nonprofits (3).** Examination of public relations strategies and techniques used to advance goals of nonprofit organizations, including generating coverage, finding and sustaining financial support, and recruiting and retaining volunteers.
- 3352—Public Relations Event Management (3).** Examination of public relations event management within various settings. Role of events in building organizational reputation. Strategy, planning, marketing, logistics, finance, risk assessment, and evaluation.
- 3353—Political Public Relations (3).** Examination of public relations applications and functions in political settings, including political campaigns, issues management, political crises, citizen engagement, government relations, public affairs, and public information.
- 3354—Sports Public Relations (3).** Examination of the roles and responsibilities of public relations practitioners working in the sports industry at the professional and collegiate levels.
- 3390—Internship in Public Relations (3).** Prerequisite: Junior or senior standing; C or better in MCOM 2320 or JOUR 2310, and PRSC

3311 and PRSC 3312; 2.5 TTU GPA, and recommendation of faculty member and internship coordinator. Minimum of 160 hours supervised employment in media or communications organization. Weekly reports, interviews, and term paper required. Must be taken pass/fail.

4000—Special Public Relations Project in Integrated Communication (V1-3). Prerequisite: Instructor consent. A hands-on experience in developing and presenting a PR campaign for a business problem or opportunity. May be repeated once for credit.

4300—Individual Study in Public Relations (3). Prerequisite: C or better in 9 hours of public relations courses.

4301—Special Topics in Public Relations (3). Considers selected topics in public relations. May be repeated for credit when topics vary.

4310—RaiderComm Agency Experience (3). Prerequisites: C or better in MCOM 2320 or PRSC 2310; 2.75 TTU GPA; instructor consent. In this service-learning course, students produce professional-level work as part of the student-led agency, RaiderComm. Students will create/implement strategic communication plans for real-life clients.

4350—Crisis Communication (3). Role of public relations in the prevention, management, and response to crises. Analysis of corporate, nonprofit, and government sector crises from a public relations perspective.

4351—International and Multicultural Public Relations (3). Prerequisites: C or better in PRSC 2310 or ADV 3310. Investigation of the challenges and opportunities of practicing public relations in international, multicultural, and cross-cultural contexts. Examination of public relations function as practiced in other cultures. (CL)

4380—Applied Public Relations Research (3). Prerequisites: C or better in MATH 2300 or MATH 2345 and PRSC 3311. In-depth examination of the applied research function in public relations. Designing, implementing, analyzing, interpreting, and applying research to address real-world problems; evaluating program effectiveness.

4412—Public Relations Campaigns (4). Prerequisites: C or better in PRSC 3308, PRSC 3312, and PRSC 4380 or MCOM 3380. Public relations campaign planning, preparation, and presentation in problem-solving mode. Setting objectives; executing research projects; evaluating creative media promotion; and preparing public relations plans, messages, budgets. (CL)

TOTAL HOURS: 120

* Choose from core curriculum requirements.

Students are required to complete 61 hours within the college, including the following core courses (43 hours): PRSC 2310, 3300, 3308, 3311, 3312, 3315, 3341 OR 3345, 4380, 4412; MCOM 1300, 1301, 2350, 2320 OR JOUR 2310; MCOM 2310 OR COMS 2300 OR COMS 2358. **Group A** (PRSC Mgmt. Electives; 9 hours): PRSC 2330, 3351, 3352, 3353, 3354, 3390, 4000, 4300, 4301 (may be repeated when topics vary), 4310, 4350, 4351.

Additional Electives. These courses may also be taken as Group A electives if not used to satisfy major core requirements: PRSC 3300, 3341, 3345, 4380.

Group B (Media and Communication; 9 hours): Students are encouraged to develop a concentration within another media and communication major area. Students not desiring to specialize may take any media and communication courses in any combination to satisfy the Group B requirement, including additional public relations courses beyond those needed to satisfy the public relations core and elective requirements.

Group C (Cognate; 15 Hours): Students majoring in public relations and strategic communication management are encouraged to take 15 hours outside the college to develop a cognate, ideally focusing on a topic that will prepare them for a particular public relations or strategic communication management role or practice area. Alternately, public relations and strategic communication management majors also have the option of selecting additional Group B courses to satisfy the Group C requirement.

MCOM Global Communication Courses. Choose from ADV 4313; COMS 3332; CMI 3355, 3358; JOUR 3370; PRSC 4351; any approved 4301 special topics course, approved Study Abroad course, and any foreign language taken at the college level in which a C or better was earned.

College of Media & Communication Graduate Programs

The College of Media & Communication offers both the Master of Arts and the Doctor of Philosophy degrees. Students seeking admission to the graduate program should consult the college's Associate Dean of Graduate Studies before enrolling in any courses.

Upon entering the college's program, graduate majors may be required to take undergraduate or graduate leveling work. This requirement will depend on the student's prior academic or professional experience in mass communications. Leveling courses must be taken in addition to the graduate-hour requirements noted in the program options below. Students should consult the college's Associate Dean of Graduate Studies regarding these requirements.

Master of Arts

Communication Studies, M.A.

The Master of Arts in Communication Studies offers advanced study of human communication in face-to-face, public, and mediated contexts. Students are encouraged to pursue research interests in organizational and small group communication, intercultural and interpersonal communication, instructional communication, and/or rhetoric and public affairs. Ultimately, the program aims to foster and promote a theory of engaged living. The M.A. degree prepares students for a career in a wide array of arenas, including but not limited to, nonprofits, start-ups, corporate contexts, and educational institutions. Alternatively, many students elect to continue their studies and matriculate into Ph.D. programs. The M.A. in communication studies is a 36-hour program; it includes three core courses: (1) COMS 5310; (2) COMS 5300 or COMS 5306; and (3) COMS 5301, COMS 5305 or COMS 5307. GTAs are also required to take COMS 6307. To complete the degree requirements, students choose from among various options: a thesis, two publishable papers, a praxis report, or qualifying exams.

Mass Communications, M.A.

The Master of Arts in Mass Communications degree is designed to prepare students to enter the communications industry or to continue studies toward a Doctor of Philosophy degree. Depending upon courses selected, graduate students are prepared for careers or advanced study in the fields of media (journalism, publishing, and electronic communications), advertising, public relations, and related fields. Sports communication is also available. Enrollment is open year-round so students may start in the semester most convenient for them.

Master of Arts students are offered two curriculum options: a traditional research-based thesis program or a professional non-thesis program. All programs are 30 credit hours. The thesis program requires 24 hours of coursework and a minimum of 6 hours of thesis credit. The thesis is comprehensive original research and typically takes a full summer or regular semester to complete. Coursework must include three required courses: MCOM 5366, 5364, and 5374.

The professional non-thesis program includes coursework that concludes with a capstone final project course. This course will be taken in the student's final semester and includes a pragmatic or applied research project focusing on professional communication. Often, students use these final projects as opportunities to complete research for company/organizational clients where student work addresses real questions/concerns of a professional nature. Students can also complete a graduate-level internship to gain professional experience. It is possible to combine the internship and final project for an immersive experience that often leads to employment.

Strategic Communication and Innovation, M.A.

The online Master of Arts in Strategic Communication and Innovation degree is a 30-hour program designed for communication professionals who are ready for the next step in their respective careers. There is a strong focus on strategic communication efforts in an ever-growing global and digital society. Students are required to complete nine courses (27 hours) and a final project (3 hours), all of which are offered exclusively online. Up to six hours of coursework may be selected from graduate offerings in other TTU colleges/departments. Enrollment is open year-round so that students may start in the semester most convenient for them. In addition, students can determine how many courses they take per semester, based on their personal and professional schedules. The required courses include MCOM 5366, 5364, 5310, 5312, 5314, 5316, three graduate-level elective courses, and MCOM 6350: The Final Project.

Doctor of Philosophy

Media and Communication, Ph.D.

The Doctor of Philosophy in Media and Communication degree is designed to prepare students for careers in communications research and academia. Doctoral study includes coursework focusing on communication theory and research. Completion of the Doctor of Philosophy degree requires 87 hours of graduate study beyond the baccalaureate degree or 60 hours beyond the Master of Arts degree, including 12 hours dedicated to a traditional research-based dissertation.

The Ph.D. in Media and Communication at Texas Tech focuses on the integration of different approaches to the study of media and communication. While coursework is broadly focused on media and communication, students may focus in the areas of advertising, communication studies, electronic media, journalism, or public relations. Likewise, students can build tracks in political communication, health communication, science communication, computer-mediated communication, as well as in rhetoric and cultural/critical studies, among other areas.

Graduate Course Descriptions

Advertising (ADV)

- 5326—**Advertising and the Consumer (3).** Survey and analysis of current behavioral science findings as related to advertising. Restricted to fully admitted graduate students with a declared degree in any program.
- 6315—**Special Topics in Advertising (3).** A rotating topics course examining theory, research, economics, ethics, performance and practice of advertising. May be repeated twice when topics vary. Restricted to fully admitted graduate students with a declared degree in any program.
- 7000—**Research (V1-12).**

Communication Studies (COMS)

- 5111—**Communication Instruction in Higher Education I (1).** First of two courses required of all communication studies teaching assistants. Provides individual development in philosophies and practices unique to teaching basic oral communication courses.
- 5112—**Communication Instruction in Higher Education II (1).** Second of two courses required of all communication studies teaching assistants. Provides individual development in philosophies and practices unique to teaching basic oral communication courses.
- 5300—**Communication Theory (3).** Provides a comprehensive overview and history of contemporary communication theories and research. Students will read, comprehend, and critique original scholarly research beginning with general semantics theory and culminating with the most recently published reviews of theoretical work in communication studies.
- 5301—**Qualitative Research Methods (3).** Introduces students to ethical and practical applications of qualitative research methodologies. Through hands-on experience, students will conduct a research project related to their area of interest, analyze data, and write a final essay.
- 5302—**Intercultural Communication (3).** Examines scholarly studies of the relationship between culture and communication in global, national, and local contexts. Explores cultural group values, practices, and

communicative behaviors from diverse theoretical and philosophical perspectives.

- 5303—Communication in Small Groups (3).** Studies factors affecting interpersonal communication in small group settings. Course content includes consideration of both theoretical and applied orientations to the study of small group communication.
- 5304—Communication in Organizations (3).** Examines theoretical perspectives, contemporary and traditional research, practical models, and related issues affecting human communication in workplace settings and other organized structures (e.g., nonprofit, government).
- 5305—Quantitative Research Methods (3).** The study of quantitative research methods in communication research, emphasizing research designs, quantitative treatments, and analysis. Course requirements will include data entry, statistical analysis, and a research prospectus.
- 5306—Theories of Rhetoric (3).** An in-depth study of rhetorical theories which have had significant impact on the research, teaching, and practice of communication behavior. Students must write a lengthy research paper in order to successfully complete this course.
- 5307—Historical Critical Research Methods (3).** Survey of contemporary methods of rhetorical criticism and their application in analyzing a wide variety of message types. Students must write multiple essays exemplifying rhetorical criticism in order to successfully complete this course.
- 5309—Conflict Management and Problem Solving (3).** Study and research of conflict management with emphasis on functional approach to conflicts through mediation, negotiation, and other conflict management approaches.
- 5310—Graduate Studies in COMS (3).** Introduces graduate students to communication studies, equips them with the skills to be successful in graduate school, and facilitates their professional development.
- 5313—Theories of Persuasion (3).** Analysis of representative theories and models of persuasive processes and their implications for communication behavior. Theories of public, interpersonal, and mass communication are included.
- 5314—Professional Communication in Health, Science, and Technology (3).** Exploration of the nature and roles of discourse processes in scientific, technological, and healthcare interactions, including interpersonal, organizational, public, new media, and intercultural communication contexts.
- 5315—Nonverbal Communication (3).** Examines communicative functions of nonverbal message behavior. Considers a variety of behavioral domains and interaction contexts from both theoretical and practical perspectives.
- 5318—Interpersonal Communication (3).** Communication theory and research on historical and contemporary topics in interpersonal communication contexts.
- 6000—Master's Thesis (V1-6).**
- 6300—Seminar in Communication Studies (3).** Analysis of selected areas and topics in the communication studies discipline. Course topics may explore the range of content or methodological areas encompassed within human communication.
- 6302—Seminar in Interpersonal Communication (3).** A research course focusing on specific topics in interpersonal communication. Topics vary with students' needs. May be repeated for credit.
- 6303—Seminar in Organizational Communication (3).** Focuses on research in specific topics in corporate-organizational communication. Topics vary with students' needs and/or the research interests of the instructor.
- 6304—Seminar in Rhetorical Theory (3).** Research seminar focusing on specific topics in rhetoric. Topics will vary. Course may be repeated for credit.
- 6305—Seminar in Communication for Center Directors (3).** Explores center directorship communication and services provided by these independent academic units within a variety of higher education contexts as educational change agents.
- 6307—Seminar in Instructional Communication (3).** A research course focusing on specific topics in instructional communication. Topics vary with students' needs. May be repeated for credit.
- 6308—Seminar in Cultural and Intercultural Communication (3).** In-depth analysis of selected areas and topics in intercultural and/or critical cultural human communication. Course topics may explore international and U.S. co-cultural communication research.
- 6350—Master's Report or Exam (3).** Prerequisites: Student must have completed at least 18 graduate level hours before taking this course. Facilitates study, preparation, and defense for a student to complete the final Master's level project or exam (non-thesis project). Departmental permission must be secured before registering. Should be taken in student's final semester.
- 7000—Research (V1-12).**

Creative Media Industries (CMI)

- 6315—Special Topics in Electronic Media (3).** Class restricted to fully admitted graduate students with a declared major in any program. A rotating topics course examining sociopolitical impacts of communications technologies, economics of information industries, and theoretical challenges of media convergence. May be repeated twice when topics vary.
- 7000—Research (V1-12).**

Journalism (JOUR)

- 5384—Multimedia Journalism in Sports (3).** Focuses on print (bloggers, columnists), audio (radio/podcast), photo, and video production for sports for organizational, live-event, and marketing/fan engagement purposes for journalistic or entrepreneurial ventures.
- 6315—Special Topics in Journalism (3).** Class restricted to fully admitted graduate students with a declared degree in any program. A rotating topics course examining theory and research into ethical, political, and organizational issues affecting news gathering, reporting, and journalistic performance. May be repeated twice when topics vary.
- 7000—Research (V1-12).**

Mass Communications (MCOM)

- 5160—Proseminar in Mass Communications (1).** Designed to bring together students and faculty for professional and academic interchange with emphasis on research interests of faculty and advanced graduate students. Pass/fail only.
- 5310—Strategic Communication Planning and Writing (3).** Utilizes a case method approach to examine best practices across a variety of contexts offering students hands-on experience in developing a strategic communication plan. Media & Communication students only.
- 5312—Media Management, Entrepreneurship and Consulting (3).** Explores the management needs and entrepreneurial efforts occurring in the traditional and digital media industries, as well as the role that consultants and freelancers play. Media & Communication students only.
- 5314—Strategic Communication in a Global Environment (3).** Offers an investigation of the challenges and opportunities involved with practicing strategic communication in a complex global environment. Media & Communication students only.
- 5316—Communication in Organizations (3).** Examines contemporary organizational practice and organizational communication theory, along with current research and applications of issues related to human communication in workplace settings. Media & Communication students only.
- 5318—Advanced Social Media Practice (3).** Survey of best practices and current trends in the use of social media as a tool for strategic communications. Media & Communication students only.
- 5321—Production of Digital Media Content (3).** Introduces students to fundamental web design in the context of human-computer interaction with a focus on design principles, aesthetics, usability, and interactivity. Media & Communication students only.
- 5322—Multimedia Story Telling (3).** Focuses on a multimedia approach to storytelling in strategic communication practice. Heavy emphasis on mobile technology and social media. Media & Communication students only.
- 5324—Audience/Data Analysis and Reporting (3).** Collecting, using, analyzing, and presenting data and metrics as a means of understanding reach, target audience opinion/attitude/behavior, and message effectiveness. Media & Communication students only.
- 5326—Risk Communication/Management (3).** Survey of research and theory relevant to risk communication with an emphasis on the application to real-world risk scenarios.
- 5332—Special Topics in Strategic Communication (3).** A rotating topics course examining best practices in areas related to strategic communication. Media & Communication students only.
- 5334—Interpersonal Communication (3).** Covers research and application of interpersonal communication theory as it relates to human relations in personal and professional contexts. Media & Communication students only.
- 5344—Seminar in Public Opinion and Propaganda (3).** A study of propaganda theory and methods. Investigation of how public opinion is formed and influenced.
- 5347—Studies in International Communications (3).** A critical examination of the structure, control, and performance of the media systems of nations and regions.
- 5349—Administration of Communications Media (3).** Problems of executive planning and management of newspapers, magazines, and broadcast media. For mass communications majors only.

- 5350—**STEM Leadership Communication Capstone (3)**. Students will complete the capstone project for the graduate certificate in STEM Leadership Communication.
- 5362—**Seminar in Mass Communications (3)**. A comprehensive exploration of theory and research into the social, psychological, and economic problems affecting modern mass communications.
- 5364—**Research Methods (3)**. Basic communications research designs: exploratory, survey, experimental, content, and secondary analysis. Measures of central tendency, contingency analysis, correlation analysis. Media & Communication students only.
- 5366—**Seminar in Mass Communications Theory (3)**. In-depth study of the theory and epistemology of mass communications. Integration, comparison, and extension of theories with respect to a specific problem area including practice in development of research hypotheses. Media & Communication students only.
- 5370—**Internship in Mass Communications (3)**. Prerequisite: Consent of instructor. Supervised experience in an established career-related area of mass communications. May not be substituted for MCOM 6350.
- 5374—**Data Analysis (3)**. Prerequisite: B or higher in MCOM 5364. The use and interpretation of statistics for data analysis. Covers the selection of statistical techniques, the use of statistics packages, and the interpretation of results.
- 5380—**Strategic Communication in Sports (3)**. Focuses on how communication activities happen in the sports industry. With an emphasis on public, media, and community relations, students investigate the vital role internal and external communication plays in sport organizations.
- 5382—**Visual Communication in Sports (3)**. Focuses on how sport organizations use sports statistics and other data to visually communicate for sports information, fan engagement, promotions, marketing, development, and other communication efforts.
- 6000—**Master's Thesis (V1-6)**.
- 6302—**Mass Communications Pedagogy (3)**. In-depth study of and research into effective teaching methods for mass communications faculty in their specialized fields.
- 6310—**Contemporary Issues in Communications Technology (3)**. Seminar in the social, political, and economic impacts of communications technologies. Topics include diffusion of innovations, global communications systems, and audience research.
- 6315—**Integrated Communications Campaigns (3)**. Seminar in managing and analyzing the success of integrated communications campaigns.
- 6330—**Seminar in Media and Sport (3)**. Examines the interaction of mass media and sport, including the related history; media economics; and the use of media by athletes, teams, and organizations.
- 6336—**Digital Media (3)**. Students will put web usage into the context of human-computer interaction and discuss design principles, aesthetics, usability, and interactivity. Students will learn coding basics.
- 6350—**Master's Report (3)**. Media & Communication students only.
- 6364—**Selected Research Methods (3)**. Prerequisites: B or higher in MCOM 5364 and MCOM 5374. Rotating research methods course focusing on experimental, survey, content analysis, or others. May be repeated twice when topics vary.
- 6366—**Advanced Mass Communications Theory (3)**. Prerequisite: MCOM 5366. Explores philosophical foundations underlying the social scientific approach and investigates the fundamental components of social scientific theory as a tool of scientists.
- 7000—**Research (V1-12)**.
- 8000—**Doctor's Dissertation (V1-12)**.

Photography (PHOT)

- 7000—**Research (V1-12)**.

Professional Communication (PCOM)

- 6315—**Special Topics in Professional Communication (3)**. A rotating topics course examining theory, research, and application of professional communication. May be repeated when topics vary.

Public Relations and Strategic Communication Management (PRSC)

- 5340—**Foundations of Public Relations (3)**. Public relations history, principles, theory, writing, and critiques of cases and campaigns.
- 5343—**Public Relations Problems and Cases (3)**. Use of contemporary public relations problems and cases to study planning, strategy, and tactics, including the organization, execution, and control of the PR function in organizations.
- 6315—**Special Topics in Public Relations (3)**. A rotating topics course examining theory, research, and application related to planning, implementation, and evaluation in public relations. May be repeated twice when topics vary.
- 7000—**Research (V1-12)**.

Graduate Certificates

Advanced Digital and Social Media

The 12-hour Graduate Certificate in Digital and Social Media is designed to introduce seasoned communication professionals to technology that is changing the face of communications in an ever-growing, global society. The program is offered exclusively online to meet the needs of our students, most of whom are communication professionals.

Students are required to complete four courses (12 hours). This includes one required course and three electives. Enrollment is open year-round so that students may start in the semester most convenient for them. In addition, students can determine how many courses they take per semester, based on their personal and professional schedules. The required course is MCOM 5310. Elective courses are MCOM 5318, 5321, 5322, 5324, 5332.

Sports Communication

The 12-hour certificate in Strategic Sports Communication will provide students with expanded, coordinated courses that provide applied, experiential opportunities to learn about sports communication and the tools that are used to produce sports media to prepare them for positions as strategic communicators in sport organizations.

Students are required to complete four courses (12 hours). This includes three required courses and one elective chosen from among a list of seven courses. Enrollment is open year-round so students may start in the semester most convenient to them. Students can determine how many courses they want to take per semester to best fit with personal and professional schedules. Required courses are: MCOM 5380, 5382; JOUR 5384. Elective courses are: MCOM 5310, 5312, 5316, 5318, 5321, 5332, 5370, or other courses as approved by the CoMC Associate Dean for Graduate Studies.

STEM Leadership Communication

The online 12-hour graduate certificate in STEM Leadership Communication is designed for scientists, technicians, engineers, and health care professionals who seek to acquire the crucial communication mindsets and skill sets that will enable them to achieve leadership positions in their industries and organizations. There are three required courses, and students select one additional course from an approved list of electives. Required courses are COMS 5314; MCOM 5324, 5350. Elective courses are COMS 5302, 5313; MCOM 5316, 5326, 5332, 5334, 5364, 6310.

J.T. & Margaret Talkington College of Visual & Performing Arts

Martin Camacho, D.M.A., Dean

About the College

The J.T. & Margaret Talkington College of Visual & Performing Arts (TCVPA) offers a diverse array of programs and courses in art, design, music, theatre, dance, arts media and technology, and interdisciplinary arts. The college seeks to prepare students who will be leaders in their professions by adhering to the highest standards in performance, teaching, research, and artistic vision. The college provides students with opportunities to be innovative and confident, to think critically, and to be successful in their chosen fields. Courses and degrees emphasize synthesis and connection via academic and creative programs, internships, and service learning. The college contributes to the cultural enrichment and understanding of the arts locally, regionally, nationally, and internationally.

Undergraduate Program

Core Curriculum Requirements. The core curriculum requirements ensure breadth in each academic program. These requirements have been incorporated into the college's various degree programs. Students should consult the Academic Requirements section of this catalog for a listing of courses that satisfy the requirements in each category.

Majors, Concentrations, Minors, and Electives. In addition to core curriculum requirements, students must take major, concentration, minor, and elective courses sufficient to total 120-130 semester hours. The minor (if applicable) may be any departmental minor from outside the major area discipline, an established interdisciplinary minor, or a student-initiated interdisciplinary or multidisciplinary minor (with approval of the appropriate associate dean of the college). Many departments and programs have residency requirements for the major, concentration, and/or minor. See departmental or program listings for specific information.

Students should have selected their major and minor (if applicable) fields by the time they reach their junior year. For the major subject, they will be required to complete a minimum of 36 semester hours, including the Communication Literacy requirement. As indicated in the degree programs on the following pages, some majors require more than the 36-hour minimum. At least 18-24 hours of the major subject must be in courses at the junior-senior level. For the minor, a minimum of 18 semester hours must be completed (except in foreign languages—explained under the department), at least 6 of which must be junior- or senior-level courses. All courses in the major and minor must be approved by the appropriate academic unit. A minimum of 40 semester hours of junior and senior work must be presented in the total degree. Students should consult an advisor for specific requirements of their degree programs.

Course Load. A normal course load is 15-19 hours per long semester. A student must be enrolled for a minimum of 12 hours to be considered full-time. All active distance-learning courses are considered as part of the course load. Course loads in excess of 19 semester hours require approval by an associate dean in the college. The maximum course load for a student on probation is 16 hours. The normal course load for a single summer term is 6-8 hours. To meet graduation requirements, a graduating senior may petition to take 9 hours one summer term, or a total of 15 hours across both summer terms.

Admission. Admission to the TCVPA is a two-step process. First, students must meet the academic requirements for admission to Texas Tech

University. Second, they must be admitted to the college or one of its three schools. Prospective students should consult the websites of the [Talkington College](#), [School of Art](#), [School of Music](#), or [School of Theatre & Dance](#) as well as "Admission Requirements for Specific Colleges" in the Undergraduate Admissions section of this catalog for information about applying for specific degree programs. In addition, some programs require a portfolio, audition, and/or interview.

Admission of Transfer Students. Students requesting permission to transfer from another academic institution must meet the university-wide admission requirements. Students requesting permission to transfer from another college at Texas Tech must have a GPA of at least 2.0. Transfer students must also meet the specific admission requirements of the desired degree program. The TCVPA will determine the applicability of any transferred credit to academic programs in the college and will grant final approval. All transfer students will enter under the catalog in force at the time of transfer. The last 30 hours prior to graduation must be completed while enrolled in the college.

Transfer Credit for Core Curriculum Courses. Some degree programs and/or minors include specific core curriculum courses as graduation requirements or prerequisites for other courses. Students who transfer in (or have previously completed via credit by exam) core curriculum courses that differ from those included in the degree program could be required to complete additional core curriculum courses as degree requirements.

Catalog Selection. Students must use the catalog issued for the year in which they were first officially admitted to the college, or a more recent catalog if approved. However, if they are not enrolled at Texas Tech for one academic year or transfer to another institution or another college at Texas Tech, they must be readmitted to the J.T. & Margaret Talkington College of Visual & Performing Arts and use the catalog in effect at the time of readmission. For graduation purposes, a catalog expires after seven years, at which time the current catalog becomes the catalog in effect.

Credit by Examination. A matriculated student may attempt credit by examination (described in the Undergraduate Admissions section of this catalog) by obtaining written approval from the Dean's Office. Approval is required to take an examination if more advanced material in the same subject has already been completed.

Grading Practices. The college conforms to university grading practices as set forth in the Academic Requirements section of this catalog. Credit for a course in which a grade of D is earned may not be applied toward fulfillment of the major (sometimes including adjunct requirements), minor, or teaching field requirements for any degree program. Except for those courses designated "may be repeated for credit" in this catalog, no course may be used more than once on a degree plan unless it has been approved by the Dean in the College.

Second Bachelor's Degree. Permission to enroll in courses to pursue a second bachelor's degree must be obtained from the Office of the Dean in the college. No second bachelor's degree is conferred until the candidate has completed at least 24 semester hours in residence in addition to the courses counted toward the first bachelor's degree. Out-of-state students must meet Texas Tech core curriculum requirements. Credit by examination and distance-learning courses will not satisfy the 24-hour residence requirement.

First-Year Students. Entering first-year students develop their programs in conference with an academic advisor. The students report to their advisors for such individual conferences or group meetings as are needed for the purpose of orienting themselves to academic regulations and procedures, curricula, and degree requirements in their areas of interest.

Final 30 Credit Hours. The final 30 credit hours of a degree program must be completed with Texas Tech enrollments.

Degree Plan and Intention to Graduate. Students are encouraged to file degree plans with the Dean as soon as their academic goals are clearly

defined. Students must file degree plans after completing 45 hours of coursework. The Intent to Graduate form is generally submitted at the same time as the degree plan, but it must be submitted no later than the final class day in the term prior to graduation. Students must be enrolled at Texas Tech during their graduation semester.

Teacher Education. Prospective teachers should refer to the College of Education section of this catalog and the chair or undergraduate advisor of the school or department in which they wish to major within the Talking-ton College of Visual & Performing Arts.

Graduate Program

For information on graduate programs offered by the College of Visual & Performing Arts, visit the Graduate Programs section page 459.

Undergraduate Degrees

Bachelor of Arts

The curriculum established for this degree is designed to provide the foundation of a liberal education through a well-rounded study of the humanities, arts, mathematics, social and behavioral sciences, and life and physical sciences. Bachelor of Arts degrees are offered with concentrations in art history, studio art, dance, music, theatre arts, and interdisciplinary arts studies.

General Requirements. See “Undergraduate Credit by Examination” in the Undergraduate Admissions section of this catalog for information on credit provided by test scores to meet these requirements. Students must take the specified number of hours in the areas listed below. With a few exceptions, courses from the major and minor may be used to satisfy these requirements. A course may not be counted in two different areas of the general requirements nor may a course be counted in requirements for both the major and minor.

| | Semester Hours |
|---|----------------|
| English | 6-12 |
| At least 6 hours of English must consist of ENGL 1301 and ENGL 1302. | |
| Oral Communication | 3 |
| (could be filled by IVPA 1302) | |
| Foreign Language | 0-16 |
| Specific foreign language requirements are determined in consultation with an academic advisor. A student must complete 0-6 hours at the second-year level or above in a single language. If 4 or more semesters of high school foreign language are accepted for admission, the student should consult the information preceding the course listing for the foreign language department. A student enrolling in the first-year sequence will have a requirement of 11-16 hours. A student who enrolls in the second-year sequence will have a 6-hour requirement. International students whose native language is not English and who graduated from a secondary school in their native country may satisfy this requirement by bringing their certificate of graduation to the Student Division of the dean's office. Credit by examination through Academic Testing Services is available for the following languages: French, German, Latin, and Spanish. Students who petition to complete the foreign language requirement via study abroad through a non-Texas Tech affiliated program will agree to have foreign language credit applied to their degrees based on scores on a language placement test administered by the language laboratory upon their return from the study abroad. Approval to do this must be granted in advance by the associate dean. | |
| Mathematics | 6 |
| Life and Physical Sciences | 8 |
| Select from the life and physical sciences laboratory courses listed in the university's core curriculum. | |
| Social and Behavioral Sciences | 3-6 |
| (could be filled by IVPA 2310) | |
| Three hours must come from courses in social and behavioral sciences approved for core curriculum requirements. An additional 3 hours may come from the same list or from anthropology, economics, geography, political science, psychology, sociology, and social work but excluding courses cited as options for any other requirement. | |

| | |
|--|-------------|
| United States History | 6 |
| Students normally enroll in HIST 2300 and HIST 2301. | |
| United States and Texas Government | 6 |
| Students will enroll in POLS 1301 and POLS 2306. | |
| Language, Philosophy, and Culture | 3-6 |
| (could be filled by IVPA 2301 or IVPA 2302) | |
| Courses must be selected from the list of core curriculum options. | |
| Creative Arts | 3-6 |
| Normally satisfied in the majors. | |
| TOTAL FOR DEGREE: | minimum 120 |

In addition to the above requirements, students must take major, minor, and elective courses sufficient to total a minimum of 120 semester hours.

Major, Minor, and Electives. Students should have selected their major and minor fields by the time they reach their junior year. For the major subject they will be required to complete a minimum of 36 semester hours, including courses to fulfill the Communication Literacy plan. As indicated in the degree programs on the following pages, some majors require more than the 36-hour minimum. At least 18-24 hours of the major subject must be in courses at the junior-senior level.

For the minor, a minimum of 18 semester hours must be completed (except in certain foreign languages as explained in the curriculum for languages), at least 6 of which must be of junior or senior level. The minor may be any departmental minor, an established interdisciplinary minor, or a student-initiated interdisciplinary minor (with approval of the discipline area faculty and the associate dean of undergraduate and curricular issues in the Talkington College of Visual & Performing Arts).

Many departments and programs have residency requirements for the major and minor. See departmental listings for specific information.

All courses in the major and minor must be approved by the appropriate academic unit. Students are expected to develop a degree plan upon completion of 45 hours. Forms and information are available in department offices. A minimum of 40 semester hours of junior and senior work are required to graduate.

Bachelor of Fine Arts

The curriculum leading to the Bachelor of Fine Arts (B.F.A.) degree provides concentrations in theatre arts—acting, theatre arts—design/technology, theatre arts—musical theatre, dance, art—art education, art—graphic design, and art—studio art. A minor is not required for this degree program. If an optional minor is elected, a course may not be credited in the requirements for both the major and minor.

| | Semester Hours |
|--|----------------|
| English | 6 |
| United States and Texas Government | 6 |
| United States History | 6 |
| Oral Communication | 3 |
| (could be filled by IVPA 2301) | |
| Mathematics | 6 |
| Life and Physical Sciences | 8 |
| Social and Behavioral Sciences | 3 |
| (could be filled by IVPA 2310) | |
| Language, Philosophy, and Culture | 3 |
| (could be filled by IVPA 2301 or IVPA 2302) | |
| Foreign Language | 0-10 |
| Entering students are expected to have had four semesters credit of a single foreign language in high school. Students who do not meet this requirement will be required to complete one year (or the equivalent) of a single foreign language taken at the college level. For more information, refer to the “Foreign Language Requirement” listing in the Academic Requirements section of this catalog. | |
| Professional Program (Select One) | |
| Dance | 82 |
| Theatre Arts (Acting, Design/Technology, or Musical Theatre) | 89 |
| Art Education | 82 |
| Graphic Design | 82 |
| Studio Art | 82 |

Bachelor of Music

Bachelor of Music degrees are offered with concentrations in performance (MUPF), composition (MUCP), theory (MUTH), and music education (MUED—leading to teacher certification). A minor is not required for this

degree program. If an optional minor is elected, a course may not be credited in the requirements for both the major and minor.

| MUED | 128 |

Bachelor of Arts in Arts Media and Technology

The Bachelor of Arts in Arts Media and Technology is a unique program for students who wish to study multiple fields in equivalent depth. As an interdisciplinary liberal arts degree, it requires similar but slightly different general requirements as the Bachelor of Arts degree. Instead of a major and minor, the student selects three fields of specialization, each of which meets the minimum requirements of a departmental or interdisciplinary minor. Together, the three fields form a coherent concentration of interest to the student that is unavailable elsewhere in the university as an organized program of study. The student chooses the three fields in consultation with the TCVPA academic advisor and, as necessary, the departmental or program advisors overseeing those areas. At least two of the three fields must reside in the TCVPA. A further requirement of the degree is that although a student may select three fields from within the College, all three fields may not reside in the same school.

Additionally, students can pursue self-designed fields of specialization provided they obtain approval from the academic areas housing the included courses.

Each field consists of a minimum of 18 hours in the chosen discipline, for a total of 54 hours minimum across the three fields of specialization. Through these self-selected fields, which combine to form an integrated concentration and liberal arts foundation, the degree can prepare a student to pursue intellectual and/or artistic interests, career goals, or further study at the graduate or professional level. The degree may be of particular interest to students with interests in several arts areas who are preparing for new career opportunities that integrate technology with art, producing work that crosses boundaries between fine art and design, or exploring how the arts impact social behavior. Outside the TCVPA, Arts Media and Technology majors can select from a concentration in either Computing Applications or Creative Media Industries. Admission is by interview, written justification, and/or audition administered by or submitted to the appropriate TCVPA associate dean and faculty, to be completed before matriculation or by the end of the second semester of study.

The first and second fields of specialization are chosen from existing minors in art, music, or theatre and dance. Some minors require auditions/portfolios for admission. The third field of specialization is in either Music

Technology or Creative Media Industries. The student determines the third field of specialization in close consultation with the TCVPA lead advisor and the TCVPA Associate Dean for Undergraduate and Curricular Issues.

A unique feature of the degree is an interdisciplinary core required of all students, consisting of IVPA 2310, IVPA 1302, and IVPA 2301 within which the juxtaposition, integration, and synthesis of all the arts are specifically addressed. The degree culminates in a one-credit capstone course, IVPA 4110, taken concurrently with two credits in an appropriate 4000-level independent study with a faculty mentor. IVPA 4110 and the associated 4000-level independent study course may be repeated once for credit to accommodate lengthier projects, including internships and study abroad.

Declaration of Major. Students declare the Interdisciplinary Arts Studies major in the TCVPA just as they do any major. A visit with the academic advisor (806.742.0700 or cvpa.advisors@ttu.edu) is the best place to start, followed by visits to program advisors representing the three intended fields of specialization.

Minimum GPA. Students in the degree must maintain a minimum GPA of 2.75. The minimum will not be retroactively required of students who entered the program prior to Fall 2018.

Graduation Requirements. General requirements for the Arts Media and Technology degree are as follows:

- Minimum total of 120 credit hours
- Minimum total of 40 junior/senior hours
- Interdisciplinary core consisting of IVPA 1302, IVPA 2301, IVPA 2310
- Capstone project: one or two registrations of IVPA 4110 plus 2 or more associated credits of 4000-level independent study
- The three fields of specialization must total at least 54 hours, each comprising an existing departmental or interdisciplinary minor of at least 18 hours. There must be a minimum of 6 junior/senior hours in each field, and courses may be credited in only one field of concentration. At least two of the fields must come from the TCVPA.

Specified core degree requirements are as follows:

| | Semester Hours |
|---|-----------------------------|
| English..... | 6 |
| Oral Communication..... | 3 |
| <i>(filled by IVPA 2301)</i> | |
| United States and Texas Government..... | 6 |
| United States History..... | 6 |
| Mathematics..... | 6 |
| Life and Physical Sciences..... | 8 |
| Social and Behavioral Sciences..... | 3 |
| <i>(filled by IVPA 2310)</i> | |
| Language, Philosophy, and Culture..... | 3 |
| <i>(filled by IVPA 2301)</i> | |
| Creative Arts..... | satisfied in concentrations |
| <i>(could be filled by a course in one of the three fields)</i> | |
| Personal Fitness and Wellness..... | 0 |
| Foreign Language..... | 0-10 |

Entering students are expected to have completed four semesters credit of a single foreign language in high school. Students who do not meet this requirement will be required to complete one year (or the equivalent) of a single foreign language taken at the college level. For more detailed information, refer to the "Foreign Language Requirement" listing in the Academic Requirements section of this catalog.

Communication Literacy Requirement

For information on courses meeting the CL requirement for the B.A. in Arts Media and Technology, please see an advisor.

Elective Hours necessary to reach a minimum total of 120 hours

'3+3' Early Admission With School of Law

Honors students in good standing who are working toward the B.A., B.S., B.F.A., B.M., or B.G.S. degree in the College of Visual & Performing Arts, the College of Arts & Sciences, or the Honors College may gain early admission to the Texas Tech University School of Law by completing coursework totaling a minimum of 100 semester hours in their undergraduate college and then completing the first year of coursework at the Texas Tech School of Law. To be eligible to participate in this program, students must meet all of the following criteria:

- Have an undergraduate GPA of at least 3.5.
- Have an LSAT score that places them in the top half nationwide.

- Have a SAT score of at least 1300 or an ACT score of at least 29.
- Be enrolled in the Honors College and making satisfactory progress toward a Visual & Performing Arts, Arts & Sciences, or Honors College degree (B.A., B.S., B.F.A., B.M., or B.G.S.) consistent with the regulations established by the colleges.
- Submit an Honors certification form to the Honors College at the time of application to the Law School.

Of the minimum 100 semester hours of undergraduate work, at least the last 30 must be completed in residence at Texas Tech. This minimum will apply to transfer students from other higher education institutions, provided they have satisfactorily completed the work outlined in the first and second years or its equivalent. (Note that the Honors College residency requirement generally calls for a minimum of three long semesters of work at Texas Tech for Honors graduation.)

The minimum 100 hours of work must satisfy all graduation requirements for the B.A., B.S., B.F.A., B.M., or B.G.S. degree in the home college at Texas Tech, with the exception of requirements in the minor (for students in the Honors College or the College of Visual & Performing Arts who do not have a minor, the hours will be applied toward elective credit). Students must also complete the minimum requirements for an Honors College designation as outlined in the *Honors Student Handbook*.

To earn the baccalaureate degree, the applicant for a degree under this plan must submit an official transcript from the Texas Tech School of Law after completion of the first year of law school. Evidence of successful completion of the first year of law school coursework (totaling 29 hours) will substitute for the 18 hours required for the minor and any electives needed (totaling up to 11 hours) for the baccalaureate degree.

For students in the College of Arts & Sciences, the total number of credit hours from outside the college (including those transferred as non-Arts & Sciences credit) and the credit hours from the School of Law applied to the baccalaureate degree cannot exceed 30. For students with a major in College of Visual & Performing Arts, the 30-hour limit applies to courses from outside the student's major that do not satisfy a Texas Tech core curriculum requirement.

Any student selecting the "3+3" Early Admission Program option should plan carefully in consultation with an Assistant or Associate Dean of the Honors College and the home college at least one year prior to beginning professional school. Also, due to the unique nature of the law school application process, students are strongly encouraged to meet with the Assistant Dean for Admissions at the School of Law at least two years prior to the desired start date for law school. Students must apply for the "3+3" program during the fall semester of their third year and must take the LSAT by December of that year. The Admissions Committee applies the same standards and procedures to both "3+3" applicants and traditional admission applicants. Students wishing to pursue the "3+3" program must file a degree plan with an appropriate major and a law minor at least one semester prior to beginning their law school coursework.

For further information, see www.honors.ttu.edu and www.prelaw.ttu.edu.

Department of Interdisciplinary Arts

Peter A. Martens, Ph.D., Chairperson

Associate Professors: Sears, Warren-Crow

Assistant Professor: Janardhan

Post-Doctoral Teaching Fellow: Gulden

CONTACT INFORMATION: School of Theatre and Dance Building
Box 45060 | 2812 18th Street STE 222, Lubbock, TX 79409 | T 806.742.0700

About the School

This department administers the following degree and certificate programs:

- Bachelor of Arts in Arts Media and Technology
- Doctor of Philosophy in Fine Arts
 - Interdisciplinary Arts Track
 - Art Track
 - Music Track
 - Theatre Track
- Undergraduate Minor in Arts Entrepreneurship
- Undergraduate Certificate in Animation Studies
- Undergraduate Certificate in Arts Entrepreneurship
- Undergraduate Certificate in Motion Picture Production
- Graduate Certificate in Arts Administration
- Graduate Certificate in Arts and Health
- Graduate Certificate in Arts Entrepreneurism
- Graduate Certificate in Interdisciplinary Arts
- Graduate Certificate in Music Cognition

Created in 2023, the Department of Interdisciplinary Arts supervises several longstanding degree and certificate programs formerly housed in the Talkington College of Visual & Performing Arts. The Ph.D. in Fine Arts was launched in 1972 as only the second doctoral interdisciplinary arts degree in the nation, and remains a unique crucible for inter-, cross-, and transdisciplinary study and inquiry in an increasingly compartmentalized academic environment.

The doctoral degree offers four tracks, three of them based in the scholarly arts disciplines of Art, Music, and Theatre, as well as an Interdisciplinary Arts track. All students, regardless of track, take five foundational courses in the methodologies, histories, and philosophies of art, dance, music, and theatre, based on a cohort model. The bulk of the remaining coursework in any track flows according to the student's interests guided by faculty advisors. The Art track's concentration in critical inquiry allows for a broad range of curricular and career applications; the Music track offers concentrations in arts administration, music education, music theory, and musicology. The Theatre track offers concentrations in arts administration, design, theatre history and criticism, and performance and pedagogy.

The Interdisciplinary Arts track allows students to choose two or three concentrations from both inside and outside the Talkington College of Visual and Performing Arts. Current students in this track are combining one or more arts disciplines with anthropology, computer science, educational curriculum and instruction, and psychology.

The Department of Interdisciplinary Arts also offers an interdisciplinary degree at the undergraduate level, the Bachelor of Arts in Arts Media and Technology (BAAMT). This degree is ideal for students preparing for careers in creative media industries, or who plan to pursue graduate degrees in this area. There are two curricular tracks offered with the BAAMT program; the arts media track emphasizes traditional studio-based work with interdisciplinary training in electronic and digital media, while the arts technology track blends design with a focus on computing applications and technology.

The Department of Interdisciplinary Arts also offers a number of certificates at both graduate and undergraduate levels, as detailed on the DIA departmental website.

* Choose from the university's core curriculum.

† Fulfills Social Sciences Core.

‡ Fulfills Language, Philosophy, and Culture Core.

§ Fulfills Oral Communication Core.

** Entering students are expected to have had four semesters credit of a single foreign language in high school. Students who do not meet this requirement will be required to complete one year (or the equivalent) of a single foreign language taken at the college level. For more information, refer to the "Foreign Language Requirement" in the Academic Requirements section of the catalog.

Graduate Program

For information on graduate programs offered by the Department of Interdisciplinary Arts, visit the Graduate Programs section of the catalog on page 457.

Undergraduate Program**Bachelor of Arts in
Arts Media and Technology**

The Bachelor of Arts in Arts Media and Technology is a unique undergraduate program for students who wish to pursue future careers in arts media and technology by integrating disciplinary content in the arts with non-arts based specializations. Instead of a traditional major and minor, students select three fields of specialization, each of which meets the minimum requirements of a departmental or interdisciplinary minor, and two of which must reside in the TCVPA. Areas of study include digital media production, theatrical and sound design, game design and development, motion graphics and digital animation, and music technology. The B.A. in Arts Media and Technology is ideal for students preparing for careers in creative media industries, or who plan to complete graduate or advanced degrees in arts media and technology.

Students may select one of two curricular tracks within the Arts Media and Technology degree program. The arts media track combines traditional studio-based coursework in the fine arts with interdisciplinary training in electronic media and digital media production. Typical course plans in the arts media track include minors in Creative Media Industries, Transmedia, and Studio Art.

The arts technology track blends creativity and design with a rigorous curriculum in computing applications and technology. Typical course plans in the arts technology track include minors in Computing Applications, Music Technology or Theatre Arts – Design, and General Music.

Finally, the Arts Media and Technology, B.A. includes an interdisciplinary core curriculum that juxtaposes, integrates, and synthesizes the selected fields of specialization for each student.

**Arts Entrepreneurship,
Undergraduate Minor or Certificate**

The Arts Entrepreneurship Minor/Certificate seeks to educate students about the management process that artists use to create artistic, social, and economic value. Students will learn how to build creative partnerships and networks among artists, audiences, communities, businesses, teachers, and students. They will learn how to become self-directed business owners or employees in arts industries and how to identify and pursue opportunities that challenge them to recombine resources in innovative ways to produce creative arts projects. The minor/certificate will equip them with career skills to define professional goals, develop marketing strategies, launch ventures, conduct fundraising campaigns, and organize artistic events.

General Requirements.

- Declaration of the minor/certificate must be approved by the TCVPA Lead Advisor or Associate Dean for Undergraduate and Curricular Issues.
- Students must complete a minimum of 21 credit hours.
- Hours applied to the minor may not be used to fulfill requirements in the student's major.

(Note: Courses generally can be taken in any order as long as any necessary prerequisites have been met.)

I. Business Component (12 credit hours)

Option One – Rawls Summer Business Institute (2.0 GPA required): BA 3012, 3014, 3015, 3011, 3010, 3016, 3017, 3013, 3019

Option Two (requires approval of the TCVPA Lead Advisor or Associate Dean): BA 3302, 3305 and two of BA 3301, 3303, 3304, 3306; MGT 3375

Option Three (requires approval of the TCVPA Lead Advisor or Associate Dean): BA 3302, 3305; MGT 4384, 4388

II. Entrepreneurship Component

This is a graded component of MUAP 4315/5315 and includes completion of Innovation Hub Red Raider Startup and/or Hub Camp.

III. Interdisciplinary Component (3 credit hours)

One of the following, chosen in consultation with the TCVPA Lead Advisor or Associate Dean for Undergraduate and Curricular Issues (some courses may count both toward the minor and the core curriculum): IVPA 2301, 1302, 2310

IV. Arts Entrepreneurship Component (3 credit hours): IVPA 4315**V. Arts Internship/Capstone Component (3 credit hours):**

IVPA 4000 or 4000-Level Independent Study in Art, Music, Theatre, or Dance* (may be repeated for credit).

** Application for the TTU Accelerator can be credited as independent study if combined with an analysis.*

Animation Studies, Undergraduate Certificate

The 12-hour Undergraduate Certificate in Animation Studies, by combining practice-based and lecture courses, provides students with an understanding of animation, a discipline and practice that integrates music, visual arts, and acting, with moving image technology. Required courses are: ARTH 4308 (*History of Animation and Interdisciplinary Approach*); MUHL 4300 (*Music in Animation*); THA 1301; IVPA 4300.

(Note: Courses generally can be taken in any order as long as any necessary prerequisites have been met. IVPA 4300 - Capstone for Animation Studies is recommended to be taken last.)

Motion Picture Production, Undergraduate Certificate

The College of Media & Communication and the Talkington College of Visual & Performing Arts have partnered to offer a 15-hour undergraduate certificate in Motion Picture Production. Students learn valuable skillsets in the areas of production and performance in motion picture films. This certificate prepares students for careers in a number of fields within and related to motion picture production, from directing, editing, and cinematography to acting, set design, and costume design, among others.

Students will select five courses:

- Two required courses from Media & Communication (JCMI 2301 and 2302).
- Two required courses from the School of Theatre & Dance (choose from THA 2305, 3311, 4335, 4336, 4337).
- One final course as an elective from either college (choose from CMI 3335, 4310, 4380, 4301; MCOM 2301; ART 4390; or a previously untaken THA course from the choices listed above).

(Note: Courses generally can be taken in any order as long as any necessary prerequisites have been met.)

Undergraduate Course Descriptions

Interdisciplinary Visual and Performing Arts (IVPA)

- 1302—Global Dialogues: Connections through the Arts (3).** Interdisciplinary arts course investigating the variety/complexity of global communications of different cultural and linguistic identities specifically as manifested in dialogue through artistic expression. Fulfills core Communication (Oral) requirement.
- 2000—Special Topics in Interdisciplinary Studies in Visual and Performing Arts (V1-6).** Study at the freshman or sophomore level in a special interdisciplinary topics area. Topics, enrollment, and credit hours subject to approval of the academic dean.
- 2301—Critical Issues in Arts and Culture (3).** Analysis of music, visual arts, theatre and dance as fundamental to contemporary society and relationship of arts to broader social context. Fulfills core Language, Philosophy, and Culture requirement. (CL)
- 2302—Yoga and the Creative Arts: Philosophy and Practice (3).** Surveys Raja Yoga and considers how its ethics, philosophy, and physical and mental practice influence past, present, and future experiences and creations of works of art. Fulfills core Language, Philosophy, and Culture requirement.
- 2303—Arts for K-8 Teachers (3).** This interactive, process-oriented course will enable its students to construct inquiry processes from art and music education content, leading to deeper understanding and EC-6 classroom application. Fulfills core Creative Arts requirement.
- 2310—Social and Scientific Issues in the Arts (3).** Introduction to social scientific research in the arts. Required for students enrolled in the Bachelor of Arts in Interdisciplinary Arts Studies. Fulfills the core Social and Behavioral Sciences requirement.
- 4000—Special Topics in Interdisciplinary Studies in Visual and Performing Arts (V1-6).** Prerequisites: Upper-level standing at TTU. Study at the junior or senior level in a special interdisciplinary arts topic area. Topics, enrollment, and credit hours subject to approval of the academic dean.
- 4110—Capstone Seminar: Interdisciplinary Arts (1).** An interdisciplinary arts capstone seminar taken concurrently with two credits in an appropriate 4000-level independent study course with a faculty mentor. Class meets once weekly, and students also meet individually with a project mentor/advisor.
- 4300—Capstone for Animation Studies (3).** Prerequisite: Instructor consent. Capstone course for the Animation Studies Certificate, providing practical understanding of how animation relates to the visual arts, music, theatre, and performance.
- 4315—Introduction To Arts Entrepreneurship (3).** Prerequisite: Consent of instructor. Arts entrepreneurship course with emphasis on identifying opportunities and goals in the arts, generating business plans, analyzing and implementing marketing strategies, and evaluating business performance. [IVPA 5315]
- 4325—Arts Entrepreneurship: ENFP (Entrepreneur Not-For-Profit) Marketing Formula (3).** Prerequisite: IVPA 4315. Capstone project for building a signature system for your business using technology and media production to professionally attract clients. [IVPA 5325]

School of Art

Ghislaine Fremaux, M.F.A., Interim Director

Professors: Flueckiger, Germany, Glover, Granados, Martin, Webster, Yoo

Associate Professors: Arnall, W. Cannings, Chua, Fowler, Fremaux, Hegert, Little, Orfila, Ortega, Peralta, Slagle, Tedeschi, Toteva, Venhuizen, Warren-Crow

Assistant Professors: Burgio-Ericson, Corona Garcia, Flanigan, Rusenova-Ina

Assistant Professors of Practice: Ina, S. Cannings

Lecturers: Hodges, Peaslee, Scherff, Wheeler

Instructor: Ratheal

CONTACT INFORMATION: 101 Art Building | Box 42081 | Lubbock, TX 79409-2081 | T 806.742.3826 | F 806.742.1971 | www.art.ttu.edu

About the School

This school supervises the following degree and certificate programs:

- Bachelor of Arts in Art
 - Concentrations: Art History, Studio Art
- Bachelor of Fine Arts in Art
 - Concentrations: Art Education, Graphic Design, Studio Art (studio emphases: Ceramics, Jewelry Design and Metalsmithing, Painting, Photo, Printmaking, Sculpture, and Digital Narrative Arts)
- Master of Art Education
- Master of Arts in Art History
- Master of Fine Arts in Art
 - Concentration: Studio Art
- Doctor of Philosophy in Fine Arts
 - Track: Art (Critical Studies and Artistic Practice)
- Undergraduate Minor in Art History
- Undergraduate Minor in Community-Focused Art Education
- Undergraduate Minor in Fine Arts Photography
- Undergraduate Minor in Studio Art Ceramics
- Undergraduate Minor in Studio Art Drawing
- Undergraduate Minor in Studio Art Jewelry Design and Metalsmithing
- Undergraduate Minor in Studio Art Painting
- Undergraduate Minor in Studio Art Printmaking
- Undergraduate Minor in Studio Art Sculpture
- Undergraduate Minor in Transmedia
- Graduate Certificate in Art History, Criticism, and Theory

The school's degree programs are accredited by the National Association of Schools of Art and Design. The Bachelor of Interior Design and Bachelor of Science in Apparel Design and Manufacturing degree programs in the College of Health and Human Sciences are also accredited by the National Association of Schools of Art and Design.

Graduate Program

For information on graduate programs offered by the School of Art, visit the Graduate Programs section of the catalog on page 459.

Undergraduate Program

Mission Statement. The School of Art is committed to providing a stimulating and challenging environment that will develop creative and scholarly potential in students, support faculty members in the pursuit of excellence in teaching and research, serve public and professional constituencies, and promote intercultural understandings through art.

Degree programs engage students in art through an examination of contemporary, historical, and cross-cultural issues, ideas, and actions in relation to multiple, diverse, and global visual cultures. The School of Art emphasizes exhibition opportunities, contemporary technologies, critical discourse, and interdisciplinary opportunities. The school offers students the opportunity to minor in art history, 2D or 3D studio art, fine

art photography, or transmedia. Non-majors who desire experience in the visual arts as part of their liberal education will find a varied selection of course offerings.

Undergraduate Admission. Undergraduate admission to the School of Art (SOA) is a two-step process, with review at institutional (TTU) and unit (SOA) levels. The institutional admission is based on academic performance as outlined in the Undergraduate Admissions section of this catalog. All art students are listed as incoming art majors until they apply to the various degree specializations during the annual SoA Advising Events. Students interested in a B.A. or B.F.A. degree in Art will submit their declaration of major/emphasis form and other application materials to the individual areas to be reviewed for acceptance. Detailed application procedures for each area will be explained in the ART 1100 class or by the School of Art academic advisor. Please follow the undergraduate admissions procedures for the SOA listed at <https://www.depts.ttu.edu/art/programs/undergraduate/index.php> to be admitted as an incoming art student.

Transfer Students. The first- and second-year art curriculum is consistent with the art curriculum for higher education approved by the Coordinating Board. The School of Art at Texas Tech therefore respects the standard art core curriculum with regard to transfer credit. In some cases, a portfolio of previous work in art and a transcript of completed courses may be necessary for the purposes of advising and placement in the degree program.

Transfer Credit for Core Curriculum Courses. Some degree programs and/or minors include specific core curriculum courses as graduation requirements or prerequisites for other courses. Students who transfer in (or have previously completed via credit by exam) core curriculum courses that differ from those included in the degree program could be required to complete additional core curriculum courses as degree requirements.

Art Foundations. The Arts Foundations is the studio and art history prerequisite courses that enable students to experiment with media, technique, and concepts to prepare them for the B.F.A. and B.A. area of concentration. All students seeking a degree in art are required to take 22 hours of Art Foundations courses in the areas of studio art and art history. These courses consist of the following: ART 1100, 1303, 2304, 1302, 2303; ARTH 1301, 2302, and 3303.

Advanced Placement. Students entering art programs may be considered for advanced placement in the Art Foundations program through the College Board Advanced Placement Program (AP), International Baccalaureate (IB), or the School of Art Foundations Portfolio Review. See Academic Testing section for details.

Individualized Programs. Through a unified foundations program, the School of Art prepares students to develop increasingly specialized and diverse courses of study. No grade below C is accepted for transfer credit in fields of concentration, minors, or emphases. Most upper-level art courses are repeatable for credit with a change of topics and allow for individualized instruction.

Semester Credit Hour and Contact Hour Equivalents. For most purposes a traditionally offered face-to-face course will have a minimum of 15 contact hours for each semester credit hour. Thus, a 1-credit-hour course should meet for at least 15 hours over a long semester and a 3-credit-hour course should meet for 45 hours over the semester. Courses taught during a summer session are expected to have the same number of contact hours as if they were taught during a long semester. It is permitted to offer a course in a shortened schedule, online, or in other non-traditional formats that do not meet the contact hour requirement if the course has been reviewed by a college faculty committee and the Office of the Provost and approved as having the same learning outcomes as a comparable course delivered traditionally.

In-residence students and any students in their semester of graduation must be enrolled in a minimum of one credit-bearing semester hour. Registration in remedial and other zero-credit hour coursework must be accompanied by one credit-bearing course. Should a student drop to zero credit hours, the student will be withdrawn from the institution.

Pursuant to the *Texas Tech University Undergraduate/Graduate Catalog*, the Texas Administrative Code, and norms stated in the *NASAD Handbook*, the credit and time expectations for School of Art courses are as follows:

- For studio- or project-based courses, a standard of 30 in-class contact hours per credit hour per term is employed. Further, noncontact hour

time expectations for out-of-class student activity typically range from 15 to 30 hours per credit hour per term.

- For traditionally delivered 3-credit-hour lecture- or seminar-based courses during a regular semester, students should expect to be in class for 3 hours per week and work outside of class a minimum of 6 hours per week. For 3-credit-hour studio- or project-based courses, students should expect to be in class for 6 hours per week and work outside of class between 3 and 6 hours per week.

School Residency Requirements. Students working toward a B.F.A. degree in art education, graphic design, or studio art must complete a minimum of 30 hours of art in residence, 24 of which must be upper-division courses. Students working toward a B.A. in Art with a field of concentration in art history or studio art must complete at least 24 hours of upper-division courses in their field of concentration in residence. At least 9 hours of upper-division courses must be taken in residence for the minor.

Laptop Requirement. As students begin their major coursework in the photography, graphic design, and art education programs, they will be required to have a laptop computer that meets specific criteria. For current information consult the School of Art website, www.art.ttu.edu.

Art, B.A.

The Bachelor of Arts will provide School of Art students with a degree in art, offering comprehensive study in a 120-hour program with concentrations in Art History and Studio Art that can be completed in four years and will include the requisite percentage of studio art, art history, and general studies classes. The Bachelor of Arts with a concentration in Art History will provide students with a comprehensive knowledge of the visual arts and architecture in a historical and global context. The program includes a variety of upper-level Art History courses that offer access to art objects, guest lectures, study abroad, as well as pre-professional experiences such as curatorial internships. This degree prepares students for careers in fields such as curatorship, museum studies, art publishing, art law, and arts advocacy, as well as for graduate study in Art History. Increasingly, major tech and media employers are seeking the research, writing, critical thinking and observational skills acquired by Art History graduates.

The Bachelor of Arts with a concentration in Studio Art will provide School of Art students with a liberal arts degree in art, offering a broader emphasis of visual arts and related studies than is currently provided through the Bachelor of Fine Arts. The degree will provide students an opportunity to participate in a more individualized degree through the choice of elective courses for a minor from outside the major area discipline that is consistent with the university philosophy and policies for a liberal arts degree.

Communication Literacy Requirement. Texas Tech University's Communication Literacy requirement signals the university's awareness that in addition to the fundamental role that writing plays in enabling students to explore, develop, focus, and organize a message, other types of communication must also be taught as appropriate for a student's discipline. Throughout each program of study, then, students must be given ample opportunity to develop their skills in forms of communication central to that program. Communication Literacy courses for the B.A. in Art with a concentration in **Art History** are ARTH 3303, 4309 and one course from ARTH 3320, 3333, 3350, 3364, 3366, 3388, 4304, 4307, 4308, 4320, 4340, 4389, 4335. Communication Literacy courses for the B.A. in Art with a concentration in **Studio Art** are ARTH 3303 and any two from ARTH 3320, 3333, 3350, 3364, 3366, 3388, 4304, 4307, 4308, 4309, 4320, 4340, 4389, 4335.

Art History Concentration

Students working toward the Bachelor of Arts in Art with a concentration in art history must complete 22 hours of Art Foundations courses, 30 hours of upper-level art history courses selected with the written consent of an advisor (at least 24 of which must be taken in residence, including Senior Thesis in Art History), a minor course of study from outside the major area discipline, second-year level in a foreign language, and the university core curriculum requirements for a B.A. in the College of Visual & Performing Arts. The number of credit hours required for a concentration in art history is 120 (including a minimum of 39 credit hours of art history).

After completing three art history survey courses in Art Foundations (9 credit hours), students will achieve a breadth of study by selecting seven upper-level art history courses (21 credit hours) with at least one course from a minimum of five of the following fields: Medieval art, Renaissance and Baroque art, Latinx and Latin American art, 18th- and 19th-century European and American art, and Modern and Contemporary European and American art. Prior to the last semester of the senior year, students are required to take an additional 6 credit hours in a focus area in preparation for the senior thesis (another 3 credit hours). The capstone experience is the presentation of the senior thesis research at the Undergraduate Art History Symposium.

Art history students complete either a traditional 18-hour minor from outside the major area discipline or an 18-hour interdisciplinary research minor (subject to approval by the art history area advisor and the associate dean of the College of Visual & Performing Arts) in collateral fields that support their art history research focus area.

The concentration in art history requires second-year level proficiency in a foreign language.

Studio Art Concentration

The Bachelor of Arts in Art with a concentration in studio art provides School of Art students with a liberal arts degree in art, offering a broader emphasis of visual arts and related studies than is provided through the Bachelor of Fine Arts. Studio art courses are carefully selected with faculty guidance and are designed to culminate in a capstone project that can take the form of a paper, project or exhibition. The capstone offers students an opportunity to synthesize their learning in a way that can provide greater understanding of the relationships between disciplines. The degree will provide students a more individualized program through the choice of elective courses for a minor from outside the major area discipline that complements the studio courses and is consistent with the university philosophy and policies for a liberal arts degree.

This concentration is a 120-hour program that can be completed in four years and requires 46 credit hours in studio art and art history, 9 interdisciplinary credit hours from the other areas of the Talkington College of Visual & Performing Arts (music, theatre arts, and/or dance), 18 credit hours in a minor area of study from outside the major area discipline that may also be interdisciplinary, and 44 to 54 credit hours of general education requirements as stipulated by the discipline area advisor and the Talkington College of Visual & Performing Arts.

The concentration in studio art requires second-year level proficiency in a foreign language.

Art, B.F.A.

The Bachelor of Fine Arts in Art will provide School of Art students with a professional degree in art, offering comprehensive study in a 123-hour program with concentrations in art education, graphic design, or studio art. Studio Art emphasizes include Ceramics, Jewelry Design and Metal-smithing, Painting, Photo, Printmaking, Sculpture, and Transmedia. These degrees can be completed in four years and will provide students an opportunity to have an intensive and in-depth experience through visual concepts and practice.

Communication Literacy Requirement. CL courses for the **Art Education** concentration include: ARTH 3303, ARTE 4365, and one of the following choices: ARTH 3320, 3333, 3350, 3364, 3366, 3388, 4304, 4307, 4308, 4309, 4320, 4340, 4389. CL courses for the **Graphic Design** concentration include: ARTH 3303, ART 4359, and one of the following choices: ARTH 3320, 3333, 3350, 3364, 3366, 3388, 4304, 4307, 4308, 4309, 4320, 4340, 4389. CL courses for the **Studio Art** concentration include: ARTH 3303, ART 4335, and one of the following choices: ARTH 3320, 3333, 3350, 3364, 3366, 3388, 4304, 4307, 4308, 4309, 4320, 4340, 4389.

Art Education Concentration

The Bachelor of Fine Arts with a concentration in art education offers students two options: option one leads to teacher certification and K-12 teaching, and option two leads toward Community Art Education. The

Art, B.A. (Art History Concentration) Recommended Curriculum

FIRST YEAR

Fall

- ☐ ART 1100 - Introduction to Art (1 SCH)

The score attained on the exam will determine whether the student is placed in a second-year course, a 5-hour review course, or in some cases the first or second semester of a beginning (first-year) language course.

program emphasizes contemporary theories and artists through the study of multiple and diverse visual cultures.

Both options require 55 semester hours of studio art and art history, 27-33 semester hours of professional education, and 41-51 semester hours of general requirements as stipulated by the J.T. & Margaret Talkington College of Visual & Performing Arts. The minimum number of hours required for art education is a total of 123 credit hours. A minimum of 40 credit hours of junior- and senior-level courses are required for graduation.

Graphic Design Concentration

The Bachelor of Fine Arts (B.F.A.) with a concentration in graphic design addresses problem-seeking and problem-solving skills. The curriculum stresses the importance of conceptual development, design history, theory and the integration of form and information for the purpose of effective communication. Emphasis is placed on social responsibility, civic engagement, and the role of the designer in society to create work for social good. Students are exposed to a full range of topics such as branding and identity design, publication design, interactive design, and emerging technologies.

Students working toward a B.F.A. with a concentration in graphic design must complete a minimum of 123 credit hours, including the Art Foundations coursework, 42-45 semester credit hours of graphic design courses, 21-24 hours of studio art and art history electives, and the university's core curriculum requirements for a B.F.A. in the J.T. & Margaret Talkington College of Visual & Performing Arts.

The graphic design curriculum is based on a series of carefully sequenced courses. All courses must be taken in order and successfully completed with a passing grade to progress within the curriculum.

Admission to the graphic design program requires specific course requirements and a portfolio review. **Being admitted to Texas Tech University and the School of Art does not guarantee admission to the graphic design program.** Applicants are selected each year in the spring semester (mid-April) through a rigorous portfolio and interview process. In the fall semester of their first year at the School of Art, students take general art courses in the core curriculum, including the required survey courses in 2D design (ART 1302) and Drawing I (ART 1303). In the spring semester, they prepare for the portfolio review by enrolling in Graphic Design Process (ART 2388). It is recommended that students enroll in 3D Design (ART 2303) and Drawing II (ART 2304) if the courses have not been taken beforehand.

Graphic design is a limited-access program, and the selection process is highly competitive. Students who are not accepted have the option of reapplying one final time during the subsequent review process in spring semester to follow. Students can complete the program in graphic design in four years if they are accepted upon the first portfolio review.

All students accepted into the graphic design program must have a laptop computer meeting specific criteria as they enter their major coursework. Qualifying students will be instructed regarding purchase requirements. Students should not purchase a laptop without consulting their professor in ART 2388.

Studio Art Concentration

Areas of emphasis in the Art, B.F.A.: Studio Art Concentration are: Digital Narrative Arts (formerly Transmedia & Photography), Ceramics, Jewelry Design and Metalsmithing, Painting, Printmaking, and Sculpture. The Bachelor of Fine Arts with a concentration in studio art offers depth in the studio areas and requires 82 hours of art and art history courses in addition to the 41 to 51 hours of general requirements as stipulated by the J.T. & Margaret Talkington College of Visual & Performing Arts. One-third of the semester hours in studio art above the Art Foundations must be outside the student's area of concentration and must be chosen with advisor approval. Courses in upper-level drawing may be used for studio art electives. Students graduating in studio art are required to participate in a group exhibition during the spring semester of their graduating year. The minimum number of hours required in studio art is 123. A minimum of 40 credit hours of junior- and senior-level courses is required for graduation.

Application to Field of Specialization. At the unit level, the School of Art requires an application process to the various degree specializations. During the annual SoA Advising events, students interested in the B.F.A. degree in art will submit their declaration of major/emphasis form and

other application materials to the individual areas to be reviewed for acceptance. Until that time, students are listed as incoming art majors.

Undergraduate Minors

Declaration of minors must be approved by the School of Art academic advisor prior to completion of minor coursework. Students working toward minors must complete a minimum of 18 semester hours, including 9 hours of junior- and senior-level courses. Hours applied to the minor area of study may not include courses used to fulfill requirements in the student's major. These courses, however, may make the student eligible immediately for upper-division courses throughout the 18 hours of the minor. Please follow course sequences and note that some studio courses are repeatable for credit.

Art History

Students working toward an art history minor must complete a minimum of 18 hours and include ARTH 1301, 2302, and 3303. The remaining 9 hours must be taken in residence and must be chosen from a menu of courses offered at the 3000 and 4000 level. These courses are ARTH 3320, 3333, 3350, 3364, 3366, 3388, 4307, 4308, 4320, 4335, 4340, and 4389.

Community-Focused Art Education

Students working toward a Community-Focused Art Education Minor must complete a minimum of 18 hours and include one of the following courses: ART 1309, ART 2310, ARTH 1301, or ARTH 2302. The remaining 15 hours are chosen from ART 2372; ARTE 3360, 3364, 3365, 4315, or 4362.

Digital Narrative Arts

A Digital Narrative Arts Minor consists of ART 1302, ARTH 1301 or ARTH 2302 or ART 1309, and ART 2309; and 9 hours of ART 3309, 3390, or 4390.

Fine Arts Photography

Students are required to take ART 1302 and ARTH 1301 or ARTH 2302 or ART 1309 and 12 hours from ART 3325, 3326 (repeatable), 4325 (repeatable). Any students who have credit for PHOT 2310 - Principles of Photography from the College of Media & Communication should first consult the faculty on whether ART 3325 is necessary or if substitution of an advanced course is possible.

Studio Art Ceramics

A Studio Art Ceramics minor consists of ART 2303 and ARTH 1301 or ARTH 2302 or ART 1309 and 12 hours from ART 3300, 3330, or 4330.

Studio Art Drawing

A Studio Art Drawing minor consists of ART 1302, 1303, 2304, and 9 hours from ART 3323, 3324, 4320 or one studio elective from ART 3320, 3321, 3308 or 4340.

Studio Art Jewelry Design and Metalsmithing

A Studio Art Jewelry Design and Metalsmithing minor consists of ART 2303 and ARTH 1301 or ARTH 2302 or ART 1309, and 12 hours from ART 3333, 3334, or 4334.

Studio Art Painting

A Studio Art Painting minor consists of ART 1302, 1303, and 12 hours from ART 2304, 3320 or 3321, 3322 or 4321.

Studio Art Printmaking

A Studio Art Printmaking minor consists of ART 1302, 1303, and 12 hours from ART 3308 or 3328 or 4328.

- ☐ ARTE 4000 - Student Teaching in Art (V3-12 SCH)

TOTAL: 6

TOTAL HOURS: 123

* Choose from the university's core curriculum.

† Students must apply to the College of Education at the start of the semester prior to the semester they intend to enroll in EDLL 4382 or EDSP 3300.

Art, B.F.A. **(Graphic Design Concentration)** **Recommended Curriculum**

FIRST YEAR

Fall

- ☐ ART 1100 - Introduction to Art (1 SCH)
- ☐ ART 1302 - 2D Design (3 SCH)
- ☐ ART 1303 - Drawing I (3 SCH)
- ☐ ARTH 1301 - Art History Survey I (3 SCH)
- ☐ Oral Communication (3 SCH)*
- ☐ ENGL 1301 - Essentials of College Rhetoric (3 SCH)

TOTAL: 16

Spring

- ☐ ART 2303 - 3D Design (3 SCH)
- ☐ ART 2304 - Drawing II (3 SCH)
- ☐ ARTH 2302 - Art History Survey II (3 SCH)
- ☐ ART 2388 - Graphic Design Process (3 SCH)
- ☐ ENGL 1302 - Advanced College Rhetoric (3 SCH)

TOTAL: 15

SECOND YEAR

Fall

- ☐ ART 3385 - Computer Design Methods I (3 SCH)
- ☐ ART 4359 - Graphic Design History (3 SCH)
- ☐ ARTH 3303 - Art History Survey III (3 SCH)
- ☐ Studio Art Elective (3 SCH)
- ☐ Mathematics (3 SCH)*

TOTAL: 15

Spring

- ☐ ART 3381 - Typography (3 SCH)
- ☐ ART 3382 - Symbols (3 SCH)
- ☐ ART 3386 - Computer Design Methods II (3 SCH)
- ☐ Mathematics (3 SCH)*
- ☐ Studio Art Elective (3 SCH)

TOTAL: 15

THIRD YEAR

Fall

- ☐ ART 3384 - Visual Systems (3 SCH)
- ☐ ART 4357 - Web Media Design (3 SCH)
- ☐ Life and Physical Sciences (4 SCH)*
- ☐ U.S. History (3 SCH)*
- ☐ Art Elective (3 SCH)

TOTAL: 16

Studio Art Sculpture

A Studio Art Sculpture minor consists of ART 2303 and ARTH 1301 or ARTH 2302 or ART 1309, and 12 hours from ART 3336, 3338, 3339 or 4338.

Transmedia

The Studio Art Transmedia Minor consists of ART 1302, ARTH 1301 or ARTH 2302 or ART 1309, and ART 2309; and nine hours of ART 3390 or 4390, which rotate between various topics such as video and animation (2D and 3D).

Undergraduate Course Descriptions

Art (ART)

- 1100—Introduction to Art (1).** Introduction to art as an academic pursuit with its diverse elements and opportunities, objectives, resources, careers, and achievements. Required of all art majors prior to admission to upper-level courses. Transfer credit acceptable. Offered fall semester only.
- 1302—2D Design (3).** [ARTS1311] Emphasis upon two-dimensional design; includes the fundamentals of line, color, value, texture, shape, space, and compositional arrangement. Students learn to apply verbal skills needed in advanced visual arts. Outside assignments. AP or portfolio waiver possible. (CL)
- 1303—Drawing I (3).** [ARTS1316] Investigation of a variety of media, techniques, and subjects. Students develop perceptual, descriptive, and verbal skills with consideration of drawing as a conceptual process as well as an end in itself. Outside assignments. AP or portfolio waiver possible.
- 1309—Global Art and Visual Culture (3).** [ARTS1301, 1313, 1413] Survey of the visual arts of western and nonwestern cultures with emphasis on understanding art through form, content, and cultural context. Nonmajors and art minors only. Fulfills core Creative Arts requirement.
- 2099—Problems in Art (VI-3).** Prerequisite: Instructor consent. Explores a specific area of interest in art. May be repeated for credit with a different topic.
- 2300—Ceramics for Non-Art Majors (3).** Introduction to handbuilding and wheel throwing for non-art majors. Outside assignments. May be repeated for credit.
- 2303—3D Design (3).** [ARTS1312] Emphasis on the three-dimensional concept of design. Students learn to apply verbal skills needed in advanced visual arts. Outside assignments. (CL)
- 2304—Drawing II (3).** [ARTS1317] Prerequisite: ART 1303. Expansion of Drawing I stressing the expressive and conceptual aspects of drawing including developed descriptive imagery, use of color, abstraction, verbal skills, and the nude human figure as a subject. Outside assignments.
- 2309—Technology in the Arts (3).** Introduces students to the Macintosh environment, digital input and output, scanning and preparing presentations, and related ethical issues.
- 2310—Art, Environment, Sustainability (3).** Reading, writing, artmaking at the intersection of art, environment, sustainability. Community outreach exhibition requirement. Fulfills core Creative Arts requirement.
- 2319—Beginning Painting for Non-Art Majors: Water Media (3).** Introduction to painting concepts and techniques in water media. Outside assignments.
- 2372—Rethinking Art Education (3).** Contemporary content and teaching in the visual arts. Non-majors only.
- 2380—Graphic Design for Non-majors (3).** Teaches the basics of graphic design, color, typography, and composition to non-majors through practical assignments.
- 2388—Graphic Design Process (3).** Prerequisites: ART 1302, ART 1303 or by permission of instructor. Offers an introductory look at the professional field of graphic design. Basic concepts of effective visual communication and the creative process will be explored in a variety of contexts. Those interested in becoming a graphic design major will prepare application materials for program acceptance.
- 3300—Beginning Ceramics (3).** Introduction to hand-building, wheel throwing, glazing, and firing. Outside assignments. May be repeated once for credit.
- 3308—Beginning Printmaking (3).** Introduction to printmaking through a survey of intaglio, monotype, screenprinting, and relief. A brief history of printmaking is included. Outside assignments in monitored print lab required.

- 3309—Beginning Digital Narrative Arts (3).** Prerequisite: ART 1302, ART 2309, or instructor consent. Introduction to photography, video, and animation, focusing on connecting and combining the three media. Covers tools, techniques, software, and concepts. Outside assignments.
- 3320—Beginning Painting: Oil (3).** Prerequisites: ART 1302, ART 1303, and ART 2304 or instructor consent. Introduction to painting concepts and techniques in oil. Outside assignments.
- 3321—Beginning Painting: Water Media (3).** Prerequisites: ART 1302, ART 1303, and ART 2304 or instructor consent. Introduction to painting concepts and techniques in water media. Outside assignments.
- 3322—Intermediate Painting (3).** Prerequisite: ART 3320, or ART 3321, or instructor consent. Emphasis on the historical progression of painting and varied approaches as well as initiating individual exploration of process and subject matter. Outside assignments.
- 3323—Drawing III: Life Drawing (3).** Prerequisites: ART 1302 (or ID 1381), ART 1303, and ART 2304. Application of developed representational skills to the study of human anatomical structure and drawing from life. Coursework includes drawing from nude models. Outside assignments. Repeatable once for credit.
- 3324—Illustration (3).** Prerequisites: ART 1302 (or ID 1381), ART 1303, ART 2304 or instructor consent. Exploration of the multiple facets of illustration today as a communication tool. Emphasis is on the elements that form strong visual ideas through digital and traditional techniques. Outside assignments. May be repeated for credit.
- 3325—Beginning Photographic Arts (3).** Open to non-majors and majors. Introduction to creative black and white photography. Covers traditional and digital camera operation, exposure adjustment, printing, and presentation. Outside assignments.
- 3326—Intermediate Photo Arts (3).** Prerequisite: ART 3325 or ART 3309 or instructor consent. Intermediate fine arts photography rotates each semester between topics: experimental photography, darkroom photography, and video. Outside assignments. May be repeated for credit with different course emphasis.
- 3328—Intermediate Printmaking (3).** Prerequisites: ART 3308 or instructor consent. Concentrated, media-specific study in printmaking. Semester long courses in digital processes (laser cut relief and screenprinting) and illustrative processes (etching and lithography). Outside assignments in print lab required. May be repeated for credit.
- 3329—Beginning Digital Imaging (3).** Open to non-majors with instructor consent. Introduction to digital image making for studio artists. Covers the creative use of drawing and photographic imaging software and a variety of input and output devices. Outside assignments.
- 3330—Intermediate Ceramics (3).** Prerequisite: ART 3300 or instructor consent. Emphasis on developing student's technical expertise, conceptual skills, and problem-solving ability. Content different each time offered. Outside assignments. May be repeated for credit.
- 3333—Beginning Jewelry Design and Metalsmithing (3).** Open to non-majors with instructor consent. Introduction to basic techniques used in metalsmithing and jewelry making. Emphasis on fabrication and design. Outside assignments. May be repeated once for credit.
- 3334—Intermediate Jewelry Design and Metalsmithing (3).** Prerequisite: ART 3333. Further study of techniques used in metalsmithing and jewelry design. Development of individual direction and exploration of various media. Rotating techniques include Laser cutting, raising, die-forming and lapidary. Outside assignments. May be repeated for credit.
- 3336—Beginning Sculpture (3).** Introduction to sculpture through the study of a variety of materials and techniques, including basic wood construction, found object assemblage, welding and metal fabrication, mold making, and casting. Outside assignments. Not repeatable for credit.
- 3338—Intermediate Sculpture: Welding and Foundry (3).** Emphasis on developing students' technical expertise, conceptual skills, and problem-solving ability through advanced welding and metal fabrication and an introduction to the foundry and casting metals. Outside assignments and self-directed projects. May be repeated for credit.
- 3339—Intermediate Sculpture: Installation and Technology (3).** Emphasis on developing students' technical expertise, conceptual skills, and problem solving ability. Rotating topics include installation and technology, video and performance. Outside assignments. May be repeated for credit.
- 3381—Typography (3).** Prerequisites: ART 3385. Theoretical and practical survey of visual typography. Typography fundamentals, historical contexts, visual organization, meaning, and expressive qualities of type as visual form and visible language.
- 3382—Symbols (3).** Prerequisites: ART 3385. Exploration of symbols in graphic design. Meaning, concept development, process, research, and problem solving are emphasized including appropriateness and responsibility to communicate effectively.
- 3384—Visual Systems (3).** Prerequisites: ART 3381, ART 3382, and ART 3386. Development of integrated design systems and their systematic application of visual continuity. Emphasis on concept and the relationship between content and form.
- 3385—Computer Design Methods I (3).** Prerequisite: ART 2388 with program acceptance or by permission of instructor. Technical aspects of digital imaging. Stresses use of digital peripherals to capture and construct images, vector drawing, file integration, and digital production.
- 3386—Computer Design Methods II (3).** Prerequisites: ART 3385. Technical aspects of page layout, file integration, and digital production will be introduced including digital peripherals.
- 3390—Intermediate Digital Arts (3).** Prerequisite: ART 3309 or ART 3385 or instructor consent. Intermediate exploration of 2D and 3D animation in rotating semesters. Outside assignments. May be repeated for credit with different topic.
- 4099—Advanced Problems in Art (VI-3).** Prerequisite: Instructor consent. Explores a specific area of interest in art. May be repeated for credit with a different topic.
- 4101—Bachelors of Arts in Art Capstone I (1).** The first of a required three-part capstone for the B.A. in Art. (CL)
- 4102—Bachelors of Arts in Art Capstone II (1).** The second of a required three-part capstone for the B.A. in Art.
- 4103—Bachelors of Arts in Art Capstone III (1).** The third of a required three-part capstone for the B.A. in Art.
- 4104—Advanced Problems (1).** Prerequisite: Instructor consent. Advanced problems in an area of production in which the student has achieved competence. May be repeated for credit.
- 4301—Studio Art Undergraduate Internship (3).** Prerequisites: Studio art majors/minors having taken 12 hours in studio area of concentration, and by consent of instructor. Undergraduate students in studio arts will earn three hours credit working as an intern in a pre-approved art venue such as a gallery, studio, or arts organization. Placement is student initiated and faculty approved.
- 4304—Independent Study in Art (3).** Prerequisite: Instructor consent. Advanced problems in an area of production in which the student has achieved competence. May be repeated for credit.
- 4320—Advanced Drawing (3).** Prerequisites: ART 3323 or ART 3324. Alternating topics. Mature, individualistic development of a unique body of work utilizing a variety of media and surfaces. May include drawing from nude models. Outside assignments. May be repeated for credit.
- 4321—Advanced Painting (3).** Prerequisite: ART 3322 or instructor consent. Emphasizes student's concepts and exploration of subject matter. Students select technical approach with instructor consent. Outside assignments. May be repeated for credit.
- 4322—Senior Painting (3).** Prerequisite: ART 4321 or instructor consent. Individual exploration of subject matter and painting media directed toward the creation of a mature and consistent body of work. Outside assignments. May be repeated for credit.
- 4325—Advanced Photographic Arts (3).** Prerequisites: ART 3326 or instructor consent. Advanced fine art photography with topics that rotate each semester. Outside assignments. May be repeated for credit up to a maximum of 12 hours.
- 4327—Combined 2d Senior Studio (3).** Prerequisites: Another 4000-level 2d studio class or instructor consent. Individual exploration of subject matter in 2d media directed toward the creation of a mature and consistent body of work. Outside assignments. May be repeated for credit.
- 4328—Advanced Printmaking (3).** Prerequisite: ART 3328 or instructor consent. Advanced study in printmaking, emphasizing student's individual exploration of subject matter. Course topics cover experimental printmaking, installation, artist books/zines, and hybrid practices. May be repeated for credit.
- 4330—Advanced Ceramics (3).** Prerequisite: ART 3330 or instructor consent. Mature, individualistic exploration directed toward developing a comprehensive, cohesive body of work for evaluation. Outside assignments. May be repeated for credit.
- 4334—Advanced Jewelry Design and Metalsmithing (3).** Prerequisite: ART 3334 or instructor consent. Mature, individualistic exploration directed toward developing a comprehensive, cohesive body of work for evaluation. Outside assignments. May be repeated for credit.
- 4335—Studio Art: Professional Practices (3).** Prerequisite: 15 hours of studio emphasis or instructor consent. Capstone course. Basic and necessary information that will enable the student to compete in the professional art world. Development of resume, portfolio, artist statement and other professional materials. (CL)
- 4338—Advanced Sculpture (3).** Prerequisite: ART 3338 or instructor consent. Mature, individualistic exploration directed toward developing a comprehensive, cohesive body of work for evaluation. Outside assignments. May be repeated for credit.
- 4340—Topics in Studio Art (3).** Prerequisites: ART 2303 and ART 2304 or instructor consent. Conceptual investigation leading to the develop-

ment and execution of advanced projects in art. May be repeated for credit with a different topic.

- 4350—Topics in Graphic Design (3).** Prerequisite: Instructor consent. Examines the process of career development and planning that includes self-assessment, job search strategies and awareness of work place issues. Covers a variety of topics necessary for successful transition from academia to the work place. May be repeated for credit.
- 4355—Professional Internship (3).** Prerequisite: Consent of instructor. Provides on-site internship experience. Placement is student initiated and faculty approved. Student's progress will be monitored.
- 4357—Web Media Design (3).** Prerequisites: ART 3382, ART 3386, and ART 4359. Fundamentals of web site design and authoring tools applied to information structure, project workflow, functionality, and interface experience related to the professional field of graphic design.
- 4358—Motion Graphics (3).** Prerequisites: ART 3384 and ART 4357. Open to non-majors with instructor consent. Explores the interactive effects of time and motion, including visual rhythm, continuity, and relationship between form and content of visual communication. May be repeated for credit.
- 4359—Graphic Design History (3).** Prerequisite: ART 2388 or by permission of instructor. Examination of the evolution of the graphic arts. Discusses design innovators as well as styles and movements. Emphasis on 20th century. (CL)
- 4365—Advanced Graphic Design Process (3).** Prerequisite: ART 4358 and ART 4380. Alternative methods of ideation and design thinking will be examined as it relates to self-directed projects, addressing issues, developing innovative ideas and solutions that serve as a catalyst for change.
- 4379—Professional Practices in Graphic Design (3).** Prerequisites: ART 4365 and ART 4381. Examines the process of career development and planning, including self-assessment, job search strategies, and awareness of work place issues. Covers a variety of topics necessary for successful transition from academia to the workplace.
- 4380—Publication Design (3).** Prerequisites: ART 3384, ART 4357, and ART 4359. Sequential design and structural systems dealing with experimentation of type, image, pacing, and form. Emphasizes concept development, research, writing, and presentation skills.
- 4381—Design in the Community (3).** Prerequisites: ART 4358 and ART 4380. Emphasis is placed on the role of the designer in the community, public awareness, and social responsibility. Stresses teamwork, communication, and interpersonal skills.
- 4382—Portfolio Development (3).** Prerequisites: ART 4365 and ART 4381. Final portfolio preparation and refinement. Offered in spring semesters only.
- 4390—Advanced Digital Arts (3).** Prerequisite: ART 3390. Explores advanced digital technologies and techniques in contemporary arts with rotating topics. Outside Assignments. May be repeated for credit with different topic.

Art Education (ARTE)

- 3360—Topics in Art Education (3).** Prerequisites: ART 1302, ART 1303, ART 2303, and ART 2304 or instructor consent. Introduction to basic inquiry, and experiences in contemporary visual art, digital art, and social contexts. May be repeated once for credit. [ART 2372]
- 3364—Art and Social Practice (3).** Prerequisites: ARTE 3360 or ART 2372 or instructor consent. Critical examination of issues of diversity within the art world, cultural institutions, such as museums, community arts programs, schools, and digital communities/social media. May be repeated once for credit.
- 3365—Topics in Visual Culture (3).** Critical examination of the social role of images and how they enable relations of looking and being. May be repeated for once for credit.
- 4000—Student Teaching in Art (V3-12).** Prerequisite: Admission to student teaching. Supervised teaching involving a period of responsibility for art instruction in an accredited school.
- 4001—Internship in Art Education (V3-12).** Prerequisite: Instructor consent. Internship that provides opportunities to participate in art education instruction outside of K-12 public education. Does not lead to teacher certification.
- 4315—Technology and Art Pedagogies (3).** Provides practical and pedagogical integration of technology and digital media in art making, viewing, and teaching.
- 4361—Contemporary Art Education (3).** Modern and postmodern socio-economics, political, and visual histories in art education.
- 4362—Contemporary Art Pedagogies (3).** Prerequisite: ARTE 3360 or instructor consent. Examination of psychological, cultural, aesthetic, philosophical, and educational perspectives on creation and response to art in children, adolescents, and adults.

- 4365—Art Methods and Pedagogies (3).** Prerequisite: ARTE 4362 or instructor consent. Art teaching methodologies, including curriculum design, classroom organization and management, assessment strategies, and teaching effectiveness evaluation. (CL)

Art History (ARTH)

- 1301—Art History Survey I (3).** A survey of painting, sculpture, architecture, and the minor arts from prehistoric times to the 14th century. AP waiver possible. Fulfills core Creative Arts requirements.
- 2302—Art History Survey II (3).** A survey of painting, sculpture, architecture, and the minor arts from the 14th through 19th centuries. AP waiver possible. Fulfills core Creative Arts requirement.
- 3303—Art History Survey III (3).** Prerequisite: ARTH 2302 or instructor consent. Open to non-majors with instructor consent. Introduction to artistic movements, events, innovations, and debates of the 20th and 21st centuries, as examined in an international cultural frame. (CL)
- 3320—Medieval Art of Europe (3).** Prerequisite: ARTH 3303 or instructor consent. Open to non-majors with instructor consent. Examines the artistic achievements of the medieval era, focusing on art and architecture of the Christian faith and culture. May be repeated for credit. (CL)
- 3333—Visual Cultures of the Americas (3).** Prerequisite: ARTH 2302 or instructor consent. Provides a general survey of the visual cultures of the Americas, from the pre-Columbian period to present day. May not be repeated for credit. (CL)
- 3350—Latin American Art (3).** Prerequisites: ARTH 2302, ARTH 3303, or instructor consent. Introduces the arts and visual culture of Latin America from pre-contact roots through the end of the nineteenth century. May be repeated for credit. (CL)
- 3364—Art of the United States (3).** Prerequisite: ARTH 2302 or instructor consent. A survey of North American art and architecture during specified eras. May be repeated for credit. (CL)
- 3366—18th and 19th Century Art (3).** Prerequisite: ARTH 2302 or instructor consent. Principal developments focusing on European painting, sculpture, and architecture during the 18th and 19th centuries. (CL)
- 3388—Animation and Modern and Contemporary Art (3).** Recommended prerequisite: ARTH 3303. Offers a synchronic exploration of the history of modern and contemporary art and cinematic and computer animation throughout the 20th and 21st centuries. (CL)
- 4301—Art History Internship (3).** Prerequisites: Minimum of 12 hours Art History and ARTH 3000- or ARTH 4000-level class. This competitive unpaid internship provides Art History majors/minors with 90 hours of supervised professional field work in a museum/gallery.
- 4304—Advanced Problems (3).** Prerequisite: Instructor consent. Advanced problems in an area of art history in which the student has achieved competence. May be repeated for credit. (CL)
- 4307—History of the Book as Art (3).** Prerequisite: ARTH 1301 or instructor consent. Historical investigations of books that have been regarded as visual art. May be repeated for credit. (CL)
- 4308—Seminar in Art History (3).** Prerequisite: 6 hours of ARTH 3000-4999 or instructor consent. Extensive exploration of a particular period in art history. May be repeated for credit. (CL)
- 4309—Senior Thesis in Art History (3).** Prerequisite: Instructor consent. An individual course of intensive study requiring in-depth reading and a substantial written project. (CL)
- 4320—Topics in Medieval Art (3).** Prerequisite: Instructor consent. Senior-level course requiring in-depth study of the art, architecture, and culture of European Middle Ages. May be repeated for credit. (CL)
- 4335—Topics in the Arts of the Americas (3).** Prerequisite: ARTH 2302 or instructor consent. Senior-level course providing in-depth examination of major indigenous, diasporic, and transcultural artistic movements and critical theories in the Americas. May be repeated for credit. (CL)
- 4340—The Art of the Renaissance (3).** Prerequisite: ARTH 2302 or instructor consent. A study of aesthetic and intellectual directions in the Age of Humanism. May be repeated for credit. (CL)
- 4389—Topics in 20th and 21st Century Contemporary Art (3).** Prerequisite: ARTH 3303 or instructor consent. Major movements in modern and contemporary art, including aesthetic and critical theories. May be repeated when topic differs. (CL)

School of Music

Andrew J. Stetson, D.M.A., Director

Professors: Brumfield, Cash, Chalex Boyle, D. Dees, Dolter, Fischer, L. Garner Santa, Gilbert, Jones, Lastrapes, Mariani-Smith, Martens, McKoin, Meek, Morton, Rogers, M. Santa, Shea, C.J. Smith, C.M. Smith, Stetson, K. Wass, Zabriskie

Associate Professors: Allen, Anderson, Brookes, Decker, del Pino, Forrest, Fried, Haugland, Henninger, Hollins, Jocoy, A. Light, Marcelletti, Salazar, Sears, Wascoe-Hays, Whalen

Assistant Professors: Jin, Whealton

Associate Professor of Practice: Averill

Assistant Professors of Practice: Boyle, Faris, Sukhina

Senior Lecturers: Barrick, J. Dees, Landes, S. Wass, Zeisler

Lecturers: Bolin, Brinker, R. Light, Mazzucco, Tehse

CONTACT INFORMATION: 2624 18th Street | Box 42033 | Lubbock, TX 79409-2033 | T 806.742.2270 | F 806.742.2294 | www.depts.ttu.edu/music

About the School

The school supervises the following degree programs and certificates:

- Bachelor of Arts in Music
Concentration: Mariachi
- Bachelor of Applied Arts in Commercial Music
(Partnership with South Plains College)
- Bachelor of Music in Music
Concentrations: Music Education, Composition, Performance, Theory
- Master of Music Education
- Master of Music in Music
Concentrations: Composition, Conducting, Music Theory, Musicology, Pedagogy, Performance
- Doctor of Musical Arts
Tracks: Composition, Conducting, Performance, Piano Pedagogy
- Doctor of Philosophy in Fine Arts
Track: Music
- Doctor of Philosophy in Music Education
- Undergraduate Minor in Music
- Undergraduate Minor in Applied Music Studies
- Undergraduate Minor in General Music Studies
- Undergraduate Minor in Music Technology
- Undergraduate Minor in Popular Music
- Undergraduate Certificate in Community Arts
- Undergraduate Certificate in Jazz Studies
- Undergraduate Certificate in World Music
- Graduate Certificate in Collaborative Piano
- Graduate Certificate in Historical Performance Research and Practice
- Graduate Certificate in Piano Pedagogy
- Graduate Certificate in Opera
- Graduate Certificate in Woodwind Specialist

The school also participates in the ethnic studies and humanities minor programs. The school's degree programs are accredited by the National Association of Schools of Music.

Graduate Program

For information on graduate programs offered by the School of Music, visit the Graduate Programs section of the catalog on page 460.

Undergraduate Program

General Information

Admission and Assessment Requirements. Students applying to the School of Music will be admitted as "music audition required" (MUAR) until their audition. **Acceptance to Texas Tech University does not ensure admission as a music major.** Music majors must audition in their declared

principal applied area with the appropriate faculty for acceptance into any music program. Consult the website of the School of Music for further information. After acceptance into the School of Music, music majors will participate in applied and academic assessment during each semester of enrollment. Students must maintain a grade of C or above in every course designated as part of the major area music curriculum. Students not receiving a grade of C in such course(s), will be allowed to repeat the course(s) twice to achieve the minimum grade of C. **University policy states that a student may repeat a course for credit only one time at the normal tuition rate; those repeating a course more than once must pay an additional cost-of-education fee.** (All MUEN music ensembles are exempt from this repeating requirement.) Students who do not receive a minimum grade of C in a major area course after repeating it twice will no longer be able to continue their status as a music major and must declare a major other than music. See the academic advisor in the School of Music for specific details regarding courses constituting the major area music curriculum.

To qualify for advancement, students must earn a minimum grade of C during each semester of first- and second-year theory and aural skills.

Students wishing to change their concentration to performance after having been accepted into another concentration in music must proceed through a formal acceptance process for performance in the appropriate applied and ensemble areas. Students wanting to move from the Bachelor of Arts in Music to any of the Bachelor of Music concentrations must also follow the above procedure. Additional information about applied music is available from the School of Music. Graduation requirements in applied music vary according to the student's degree and concentration.

Entering first-year students may receive credit for college-level work in music accomplished prior to entering the university. This may be done through advanced standing examinations administered by the faculty of the School of Music during the first semester of the first year after the student has obtained permission from the Academic Dean of the J.T. & Margaret Talkington College of Visual & Performing Arts. Advanced standing examinations will be administered only in the field of music theory. To receive credit by an advanced standing examination, the student must achieve a grade of not less than a B on such an examination.

All students whose principal instrument is not keyboard must demonstrate keyboard proficiency as determined by the school.

Refer to the curriculum tables that follow and consult with an advisor for specific ensemble requirements pertaining to particular degree plans.

Residency Requirements. Students working toward a Bachelor of Music, Bachelor of Music Education, or a Bachelor of Arts in Music must complete a minimum of 24 hours of music in residence at Texas Tech. Minors in music require a minimum of 9 hours of music in residence at Texas Tech. Information is available in the School of Music office.

Recital Requirements. Performance students are required to present a half-length junior recital and a full-length senior recital. Candidates for music education must present a half-length recital. The recital program must be approved by the appropriate area faculty or applied faculty member and submitted to the Scheduling Office at least two weeks prior to the recital for processing. Permission to present each recital must be obtained from an examining jury at least two weeks prior to the recital.

Music composition students are required to present a recital of their original compositions during the senior year. Permission to present the recital must be obtained from the composition faculty one semester prior to the recital.

Postponement or cancellation of a scheduled recital (without penalty) is allowed only with good reason such as illness or death in the family. Failure to pass a hearing or failure of preparation are not valid reasons. The appropriate applied faculty member must verify any reason for postponement or cancellation. If a recital is postponed for verified good reason, the student may reschedule in the same or subsequent semester. If a scheduled recital is postponed or canceled without verified good reason, the student may not reschedule during the same semester in which postponement or cancellation occurs.

All School of Music undergraduate music majors enrolled in applied lessons are expected to experience a broad range of repertory through attendance each semester at such performance events as recitals, guest artist concerts, ensemble concerts, chamber music concerts, opera and

music theatre productions, and Presidential Lecture and Performance Series events.

Semester Credit Hour and Contact Hour Equivalents. Pursuant to the *Undergraduate/Graduate Catalog*, the Texas Administrative Code, and the norms stated in the *NASM Handbook*, credit and time expectations for School of Music courses are as follows:

- For applied lessons, the standard requirement is one contact hour of one-on-one instruction and one contact hour of studio class per week, thus totaling 30 in-class contact hours per semester. In addition, an average of two non-contact hours per day are expected for out-of-class student practice.
- For traditionally delivered 3-credit-hour lecture- and seminar-based courses during a regular semester, students should expect to be in class for three hours per week and work outside of class a minimum of six hours per week. For 3-credit-hour studio- and project-based courses, students should expect to be in class for six hours per week and work outside of class between three and six hours per week.
- For major ensembles, students should expect to be in class for a minimum of three hours per week for 1 credit hour. Small and medium ensembles normally meet in class a minimum of one or two hours per week for 1 credit hour.

Communication Literacy Requirement. Communication literacy in music is evidenced by competence in reading, writing, speaking, listening, and performing. This comprehensive approach to “musical” communication literacy is apparent in all undergraduate music degrees by matriculation and completion of our three-semester series of musicology courses (i.e., music as cultural history). There is a very distinct sequential approach to “musical” communication literacy by the orderly completion of these courses with a research paper and basic listening skills enhanced in the form of journals employed in the beginning course of the sequence, MUHL 2301 and further through the culminating course MUHL 3303, where performance practice, critical listening, and role-playing are the hallmarks of musical integration and communication. Courses in the Communication Literacy plan are (1) MUHL 2301, (2) 3302, and (3) 3303.

Core Curriculum. All concentrations have the same core curriculum and professional education courses. Consult an advisor for specific courses.

Transfer Credit for Core Curriculum Courses. Some degree programs and/or minors include specific core curriculum courses as graduation requirements or prerequisites for other courses. Students who transfer in (or have previously completed via credit by exam) core curriculum courses that differ from those included in the degree program could be required to complete additional core curriculum courses as degree requirements.

Minor in Music. The School of Music houses three distinct music minor programs, including General Music Studies, Applied Music Studies, and Popular Music. The Popular Music and General Music Studies minor programs do not require audition or previous experience in music and are entirely classroom based. Additionally, a student may seek a minor in music by completing 18 hours selected in consultation with the undergraduate advisor in the School of Music. Six hours of all music minors must be upper division courses.

Courses for Non-majors. Non-music majors may elect class or private instruction in voice or in any instrument subject to the availability of faculty. Students enrolled in applied music are carried at their maximum level of achievement, and the non-music major is not examined in competition with the music major. In addition to the above, courses designed to serve all students enrolled in the university include all major ensembles such as Marching Band (fall only—MUEN 1103, 3103, 3203); Symphonic Concert, and University Bands (MUEN 3103, 3203); Orchestra (MUEN

3104, 3204); University Choir (MUEN 3101, 3201); University Singers, Women's Chorus and Matador Singers (MUEN 3101); Music Theatre (MUEN 3102); Jazz Ensembles (MUEN 3105); and Small/Medium Ensembles (MUEN 3106, 3110). Auditions are required for most of these ensembles; contact the ensembles office at 806.742.2272 for information about auditions.

The following courses are designed specifically for non-majors: MUAP 1123, 1124; MUHL 1308, 2304, 2307, 2308, 2310, 2312; MUTH 1300; MUSI 1300, 2313.

Commercial Music, B.A.A.

The Bachelor of Applied Arts in Commercial Music is a partnership between Texas Tech University (TTU) and South Plains College (SPC) Creative Arts Department. SPC students who complete the Associate of Applied Arts in Commercial Music are eligible to pursue the B.A.A.C.M. at Texas Tech, upon acceptance by application.

Communication Literacy (CL) Plan. Courses in the Communication Literacy Plan for the Commercial Music degree are three courses from MUAP 3205, MUCP 4321, MUHL 2307, or IVPA 2301.

Commercial Music, B.A.A. Recommended Curriculum

TTU Semester Overview (pending completion of the SPC A.A.A. in Commercial Music)

THIRD YEAR

Fall

- ☐ ENGL 1302 - Advanced College Rhetoric (3 SCH)*
- ☐ PHYS 1406 - Physics of Sound and Music (4 SCH)
- ☐ IVPA 2301 - Critical Issues in Arts and Culture (3 SCH) (*Language, Philosophy, and Culture*)
- ☐ MUAP 3001 - Applied Music (V1-4 SCH) (3 hours)
- ☐ MUEN 3101 - Choir (1 SCH) (3, 4, 5, 6, 10)
- ☐ MUTH 3205 - Introduction to Jazz Harmony (2 SCH) **OR**
- ☐ MUTH 4000 - Special Topics (3 hours)

TOTAL: 17

Spring

- ☐ POLS 1301 - American Government (3 SCH)*
- ☐ Life and Physical Science (4 SCH)*
- ☐ HIST 23xx (3 SCH)*
- ☐ MUAP 3002 - Applied Music (V1-4 SCH) (3 hours)
- ☐ MUEN 3101 - Choir (1 SCH) (3, 4, 5, 6, 10)
- ☐ MUHL 4300 - Special Topics in Music History and Literature (3 SCH)

TOTAL: 17

FOURTH YEAR

Fall

- ☐ HIST 23xx (3 SCH)*
- ☐ POLS 2306 - Texas Politics and Topics (3 SCH)*
- ☐ MUHL 2307 - Music and Globalization (3 SCH) (*Creative Arts*)
- ☐ MUAP 4001 - Applied Music (V1-4 SCH) (3 hours)
- ☐ MUAP 3190 - Junior Recital (1 SCH) **OR**
- ☐ MUAP 4190 - Senior Recital (1 SCH)
- ☐ MUEN 3101 - Choir (1 SCH) (3, 4, 5, 6, 10)
- ☐ Upper Level MUHL/MUTH/VPA (3 SCH)

TOTAL: 17

Spring

- ☐ MATH (3 SCH)*
- ☐ MUEN 3101 - Choir (1 SCH) (3, 4, 5, 6, 10)
- ☐ MUEN 3101 - Choir (1 SCH) (3, 4, 5, 6, 10)
- ☐ MUAP 3205 - Jazz Improvisation (2 SCH) **OR**
- ☐ MUAP 4002 - Applied Music (V1-4 SCH)
- ☐ MUHL 4300 - Special Topics in Music History and Literature (3 SCH)
- ☐ MUSI 4000 - Individual Studies in Music (V1-3 SCH) **OR**
- ☐ MUTH 4000 - Special Topics (3 SCH)
- ☐ Upper Level MUHL/MUTH/VPA (3 SCH)

TOTAL: 17

TOTAL HOURS: 127

TTU TOTAL HOURS: 68; SPC TOTAL HOURS: 59

* Potential dual enrollment at SPC (transfer core curriculum credits).

Music, B.A.

A minimum of 46 hours of music courses, 27 hours of which must be junior or senior level, are required for the Bachelor of Arts degree with a music major, including the following courses. Bachelor of Arts students are required to enroll in four semesters of ensemble and lessons. The degree will provide students an opportunity to participate in a more individualized degree through the choice of elective courses for a minor from outside the major area discipline that is consistent with the university philosophy and policies for a liberal arts degree and complete the general degree requirements for the Bachelor of Arts degree. A minimum total of 120 hours is required for this degree. Required courses include:

- **Music (6):** MUSI 1300, 3341
- **Music Theory (19):** MUTH 1103, 1104, 1303, 1304, 2103, 2104, 2303, 2304, 3303
- **Music History and Literature (9):** MUHL 2301, 3302, 3303
- **Music Ensemble (5):** 5 semesters of any ensemble except MUEN 1103
- **Applied Music (4):** MUAP 1001, 1002, 2001, 2002
- **Piano Proficiency:** Must pass proficiency level equivalent to MUAP 2124
- **Minor (18):** Completion of a minor (normally 18 hours) in an area outside of music is required. At least 40 hours in the degree (combined across Music, Minor, Core Curriculum, and Electives) must be junior or senior level.
- **Electives (15):** Courses selected by the student in consultation with the Music Academic Program Advisor and, if applicable, faculty in the area(s) where courses are chosen. At least 40 hours in the degree (combined across Music, Minor, Core Curriculum, and Electives) must be junior or senior level.

Commercial Music Concentration

A minimum of 50 hours of music courses, 27 hours of which must be junior or senior level, are required for the Bachelor of Arts degree with a music major, including the following courses. Bachelor of Arts students are required to enroll in four semesters of ensemble and lessons. The degree will provide students an opportunity to participate in a more individualized degree through the choice of elective courses for a minor from outside the major area discipline that is consistent with the university philosophy and policies for a liberal arts degree and complete the general degree requirements for the Bachelor of Arts degree. A minimum total of 120 hours is required for this degree. Required courses include:

- **Music (14):** MUSI 1300, 3341, 3310, 4310; MUAP 4291
- **Music Theory (19):** MUTH 1103, 1104, 1303, 1304, 2103, 2104, 2303, 2304, 3303
- **Music History and Literature (9):** MUHL 2301, 3302, 3303
- **Music Ensemble (4):** 4 semesters of any ensemble except MUEN 1103
- **Applied Music (4):** 4 semesters of principal instrument. MUAP 1001, 1002, 2001, 2002

Mariachi Concentration

A minimum of 61 hours of music courses, 27 hours of which must be junior or senior level, are required for the Bachelor of Arts degree with a music major, including the following courses. Bachelor of Arts students are required to enroll in four semesters of ensemble and lessons. The degree will provide students an opportunity to participate in a more individualized degree through the choice of elective courses for a minor from outside the major area discipline that is consistent with the university philosophy and policies for a liberal arts degree and complete the general degree requirements for the Bachelor of Arts degree. A minimum total of 120 hours is required for this degree. Required courses include:

- **Music (6):** MUSI 1300, 3341
- **Music Theory (19):** MUTH 1103, 1104, 1303, 1304, 2103, 2104, 2303, 2304, 3303
- **Music History and Literature (18):** MUHL 1309, 2301, 2308, 3302, 3303, 3305
- **Music Ensemble (5):** 5 semesters of any ensemble except MUEN 1103
- **Applied Music (4):** MUAP 1001, 1002, 2001, 2002
- **Piano Proficiency:** Must pass proficiency level equivalent to MUAP 2124

* Choose from the university's core curriculum.

- **Minor (18):** Completion of a minor (normally 18 hours) in an area outside of music is required. At least 40 hours in the degree (combined across Music, Minor, Core Curriculum, and Electives) must be junior or senior level.
- **Electives (9):** Courses selected by the student in consultation with the Music Academic Program Advisor and, if applicable, faculty in the area(s) where courses are chosen. At least 40 hours in the degree (combined across Music, Minor, Core Curriculum, and Electives) must be junior or senior level.

The Mariachi concentration allows Music, B.A. students to demonstrate proficiency in the history and performance of Mariachi music. Students will perform with the Mariachi Ensemble and take courses in the history of Mariachi, specifically, and the music of Latin America more broadly.

Music, B.M.

The Bachelor of Music in Music offers four concentrations: music education, composition, performance, and theory. The concentration in music education prepares students to teach choral, instrumental, and general classroom music in kindergarten, elementary, middle, junior high, and senior high schools, with specializations in piano/keyboard, voice, brass, woodwind, percussion, and stringed instruments. The performance concentration includes specializations in piano/keyboard, voice, brass, woodwind, percussion, and stringed instruments.

The curriculum tables that follow are provided as a recommended sequence to students and advisors. All B.M. students pursuing a concentration in music education must plan their individual courses of study in consultation with the School of Music advisor and consult the online catalog for any revisions to the curriculum. Students must have a 2.75 cumulative GPA to be admitted to upper-level music education classes. See music advisor for more information. Students should contact the College of Education concerning professional education course requirements for all-level certification.

Jazz Concentration

The 4-year undergraduate Bachelor of Music (B.M.) with Jazz Concentration allows students to pursue an emphasis in jazz performance. All students enrolled in this concentration participate in lessons, ensembles, and receive comprehensive instruction in jazz and classical theory and music history. These students also complete the university's core curriculum.

Undergraduate Minors

Applied Music Studies

The undergraduate minor in applied studies seeks to further prior knowledge and skill in music for students with previous experience with a particular instrument or voice type. This minor provides opportunities for practical study and ensemble experiences, as well as classroom-based instruction on a broad array of musical topics. No more than 6 credits from applied study can be counted towards this minor. An audition is required to declare this minor and enroll in one-on-one study. Completion of this minor will satisfy the creative arts core requirement.

Required courses.

- **Music History:** MUSI 1300† OR MUHL 1308†
- **Music Theory:** MUTH 1300 OR MUTH 1303 (requires concurrent enrollment in MUTH 1103)
- **Applied** (at least three hours of the following): MUAP 1001, 1002
- **Ensemble** (at least two enrollments in any music ensemble, 1 semester credit hour each, some may require audition): MUEN Any Music Ensemble

Elective courses. Choose from the following for the remaining semester credit hours. Courses taken to satisfy the required courses cannot be repeated or otherwise used to fulfill the elective courses. Six hours must be upper level. MUAP 2001-3001; MUSI 1000, 1300, 2301†, 2309†, 3300, 3310, 3341, 4000, 4310; MUHL 1308†, 1309, 2304†, 2307†, 2308†, 2309, 2310†, 2312, 3305, 4300*, 4307, 4338 (study abroad); MUTH 1103, 1300†, 1301, 1303, 3300.

Any additional MUEN Music Ensemble. MUEN 1103 (fulfills Personal Fitness and Wellness requirement)**, 3101 (University Singers, Women's Chorale, Matador Singers, University Choir, Lubbock Chorale)**, 3102 (Opera and Opera Theatre)**, 3103 (Marching Band, University Band, Concert Band, Symphonic Band, Symphonic Wind Ensemble)**, 3104 (String Orchestra, University Symphony Orchestra, Ensemble Bravura)**, 3105 (Jazz Ensemble I, Jazz Ensemble II)**, 3106**, 3110**

Additional courses in music theory or musicology with instructor permission.

General Music (Online)

The undergraduate online music minor in "General Music - Online" seeks to educate students in a wide array of musical topics and issues through

TOTAL HOURS: 128

*Choose from the university's core curriculum.

Foreign Language: The student must complete six hours of a language approved by the division at the second-year level.

online education. Students will gain an understanding of music in a global context with historical and contemporary viewpoints. This online-only minor can be completed with no previous musical training and can be completed by distance students. Completion of this minor will satisfy the Creative Arts Core Requirement.

Required Courses (6 hours). MUSI 1300†, MUHL 2307†.

Elective Courses (6 hours). Choose from MUSI 2309†; MUHL 1308†, 1309, 2310†, 2304†.

Required Upper-Level Courses (6 hours). Choose from MUSI 3300 (Could be repeated for credit with different topics.), 3341; MUHL 4330.

General Music Studies

The undergraduate minor in general music studies seeks to educate students in a wide array of musical topics and issues. Students will gain an understanding of music in a global context with historical and contemporary viewpoints. This classroom-based minor can be completed with no previous musical training. Completion of this minor will satisfy the Creative Arts core requirement.

Required Courses (9 hours). MUSI 1300† OR MUHL 1308† and at least 6 hours from the following: MUSI 1300†; MUHL 1308†, 2304†, 2307†, 2308†, 2309, 2310†, 2312, 2308†, 2310†.

Elective Courses. Choose 9 semester credit hours from the following courses. Courses taken to satisfy the required courses core cannot be repeated or otherwise used to fulfill the elective courses. Six hours must be upper level: MUSI 1000, 1300†, 2301†, 2309†, 3300, 3310, 3341, 4000, 4310; MUHL 1308†, 1309, 2304†, 2307†, 2308†, 2309, 2310†, 2312, 3305, 4300*, 4307, 4338; MUTH 1300†, 1301, 3300; MUEN 1103 (Fulfills Personal Fitness and Wellness requirement)**; 3101 (University Singers, Women's Chorale, Matador Singers, University Choir, Lubbock Chorale)**; 3102 (Opera and Opera Theatre)**; 3103 (Marching Band, University Band, Concert Band, Symphonic Band, Symphonic Wind Ensemble)**; 3104 (String Orchestra, University Symphony Orchestra, Ensemble Bravura)**; 3105 (Jazz Ensemble I, Jazz Ensemble II)**; 3106**, 3110**

Music

A student may seek a minor in music by completing 18 hours selected in consultation with the undergraduate advisor in the School of Music.

Music Technology

The undergraduate music minor in music technology seeks to educate students in a wide array of musical topics and issues. Students will gain an understanding of music informatics and other associated technologies. This classroom-based minor can be completed with no previous musical training. Completion of this minor will satisfy the Creative Arts core requirement.

Required General Courses (6 hours). MUSI 1300† OR MUHL 2307† and one of the following: MUSI 2309 OR 1308†.

Required Technology Courses (9 hours). MUCP 4321, 4331, 4341 (with permission of instructor); MUSI 3341, 4000.

Elective Courses. Choose one course from the following list: MUSI 1300†, 2301†, 2309†; MUHL 1308†, 1309, 2304†, 2307†, 4300*; MUTH 1301; MUCP 4321#, 4322#, 4331#, 4332, 4341# (with permission of instructor).

May choose if not taken as part of the Required Technology Courses.

Popular Music

The undergraduate music minor in popular music studies seeks to educate students in the music we interact with each day. Students will gain an appreciation for the ways in which music is created, shared, commercialized, and valued. This classroom-based minor requires no previous musical training, and completion of courses within this minor will satisfy the Creative Arts core requirement.

Required Courses (6 hours). MUSI 1300† OR MUHL 1308† AND MUSI 2309†.

Elective Courses (12 hours). (Choose 12 semester credit hours from the following. Six hours must be upper level.): MUSI 1000, 1300†, 3300, 3310, 3341, 4000, 4310; MUHL 1308†, 1309, 2304†, 2307†, 2308†, 2309, 2310†,

2312, 3305, 4300 (Frank Zappa, Music in the US, Asian Pop Music, Women in Music, or Musical Iconography), 4307, 4322; MUAP 1001 (Group Voice, Group Piano, or Group Guitar; no previous experience required); MUTH 1300†, 1301, 3300.

Any MUEN Music Ensemble: MUEN 1103 (Fulfills Personal Fitness and Wellness requirement)**, 3101 (University Singers, Women's Chorale, Matador Singers, University Choir, Lubbock Chorale)**, 3102 (Opera and Opera Theatre)**, 3103 (Marching Band, University Band, Concert Band, Symphonic Band, Symphonic Wind Ensemble)**, 3104 (String Orchestra, University Symphony Orchestra, Ensemble Bravura)**, 3105 (Jazz Ensemble I, Jazz Ensemble II)**, 3106 **, 3110**.

Notes for Music Minors.

* Offered in rotation. See advisor for currently available topics. Repeatable for credit with different topic designation.

** Ensemble audition may be required. Subject to availability.

† Fulfills Creative Arts core curriculum requirement.

MUHL 4300: Available topics for Music Minors. These courses rotate and are not available each semester. See advisor for the current semester's schedule.

Asian Pop Music; Charles Ives in His World; Classic Music; Frank Zappa; Great Musicians in Paris; History of Jazz; Mozart and the Age of Revolution; Music and American Radical Politics; Music and Nationalism; Music and the Contemplative Mind; Music in the US; Music of the African Diaspora; Music, Mysticism, and Magic; Musical Iconography; Musics of Latin America; Romantic Music; Shakespeare and Music; Symphonic Literature; The Music of Duke Ellington; Women and Music; World Music

Undergraduate Certificates

Community Arts

The School of Music, under the general supervision of the Vernacular Music Center, offers a 15-hour Undergraduate Certificate in Community Arts, particularly aimed at practitioners and participants in community arts. It provides practical and applicable skills for future arts administrators, working artists, performers, presenters, and community advocates. The certificate is available in either administrative or artistic practice concentrations (according to electives).

For most working artists/educators it is valuable, for both personal careers and artistic and creative campus and community projects, to develop strong skills in management, budgeting, promotions, and media. Those interested in advanced degrees will find material advantage through this foundational undergraduate certificate. Those involved in K-12 education will be greatly facilitated in speaking and advocating on behalf of their program initiatives.

Required courses for the certificate are PSY 3301, MUSI 3310, and IVPA 2301. Students additionally select two 3-hour electives from BA 3301, BA 3302, ADV 3310, COMS 3356, CMI 3300 (administrative concentration) or CMI 3300, ANTH 2304, ANTH 3300, ART 2310, ART 4304, DT 3351 (artistic concentration). Certificate candidates are also encouraged to participate actively in creative activities through the college. Courses generally may be taken in any order as long as prerequisites have been met.

Historical Performance

Historical Performance (HP) is a field of musical scholarship and performance that focuses on the research and practice of historical instruments, techniques, and repertoires, particularly in music of the pre-modern and early-modern eras, spanning a period from Gregorian chant to the music of Johann Sebastian Bach and the early Classic era. HP has become the prevailing approach to pre-19th-century western music repertoires, and the skills associated with HP are highly valued in the world of both performance and academic music research. Many performers, educators, and even instrument builders have made it the primary focus of successful careers, and many musicians have also embraced HP as a career-enhancing secondary specialization.

The undergraduate certificate in Historical Performance offers Texas Tech music students the opportunity to pursue an HP specialization while simultaneously allowing them to complete the standard undergraduate

Bachelor of Arts, Music, or Music Education, with a minimum of extra coursework. Students with this certificate will be better equipped to pursue 1) graduate programs that offer a concentration in historical performance; 2) musicology graduate research focused on pre- and early-modern music; and 3) other advanced post-diploma training in historical instruments/vocal techniques.

Required Courses (11 hours). MUHL 4322, MUSI 4000 (1 credit X 4 semesters, 1-1-1-1), and MUEN 3110 (1 credit X 4 semesters, 1-1-1-1; also fulfills the Elective Ensemble Credit for 3rd and 4th year students).

Elective Course (3 hours). Choose one from the following cross-listed Seminar in the History and Literature of Music courses. This course also satisfies the requirement for a Jr./Sr. Level Elective: MUHL 5331/4300 (Medieval), MUHL 5332/4300 (Renaissance), MUHL 5333/4300 (Baroque), or MUHL 5334/4300 (Classical era).

Permission may also be given for topics courses that are relevant to historical performance or pre- or early modern music.

Jazz Studies

The School of Music offers a 15-hour Undergraduate Certificate in Jazz Studies to provide students with a foundation in the skills necessary to be a successful performer in the jazz idiom. The certificate program combines lecture and laboratory courses (performance ensembles) with private study, much like the mentor/apprentice tradition seen throughout the history of jazz music.

Music education students are often required to teach jazz music and direct jazz ensembles after entering the workforce as professional music educators. Successful completion of this certificate program will make students more competitive in this job market.

The certificate requires the following courses: MUEN 3105 and MUEN 3106, MUTH 3205 (may substitute MUSI 4000 Jazz/Commercial Arranging with permission of program coordinator), MUAP 1001 and MUAP 3205, and MUHL 2304.

Vernacular Music

The School of Music offers a 15-hour Undergraduate Certificate in Vernacular Music. For most scholars involved in teaching or research, there is an expectation of familiarity with a range of the world's music styles. Those interested in advanced degrees and EC-12 education will find material advantage in this certificate's emphasis on improvisation and global perspectives. This certificate complements programs in music education, music composition, performance, and the Bachelor of Arts in Music.

The required courses for the certificate are MUHL 4300 (6 hours, requires topic approval), DAN 2301, MUEN 3110 (3 hours). Students can select one 3-hour elective from MUHL 4300, MUSI 3341, or MUSI 4000.

Accelerated Bachelor's to Master's Degree

Music, B.M. / Music Education, M.M.Ed.

Advanced music education undergraduates (possessing a 3.2 GPA and 90 accumulated hours when enrolling in MUED 3311) may apply for admission to the Combined Accelerated B.M.+M.M.Ed. program. Admission allows dual graduate/undergraduate enrollment in 6 specific hours while still an undergraduate, leading toward a Master of Music Education degree (36-hour non-thesis track). Application should be made in October, one to two semesters prior to enrolling in MUED 3311. The program is designed for exceptional undergraduate music education majors who wish to complete the M.M.Ed. degree in full- or part-time graduate study during Texas Tech's summers-only program or in some combination of the two. This allows educators to maintain a full-time teaching position while pursuing an advanced degree.

Undergraduate Course Descriptions

Music (MUSI)

- 1000—Special Topics in Music (V1-3).** Topics may cover musicology, music theory, applied music, applied arts, and other areas from multiple periods and genres. May be repeated under different topics.
- 1101—Introduction to Music Teaching (1).** Exploration and inquiry into music education environments, music teachers, and music students EC-12. Includes examination of music teachers' and music students' roles. Includes peer teaching, observation, and discussion. Open to all music majors.
- 1300—Creating the Critical Listener (3).** Drawing on classical, folk, popular, and world music traditions, this course cultivates a set of analytical tools that enables one to listen, read, speak, and write accurately, critically, and insightfully about music from a variety of global traditions. Fulfills core Creative Arts requirement.
- 2000—Independent Studies in Music (V1-3).** Individual study at the freshman and sophomore levels, providing greater depth than required by the established curricula. Enrollment and credit hours subject to the approval of divisional coordinators.
- 2301—Essential Elements of Music (3).** [MUSI1304] Basic elements of music with appropriate techniques and principles of singing, playing, moving to, and listening to music. For students preparing to teach young children. Not for music majors. Fulfills core Creative Arts requirement.
- 2309—Survey of Popular Music (3).** Introduction to the realm of American Popular Music since 1900. Fulfills core Creative Arts requirement.
- 2313—Dance Practices and Music (3).** Integrated approach to dance and dance-related bodywork, including vernacular forms, improvisation, and body-mind awareness. Enhances attention, concentration, creative insight, and health and wellness.
- 3216—Choral Techniques (2).** Prerequisites: MUAP 3206 and MUAP 3207 (choral conducting). Materials, repertoire, and procedures for developing instructional programs in choir. Field experiences required.
- 3217—Choral Techniques (2).** Prerequisites: MUAP 3206 and MUAP 3207 (choral conducting); MUSI 3216. Materials, repertoire, and procedures for developing instructional programs in choir. Field experiences required.
- 3218—Orchestra Techniques (2).** Prerequisites: MUAP 3206 and MUAP 3208 (instrumental conducting). Materials, repertoire, and procedures for developing instructional programs in orchestra. Field experiences required.
- 3219—Orchestra Techniques (2).** Prerequisites: MUAP 3206 and MUAP 3208 (instrumental conducting); MUSI 3218. Materials, repertoire, and procedures for developing instructional programs in orchestra. Field experiences required.
- 3225—Band Techniques (2).** Prerequisites: MUAP 3206 and MUAP 3208 (instrumental conducting). Materials, repertoire, and procedures for developing instructional programs in band. Field experiences required.
- 3226—Band Techniques (2).** Prerequisites: MUAP 3206 and MUAP 3208 (instrumental conducting). Materials, repertoire, and procedures for developing instructional programs in band. Field experiences required.
- 3237—Music for Children (2).** Comprehensive study of musical skill development in primary grades. Contemporary pedagogical approaches to music teaching; skill development in children emphasized. Field experiences required. Music majors only.
- 3238—Music for Children (2).** Comprehensive study of musical skill development in primary grades. Contemporary pedagogical approaches to music teaching; skill development in children emphasized. Field experiences required. Music majors only.
- 3300—Advanced Special Topics in Music (3).** Advanced music topics may cover musicology, music theory, applied music, applied arts, and other areas from multiple periods and genres. May be repeated under different topics.
- 3310—Introduction to Music Business (3).** Prerequisite: Instructor approval. Introduction to copyright; publishing; unions; guilds; licensing; artist management; record labels; promotion; music in radio, video, and media; streaming; career opportunities; and development.
- 3341—Introduction to Music Technology (3).** Outlines development and impact of music technology from outset of electric/electronic music synthesis to the present. Provides basic knowledge of Web site design, sound synthesis, elements of sound, MIDI, digital audio recording and FX, computer generated notation and MIDI sequencing. For both majors and non-majors.
- 4000—Individual Studies in Music (V1-3).**
- 4310—Music Career Management and Portfolio (3).** Prerequisite: Instructor approval. Presents strategies to build a sustainable career in the arts and entertainment music industry as an artist, producer, composer, or diverse creator.

Music Applied (MUAP)

- 1001—Applied Music (V1-4).** Instrument or Voice.
- 1002—Applied Music (V1-4).** Instrument or Voice.
- 1103—Percussion (1).** [MUSI1188] Introduction to fundamentals of playing and teaching percussion instruments. Laboratory ensemble experience.
- 1104—Percussion (1).** Prerequisite: MUAP 1103. Advanced study of fundamentals of playing and teaching percussion instruments. Laboratory ensemble experience.
- 1105—Keyboard Skills (1).** Sight reading and ensemble skills. Required of all piano majors for two semesters. Enrollment limited to piano majors, or by instructor consent.
- 1106—Keyboard Skills (1).** Sight reading and ensemble skills. Required of all piano majors. Enrollment limited to piano majors, or by instructor consent.
- 1113—Voice (1).** [MUSI1183] Correct posture and studies for breath control; development of resonance; study of vowel formation; vocalization. Simple songs. Laboratory ensemble experience.
- 1123—Group Keyboard Instruction I (1).** [MUSI1114, 1181] Beginning instruction in piano and electronic keyboards. Sight reading, harmonization and transposition, solo and ensemble repertoire, and playing techniques.
- 1124—Group Keyboard Instruction II (1).** [MUSI1115, 1182] Beginning instruction in piano and electronic keyboards. Sight reading, harmonization and transposition, solo and ensemble repertoire, and playing techniques.
- 1303—English Diction for Singers and The International Phonetic Alphabet (3).** Introduction to the International Phonetic Alphabet. Use of English language in lyric diction. Prerequisite for MUAP 1304.
- 1304—Italian Diction for Singers (3).** Prerequisite: MUAP 1303. Italian language as applied to lyric diction, employing the principles of the International Phonetic Alphabet (IPA).
- 1305—German Diction for Singers (3).** Prerequisite: MUAP 1303. Use of German language as applied to lyric diction, employing the principles of the International Phonetic Alphabet.
- 1306—French Diction for Singers (3).** Prerequisite: MUAP 1303. Use of French language as applied to lyric diction, employing the principles of the International Phonetic Alphabet.
- 2001—Applied Music (V1-4).** Instrument or Voice.
- 2002—Applied Music (V1-4).** Instrument or Voice.
- 2103—Strings (1).** Fundamentals of playing and teaching high string instruments. Laboratory ensemble experience.
- 2104—Strings (1).** Fundamentals of playing and teaching low string instruments. Laboratory ensemble experience.
- 2123—Group Keyboard Instruction III (1).** [MUSI2114, 2181] Intermediate instruction in piano and electronic keyboards. Sight reading, harmonization and transposition, solo and ensemble repertoire, and playing techniques.
- 2124—Group Keyboard Instruction IV (1).** [MUSI2115, 2182] Intermediate instruction in piano and electronic keyboards. Sight reading, harmonization and transposition, solo and ensemble repertoire, and playing techniques.
- 3001—Applied Music (V1-4).** Instrument or Voice.
- 3002—Applied Music (V1-4).** Instrument or Voice.
- 3101—Dimensions of Performance (1).** An interactive course open to all performers. Expressive movement, group dynamics, and free improvisations are used to maximize the spontaneity, confidence, and creativity of performers. May be repeated for credit.
- 3103—Brass Instruments (1).** Introduction to fundamentals of playing and teaching brass instruments. Laboratory ensemble experience.
- 3104—Brass Instruments (1).** Prerequisite: MUAP 3103. Advanced study of fundamentals of playing and teaching brass instruments. Laboratory ensemble experience.
- 3190—Junior Recital (1).** Prerequisite: MUAP 3001 and MUAP 3002 (MUAP 3002 may be taken concurrently) on the same instrument or voice.
- 3205—Jazz Improvisation (2).** Prerequisite: Consent of instructor. Study and application of techniques of improvisation in jazz performance. May be repeated for credit. (CL)
- 3206—Conducting (2).** Basic conducting techniques.
- 3207—Choral Conducting (2).** Prerequisite: MUAP 3206. Specific techniques of choral conducting and choral rehearsal.
- 3208—Instrumental Conducting (2).** Prerequisite: MUAP 3206. Advanced baton techniques, score reading, and interpretation.
- 3303—Vocal Literature (3).** Prerequisites: MUHL 2301, MUHL 3302. Historical and comparative analytical survey of the standard vocal literature of the 19th and 20th centuries.
- 3305—Jazz Pedagogy (3).** Prerequisite: Music major or instructor approval. Examination of jazz pedagogy methods, techniques, and resources

for teaching jazz big band, jazz combo, and teaching jazz topics in a secondary school environment.

- 4001—**Applied Music (V1-4)**. Instrument or Voice.
- 4002—**Applied Music (V1-4)**. Instrument or Voice.
- 4103—**Woodwinds (1)**. Introduction to fundamentals of playing and teaching woodwinds. Laboratory ensemble experience.
- 4104—**Woodwinds (1)**. Prerequisite: MUAP 4103. Advanced study of fundamentals of playing and teaching woodwinds. Laboratory ensemble experience.
- 4190—**Senior Recital (1)**. Prerequisite: MUAP 4001 on the same instrument or voice. Corequisite: Concurrent enrollment in MUAP 4002.
- 4205—**Vocal Pedagogy for Educators (2)**. Course will emphasize functional vocal anatomy, breathing, phonation and articulation. Repertoire appropriate for young singers will be emphasized.
- 4291—**Commercial Music Applied Capstone (2)**. Prerequisites: MUAP 4001 in the same designation of instrument, voice, or composition; Commercial Music students only. Corequisite: MUAP 4002. Designed to support students in a final performance or presentation project that demonstrates a synthesis of their learning throughout the partnership degree.
- 4305—**Vocal Pedagogy (3)**. Pedagogical attitudes in identifying and solving vocal problems based on a thorough knowledge of functional anatomy with an emphasis on the following: anatomy of breathing, phonation, articulation, as well as repertoire selection, memorization skills, coaching, program development, and performance skills.
- 4308—**Instrumental Conducting (3)**. Prerequisite: MUAP 3208. Study and performance of instrumental works of all periods. Participation in a major instrumental ensemble required. An individual study course.
- 4350—**Commercial Music Internship (3)**. Supervised unpaid internship/apprenticeship involving a period of major responsibility in a professional music-making facility—teaching studio, recording studio, production company or venue, or similar.

Music Composition (MUCP)

- 1201—**Introduction to Contemporary Music (2)**. [MUSI1386] Prerequisite: For composition majors. A survey of current trends, with activities emphasizing creative musicianship and new technology in composition. May be an individual study course. (For songwriting, see MUTH 1300.)
- 1202—**Introduction to Contemporary Music (2)**. Prerequisite: MUCP 1201. For composition majors. A survey of current trends, with activities emphasizing creative musicianship and new technology in composition. May be an individual study course. (For songwriting, see MUTH 1300.)
- 2201—**Music Composition (2)**. Prerequisites: MUCP 1202 and instructor approval. For composition majors. Work in traditional forms and media, together with the principles of notation, layout, reproduction, and copyright.
- 2202—**Music Composition (2)**. Prerequisites: MUCP 2201 and instructor approval. For composition majors. Work in traditional forms and media, and also electronic media, together with the principles of notation, layout, reproduction, and copyright.
- 3201—**Music Composition (2)**. Prerequisites: MUCP 2202 and formal approval to continue in the Bachelor of Music program in music composition. For composition majors. Continued work in both traditional and electronic media.
- 3202—**Music Composition (2)**. Prerequisites: MUCP 3201 and formal approval to continue in the Bachelor of Music program in music composition. For composition majors. Continued work in both traditional and electronic media.
- 4102—**Music Composition (1)**. Prerequisite: MUCP 3201. For composition majors. Advanced work on a larger scale, culminating in a senior recital (MUAP 4190) as noted in the curriculum.
- 4201—**Music Composition (2)**. Prerequisite: MUCP 3202. For composition majors. Advanced work on a larger scale, culminating in a senior recital (MUAP 4190) as noted in the curriculum.
- 4208—**Orchestration (2)**. Prerequisite: MUCP 4307. More advanced work in scoring for both band and orchestra.
- 4300—**Special Topics in Music Composition (3)**. Prerequisites: MUTH 1304, MUTH 1104, MUCP 1202. Topics may cover any advanced subject related to music composition, arranging, computer, or digital music and music technology. May be repeated up to six times under different topics.
- 4307—**Instrumentation (3)**. Prerequisite: MUTH 2304 and MUTH 2104 or equivalent, or by permission of the division of theory and composition. A study of the properties of woodwind, brass, percussion, and string instruments, their transpositions, and their sectional treatment, leading to full scorings for both band and orchestra.

- 4309—**Jazz Arranging (3)**. Prerequisites: MUTH 2304, MUTH 2104; music majors only. Modern methods of arranging for small and large jazz ensembles.
- 4321—**Recording Technology and Portfolio (3)**. Explores the latest creative methods and technology in sound and video productions, including live concert recording/filming, ADR for Anime, and more. May be repeated for credit. (CL) [MUCP 5321]
- 4331—**Music Informatics I (3)**. Explores new possibilities in a combined field of music, science, and technology, through developing electronic musical instruments using Arduino and other devices. [MUCP 5331]
- 4332—**Music Informatics II (3)**. Prerequisite: MUCP 4331. Explores advanced use of technology in music and media productions through developing new electronic musical instruments/devices using Arduino/Teensy, sensors, and 3D Printer. [MUCP 5332]
- 4341—**Computer Music I (3)**. Prerequisite: Consent of instructor. Techniques and tools for creating computer music, including audio recording, signal processing, MIDI sequencing, and sound design.
- 4342—**Computer Music II (3)**. Prerequisite: MUCP 4341 or consent of instructor. Continuation of MUCP 4341. More advanced topics in computer music, including interactive media, live acoustic instruments with electronic tape, advanced sound design and software applications.

Music Education (MUED)

- 3311—**Curriculum and Instruction in Education and Music (3)**. Prerequisite: MUAP 3206 (track appropriate section), MUTH 2304 and MUTH 2104. Foundations, patterns, and issues in music curriculum development. Special emphasis on adolescent musicians. Transfer and application to the discipline of music. Field experiences required.
- 3312—**Methods in Education and Music (3)**. Prerequisites: MUED 3311, junior standing, and acceptance to teacher education program. Foundations of teaching techniques, evaluation, and classroom management. Application to the discipline of music. Field experiences required.
- 4315—**Integrating Instructional Technology into Learning and Teaching Music (3)**. Prerequisite: Music majors only. Corequisite: MUED 3311. Introduces music teacher candidates to current instructional technology with integration strategies based on specified learning theories.
- 4323—**Teaching in the Music Classroom: Diversity, Equity, and Excellence (3)**. Prerequisite: Music majors only. Corequisite: MUED 3312. Organizing classrooms and rehearsals responsive to student learning styles, ethnic/cultural backgrounds, and special needs in music settings.

Music Ensemble (MUEN)

- 1103—**Marching Band (1)**. Audition Required. Fulfills Personal Fitness and Wellness requirement.
- 2101—**Secondary Instrumental Ensemble (1)**. Introduction to instruments for choral educators. Includes performance on brass, woodwinds, percussion and string instruments.
- 2102—**Vocal Ensemble for Instrumentalists in Music Education (1)**. Introduction to choral concepts for instrumental educators. Includes choral experiences, vocal pedagogy, and appropriate repertoire.
- 3101—**Choir (1)**. Auditions required.
- 3102—**Opera Theatre (1)**. Auditions required.
- 3103—**Band (1)**. Auditions required.
- 3104—**Orchestra (1)**. Auditions required.
- 3105—**Jazz Ensemble (1)**. Auditions required.
- 3106—**Chamber Ensemble (V1-6)**. Chamber Ensemble is a by-audition placement into a non-conducted ensemble consisting of three to twelve members.
- 3110—**Medium Ensemble (V1-6)**. Auditions required.
- 3201—**University Choir (2)**. Auditions required.
- 3203—**Band (2)**. Auditions required.
- 3204—**Orchestra (2)**. Auditions required.

Music History and Literature (MUHL)

- 1308—**Music in Western Civilization (3)**. [MUSI1306, 1307, 1308] Introductory course for non-music majors in the history of music and its role in western civilization from the Middle Ages through the 20th century and beyond. Fulfills core Creative Arts requirement.
- 1309—**Introduction to Musical Cultures of the World (3)**. With an introduction to basic ethnomusicological concepts, this course provides an overview to the world's musical traditions.
- 2301—**Music as Cultural History I (3)**. Prerequisite: MUSI 1300. Survey of music history, culture and style from 1750 to 1880. Part I of MUHL 2301, MUHL 3302, MUHL 3303 sequence. (CL)

- 2304—History of Jazz (3).** Historical and analytical survey of jazz from its beginning through “Rock” its form, style, literature, and influence on 20th century music. Fulfills core Creative Arts requirement.
- 2307—Music and Globalization (3).** Students study processes of cultural transmission, exchange, and global communication through music. Fulfills core Creative Arts requirement. (CL)
- 2308—Musics of Latin America (3).** Traditions, styles, and history of Latin American musics: Cuba, Puerto Rico, Mexico, Panama, Guatemala, Argentina, Brazil, Peru, Venezuela. Fulfills core Creative Arts requirement.
- 2309—World Music Musicianship (3).** Serves as an introduction to world music musicianship through exploration of basic common musical elements and training in aural recognition.
- 2310—History of Rock and Roll (3).** An in-depth look at the music of Rock and Roll from its early 20th-century origins in Blues and Country to Punk Rock in the mid-1970s. Fulfills core Creative Arts requirement.
- 2312—Music of the Beatles (3).** Music of the Beatles will focus on the musical analysis of the works of the Beatles and their profound influence on popular music and culture at large.
- 3302—Music as Cultural History II (3).** Prerequisites: MUSI 1300, MUHL 2301. Survey of music history, culture and style from antiquity to 1750. Part II of MUHL 2301, 3302, MUHL 3303 sequence. (CL)
- 3303—Music as Cultural History III (3).** Prerequisites: MUSI 1300, MUHL 2301, and MUHL 3302. Survey of music history, culture and style from 1880-present. Part III of MUHL 2301, MUHL 3302, 3303 sequence. (CL)
- 3305—History of Mariachi (3).** Explores the history of the mariachi tradition in Mexico and the United States.
- 4300—Special Topics in Music History and Literature (3).** Prerequisites: MUHL 2301 and MUHL 3302. Topics may cover any historical period of music, music literature, or composers. May be repeated up to six times under different topics. [MUHL 5326]
- 4307—Women and Music: From Hildegard to Hip-Hop (3).** Prerequisites: MUSI 1300 or MUHL 1308 or consent of instructor. Considers how gender norms and constructs have affected women musicians and how women musicians have played powerful roles in Western classical and popular music.
- 4322—Introduction to Historical Performance (3).** Teaches musicians about the use of period instruments, original sources, and musical techniques contemporary to medieval, Renaissance, Baroque, and even early Classical musics.
- 4330—Music in the United States (3).** Explores the interactions of American music and cultural history since first Colonial contact, with particular emphasis on vernacular traditions that have historically been unique to the North American experience.
- 4338—Music, Folklore, and Traditional Culture in Irish History (3).** An intensive topics-oriented survey of the styles, practices, and cultures of music and oral tradition in Ireland since St. Patrick.

Music Theory (MUTH)

- 1101—Developmental Aural Skills (1).** For music majors or with consent of instructor. Developmental diction, sight singing, and keyboard skills.
- 1103—Elementary Aural Skills I (1).** [MUSI1116, 1216] Corequisite: MUTH 1303. For music majors or with consent of instructor. Dictation, sight-singing, and keyboard skills.
- 1104—Elementary Aural Skills II (1).** [MUSI1117, 1217] Prerequisites: C or better in MUTH 1303 and MUTH 1103 or equivalent. Corequisite: MUTH 1304. Dictation, sight-singing, and keyboard skills.
- 1300—Songwriting (3).** A beginning course for nonmusic majors. A practical approach to music theory through songwriting. Includes aural training, notation, textual setting, melodic writing, and chord assignment. Fulfills core Creative Arts requirement.

- 1301—Music Theory Fundamentals (3).** Introduces the elements of melody, harmony, and rhythm.
- 1303—Elementary Music Theory I (3).** [MUSI1211] Corequisite: MUTH 1103. For music majors or with consent of instructor. Melody, rhythm, and diatonic harmony.
- 1304—Elementary Music Theory II (3).** Prerequisites: C or better in MUTH 1303 and MUTH 1103 or equivalent. Corequisite: MUTH 1104. Melody, rhythm, and diatonic harmony.
- 1305—Fundamentals of Music I (3).** Focuses on basic mechanics of notation and piano keyboard. Students will learn how to read staff notation in all keys and common meters and produce music with both voice and piano.
- 1306—Fundamentals of Music II (3).** Focuses on applying skills from MUTH 1305 to musical theatre literature. Students will prepare and perform excerpts from musicals from the past 100 years by singing and playing piano.
- 2103—Intermediate Aural Skills I (1).** [MUSI2116, 2216] Prerequisites: C or better in MUTH 1304 and MUTH 1104 or equivalent. Corequisite: MUTH 2303. Dictation, sight-singing, and keyboard skills.
- 2104—Intermediate Aural Skills II (1).** [MUSI2117, 2217] Prerequisites: C or better in MUTH 2303 and MUTH 2103 or equivalent. Corequisite: MUTH 2304. Dictation, sight-singing, and keyboard skills.
- 2303—Intermediate Music Theory I (3).** [MUSI2211] Prerequisites: C or better in MUTH 1304 and MUTH 1104 or equivalent. Corequisite: MUTH 2103. Diatonic and chromatic harmony.
- 2304—Intermediate Music Theory II (3).** [MUSI2212] Prerequisites: C or better in MUTH 2303 and MUTH 2103 or equivalent. Corequisite: MUTH 2104. Diatonic and chromatic harmony; survey of twentieth-century techniques.
- 3205—Introduction to Jazz Harmony (2).** Prerequisites: MUTH 1104, MUTH 1304; MUAP 1124. Addresses fundamental concepts in contemporary jazz theory and harmony, intervals, chord construction, chord/scale relationships, harmonic and melodic analysis, scale choice, basic jazz keyboard, and aural skills.
- 3300—Advanced Songwriting (3).** Prerequisite: MUTH 1300 or instructor consent. Expands on songwriting techniques with an emphasis on developing a personal style and overcoming creative hurdles.
- 3303—Form, Analysis, and Synthesis (3).** Prerequisites: C or better in MUTH 2304 and MUTH 2104 or equivalent. The analysis and synthesis of Classical, Romantic, Impressionist, and Contemporary styles, including harmonic and nonharmonic practices and the principles of both small and large part-forms. May be an individual study course.
- 4305—Modal Counterpoint (3).** Prerequisites: C or better in MUTH 2304 and MUTH 2104 or equivalent. A study of sixteenth century vocal counterpoint, beginning with the principles of melodic writing and concentrating upon the analysis and synthesis of polyphonic textures, as found in the motet and the mass.
- 4307—Tonal Counterpoint and Fugue (3).** Prerequisites: C or higher in MUTH 2304 and MUTH 2104 or equivalent. The analysis and synthesis of 18th century counterpoint in two to four voices, concentrating upon the instrumental style and techniques of the invention and the fugue.
- 4316—Analysis of Post-Tonal Music (3).** Prerequisites: C or better in MUTH 2104 and MUTH 2304. Covers materials and techniques employed by composers writing post-tonal music. Restricted to music majors.

Student Teaching for Music (MUAL)

- 4000—Student Teaching in Music All-Level (V1-12).** Prerequisite: Attainment of admission standards for student teaching. Supervised teaching involving a period of major responsibility for instruction and learning in an accredited school.

About the School

This school supervises the following degree programs:

- Bachelor of Arts in Dance
- Bachelor of Fine Arts in Dance
- Bachelor of Arts in Theatre Arts
- Bachelor of Fine Arts in Theatre Arts
 - Concentrations: Acting, Design/Technology/Management, Musical Theatre
- Master of Arts in Dance Studies
- Master of Arts in Theatre Arts
- Master of Fine Arts in Theatre Arts
 - Concentrations: Arts Administration, Design, Performance and Pedagogy, Playwriting
- Doctor of Philosophy in Fine Arts
 - Track: Theatre Arts

The School, an accredited program of the National Association of Schools of Theatre and the National Association of Schools of Dance, sponsors a regular schedule of major theatrical and dance productions each academic year under the direction of professionally qualified members of the theatre arts and dance faculty and/or graduate students. The School selects its season to give each student an opportunity to experience a representative selection of the great works of the past as well as plays by modern, diverse, and contemporary playwrights or that represent those experiences connected to the broader professional industry. Many of these events are presented at the Charles E. Maedgen Jr. Theatre, which seats 385 patrons in a comfortable, continental arrangement; in our intimate Creative Movement Studio; and in the new state-of-the-art, completely flexible Helen Devitt Jones/CH Foundation Black Box theatre. The beautiful facilities boast a small Studio Theatre, state-of-the-art production studios, two dance studios, and an environment rich for exploration. In addition, the School of Theatre & Dance sponsors chapters of Alpha Psi Omega (national theatre honorary), Chi Tau Epsilon (national dance honorary), and the United States Institute of Theatre Technology.

The school is an institutional member of the Texas Educational Theatre Association, the Texas Nonprofit Theatre Inc., the Association for Theatre in Higher Education, the United States Institute of Theatre Technology, the Association of Arts Administration Educators, the Kennedy Center American College Theatre Festival, and the American College Dance Festival Association. Along with only two other universities in the nation, the School of Theatre & Dance is a member of the International Theatre Festival, offering opportunities for international partnerships.

Graduate Programs

For information on graduate programs offered by the Department of Theatre and Dance, visit the Graduate Programs section of the catalog on page 464.

Undergraduate Programs

Grades below C in courses required of theatre arts and dance majors and minors are not acceptable in fulfillment of degree requirements. A

grade of C or better must be achieved in any DAN or THA course that is a prerequisite for another course. Transfer students must complete the following minimum credit hours of major or minor courses in residence at Texas Tech: B.A. theatre arts majors, 24 hours; B.F.A. theatre arts majors, 36 hours; B.A. dance majors, 24 hours; B.F.A. dance majors, 36 hours; and theatre or dance minors, 9 hours.

Undergraduate Admission. Undergraduate admission to the School of Theatre & Dance is a two-step process, with review at institutional (TTU) and unit (Theatre and Dance) levels. The institutional admission is based on academic performance as outlined in the Undergraduate Admissions section of this catalog. At the unit level, the School of Theatre & Dance requires an audition (for the B.A. in Dance, B.F.A. in Dance, B.F.A. in Theatre Arts with a concentration in Acting, and the BFA in Theatre Arts with a concentration in Musical Theatre), and a portfolio and interview (for the B.F.A. in Theatre Arts with a concentration in Design/Technology/Management). Undergraduate admissions procedures for the School of Theatre & Dance are listed at www.depts.ttu.edu/theatreanddance/students/index.php.

Semester Credit Hour and Contact Hour Equivalents. Pursuant to the Texas Tech University *Undergraduate/Graduate Catalog*, the Texas Administrative Code, and norms stated in the NAST Handbook, the credit and time expectations for the School of Theatre and Dance courses are as follows:

- For studio-based courses, a standard of 30 in-class contact hours per credit hour per term is employed. Further, non-contact hour time expectations for out-of-class student activity typically range from 20 to 30 hours per credit hour per term.
- For traditionally delivered 3-credit-hour lecture- or seminar-based courses during a regular semester, students should expect to be in class for 3 hours per week and work outside of class a minimum of 6 hours per week. For 3-credit-hour courses requiring a non-credit lab, students should expect to be in class for 6 hours per week and work outside of class 3 to 6 hours per week.

Transfer Credit for Core Curriculum Courses. Some degree programs and/or minors include specific core curriculum courses as graduation requirements or prerequisites for other courses. Students who transfer in (or have previously completed via credit by exam) core curriculum courses that differ from those included in the degree program could be required to complete additional core curriculum courses as degree requirements.

Interdisciplinary Undergraduate Certificate. The Talkington College of Visual & Performing Arts, in conjunction with the College of Media & Communication, offers an interdisciplinary Motion Picture Production undergraduate certificate. More information can be found in the Department of Interdisciplinary Arts section of the catalog.

Teacher Education

Students desiring all-level certification in theatre arts must include the following courses within their overall degree plan: THA 1301, 2303, 2101, 2302, 3303, 3304, 3305, 3308, 3309, 4302, and one 3-hour theatre arts elective. Students desiring secondary certification in dance must include the following courses within their overall degree plan: DAN 1100 (twice), 2202, 2301 (or 4313), 2313, 3100, 3203, 3205, 3207, 3208, 3209, 3301, 3309, 4110, 4203, 4205 and 4207. The overall degree plan for the B.F.A. or B.A. degree in theatre arts and for the B.A. degree in dance constitutes the academic major for purposes of recommendation for teacher certification.

Dance, B.A.

The Bachelor of Arts in Dance prepares students for a wide range of career options post-graduation and includes opportunities for multiple areas of specialization. Coursework is designed to help students become skillful, articulate, expressive movers; develop their own perspectives as creative artists; develop the ability to work effectively in a collaborative environment; and grow in their understanding of dance as an art form. The degree will provide students an opportunity to participate in a more individualized degree through the choice of elective courses for a minor from outside the major area discipline that is consistent with the university philosophy and policies for a liberal arts degree.

Students accepted to Texas Tech University who wish to seek a B.A. in Dance must also audition for the dance program. Auditions are held every

fall and spring semester and consist of prospective students learning and performing movement in contemporary, ballet, jazz, and hip hop. Solos will be submitted virtually with the B.A. dance major application online. Students will also be asked to submit a statement of purpose written submission as part of their application. Acceptance to Texas Tech University does not ensure admission as a dance major. The number of hours required for the B.A. in Dance is 120, at least 40 of which must be at the junior and senior levels. Students are required to take at least one semester of two technique genres at the Intermediate Level (3000-level) before graduation.

Communication Literacy Requirement. Communication Literacy courses for the B.A. in Dance are DAN 3100, 3208, 3209, and 3301.

Dance, B.F.A.

The Bachelor of Fine Arts in Dance prepares students to become independent creative artists by providing the skills, tools, and practice necessary to pursue a career in dance. The program provides strong technical training in which students take artistic risks, expand skills, think critically, and pursue an interdisciplinary, collaborative approach as dancers, choreographers, directors, performers, writers, and/or teachers.

Students accepted to Texas Tech University who wish to seek a B.F.A. in Dance must also audition for the dance program. Auditions are held every fall and spring semester and consist of prospective students learning and performing movement in contemporary, ballet, jazz, and hip hop. Solos will be submitted virtually with the B.F.A. dance major application online. Students will also be asked to submit a statement of purpose written submission as part of their application. Acceptance to Texas Tech University does not ensure admission as a dance major. The number of hours required for the B.F.A. in Dance is 123, at least 40 of which must be at the junior and senior levels. Students should take at least one semester of two technique genres at Advanced Level (4000-level) before graduation.

Communication Literacy Requirement. Communication Literacy courses for the B.F.A. in Dance are DAN 3208, 3209, and 3301.

Theatre Arts, B.A.

The number of hours required for the B.A. in Theatre Arts is 120, at least 40 of which must be at the junior and senior levels. The degree will provide students an opportunity to participate in a more individualized degree through the choice of elective courses for a minor from outside the major area discipline that is consistent with the university philosophy and policies for a liberal arts degree, supported by well-rounded theatre training.

Communication Literacy Requirement. Communication Literacy courses for the B.A. in Theatre Arts are THA 3308, 3309, 3351, and 4300.

Theatre Arts, B.F.A.

Students seeking pre-professional training leading to a B.F.A. degree in theatre arts can pursue concentrations in acting, design/technology, or musical theatre and must be admitted to the B.F.A. program by audition and interview. Students are admitted at the discretion of the faculty connected to each discipline-specific area. Continuation in the program is dependent upon semester or annual review and the faculty assessment of the student's timely progress, as well as completion of additional programmatic requirements which vary per discipline. Students whose progress is found unsatisfactory will be placed on programmatic probation. The number of hours required for B.F.A. theatre arts majors is 130, at least 40 of which must be at the junior and senior levels.

Communication Literacy Requirement. Communication Literacy courses for the B.F.A. in Theatre Arts are THA 3308, 3309, 3351, and 4300.

Theatre and Dance Undergraduate Minors

Students working toward a minor in theatre arts or dance must complete a minimum of 18-24 hours of specific coursework. Hours applied to the minor area of study may not include courses used to fulfill requirements in the student's major. Because each minor takes at least four long semesters to complete, students should begin the minor in theatre arts or dance as early as possible in their academic career. Prospective minors should meet with the theatre arts and dance advisor as soon as possible for course information regarding prerequisites, availability, etc.

Dance

Students who wish to minor in dance must also audition for the dance program. Auditions are held every fall and spring semester and consist of prospective students learning and performing movement in contemporary, ballet, and jazz. Solos will not be seen. Auditions also include an expository writing component. Acceptance to Texas Tech does not ensure admission as a dance minor. Students accepted as a dance minor must complete the following 24 credit hours:

- DAN 1100 (2 semesters)
- DAN 1200
- AT LEAST 10 credit hours (5 classes) from:
 - DAN 1203, 2203, 3203, 4203 (Jazz)
 - DAN 1205, 2205, 3205, 4205 (Ballet)
 - DAN 1207, 2207, 3207, 4207 (Contemporary)
 - DAN 1211, 2211, 3211, 4211 (Hip Hop)
- DAN 2202, 2313, 3208, 3309
- AT LEAST one class from:
 - DAN 3301, 3309, 4210, 4313; DT 3351

Students in the Dance minor must complete at least ONE course from each technique genre (Jazz, Ballet, Contemporary, and Hip-Hop); no more than TWO courses from each genre can be applied to the minor/concentration. Some courses may be repeated for credit depending on faculty-assigned placement levels. Students must complete at least one technique genre in an Intermediate level (3000-level).

Theatre Arts – Acting

Students completing a theatre arts – acting minor must complete 21 credit hours, including DT 1306; THA 1301, 2302, 2303, 2312, 3310; and THA 3302, 3322, or 3332. *** Students cannot declare a theatre arts – acting minor without interview/authorization from the Head of Acting; authorization not guaranteed.*

Theatre Arts – Cosplay and Costume Technology

The Theatre Arts – Cosplay and Costume Technology minor capitalizes on niche pop cultural interest in character expression and interpretation via the lens of costume technology. Whether to amplify hobby-based interests or prepare students with formal skillsets needed to distinguish them in the emerging market of cosplay costume creation and character development, this minor is designed to amplify the creative, narrative, and design-based aspects needed to participate within adjacent industry markets more fully, as well as to more successfully translate costume ideas into reality by leaning into traditional theatre-based costume construction techniques. A portion of this curriculum has been dedicated to software-based coursework that allows students to translate ideas and lean into new-media based fabrication.

Required Courses (22 hours). THA 2301, 2101, 2305, 3305, 4310, 4336, 4338, and 4335 (Costume Crafts or 3D New Media Fabrication).

Theatre Arts – Design and Technology for the Entertainment Industry

The Theatre Arts – Theatre Technology minor is a comprehensive capture of the range of disciplines that encapsulate design and technology for the entertainment industry. These courses extend beyond the mode of traditional theatrical presentation into other media. The Principles of Sound course rounds out the comprehensive training approach to include a vital discipline, in light of the creation of the course. Choice of Studio course allows for students to lean into their primary area of interest and apply all courses to a design-based studio experience.

Required Courses (18 hours). THA 2303, 2305, 3301, 3303, 3304, 3305.

Elective Course (3 hours). Choose one course from THA 4309, 4310, 4311, or 4319.

Theatre Arts – Design Visualization

The Theatre Arts – Design Visualization minor captures the SoTD courses related to visualization of design deliverables. This minor amplifies a skill-set that can empower students to take on work as a professional design assistant, concept artist, or range of opportunities within the entertainment industry. This minor focuses on best practice, digital software, imaging

Dance, B.A. Recommended Curriculum

FIRST YEAR

Fall

- ☐ One technique course from approved Jazz, Ballet, Contemp., or Hip Hop (2 SCH)
- ☐ DAN 1100 - Dance Production Activities (1 SCH)
- ☐ DAN 1200 - First Year Seminar in Dance (2 SCH)
- ☐ DAN 2202 - Improvisation (2 SCH)
- ☐ DAN 1202 - Dance Conditioning (2 SCH)
- ☐ ENGL 1301 - Essentials of College Rhetoric (3 SCH)
- ☐ Social & Behavioral Sciences (3 SCH)*

- ☐ DAN Elective (3 SCH)
- ☐ Minor Courses (6 SCH)

TOTAL: 14

TOTAL HOURS: 120

The sample course sequence above includes general minor classes for subject areas in which students can complete classes in any order at any time. Be aware that the minor in education (leading to Texas Teacher Certification) follows a much different pattern. To minor in education, students must meet specific GPA requirements, testing standards, and be admitted to the Teacher Education Program (TEP) through the College of Education. Application to the TEP typically does not occur until the student reaches approximately 70-75 credit hours. Teacher certification may add one full year to a student's program due to the 4 semester Block/student teaching requirements.

* Choose from the university's core curriculum.

Foreign Language: Entering students are expected to have had four semesters credit of a single foreign language in high school. Students who do not meet this requirement will be required to complete one year (or the equivalent) of a single foreign language taken at the college level. For more information, refer to the "Foreign Language Requirement" in the Academic Requirements section of the catalog.

DAN Electives: DAN 1100 (repeated for a third time), 1204, 2301, 2323, 3000, 4000, 4210; DT 1306, 2206, 2216; THA 3306 (WildWind/Marfa).

The sample course sequence above includes general minor classes for subject areas in which students can complete classes in any order at any time. Be aware that the minor in education (leading to Texas Teacher Certification) follows a much different pattern. To minor in education, students must meet specific GPA requirements, testing standards, and be admitted to the Teacher Education Program (TEP) through the College of Education. Application to the TEP typically does not occur until the student reaches approximately 70-75 credit hours. Teacher certification may add one full year to a student's program due to the 4 semester Block/student teaching requirements.

* Choose from the university's core curriculum.

† The B.A. in Theatre Arts requires at least one year (or its equivalent) of the same foreign language on the college level.

TOTAL: 16

TOTAL HOURS: 130 MINIMUM

Note: Musical theatre students may be required to enroll in Level I DAN classes more than once before advancing to Level II DAN classes. Additional hours at Level I will not apply to the degree plan but will provide essential skills development necessary to advance to Level II. For any student placed higher than a Level I or II, higher levels can be substituted for lower levels. Musical Theatre students must take at least one DAN class each long semester unless otherwise authorized by the Head of Area.

* Choose from the university's core curriculum.

† BOTH ARE EVENTUALLY REQUIRED—students should take the course that is being offered this term.

techniques, 3D rendering, and new media modeling to give students a comprehensive skill base to help translate ideas into reality. This minor could pair with any industry that could benefit from theater's unique disciplinary approach to storytelling, world building, and creative problem solving.

Required Courses (18 hours). THA 2305, 2101, 3208, 4336, 4337, 4338, 4335 (Photography, New Media Fabrication, or choice of Special Topics).

Theatre Arts – General

Students completing a theatre arts – general minor must complete the following 18 credit hours: THA 2301 and 2303; 3 courses from THA 1101, 1102, 1103, 1104, 3105, or any DAN course (with no course counted more than once); THA 3303 or 3304 or 3305; and 6 hours of advanced THA courses (3000 or 4000 level).

Theatre Arts – Live Action Role Play and Performance for Reenactment

This minor combines traditional actor training and costume technology to emphasize full character development and portrayal for use in alternate industry, role-playing, museum and historical re-enactment, and gaming.

Required Courses (13 hours). DT 1306; THA 1301, 2101, 2302, 3341

Choice of Analysis Course (3 hours). THA 4303, 4300

Choice of Advanced Movement Course (3 hours). THA 4000 (Stage Combat), 3342

Choice of Design/Technology Course (3 hours). THA 3305, 4310, 4335 (Costume Crafts OR Stage Properties)

Theatre Arts – Sound Design

This minor is ideal for those interested in understanding differential approaches to storytelling through the medium of theatrical sound design, which includes elements of both technical study, environmental sound-scape design, sound reinforcement for live performance, mixing, and digital/electronic manipulation of sound for consumption for application in theatre and the entertainment industries.

Required Courses (12 hours). THA 1102, 2305, 3102, 3301, 4319

Electives (6 hours). Choose two from: THA 4319 (repeated), 4335 (Audio Engineering), 4335 (Max 8 and Specialized Software), 4335 (Podcast)

Theatre Arts – Stage and Screen Studies

The minor in Stage and Screen Studies allows students the opportunity to study the history, theory, and criticism of theatre and media. This minor embraces the fact that the world of performance is shifting and traditional barriers between “stage” and “screen” are more porous than ever, and acknowledges that those barriers are unlikely to return to their previous strength. Courses in this minor address the ways in which theatre and media have, and continue to, productively overlap in addition to courses that offer a sustained focus on theatre or a sustained focus on media.

Required Courses (15 hours). THA 2303, 2304, 3308, 3309, 4308 (Studies in Adaptation OR Introduction to Stage / Screen Studies)

Electives (6 hours). Choose two from: THA 3311, 4310, 4335, 4308 (Studies in Adaptation OR Introduction to Stage / Screen Studies) 4336, 4337

Theatre Arts – Stage Management and Production

The Theatre Arts – Stage Management and Production minor focuses on coursework that enables a student to specialize in management specifically for the stage by leaning into practice-based coursework associated with the School of Theatre and Dance mainstage production season. Students seeking this minor will be required to take on an internship as part of their study to reinforce the importance of skill translation to a variety of settings and theatrical genres and companies.

Required Courses (19 hours). THA 2303, 2305, 2306, 1101, 1102, 1103, 3100 (taken twice), 4208, 4000 (internship, 3 SCH).

Undergraduate Course Descriptions

Dance (DAN)

- 1100—Dance Production Activities (1).** Participation in a dance production as a performer, designer, or crew member. Must be concurrently enrolled in a dance technique course. May repeat twice for credit.
- 1106—Conditioning for Performers (1).** An introduction to systems of physical conditioning specific to the needs of dance and theatre performers. May be repeated once for credit.
- 1108—Hip Hop (1).** A study of basic hip hop dance techniques, performance, and choreography. May be repeated once for credit.
- 1200—First Year Seminar in Dance (2).** Supports students' approaches to their dance practices, reading, writing, and creative work for an informed, rigorous experience at TTU.
- 1201—Introduction to Dance Technique (2).** Prerequisite: Department permission. Introduces the fundamentals of dance technique, including introduction to and application of terminology specific to ballet, jazz, and contemporary dance forms.
- 1202—Dance Conditioning (2).** Exploration of dance conditioning practices that incorporate somatic principles that may include yoga, Pilates, Bartineff Fundamental, Ideokinesis, or other related dance training methods for cross-training, injury prevention, and technical improvement.
- 1203—Introductory Jazz (2).** [DANC1141, 1241, 1341] Prerequisite: DAN 1201 or consent of instructor. An introduction to fundamental jazz dance technique. May be repeated once for credit.
- 1204—Tap (2).** [DANC1110, 1210] A study of basic tap dance techniques, performance, and choreography. May be repeated once for credit.
- 1205—Introductory Ballet (2).** [DANC1141, 1241, 1341] Prerequisite: DAN 1201 or consent of instructor. An introduction to fundamental ballet dance technique. May be repeated once for credit.
- 1206—Musical Stage Dance (2).** Prerequisite: DAN 1203 or DAN 2203 (may be taken concurrently). An introduction to basic principles of dance styles associated with musical theatre. May repeat once; only 2 hours of credit will be applied to the B.A. in Dance.
- 1207—Introductory Contemporary Dance (2).** [DANC1145, 1245, 1345] Prerequisite: DAN 1201 or consent of instructor. A study of beginning contemporary dance technique and contemporary dance styles. May be repeated for credit.
- 2100—Company Class (1).** Prerequisites: DAN 2203, DAN 3203, DAN 4203, or DAN 2205, DAN 3205, DAN 4205; DAN 2207, DAN 3207, DAN 4207. A study of ballet, jazz and contemporary dance techniques. May be repeated.
- 2201—Anatomy and Somatic Practices (2).** Prerequisite: DT 1306. An extensive study on the human body as a tool for movement and on understanding how to develop flexibility and strength equally and safely.
- 2202—Improvisation (2).** A study of basic movement improvisation techniques and skills.
- 2203—Beginner Jazz (2).** [DANC1148] Prerequisite: DAN 1203 or consent of instructor. A study of intermediate jazz dance technique and various jazz dance styles. May be repeated for credit.
- 2204—Dance Improvisation II (2).** Prerequisite: DAN 2202. Drawing from post-modern performance practices, scores and guided improvisation are used to explore imagery, ensemble practice, and to craft compositions. May be repeated once for credit.
- 2205—Beginner Ballet (2).** [DANC1142] Prerequisite: DAN 1205 or consent of instructor. A study of intermediate ballet dance technique. May be repeated for credit.
- 2206—Music for Dance (2).** An introduction to and exploration of fundamental elements of music as they relate to the study and practice of dance.
- 2207—Beginner Contemporary Dance (2).** [DANC1146] Prerequisite: DAN 1207 or consent of instructor. A study of intermediate contemporary dance technique and contemporary dance styles. May be repeated for credit.
- 2211—Beginner Hip Hop (2).** Prerequisite: Instructor consent. Introduction to hip hop as a culturally significant dance form, art movement, and music evolving from primarily African American and Latinx communities.
- 2301—Cultural Foundations of Dance (3).** A study of dances from different cultures, their histories, and their influences on contemporary American dance and culture. Fulfills core Creative Arts requirement.
- 2303—Dance Appreciation (3).** Provides students with a general overview of dance as an art form and as entertainment, beginning with ancient forms and progressing to the present day. Fulfills core Creative Arts requirement.
- 2313—Dance Histories: 1850-Present (3).** Introduces students to a wide range of dance and dancers from the 20th and 21st centuries, from the Industrial Revolution to the Digital Revolution. Though the emphasis

is on Western concert dance, the course content considers the fusion of global techniques and critical moments in history from multiple sites throughout the world. Fulfills core Creative Arts requirement. Online.

- 2323—Hip-Hop in U.S. Popular Culture (3).** Explores the development of hip-hop through the lens of pop culture, as seen in television, film, advertising, fashion, popular music, the internet, and social media.
- 3000—Special Topics in Dance (VI-3).** Prerequisite: Consent of instructor. Introduction to special topics in dance for in-depth study. May be repeated for up to 6 credit hours with different topics; only 3 hours of credit will be applied to the B.A. in Dance.
- 3100—Dance Production Activities II (1).** Prerequisites: DAN 1100, DAN 3208, DAN 3209. Participation in a dance production as a choreographer. May be repeated once for credit. (CL)
- 3203—Intermediate Jazz (2).** Prerequisite: DAN 2203 or consent of instructor. A study of intermediate and advanced jazz dance technique, jazz dance styles, and jazz performance and choreography. May be repeated for credit.
- 3205—Intermediate Ballet (2).** Prerequisite: DAN 2205 or consent of instructor. A study of intermediate and advanced ballet dance technique, various ballet dance styles, and ballet performance and choreography. May be repeated for credit.
- 3207—Intermediate Contemporary Dance (2).** Prerequisite: DAN 2207 or consent of instructor. A study of intermediate/advanced contemporary dance technique and contemporary dance styles. May be repeated for credit.
- 3208—Principles of Choreography I (2).** Prerequisites: B or higher in DAN 2203 or DAN 3203, and DAN 2205 or DAN 3205, and DAN 2207 or DAN 3207, and DAN 2202; or consent of instructor. An introduction to and practical application of basic principles and skills of dance making. (CL)
- 3209—Principles of Choreography II (2).** Prerequisite: DAN 3208 or consent of instructor. An exploration of skills and techniques used to hone choreographic style and process. (CL)
- 3211—Intermediate Hip Hop (2).** Prerequisite: Instructor consent. Intermediate study of hip hop as a culturally significant dance form, art movement, and music evolving from primarily African American and Latinx communities.
- 3301—Writing for Dance (3).** Prerequisite: C or better in DAN 2313. An investigation of history and trends in dance theory, research, and philosophy. (CL)
- 3309—Pedagogy (3).** Prerequisite: C or better in DAN 2313. Investigation and practical application of contemporary teaching theories and methodologies.
- 3314—Dance Histories II: Cultural Foundations (3).** Prerequisite: DAN 2313. An overview of dance history with an emphasis on non-Western forms and understanding dance as a form of cultural and societal identity.
- 4000—Projects in Dance (VI-3).** Prerequisite: Consent of instructor. Designed for students interested in pursuing guided independent projects in dance. May be repeated for up to 6 credit hours.
- 4100—Repertory (1).** Prerequisites: DAN 3205, DAN 3203, DAN 3207. Offers students insight into the process of constructing choreography through learning and interpreting the work of visiting artists. Meets twice weekly.
- 4110—Capstone Concert (1).** Prerequisite: B or higher in DAN 3209 and consent of instructor. Corequisite: DAN 3100. Production of a fully realized dance concert and completion/presentation of a professional portfolio.
- 4200—Senior Capstone: Thesis and Production (2).** Prerequisites: DAN 1200, DAN 2202, THA 2305, DAN 3208, DAN 3209, THA 3306. Students undertake a research project resulting in a fully-produced choreographic work and an accompanying written and orally presented senior thesis.
- 4202—Contact Partnering (2).** Prerequisites: A or higher in DAN 2202; and DAN 3203 or DAN 4203; and DAN 3205 or DAN 4205; and DAN 3207 or DAN 4207; or consent of instructor. A study of contact partnering skills, techniques, and improvisations as practiced in contemporary dance. May repeat once for credit.
- 4203—Advanced Jazz (2).** Prerequisite: DAN 3203 or consent of instructor. A study of advanced jazz dance technique, various jazz dance styles, and jazz.
- 4205—Advanced Ballet (2).** Prerequisite: DAN 3205 or consent of instructor. A study of advanced ballet dance technique, various ballet dance styles, and ballet performance and choreography. May be repeated for credit.
- 4207—Advanced Contemporary Dance (2).** Prerequisite: DAN 3207 or consent of instructor. A study of advanced contemporary dance technique and contemporary dance styles. May be repeated for credit.
- 4210—Careers in Dance (2).** Explores contemporary practices and approaches to careers in commercial and concert dance, studios, K-12 dance education, academia, nonprofit dance, and technical theatre.

4211—Advanced Hip Hop (2). Prerequisite: Instructor consent. Advanced study of hip hop as a culturally significant dance form, art movement, and music evolving from primarily African American and Latinx communities.

4313—Topics in Dance History (3). Prerequisite: DAN 2313 or consent of instructor. An in-depth investigation of particular topics in dance history with a focus on the roles of dance in a larger cultural context. May be repeated once for credit.

Dance Theatre (DT)

1306—Movement for the Performer (3). Combines various somatic modalities with specific physical practices to facilitate performers' understanding of their bodies in movement.

2206—Musical Theatre Dance Styles (2). Prerequisite: Minimum Grade of B- in one of DAN 1203, DAN 1205, DAN 1207 or consent of instructor. Explore dance in musical theatre with training in performance skills of different musical styles, comprehension of dance vocabulary, and basic foundations of musical theatre dance.

2216—Musical Theatre Dance Repertory (2). Prerequisites: B- or higher in DAN 1203, DAN 1205, or DAN 1207, or consent of instructor. Explore the art of dance in musical theatre with training performance skills in choreography of iconic Broadway choreographers and their stylistic choices. May be repeated for credit.

3351—Theatre and Dance in the Community (3). Allows students to immerse themselves in a performing arts-related discipline from the standpoint of community engagement. Students, with faculty mentorship, will create and implement projects that integrate the performing arts within a community need or interest.

Theatre Arts (THA)

1101—Practicum: Scenery and Properties (1). Experiential learning in Scenery and Properties through theatrical production.

1102—Practicum: Lighting and Sound (1). Experiential learning in Lighting and Sound through theatrical production.

1103—Practicum: Costume and Make-Up (1). Experiential learning in Costuming and Make-Up through theatrical production.

1104—House Management Practicum (1). Opportunity to participate extensively in theatre activities in the area of house management.

1161—Musical Theatre Voice – Studio (1). Individual instruction on proper voice technique for varying musical theatre and bel canto styles increasing versatility, vocal stamina, and a varied audition repertoire.

1162—Musical Theatre Voice – Studio (1). Individual instruction on proper voice technique for varying musical theatre styles, increasing versatility, vocal stamina, and a varied audition repertoire.

1301—Voice for the Actor (3). [DRAM2336] Explores “freeing” the natural resources of the human voice with emphasis on characterization and vocal flexibility. Enrollment in noncredit lab is required. May be repeated once for credit.

1302—Movement for the Actor (3). [DRAM1322] Explores the physical skills necessary for the actor with emphasis on individual physical creativity and imagination. Enrollment in noncredit lab is required. May be repeated once for credit.

1304—Speech for the Actor (3). Designed to expand the actor's knowledge/experience in the mechanics of speech and heightened/classical language.

2101—Make-Up for Stage and Screen (1). [DRAM1141, 1341] The exploration of Stage Make-Up Techniques and application for Stage and Screen, emphasizing, make-up and character development.

2161—Musical Theatre Voice – Studio (1). Individual instruction on proper voice technique for varying musical theatre and bel canto styles, increasing versatility, vocal stamina, and a varied audition repertoire.

2162—Musical Theatre Voice – Studio (1). Individual instruction on proper voice technique for varying musical theatre and bel canto styles, increasing versatility, vocal stamina, and a varied audition repertoire.

2301—Introduction to Acting (3). Fundamental principles of acting for nonmajors, with emphasis on establishing a working vocabulary and basic acting process. Fulfills core Creative Arts requirement.

2302—Principles of Acting I (3). [DRAM1351] Explores the fundamental principles of acting. Emphasis on establishing a process and working vocabulary necessary for the profession. Enrollment in noncredit lab is required.

2303—Theatre Appreciation (3). [DRAM1310] Study and application of the various activities and methods of theatrical practice. Attendance at representative plays is required. Fulfills core Creative Arts requirement.

2304—Introduction to Cinema (3). [COMM2366; DRAM2366, 2367] A study of film and the cinematic art form. Fulfills core Creative Arts requirement.

- 2305—Elements of Theatrical Design (3).** Introduction to the elements, principles, and techniques of design for contemporary performing arts, including the design and practice of scenery, lighting, costume, and sound.
- 2306—Stage Management (3).** Prerequisite: THA 2303 (may be taken concurrently). An in-depth study of the functions and responsibilities of the stage manager in the performing arts.
- 2312—Principles of Acting II (3).** [DRAM1352] Prerequisite: THA 2302. Explores representative acting theories in practice with emphasis on given circumstances and character development. Enrollment in noncredit lab is required. May be repeated once for credit.
- 3100—Advanced Practicum: Stage Management (1).** Prerequisite: Instructor consent. Experiential learning in Stage Management through theatrical production with an emphasis on leadership opportunities and advanced assignments. May be repeated twice for credit.
- 3101—Advanced Practicum: Scenery and Properties (1).** Prerequisite: Instructor consent. Experiential learning in Scenery and Properties through theatrical production with an emphasis on leadership opportunities and advanced assignments. May be repeated twice for credit.
- 3102—Advanced Practicum: Lighting and Sound (1).** Prerequisite: Instructor consent. Experiential learning in Lighting and Sound through theatrical production with an emphasis on leadership opportunities and advanced assignments. May be repeated twice for credit.
- 3103—Advanced Practicum: Costume and Make-Up (1).** Prerequisite: Instructor consent. Experiential learning in Costuming and Make-Up through theatrical production with an emphasis on leadership opportunities and advanced assignments. May be repeated twice for credit.
- 3104—Advanced Theatre Activities: House Management (1).** Prerequisite: THA 1104. Opportunity to participate extensively in theatre activities in house management with emphasis on leadership experiences.
- 3105—Rehearsal and Performance (1).** Credit for acting or stage managing in departmental productions or acting in approved directing scenes. May be repeated twice for credit.
- 3161—Musical Theatre Voice – Studio (1).** Individual instruction on proper voice technique for varying musical theatre and bel canto styles, increasing versatility, vocal stamina, and a varied audition repertoire.
- 3162—Musical Theatre Voice – Studio (1).** Individual instruction on proper voice technique for varying musical theatre and bel canto styles, increasing versatility, vocal stamina, and a varied audition repertoire.
- 3208—Scenic Painting (2).** Prerequisites: THA 3303 and THA 3304. Study of the art and craft of scene painting styles and techniques. May be repeated once for credit.
- 3210—Auditioning (2).** Prerequisites: THA 1301, THA 2302 (may be taken concurrently). A practicum for developing audition techniques and examining guidelines for audition procedures, with emphasis on resume organization and audition material selection and performance.
- 3301—Principles of Sound Technology (3).** Prerequisite: THA 2305; majors and minors only, instructor consent outside of major. An introduction to the fundamentals of audio technology, as it relates to basic sound synthesis, basic circuitry, studio/live sound reinforcement and production process.
- 3302—Acting Period Styles I (3).** Prerequisite: THA 2312. Scene study in a spectrum of periods and styles, from the Greeks to Renaissance theatre. Enrollment in noncredit lab is required. Required of B.F.A. acting majors. May be repeated once for credit.
- 3303—Principles of Theatrical Scenery (3).** Prerequisite: C or better in THA 2303. The study of technical problems of play production. Design, construction, and painting of scenery and properties and special effects. Enrollment in noncredit lab is required.
- 3304—Principles of Theatrical Lighting (3).** Prerequisite: C or better in THA 2303. Study of the theory and practice of theatrical stage lighting. Elementary electricity, lighting control and instruments, lighting design. Enrollment in noncredit lab is required.
- 3305—Principles of Theatrical Costuming (3).** Prerequisite: C or better in THA 2303. The study of costume technology, historical dress, and costume design for the stage. Enrollment in noncredit lab is required.
- 3306—Performance Lab I (3).** An immersive learning experience in theatre and dance that explores avenues of production, theory, devising, and development with diverse professional artists in a laboratory setting. May be repeated once for credit.
- 3307—Performance Lab II (3).** An immersive learning experience in theatre and dance that explores avenues of production, theory, devising, and development with diverse professional artists in a laboratory setting. May be repeated once for credit.
- 3308—History of Theatre I (3).** A comprehensive review of world theatre from its beginning to the 17th century. (CL)
- 3309—History of Theatre II (3).** A comprehensive overview of world theatre from the 17th century to the present. (CL)
- 3311—Acting for the Camera (3).** Prerequisite: THA 2301 or THA 2302 or consent of instructor. Principles of acting for the camera, including industry terms, auditioning, and acting techniques.
- 3313—Principles of Acting III (3).** Prerequisite: THA 2312. Advanced study of Acting as influenced by Meisner, Stanislavski, and/or other eastern or western approaches to applied physical storytelling.
- 3322—Acting Period Styles II (3).** Prerequisite: THA 2312. Scene study in a spectrum of periods and styles from Restoration to contemporary theatre. Enrollment in noncredit lab is required. May be repeated once for credit.
- 3332—Acting Period Styles III (3).** Prerequisite: THA 2312. Scene study in the performance of Shakespearean texts and the conventions and performance styles of Elizabethan theatre. Enrollment in noncredit lab is required. May be repeated once for credit.
- 3341—Voice for the Actor II (3).** Prerequisite: THA 1301; consent of instructor. Exploration in extended vocal tasks (laughing, screaming, etc.) and continuation of functional breath management for acting.
- 3342—Movement II (3).** Prerequisite: Consent of instructor. A continuation of the development of the actor's physical skill, clarity, and awareness. Emphasizes integrating mind, body, voice, and emotion in all work.
- 3343—Speech for the Actor II (3).** Prerequisite: THA 1304. Introduction to common dialect/accents sound changes and modifications for theatre, film and public speaking; exploring IPA (International Phonetic Alphabet), sociolinguistic elements of language and dialect.
- 3351—Theatre in the Community (3).** Combines community service (creating theatre activities for or with non-profit community organizations that serve at-risk populations) with readings, discussions, and collaborations on societal applications for the performing arts. (CL)
- 3361—Musical Theatre Literature (3).** Classroom and studio study of musical theatre through the ages, including relevant musical/acting styles and historical context. This course has both a classroom and performance component.
- 3362—History of Musical Theatre (3).** Study of the evolution of use of music in theatre from western theatre origins to the present day modern musical with relevant historical context.
- 4000—Projects in Theatre and Dance (VI-6).** Prerequisite: Consent of instructor. Individual study under the guidance of a faculty member. May be repeated for up to 18 credit hours.
- 4110—Senior Seminar for the B.A. in Theatre (1).** A capstone course providing upper-level B.A. majors professional preparation tailored to their individual strengths.
- 4161—Musical Theatre Voice – Studio (1).** Individual instruction on proper voice technique for varying musical theatre and bel canto styles, increasing versatility, vocal stamina, and a varied audition repertoire.
- 4162—Musical Theatre Voice – Studio (1).** Individual instruction on proper voice technique for varying musical theatre and bel canto styles, increasing versatility, vocal stamina, and a varied audition repertoire.
- 4208—Professional Career Management (2).** Prerequisite: Junior or senior standing. An overview of the various aspects of developing and managing a career in the performing arts including portfolios, personal websites, resume writing, portfolio development, and contract evaluation for theatrical design and technology. [THA 5208]
- 4262—BFA Showcase (2).** Designed to train the student artist in styles/genres of musical, classical, and contemporary theatre performance focusing on ensemble and scene study/performance, culminating in a public showcase for agents and casting directors.
- 4300—Script Analysis (3).** A study of dramatic structure and methods of script analysis as a preparation for writing, directing, designing, performing, and criticizing plays. (CL)
- 4302—Stage Directing Methods (3).** Prerequisite: Junior or senior standing, THA 2302, THA 3303, THA 3304, and THA 3305. Study and practice of fundamental principles and techniques of directing. Student direction of representative plays. Enrollment in noncredit lab is required.
- 4303—Theory and Practice of Playwriting (3).** Prerequisite: THA 4300. Study of the techniques of dramaturgy. Practical work in the writing of drama. May be repeated once for credit.
- 4308—Topics in Theatre History (3).** Prerequisites: THA 4300 and either THA 3308 or THA 3309. Advanced topics course to integrate history, drama, production, and theory around a focused era or subject. May be repeated up to three times for credit.
- 4309—Scenic Design Studio (3).** Prerequisite: Instructor consent. Study of theory and practice of theatrical scene design. May be repeated twice for credit.
- 4310—Costume Design Studio (3).** Prerequisite: Instructor consent. Theory and practice of costume design for technical production. May be repeated twice for credit.
- 4311—Lighting Design Studio (3).** Prerequisite: Instructor consent. Study of the theory, process, and practice in lighting design for theatre, opera, and dance. May be repeated twice for credit.

- 4312—**Acting for the Camera II (3)**. Prerequisite: Instructor consent. The business of film acting and how to break down sides for an audition; experience, prep for, and perform mock auditions; learn the business of working in film and television.
- 4319—**Sound Design Studio (3)**. Prerequisite: Instructor consent. An exploration of the concepts and techniques of sound design for live performance structured around the typical workflow of a sound designer for a theatrical production.
- 4330—**Performance Synthesis (3)**. Prerequisite: Instructor consent. Exploration of advanced performance concepts utilized in a variety of popular global storytelling methods including Applied Meisner, Suzuki, Mask Work (Balinese, Italian/Dell Arte), Stanislavski, Viewpoints, Michael Chekhov, Fitzmaurice, Linklater, and more.
- 4335—**Topics in Design/Technology (3)**. Prerequisite: Instructor consent. An investigation of advanced topics such as design theory, specific design styles or approaches, rendering techniques, draping and patterning, costume crafts, digital technologies, etc. Topic varies. May be repeated up to eight times for credit.
- 4336—**Drafting for the Theatre and Entertainment Fields (3)**. Students will study and implement computer-aided drafting techniques specific to the theatre and entertainment fields, increasing their marketable skills. May be repeated once for credit.
- 4337—**Computer Rendering for the Theatre and Entertainment Fields (3)**. Students will study and implement computer-aided rendering techniques for theatrical presentation, increasing their marketable skills. May be repeated once for credit.
- 4338—**Hand Rendering for the Entertainment Industry (3)**. Prerequisite: Instructor consent. Advanced study of theatrical rendering/drawing, utilizing an array of techniques and 2-D media relevant to all facets of design; including storyboarding, figure drawing, proportion, perspective, and color theory. [THA 5338]
- 4340—**Period Styles for Design (3)**. Advanced and in-depth research of historical periods for use in theatrical design.
- 4342—**Movement III (3)**. Prerequisite: Instructor consent. A continuation of the development of the actor's physical skill, clarity, and awareness. Emphasizes integrating mind, body, voice, and emotion in all work.
- 4361—**Musical Theatre Performance I (3)**. Designed to train the student artist in styles/genres of musical theatre performance focusing on solo and duet performance/study, culminating in a public showcase.

J.T. & Margaret Talkington College of Visual & Performing Arts Graduate Programs

Admission to graduate programs in the J.T. & Margaret Talkington College of Visual & Performing Arts is a two-step process with requirements established by both the Graduate School and the school in which the student plans to study. Students should note carefully any particular requirements for admission established by the school in which they plan to major and contact the graduate advisor of the unit for more detailed information.

Department of Interdisciplinary Arts

Fine Arts, Ph.D. Faculties in the J.T. & Margaret Talkington College of Visual & Performing Arts offer an interdisciplinary program leading to the Ph.D. in Fine Arts. Aims of this program comprise providing a comprehensive approach to doctoral study of the arts and of aesthetic principles, and fostering leadership in the arts for emerging and established institutions.

The 60-hour program with major in Fine Arts requires a minimum of 48 semester hours of graduate coursework beyond the master's degree. Students engage a core curriculum of 15 hours that emphasizes interdisciplinarity among the arts: four required courses include a colloquium that explores disciplinary formation and types of interdisciplinary engagement; arts histories; arts in a contemporary context; and philosophical aesthetics. An additional approved topics or aesthetics course completes a student's core program. Whenever possible, entering students are strongly encouraged to enroll first in Colloquium, and then to proceed as a cohort to complete in sequence Arts in a Contemporary Context and Arts Histories. Thirty-three hours of coursework in a track (art, music, or theatre) and 12 hours of enrollment in dissertation constitute the remaining minimum hours required for the degree. Work in the disciplinary track ordinarily involves required coursework along with an individualized curriculum that allows the candidate to pursue a professional goal relating to personal interests and competencies. The residence requirement for the doctoral degree program with major in Fine Arts is fulfilled by satisfactory completion of 18 semester hours of graduate coursework during one 12-month period.

Each candidate will write a formal dissertation, ordinarily in the disciplinary track; however, students with appropriate backgrounds may be permitted to complete interdisciplinary dissertations. The nature of the dissertation project may vary among three plans: traditional or interdisciplinary research, research devoted to solving a professional problem, or research based on an internship experience. Regardless of the project chosen, however, the research will culminate in a formal document submitted to the Dean of the Graduate School.

In addition to meeting the Graduate School's minimal requirements for admission, applicants must also be approved by their major schools and by the TCVPA's Fine Arts Doctoral Program Committee. All applicants for the program must have completed a master's degree or its equivalent with emphasis in some area of the arts.

Interdisciplinary Arts Graduate Certificate. Faculties in the J.T. & Margaret Talkington College of Visual & Performing Arts offer a certificate in Interdisciplinary Arts appropriate for doctoral students interested in the relationship between art forms and their associated modes of scholarship, and/or the intersection of the arts and disciplines outside of the TCVPA.

Fine Arts, Ph.D. with a Track in Interdisciplinary Arts

The College of Visual & Performing Arts participates with the faculties in art, music, theatre & dance, and philosophy in an interdisciplinary program leading to the Doctor of Philosophy with a major in Fine Arts. Students engage a core curriculum of 15 hours that emphasizes interdisciplinarity among the arts: four required courses include a colloquium that explores disciplinary formation and types of interdisciplinary engagement;

arts histories; arts in a contemporary context; and philosophical aesthetics. An additional approved topics or aesthetics course completes a student's core program. Work within this track involves an individualized curriculum that allows the candidate to pursue a professional goal relating to personal competencies and culminates in a dissertation.

The doctoral degree program with major in Fine Arts requires a minimum of 60 semester hours; the residence requirement is fulfilled by satisfactory completion of 18 semester hours of graduate coursework during one 12-month period. Additional details appear in the introductory catalog section to the Talkington College of Visual & Performing Arts.

Concentrations

The Interdisciplinary Arts track allows students to select two or three disciplinary concentrations in support of a customized course of study. The primary concentration will be situated in one of the TCVPA's three Schools but will not be limited to the concentrations currently offered as part of that School's FADP tracks. The second (and third, if chosen) concentration can be an additional arts discipline housed within the TCVPA, or can be a non-arts discipline with which the TCVPA has an agreement relative to this degree track. The Qualifying Exam for this track will involve multiple parts: the VPA Core Exam as well as exams in each of the major fields.

Anthropology. With two concentrations, the Anthropology concentration will require 18 hours of coursework if selected as a first concentration or 15 hours if selected as a second concentration. With three concentrations, the Anthropology concentration will require 12 hours of coursework if selected as a first or second concentration, or 9 hours if selected as a third concentration.

Students selecting an Anthropology concentration should choose the required number of courses, in consultation with their Anthropology faculty mentor, from the available 5000- and 7000-level courses most relevant to their dissertation project, with consent of instructor.

Dance Studies. With two concentrations, the Dance Studies concentration will require 18 hours of coursework if selected as a first concentration or 15 hours if selected as a second concentration. With three concentrations, the Dance Studies concentration will require 12 hours of coursework if selected as a first or second concentration, or 9 hours if selected as a third concentration.

Students selecting a Dance Studies concentration should choose the required number of courses from the list of 3-hour courses below:

- 5301, 5302, 5303, 5304, 5305, 5306, 5307, 5308, 5310, 5311

Psychology. With two concentrations, the Psychology concentration will require 18 hours of coursework if selected as a first concentration or 15 hours if selected as a second concentration. With three concentrations, the Psychology concentration will require 12 hours of coursework if selected as a first or second concentration, or 9 hours if selected as a third concentration.

Students selecting a Psychology concentration should choose the required number of courses, in consultation with their Psychology Department faculty mentor, from the available 5000- and 7000-level courses most relevant to their dissertation project, with consent of instructor.

Fine Arts, Ph.D. with a Track in Art

The School of Art participates with the faculties in music, theatre & dance, and philosophy in an interdisciplinary program leading to the Doctor of Philosophy with a major in Fine Arts. Students engage a core curriculum of 15 hours that emphasizes interdisciplinarity among the arts: four required courses include a colloquium that explores disciplinary formation and types of interdisciplinary engagement; arts histories; arts in a contemporary context; and philosophical aesthetics. An additional approved topics or aesthetics course completes a student's core program. Within the disciplinary track (art), is offered a concentration termed "Critical Studies and Artistic Practice."

In addition to the fine arts core curriculum, students engage a "Critical Studies and Artistic Practice" Core of 12 hours, consisting of interdisciplinary topics in the visual arts. Beyond the two groups of core classes, students must complete a minimum of 33 hours of individualized coursework, including 12 hours of dissertation work. Individualized coursework may be chosen, with consent of the advisor, from two of the following fields of study: history of art, art education, critical studies, museum studies, arts administration, and studio art (if the student holds an appropriate

master's), as well as theatre and music. The residence requirement for the doctoral program with major in Fine Arts is fulfilled by satisfactory completion of 18 semester hours of graduate coursework during one 12-month period. This is usually accomplished with one consecutive fall-spring schedule, or summer sessions I and II consecutive with either a fall or a spring semester. The complete program is explained in the introductory catalog section to the Talkington College of Visual & Performing Arts.

For acceptance into the doctoral program, we strongly recommend but do not require that the applicant have a master's degree, or its equivalent, with emphasis in a visual arts area. Every effort is made to select candidates who show strong scholarship and professional competence. Art doctoral faculty will evaluate each applicant's professional goals and any evidence of progress toward these goals. More specific qualifications will pertain to specific career directions. Applicants must include GRE scores.

For admission into this program, the art doctoral faculty review the applicant's dossier. A personal interview is recommended. If approved, the applicant is recommended by the committee to the college's Graduate Committee for acceptance into the program. Acceptance is also contingent upon meeting the admission requirements of the Graduate School. After admission, a specific degree plan is determined.

Fine Arts, Ph.D. with a Track in Music

The School of Music participates with the faculties in art, theatre & dance, and philosophy in an interdisciplinary program leading to the Doctor of Philosophy with a major in Fine Arts. Students engage a core curriculum of 15 hours that emphasizes interdisciplinarity among the arts: four required courses include a colloquium that explores disciplinary formation and types of interdisciplinary engagement; arts histories; arts in a contemporary context; and philosophical aesthetics. An additional approved topics or aesthetics course completes a student's core program. Work within the disciplinary track of music ordinarily involves an individualized curriculum that allows the candidate to pursue a professional goal relating to personal competencies and culminates in a dissertation. Concentrations are available in musicology, music theory, music education, and arts administration. Students in the musicology concentration must demonstrate reading and writing proficiency in two foreign languages prior to completion of the program. The doctoral degree program with major in Fine Arts requires a minimum of 60 semester hours; the residence requirement is fulfilled by satisfactory completion of 18 semester hours of graduate coursework during one 12-month period. This program is explained in the introductory catalog section to the Talkington College of Visual & Performing Arts.

Fine Arts, Ph.D., with a Track in Theatre

The School of Theatre and Dance participates with the faculties in art, music, and philosophy in an interdisciplinary program leading to the Doctor of Philosophy with a major in Fine Arts. Students engage a core curriculum of 15 hours that emphasizes interdisciplinarity among the arts: four required courses include a colloquium that explores disciplinary formation and types of interdisciplinary engagement; arts histories; arts in a contemporary context; and philosophical aesthetics. An additional approved topics or aesthetics course completes a student's core program. Work within the disciplinary track of theatre ordinarily involves required coursework along with an individualized curriculum that allows the candidate to pursue a professional goal relating to personal interests and competencies. (This degree is detailed in the catalog section that introduces the Talkington College of Visual & Performing Arts.) The residence requirement for the doctoral program with major in Fine Arts is fulfilled by satisfactory completion of 18 semester hours of graduate coursework during one 12-month period.

Concentrations. Doctoral students whose disciplinary track is theatre can choose two of the following concentrations: acting/directing, arts administration, design, history/theory/criticism, playwriting. Work toward the degree is both scholarly and practical, requires a minimum of 60 semester hours at the graduate level beyond the master's degree, includes a rigorous comprehensive examination, and culminates in a dissertation that allows a choice of several avenues of research created through traditional research, professional problems, or an internship.

Graduate Course Descriptions

Interdisciplinary Visual and Performing Arts (IVPA)

- 5300—Topics in the Visual and Performing Arts (3).** Focused study of topics relevant to the arts, including, but not limited to, history, theory, and current issues such as arts management, interdisciplinary investigation, or cultural/sociological constructs. May be repeated for credit with different topic.
- 5301—Colloquium: Inter/Disciplinarity in the Arts (3).** Foundation for practice of interdisciplinary scholarship in the arts, including formation of interdisciplines, disciplinary labor of various approaches to arts research, and function of critical theory.
- 5310—Arts Histories (3).** Examines the changing nexus of disciplinarity across world-historical space and time through selected instances of visual art, music, and theatre.
- 5314—Arts Research in Contemporary Contexts (3).** Identifies and interrogates current trends in arts research and examines interdisciplinary research methodologies associated with the composition, performance, reception, and interpretation of artworks.
- 5315—Introduction to Arts Entrepreneurship (3).** Prerequisite: Consent of instructor. Arts entrepreneurship course with emphasis on identifying opportunities and goals in the arts, generating business plans, analyzing and implementing marketing strategies, and evaluating business performance. [IVPA 4315]
- 5325—Arts Entrepreneurship: ENFP (Entrepreneur Not-For-Profit) Marketing Formula (3).** Prerequisite: IVPA 5315. Capstone project for building a signature system for your business using technology and media production to professionally attract clients. [IVPA 4325]
- 5330—Introduction to the Field of Arts in Health (3).** Explores the theoretical foundations of the relationship between creativity and health and will serve as an introduction to the emerging field and practice of arts in medicine.
- 7000—Research (V1-12).**
- 8000—Doctor's Dissertation (V1-12).**

School of Art

For specific admission requirements and procedures for each program, visit the School of Art website: www.art.ttu.edu.

The School of Art offers the Master of Art Education (M.A.E.) degree; the Master of Arts (M.A.) degree in Art History; the Master of Fine Arts (M.F.A.) degree in Studio Art; a Doctor of Philosophy (Ph.D.) degree in Fine Arts (Art); and a graduate certificate in Art History, Criticism, and Theory.

Credit and Time Requirements. For most purposes, a traditionally offered face-to-face course will have a minimum of 15 contact hours for each semester credit hour. Thus, a 1-credit-hour course should meet for at least 15 hours over a long semester and a 3-credit-hour course should meet for 45 hours over the semester. Courses taught during a summer session are expected to have the same number of contact hours as if they were taught during a long semester. It is permitted to offer a course in a shortened schedule, online, or in other non-traditional formats that do not meet the contact hour requirement if the course has been reviewed by a college faculty committee and the Office of the Provost and approved as having the same learning outcomes as a comparable course delivered traditionally.

In-residence students and any students in their semester of graduation must be enrolled in a minimum of one credit-bearing semester hour. Registration in remedial and other zero-credit hour coursework must be accompanied by one credit-bearing course. Should a student drop to zero credit hours, the student will be withdrawn from the institution.

Pursuant to the Texas Tech University *Undergraduate/Graduate Catalog*, the Texas Administrative Code, and norms stated in the *NASAD Handbook*, the credit and time expectations for School of Art courses are as follows:

- For studio- or project-based courses, a standard of 30 in-class contact hours per credit hour per term is employed. Further, non-contact hour time expectations for out-of-class student activity typically range from 15 to 30 hours per credit hour per term.
- For traditionally delivered 3-credit-hour lecture- or seminar-based courses during a regular semester, students should expect to be in class for 3 hours per week and work outside of class a minimum of 6 hours per week. For 3-credit-hour studio- or project-based courses, students should expect to be in class for 6 hours per week and work outside of class between 3 and 6 hours per week.

Art Education, M.A.E.

The Master of Art Education (M.A.E.) degree program is comprised of a minimum of 36 semester hours of graduate work that includes 12 semester hours of art education core courses; 9-12 semester hours of related art courses; 6-9 semester hours as a minor (taken outside the school or with the option of classes within the School of Art); and a minimum of 6 semester hours of thesis, professional project, or studio problem leading to an art exhibition. The M.A.E. graduate coordinator will evaluate applicants who have met the minimum entrance requirements of the Graduate School. The applicant for the M.A.E. degree must submit a portfolio and/or slides of his or her art and, if possible, examples of student art to the preview committee. On the basis of these requirements, the preview committee will make recommendations concerning the acceptance of students to the M.A.E. degree program and will determine and prescribe any leveling work to be completed before or after acceptance. Teacher certification is available with an additional 18 hours of coursework and student teaching. Students applying for the Master of Arts Education degree program **do not** need to submit scores for the Graduate Record Examination.

The degree is available onsite or online.

Art History, M.A.

Art history investigates the intellectual and cultural products of human activity by focusing on artifacts, artworks, and monuments from around the globe. The Master of Arts in Art History prepares students for doctoral studies in art history and related fields. Those who earn the M.A. will be prepared for a variety of positions in museums and cultural organizations and for teaching in institutions that do not require the terminal degree.

The M.A. in Art History requires a minimum of 30 hours of postbaccalaureate study, including two required art historical theory and methodology courses (ARTH 5308 and ARTH 5309), 12 hours of graduate art history, 6 hours of the MA thesis (ARTH 6000), and 6 hours of supporting coursework (the "minor"). Additionally, the degree requires reading knowledge of at least one foreign language.

Students, in consultation with a faculty advisor, will craft a broad curriculum from the following areas: Medieval and Renaissance, Indigenous and Latin American, 18th and 19th Century, and Modern and Contemporary art and critical theory.

Arts (Studio), M.F.A.

The Master of Fine Arts degree (M.F.A.) is the recognized terminal degree in the practice of art. It is offered with a major in art and requires a minimum of 60 semester hours of graduate work.

Students may pursue tracks in the areas of Ceramics, Jewelry Design and Metalsmithing, Painting, Photography, Printmaking, or Sculpture. Graduate-level courses in Drawing and Transmedia may be selected as elective credit. Admission to the M.F.A. program normally presumes that students hold a Bachelor of Fine Arts degree in studio art. A graduate preview committee, composed of graduate faculty members in the studio area for which the applicant is seeking admission, will examine a portfolio of the student's work and may hold a personal interview. Based on these examinations, the preview committee will make recommendations concerning acceptance to the M.F.A. program and will determine and prescribe any leveling work to be completed before or after acceptance. Students applying for the Master of Fine Arts degree program do not need to submit scores for the Graduate Record Examination.

Graduate Course Descriptions

Art (ART)

- 5100—Advanced Art Unit (1).** Individual investigation in art. May be repeated for credit.
- 5102—Teaching Studio Art in Higher Education (1).** Required seminar of all studio art teaching assistants. Provides methodology and practical teaching strategies unique to teaching studio art courses.
- 5105—Organizing Public Forums About Art (1).** Graduate students gain preprofessional experience by organizing a series of scholarly public lectures, discussions, and/or events that focus on a single theme associated with art. Each course offering is unique. May be repeated.
- 5202—Art Seminar Professional Topics (2).** Prerequisite: Instructor approval required for all graduate students admitted to the M.F.A. program.

Students gain ability and experience in a variety of general skills essential for professional artists. Pass/fail grading.

- 5304—Advanced Studio: Two-Dimensional (3).** Prerequisite: Instructor consent. The development and execution of advanced two-dimensional studio problems. May be repeated for credit.
- 5305—Advanced Studio: Three-Dimensional (3).** Prerequisite: Instructor consent. The development and execution of advanced three-dimensional studio problems. May be repeated for credit.
- 5306—Graduate Topics in Studio Art (3).** Prerequisites: M.F.A. Studio candidate or instructor consent. Conceptual investigation leading to the development and execution of graduate-level projects in art. May be repeated for credit with a different topic.
- 5310—Historical and Critical Perspectives in the Visual Arts (3).** Historical and critical overview of the field including introduction to major theories and methodologies; study of particular artists, works, or movements that provide insight into specific creative techniques; basic media and techniques of the field; and interdisciplinary relationships with the other arts.
- 5314—The Visual Arts in Contemporary Context (3).** Contemporary issues in the field: current artistic trends, theory and criticism, organization (e.g., funding, administration), and cultural policy (e.g., education, assessment, multicultural issues, censorship).
- 5320—Graduate Drawing (3).** Prerequisite: Instructor consent. The development and execution of advanced problems in drawing. May be repeated for credit.
- 5322—Graduate Painting (3).** Prerequisite: Instructor consent. The development and execution of advanced problems in painting. May be repeated for credit.
- 5326—Graduate Photography (3).** Prerequisite: Instructor consent. Experimental investigation into varied aspects of photography as creative media. May be repeated for credit.
- 5328—Graduate Printmaking (3).** Prerequisite: Instructor consent. Traditional and experimental investigation into printmaking as creative media. May be repeated for credit.
- 5330—Graduate Ceramics (3).** Prerequisite: Instructor consent. The development and execution of advanced problems in ceramics. May be repeated for credit.
- 5334—Graduate Jewelry Design and Metalsmithing (3).** Prerequisite: Instructor consent. The exploration of personal direction and execution of advanced problems and techniques in metalsmithing and jewelry design. Emphasis will vary. May be repeated for credit.
- 5338—Graduate Sculpture (3).** Prerequisite: Instructor consent. The development and execution of advanced problems in sculpture. May be repeated for credit.
- 5340—Transdisciplinary Approaches to Issues in the Arts (3).** Prerequisite: Instructor consent. Instructors from two disciplines encourage the production of new knowledge and solutions by approaching a challenging issue or topic in art from multiple critical, theoretical, and historical perspectives. Team-taught course. Each offering is unique. May be repeated with change of topic.
- 5360—Seminar in Art Education (3).** Topics vary per course from faculty research to publication processes, ecology, technology, interpretation, and issues of power, privilege, and ideology. May be repeated for credit.
- 5361—Critical Pedagogy in the Visual Arts (3).** Introduction to curriculum materials and technology to develop awareness of and practice in innovative procedures for teaching visual arts disciplines. Offered online.
- 5363—Research Methods in the Visual Arts (3).** Prerequisite: Instructor consent. A survey of research methods applicable to the visual arts. May be repeated for credit. Offered online.
- 5364—Feminist Research Methodologies in Art Education (3).** Prerequisite: Instructor consent. This interdisciplinary course focuses on the vision and methods that feminist scholars use to study feminist issues within and across a range of traditional disciplines.
- 5390—Graduate Transmedia Art (3).** A graduate-level exploration of technology in contemporary art. May be repeated for credit.
- 6000—Master's Thesis (V1-6).**
- 6001—Master's Thesis: Professional Project (V1-6).** Prerequisites: ART 5363, 9 hours of degree program course work, and advisor approval. The professional project requires a written proposal, an oral defense of the proposal, a final written report, and an oral defense of the report. May be repeated 3 times for credit up to 6 hours.
- 6002—Master's Thesis: Exhibition (V1-6).** Prerequisites: ART 5363, 9 hours of degree program course work, and advisor approval. A written proposal of an artistic problem leading to an exhibition which connects to teaching and culminates in a public lecture during the exhibition opening. May be repeated 3 times for credit up to 6 hours.
- 6301—Master's Report (3).** Prerequisite: Instructor consent. May be repeated for credit.
- 7000—Research (V1-12).** Prerequisite: Instructor consent.
- 8000—Doctor's Dissertation (V1-12).** Prerequisite: Instructor consent.

Art Education (ARTE)

- 5315—Integrating Instructional Technology into Learning and Teaching Visual Arts (3).** Instructional and studio emphasis on technology in the visual arts.

Art History (ARTH)

- 5301—Art History Graduate Internship (3).** Prerequisites: Minimum 9 hours of 5000 level Art History. This competitive unpaid internship provides Art History grad students with 90 hours of supervised professional field work in a museum/gallery.
- 5305—Topics in Art History (3).** Prerequisite: Instructor consent. Topics or issues in art historical research that present current disciplinary developments, areas of expertise, new directions of study, etc. May be repeated for a maximum of 12 credit hours.
- 5308—Methods and Theories in Art History (3).** Prerequisite: Instructor consent. Graduate seminar course that exposes students to main methodology and theory of history of art from classical antiquity to the twentieth century.
- 5309—Theories of Contemporary Art (3).** Prerequisite: Instructor consent. Advanced survey of contemporary art theory and critical methods, with emphasis on the impact of the post-structuralist critique of representation.
- 5320—Arts of Medieval Europe (3).** Prerequisite: Instructor consent. Multiple critical, theoretical, and historical approaches to the art and architecture of Medieval Europe. May be repeated with change of topic up to 9 hours.
- 5335—Hemispheric Arts of the Americas (3).** Prerequisite: Instructor consent. Advanced seminar focusing on major indigenous, diasporic, and transcultural artistic movements and critical theories across the Americas. May be repeated for credit.
- 5340—Renaissance and Baroque Art (3).** Prerequisite: Instructor consent. Examination focusing upon major developments in Renaissance or Baroque painting, sculpture, architecture, and art criticism. May be repeated for credit.
- 5363—18th and 19th Century Art (3).** Prerequisite: Instructor consent. Principal developments in 18th and 19th century painting, sculpture, and architecture. Emphasis on Europe and the United States. May be repeated for credit.
- 5382—Modern and Contemporary Art (3).** Prerequisite: Instructor consent. An examination of major developments in modern and contemporary painting, sculpture, graphic, and ceramic art. May be repeated for credit.
- 6000—Master's Thesis (V1-6).** Prerequisite: Instructor consent. Research contributing toward the master's thesis.
- 7000—Research (V1-12).** Prerequisite: Instructor consent. Research in an area of art history in which the student has achieved competence. May be repeated for credit.

School of Music

The School of Music offers a Master of Music Education (M.M.Ed.) degree and a Master of Music (M.M.) degree with six concentrations; a Doctor of Philosophy degree (Ph.D.) in Music Education, and a Doctor of Philosophy in Fine Arts (Music) with four tracks; a Doctor of Musical Arts (D.M.A.) degree with four tracks; and five graduate certificates.

Admission. For admission to any graduate program in music, the applicant must fulfill all requirements of the Graduate School as well as School of Music requirements. Applicants for the Ph.D. in Fine Arts (Music) program must be recommended by the faculty and approved by the college Graduate Committee. GRE scores are not required for admission to any School of Music graduate program. Students beginning a graduate degree program take placement tests in music history and music theory, as well as in applied music if the major is performance or in music education if the major is music education. Texas Tech graduates with a bachelor's degree in music or music education are also required to take the placement examinations. All placement and preliminary examinations are administered by the School of Music during the registration period of each semester. Deficiencies, if any, may be removed by appropriate leveling work. The prospective graduate student should also consult the Graduate School section of this catalog for admissions requirements.

Credit and Time Requirements. Pursuant to the Texas Tech University *Undergraduate/Graduate Catalog*, the Texas Administrative Code, and norms stated in the *NASM Handbook*, the credit and time expectations for School of Music graduate courses are as follows:

- For studio- or project-based courses, in-class contact hours typically include a combination of individual meetings and group activities that may vary by studio discipline and instructor. Total time expectations for in- and out-of-class student activity typically range from 45 to 60 hours per credit hour per semester.
- For traditionally delivered 3-credit-hour lecture- and seminar-based courses during a regular semester, students should expect to be in class for 3 hours per week and work outside of class a minimum of 6 hours per week. For 3-credit-hour studio- and project-based courses, students should expect to devote 9 to 12 hours to the course per week.

Music, M.M.

The M.M. in Music degree offers concentrations in composition, conducting, music theory, musicology (all 30 hours), pedagogy (36 hours), and performance (32 hours). The degree consists of a minimum of 30 hours of graduate work, including recitals for the performance concentration, thesis for the musicology and music theory concentrations, and an original composition for the composition concentration. Students in the musicology concentration must demonstrate reading proficiency in one foreign language prior to completion of the program. The Master of Music degree in pedagogy (string or keyboard) may be attained with a 36-hour program without a thesis. The Master of Music degree in performance (jazz, keyboard, collaborative piano, string, voice, or winds/percussion) may be attained with a 32-hour program that requires two public performances. Both performances must be judged satisfactory by the student's applied music faculty committee. Students in the conducting concentration (choral, orchestral, or wind) may present either two performances or one with a paper in support of the performance.

Music Education, M.M.Ed.

The Master of Music Education degree may be attained with a 30-hour program that includes a thesis or a 36-hour program without a thesis.

Admission. Some applicants for admission to graduate programs in music are required to submit scores for the General Test of the Graduate Record Examination. Students applying for the Master of Music in a performance concentration or the Doctor of Musical Arts degree programs do not need to submit these scores. Students beginning a graduate degree program take placement tests in music history and music theory, as well as in applied music if the major is performance or in music education if the major is music education. Texas Tech graduates with a bachelor's degree in music or music education are also required to take the placement examinations. All placement and preliminary examinations are administered by the School of Music during the registration period of each semester. Deficiencies, if any, may be removed by appropriate leveling work. The prospective graduate student should also consult the Graduate School section of this catalog for admissions requirements.

Musical Arts, D.M.A.

The Doctor of Musical Arts degree is a 45-hour program past the master's program oriented toward professional practice in music emphasizing the creation or performance of musical works and the application and transmission of knowledge about musical works. Tracks are available in performance, conducting, composition, and piano pedagogy. A non-dissertation program, the degree culminates in four doctoral performance projects which are designed to suit the professional interests and aspirations of the student. A research document is a component of the final doctoral project. Additional information may be obtained from the School of Music.

Language Requirements. No foreign language requirement exists for the Doctor of Musical Arts degree, the Master of Music degree, or the Master of Music Education degree. Vocal performance students and choral conducting students must demonstrate singing proficiency in French, German, and Italian.

Music Education, Ph.D.

The Doctor of Philosophy in Music Education focuses on research and music educator preparation. Students engage in a core curriculum of 20-24 core hours that emphasizes expertise in music education content knowledge, expertise in music educator preparation, and music education research design and methods. Students elect one or two cognates by taking at least 9 hours in the cognate area. Cognates might include inter-

disciplinary studies in fine arts, music education curriculum, conducting, performance, exceptionalities, music theory, musicology, ethnomusicology, psychology, or any other student-selected/faculty-approved cognate. The Ph.D. in Music Education requires a minimum of 60 semester hours. The minimum residence requirement is fulfilled by satisfactory completion of 18 semester hours of graduate coursework during one 12-month period, but full residency is highly encouraged for this degree because of the required experiences with music teacher preparation activities.

Graduate Course Descriptions

Music (MUSI)

- 5100—Teaching Music in College (1).**
- 5216—Graduate Studies: Choral Techniques I (2).** Materials, repertoire, and procedures for developing instructional programs in choir. Field experiences required. For graduate music certification candidates only.
- 5217—Graduate Studies: Choral Techniques II (2).** Materials, repertoire, and procedures for developing instructional programs in choir. Field experiences required. For graduate music certification candidates only.
- 5218—Graduate Studies: Orchestra Techniques I (2).** Materials, repertoire, and procedures for developing instructional programs in orchestra. Field experiences required. For graduate music certification candidates only.
- 5219—Graduate Studies: Orchestra Techniques II (2).** Materials, repertoire, and procedures for developing instructional programs in orchestra. Field experiences required. For graduate music certification candidates only.
- 5225—Graduate Studies: Band Techniques I (2).** Materials, repertoire, and procedures for developing instructional programs in band. Concert band is emphasized. Field experiences required. For graduate music certification candidates only.
- 5226—Graduate Studies: Band Techniques II (2).** Materials, repertoire, and procedures for developing instructional programs in band. Concert band is emphasized. Field experiences required. For graduate music certification candidates only.
- 5237—Graduate Studies: Music for Children I (2).** Contemporary pedagogical approaches to music teaching in primary grades; skill development in children emphasized. Field experiences required. Music majors only; teaching certification candidates only.
- 5238—Graduate Studies: Music for Children II (2).** Contemporary pedagogical approaches to music teaching in primary grades; skill development in children emphasized. Field experiences required. Music majors only; teaching certification candidates only.
- 5305—Administration in Music (3).** Study of basic structure of music programs in higher education; organizational characteristics related to curriculum, budget, and personnel; leadership principles; and administrative activities.
- 5306—Music for Students with Exceptionalities (3).** Strategies and materials for assisting students from special populations to learn music. Includes characteristics of various disabilities and current policy affecting exceptional students.
- 5307—Current Issues in Music (3).** Current issues in policy, learning, schools, and society affecting student musical learning. Continually revised based on current events. May be repeated for credit.
- 5310—Historical and Critical Perspectives in Music (3).** Historical and critical overview of the field including introduction to major theories and methodologies, study of particular artists, works or movements that provide insight into specific creative techniques, basic media and techniques of the field; and interdisciplinary relationships with the other arts. Not for music majors.
- 5314—Music in Contemporary Context (3).** Contemporary issues in the field including current artistic trends, theory and criticism, organization (e.g., funding, administration), and cultural policy (e.g., education, assessment, multicultural issues, censorship).
- 5341—Introduction to Technology for Musicians (3).** Introduction to technological resources for all aspects of the musical experience, primarily from the standpoint of the Macintosh operating system. Topics covered include computer-assisted instruction, music printing, MIDI sequencing, digital sampling, HyperCard software development, and nonmusic topics such as word processing, graphics, multimedia, and electronic communication.
- 5342—Applications of Technology in Music I (3).** Current technological applications in music settings related to learning music. Personal applications in educational settings emphasized. Continually updated to reflect current technological trends in music.
- 5343—Applications of Technology in Music II (3).** Prerequisite: MUSI 5342 or consent of instructor. Advanced technological applications in music

settings related to learning music. Personal applications in educational settings emphasized. Continually updated to reflect current technological trends in music.

7000—Research (V1-12).

7301—Music Bibliography and Research (3). Required of all doctoral students.

8000—Doctor's Dissertation (V1-12).

8301—Doctoral Performance Project I (3). Individual directed project in music performance or composition.

8302—Doctoral Performance Project II (3). Individual directed project in music performance or composition.

8303—Doctoral Performance Project III (3). Individual directed project in music performance or composition.

8304—Doctoral Performance Project IV (3). Individual directed project in music performance or composition.

8305—Doctoral Pedagogy Project I (3). Individual directed project in pedagogy of music.

8306—Doctoral Pedagogy Project II (3). Individual directed project in pedagogy of music.

Music Applied (MUAP)

5001—Applied Music (V1-4).

5101—Dimensions of Performance (1). An interactive course open to all performers. Expressive movement, group dynamics, and free improvisation are used to maximize the spontaneity, confidence, and creativity of performers. May be repeated for credit.

5122—Introduction to Diction for Collaborative Pianists (1). Focuses on correct pronunciation and transcription of the Italian, German, and French languages as applied to lyric diction from the viewpoint of a collaborative pianist.

5202—Collaborative Skills for Pianists (2). Advanced study and practice of professional skills in accompanying and chamber music. These include score preparation, elements of texture and style, and relating effectively to soloists.

5205—Jazz Improvisation (2). Prerequisite: Consent of instructor. Study and application of techniques of improvisation in jazz performance. May be repeated for credit.

5302—Applied Music Literature (3). Prerequisite: The undergraduate music literature courses required on the B.M. or B.M.E. degree. Advanced study of literature for the various applied music areas. Individual research projects and class performance.

5303—Pedagogy of Applied Music (3). Advanced study in the pedagogy of applied instrumental or vocal masterworks from easy-moderate to difficult. Emphasis in the pedagogy of interpretation, technique, and memorization.

5305—String Methods and Etude Materials (3). Advanced studies in the materials, methods, procedures, philosophies, and/or techniques of string pedagogy. Final demonstration project, research paper, and/or recital required.

5306—Conducting Techniques and Analysis (3). Structural analysis and study of conducting problems. Individual instruction course. Participation in a major ensemble required. May be repeated with consent of instructor.

5307—Conducting Techniques and Analysis (3). Structural analysis and study of conducting problems. Individual instruction course. Participation in a major ensemble required. May be repeated with consent of instructor.

5308—Choral Conducting Methods (3). Emphasizes choral performance excellence in schools through analysis and rehearsal of conducting techniques. May be repeated for credit.

5309—Orchestral Conducting Methods (3). Emphasizes orchestra performance excellence in schools through analysis and rehearsal of conducting techniques. May be repeated for credit.

5310—Band Conducting Methods (3). Emphasizes band performance excellence in schools through analysis and rehearsal of conducting techniques. May be repeated for credit.

5312—Fundamentals of Piano Pedagogy (3). Advanced study of the principles of effective teaching in the piano studio as related to the fundamentals of skill learning, history/development of piano pedagogy, and practical/professional issues of music teaching.

5313—Pedagogical Literature for Keyboard Instruction (3). Investigation of elementary and intermediate levels of piano methods, repertoire, and pedagogical procedures.

5314—Problems in Keyboard Pedagogy (3). Advanced studies in the materials, methods, procedures, philosophies, and/or techniques of keyboard pedagogy. Final demonstration project, research paper, and/or recital required.

5315—Instructional Effectiveness in the Piano Studio and Classroom (3). Materials, methods, and procedures for teaching class and applied

piano, with particular attention to managing electronic keyboard laboratories and applied studios.

5323—Diction for Singers (3). A comprehensive study of the rules of lyric diction using the International Phonetic Alphabet to analyze and transcribe vocal repertoire. Topics will rotate accordingly: even-numbered years—Italian, German, and French; odd-numbered years—Czech, Russian, and Spanish.

5333—Dynamics of Studio Teaching (3). Practical exploration of the successful teacher-student relationship in the music studio, applicable to any performance area. Topics include learning styles, personality types, communication skills, and motivation.

6301—Master's Recital I (3). Capstone requirement for master's degree in music performance.

6302—Master's Recital II (3). Capstone requirement for master's degree in music performance.

Music Composition (MUCP)

5308—Composition (3). Prerequisite: C or better in MUCP 4402 or equivalent. Advanced writing for chamber ensembles, orchestra, band, chorus, or electronic media. May be individual study courses. May be repeated for credit.

5309—Composition (3). Prerequisite: C or better in MUCP 5308. Advanced writing for chamber ensembles, orchestra, band, chorus, or electronic media. May be individual study courses. May be repeated for credit.

5312—Advanced Orchestration (3). Scoring for large instrumental, choral, and dramatic ensembles. May be an individual study course.

5321—Recording Technology and Portfolio (3). Explores the latest creative methods and technology in sound and video productions including live concert recording/filming, ADR for Anime, and more. May be repeated for credit. [MUCP 4321]

5331—Music Informatics I (3). Explores new possibilities in a combined field of music, science, and technology, through developing electronic musical instruments using Arduino and other devices. [MUCP 4331]

5332—Music Informatics II (3). Prerequisite: MUCP 5331. Explores advanced use of technology in music and media productions through developing new electronic musical instruments/devices using Arduino/Teensy, sensors, and 3D Printer. [MUCP 4332]

5341—Computer Music I (3). Prerequisite: Graduate-level composition student or consent of instructor. Techniques and tools for creating computer-generated music, including audio recording, sampling, signal processing, MIDI sequencing, and sound design.

5342—Computer Music II (3). Prerequisite: MUCP 5341 (or equivalent) or consent of instructor. Continuation of MUCP 5341. Offers more advanced topics in computer music, including interactive media, live acoustic instruments with electronic tape, advanced sound design, and software applications.

6000—Master's Thesis (V1-6).

Music Education (MUED)

5031—Graduate Topics in Music Education (V1-3). Examination of music education issues, including creativity, special populations, psychology of music, and learning theories. Discussion based. Different topic each semester. May be repeated for credit. May enroll in 1-3 hours with permission of instructor.

5315—Integrating Instructional Technology into Learning and Teaching in Music (3). Prerequisite: Post-Baccalaureate Teacher Certification candidate. Corequisite: MUED 3311 or graduate equivalent. Introduces music teacher candidates to current instructional technology with integration strategies based on specified learning theories.

5323—Teaching in the Music Classroom: Diversity, Equity, and Excellence (3). Prerequisite: Post-Baccalaureate Teacher Certification candidate. Corequisite: MUED 3312 or graduate equivalent. Organizing classrooms and rehearsals responsive to student learning styles, ethnic/cultural backgrounds, special needs in music settings.

5325—Topics in Choral Music Education (3). Emphasizes curriculum, organization, and development of performance excellence among choral groups in schools. May be repeated for credit.

5326—Topics in Band Music Education (3). Emphasis upon the organization and development of instrumental groups in the public schools, and upon development of performance excellence by these groups. May be repeated for credit.

5327—Topics in Orchestral Music Education (3). Emphasizes curriculum, organization, and development of performance excellence among orchestras in schools. May be repeated for credit.

5332—Learning and Music (3). Study of psychological and sociological responses to the arts. Emphasis given to the research that informs psychology of the arts as applied to music teaching and learning.

- 5333—**Tests, Measurements, and Evaluations in Music (3)**. A study of general descriptive, statistical, qualitative and quantitative measures as applied to music. Emphasis is placed on reading and conducting original music education research.
- 5340—**Foundations of Music Education (3)**. History of American music education and the philosophies that inform current practice. Emphasis is on the relationship between historical/philosophical thought and current music education issues.
- 5344—**Special Problems in Music Education (3)**. Prerequisite: Consent of advisor. Investigation and execution of special problems in the field of music education. May be repeated with a new problem.
- 5345—**Topics in Kodaly Pedagogy (3)**. Prerequisite: Consent of instructor. Kodály pedagogical approach to music teaching to all ages. Materials, strategies, and sequences of Kodály approach emphasized.
- 6000—**Master's Thesis (V1-6)**.
- 6031—**Doctoral Seminar in Music Education (V1-3)**. Emphasizes issues (educator preparation, early career success, tenure, publication, professionalism, ethics) surrounding early career Ph.D. recipients. Variable credit. May be repeated for credit.
- 6346—**Teacher Preparation in Music Education (3)**. Emphasizes scholarship regarding coursework for and observation of pre-service music educators. Cornerstone course of Ph.D. in Music Education. May be repeated for credit.

Music Ensemble (MUEN)

- 5101—**Choir (1)**. Auditions required.
- 5102—**Opera Theatre (1)**. Auditions required.
- 5103—**Band (1)**. Auditions required.
- 5104—**Orchestra (1)**. Auditions required.
- 5105—**Jazz Ensemble (1)**. Auditions required.
- 5106—**Chamber Ensemble (V1-6)**. By-audition placement into a non-conducted ensemble consisting of three to 12 members.
- 5110—**Medium Ensemble (V1-6)**. Auditions required.

Music History and Literature (MUHL)

- 5300—**Graduate Survey of Western Music (3)**. Repertoire, context, and composers. Prerequisite to graduate music history unless waived by placement examination or by consent of Musicology Division. Not intended to fulfill major or minor graduate degree requirements.
- 5306—**Pedagogy of Music History (3)**. Prepares graduate-level music students for the experience of teaching a college-level course in musicology or music history.
- 5311—**Symphonic Literature (3)**. Studies in the development of orchestral music from the Classic Period to the present.
- 5312—**Chamber Music Literature (3)**. Studies in the development of chamber music from the Classic Period to the present.
- 5313—**Great Composer Seminar (3)**. Critical examination of the works of a single composer, e.g., Bach, Haydn, Mozart, Beethoven, Wagner, Verdi, Brahms, or Stravinsky. A different composer will be studied each time the course is offered. May be repeated for credit.
- 5320—**Topics in Music History (3)**. Topics include specific styles, ethnomusicology, vernacular musics, graduate history review, advanced research projects, and others as needed. May be repeated for credit on different topic; 12 maximum credit hrs.
- 5321—**Constructs in Ethnomusicology (3)**. Detailed examination of topics in ethnomusicology (the study of musical behavior in its original contexts) and its history, philosophies, methods and areas of study.
- 5322—**Historical Performance Research and Practice (3)**. Study of the use of period instruments, original sources, and musical techniques contemporary to medieval, Renaissance, and Baroque musics.
- 5323—**Music, Folklore and Tradition in Irish Cultural History (3)**. Intensive topics seminar on music and oral culture in Ireland. Enhanced learning experience combining history folklore, ethnomusicology, literature, and geography. Includes field trip.
- 5324—**Transcription and Analysis of Non-Western Musics (3)**. Prerequisite: Successful completion of graduate music history and theory placement exams. Provides students with professional skills in transcription and analysis of vernacular musics and the theoretical frameworks for understanding those works. Required for the Ph.D. in musicology.
- 5325—**Music Paleography, Codicology, and Notation, 900-1750 (3)**. Provides graduate-level music students with research tools essential to the interpretation and analysis of early music manuscripts, treatises, and notated scores.
- 5326—**Music and the Contemplative Mind (3)**. Prerequisites: Successful completion of Music History Placement Exam or MUHL 5300. Examines historical accounts, current scientific research, case studies

of contemporary musicians, and a diversity of practices that can be considered contemplative. [MUHL 4300]

- 5330—**Music in the United States (3)**. A study of 20th century American music together with its historical and cultural background.
- 5331—**Seminar in the History and Literature of Music: Medieval (3)**. May be repeated with consent of instructor.
- 5332—**Seminar in the History and Literature of Music: Renaissance (3)**. May be repeated with consent of instructor.
- 5333—**Seminar in the History and Literature of Music: Baroque (3)**. May be repeated with consent of instructor.
- 5334—**Seminar in the History and Literature of Music: Classical Period (3)**. May be repeated with consent of instructor.
- 5335—**Seminar in the History and Literature of Music: Romantic Period (3)**. May be repeated with consent of instructor.
- 5336—**Seminar in the History and Literature of Music: Twentieth Century (3)**. May be repeated with consent of instructor.
- 5337—**Seminar in the History and Literature of Music: World Music (3)**. May be repeated with consent of instructor.
- 5338—**Seminar in the History and Literature of Music: Postromanticisms in Music (3)**. Prerequisite: MUHL 5300 or instructor consent. Provides graduate music majors with a survey and critical exploration of Western music and musical cultures during the "post-Romantic" era in music, from ca. 1848–1914.
- 5339—**Music and American Radical Politics (3)**. Intensive seminar exploring interactions of American music, cultural history, and radical thought across the political spectrum since the founding of the Republic.
- 6000—**Master's Thesis (V1-6)**.

Music Theory (MUTH)

- 5300—**Studies in Harmony and Voice Leading (3)**. Common-practice harmony, counterpoint, and figured bass. Prerequisite to enrollment in graduate music theory unless waived by placement or preliminary examination or by consent of the theory-composition division. Not intended to fulfill major or minor graduate degree requirements.
- 5301—**Dictation and Sight-Singing (3)**. Studies in melodic, harmonic, and contrapuntal dictation, complemented by the sight-singing of equivalent materials. Prerequisite to enrollment in graduate music theory unless waived by placement examination or by consent of the division chair. Does not fulfill graduate degree requirements.
- 5303—**Forms and Styles in Tonal Music (3)**. Prerequisites: Successful completion of MUTH 5300 and MUTH 5301 or instructor consent. A study of forms and styles in tonal music from the 17th century to the present.
- 5305—**Styles in Wind Literature of the 19th and 20th Centuries (3)**. Prerequisites: Successful completion of MUTH 5300 and MUTH 5301 or instructor consent.
- 5306—**Pedagogy of Theory (3)**. A survey of the materials, organization, techniques, and problems of college freshman and sophomore theory courses.
- 5310—**Modal Counterpoint (3)**. A study of 16th century vocal counterpoint, beginning with the principles of melodic writing and concentrating on the analysis and synthesis of polyphonic textures, as found in the motet and the Mass.
- 5311—**Tonal Counterpoint and Fugue (3)**. The analysis and synthesis of 18th century counterpoint in two to four voices, concentrating upon the instrumental style and techniques of the invention and the fugue.
- 5315—**Analysis of Tonal Music (3)**. Prerequisite: Successful completion of MUTH 5300 and MUTH 5301 or consent of instructor. A study of analytic techniques and their application in tonal music.
- 5316—**Analysis of Post-Tonal Music (3)**. Prerequisite: Successful completion of MUTH 5300 and MUTH 5301 or consent of instructor. Covers materials and techniques employed by composers writing post-tonal music. [MUTH 4316]
- 5317—**Advanced Rhythm and Meter (3)**. Prerequisites: Successful completion of MUTH 5300 and MUTH 5301 or instructor consent. Examines advanced concepts of rhythmic organization and metrical perception and how they influence performance decisions, focusing primarily on tonal music. Includes source readings of text, analytical exercises, listening exercises, and conducting.
- 5318—**Analysis of Popular Music (3)**. Prerequisite: Successful completion of Graduate Music Theory Placement Exam. Engages recent scholarship to explore issues of timbre, meter, form, melody, and harmony in a wide variety of popular styles since the 1950s.
- 5320—**Special Topics in Music Theory (3)**. Topics include history of music theory, advanced analysis projects, and other topics as needed. Some topics offered on-line. May be repeated for credit on different topic.
- 5321—**History of Music Theory I: Antiquity to 1600 (3)**. Prerequisites: Successful completion of MUTH 5300 and MUTH 5301 or instructor consent Seminar on the conceptual foundations of Western music in

philosophy, politics, religion, and practice from antiquity through the Renaissance.

5322—History of Music Theory II: 1600 to 1950 (3). Prerequisites: Successful completion of MUTH 5300 and MUTH 5301 or instructor consent. Seminar on the major traditions and developments in Western music theory, philosophy, and pedagogy during the past four centuries.

5325—Music Cognition: Music and Your Mind (3). Prerequisites: Successful completion of MUTH 5300 and MUTH 5301 or instructor consent. Intensive seminar on the perception and cognition of music, focusing on music's direct relationship to our basic physiological and psychological mechanisms.

6000—Master's Thesis (V1-6).

School of Theatre and Dance

The School of Theatre and Dance offers a Master of Arts (M.A.) degree in Dance Studies; a Master of Arts degree in Theatre Arts; the Master of Fine Arts (M.F.A.) degree in Theatre Arts with four concentrations; and a Doctor of Philosophy (Ph.D.) degree in Fine Arts (Theatre).

For admission to any graduate program in theatre, the applicant must fulfill all requirements of the Graduate School as well as school requirements.

Applicants for the Ph.D. program must also be recommended by the faculty and be approved by the college Graduate Committee. All incoming students must take at the start of the fall term a school diagnostic examination that will provide a basis for faculty decisions about leveling courses that may be required and credits that may be transferred.

All graduate students are expected to participate actively in the school's production program.

Credit and Time Requirements. Pursuant to the Texas Tech University *Undergraduate/Graduate Catalog*, the Texas Administrative Code, and norms stated in the *NAST Handbook*, the credit and time expectations for the School of Theatre and Dance graduate courses are as follows:

- For studio-based courses, in-class contact hours typically include a combination of individual meetings and class-based activities that may vary by studio and instructor. Total time expectations for in- and out-of-class student activity typically range from 45 to 60 hours per credit hour per term.
- For traditionally delivered 3-credit-hour lecture- and seminar-based courses during a regular semester, students should expect to be in class for 3 hours per week and work outside of class a minimum of 6 hours per week. For 3-credit-hour studio- and project-based courses, students should expect to devote 9 to 12 hours to the course per week.

Dance Studies, M.A.

The emphasis of the online Master of Arts in Dance Studies at Texas Tech University is to prepare the dance educator for teaching and scholarship. This program offers investigation into a range of disciplinary practices and includes in-depth study of dance histories, arts advocacy, pedagogies, and critical reading and writing. Students also investigate movement practices in the contexts of choreography, anatomy and kinesiology, somatics, and collaboration. Completion of a written thesis or thesis project in a specialized area is required. The online Master of Arts in Dance Studies requires a minimum of 36 semester hours of graduate-level course requirements, normally constituting a three-year course of study. The curriculum includes 15 credit hours of face-to-face instruction offered in summer terms and 21 credit hours of online coursework offered during fall and spring terms. The program is designed for working professionals who are encouraged to complete one online course each fall and spring in addition to the summer face-to-face components. It is expected that accepted students will have an undergraduate degree in dance or will have experience in dance (e.g., professional performance, choreography, training, and/or criticism) substantial enough to adequately prepare them for the required curriculum.

Upon completion of this degree, students will be able to:

- Engage in rigorous investigation of dance in diverse artistic, cultural, and educational contexts.
- Synthesize and demonstrate the creative, physical, and intellectual skills needed to research, write about, discuss, teach, and practice dance at the graduate level.
- Distinguish and analyze individual areas of interest relative to the student's professional goals in the form of a thesis project.

Theatre Arts, M.A.

The Master of Arts in Theatre Arts degree prepares students for further graduate work (in either a Ph.D. or an M.F.A. program), for teaching at the community college or secondary level, and for analytical positions within the profession (such as those of dramaturg or literary manager). The M.A. in Theatre Arts is a bridge from undergraduate theatre arts study to professional achievements in a multitude of areas.

The Master of Arts in Theatre Arts requires a minimum of 36 semester hours beyond the Baccalaureate. This includes 15 hours of M.A. core courses, 15 hours of electives, and 6 hours of thesis work. Completion of the M.A. degree requires a thesis and a final examination.

The core requirements of the M.A. in Theatre Arts develop key competencies in academic research and writing, while electives ensure a familiarity with a broad range of artistic and administrative skills. Students, in consultation with a faculty advisor, undertake wide ranging coursework that students to explore future possibilities. In addition to rigorous preparation for scholarly work, our program uniquely offers the opportunity for students to pursue their interests in acting, directing, design, playwriting, and arts administration.

Theatre Arts, M.F.A.

The Master of Fine Arts in Theatre Arts is a terminal professional degree that provides for intensive study in four areas of specialization: performance and pedagogy, design, playwriting, or arts administration. A minimum of 60 hours is required beyond the baccalaureate. Completion of the M.F.A. degree requires a written thesis or a thesis project, favoring project-based work within the design and performance and pedagogy tracks.

Graduate Course Descriptions

Dance (DAN)

5301—Foundations and Qualitative Research Methodologies (3). Students will explore a range of interpretive and observational approaches within qualitative research philosophies and methodologies.

5302—Applied Anatomy and Movement Analysis (3). Covers a broad base of knowledge ranging from an overview of functional skeletal and muscular anatomy to a broad treatment of multiple methods of movement analysis.

5303—Dance Histories I: 1850-Present (3). Traces the history of concert dance as a series of lineages and ruptures, with bodies responding to and shaping the world they inhabit, and provides students with a wide range of historical examples from the 20th and 21st centuries, from the Industrial Revolution up to the Digital Revolution.

5304—Advocacy and Collaboration in Dance (3). Students will study the importance and impact of external environments and support structures on the formation, production, and funding of dance activities. Students will learn about various collaborative models that support art-making with a specific focus on dance.

5305—Choreography: Practices and Perspectives (3). Students will explore pedagogical, philosophical, aesthetic, and cultural approaches and issues in choreography. Investigating the political and artistic stakes of choreography, students will consider differing dance-making strategies in diverse communities and for diverse purposes.

5306—Practical Issues in Dance Pedagogy (3). An investigation of contemporary practices in K-12 dance education, including researching state and national standards for dance education and exploring strategies for resource management and program advocacy.

5307—Critical Inquiry – Dance (3). Students will look at multiple uses of dance, concentrating on its functions as a conceptual term, an object of analysis, and a mode of interpretation.

5308—Dance Histories II: Culture and Globalization (3). Focuses on a study of non-Western dance forms with emphasis on the role(s) of dance in defining and maintaining cultural and social identities, the investigation of dance as a form of cultural preservation, and the potential of dance as a vehicle for transformative social change.

5309—Thesis Project Proposal (3). A research lab in which students will learn and demonstrate the core skills necessary to draft a thesis or alternative thesis project.

5310—Applied Somatics (3). Addresses issues related to ideas of psychophysical unity. Topics include a survey of somatic practices, embodiment theories, learning methodologies, and the implications of physical and experimental learning in a variety of contexts.

- 5311—**Dance in Communities (3)**. Students will explore the relationship between dance and communities, specifically focusing on performances' stakes and responsibilities in the construction of culturally diverse communities.
- 5312—**Thesis Project Presentation (3)**. Comprises student presentation and defense of a scholarly thesis or alternative thesis project.

Theatre Arts (THA)

- 5208—**Professional Career Management (2)**. Prerequisite: Instructor consent. A synthesis of the various aspects of managing a career in the performing arts including portfolios, personal websites, resume writing, portfolio development, and contract evaluation for theatrical design and technology. May be repeated for credit. [THA 4208]
- 5300—**Dramatic Analysis (3)**. Study of dramatic structures and script analysis methods as a preparation for writing, directing, designing, performing, and criticizing plays.
- 5301—**Playwriting I (3)**. Prerequisite: THA 5300. Basic graduate-level study in the theory and practice of playwriting, focusing on crafting the short play.
- 5302—**Playwriting II (3)**. Prerequisite: THA 5301. Instruction and practice in crafting the full-length play script. May be repeated once for credit.
- 5303—**Scenic Design Studio (3)**. Advanced work in the process of designing for the stage. Includes work on models, sketches, renderings, and theatre drafting. May be repeated for credit.
- 5304—**Lighting Design Studio (3)**. Advanced work in theatrical lighting design with an emphasis on the use of light as artistic expression. May be repeated for credit.
- 5305—**Costume Design Studio (3)**. Advanced work in the total process of designing costumes for the stage through design projects for representative plays. May be repeated for credit.
- 5306—**Theatre History Survey (3)**. A survey of the major periods and traditions of world theatre and various approaches to theatre historiography. Required of all theatre arts doctoral students.
- 5307—**Performance Lab I (3)**. An immersive learning experience in theatre and dance which asks students to explore avenues of production, theory, devising, and development with diverse professional artists in a laboratory setting. May be repeated once for credit.
- 5308—**Advanced Performance Lab II (3)**. An immersive learning experience in theatre and dance which asks students to explore avenues of production, theory, devising, and development with diverse professional artists in a laboratory setting. May be repeated once for credit.
- 5309—**Seminar in Theatre History (3)**. Consideration of the theatre of a specific historical epoch, or the comparative study of the theatre of several periods. May be repeated for credit.
- 5310—**Historical and Critical Perspectives in Theatre Arts (3)**. Historical and critical overview of the field including introduction to major theories and methodologies; study of particular artists; works or movements that provide insight into specific creative techniques; basic media and techniques of the field; and interdisciplinary relationships with the other arts.
- 5311—**Advanced Directing (3)**. Prerequisite: Undergraduate directing course or consent of instructor. Study of procedures and techniques of directing. Enrollment in noncredit lab is required.
- 5312—**Theatre Management (3)**. Study of university, community, and professional theatre management with special attention to policy making, audience building, play selection, staff organization, budget preparation, and relationships with governmental and private agencies and foundations.
- 5313—**Dramatic Criticism (3)**. Principles of dramatic criticism from Aristotle to the present day.
- 5314—**Theatre Arts in Contemporary Context (3)**. Study of contemporary issues in the field: Current artistic trends, theory and criticism, organization (e.g., funding, administration), and cultural policy (e.g., education, assessment, multi-cultural issues, censorship).
- 5315—**Reading Playscripts (3)**. Reading and analysis of numerous playscripts and a study of the way in which they are produced in performance.
- 5316—**Marketing the Arts (3)**. An approach to the field of current theories and practices of arts marketing.
- 5317—**Funding the Arts (3)**. A seminar in locating and arranging funding for arts organizations.
- 5318—**Advocacy for the Arts (3)**. Study of the importance and impact of external environments on the formation, production, and funding of arts activities.
- 5319—**Sound Design Studio (3)**. An exploration of the concepts and techniques of sound design for live performance structured around the typical workflow of a sound designer for a theatrical production.
- 5320—**Theatre Planning (3)**. A study of the planning and design of theatre facilities.
- 5321—**Playwriting III (3)**. Prerequisite: C or better in THA 5301 or consent of instructor. Study of selected topics in the theory and practice and process of playwriting.
- 5322—**New Script Production (3)**. Practical work for playwrights participating in the production of their original full-length scripts.
- 5323—**Collaboration for Theatre (3)**. Prerequisite: Instructor consent. An in-depth and practical study of the collaborative process and interpersonal relationships within the entertainment industry from the research to the production phase.
- 5324—**The Teaching of Acting (3)**. Study of modern theories and practices of acting and actor training. Design of the acting course.
- 5325—**Period Styles in Acting (3)**. Scene study in various periods ranging from Ancient Greece through Medieval, Spanish Golden Age, Jacobean, Restoration, and beyond. Enrollment in non-credit lab is required.
- 5326—**Seminar in Directing Methods (3)**. A study of the methods of selected modern directors and directing theories.
- 5327—**Special Problems in Directing (3)**. Individual directing project on or off campus. Project must be approved by instructor before enrollment.
- 5328—**Special Problems in Playwriting (3)**. Prerequisite: THA 5301. Advanced study in developing, writing, and revising play scripts. May be repeated for credit.
- 5329—**Advanced Scene Study (3)**. Scene study in realist and contemporary acting styles. Various approaches to acting in 20th century drama. Enrollment in non-credit lab is required. Required of all first-year acting and directing M.F.A. students.
- 5330—**Design Principles and Process (3)**. Prerequisite: Instructor consent. Overview of the design process for theatre and entertainment industries, development of aesthetic, professional process/practice and diverse range of industry opportunities.
- 5331—**Studies in Contemporary Theatre (3)**. A seminar in contemporary theatre theories and practices.
- 5333—**Directing Heightened-Language Theatre (Pre-Modern to Contemporary) (3)**. A study of approaches to directing pre-modern and contemporary heightened-language theatre for present-day audiences.
- 5334—**Topics in Acting (3)**. In-depth workshop in specific acting styles, genres, national and ethnic theatres, and techniques or training.
- 5335—**Topics in Design/Technology (3)**. Prerequisite: Instructor consent. In-depth exploration and research of advanced topics, including design styles, rendering techniques, costume crafts, digital technologies, etc. with a pedagogical component. Topic varies. May be repeated up to eight times for credit.
- 5336—**Drafting for the Theatre and Entertainment Fields (3)**. Students will study and implement computer-aided drafting techniques specific to the theatre and entertainment fields, increasing their marketable skills.
- 5337—**Computer Rendering for the Theatre and Entertainment Fields (3)**. Students will study and implement computer-aided rendering techniques for theatrical presentation, increasing their marketable skills. May be repeated once for credit.
- 5338—**Hand Rendering for the Entertainment Industry (3)**. Advanced study of theatrical rendering/drawing, utilizing an array of techniques and 2-D media relevant to all facets of design; including storyboarding, figure drawing, proportion, perspective, and color theory. [THA 4338]
- 5339—**Applied Studio for Theatre and the Entertainment Industry (3)**. Prerequisite: Instructor consent. Collaborative and interdisciplinary studio, addressing a range of genres, periods, and applications of design within theatre and entertainment industries. May be repeated up to 4 times for course credit.
- 5340—**Period Styles for Design (3)**. Advanced and in-depth research of historical periods for use in theatrical design.
- 5341—**Seminar in Dramatic Theory (3)**. Prerequisite: An undergraduate major in theatre arts or consent of instructor. The consideration of a specific theoretical approach to the theatre or the comparative study of several theoretical approaches. May be repeated for credit.
- 5343—**Graduate Movement for the Actor (3)**. Physical story-telling with complimentary focus on conditioning, balance, well-being, and nutrition. Students learn fundamental principles of human gesture, neutral/epic body, while developing keener kinesthetic awareness.
- 5344—**Pedagogy in Theatre Arts (3)**. Introduces educational methodologies and offers opportunities for in-class teaching with an emphasis on creating life-long learners of the theatrical disciplines in higher education.
- 5345—**Graduate Voice for the Actor (3)**. Integration of healthy vocal use and principles to support storytelling, song, and vocal extremes. Research into a variety of voice practitioners and their methods.
- 5346—**Graduate Speech for the Actor (3)**. Acquisition and modification of global accents and dialects for storytelling, and research into existing sociolinguistic stereotypes. Students will broaden understanding of the International Phonetic Alphabet.

- 5350—**Seminar in Theatre Research Methods (3)**. Examination of research and critical processes in dramatic history, theory, and performance or production through current philosophical orientations, methodologies, and techniques.
- 5351—**Theatre and Dance in the Community (3)**. Allows students to immerse themselves in a performing arts-related discipline from the standpoint of community engagement. Students, with faculty mentorship, will create and implement projects that integrate the performing arts within a community need or interest. May be repeated once for credit.
- 5354—**Pedagogy II: Preparing for the Teaching Profession (3)**. Prerequisite: THA 5344 is recommended but not required. Introduces future educators to the duties and responsibilities of the junior college and university system and prepares them to apply for jobs in the education field.
- 5372—**Dramaturgy (3)**. Study of the role of the dramaturgy in the theatre with emphasis on research, artistic collaboration, and the development of new works.
- 6000—**Master's Thesis (V1-6)**.
- 6001—**Internship (V1-6)**. Prerequisite: Consent of instructor. Service assignment in an arts organization for students in the graduate theatre and dance program. May be repeated for credit.
- 7000—**Research (V1-12)**. Prerequisite: Consent of instructor.
- 8000—**Doctor's Dissertation (V1-12)**.

Graduate Certificates

Graduate certificates offered by the TCVPA include the following:

Art History, Criticism, and Theory

The Graduate Certificate in Art History, Criticism, and Theory (GCAHCT) comprises a minimum of 15 semester hours of graduate work that includes 6 semester hours of required courses and 9 semester hours of related courses in art history and criticism chosen in consultation with the coordinator of GCAHCT. In addition, 6 credit hours of undergraduate or graduate art history are required as prerequisites. Students who have met the minimum entrance requirements of the Graduate School and are currently enrolled in a TTU graduate program should apply to the GCAHCT coordinator for entry into the program. The Graduate School will issue the certificate upon completion of the required 15 semester hours of coursework. Courses completed as requirements for another program (e.g., a minor field of study) can be applied toward the certificate.

Students must complete five of the following, including two of the three courses marked with an asterisk: ART 5340*; ARTH 5305, 5308*, 5309*, 5320, 5340, 5363, 5382, 7000.

Theresa.Flanigan@ttu.edu

Arts Administration

This graduate certificate is open to all master's or doctoral students who wish to further their knowledge in the area of arts administration. This 15-hour certificate's curriculum is flexible within required competency areas, allowing enrolled students to pursue individualized professional goals, while drawing on courses from numerous departments outside the Talkington College of Visual and Performing Arts.

Arts Administration Courses (Choose 2): THA 5316, 5317, 5318; IVPA 5300.

Public and Nonprofit Administration and Management Courses (Choose 3): MGT 5371; ENGL 5391; PUAD 5342, 5340, 5337, 5335; MUSI 5305; MUSM 5326.

Arts and Health

The Graduate Certificate in Arts and Health will provide students with an overall understanding of the relationship between the creative arts and healthcare, while gaining an overview of healthcare settings and the rapidly increasing presence of arts practices (including therapies, interventions, and programming) in those settings. Through the elective portion of the certificate, students will have the option to focus on administration and funding, research, or arts delivery.

Required Courses (6 hours): IVPA 5330; PUAD 5332.

Electives (9 hours): ART 5360 (Limited to topics in health, wellness, or community engagement); IVPA 5300 (Psychology Across the Arts), 7000 (Arts in Health Practicum); PUAD 5319, 5334; THA 5318.

Arts Entrepreneurism

The Graduate Certificate in Arts Entrepreneurism is designed for those who wish to expand their practical skills in the sought-after and competitive field of arts production, allowing creative artists, as well as engineers or others with interest in creative industries, to focus on advanced training and performance experience in contemporary arts production with appropriate emphasis in each student's area of interest. Courses completed as requirements for another program can be applied toward the certificate.

The 9-hour Graduate Certificate in Arts Entrepreneurism is designed for students who wish to be proactive in an industry that is still reeling from the pandemic to create their own businesses using new metrics for now and future audiences. The next years will be challenging, both in the arts sector and in the broader global community. At the same time this provides a rare opportunity for the sector to revisit what success looks like and how we measure it and how we will share our creative work. The certificate focuses on:

- how to launch a business in the arts as a solopreneur or entrepreneur
- how to produce and publish your work in order to create residual income

The certificate combines arts with business acumen, basic production and publication, pricing, sales that are aesthetically aligned to your audience, messaging, and entrepreneurial marketing. Anyone who wants to expand their practical skills in the sought-after and competitive field of arts production and publication will be able to set up their career as a business through completing this certificate.

The production skills and marketability for someone with this certificate allows creative artists, as well as engineers or others with interest in creative industries, to focus on advanced training, production, and performance experience in contemporary arts production with appropriate emphasis in each student's area of interest.

The purpose of the Graduate Certificate in Entrepreneurism is to provide a contemporary and stimulating atmosphere in which students can successfully further their careers. The program is designed to prepare the strategic business practices, and the production skills needed in today's performance and composition careers, both as skilled creative artists or engineers pursuing basic production and marketing expertise as non-musicians. Understanding the arts and media as a producer, collaborative educator, scholar, and performer will, in turn provide valuable service for the college as collaborative support for a variety of special performance production. This dynamic improves professional confidence in all types of partnership and reinforces the service aspect of the creative arts in our communities.

Required Courses: IVPA 5315, 5325; 3 hours from: MUSI 5305; THA 5312.

Collaborative Piano

The 15-hour Graduate Certificate in Collaborative Piano is designed for students who wish to expand their practical skills in sought-after and competitive field of collaborative and chamber music performance. It is intended as either an add-on to another graduate degree, or an alternative to master's and doctoral degrees for students who show the potential and motivation to achieve successful collaborative career but do not wish to engage in the complete curriculum required in standard graduate degree programs.

The resume-strengthening certificate allows students to focus on advanced training and performance experience in all aspects of collaborative education with appropriate emphasis in each student's area of interest.

Required Courses: MUAP 5001 (two enrollments, 4 SCH total), 5202 (two enrollments, each will conclude with a performance project.); 6 hours chosen from: MUAP 5302 (vocal, song), 5302 (vocal, opera), 5302 (instrumental I), 5302 (instrumental II); 1 hour chosen from MUEN 5106, MUSI 7000 (vocal accompanying).

Historical Performance Research and Practice

The 15-hour Graduate Certificate in Historical Performance Research and Practice provides graduate music majors with the option of tailoring their coursework and medium ensemble participation to focus on the research and performance of medieval, Renaissance, Baroque, and early Classic era music. This resume-enhancing certificate is especially recommended for musicology, theory, choral, or vocal/instrumental students who wish to

obtain the in-demand skills required of specialists in the dynamic area of early music scholarship and historical performance.

Required Courses: MUHL 5322, 5325.

Electives: One from MUHL 5331, 5332, 5333, 5334; one from: MUTH 5310, 5311, 5320; one from: MUHL 5313, 5320, 5321, MUTH 5320; and three semesters of MUEN 5110 (TTU Collegium Musicum/Early Music Ensemble).

angelamariani.smith@ttu.edu

Interdisciplinary Arts

The 15-hour graduate certificate in Interdisciplinary Arts is open to any doctoral-level student and consists of the five-course core curriculum from the Talkington College of Visual & Performing Arts' existing Fine Arts Doctoral Program. Four required courses include a colloquium that explores disciplinary formation and types of interdisciplinary engagement; arts histories; arts in a contemporary context; and philosophical aesthetics. One additional approved topics or aesthetics course completes the certificate. This certificate is appropriate for students interested in the relationship between art forms and their associated modes of scholarship, and/or the intersection of the arts and disciplines outside of the TCVPA.

Required Courses: IVPA 5301, 5310, 5314.

Elective courses: One from PHIL 5310 or 5314, and one from IVPA 5300 (approved topic); PHIL 5310, 5314.

Contact: Peter Martens | 806.834.1870 | peter.martens@ttu.edu

Music Cognition

The graduate certificate in Music Cognition introduces students to interdisciplinary research in music and the cognitive sciences. Students will examine the sensory and cognitive processes involved in perceiving, composing, and performing music, and conduct laboratory research using both behavioral and computational methods. The certificate benefits students who are 1) preparing for commercial jobs in the music technology sector and/or subsequent post-doctoral studies in fields like psychology, cognitive neuroscience, psychoacoustics, and music information retrieval; or 2) wishing to broaden their academic/research experience and credentials while pursuing careers in traditional academic disciplines like music theory, music education, music composition, musicology, or performance.

The certificate is open to students from the Schools of Music and Psychology, as well as from other degree programs at Texas Tech University. No formal training in music is required, but an ability to read Western notation is strongly encouraged. Students seeking the certificate in Music Cognition must complete 15 hours selected from the following lists.

Required Courses:

1. Foundational (3 hours): MUTH 5325; IVPA 5300 (Psychology Across the Arts); MUED 5332
2. Applied Research (6 hours): STAT 5384, 5385; EPSY 5380*, 5381*, 5382*; PSY 5367*, 5447*, 5448*, 5460*, 5465*, 5485*, 5490*, 5495*, 5496*
3. Laboratory Experience (3 hours): MUSI 7000; IVPA 7000.

Electives: 3 hours from MUED 5333; IVPA 5300 (The Arts as (Big!) Data); MUCP 5342. Courses from 1 and 3 may also apply.

* Graduate students from psychology and music education are required to take PSY and EPSY courses, respectively.

Music Technology

The graduate certificate in music technology seeks to educate students in various musical topics and issues. Students will understand music informatics and other associated technologies within two required courses and choose a single elective within several available topics.

Students may also select an internship to work within the School of Music's recording studio, providing real-world, hands-on experience to better prepare them for professions in the field.

Required Courses: MUCP 5321, 5331. Choose one from: MUCP 5322, 5331; MUSI 7000 (Internship in Recording Studio, 3 hrs) OR MUSI 7000 (Special Project, 3 hrs); MUCP 5341.

Music Theory Pedagogy

The Graduate Certificate in Music Theory Pedagogy prepares graduate music students for teaching music theory at the collegiate level. The *Journal of Music Theory Pedagogy* reports that 80% of the music theory courses in the U.S. are being taught by people who did not major in music theory. This means that faculty in other areas of music are frequently asked to teach music theory courses. Students who complete this certification will have a tangible record of accomplishment and preparation for these duties. Students in this certificate program will take Pedagogy of Music Theory as well as their choice of other music theory courses so that they are engaged with current trends in research and curriculum. This certificate is open to all students enrolled in a graduate music degree.

Required Courses: MUTH 5306 and 9 hours of any 5000-level MUTH courses.

Opera

The Certificate in Opera is a collaboration with the Amarillo Opera and is designed for post-baccalaureate voice students who seek a real-world application of their performance degrees in the context of a professional opera company. The certificate can be undertaken along with a graduate degree or as a stand-alone certificate and can be completed in 13-15 hours.

Required Courses: MUAP 5001 (2 enrollments required) (Can be taken at 2 or 3 SCH. The optional 3rd SCH would add a weekly hour-long session with faculty vocal coach in addition to weekly studio lesson with voice faculty.); MUEN 5102 (2 enrollments required); MUSI 7000 (2 SCH required) (must be taken concurrently with MUEN 5102); MUAP 5323.

Contact: Peter Martens | 806.834.1870 | peter.martens@ttu.edu

Piano Pedagogy

This graduate certificate is designed for the professional piano teacher. The 16-hour curriculum provides enrichment and skill development in artistic and instructional capacities.

Required Courses: MUAP 5001 (4 SCH), 5312, 5313.

Electives: MUAP 5333, 5315, 5302; other courses approved by head of the Piano Pedagogy division.

Contact: Dr. Carla Davis Cash | 806.834.3924 | carla.d.cash@ttu.edu

Woodwind Specialist

The 14-hour Woodwind Specialist graduate certificate is designed to support the development of multiple woodwind skills for those seeking careers as doublers either in the jazz or music theater medium, or to support the development of multiple woodwind skills for music education professionals seeking to develop areas of specialty.

The certificate is comprised of two options, each containing five existing applied courses in the current School of Music Program.

Option 1: Four-Instrument Concentration. 8 credits of Applied Lessons (MUAP 5001: four different instrumental sections, four enrollments of 2 credits, for a total of 8 credits), outside of the student's home performance area to be selected from applied flute, oboe, clarinet, bassoon, and/or saxophone.

6 credits from two 3-credit enrollments in Pedagogy of Applied Music (MUAP 5303) and/or Applied Music Literature (MUAP 5302) in areas of the student's choice outside his/her home area of specialty.

Option 2: Two-Instrument Concentration. 8 credits of Applied Lessons (MUAP 5001: two different instrumental sections, four enrollments of 2 credits, for a total of 8 credits) outside of the student's home performance area to be selected from applied flute, oboe, clarinet, bassoon, and/or saxophone.

6 credits from two 3-credit enrollments in Pedagogy of Applied Music (MUAP 5303) and/or Applied Music Literature (MUAP 5302) in areas of the student's choice outside his/her home area of specialty.

Total credit hours for both options: 14 credit hours

Texas Tech University Online

Multiple colleges offer online minors, degree programs, certificate and certificate preparation programs that make pursuing an education through Texas Tech University possible at any location. Online and distance learning programs at Texas Tech are delivered through a variety of modalities, including synchronous or asynchronous instruction and interactive video conferencing.

Students pursuing degree programs via online and distance learning at Texas Tech are held to the same entrance requirements as students in Lubbock. Courses, curriculum, and graduation requirements in each of the online and distance programs meet the same standards as those in Lubbock.

In addition to the undergraduate minors, additional concentrations are offered online for the Bachelor of Arts in Interdisciplinary Studies, the Bachelor of Science in Leadership Studies, the Bachelor of Science in Human Sciences, and the Bachelor of General Studies.

The following programs are available online or have distance components available to students. For more detailed information about the specific program and sample degree plans, contact the advisor of the program or visit the department's website.

TTU Regional Sites

Brian Still, Ph.D., Vice Provost

Box 42019 | Lubbock, TX 79409-2019

T 806.742.2184 | F 806.742.1331

brian.still@ttu.edu | www.elearning.ttu.edu/regional

The Office of the Provost coordinates all programs offered at regional sites in El Paso, Fredericksburg, Highland Lakes (Marble Falls), Junction, and Waco. Programs at these sites provide distance students with opportunities to earn undergraduate and graduate degrees with a blended delivery of face-to-face, interactive video conferencing, and online classes. Students may complete their degrees without the need to relocate or travel long distances from their homes and work.

Texas Tech University partners with regional community colleges for lower-division coursework and offers upper-division courses to complete a bachelor's degree at the TTU regional sites. Graduate degrees are also offered through participating colleges at Texas Tech.

Students pursuing degree programs at TTU regional sites are held to the same entrance requirements as students at the Lubbock campus. Courses, curriculum, and graduation requirements at each site meet the same standards as those in Lubbock and are often taught by Lubbock faculty.

Students at regional sites can design a unique degree by selecting one of the following degree programs: the B.S. in Human Sciences, B.G.S., the B.A. in Interdisciplinary Studies, the B.S. in University Studies, and B.A.A.S. Students select three minors to create a comprehensive program of study. The TTU regional sites offer numerous minors and concentrations either at the site or online for the previously mentioned degrees.

Not all minors are available at each regional site. Visit with one of the advisors at the regional sites to determine what minors are available at each site. The B.G.S. degree does require that at least two of the concentrations be within the College of Arts & Sciences. The B.S. in Human Sciences degree does require that at least two of the concentrations be within the College of Health and Human Sciences.

Texas Tech University Center at Junction

806.742.6434 | www.junction.ttu.edu

TTU Center at Junction offers an intensive two-week session in May (Intersession) as well as two three-week summer sessions in June and July that allow students to take undergraduate and graduate coursework. Texas Tech University Center at Junction is available to Texas Tech student organizations, faculty groups, researchers, and other professional organizations for workshops, retreats, and special activities. A wide range of housing accommodations and full-meal service is available year-round for groups of 15 to 200 people. Recreational opportunities include kayaking or tubing the South Llano River, hiking, a sand volleyball court, an interpretive trail system, and a swimming pool.

TTU Center at Junction is also home to the Llano River Field Research Station and the Outdoor Learning Center. The Llano River Field Research Station supports research on climate, rivers, watershed management, and environmental education. The nationally recognized, award-winning Outdoor Learning Center is a hands-on program for K-12 teachers and students that stimulates imagination and understanding of difficult abstract STEM concepts.

* Requires students to travel occasionally to the Lubbock campus.

University Studies

Patrick Hughes, Ph.D., Dean

Drane Hall, 2515 15th St. | Box 41006

Lubbock, TX 79409-1006

About University Studies

University Studies, part of Texas Tech Online, will offer online students a signature experience with academic degree programs, academic minors, and concentrations. University Studies will offer all students prior learning experience academic credit with every online degree program. Additionally, University Studies offers flexible accelerated course schedules, micro-credential short courses that are capable of conversion for credit, and self-paced courses. University Studies faculty craft engaging and dynamic fully online, and on-demand, content for a flexible learning experience. All academic degrees are taught by credentialed faculty effective at online teaching.

Programs

University Studies administers the following degrees:

- Bachelor of Applied Arts and Sciences in Applied Leadership
- Bachelor of Arts in Human Resources Development
- Bachelor of Arts in Interdisciplinary Studies
 - Concentrations in Integrative Studies, Interdisciplinary Diversity Studies, Human Resource Development, Organizational Leadership
- Bachelor of Science in Leadership Studies
 - Concentrations in Integrative Studies, Interdisciplinary Diversity Studies, Human Resource Development, Organizational Leadership
- Undergraduate Minor in Computing Applications
- Undergraduate Minor in Human Resource Development
- Undergraduate Minor in Integrative Studies
- Undergraduate Minor in Integrative Studies in Healthcare Organizations
- Undergraduate Minor in Legal Studies
- Undergraduate Minor in Organizational Leadership
- Undergraduate Certificate in Strategic Leadership in Human Resource Development

Undergraduate Program

Applied Leadership, B.A.A.S.

Students seeking the 120-hour Bachelor of Applied Arts and Sciences (B.A.A.S.) degree in Applied Leadership must first obtain an applied associate's degree from an approved institution. This degree program allows students who have earned an Associate of Applied Arts or Applied Sciences from a two-year institution to complete a Bachelor of Applied Arts and Sciences in Applied Leadership. The degree is not open to Texas Tech students seeking to change their major.

The program is administered by the Office of the Provost and interested students should contact the student services center in University Studies, 332 Drane Hall, T 806.742.7100, www.depts.ttu.edu/universitystudies/.

Degree Requirements

1. Major Requirements

- **Occupational Specialization, up to 45 Hours.** Comprised of courses related to a specific occupation, field, or subject. The occupational concentration typically consists of field-specific coursework completed for an Associate of Applied Science

(A.A.S.) degree at a community college. Active-duty military or veterans might receive credit for technical or other formal training courses under this component of the degree plan. Students need to provide a DD214 to the B.A.A.S. advisor for consultation regarding academic credit to apply toward the degree.

- **Professional Development Concentrations, 24 Hours.** Consists of two separate concentrations that serve to enhance the skills acquired by the student through an applied associate's degree or are complementary themes of interest. Requires completion of 24 hours in two separate concentrations of 12 hours each.

- **Concentration I:** 12 semester hours from University Studies
- **Concentration II:** 12 semester hours from University Studies

2. **Core Curriculum Requirements, 44 Hours.** Select any approved Texas Tech courses deemed by a B.A.A.S. advisor as appropriate to the degree. Caution must be exercised to ensure the student fulfills the university requirement of 40 hours of junior/senior-level coursework.

4. **Communication Literacy Requirement.** The Communication Literacy course for the Applied Leadership major is INTS 4351, which may be included in one of the concentration areas.

Interdisciplinary Studies, B.A.

Interdisciplinary studies is an interdisciplinary major that encourages integrative learning and fosters new areas of learning and discovery by facilitating student learning across department and college boundaries. Administered by University Studies within the Office of the Provost, a Bachelor of Arts in Interdisciplinary Studies provides a unique course of study that allows students flexibility in choosing three distinct areas of study. Each area is referred to as a "concentration." Although the three concentrations exist as separate programs within the university, they are normally unavailable as a combination of courses in an existing degree program. For example, a student might focus on a specialization in environmental journalism with concentrations in journalism, plant and soil sciences, and environmental toxicology. Each area exists in different colleges as part of separate degree programs, but only a major in interdisciplinary studies will allow students to study the three concentrations as a unit.

Coursework in the B.A. degree must total 120 semester hours. Prerequisites for courses selected in the areas of concentration must be completed and, depending on the concentration, may not count toward the 18-hour minimum per area of concentration. A minimum of 40 upper-division hours is required for the degree.

Students seeking a B.A. in Interdisciplinary Studies will be required to make a C or better in 6 hours of Integrative Studies: INTS 3300 and INTS 4350; these courses must be taken in succession. Concentration areas must combine in such a way that they provide an integrative or thematic specialization without significantly replicating any existing departmental major. Students must be in good academic standing to apply for the major.

Students interested in an interdisciplinary studies degree must begin the process by contacting an interdisciplinary studies degree advisor to organize a course of study that meets existing university, degree, and minor requirement standards. With the degree advisor's assistance, each student must develop a degree plan that consists of (1) a concentration declaration form and (2) a degree plan incorporating a listing of all courses completed and/or in progress as well as a listing of all intended or enrolled courses related to the degree and major. A student choosing to change an already established area of concentration must be appropriately advised by an interdisciplinary studies advisor and submit a new degree plan. A final audit of degree requirements will be conducted prior to the start of a student's final term.

Credit by Exam. Seniors must receive written permission from the University Studies Student Services Office prior to attempting credit by examination and provide proof of notification upon registering for an exam in Academic Testing Services.

Grading Practices. Credits for a course in which a grade of D is earned may not be applied toward fulfillment of any concentration area. No course may be used more than once on a degree plan unless it has been approved by the University Studies Student Services Office or has the statement "may be repeated for credit" in the official published course description.

Final 30 Hours. The final 30 credit hours applied to a degree program must be completed with Texas Tech University enrollments. Credit for courses

TOTAL HOURS: 120

Additional credits may be required to meet Texas Tech University Graduation requirements, as applicable.

* Texas Tech University requires 44 hours of core curriculum in order to graduate from the institution.

Years three and four represent additional credits to be taken at Texas Tech. The total required number of hours is 120. Students must be advised by a pre-transfer advisor or online student advocate in TTU Online before starting the program at Texas Tech.

Prerequisites for courses selected in the concentration areas must be completed and, depending on the concentration, may not count toward the 12-hour minimum in each concentration.

If an entering student has not completed two years of a single foreign language in high school or has not transferred at least two semesters of a single foreign language from another college, the student must complete at least two semesters (or its equivalent) of a single foreign language at the first-year level as a graduation requirement. Visit Academic Requirements for more information.

For the Life and Physical Sciences core requirement, 6 hours will fulfill the core curriculum requirements, but Texas Tech also requires for graduation a 2-hour science laboratory that is not part of the core curriculum.

taken at other institutions must have prior written approval from the Office of the Provost.

Communication Literacy Requirement. Communication Literacy courses for the Interdisciplinary Studies major are INTS 3300 and INTS 4350.

Degree Plan and Intention to Graduate. Students are encouraged to file degree plans with their academic advisor as soon as their academic goals are clearly defined and no later than two subsequent semesters after earning 45 credit hours. The Intent to Graduate form must be submitted no later than the last day of classes of the term prior to graduation. Students must be enrolled at Texas Tech University in their graduation semester.

Leadership Studies, B.S.

The Bachelor of Science (B.S.) in Leadership Studies guides and encourages the exploration of organizations and their influence on leadership in a local, state, national, and global economy. The curriculum blends course options to include articulation of educational, professional, and personal experiences through an interdisciplinary course sequence. In addition, students may choose elective courses to facilitate an interest in and appreciation for, the beneficial application of operational concepts through leadership. Students will learn leadership theories and concepts that address the needs of private, nonprofit, and government sectors.

The B.S. in Leadership Studies will provide graduates with the opportunity to advance in their careers as professionals. This degree will also provide post-traditional students with an opportunity to understand the roles and personal dynamics required to be an effective organizational leader.

Leadership Studies is an interdisciplinary major that encourages integrative learning and fosters new areas of learning across college and department boundaries. Two of the three concentration areas will be selected from the University Studies that include teaching students to understand leadership theory applied to practice: Organizational Leadership, Integrative Studies, and Human Resources Development. (See suggested course options below). Additionally, a student will select a third concentration area of their choosing from any concentration offered by academic departments at Texas Tech University. ***Note:** GPA restrictions and prerequisites apply to the third area of concentration as determined by the academic college. For information on other minor and concentration areas, see individual program sections of the catalog.

Students are required to complete coursework for three concentration areas with a minimum of 12 upper-division credit hours in each concentration, core curriculum requirements, Texas Tech University graduation requirements (including 40 hours of upper-division and foreign language), and applicable elective credit for a total of 120 semester hours. Students may pursue an academic minor instead of elective credit.

Communication Literacy Requirement. Communication literacy in the Bachelor of Science in Leadership Studies is assessed INTS 4351: Capstone in Applied Leadership.

Grading Practices. Credits for a course in which a D is earned may not be applied toward fulfillment of the major course requirements.

Degree Plan and Intention to Graduate. Students are encouraged to file a degree plan with the University Studies Student Services office as soon as their academic goals are defined, but no later than two subsequent semesters after earning 45 credit hours. The Intent to Graduate form on Raiderlink must be submitted no later than the last day of classes of the term before graduation. Students are encouraged to consider an academic minor to complement their major in Leadership Studies.

Two of the three concentration areas will be selected from Organizational Leadership, Integrative Studies, or Human Resources Development.

Concentrations for Interdisciplinary Studies, B.A. or Leadership Studies, B.S.

Human Resource Development

The human resource development (HRDV) curriculum focuses on the skills and knowledge necessary for interacting with people in various work settings. The courses in the program draw on theory from the social and

behavioral sciences and organizational leadership. HRDV courses are designed to help students understand and address issues confronting both individuals and organizations. Coursework focuses on workplace topics such as human relations and communication, training and development, staffing skills and strategies, and leadership within the workplace.

Students interested in pursuing a B.A. in Interdisciplinary Studies or a B.S. in Leadership Studies with an area of concentration in human resource development must complete all the degree requirements for the chosen degree.

Includes a minimum of 18 hours from: HRDV 2301, 2303, 3301, 3303, 3305, 3307, 3308, 3309, 3310, 3311, 3313, 3315, 4000, 4301, 4302, 4303, 4304, 4005, 4306.

Integrative Studies

Integrative Studies is a curricular approach to integrative learning and interdisciplinarity. INTS courses serve as the core curriculum for the Interdisciplinary Studies, B.A. or Leadership Studies, B.S. and provide for a synthesis of study and life or an application of interdisciplinarity to complex problems. Integrative studies students develop the intellectual tools needed to build bridges across academic disciplines and apply their skills, innovations, and knowledge in various academic and practical settings. In core classes, students will learn and apply interdisciplinary research methods and develop portfolio artifacts that showcase their individual skills, interests, and talents. This portfolio and the applied learning experience provide each student with valuable resources for flexible, individualized career planning and development.

Students interested in pursuing a degree in university studies with an area of concentration in integrative studies must include in their course of study a minimum of 18 hours from the following courses:

Required Coursework. INTS 3300, 4300, 4350.

Choose three courses from the following options: INTS 3301, 3310, 3320, 3330, 3350, 4000, 4320.

Interdisciplinary Diversity Studies

The Diversity Studies concentration is an interdisciplinary program of study that encourages students to develop a broad understanding of the components of diversity in society. These include race and ethnicity, gender, social class, religion, culture, and language. The concentration explores the historical, cultural, and sociological differences amongst groups that bring us together and set us apart within the United States and globally. It is relevant to any field that involves diverse groups of people, such as business, education, social welfare, health, and medicine. All courses offered in this concentration are online.

Required Coursework. INTS 3330 OR HRDV 2303, AND INTS 3335.

Choose 12 or more credit hours from: AGLS 2307; CARS 2360; CMI 3355; COMS 3332, 3353; CRIM 3341; EDSE 2300; HDFS 3383; HRDV 2303; HRM 3348; INTS 3330; MALS 2300; MGT 4372; NRM 2307; PSY 3398; SOC 3323; WGS 2300.

Organizational Leadership

The interdisciplinary concentration in organizational leadership formally guides and encourages the exploration of organizations and their influence in the global economy. The curriculum blends challenging course options with relevant interdisciplinary electives to facilitate an interest in and appreciation for the beneficial application of operational concepts through leadership. The concentration comprises 18 credit hours consisting of 6 hours from three curricular learning objectives.

Required Coursework. With an emphasis on academic and institutional engagement, utilization of resources, intellectual agility, and future application, students must select 6 credit hours from each of the three curricular learning objectives of the concentration: communication, leadership, and operational practice. Students cannot select more than 6 credit hours from any curricular learning objective. Courses required explicitly and without alternatives by the student's declared major/minor may not be used to fulfill elective coursework in the organizational leadership concentration.

Communication. Students may select from the following courses: AGSC 2300, 2301; AAEC 4320; ADV 3310; COMS 2358, 3315, 3355†, 3359;

* Choose from core curriculum requirements.

† Choose elective credit hours to fulfill graduation requirements, such as junior/senior credit hours, conversion of alternative non-credit activity to semester credit hours (see [OP 30.10](#)), foreign language, optional academic minor, or free elective credit.

HRDV 2303†; SPMT 4356†, 4358†; INTS 3301†, 4300†, 4350†; MKT 3350*; PFI 3301†; RETL 3350.

Leadership. Students may select from the following courses: AAEC 2305, 3301, 3305, 4306, 4313, 4319; COMS 3356†; ECO 3320; MGT 3370*; BA 3304†, 3305†; HRDV 3305†, 3308†, 3309†, 4301†, 4302†, 4303†, 4306†; INTS 3330†, 3350†; ISQS 3344*; RHIM 4341.

Operational Practice. Students may select from the following courses: AAEC 3302, 3315, 4303, 4315, 4316; ACCT 2300*, 2301*; BA 3301†, 3302†, 3303; BLAW 3391*; COMS 3351; ECO 2301, 2302, 2305, 3311, 3323, 3324; FIN 3320*; HRDV 2301, 3301†, 3303†, 3307†, 3310†, 4000†, 4304†, 4005†; INTS 4320†; ISQS 2340*; MATH 2345, 3356; PRSC 2310; RHIM 3320, 3345; HRM 3321, 3322, 4316; RETL 3380.

Students must satisfy individual course prerequisites that may not count toward the organizational leadership concentration. For example: a 2.0 TTU GPA is required to enroll in BA 3301, 3302, 3303, 3304, 3305, and 3306.

* Courses are for Rawls College of Business students only; however, if a student has transferred in this course, it may apply toward the concentration.

† Course has historically been offered online or at a regional site.

Computing Applications, B.S.

The B.S. in Computing Applications is offered by University Studies in TTU Online. All courses are offered 100% online and on an eight-week calendar.

Information technology touches every aspect of our lives today. The evolving job market has seen an increasing use of computing in jobs that are outside the computer science realm. To meet the demands of an expanding and evolving workplace, our vision, in developing the Bachelor of Science degree in Computing Applications, is to formalize student information technology training by providing students with a novel education modality: computing applications in typically non-STEM or soft-STEM fields. This program will provide students with the opportunity to customize their education in a manner that would not be feasible if they are restricted to the one-degree, one-department, one-job paradigm.

Education has indeed evolved to incorporate computing in non-STEM disciplines, but traditional curricula do not allow students to customize courses across different departments and colleges. At TTU, faculty conduct education and research in computing applications in the areas of music, arts, language, biotechnology, and wind energy. The availability of these courses, however, is siloed in departments or in degree or certificate programs offered within that department. The proposed degree program in Computing Applications, geared towards non-STEM disciplines, will allow students to tailor their education to meet their aptitudes and career goals.

The undergraduate program is transformative and innovative. The program will achieve at least three major transformative innovations for undergraduate students. When implemented, these innovations will have positive impacts for students academically and professionally.

First, bridging diverse areas of education—Computer Science (STEM) with the Humanities (non-STEM). Programs of this kind do not exist, at least at the undergraduate level. Engineering and computer science departments at public universities throughout the state of Texas do not have such an interdisciplinary computing applications major.

Second, removing restrictions on students taking courses across disciplines and departments. This course-choice option allows a student to customize their degree plans to meet their specific career goals. This degree will take the traditional intra-departmental education and make it inter-departmental. Indeed, other than the required courses and core courses, it is very likely that two students who obtain a degree in Computing Applications will have done so having taken no common courses.

Third, offering a dynamic education matched with a career goals management plan. Students will be counseled at every step of their educational careers, continually making the student aware of the evolving job market. We will facilitate a student's continual involvement with the partner institutions' career services. Students will explore job market trends throughout the collegiate career, a departure from the "job hunting" that a student typically undertakes closer to graduation.

Communication Literacy Requirement. The Communication Literacy course for the Computing Applications, B.S. is CMPA 4304.

Human Resources Development, B.A.

The Bachelor of Arts in Human Resources Development (HRDV) will provide graduates with the knowledge, skills, and abilities to improve workplace learning and performance in individual, group, and organizational contexts. This degree is designed to bridge theory with practice in all areas of HRDV, including training and development, recruitment, and talent acquisition. This major is only offered online.

Students are required to complete all major-related course work (30 credits) and six prescribed electives. Students are also required to complete the Texas core curriculum and graduation requirements of Texas Tech University for a total of 120 semester hours.

Communication Literacy. Communication literacy in the Bachelor of Arts in Human Resources Development is assessed in HRDV 4301.

Grading Practices. Credits for a course in which a D is earned may not be applied toward fulfillment of the major course requirements.

Degree Plan and Intention to Graduate. Students are encouraged to file a degree plan with the University Studies Student Services Office as soon as their academic goals are defined, but no later than two subsequent semesters after earning 45 credit hours. The Intent to Graduate form on Raider-link must be submitted no later than the last day of classes of the term prior to graduation. Students are encouraged to consider an academic minor to complement their major in HRDV.

Credit by Exam. Seniors must receive written permission from the University Studies Student Services Office prior to attempting credit by examination and provide proof of notification upon registering for an exam in Academic Testing Services.

For information on other minor areas, see individual program sections of the catalog.

Human-Centered Artificial Intelligence, B.S.

Most AI degree programs are centered around the technical side of AI development. These include computer science, mathematics, and similar fields of study. Skills taught within these technical fields could include programming, data mining, natural language processing, neural networks, etc. This can be thought of as the producer side of AI, where systems are created for human use. There is also the human side of AI, which focuses on the consumption and use of these technologies. Social sciences and humanities provide education in fields such as ethics, psychology, sociology, communication, management, education, and law. This can be thought of as the user side of AI that uses new technologies in a human context. Both areas form a symbolic relationship and build a bridge between the AI producer and user.

The Human-Centered Artificial Intelligence (HCAI) undergraduate degree will prepare students to design, develop, and evaluate AI technologies with a focus on user-centered design, interdisciplinary approaches, ethical considerations, communication, and problem-solving. This program equips students to ensure AI solutions address real-world challenges, respect human values, and drive social good. The degree plan includes capstone opportunities to apply HCAI degree concepts to real-world problems. Courses in the degree cover: AI and Data Science; Human-Centered AI Design and Interdisciplinary Application of AI; Evaluation and Research on Human-AI Interaction; Ethical and Social Responsibility in AI Leadership; and Communication, Problem Solving, and Producing New Ideas and Innovations.

Communication Literacy Requirement. The Communication Literacy course for the Human-Centered Artificial Intelligence, B.S. is HCAI 4304.

Legal Studies, B.A.

This Legal Studies, B.A. degree will provide a strong pre-law foundation using an interdisciplinary approach. This guides and encourages the exploration of law and introduces students to the structures of law and how law interacts with other areas in society while also preparing students with the critical thinking and professional skills of lawyers, paralegals, public officials, and other legal and justice-related professionals. This program provides a strong foundation for students to enter law school or the workforce. The curriculum blends core required and prescribed elective courses coupled with challenging and relevant interdisciplinary course options

offered across academic colleges at Texas Tech University. The program emphasizes the learning of substantive knowledge about the law, the role of law in society, and the development of important skills (oral and written communication, reading comprehension, logical and analytical thinking, and competence in conducting legal research) necessary for law school or related careers. Classes include pre-law topics like legal research, criminal law, contract law, torts, civil litigation, and legal writing to help prepare students to enter law school or become certified paralegals.

The Legal Studies, B.A. contains required core courses, prescribed interdisciplinary elective courses students may choose from a preset list of classes covering a range of disciplines and departments, and additional electives a student may choose at their discretion, with advisor approval. A culminating capstone project will be required.

Communication Literacy Requirement. The Communication Literacy course for the Legal Studies, B.A. is LGST 4300.

Organizational Leadership, B.A.

In University Studies in the B.A. in Organizational Leadership at Texas Tech Online, students gain a comprehensive understanding of leadership theories, organizational dynamics, and strategic decision-making. Students explore effective communication strategies, ethical leadership principles, and change management practices. The program also covers themes related to data-driven analysis, technological innovation in organizations, and global business environments. Additionally, students learn about team dynamics, conflict resolution, and the application of leadership skills across various organizational contexts. This diverse curriculum prepares graduates to excel in leadership roles across multiple sectors, equipped with both theoretical knowledge and practical skills essential for navigating today's complex organizational landscapes. This degree program offers a career focused microcredential, 9 credit hours to recognize your past work and life experiences, and utilizes industry certificates to enhance a student's globally recognized Texas Tech degree.

This degree is offered 100% online and in 8-week courses in TTU Online.

Communication Literacy Requirement. The Communication Literacy course for the Organizational Leadership, B.A. is ORGL 3340.

Undergraduate Minors

For more information about minors, contact University Studies: 332 Drane Hall | T 806.742.7100 | www.depts.ttu.edu/universitystudies.

Computing Applications

The Computing Applications minor will provide students with an interdisciplinary and integrative undergraduate minor at Texas Tech University in applications of computing and information technology in a wide variety and widely dispersed fields. Formalized educational paradigms in interdisciplinary computing applications currently do not exist. These have been identified as necessary—even critical. Information technology has facilitated the acquisition of information whether in education, entertainment, or communication. For example, two disparate domains of study: computer science and experimental biology came together to create a new discipline—bioinformatics. Information technology literacy is integral to success in most careers and in everyday life; its necessity and applications will only increase over time. Through this minor, we seek to provide students with foundational applications to meet the demands of the job market that are also integrated with student occupational goals. This minor will be housed in University Studies at TTU and will contribute to a student's undergraduate degree in University Studies and is open to all students seeking a minor. To complete this minor and six courses, students must take two computer science courses and two courses involving computer applications in the field of interest.

Required Course: INTS 3320.

Choose three credit hours or more from the Foundational Computer Courses: CS 1382, 1411, 1412, 2365, 2413, 3350; ECE 1305; EDIT 2318; ME 2315.

Choose six credit hours or more from the Discipline of Interest: Art 1302, 1303, 1309*, 2303, 2304, 2388; ARTH 1301; BIOL 1403, 3320*, 3416; CHEM 1307*, 2303; MBIO 3400; MCOM 1300, 2301, 2320*, 2330, 2350*,

Human Resource Development

Although students majoring in university studies do not need a minor, students in other degree programs may seek a minor in human resource development by taking 18 hours in HRDV courses approved by a human resource development advisor.

The core (required) courses for a human resource development minor are: HRDV 2301, 3301, 3303. The remaining 9 hours can be selected from: HRDV 2303, 3305, 3307, 3308, 3309, 3310, 3311, 3313, 3315, 4000, 4301, 4302, 4303, 4304, 4005, 4306.

Integrative Studies

Integrative studies is an approach to answering questions, solving problems and addressing contemporary social issues from multiple perspectives. Integrative studies students develop the intellectual tools needed to build bridges across academic disciplines and apply their skills, innovations, and knowledge in various academic and practical settings. In core classes, students develop portfolio artifacts that showcase their individual skills, interests, and talents. This portfolio and the applied learning experience provide each student with valuable resources for flexible, individualized career planning and development.

Although students majoring in university studies do not need a minor, students in other degree programs may seek a minor in integrative studies by taking 18 hours of integrative studies courses approved by an integrative studies advisor. A grade of C or better must be achieved in each course.

Required Courses: INTS 3300, 4300, 4350.

The coursework is recommended to be taken in the order listed below:

1. INTS 3300.
2. Four classes from: INTS 3301, 3320, 3330, 3310, 3350, 4300, 4320.
3. INTS 4350.

Integrative Studies in Healthcare Organizations

The online minor provides the academic foundation for pre-health students to prepare for advanced study and the essential knowledge components in health care studies. Healthcare is a unique, multi-faceted, interdisciplinary field that is growing in the United States and requires knowledge in health, wellness, and personnel. This minor provides an introduction and overview of the healthcare field and its various organizations that integrate theory, application, and practice in healthcare organizations. Students in this minor will be able to tackle global healthcare organizational problems and assess issues from an integrative perspective.

Required (6 hours): RRP 3100, 4100; INTS 3110; HRDV 4303.

Choose 12 credit hours from the following: AAEC 2305; ADRS 2310; COMS 2320, 3365; ENGL 2311; HLTH 3301; HDFS 3322; HRDV 2303, 3308; INTS 3350; MCOM 2350; NS 4220; POLS 3318; PRSC 3353; SOC 1320; ZOOL 2403, 2404.

Legal Studies

This interdisciplinary minor in Legal Studies instructs students and formally guides and encourages the exploration of the field of law. The courses provide knowledge and skills that introduce students to the structures of law, prepare students with critical thinking and professional skills of lawyers, and help the students understand the influence of law in society. The curriculum integrates three core courses combined with challenging and relevant related interdisciplinary course options offer across academic colleges at Texas Tech University.

The minimum 18-credit-hour minor consists of required courses plus elective coursework. Students may not be eligible for some elective coursework. University Studies Student Services Office is responsible for certifying completion of the minor requirements in concurrence with the standard graduation certification processes used in each academic college.

Students must have a minimum 2.0 cumulative Texas Tech GPA to declare, and a grade of C or better is needed to complete all minor requirement courses. Students must meet prerequisites for some elective coursework. Prerequisite courses may not be applicable to the legal studies minor if conditions are required. Additional electives and alternative coursework will be considered, and additional electives may apply. Please see the University Studies Student Services office for academic advising.

Required Courses (9 hours): Core courses are offered both face-to-face and online. Students must take: LGST 3300, 3301 and 3302.

Elective Courses (9 hours): The remaining minimum 9 credit hours will be selected from the following courses: PLAW 3002, 3101, 4301; AAEC 4320, 4330; BA 3302; BLAW 3391; FIN 3393; COMS 3313, 3314, 3332, 3356; EDLD 5340; ENGL 2311, 2391, 3362, 3365; ENGR 2392; ECO 3327; HIST 4324, 4333; HONS 2311, 5300, 5400; HDRV 3307; HRM 4313; MCOM 3320; NRM 4311; PHIL 2310, 2320, 3321; POLS 3300, 3351, 3352, 3353, 4001; PSY 4305, 4384; RE 4311; SOC 3327; THA 2301; LIBR 1100*.

* Please consult with a Legal Studies minor advisor to ensure a minimum total of 18 credit hours.

Organizational Leadership

The interdisciplinary minor in organizational leadership formally guides and encourages the exploration of organizations and their influence in the global economy. The curriculum blends challenging course options with relevant interdisciplinary electives to facilitate an interest in and appreciation for the beneficial application of operational concepts through leadership. The concentration comprises 18 credit hours consisting of 6 hours from three curricular learning objectives.

Required Coursework (6 hours from each): With an emphasis on academic and institutional engagement, utilization of resources, intellectual agility, and future application, students must select 6 credit hours from each of the three curricular learning objectives of the minor: communication, leadership, and operational practice. Students cannot select more than 6 credit hours from any curricular learning objective. Courses required explicitly and without alternatives by the student's declared major/minor may not be used to fulfill elective coursework in the organizational leadership minor.

Communication. Students may select from the following courses: AGSC 2300, 2301; AAEC 4320; ADV 3310; COMS 2358, 3315, 3355†, 3359; HRDV 2303†; SPMT 4356†, 4358†; INTS 3301†, 3302, 4300†, 4350†; MCOM 2310, MKT 3350*; PFI 3301†; RETL 3350.

Leadership. Students may select from the following courses: AAEC 2305, 3301, 3305, 4306, 4313, 4319; COMS 3356†; ECO 3320; MGT 3370*; BA 3304†, 3305†; HRDV 3305†, 3308†, 3309†, 4301†, 4302†, 4303†, 4306†; INTS 3325, 3330†, 3350†; ISQS 3344*; LDR 3300; RHIM 4341.

Operational Practice. Students may select from the following courses: AAEC 3302, 3315, 4303, 4315, 4316; ACCT 2300*, 2301*; BA 3301†, 3302†, 3303, 3306; BLAW 3391*; COMS 3351; ECO 2301, 2302, 2305, 3311, 3323, 3324; FIN 3320*; HRDV 2301, 3301†, 3303†, 3307†, 3310†, 4000†, 4005†, 4304†; INTS 4320†, 4351; ISQS 2340*; MATH 2345, 3356; PRSC 2310; HRM 3321, 3322, 4316; RHIM 3320, 3345; RETL 3380.

Students must satisfy individual course prerequisites that may not count toward the organizational leadership minor. For example: a 2.0 TTU GPA is required to enroll in BA 3301, 3302, 3303, 3304, 3305, and 3306.

* Courses are for Rawls College of Business students only; however, if a student has transferred in this course, it may apply toward the minor.

† Course has historically been offered online or at a regional site.

Undergraduate Concentration

Strategic Leadership in Human Resource Development

University Studies offers a 12-hour Undergraduate Certificate in Strategic Leadership in Human Resource Development to provide students with the knowledge and skills necessary to build productive employee teams and lead organizations in a dynamic workplace environment. The certificate program provides knowledge and skills related to leadership in traditional, global, and virtual workplaces; team building; developing human capital; and aligning human resources with organizational goals.

The required courses for the certificate are the following. It is recommended that students take HRDV 4301 (during their first semester) and 4306 (during their last semester). Students additionally select two 3-hour electives from: AGLS 3314, 4308; COMS 3355, 3356; HRDV 4302, 4303, 4304, 4005; INTS 3350.

Undergraduate Course Descriptions

Computing Applications (CMPA)

- 3301—Fundamentals of Computing Applications (3).** Introduces and explores fundamental concepts of computing applications, current and emerging practices, theories, technologies, and related environments, fields, and professions.
- 3302—Foundations of Information Organization and Management (3).** Introduces key principles of information organization and management, covering concepts, methodologies, technologies, and modern knowledge access and sharing techniques.
- 3303—Product Design in Computing Applications I (3).** Provides a practical introduction to product design in computing applications, equipping students with foundational skills and thinking to build modern digital products.
- 3304—Computing Applications Technology I (3).** Introduces students to computing applications technologies involved in developing websites and software, covering essential fundamentals, practices, roles, constraints, and contexts.
- 4301—Systems and Methods of Information Organization and Management (3).** Explores the technical aspects of organizing and managing information using modern computing solutions to capture, process, transform, and structure data to provide meaning.
- 4302—Product Design in Computing Applications II (3).** Builds on foundational skills in product design in computing applications through the ideation, research, prototyping, testing, iteration, and deployment of modern digital products.
- 4303—Computing Applications Technology II (3).** Builds on foundational skills in computing applications technologies, focusing on web and software development strategies, prototyping, interactivity, practices, collaboration, and deployment.
- 4304—Senior Capstone in Computing Applications (3).** This project-oriented course requires students to demonstrate proficiency in computing applications skills and theory through the design, development, and presentation of real-world projects.

Human-Centered Artificial Intelligence (HCAI)

- 3301—Programming Logic in Human-Centered AI (3).** Learn the foundations of computer programming to solve problems. Develop systematic thinking for building solutions with code and enhance communication using programming knowledge.
- 3302—Practical Statistics in Human-Centered AI (3).** Teaches essential statistical techniques for human-centered AI, focusing on real-world applications, ethical considerations, and data visualization using R and Python.
- 3303—Foundations of Human-Centered AI Design (3).** Focuses on fundamental principles of human-centered design of human-technology interaction with emphasis on human-automation interaction broadly, and human-AI interaction, in particular.
- 3304—Human-Centered AI: Ethical Decision-Making and Leadership (3).** Explore how human-centered AI principles drive ethical decision-making and leadership, preparing students to navigate AI's impact on organizations, society, and the future.
- 4000—Independent Study in Human-Centered AI (VI-12).** Students explore human-centered AI through self-directed projects, emphasizing independent learning, critical thinking, and applied AI principles.
- 4301—Data Intelligence in Human-Centered AI (3).** Introduces data intelligence fundamentals, including the collection, handling, analysis, manipulation, and visualization of various types of real-world data.
- 4302—Fundamentals of Human-Centered AI Models (3).** Introduction to AI systems and machine learning models, emphasizing conceptual tools, hands-on exercises, and practical applications.
- 4303—Methodologies for Human-Centered AI Design (3).** Provides an overview of methods that aid in effective human-centered design to ensure that technological design suits human user goals and capabilities.
- 4304—AI, Communication, and Society: Technology and Business Applications (3).** Explores AI's impact on communication and society, exam-

ining how AI technologies shape societal narratives and transform business practices through innovative applications. [PCOM 4310]

- 4350—**Human-Centered AI Capstone Experience (3)**. Students complete a professional project, gaining practical skills relevant to human-centered AI.

Human Resource Development (HRDV)

- 2301—**Introduction to Human Resource Development (3)**. Online course focusing on the foundations of human resource development, including the history of human resource development, recruitment, training and development, and compensation and benefits.
- 2303—**Diversity and Cultural Competence in the Workplace (3)**. Students will analyze organizational, cultural, and global workplace issues related to diversity leadership and gain cultural competencies necessary to manage a 21st-century multicultural workforce. Fulfills core Social and Behavioral Sciences requirement.
- 3301—**Human Relations in Human Resource Development (3)**. Online course that explores topics related to working with people in the organization, including communication, issues of concept and self-reliance, small group dynamics, and attitudes in the workplace.
- 3303—**Introduction to Data Analytics and Research in Human Resource Development (3)**. Online course that explores the common data collection and analysis techniques utilized in the workplace. Includes sampling, survey design, measurement, quantitative and qualitative data analysis, and the use of research findings to inform organizational decision-making and change.
- 3305—**Staffing Strategies in Human Resource Development (3)**. Online course that focuses on the process of staffing organizations. Includes analysis of the external job market, talent acquisition, resume analysis, interviewing techniques, background and reference checks, the hiring process, and integration of new employees into the organization.
- 3307—**Employment Law in Human Resource Development (3)**. Online course that explores contemporary issues in employment law and the major legal facts and concepts used in human resource development. Includes federal laws (OSHA, ADA, FMLA, etc.) that employers deal with regularly.
- 3308—**Employee and Labor Relations (3)**. Online course focusing on the complexities of labor and employee relations. Topics include organizational culture, employment counseling issues, negotiation, dispute resolution, and employee motivation and retention. (CL)
- 3309—**Role of Human Resource Development in Adult Learning (3)**. Online course that focuses on the relationship between human resource development and the adult learning process. Addresses adult learning models and preferences as they relate to human resource development context.
- 3310—**Training and Development in Human Resource Development (3)**. Online course that addresses key training and development topics, including conducting training needs assessments, developing training to meet employee/employer needs, and adult learning theories and methods.
- 3311—**Total Compensation and Benefits (3)**. Course topics include the strategic use of total compensation to attract and retain employees, salary and pay structures, variable pay, benefit plans, and compensation administration.
- 3313—**Organizational Safety and Wellness (3)**. Prepares students to analyze concerns related to workplace safety and wellness, develop and evaluate workplace safety and wellness programs, and follow governmental safety regulations.
- 3315—**Job Analysis and Design (3)**. Focuses on job analysis and design processes, legal aspects of job analysis/design, and the strategic use of job analysis/design to increase organizational success.
- 4000—**Independent Study (V1-12)**. Designed to acquaint students with current research, theory, policies, perspectives, and/or practices in human resource development. May be repeated for credit.
- 4005—**Internship in Human Resource Development (V1-6)**. Prerequisite: HRDV 2301. Provides an overview of advanced human resource topics, including managing human capital, strategic management, global leadership, the alignment of human resources and strategic goals, ethics in human resources, teamwork in the workplace, and conflict management.
- 4301—**Principles of Leadership in the Workplace (3)**. Focuses on the essential theories, principles, processes, and techniques that can be utilized to lead people in an organization. Examines the linkages between leadership and performance and goal attainment. (CL)
- 4302—**Global and Virtual Leadership in Human Resource Development (3)**. Provides an introduction to leadership in a global and virtual workplace. Topics include strategies for global/virtual talent acquisition and development, leadership issues, and management strategies. F.

- 4303—**Strategic Leadership in Healthcare Organizations (3)**. Provides an introduction to and overview of leadership, management, and organizational behavior in the unique sector of health care. Integrates theory with practice through readings, lectures, written assignments, and presentations from different organizational perspectives. S.

- 4304—**Advanced Concepts in Human Resource Development (3)**. Provides an overview of advanced human resource topics, including managing human capital, strategic management, global leadership, the alignment of human resources and strategic goals, ethics in human resources, teamwork in the workplace, and conflict management. SS

- 4306—**Strategic Leadership in Human Resource Development (3)**. Advanced course in human resources development. Students will produce an in-depth independent project demonstrating their knowledge of human resource development and their ability to apply learned strategies and skills in a real-world setting.

Integrative Studies (INTS)

- 1101—**Introduction to Chess (1)**. Introduction to the storied history, general rules, and basic concepts of chess. Students will strengthen their long range planning, critical thinking, and problem solving skills.
- 3110—**Seminar in Health Careers (1)**. Health professionals present weekly seminars related to preparation, training, and activities associated with various health professions and organizations.
- 3300—**Foundations of Integrative Studies (3)**. Prerequisite: ENGL 1301. Introduces students to the foundations of key interdisciplinary concepts and theories and prepares students for success in the integrative studies program. Online course. (CL)
- 3301—**Career and Professional Development (3)**. Prepares students for a successful workplace experience. Offers students the opportunity to develop career search and interviewing strategies, resume writing, and professional and personal growth.
- 3302—**Becoming a Self-Directed Learner (3)**. Explores topics related to the development and application of self-directed learning through reflection on experience, logic, application, and innovation.
- 3305—**Critical Thinking in Leadership (3)**. Introduces leadership theory and concepts through critical thinking exercises to enable an understanding of the impact of leadership decision making.
- 3310—**Introduction to Interdisciplinary Theory and Research Methods (3)**. Corequisite: INTS 3300. Introduces theoretically based inquiry and foundational research methods. Covers the goals of scientific research and supports the transition to interdisciplinary methods of inquiry.
- 3315—**Introduction to Public Health (3)**. Provides broad overview of public health. Covers basic definition, analytical methods, biomedical basis, social and behavioral factors, and environmental and management issues.
- 3320—**Introduction to Computing Applications (3)**. An interdisciplinary course introduction to computing applications and applicable career paths; outside traditional domains of information technology—the arts, languages, experimental biosciences, and wind energy.
- 3325—**Leadership Practice and Development (3)**. A comprehensive understanding of leadership theories, strategies, and students' own personal strengths to empower them to become effective leaders in their chosen industries.
- 3330—**Global Perspectives in Integrative Studies (3)**. Emphasizes interdisciplinary problem solving through critical, analytical, and integrative approaches to the study of general issues and trends facing the contemporary world.
- 3335—**Interdisciplinary Issues in Cultural Diversity (3)**. Explores topics related to cultural diversity with the expressed purpose of using an interdisciplinary research process for developing a greater understanding.
- 3350—**Team Leadership in Interdisciplinary Problems (3)**. Students will utilize critical, analytical, and integrative approaches to interdisciplinary problem solving while emphasizing the practices of effective interdisciplinary leadership and teamwork. Online.
- 4000—**Independent Study (V1-12)**. Prerequisites: 2.5 GPA and consent of instructor. Teaching assistantships, independent coursework, student-initiated research experience, or individual studies of special interest in integrative studies. May be repeated for credit.
- 4300—**Perspectives in Integrative Studies (3)**. Prerequisites: INTS 3300. Introduction to interdisciplinary research methods. Covers methods of disciplinary integration, orientation to interdisciplinary expectations, and standards in academic and professional organizations.
- 4320—**Internship in Integrative Studies (3)**. Prerequisites: INTS 3300 and instructor consent. Supervised internship in a professional workplace setting. Students apply their research skills and integrative knowledge to a workplace problem. May be repeated for credit.

- 4350—Capstone in Integrative Studies (3).** Prerequisites: INTS 3300. Advanced course in integrative studies. Students will draw together the diverse strands of their studies, reflect on their connections, and produce an in-depth senior project. (CL)
- 4351—Capstone in Applied Leadership (3).** An advanced course in the interdisciplinary analysis of the principles of leadership with application to students' professional and personal goals. (CL)

Leadership (LDR)

- 1200—Life Skills for Student Athletes (2).** Prerequisite or corequisite: RRP 1100. Designed to assist first-year student athletes with a variety of life-skill components, including personal, athletic, academic, and career development.
- 1300—Foundations of Leadership (3).** Study of leadership and the application of leadership theories, concepts, models, and skills. Students will develop their own leadership potential through the completion of personal and leadership self-assessments, values exploration, and leadership skill applications through course activities.
- 3300—High Impact Leadership (3).** Exploration of leadership identity development for sports and other organizations. Focus is on application of leadership skills and ethics needed for effective organizations.
- 4300—Advanced Leadership Development and Practicum for Student Athletes (3).** Develops leadership skills in campus or community organizations. Students will engage in service designed to develop personal effectiveness as a leader. Students will study and apply skills of interpersonal communication; decision making; and critical problem solving, mentoring and conflict resolution.

Legal Studies (LGST)

- 3300—Introduction to Legal Studies (3).** Discover fundamentals of federal and state legal and governing systems, including how attorneys train and work within these systems to develop and change the law.
- 3301—Critical Thinking in Legal Studies (3).** Prerequisite: LGST 3300. Learning how to critically think, evaluate issues from multiple positions, and develop factual arguments from a variety of authority types with legal issues in mind.
- 3302—Reading and Writing in Legal Studies (3).** Prerequisite: LGST 3300. Build skills for legal studies or law-adjacent professional fields in critical reading, premise development, and formal writing to be able to create professional written products.
- 3303—Law and Society (3).** Introduces jurisprudence concepts, examines interdisciplinary relationships between law and society, and helps students understand why law and society are essential in our world.
- 3304—Civil Litigation and the Legal Field (3).** Examines civil procedures and the court system including the role of judges, attorneys, and juries.

- 3305—Criminal Law and Procedure (3).** Familiarizes the student with substantive criminal law and criminal procedures, including constitutional protections, state laws, and procedures from arrest through trial and conviction.
- 3307—Family Law and Public Policy (3).** A study of the general principles of family and domestic law.
- 3308—Law of Torts (3).** Focuses on the fundamental concepts of tort law, which is a civil wrong for which the law provides a remedy.
- 3309—Law of Contracts (3).** Explores how the existence and validity of a contract are determined by specific rules.
- 3310—Laws That Change the World (3).** Explores law's interaction with societal institutions, emphasizing practical skills in critical and legal reasoning through analysis of contemporary legal issues and court resolutions.
- 3311—Property Law (3).** Introduces a range of topics including real estate law, land use regulation, and property rights.
- 4300—Capstone in Legal Studies (3).** This legal analytical project is the culminating experience that permits students to demonstrate their capacity to deeply research a narrow topic concerning legal challenges.

Organizational Leadership (ORGL)

- 3340—Strategic Storytelling for Leaders (3).** Learn to craft and deliver compelling narratives to inspire, motivate, and drive organizational change, focusing on storytelling techniques for various leadership contexts.
- 3341—Ethical Leadership: Solutions to Contemporary Organizational Challenges (3).** Examines ethical frameworks and contemporary challenges facing organizational leaders, including globalization, technological disruptions, and sustainability issues.
- 3342—Leading Organizational Change: Theory and Practice (3).** Learn strategies for effectively managing and leading organizational change, studying change models, overcoming resistance, and analyzing case studies of exemplary change leaders.
- 4340—Professional Relations in Organizational Leadership (3).** Explores strategies for building and maintaining effective professional relationships within organizational contexts, emphasizing interpersonal communication, networking, and conflict resolution.
- 4350—Team Leadership and Organizational Dynamics (3).** Explores theories of team formation, development, and leadership, integrating organizational behavior concepts to enhance team performance and collaboration.
- 4360—Strategic Planning in Leadership (3).** Learn to understand and develop organizational assessments, interpret data, and leverage insights for informed decision-making and organizational improvement.

All-University Programs

Center for Transformative Undergraduate Experiences

The [Center for Transformative Undergraduate Experiences](#) (TrUE) supports undergraduate student and faculty success at Texas Tech. We spark, scale, and sustain innovative programs and activities to enhance the value of undergraduate education through high-impact educational experiences such as undergraduate research and creative activities. Texas Tech students are encouraged to reach out to us for guidance and support in pursuing these enriching experiences.

TrUE Scholars

The [TrUE Scholars Program](#) prepares students to compete for opportunities beyond their bachelor's degrees through undergraduate research and creative activities projects. TrUE Scholars learn about the wide array of research and creative opportunities at Texas Tech and then receive funding and support as they launch into their own experiences. Scholars who excel through the program receive the Mark of the Matador distinction at graduation.

TTU Undergraduate Research Conference (URC)

Beginning in 2008, the [Texas Tech University Undergraduate Research Conference \(URC\)](#) is one of the nation's largest interdisciplinary undergraduate research conferences. The URC is a celebration of the rich undergraduate research and creative activities landscape at Texas Tech and gives undergraduates the opportunity to share their work.

TTU Transformative Undergraduate Experiences Symposium

The Transformative Undergraduate Experiences Symposium brings undergraduates and faculty together to showcase their work through three-minute Impact Talks. These sessions give students the opportunity to communicate their scholarly work to a broader audience as they focus on how they are making a positive impact.

Raider Service Breaks

Raider Service Breaks (RSBs) are impactful trips offering students, faculty, and staff the opportunity to engage in group service projects and learn about critical issues. These week-long or weekend experiences emphasize meaningful service, group reflection, and leadership development. We are excited to partner with and develop Raider Service Breaks within an undergraduate class, organization, and/or program.

Contact us or drop by Drane Hall room 239! You can reach us by email at true@ttu.edu or by phone at 806.742.1095. Connect with us through social media: <https://linktr.ee/ttuttrue>.

Cooperative Education

The Cooperative Education program integrates classroom study with paid, practical, and supervised work training in public and private employment situations. By applying their academic training in a work setting, students not only enhance their self-confidence while earning wages, but they also gain career direction and may receive offers for future full-time employment.

Co-op programs include both the alternating and parallel patterns. The alternating option allows students to alternate semesters of work and school, working a minimum of two semesters. The parallel plan permits students to work at least 15 to 20 hours per week concurrently with their academic progression.

Students considering a Co-Op experience should consult with an advisor in the University Career Center as early as possible. In addition, the student must obtain approval from his or her departmental advisor before enrolling. Ordinarily a student must have completed the sophomore year to be considered for the program.

For more information, visit the University Career Center, 150 Wiggins Complex, 806.742.2210, careercenter@ttu.edu, www.careercenter.ttu.edu.

Undergraduate Course Descriptions

Cooperative Internship (COIN)

3000—Cooperative Internship (VI-6). Supervised internship in an approved industrial or professional establishment. Approval of enrollment by Co-op program required.

Essentials of Scholarly Research

Essentials of Scholarly Research is a one-hour course designed to introduce students to lifelong information literacy skills and establish tools for effective and efficient research in a university library. Because information comes in many forms, students sometimes find the multitude of printed publications, Internet resources, and microform and audiovisual materials overwhelming. They need to know how to identify, find, evaluate, and use resources that are most appropriate for their assignments.

Essentials of Scholarly Research has four main objectives: to present the arrangement and services of the Texas Tech University Libraries; to introduce resources and search strategies; to outline a transferable, systematic plan for critical evaluation and use of these resources in a variety of ways; and to promote the effective use of information to accomplish specific tasks.

Course content (readings, quizzes, and activities) is accessed through Blackboard for onsite and distance students. Onsite students will meet for lecture and hands-on sessions.

Contact: Donell Callender | 806.834.2944 | donell.callender@ttu.edu

Undergraduate Course Descriptions

Library Research (LIBR)

1100—Essentials of Scholarly Research (1). Introduces students to research strategies and tools in a university library to prepare students to be critical and ethical users of information.

Government and Public Service Internship Program

The Government and Public Service Internship Program at Texas Tech University offers students an invaluable opportunity to gain first-hand experience in the workings of federal and state government. It provides students with the experience of a professional internship and the cultural aspects of a study abroad experience. Administered by the Office of the President, this program places students in offices located in Washington, D.C., Austin, and Lubbock.

Internships are available each semester, with students selected through a competitive interview process. Participants earn academic credit, receive a scholarship, gain meaningful professional work experience, and develop valuable networking opportunities that benefit their future careers.

The program is open to students of all majors and academic disciplines. Applicants must have a minimum 3.0 GPA and have completed at least 60 semester credit hours. Graduate and law students are also encouraged to apply.

For program and application information, please see the website www.depts.ttu.edu/ttuintern/ or contact Ronald Phillips at gpsip@ttu.edu.

Undergraduate Course Descriptions

General Studies (GST)

4000—Internship in General Studies (VI-6). Supervised internship with government offices and agencies including primarily congressional and legislative offices in Washington, D.C. and Austin, Texas. Open to all undergraduate, graduate, and law students at Texas Tech.

Humanities Center

The Humanities Center at Texas Tech fosters world-leading research in the humanities. We facilitate collaboration among the diverse research communities of Texas Tech, the nation, and the globe in pursuit of richer conceptualizations of human cultural production. To this end, we promote critical investigations, articulations, and alliances which both strengthen existing partnerships and imagine new ones.

The Center awards competitive fellowships to researchers. In addition, the Center sponsors a year-long programming theme that addresses an issue of broad significance to the humanities. Each yearly theme is administered by a core group of researchers, who organize a lecture series and other events. Finally, the Center coordinates humanities resources and initiatives across campus and provides support to all humanities research at Texas Tech.

Institute for Studies in Pragmatism

The Institute for Studies in Pragmatism offers graduate- and undergraduate-level courses on research methods. The only prerequisite is approval of the instructor. Students in any branch of Texas Tech University or Texas Tech University Health Sciences Center are eligible to enroll.

As course participants, students will have direct access to Institute resources such as:

- materials on its long history of interdisciplinary research
- individual consulting and study opportunities
- scholarship opportunities
- international scholarly network

For details, please visit the website of the Institute, www.pragmatism.net.

Contact: Dr. Elize Bisanz, Director, Institute for Studies in Pragmatism
Box 40002, Texas Tech University | Lubbock, TX 79409-0002
806.834.3966 | elize.bisanz@ttu.edu

Undergraduate Course Descriptions

Pragmatism (PRAG)

3301—Semeiotic: The University of Signs and Relations (3). Prerequisites: Junior standing or consent of instructor. Humans communicate via signs to express ideas, to represent meanings followed by interpretations. Semeiotic is the science of these communication processes.

4000—Independent Research in Peirce Studies (V-16). Prerequisite: Consent of instructor. Directed study of selected interdisciplinary problems in Peirce Studies. May be repeated for credit.

RaiderReady Program

RaiderReady Program includes four one-credit seminar courses meant to assist students in academically transitioning and maintaining success throughout their college years and beyond.

RaiderReady: First Year Seminar (RRP 1100) is a one-credit course designed for students to successfully manage the transition from high school to Texas Tech University. RRP 1100 serves to acclimate, prepare, and guide students as they begin their academic journey at Texas Tech University. The program assists students by developing and honing their academic success skills as they build relationships and community with their fellow Red Raiders. RRP 1100 encourages students to engage with campus and develop into well-rounded campus citizens. Students who enroll and complete the course have earned higher GPAs, are more connected to Texas Tech, and are more likely to continue on to their second year of studies at Texas Tech.

First-year student athletes must take both RRP 1100 and LDR 1200, with the latter designed specifically to meet the unique demands and constraints on first-year student athletes.

RaiderReady: Second Year Seminar (RRP 2100) is a sophomore-level course to assist students in successfully navigating their second year of college. This course covers topics such as living off-campus and choosing a career, to budgeting, stress, and time management. RRP 2100 continues to help students feel connected to campus and remind them of resources and opportunities available to them.

RaiderReady: Service and Research Seminar (RRP 3100) is a junior-level course to begin preparing students for life after graduation. Through this course, students will gain knowledge and experience in service learning and research as well as learn applicable leadership skills.

RaiderReady: Experience and Professional Skills Seminar (RRP 4100) is a senior-level course to assist students in the transition from college to the workplace. Students who take RRP 4100 should experience better results in their job search as a result of course content designed to enhance their ability to identify their own strengths and use those strengths to enter the workplace successfully.

For more information about Raider Ready courses, please contact raiderready@ttu.edu or 806-834-3156.

Undergraduate Course Descriptions

RaiderReady Program (RRP)

1100—RaiderReady: First Year Seminar (1). Supports first-year students in successfully managing their transition from high school to college, focusing on academic success strategies and skills and how to utilize campus resources in fulfillment of their academic goals.

2100—RaiderReady: Second Year Seminar (1). Builds on RaiderReady: First Year Student Seminar and focuses on higher learning, involvement, transformation, and wellness.

3100—RaiderReady: Service and Research Seminar (1). Explores the complex challenges of academic life. Focuses on skills, techniques, institutional support essential to academic success, research, and service.

4100—RaiderReady: Experience and Professional Skills Seminar (1). Designed to help ease student transition from college to occupation, including understanding job market trends, and developing professional skills in job interviewing, preparation, and negotiation.

Study Abroad Program

The Study Abroad Office in International Affairs coordinates all study abroad programs for Texas Tech University. In today's globalized job market, students who participate in a study abroad program, to include international internships, service-learning, and research, can be more competitive in almost every field. An educational experience overseas can equip college students with an international perspective that helps them function more objectively and comfortably in the global marketplace while earning credit toward their degree.

Texas Tech students may choose from several types of study abroad programs. Many academic departments offer faculty-led programs, usually in the summer, with a wide variety of course offerings and locations to include the TTU Sevilla Center and TTU Costa Rica. Students earn Texas Tech credit while taking a catalog course in an international location with Texas Tech faculty.

Other study abroad programs available to Texas Tech students range in length from one week to a full academic year. Study Abroad Counselors assist students in choosing a program that best fits their individual needs and goals. The Texas Tech Study Abroad team also provides guidance during the application and orientation processes.

Students participating in an approved credit-bearing Texas Tech study abroad program are encouraged to apply for the Study Abroad Competitive Scholarship. This scholarship is funded by the International Education Fee paid by all Texas Tech students. Many additional scholarships are also available for study abroad. Students participating in credit-bearing Texas Tech study abroad programs also remain eligible for Texas Tech financial aid to help fund their experience abroad.

Contact: studyabroad@ttu.edu | www.studyabroad.ttu.edu | 806.742.3667
International Cultural Center | 601 Indiana Avenue, Lubbock, TX

Undergraduate Course Descriptions

TTU Affiliate Study Abroad (AFF)

2001—TTU Affiliate Study Abroad (V1-15). Study Abroad.

Reciprocal Study Abroad (RCP)

2001—TTU Reciprocal Study Abroad (V1-12). Reciprocal study abroad in interdisciplinary, international, or multicultural experiences.

Graduate Course Descriptions

TTU Affiliate Study Abroad (AFF)

5013—TTU Affiliate Study Abroad (V1-18). Open only to students during a term in which they are studying abroad on a Texas Tech-approved affiliate program with department or college approval.

Reciprocal Study Abroad (RCP)

5001—TTU Reciprocal Study Abroad (V1-12). Prerequisite: Consent of Office of International Affairs. Reciprocal study abroad in interdisciplinary, international, or multicultural experiences.

Additional Undergraduate Course Descriptions

Academic Advising (ADVA)

2310—**Foundations of Academic Advising (3)**. Introduces foundational concepts in academic advising that are essential to student success and retention in higher education. Students explore advisor responsibilities, training, and deliver systems. Online.

3310—**Human Relations Skills in Academic Advising (3)**. Prerequisite: ADVA 2310. Emphasizes student, faculty, and administration interpersonal communication through various tools, skills, and resources. Topics include personal, behavioral, and ethical considerations in academic advising. Online.

4320—**Internship in Academic Advising (3)**. Prerequisite: ADVA 2310 or instructor consent. Supervised practicum experience in an approved centralized advising office or professional workplace setting. Online.

4330—**Student Diversity in Academic Advising (3)**. Prerequisite: ADVA 2310. Explores potential cultural, ethnic, racial, and language issues and barriers associated with academic advising. Students will apply advising scenarios that promote diversity. Online.

4340—**Special Populations in Academic Advising (3)**. Focuses on recent trends, theories, and contemporary issues related to academic advising for special populations. Identification of on-campus resources and action plans are discussed. Online.

AVID First Year Experience Program (AVID)

1102—**AVID for College Success (1)**. Introduces the philosophy of the AVID system (Advancement Via Individual Determination) to develop theoretical and practical approaches to individual determination needed for success in higher education.

Women's and Gender Studies

The Women's and Gender Studies Program is an interdisciplinary, all-campus program administered by the Director of Women's and Gender Studies.

Women's and Gender Studies, Undergraduate Minor

The university offers a minor in Women's and Gender Studies (WGS). Women's and gender studies minors will learn to critically examine gender, ethnicity/race, sexuality, class, and other social identities. A minor consists of 18 hours of courses as approved by the director. The minor includes two required courses: WGS 2300 and one of the following courses: WGS 4310 or WGS 4399. WGS minors can opt to enroll in research, teaching, and/or community practicums (WGS 4000). Many courses with and without a WGS prefix may be used to complete the minor, with the approval of the director.

Women's and Gender Studies, Graduate Certificate

The 15-hour graduate certificate in Women's and Gender Studies offers a specialist interdisciplinary sub-field in women's, gender, and identity studies for doctoral and master's degree candidates. It also functions as a stand-alone credential useful for professionals in nursing, social work, law, healthcare management, and the military, as well as in faith-based organizations and the field of education. The curriculum includes courses in women's studies as well as a wide range of related courses from other departments and programs.

Required course: WGS 5310. Electives: WGS 5000, 5300, 5340, 5360, or other electives from an approved list.

Undergraduate Course Descriptions

Women's and Gender Studies (WGS)

2300—**Introduction to Women's and Gender Studies (3)**. Basic survey of concepts and theories related to the study of women and to the analysis of gender roles. Fulfills core Language, Philosophy, and Culture requirement.

2301—**Gender Development: Life Span Perspectives (3)**. Introduction to gender concepts and to the impact of gender on individual and family developmental processes. [HDFS 2300]

2305—**Intersectionalities: Race, Class, and Gender in a Global World (3)**. The study of women's experiences as influenced by such social statuses and identities as race, class, and global status. Fulfills core Social and Behavioral Sciences requirement.

2307—**Psychology of Gender (3)**. Surveys research and theories related to sex/gender, including professional settings, mental health, and relationships. Students may take this course or WGS 2301, not both. [PSY 2307]

3305—**From Disney to Beyoncé: Gender, Race, and Sexuality, in Popular Culture (3)**. Uses feminist and queer theories to analyze popular culture and address representations of gender and sexuality across a variety of platforms.

3307—**Gender Issues in Sport (3)**. Examination of the ways sport experiences differ for males and females emphasizing historical, social, behavioral, and physiological dimensions.

3312—**Gender and Communication (3)**. Examines gender in contemporary society, giving attention to gender roles, masculine and feminine communication styles, social institutions that shape gender, and everyday applications of gender in the lives of people. [COMS 3334]

3321—**Human Sexuality a Life Span Perspective (3)**. Prerequisite: 2.5 TTU GPA. Human sexuality from a life span perspective, with emphasis on developmental, familial, and societal factors that influence individual sexuality. [HDFS 3321]

3323—**Women in Modern America (3)**. Explores the history of women and gender in the United States from the 16th century to 1877. [HIST 3323]

3325—**Gendered Lives (3)**. Prerequisite: SOC 1301. Course treats women as a group with unique sex role socialization, work, family, and political experience. Emphasis on women in contemporary United States. [SOC 3325]

3326—**Gender and Politics (3)**. A study of female political participation in the United States, including voting, campaign activity, interest group activity, and office holding. [POLS 3326]

3331—**Sexuality, Intimate Relations, and Family Life (3)**. An examination of the sociology of love and intimate partnership formation; sexuality; and historical, global, and cultural variations in family life. [SOC 3331]

3332—**Feminist Philosophy (3)**. Examines philosophical issues in feminist thought. Topics may include oppression, sexual difference, the intersection between multiple identities, sex and sexuality, aesthetics, epistemology, and ethical theories. [PHIL 3332]

3337—**Inequality in America (3)**. Inequality as expressed in occupational, class, ethnic, and sexual hierarchies is examined from varying sociological perspectives. [SOC 3337]

3339—**Sexuality and Literature (3)**. Representative literature focusing on gender and sexuality from various parts of the world. May be repeated once for credit when topic varies. [ENGL 3339]

3340—**Gender and Sexuality in the Classical World (3)**. Examination of social and cultural dimensions of gender and sexuality in the ancient Greco-Roman world. Readings in English. [CLAS 3340]

3341—**Women in European Civilization (3)**. What women were supposed to do; what women did, from prehistory to the vote in 1920.

3342—**Introduction to Research in Human Geography (3)**. Introduction to research methods in geography. [GEOG 3340]

- 3349—LGBTQ History in the United States (3).** Traces the history of lesbian, gay, bisexual, transgender, and queer (LGBTQ) people in the United States, from the colonial period to the present. [HIST 3349]
- 3382—Women Writers (3).** Significant works by women. [ENGL 3382]
- 4000—Individual Study: Teaching, Research, or Community Practicum (V1-6).** Prerequisite: 2.5 TTU GPA or consent of instructor and director. Teaching practicum, student-initiated research experience, or community practicum. May be repeated with consent of the Director of Women's and Gender Studies. F, S.
- 4301—Special Topics in Women's & Gender Studies (3).** Topics vary, focusing on interdisciplinary work arising from feminist scholarship.
- 4302—Psychology of Human Sexual Behavior (3).** Prerequisite: Junior standing. Study of human sexual behavior from a psychological viewpoint with emphasis on contemporary research methods and findings. [PSY 4300]
- 4305—Directed Studies (3).** Independent study under the guidance of the instructor. May be repeated with consent of the Director of Women's Studies.
- 4310—Feminist Thought and Theories (3).** An examination of important theoretical writings and perspectives in women's studies, including the contributions of feminist theory and analysis to traditional disciplines.
- 4355—Let's Talk Women, Let's Talk War: Women in Conflict in the 20th Century (3).** Prerequisite: Junior standing or consent of instructor. Examines the involvement and reactions of European women to situations of war and revolution in the 20th Century.

- 4399—Women's and Gender Studies Seminar (3).** Prerequisite: WGS 2300. A capstone course for the minor in women's studies. Extends, integrates, synthesizes, and applies women's studies knowledge.

Graduate Course Descriptions

Women's and Gender Studies (WGS)

- 5000—Practicum in Women's Studies (V1-6).** Prerequisite: Consent of instructor and the Director of Women's Studies. Practical experience in projects, activities, or artistic expressions that are socially and/or communally relevant.
- 5300—Directed Studies (3).** Prerequisite: Consent of instructor and the Director of Women's Studies. Content will vary to meet the needs of students. May be repeated up to three times for credit with consent of the director.
- 5310—Feminist Thought and Theories (3).** An in-depth examination of important theoretical writings and perspectives in women's, gender, and identity studies, including the contributions of feminist theory and analysis to traditional disciplines.
- 5340—Special Topics in Women's Studies (3).** Focused and rigorous examination of selected topics. May be repeated with consent of the director.
- 5360—Foundations of Women's Studies (3).** Interdisciplinary study of fundamental concepts and issues in gender and identity studies and contemporary scholarship, including the complexities introduced by cross-sectional study of race, sexual orientation, and class distinctions, tensions, and alliances.

Pre-Professional Programs

Pre-Law Program

Students who are interested in attending law school should begin preparing long before graduation. The discipline of law is for students who are interested in combining precision in thinking, researching, and writing with a desire to work with people. While many law school graduates choose to practice in the courtroom, others leverage their newly developed skills to excel in other fields. Through a structured four-year process, the TTU Pre-Law Program cultivates the undergraduate to become a confident and articulate law school applicant bearing exceptional qualifications. Participants focus on the three essential areas identified by law school professionals nationwide:

- Writing and speaking with comprehension and clarity.
- Understanding social institutions and human nature.
- Thinking creatively and analytically.

To aid students in their law school preparations, the Pre-Law Program functions through a four-part model:

- **Advising.** Through access to the pre-law advisor, program assistants, and ambassadors, students are easily able to ask questions and voice concerns about their decision to attend law school and receive help with the application process.
- **Roundtables and Events.** Monthly events aim to familiarize students with the essential aspects of the law school application process, including LSAT, GPA, letters of recommendation, personal statement, and resume. Additionally, these events strive to educate students on best practices and tips for doing well in law school (both personally and academically) and to broaden the understanding of legal fields and specialties.
- **Learning Community.** The Pre-Law Learning Community provides a unique experience for future law students to live together in an environment supporting their academic, personal, and professional success.
- **Legal Studies Minor.** The interdisciplinary minor in legal studies formally guides and encourages the exploration of law and its influence in society. The curriculum blends challenging course options in students' home disciplines with relevant interdisciplinary electives to facilitate an interest in and an appreciation for the beneficial application of theory and research through the vehicle of law.

Prospective law students need a four-year bachelor's degree in the academic discipline of their choice. Law schools are generally most interested in applicants who exhibit intellectual maturity and have the foundation of a broad-based liberal arts education. They consider exceptional applicants from diverse disciplines and backgrounds, often providing programs for early admission to qualified applicants. The Texas Tech University School of Law offers four such early admission programs for qualified students.

Contact: Texas Tech University Advising | 347 Drane Hall | 806.742.2189
prelaw@ttu.edu | www.prelaw.ttu.edu

Pre-Professional Health Careers

Pre-Professional Health Careers provides services to students interested in a health professions career, including (1) primary academic advising for students in pre-health designations who have not yet declared a degree-granting major; (2) support academic and career advising for students who are either undecided about or exploring health professions careers; and (3) application advice primarily to students applying to any of the full range of health career professional schools, including those at the Texas Tech University Health Sciences Center.

While the office maintains an extensive collection of information on a broad range of health careers and can provide support for a wide variety of health career interests, most students align themselves with one of 10 different designations: pre-medical laboratory science; pre-dentistry; pre-

medicine; pre-nursing; pre-occupational therapy; pre-optometry; pre-pharmacy; pre-physical therapy; pre-physician assistant; and pre-speech, language, and hearing sciences. Although the academic preparation required for admission to various health career professional schools varies greatly, most require successful completion of specific college-level science, mathematics/statistics, and general education courses.

None of the 10 pre-health designations offered to students and advised by Pre-Professional Health Careers are degree-granting majors, nor do they lead to an undergraduate degree. This distinction between designations and degree-granting majors is critically important because a baccalaureate degree is required for admission to occupational therapy, physical therapy, and physician assistant programs and is almost always obtained for admission to dentistry, medicine, and optometry programs, with a broad range of major areas being accepted. Professional programs in medical laboratory science; nursing; and speech, language, and hearing sciences confer baccalaureate degrees, so one is often not required for admission. Pharmacy programs occupy an intermediate position where a baccalaureate degree is not required for admission, but the majority of admitted pharmacy students hold at least a bachelor's degree. Regardless of their health profession goals, students pursuing these careers are strongly encouraged to identify a degree-granting major that aligns with their strengths, values, and interests, and that can provide satisfactory career options in addition to their health professions aspirations.

To receive department-level academic advising as early as possible, students pursuing health professions careers are strongly encouraged to declare a degree-granting major as soon as they are comfortable with their choice. According to Texas Senate Bill 25, all students at state institutions must file a degree plan, and thus select a degree-granting major, prior to the end of the first regular semester after earning, from all sources, 30 or more semester credit hours. However, delaying the filing of a degree plan until the legal deadline may adversely affect graduation timelines. Even after a degree-granting major has been declared, students pursuing health professions careers will still find Pre-Professional Health Careers a valuable resource. The office provides the evaluation forms and coordinates assembling evaluation packets for applications to schools of dentistry, medicine, and optometry, sponsors an annual Health Professions School Fair each spring semester, hosts personal statement workshops and health professional admission forums, coordinates shadowing and volunteering opportunities, and works with multiple affiliated health career student organizations in all disciplines.

Contact: Pre-Professional Health Careers | 347 Drane Hall
806.742.3078 | www.pphc.ttu.edu

Professional School Requirements. Because changes in prerequisite course requirements are occasionally made by the various health professions schools and requirements can differ between institutions, students are strongly encouraged to consult often with both Pre-Professional Health Careers advisors and health professions programs of interest to be sure they have the most up-to-date information. Nevertheless, some general required course guidelines can be outlined for the various health career programs. Prerequisite course information for each pre-health designation is provided for general guidance at www.pphc.ttu.edu. However, many variations on the suggested course of study can equivalently prepare a student for health professional school admission. Students should not feel constrained by these model curricula, and variations may be required by college credit awarded through transfer, examination, and/or dual-credit courses. Students should always have alternate curriculum plans evaluated by a Pre-Professional Health Careers advisor.

Pre-Dentistry

The minimum admission requirements for most dental schools in the United States include 14 semester hours of biology, 6 semester hours of English, 8 semester hours of general chemistry, 8 hours semester hours of organic chemistry, 8 semester hours of physics, and 3 semester hours of statistics. Applicants to dental schools are required to take the Dental

Admission Test and submit their application approximately one year prior to the planned matriculation. To learn the admission requirements of a specific dental school, students should consult the website of the dental school. While it is possible to be admitted to dental school after completing only 90 semester hours, this is unusual, and students should plan to complete a baccalaureate degree before entering dental school.

Pre-Medicine

The minimum admission requirements for most medical schools in the United States include 3 hours of biochemistry, 14 hours of biology, 3 hours of calculus or statistics, 6 hours of English, 8 hours of general chemistry, 8 hours of organic chemistry, and 8 hours of physics. Applicants to medical schools are required to take the Medical College Admission Test and submit their application approximately one year prior to the date of the planned matriculation. For the most up-to-date admission requirements, students should consult the application service websites or the website of a particular medical school of interest. While it is possible to be admitted to medical school after completing only 90 semester hours, students typically complete a baccalaureate degree before entering medical school.

Pre-Nursing

Specific admission requirements vary depending on the nursing school, but the requirements generally include 4 hours of chemistry, 6 hours of English, 8 hours of human anatomy and physiology, 3 hours of humanities, 3 hours of lifespan growth and development, 4 hours of microbiology, 3 hours of nutritional sciences, 6 hours of political science, 3 hours of psychology, 3 hours of statistics, 6 hours of U.S. history, and 3 hours of creative arts. An introduction to nursing course and a pathophysiology course are also often required. Some nursing schools require applicants to take the Test of Essential Academic Skills or the Higher Education Systems Incorporated exam. Students should consult the websites of particular nursing schools to learn detailed specific application requirements and follow through with the submission of all required information and documents.

Pre-Optometry

Specific admission requirements vary depending on the optometry school, but the requirements generally include 8 hours of biology, 3 hours of biochemistry, 3 hours of calculus, 8 hours of general chemistry, 3 hours of general psychology, 4 hours of human anatomy, 4 hours of microbiology, 4 hours of organic chemistry, 8 hours of physics, 4 hours of physiology, and 3 hours of statistical methods. The website of a particular optometry school should be consulted to learn the detailed specific application requirements. The completion of a baccalaureate degree is not always required. Applicants to optometry school are required to take the Optometry Admission Test and submit all admission-related documents in accordance with the timeline available on the website of the optometry school.

Pre-Pharmacy

Specific admission requirements vary depending on the pharmacy school, but the requirements generally include 8 hours of biology, 3 hours of calculus, 3 hours of economics, 6 hours of English, 8 hours of general chemistry, 15 hours of humanities/social science, 3 hours of literature, 4 hours of microbiology, 8 hours of organic chemistry, 4 hours of physics, 3 hours of public speaking, and 3 hours of statistical methods. Students are strongly encouraged to consult the website of a particular pharmacy school to learn detailed specific application requirements.

Affiliated Health Professions

Programs in affiliated health professions include degree options in medical laboratory science; speech, language, and hearing sciences; occupational therapy; physical therapy; and physician assistant. Students are awarded degrees at a range of levels upon completion of these programs. Some professional schools require a baccalaureate degree while other professional programs require only 60 to 90 hours of college-level coursework. Additionally, many health professions programs require an entrance exam of some sort. This variability makes it essential for a student to consult carefully the website of the particular program at a specific school to learn all the application requirements. Application deadlines also vary, but are usually required six to 12 months prior to the planned start date.

Office of the Provost: Student Life

Matt Gregory, Ph.D., Dean of Students & Vice Provost for Student Life

About Student Life

Student Life embodies the student experience here at Texas Tech University. Student Life staff work to enhance the student experience outside the classroom by delivering robust programs and services, opportunities to connect with fellow students, and promoting responsible citizenship as a member of the Red Raider Community. Our desired outcome is to guide students toward accomplishing academic, personal and professional goals.

While on campus, students have the opportunity to get involved in any of our over 600 student organizations, form lifelong friendships, make lasting memories, and have fun! There are a variety of ways to get involved on campus, including the Student Government Association (SGA), becoming a member of a fraternity or sorority, cheering for the Red Raiders along with our TTU Spirit squads, and so much more. We encourage you to explore all that TTU has to offer!

Reserve Officer Training Corps

The Department of Military Science and the Department of Aerospace Studies conduct senior division Reserve Officer Training Corps (ROTC) to provide students the opportunity to learn more about the United States military and its place in American society. Qualified students can pursue a program of studies and learning experiences leading to an officer's commission in either the Army or Air Force.

The first two years of courses in the Army and Air Force ROTC programs are open to all students. No military commitment or obligation is incurred with these courses unless the student has an ROTC scholarship, signs an early enlistment contract, or is contracted as a Simultaneous Membership Cadet who is training in both a U.S. Army Reserve or Army National Guard Unit and the Army ROTC program. The courses may be substituted for the College of Arts and Sciences health and physical fitness course requirements.

Army ROTC offers a two-, three-, and four-year commissioning program. To enter the junior- and senior-level Army Advanced Course, students must have completed the first-year student and sophomore-level basic course; or successfully completed the Army ROTC Basic Camp; or Armed Forces Basic Training and be an honorably discharged veteran and must be approved by the Professor of Military Science. In addition, all applicants must be academically aligned where a student's academic status (according to the university/college) is the same as his/her Military Science class status. Example: A MSL II student with 3 years remaining in college at the start of the fall semester is said to be academically aligned.

Air Force ROTC offers a three- and four-year commissioning program. Three- and four-year students competing for selection to the Air Force Professional Officer Course (POC) must have completed the first-year and sophomore-level General Military Course (GMC) or have received constructive credit by having completed Junior ROTC, Civil Air Patrol, or prior active duty. Cadets attend a two-week field training program. Attendance at field training is contingent upon selection to the Professional Officer Course and is normally scheduled between the sophomore and junior years.

Detailed information about the alternative programs is available from the chair of the respective departments. Advanced Course, Professional Officers Course, scholarship, early enlistment contract and contracted Simultaneous Membership students receive a monthly allowance. In addition to completing the above requirements, students who wish to enroll in the ROTC commissioning program must be citizens of the United States, be not less than 17 years of age, and be able to complete work for a baccalaureate degree and all other requirements for commissioning prior to their 30th birthday (39th birthday with waiver). For the Air Force, students must finish their baccalaureate degree and all other requirements for commissioning by the time they are 29.5 years old if they are programmed for flight training or up to 34 years old with waiver if programmed for other than flight training. All ROTC program students must have a GPA of 2.0 or better, pass all military aptitude tests as required, be physically qualified, be enrolled as a full-time student, and be approved by the professor of military science or professor of aerospace studies, as appropriate. For admission into the Advanced Course or Professional Officers Course, students must sign a contract to seek a commission as a second lieutenant.

Scholarships. The Department of Army ROTC offers competitive three- and four-year ROTC scholarships to selected high school seniors. Additionally, the Army offers four-, three-, and two-year scholarships to outstanding students selected by faculty in the program. Air Force ROTC offers four- and three-year scholarships based on merit, not need. Though scholarship awards vary, most pay all tuition, books, and approved university fees. High school seniors who are interested in the four-year scholarship must apply at www.armyrotc.com and www.afrotc.com. Cadets not on scholarship may apply for three- and two-year scholarships during their first and sophomore years. Both Army and Air Force ROTC scholarships provide textbook payment, tuition, and fees as well as a monthly allowance of \$420 for first-year students, sophomores, juniors, and seniors.

Commissioning

Army. Upon receiving a commission, the Army ROTC lieutenant will enter full-time active duty service or part-time service with the U.S. Army, the Army Reserve, or the Army National Guard. For those who wish to combine a career with part-time military service, contracts are available guaranteeing that cadets can serve all their commitments in the Army Reserve or National Guard. Cadets may also apply for educational delays for graduate training.

Air Force. Upon graduation and receiving a commission, Air Force cadets will enter active duty service and agree to serve four years on active duty if in a non-flying career field, 6-10 years upon completion of undergraduate pilot, remote pilot, combat system operator, or air battle manager training.

Department of Aerospace Studies

Daniel O'Brien, Lt Col., Chairperson

Professor: Lt Col. O'Brien

Assistant Professors: Maj. Gray, Maj. Tennes, Capt. Parker

Instructor: TSgt Ochoa

About the Department

Organization. AFROTC is the largest and oldest source of commissioned officers for the Air Force. AFROTC is designed to recruit, educate, and commission officer candidates through academic education, field training, and professional development training programs based on Air Force requirements. Students can attend classes through host or cross-town enrollment programs or consortium agreements.

History. ROTC was established with passage of the National Defense Act of 1916. The first AFROTC units were established between 1920 and 1923 at the University of California at Berkeley, Georgia Institute of Technology, the University of Illinois, the University of Washington, Massachusetts Institute of Technology and Texas Agricultural and Mechanical College.

After World War II, Gen. Dwight D. Eisenhower, chief of staff of the War Department, signed General Order No. 124, establishing AFROTC units at 78 colleges and universities throughout the nation. Eligible Air Force enlisted men and women pursuing a college degree who were interested in becoming commissioned officers were given that opportunity through competition in the AFROTC Airman Scholarship and Commissioning Program, established in 1973.

In 1978, Air Training Command assumed responsibility for AFROTC programs. On July 1, 1993, Air Training Command merged with Air University to form Air Education and Training Command. Air University became a direct reporting unit under Air Education and Training Command and AFROTC realigned under Air University.

In February 1997, AFROTC and Officer Training School merged under the newly created parent organization, Headquarters Air Force Officer and Accession Training Schools. This restructuring placed oversight for three-quarters of Air Force officer production under one command and facilitated the sharing of manpower and expertise with minimum effect on the day-to-day operations of either organization. In June 2008, AFOATS was re-designated as the Jeanne M. Holm Center for Officer Accessions and Citizen Development.

AFROTC Program. The first two years of AFROTC's four-year program, the General Military Course (GMC), consist of one hour of classroom work, two hours of leadership laboratory, and three hours of physical conditioning each week. Upon completion of GMC requirements, cadets who wish to compete for entry into the last two years of the program, the Professional Officer Course (POC), must do so under the requirements of the POC selection system. This system uses qualitative factors, such as grade-point average, detachment commander's evaluation, aptitude test scores and physical fitness test scores to determine a student's officer potential. After selection, students must successfully complete summer field training at Maxwell AFB.

Field training is a required integral component of the AFROTC curriculum that typically occurs after the cadet has satisfied the GMC program requirements and before entry into the POC program. It consists of a series of strategically planned events with the purpose to train, evaluate and grow cadets through a transformational experience. Field training culminates in a graduation event that includes an interactive leadership development course focused on preparing cadets for leadership challenges at their detachments.

In the POC, cadets attend class three hours a week, participate in a weekly leadership laboratory lasting two hours and perform three hours of physi-

cal conditioning per week. Cadets apply what they have learned in the GMC and at field training. Under the guidance of detachment cadre, POC cadets conduct leadership laboratories and manage the unit's cadet corps. Each unit has a cadet corps based on the Air Force organizational pattern of flight, squadron, group, and wing. POC classes are small, with emphasis on group discussions and cadet presentations. Classroom topics include leadership, communication skills, and national defense policy. Once enrolled in the POC, all cadets are enlisted in the Air Force Reserve and assigned to the Obligated Reserve Section.

Awards and Recognition. A number of awards, trophies, and decorations are presented each year to outstanding Air Force ROTC cadets during a suitable military ceremony by military and civilian leaders. The awards, presented to recognize achievement and encourage competition, are given to recipients chosen by the professor of aerospace studies, detachment staff, and the cadet staff.

Sabre Flight Drill Team. The Sabre Flight Drill Team is an integral part of the program, and its basic mission is to promote interest in the Air Force ROTC. Members of the flight participate regularly in color and honor guard formations and precision drill activities.

Arnold Air Society. This professional honorary service organization of selected Air Force ROTC cadets participates in a variety of service functions for the university and the community. Its objective is to create a closer and more efficient relationship within the Air Force ROTC and to promote interest in the Air Force.

Silver Wings. The Silver Wings is a national, coed, professional organization dedicated to creating proactive, knowledgeable, and effective leaders through community service and education about national defense and is open to all students.

Air Force ROTC Professional Development Training. There are numerous program opportunities available for cadet participation on a voluntary basis within the Professional Development Training (PDT) Program. PDT is a collection of summer programs available for Air Force ROTC cadets. These programs are conducted at a variety of locations in the United States and overseas. Travel to training location is provided. Room and meals are provided during training. Cadets can expect to shadow Air Force officers to see their day-to-day responsibilities. There are numerous opportunities to interact with flying, engineering, medical, legal, and many other career fields. Flying and parachuting opportunities are available for freshman cadets.

Air Force ROTC Field Training. Field Training is a program that cadets participate in during the summer at Maxwell Air Force Base in Montgomery, Alabama and is usually between the sophomore and junior year. Being selected to attend Field Training is a competitive process and cadets compete nationwide to attend. In order to attend, cadets must have passed the Air Force Officer Qualifying Test, have an approved Department of Defense Medical Review Board physical and met all the General Military Course requirements. Additionally, Field Training is a requirement to commission as an officer through Air Force ROTC. The major areas of study in the field training program include junior officer training, career orientation, survival training, base functions and the Air Force environment, and physical conditioning.

AERS 820 Leadership Laboratory. Instruction is within the framework of an organized cadet wing with a progression of experiences designed to develop each student's leadership potential. Leadership Laboratory involves a study of Air Force customs and courtesies, drill and ceremonies, career opportunities in the Air Force, and the life and work of an Air Force junior officer. Students develop their leadership potential in a practical, supervised laboratory that typically includes field trips to Air Force installations and visits by Air Force officers in various job specialties. Students who enroll in aerospace studies courses must also enroll in a corresponding Leadership Laboratory section. Contact the Department of Aerospace Studies for details.

Undergraduate Course Descriptions

Aerospace Studies (AERS)

- 0820—Leadership Laboratory (0).** Hands on leadership and critical thinking course focused on team building and developing cohesive and inclusive environments and organizations.
- 1105—Heritage and Values I (1).** A survey course that deals with the mission, organization, and function of the American military, especially as it applies to the United States Air Force.
- 1106—Heritage and Values II (1).** A survey course that deals with the Air Force in the contemporary world through a study of the total force structure, strategic offensive and defensive forces, general purpose forces and aerospace support forces.
- 2103—Team and Leadership Fundamentals I (1).** Prerequisite: AERS 1105. A survey course designed to examine general aspects of air and space power through a historical perspective. Historical examples are provided to analyze the development of the Air Force capabilities and missions as well as to demonstrate the evolution of today's air and space power. Students also focus on basic verbal and written communication skills and USAF core values.
- 2104—Team and Leadership Fundamentals II (1).** Prerequisite: AERS 1106. Corequisite: AERS 0820. A survey course designed to examine general aspects of air and space power through a historical perspective. Historical examples are provided to analyze the development of the Air Force capabilities and missions as well as to demonstrate the evolution of today's air and space power. Students also focus on basic verbal and written communication skills and USAF core values.
- 3305—Air Force Leadership Studies I (3).** Prerequisite: Acceptance into the Professional Officer Course. An introductory management course emphasizing the individual as a manager in the Air Force. Individual motivation and behavioral processes, leadership, communication, and group dynamics are covered to provide a foundation for the development of the junior officer's professional skills as an Air Force leader.
- 3306—Air Force Leadership Studies II (3).** Prerequisite: Acceptance into the Professional Officer Course. Leadership theory and management practice are amplified through study of management of forces in change, organizational power, managerial strategy and tactics, and leadership ethics.
- 4303—National Security, Leadership Responsibilities and Commissioning Preparation I (3).** Prerequisite: Acceptance into the Professional Officer Course. AS 400 examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Special topics of interest focus on the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Within this structure, continued emphasis is given to the refinement of communication skills.
- 4304—National Security, Leadership Responsibilities and Commissioning Preparation II (3).** Prerequisite: Acceptance into the Professional Officer Course. AS 400 examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Special topics of interest focus on the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Within this structure, continued emphasis is given to the refinement of communication skills.

Department of Military Science

Thomas W. Stevenson, Lt. Col., Chairperson

Professor: Lieutenant Colonel Stevenson

Senior Instructor: Master Sergeant Muller

Instructors: Sergeant First Class Branstetter, Sergeant First Class (Ret.) Livermore

CONTACT INFORMATION: Army ROTC | Department of Military Science
Box 45003 | 2508 15th St. | Weeks Hall | Lubbock, TX 79409-5003
T 806.742.2141 | F 806.742.1144 | www.depts.ttu.edu/armyrotc

About the Department

The Army Reserve Officer Training Corps (ROTC) program of instruction is designed to prepare university students for commissioning as officers for the active Army, the Army Reserve, and the Army National Guard. This is an integral aspect of national security because Army ROTC provides over 70 percent of the commissioned officers serving in the Army Reserve components and the active Army. It is for this reason that Army ROTC seeks quality men and women who are willing to accept the responsibilities inherent with officership. The training program is designed to teach military skills and enhance the individual's abilities in communications, leadership, and physical aptitude.

The four-year Army ROTC program is divided into the basic course (first two years) and the advanced course (last two years). Students who are not scholarship winners or not under SMP or ROTC contract incur no military obligation during the first two years. Students who enroll in the advanced course (juniors and seniors) must meet all eligibility requirements not later than the second semester of their sophomore year.

Basic Course. Enrollment in the basic course is open to all full-time students who are U.S. citizens. Immigrant aliens may enroll with prior approval from the department chair. During the first two years, students are trained in military leadership and problem-solving techniques that will assist them in their adjustment to the university environment. Course content includes wilderness survival skills, land navigation with a compass and topographic map, safety, first aid, rappelling, and physical conditioning, all of which are taught in both the classroom and outdoor settings. Course content also includes the structure of the Army and its relationship to American society, the customs and courtesies of the Army, leadership, values, and interpersonal communications. Eligible students may receive some credit for the basic course via prior military service to include Army National Guard or U.S. Army Reserve basic training, or completion of the Army ROTC Basic Camp. Eligibility is determined through verification of prior service and an Army ROTC degree plan to verify alignment with MILS courses for remaining semesters towards graduation.

Advanced Course. The junior- and senior-level courses offer an in-depth study of leadership and individual and group behavior. During the junior year the emphasis is on individual- and small-unit combat tactics, physical training, and basic soldier skills. This culminates between the junior and senior years with attendance at the Army ROTC Advanced Camp. During the senior year, students study ethics and leadership and prepare for becoming a lieutenant. In addition, they participate in planning and executing training for the other cadets. Students are required to develop skills in oral and written communications as well as techniques of instruction.

Military Science Organizations. This department sponsors the local chapter of Scabbard and Blade, the national military honor society. It also sponsors intramural athletic teams and the following organizations:

- **Ranger Challenge Team.** This eleven-member team represents the Texas Tech Army ROTC program at competitive meets. The purpose of the Ranger Challenge Team is to test the abilities of the top cadets in small-unit competition designed to promote exciting, challenging training and the opportunity to compete with top cadets from other

schools. Team members are selected competitively based on physical fitness, endurance, and proficiency in basic soldier skills.

- **Grey Scouts.** This club offers students the opportunity to participate in a self-paced, recreational shooting sports program that recognizes and rewards skill development from a basic performance-level Marksman rating up to nationally recognized performance-level Distinguished Expert. Membership is open to all interested students.
- **Army Ten Miler Team.** Every fall, the Texas Tech Army ROTC program takes part in the Army Ten Miler race held in Washington, D.C. This event draws a crowd of around 30,000 individuals, including soldiers, retired personnel, family members, and ROTC Cadets who run in support of the Army soldiers and their families. The TTU Red Raider Battalion trains a team of committed runners who participate in the race while showcasing their patriotism for our country and the soldiers who sacrifice for our nation's flag.
- **Color Guard.** Students in this organization are trained to attain proficiency in dismounted drill and ceremonies. Members of the color guard routinely participate in opening ceremonies of sporting and formal events. Membership is open to all Army ROTC Cadets who meet membership requirements.

Awards and Recognition. Awards and decorations are presented each semester to military science students in recognition of outstanding performance in academics, military science, athletics, and physical training. Awards range from cadet ribbons and certificates to organization decorations and scholarships.

Simultaneous Membership Program (SMP). Advanced course students who are eligible to enlist or are already enlisted in either an Army Reserve or Army National Guard unit may serve in both ROTC and the reserve component simultaneously. The financial benefits generally exceed \$1,200 per month. Members must have at least four years of military service remaining on their enlistment contract prior to signing an ROTC contract.

Leader Training Exercises. Leader Training Exercises (LTXs) are conducted one weekend each semester, including such activities as rappelling, land navigation, marksmanship, and small-unit tactics. These weekend activities are optional for basic course students but required for advanced course cadets and intended to reinforce skills learned in the classroom and lab environment.

Leadership Laboratory. All students enrolled in military science are required to enroll in Leadership Lab 501. Students are given the opportunity during lab to practice skills learned in the classroom. Each student is assigned to a specific cadet company within the cadet battalion and normally advances in leadership position in accordance with class level and experience. The laboratory location will vary from the classroom to a field training area. Lab training includes such activities as rappelling, rope bridging, land navigation, and first aid training.

Summer Training

Basic Camp. Basic Camp is a 28-day camp designed to instruct and educate those cadets with little or no prior military experience in basic military skills. It is a requirement for all scholarship contracted freshmen and select contracted sophomores and will be conducted the summer after their freshmen year for freshmen and before their junior year for sophomores. It is held at Fort Knox, Kentucky, and all transportation, lodging, and meals are paid by the U.S. Army. Exceptions are available on a case-by-case basis for those cadets who have completed basic military training.

Basic Camp-Lateral Entry. Students who desire to enter the military science program, have no prior military service, and have only two to two and one-half years remaining until graduation may choose to attend the four-week Basic Camp-Lateral Entry at Fort Knox, Kentucky. Satisfactory completion of this camp satisfies the requirements for the basic course. Upon completion of Basic Camp-Lateral Entry students may then contract and enter the advanced course. Transportation, room and board, and an allowance will be paid for the four-week period of Advanced Camp. All advanced course students must complete this four-week camp at Fort Knox, Kentucky, between their junior and senior years or immediately following completion of their senior year. Successful completion of Advanced Camp is a commissioning requirement. Transportation, room

and board, and an allowance will be paid for the period. The program of instruction is designed to be the culmination of the military education up to and including the junior year.

Nurses Summer Training Program. Students seeking a B.S.N. and a commission in the Army Nurse Corps attend the regular Advanced Camp. Students can then be assigned to an Army hospital for four weeks. During this time, nursing students work one-on-one with an Army nurse putting into practice the clinical skills learned in college. Students participating in this program can receive college credit from the TTUHSC School of Nursing (subject to approval).

Special Schools. Army ROTC students may apply for summer training in Army Airborne, Air Assault, or Northern Warfare Schools. Junior-level students also may request assignment to a Cadet Troop Leadership Training (CTLT) position for experience training with an active Army unit. CTLT training is normally for three weeks; however, a few positions may be available for extended training (five weeks) overseas.

Military Studies, Undergraduate Minor

A military studies minor is available to enlisted/contracted Army and Air Force ROTC Cadets who complete the 18-hour MILS/AERS curriculum with limited course substitutions subject to approval by the department chair/Professor of Military Science or Aerospace Studies. Minors are not awarded based on previous military service.

Undergraduate Course Descriptions

Military Science (MILS)

- 1101—MSI Foundations of Officership I (1).** Introduction to the Army profession, the role of the Army officer, and military leadership. Instruction on time management and physical fitness, as well as general military skills. Survey of pre-commissioning program requiring no military obligation.
- 1102—MSI Foundations of Officership II (1).** Introduction to the Army profession, the role of the Army officer, and military leadership. Instruction on time management and physical fitness, as well as general military skills. Survey of pre-commissioning program requiring no military obligation.
- 2201—MSII Individual Leadership Studies - Leadership and Teamwork I (2).** Prerequisite: MILS 1101 and MILS 1102 or consent of instructor. Introduction to decision-making and group processes relating to military leadership. Focus on character development, role of the officer, and Army values.
- 2202—MSII Individual Leadership Studies - Leadership and Teamwork II (2).** Prerequisite: MILS 1101 and MILS 1102 or consent of instructor. Introduction to decision-making and group processes relating to military leadership. Focus on character development, role of the officer, and Army values.
- 2203—MSII Independent Studies in Leadership and Teamwork (2).** Prerequisite: Consent of department chairman. Individualized studies in military leadership and teamwork. Select lab and/or class participation may be required. This class may be repeated and may substitute for MILS 2201 or MILS 2202 credit. F and S.
- 3301—MSIII Leadership and Problem Solving I (3).** Prerequisites: MILS 2201 and MILS 2202, basic training, or consent of the instructor. Prepares student for summer completion of the Leadership Development and Assessment Course. Emphasis on small-unit tactics, troop leading procedures, field training, and basic soldiering skills such as land navigation and rifle marksmanship. F.
- 3302—MSIII Leadership and Problem Solving II (3).** Prerequisites: MILS 2201 and MILS 2202, basic training, or consent of the instructor. Prepares student for summer completion of the Leadership Development and Assessment Course. Emphasis on small-unit tactics, troop leading procedures, field training, and basic soldiering skills such as land navigation and rifle marksmanship. S.
- 3303—MSIII Independent Studies in Leadership and Problem Solving (3).** Prerequisite: Consent of department chairman. Individualized studies in military leadership and problem solving. Select lab and/or class participation may be required. This class may be repeated and may substitute for MILS 3301 or MILS 3302 credit. F and S.
- 4301—MSIV Officership I (3).** Prerequisites: MILS 3301 and MILS 3302. Focus on transition from cadet to lieutenant with an introduction to

military law and ethics, leadership case studies, hands-on practice sessions, and a Senior Leadership Project. F.

4302—MSIV Officership II (3). Prerequisites: MILS 3301 and MILS 3302.

Focus on transition from cadet to lieutenant with an introduction to military law and ethics, leadership case studies, hands-on practice sessions, and a Senior Leadership Project. S.

4303—MSIV Independent Studies in Officership (3). Prerequisite: Consent of department chairman. Individualized studies in military officership and professional development. Select lab and/or class participation may be required. This class may be repeated and may substitute for MILS 4301 or MILS 4302 credit. F and S.

TTU Chess Program

The Chess Program brings outstanding students from all over the world to Texas Tech University. Offering chess scholarships to qualified applicants at both the undergraduate and graduate levels. Competing at all division levels, the program is able to provide opportunities for all ratings from International Grandmasters to club players. Director and Head Coach Alex Onischuk is an internationally renowned Grandmaster and trainer who has trained successfully with a wide range of skill levels, from beginners to world champions.

About the Graduate School

Graduate education plays a critical role in innovation, and graduate degree holders are increasingly in demand in the workforce because of their specialized knowledge and problem-solving ability. Graduate study is much more than a continuation of undergraduate work. It is distinguished by a spirit of inquiry and the desire to increase human knowledge. Graduate study should be contemplated, therefore, only by students who have demonstrated in their undergraduate program unusual intellectual ability and the capacity for independent thought and investigation. For this reason, the Texas Tech University Graduate School exercises selectivity in its admission of students. Selective entrance requirements are partly for the maintenance of high standards that must characterize graduate study and partly for the benefit of students in helping them decide whether they should undertake such work.

The Graduate School of Texas Tech University recognizes its obligations to maintain the highest academic standards and reserves the right to decline to accept any applicant whose admission would not be in the best interest of the applicant or the university.

Mission Statement

The Graduate School prepares ethical, knowledgeable, and thoughtful graduates who are equipped to tackle complex challenges and to enrich the cultural and social fabric of society.

Academic Diversity

Established in 1923, Texas Tech has become a leading research university in the U.S. A strong commitment to academic quality and research has earned numerous graduate programs at Texas Tech national and international recognition. From a creative writing program to an advanced ceramics program, from a nationally recognized personal financial planning program to a semi-conductor processing program, the Texas Tech University Graduate School offers unlimited opportunity for the aspiring scholar.

The hallmarks of the graduate experience at Texas Tech include 1) individualized programs of study to meet students' career objectives, 2) comprehensive professional and career development program to complement disciplinary training, 3) opportunities to engage in practical experience that attracts employers (e.g., internships, etc.), and 4) access to The Graduate Center, a facility for the exclusive use of graduate students and postdoctorals that provides academic and student support services.

The Graduate School strives to maintain flexibility through a combination of options from traditional degree programs to progressive interdisciplinary and multidisciplinary choices. The Graduate School values the student's interests, personal research aims, and career goals. In keeping with that spirit, many outstanding facilities for interdisciplinary research are located at Texas Tech, including numerous specialized research centers and institutes. Some interdisciplinary programs are housed within specific colleges or a cluster of departments, while others are headquartered in the Graduate School. All of these programs are defined by the topic rather than by traditional disciplinary boundaries. In addition to approved student-designed options, interdisciplinary subjects include biotechnology, arid land studies, heritage and museum science, wind science, energy, applied linguistics, environmental evaluation, international affairs, women's and gender studies, and many more.

Graduate Council

The Graduate Council, assisted by the graduate faculty, is charged with the responsibility of formulating the policies of the Graduate School and the requirements for graduate degrees. The Dean administers these policies.

The Graduate Council is composed of 14 members. The graduate faculty elects 11 of the members, the Graduate Dean appoints two, and the Faculty Senate elects one from its graduate faculty membership. All 14 are voting members of the Graduate Council. The Dean is ex officio chairperson of the council; associate deans, the Provost (or a designated representative), and others appointed by the Dean are ex officio and nonvoting members of the Council. The graduate student vice president of the Student Government Association and the president of the Graduate Assembly also serve as ex officio nonvoting members of the Council.

Elected members other than the Faculty Senate representative serve for a three-year period and are not eligible for immediate reelection unless they have been chosen to fill an unexpired term. Members appointed by the Dean serve for two years. The Faculty Senate representative serves a one-year term. By a system of rotation, some new members join the council each year, replacing those whose terms of office have expired.

Graduate Degrees at Texas Tech

In addition to this list of graduate degrees, many departments offer specializations or concentrations in a variety of subject areas.

Davis College of Agricultural Sciences & Natural Resources

Agribusiness, M.A.B.
Agricultural and Applied Economics, M.S., Ph.D.
Agricultural Communications, M.S.
Agricultural Communications and Education, Ph.D.
Agricultural Education, M.S., Ed.D.
Animal Health and Industry, M.S.
Animal Science, M.S., Ph.D.
Food Science, M.S.
Horticulture Science, M.S.
Landscape Architecture, M.L.A.
Plant and Soil Science, M.S., Ph.D.
Professional Science Master's in Environmental Sustainability and Natural Resources Management, P.S.M.
Ranch Management, M.S.
Wildlife, Aquatic, and Wildlands Science and Management, M.S., Ph.D.

Huckabee College of Architecture

Architecture, M.Arch., M.S.

College of Arts & Sciences

Anthropology, M.A.
Atmospheric Science, M.S.
Biology, M.S., Ph.D.
Chemistry, M.S., Ph.D.
Creative Writing, M.F.A.
Clinical Psychology, Ph.D.
Counseling Psychology, Ph.D.
Economics, M.A., Ph.D.
English, M.A., Ph.D.
Environmental Toxicology, M.S., Ph.D.
Experimental Psychology, M.A., Ph.D.
Exercise Physiology, Ph.D.
Forensic Science, M.S.
Geography and the Environment, M.S.
Geosciences, M.S., Ph.D.
History, M.A., Ph.D.
Kinesiology, M.S.
Languages and Cultures (Applied Linguistics, Classics, or German concentration), M.A.
Mathematics, M.A., M.S., Ph.D.
Microbiology, M.S.
Philosophy, M.A.
Physics, M.S., Ph.D.
Political Science, M.A., Ph.D.
Psychology, M.A.
Public Administration, M.P.A.
Romance Languages (French or Spanish concentration), M.A.
Social Work, M.S.W.
Sociology, M.A.
Spanish, Ph.D.
Sport Management, M.S.
Statistics, M.S.
Technical Communication, M.A.
Technical Communication and Rhetoric, Ph.D.

Graduate Faculty

Members of the graduate faculty participate in all phases of the graduate enterprise, including developing policies and procedures related to graduate education, teaching graduate courses, supervising graduate student thesis and dissertation research, and voting on candidates for graduate degrees. Membership is a means of recognizing the members of the faculty for scholarly activities, creativity, direction of graduate research and study, and other contributions to the graduate programs of the university. Except in special cases approved by the Graduate Dean, only graduate faculty may serve as instructors of graduate courses, conduct graduate examinations, and serve on thesis and dissertation committees. Please refer to [OP 64.10](#) for additional information including the approval of external committee members and graduate course teaching waivers.

Cost of Attendance and Financial Support

Texas Tech offers graduate study opportunities that are extremely affordable compared to other institutions. Texas Tech is outstanding among the state's universities for its reasonable costs and its ability to help many graduate students with some form of financial assistance. With the below-average cost of living in Lubbock, graduate education at Texas Tech is an exceptional investment value.

Graduate Program Tuition. A complete explanation of tuition and fees is available online at www.sbs.ttu.edu.

Residency Status Determination. For rules governing the determination of residency status as defined by the Texas Higher Education Coordinating Board, see <https://goo.gl/5dWYUo>.

Academic Common Market. Texas Tech participates in the Academic Common Market, an interstate agreement that provides reciprocal higher education opportunities to citizens of states declared as parties to the Southern Regional Education Compact. Graduate students who are from these states and are admitted into approved out-of-state programs qualify for resident tuition if the program of study is not offered in their home state. Approved programs at Texas Tech University and the member states from which qualified students may gain resident tuition are as follows:

- Master of Architecture (Alabama, Kentucky)
- Master of Science, Doctor of Philosophy—Wildlife, Aquatic, and Wildlands Science and Management (Arkansas, Louisiana)
- Doctor of Philosophy—Fine Arts (Arkansas, Louisiana, Tennessee, Virginia)
- Doctor of Philosophy—Family and Consumer Sciences Education (Kentucky)
- Doctor of Philosophy—Land-Use Planning, Management, and Design (Alabama, Arkansas, Kentucky, Louisiana, Virginia)

- Doctor of Philosophy—Couple, Marriage, and Family Therapy (Kentucky)
- Doctor of Philosophy—Technical Communication and Rhetoric (Tennessee)

Applicants who wish to qualify for the Academic Common Market must (1) be accepted into a program for which an interstate agreement has been arranged, and (2) submit to Student Business Services proof of legal residency in a member state by providing documentation from the qualifying state's Coordinating Board or Board of Regents.

A list of state coordinators is available from the Southern Regional Education Board, 1340 Spring Street, N.W., Atlanta, GA 30309. For information about the ACM program in Texas, contact the Program Development Division of Senior Colleges and Universities, Texas Higher Education Coordinating Board, Box 12788, Capitol Station, TX 78711.

Financial Assistance. Assistantships (teaching and research), scholarships, and fellowships are available to support graduate study. The Graduate School awards fellowships and scholarships on a competitive basis each year for new and continuing degree-seeking students (both full- and part-time). Deadlines are in the spring for awards for the upcoming fall and spring semesters. Online applications and detailed information are available online at <http://www.depts.ttu.edu/gradschool/financial/FellowshipsScholarships.php>. The Graduate School also makes recruitment fellowships available to departments to aid them in attracting new graduate students to Texas Tech. Many departments/programs offer teaching and/or research assistantships as well as some scholarships; inquiries about these opportunities should be directed to the specific department concerned. If you are a Texas resident, please fill out your FAFSA as soon as possible for need-based aid consideration.

Graduate Admissions

The Graduate School of Texas Tech University aspires to have a diverse student body. Although all students are admitted to the university by the Dean of the Graduate School, applications for degree programs also must be evaluated by the department/program to which the student is applying.

Three general categories of criteria are used as part of a holistic process to evaluate all applicants for admission and competitive scholarships:

- 1. Academic Records.** All academic records will be considered. All materials submitted become property of Texas Tech University and will not be returned.
- 2. Test Scores.** The only test scores required for admission consideration by the Graduate School are English proficiency scores for international applicants. International applicants must submit proof of English proficiency as part of their application materials. Some programs may

require GRE or GMAT scores as part of their required application materials. GRE or GMAT scores should be not more than five (5) years old. In accordance with Texas Education Code §51.842, the applicant's performance on a standardized test may not be used in the admissions or competitive scholarship process as the sole criterion for consideration of the applicant or as the primary criterion to end consideration of the applicant.

3. Individual Applicant Materials. Profiles may include recommendations, research background, motivation, multilingual proficiency, undergraduate institution, presentations, portfolios, interviews, work experience, demonstrated commitment to a particular field of study, community involvement, family and socioeconomic background, and standardized test scores.

For information about services for students with disabilities, contact Student Disability Services, 130 Weeks Hall or Box 45007, Texas Tech University, Lubbock, TX 79409-5007, 806.742.2405.

Academic Integrity in the Application Process. All prospective graduate students applying to Texas Tech University are expected to adhere to the university's Statement of Academic Integrity in Part II, Section B of the [Student Handbook](#). This includes entering all post-secondary institutions attended on your application for admission as well as submitting official academic credentials from all post-secondary institutions attended. Not providing that information on your application or not submitting all academic credentials is considered falsification of academic records and will result in the voiding of your application or other disciplinary action.

Domestic Student Admissions

Admission to any graduate degree program is granted by the Dean of the Graduate School upon the recommendation of the department of proposed study. U.S. citizens and permanent residents are considered domestic for applicant purposes; all others are considered international applicants. All application materials must be submitted via the Graduate Admissions applicant portal.

The following procedures should be followed in order for domestic applicants to be considered for admission to a graduate program at Texas Tech University. A completed domestic Graduate School application consists of the following:

1. Application—Applications should be submitted at least three months prior to date of intended enrollment. Preferred deadlines for priority processing are June 1 for fall, September 1 for spring, and March 1 for summer. All applications will be submitted online at go.grad.ttu.edu/apply. Falsification of application information will void admission to Texas Tech University.

2. Nonrefundable Application Fee—An application fee as approved by the Board of Regents is required for each application. The fee will be paid online with a credit card as part of the application.

- Texas Tech University System employees who are employed at least half-time, their spouses, and dependents under age 25 are exempt from this fee. The faculty/staff fee waiver form is located online at go.grad.ttu.edu/staffwaiver.
- McNair Scholars and GEM (National Consortium for Graduate Degrees for Minorities in Engineering) Scholars will receive an application fee waiver by submitting documentation from either the McNair Scholar coordinator at their current/former institution or by supplying proof of their GEM Fellowship.
- U.S. military personnel, active duty or veteran, are exempt from the application fee. The Military Application Fee Waiver form is located online at go.grad.ttu.edu/militarywaiver.

3. Post-Secondary Transcripts.

- The applicant must have earned a bachelor's degree from a regionally accredited post-secondary institution in the United States or its equivalent from a foreign institution with substantially similar degree requirements as Texas Tech University; foreign institutions must be recognized by their government/government ministry or department to award undergraduate and/or post-graduate degrees.
- The applicant must submit a transcript from each degree-awarding post-secondary college or university attended. Unofficial copies of transcripts are required for evaluation purposes.

- All degrees earned must appear on the official transcript. If a domestic applicant received a university-level degree from a non-US college/university, an official diploma or degree certificate will be required for that degree. Diplomas are required only if an applicant is admitted and are not required for application evaluation purposes.
- The applicant who, because of current enrollment, cannot provide final transcripts at the time of application must submit transcripts of all completed study. Consideration may then be given for tentative admission upon the condition that final transcripts are provided within the initial semester of enrollment at Texas Tech.
- The applicant must have been in good standing in all schools attended at final matriculation.
- If admitted, a student will be required to submit official transcripts from each degree-awarding post-secondary college/university attended by the 12th class day of the term to which the student is admitted. All degrees earned must appear on an official transcript. If a domestic applicant received a university-level degree from a non-US college/university, an official diploma or degree certificate will be required for that degree. Diplomas are required only if an applicant is admitted and are not required for application evaluation purposes. Failure to submit official transcripts by the 12th class day will result in a registration hold being placed.

4. Resident Alien Card—Immigrant Permanent Residents must provide a copy of the front and back of their Resident Alien Card. Applicants with pending applications for permanent residency may submit alternative documentation; for a list of alternative documentation please email graduate.admissions@ttu.edu.

5. Proof of Citizenship for Foreign-Born U.S. Citizens Alien—Foreign-born U.S. citizens, including U.S. citizens born abroad and naturalized U.S. citizens, must submit proof of citizenship. The following documents can be submitted to meet this requirement:

- A copy of the U.S. passport biographic page.
- Consular Report of Birth Abroad (DOS Form FS-545, DS-1350, or FS-240) – citizens born outside the United States of America, including the children born outside the U.S. to American military personnel, must submit a copy of this form. The copy may be made in color or in black-and-white.
- Certificate of Naturalization (DHS Form N-550 or N-570) – naturalized citizens must submit a black-and-white copy of the Certificate of Naturalization form. Do NOT submit a color copy of this form.
- Certificate of Citizenship (DHS Form N-560 or N-561) – individuals who derive their citizenship through a parent must submit a black-and-white copy of the Certificate of Citizenship form. Do NOT submit a color copy of this form.
- U.S. Citizenship Identification Card (I-197 or I-179).
- Birth certificate from the following American territories, commonwealths, and protectorates – U.S. Virgin Islands, American Samoa, Guam, Swains Island, the Panama Canal Zone before 1 October 1979, the Philippines before 4 July 1946, and the Northern Mariana Islands after 3 November 1986.

Citizens who cannot provide the documentation above should contact Graduate Admissions to find out what other documentation may suffice.

6. Additional Requirements—Many programs will require additional materials such as recommendation letters, personal statements, GRE or GMAT scores, and/or writing samples. Departmental application requirements are listed on the application; you may also visit individual department websites for that information.

Evaluating Applications. Application files will not be evaluated until all the above requirements have been met. Applicants will be notified of admission decisions via email.

Official Documents. If an offer of admission is received, the applicant will then be required to submit official copies of all academic transcripts, English proficiency scores, and GRE/GMAT scores (if required by the program) to Graduate Admissions. Failure to submit official documents by the 12th class day of the term in which the applicant was admitted will result in a registration hold being placed, preventing registering until all documents are received. *Any alterations or omission of information on the transcript submitted to Texas Tech University could be grounds for cancellation of the application and/or the withdrawal of the offer of admission.*

International Graduate Admissions

Texas Tech University has been fortunate to attract sizeable numbers of highly qualified and talented international students. Recognizing the difficulties involved in moving from their home countries and home schools to a new environment and new scholarly procedures and expectations, the Office of Graduate Admissions is committed to helping international students in this important transition.

All applicants who are not U.S. citizens or immigrant permanent residents are considered international applicants. International students must have a visa type which allows for academic study.

The following procedures should be followed carefully in order for international students to be eligible for graduate admission consideration at Texas Tech University.

1. Application—Applications should be submitted by January 15 for fall and summer semesters and June 15 for spring semester. International applicants may apply after these preferred deadlines. However, Graduate Admissions cannot guarantee there will be sufficient time for late applications to be evaluated and make any necessary visa/travel arrangements if admitted.

2. Nonrefundable Application Fee—An application fee as approved by the Board of Regents is required for each application. The fee will be paid online with a credit card as part of the application.

- Texas Tech University System employees who are employed at least half-time, their spouses, and dependents under age 25 are exempt from this fee. The faculty/staff fee waiver form is located online at go.grad.ttu.edu/staffwaiver.

3. Post-Secondary Academic Transcripts—The applicant must have earned a bachelor's degree from a regionally accredited institution in the United States or its equivalent from a foreign institution. Foreign institutions must be recognized by their government/governmental ministry as a degree-granting institution. The applicant must have been in good standing in all schools attended at final matriculation. Texas Tech University requires a degree that is equivalent to a U.S. undergraduate degree. A list of acceptable credentials for graduate admission is available on the website <https://go.grad.ttu.edu/degequiv>. Unofficial copies of transcripts are required for evaluation purposes. **DO NOT SEND OFFICIAL TRANSCRIPTS FOR APPLICATION EVALUATION PURPOSES.** Unofficial copies of transcripts from all post-secondary institutions attended must be received before the application will be evaluated.

If admitted, an applicant must submit an official transcript from each college or university attended, including transcripts/marksheets for each semester. An applicant who, because of current enrollment, cannot provide final transcripts at the time of application must submit transcripts of all completed study. Consideration may then be given for tentative admission upon the condition that final transcripts are provided within the initial semester of enrollment at Texas Tech. Applicants must submit at least six (6) semesters of coursework to be eligible for admission consideration.

International applicants must also provide an official English translation of all transcripts/marksheets if the documents are not provided in English. Graduate Admissions will not accept a public notary certification in place of an official English translation. If official English translations are not supplied by the applicant's institution(s), the applicant must provide a translation done by an American Translators Association-certified translator. A list of ATA-certified translators is available online at www.atanet.org/directory/. If admitted, the applicant will be required to submit official transcripts from all colleges/universities attended by the twelfth class day of the term to which the applicant is admitted.

4. Official Diploma/Degree Certificates—If admitted, the applicant is required to submit an official copy of the degree certificate, diploma, or official statement that the degree has been granted. Provisional certificates are not considered to be diplomas. Students who receive degrees from countries that are a part of the European Higher Education Area must also provide a Bologna-compliant diploma supplement; if your institution does not provide a separate diploma and diploma supplement, you must provide written documentation from your institution which states that. International applicants must also provide an official English translation of all diplomas/degree certificates if the documents

are not provided in English. Graduate Admissions will not accept a public notary certification or translation. If official English translations are not supplied by the applicant's institution(s), the applicant must provide a translation done by an American Translators Association-certified translator. A list of ATA-certified translators is available online at www.atanet.org/onlinedirectories. **Diplomas are NOT required for application evaluation.**

5. Proof of English Proficiency—All international applicants must provide proof of English proficiency before their applications can be considered for admission. This requirement is waived only for graduates of regionally accredited U.S. universities or universities in English proficiency-exempt countries. A list of exempt countries can be found at go.grad.ttu.edu/exempt_country. Applicants who have completed at least two consecutive years at a college or university in the U.S. or in an English proficiency-exempt country are also exempted from the English proficiency requirements. Applicants who believe they qualify for an exemption from the English proficiency requirement must submit the English Proficiency Exemption Request form located at go.grad.ttu.edu/englexempt. Applicants may submit one of the following measures of English proficiency:

- **TOEFL** (Test of English as a Foreign Language) – The minimum TOEFL score required is 550 (paper-based version) or 79 (internet-based version). The TOEFL score must be received directly from the Educational Testing Service (ETS). Texas Tech University's institutional code is 6827. TOEFL scores are valid for two (2) years. Applicants may provide a copy of their Examinee Score Report for application evaluation purposes.
- **IELTS** (International English Language Testing Service) – The minimum IELTS required score is an overall band score of 6.5 on the Academic version; IELTS General Training results are not acceptable. There is no IELTS institution code for Texas Tech University. IELTS scores are valid for two (2) years.
- **Duolingo English Test** – The minimum required Duolingo score is 100. There is no institutional code for Duolingo. Scores are reported within 48 hours and are valid for two years.
- **PTE Academic** (Pearson Test of English Academic) – The minimum required PTE Academic score is 60. PTE General and PTE Young Learners results are not acceptable. There is no PTE Academic institution code for Texas Tech University. PTE Academic scores are valid for two years.
- **Cambridge C2 Proficiency** – The minimum required Cambridge C2 Proficiency score is 180. There is no institutional code for the Cambridge C2 Proficiency. The Cambridge C2 Proficiency is valid for life.
- **Cambridge C1 Advanced** – The minimum required Cambridge C1 Advanced score is 180. There is no institutional code for the Cambridge C1 Advanced. The Cambridge C1 Advanced is valid for life.
- **ELS Intensive English Program** – Texas Tech will accept completion of Level 112 of ELS' English for Academic Purposes program. An official transcript and certificate of completion must be submitted.

Unofficial student score reports of the above measures of English proficiency must be submitted for application evaluation purposes only. If admitted, the applicant will be required to submit official results from the test provider.

6. Additional Requirements—Many programs will require additional materials such as recommendation letters, personal statements, GRE or GMAT scores, and/or writing samples. Departmental application requirements are listed on the application; prospective students may also visit individual department websites for that information.

Evaluating Applications. Applications will not be evaluated until all the above requirements have been met. Applicants will be notified of admission decisions via email.

Official Documents. If an offer of admission is received, the applicant will be required to submit official transcripts and diplomas (including an official English translation if the document is issued in a language other than English), test scores, and any other required materials. Diplomas are only required if the degree was awarded by a non-U.S. institution. The applicant must also submit official proof of English proficiency, and the official scores must match the score copies submitted as part of the application. If an

applicant cannot provide official English proficiency results because their scores have expired, they will be required to submit new English proficiency results that do meet the minimum requirement for that English proficiency requirement before they are allowed to register. If a program requires the GRE or GMAT scores, the applicant will also be required to submit official GRE/GMAT results. Failure to submit official documents by the 12th class day of the term in which the applicant was admitted will result in a registration hold being placed, preventing registering until all documents are received. Any alterations or omission of information on the documents submitted to Texas Tech University could be grounds for cancellation of the application and/or the withdrawal of the offer of admission.

Non-Degree Seeking Graduate Admissions

Applicants seeking non-degree admission in any category must provide the same application materials as those seeking admission to a degree program. Please see either Domestic/Permanent Resident Admission or International Admission requirements above. **NOTE: International students may not be eligible to apply for non-degree status depending on their visa type. International applicants considering applying for non-degree status are strongly encouraged to email Graduate Admissions at graduate.admissions@ttu.edu BEFORE submitting an application for a non-degree status.** Admission to a non-degree program is not a guarantee of admission to a graduate degree program at a later date, nor does it guarantee that credits earned in a non-degree program will count toward a graduate degree.

- **Post Graduate**—The Post Graduate category is for students who have earned an undergraduate degree and desire to take only undergraduate courses, typically for leveling purposes. In this status, a student may register indefinitely as a non-degree graduate student but cannot be appointed to teaching assistantships or research assistantships, nor are they eligible to receive an undergraduate degree from Texas Tech University while registered as a Post Graduate student. Students in this category may not register for graduate courses. Post Graduate students are not eligible for financial aid. Admission decisions for Post Graduate applications are made by Graduate Admissions.
- **Graduate Temporary**—A student in this category is considered a temporary non-degree student and may enroll for no more than twelve (12) hours. All Graduate Temporary students should be aware that completion of courses as a Graduate Temporary does not ensure that the student will be accepted into a degree program, nor does it ensure that any courses taken while enrolled as a Graduate Temporary will be accepted for credit if the student is subsequently accepted into a degree program. Graduate Temporary students are not eligible for financial aid. Admission decisions for Graduate Temporary applications are made by Graduate Admissions.
- **Teacher Certification**—A student who desires to earn teacher certification through the College of Education may apply for this type of non-degree status. Graduate courses may be taken, but if the student wishes to pursue a degree at a later time, only 12 graduate hours completed before admission to a degree program can be counted toward a degree. Teacher Certification students may be eligible for financial aid if they are concurrently enrolled in a graduate degree-seeking program.
- **Continuing Professional Education Development**—The Continuing Professional Education Development status is designed to meet the needs of professionals such as engineers, certified public accountants, architects, social workers, teachers, and others who require continuing professional educational development. Continuing Professional Education Development students are not eligible for financial aid. Admission decisions for Continuing Professional Education Development applications are made by Graduate Admissions.
- **Graduate Certificate Program**—Graduate Certificates are intended to meet the advanced skills and/or supplemental educational needs of professionals. A graduate certificate program is comprised of a set of courses that provide a coherent knowledge base. These courses may be derived from more than one (1) academic program and may be more practice-oriented than the courses in a graduate academic program. Students applying for a graduate certificate program may not be required to submit GRE or GMAT scores (although some of the Graduate Certificate Program programs do require these scores). Graduate Certificate Program students may be eligible for financial aid if they are concurrently enrolled in a graduate degree-seeking program.

Deferring Admissions

Applicants who wish to defer admission to a semester for which they did not originally apply may do so via their applicant portal if their previous application was in review with the department or they have been admitted. Deferral is permitted to any open application term within one year from the start of the original application term. Outside of this timeframe, an applicant must reapply. Admission for the new term is not guaranteed; programs will consider students on a case-by-case basis. Applicants will be notified of deferral decisions via email.

Adding or Changing a Program

Applicants who want to add or change a program must submit a new application for admission to the desired program. Students may enroll in no more than two graduate programs, including certificate programs, at the same time. If a student is already enrolled in two programs, they must either replace one of their current programs or complete one before adding another. Admission is not automatic; departments evaluate each applicant individually. Graduate Admissions will notify applicants of the decision via email.

Second Graduate Degree Program

Permission to work toward a second graduate degree of the same level is granted only upon recommendation by the relevant program and approval by the Graduate Dean. In addition, the applicant is subject to all requirements as a new student. While there is no guarantee that any work from the first degree may apply to the second, at least one full year (24 semester hours) must be taken specifically for the new degree program.

Readmission

Students who fail to register or who leave school during a spring or fall semester without an approved leave of absence must submit a new application plus a non-refundable application fee. Automatic readmission is not guaranteed; programs will consider students on a case-by-case basis. Applicants will be notified of admission decisions via email.

Admission Decision Appeals

Texas Tech University graduate applicants have the right to appeal admissions decisions. Appeals must be submitted using the form located at go.grad.ttu.edu/appeals within 10 business days of receiving the decision. Appeals submitted within 30 days of the start of the term for which the applicant applied may be considered for the next available term.

The appeal along with any additional supporting documentation provided will be sent to the academic department responsible for the admissions decision. The department will reconsider the application and inform Graduate Admissions of its decision within 10 business days of receiving the appeal. Graduate Admissions will then notify the applicant of the decision.

An unfavorable ruling at the department level may then be appealed to the Graduate School by responding within five business days of receiving the department's appeal decision. Graduate Admissions will forward this secondary appeal to the Student Affairs Committee of the Graduate Council for its review. The committee will make a final decision within 30 days, notifying the applicant, the department, and Graduate Admissions.

Applicants are allowed only one appeal per application cycle, and all decisions made through the appeal process are final. Please note that application fees are non-refundable, regardless of the appeal outcome.

Enrollment

Students who have been granted admission to the Graduate School are expected to register for coursework whether or not they contemplate degree work. If students fail to register in the term for which admission is granted or if they have not maintained continuous enrollment once they have begun their graduate program, they will be required to reapply for admission. The details of registration are under the jurisdiction of the registrar's office which furnishes each enrollee complete instructions for all steps in the procedure. Students should follow carefully such instructions and those found in this section of the catalog. All graduate students should

register themselves. Graduate students are permitted to register at any time beginning with the first day of advance registration. Advance registration usually begins in April for the fall semester and in November for the spring and summer semesters. Online registration is available to all admitted students. Instructions for web registration, add-drop, and withdrawal can be found on [Raiderlink](#).

Departmental Approval of Courses. Students should have a schedule of courses approved by an official representative of their major department/program at the time of registration. It is the student's responsibility to see that the registrar's printout corresponds exactly to the courses for which the student has registered.

Enrollment of a graduate student in any course that carries graduate credit is automatically considered to be for graduate credit and affects relevant grade point averages accordingly.

Full-Time Study. Normal full-time enrollment varies between 9 and 13 hours for doctoral students and 9 and 16 hours for other graduate students in the regular semester. The minimum enrollment for full-time graduate status is 9 hours in the regular semester and 3 hours each summer session. The minimum enrollment for full-time financial aid status is 9 hours in the regular semester and 6 hours in the summer term. Full-time status for selected professional degree programs (e.g., working professional MBA) is 6 hours in a regular semester and 3 hours each summer session. Students on fellowships, assistantships, or other appointments designed for the support of graduate study must enroll for 9 hours in each regular semester and 3 hours in each summer session for which they have a fellowship, scholarship, assistantship, or other appointment designed for the support of graduate study.

If a student is devoting full time to research, using university facilities and faculty time, the schedule should reflect at least 9 hours enrollment (6 in each summer term). Doctoral students who have completed coursework, passed qualifying exams, been admitted to candidacy, are not funded by the Graduate School or their program, and have accumulated at least 85 doctoral hours may register as full-time students for one semester, taking the number of hours (not less than 3) that will bring the total to 93 hours. Then they may register as full-time students for up to two more semesters of 3 hours each, thus constituting full enrollment. Such lower enrollment may affect financial aid status; students are encouraged to check with financial aid, scholarship, and loan officers before taking the 3-hour option.

The maximum allowable hours per semester is 13 for doctoral students, 15 for other graduate students, and 6 in a six-week summer term. Any exceptions to this rule must have the prior approval of the Graduate Dean.

Registration in an individual study, research (7000), or similar course implies an expected level of effort on the part of the student comparable to that associated with an organized class with the same credit value. A syllabus for the individual study course must be on file with the department for any class taken (including independent study hours).

A non-Lubbock doctoral student who is required to register solely for the purpose of satisfying a continuous enrollment requirement need not register for more than 1 credit hour during each term (as long as the student does not receive a fellowship, assistantship, or other appointments designed for the support of graduate study, and if the student is designated as an off-campus student). However, a doctoral student who is involved in internship, research, or another type of academic study should register for credit hours in proportion to the teaching effort required of the program faculty regardless of where they are physically located.

Leave of Absence. Any student who fails to register during a fall or spring semester and who does not have an official leave of absence from study is subject to review for readmission by the standards in effect at the time of reconsideration. Official leave of absence, which is granted by the Dean of the Graduate School upon departmental recommendation, *may be requested only in case of serious medical conditions and other exceptional reasons*. Normally, leaves of absence will not exceed one year. Leaves of absence do not extend the maximum time allowed for completion of the degree. Request for leaves of absence must first be approved by the department and then be sent to and approved by the Graduate Associate Dean for Student Affairs along with appropriate written documentation prior to their leaving the university. These requests should be submitted through the Graduate School Enrollment Services portal.

Continuous Enrollment. Students are required to register for appropriate courses in every semester or summer term in which they expect to receive assistance, use the facilities of the university, complete their comprehensive evaluation, take their preliminary or qualifying exams, or defend their thesis or dissertation. The number of hours for which students must enroll in each semester depends on their level of involvement in research and their use of university facilities and faculty time. Students in residence who are devoting full time to research should enroll for at least 9 hours. Students who are on an assistantship or who receive fellowships or scholarships through the Graduate School must register for 9 hours each semester and 3 hours in each relevant summer session in which they receive assistance. Students receiving financial assistance must register for the number of hours required by Financial Aid. For Financial Aid purposes, 9 hours of enrollment is automatically considered full-time enrollment; 4 hours of enrollment is automatically considered half-time enrollment.

Students who have begun thesis or dissertation research must register for 6000 or 8000 courses, respectively, in each regular semester and at least once each summer until all degree requirements have been completed, unless granted an official leave of absence from the program for medical or other exceptional reasons. Students officially classified as off-campus students may register for 1 hour of 6000 or 8000 with departmental approval until their final semester, at which time they must enroll in at least 3 hours.

Registration for Thesis or Dissertation Hours. Registration for at least 6 hours of 6000 is required for the master's thesis and at least 12 hours of 8000 for a doctoral dissertation. Once the project has begun, a student must be enrolled in such courses every semester and at least one session during the summer until completion. A student should enroll under the committee chairperson. However, in those instances in which other professors on the student's committee are making substantial contribution to the student's research, it is permissible for the student to enroll proportionally under those professors. Students certified as off-campus and without an assistantship or scholarship/fellowship may enroll for as few as 1 hour until their final semester, at which time 3 hours minimum are required.

Students may not enroll in thesis or dissertation courses before formal admission to a degree program by the Graduate Dean.

Registration in Session of Graduation. There are three official graduation dates: December, May, and August. Every candidate for a graduate degree must be registered for classes in the session of graduation. Doctoral students must register for at least 3 hours at the 8000 level and master's students in a thesis option must be registered for at least 3 hours at the 6000 level. Master's students in a thesis option who have completed the required 6 hours of thesis work and have defended the thesis may enroll in at least 3 hours at the 5000 level or 7000 hours (research hours). Master's students in a non-thesis option must register for at least 1 hour of non-thesis graduate coursework. Failure to graduate at the expected time requires such additional registrations as may be necessary until graduation. Students must complete a new Application to Graduate for each semester.

Maximum Allowable Doctoral Hours. Students not making timely progress toward completion of the doctoral degree are subject to termination by the Graduate Dean. The Texas Legislature has capped fundable graduate study at 99 doctoral hours for most programs and may impose sanctions upon universities permitting registration for excess hours. Doctoral students with more than 99 doctoral hours will be required to pay out-of-state tuition, regardless of residence status. The maximum time allowed for completing the doctoral degree is eight years from the first doctoral semester or four years from admission to candidacy, whichever comes first. The Graduate Dean must approve exceptions or extensions in advance.

Maximum Allowable Graduate Hours. Students who are in programs other than doctoral programs and are not making timely progress toward completion of their degree are subject to termination by the Graduate Dean. Graduate students beyond the maximum allowable graduate hours as determined by the Texas Legislature may be required to pay non-resident tuition, regardless of residency status. The maximum time allowed for completing a master's degree is six years. The maximum time allowed for completing a doctoral degree is eight years. The Graduate Dean must approve exceptions or extensions in advance.

Changes in Schedule and Withdrawal. Graduate students who wish to add or drop a course past the deadline when student-initiated adds or drops are allowed as set by the Registrar must initiate such action with

the graduate advisor for their academic program. A student who wishes to drop all courses in a term must withdraw from the university through the Office of the Registrar. A student who quits a course or courses without officially dropping the course or making a full withdrawal from the university is likely to receive an F in that course or courses. Students should be familiar with the strict deadlines that the university has set for refund allowances for dropping courses and/or withdrawing from the university (www.depts.ttu.edu/studentbusinessservices/calendar/importDates.php).

Enrollment by Faculty and Staff. Full-time members of the faculty and staff of Texas Tech University may enroll for courses by permission of the department chairperson concerned. In registering for graduate work, they become subject to the regulations of the Graduate School. However, no member of the faculty who has held rank higher than instructor at Texas Tech is eligible to pursue a graduate degree program at this institution unless approved by the Dean of the Graduate School. An immediate supervisor of the faculty/staff member may not direct the student's research nor permit the enrollment of the supervisee in his/her courses or other organized instructional activity.

Enrollment by Undergraduates. An undergraduate student who has earned 90 hours of course credit and who has at least a 3.0 GPA in their major subject courses may enroll for courses carrying graduate credit, subject to the approval and certification of an acceptable grade point average by the dean of the instructional college and the approval of the Dean of the Graduate School. This approval must be obtained on special forms available from the Graduate School website prior to registration and submitted to the Graduate School Enrollment Services through the portal. No course taken without this approval may be counted for graduate credit. Students may not receive both graduate and undergraduate credit for the same course, except for up to 9 hours when a student is admitted into an approved combined/accelerated baccalaureate – master's degree program where the graduate program hours exceed 30.

The maximum amount of work that may be scheduled by an undergraduate taking courses for graduate credit is 16 hours in a long semester or 6 hours in a summer term, inclusive of both undergraduate and graduate work.

Continuation in Graduate School

Every student enrolled in the Graduate School, whether working toward a degree or not, is required to maintain a high level of performance and to comply fully with policies of the institution. The Graduate School reserves the right to place on probation, suspend, or dismiss any post-baccalaureate or graduate student who does not maintain satisfactory academic standing or who fails to conform to the regulations of the university.

Students who are admitted to the Graduate School or to a degree program on condition of maintaining a required GPA are automatically admitted on a probationary basis. Failure to fulfill the conditions stipulated at the time of admission will result in dismissal from the Graduate School.

Academic Probation, Suspension, and Dismissal

Probation

- A student whose cumulative GPA falls below 3.0 is placed on academic probation.
- The student must raise the cumulative GPA within two consecutive long terms to avoid academic suspension.
- If semester GPA drops below 3.0 during the two-semester period, students are subject to academic suspension.
- If cumulative graduate GPA remains less than 3.0 and their term GPA is greater than 3.0 in the next term, they are placed on continued probation.
- If the student's overall GPA remains below 3.0 in the following term, they are placed on academic suspension.

Suspension

- Students placed on academic suspension are required to remain out of the Graduate School for one term and must reapply to the Graduate School.
- In accordance with [OP 64.07](#), any student who has been suspended must appeal to the Graduate School if reinstatement is desired.
- Automatic readmission is not guaranteed.

- Any student placed on academic suspension twice will not be allowed to return to the Graduate School.
- Students may be suspended for unprofessional conduct such as cheating or plagiarism. Appeal is subject to the provisions of the Code of Student Conduct in the *Student Handbook*.

Dismissal from an Individual Program

Individual academic programs may have higher standards than the minimum university requirements. Students who fail to meet higher program standards may be placed on probation, suspended, or dismissed from the program. Such standards must be approved by the Graduate School, and actions based thereon are to be recommended by the department/program to the Dean of the Graduate School for formal action.

Examples of such disciplinary actions include the following:

- Failure to fulfill the conditions stipulated at the time of admissions will result in termination from the program.
- Students not making satisfactory progress may be placed on probation and given conditions to meet to stay in the program.
- Continued unsatisfactory progress in any area of graduate work will be cause for dismissal by the Graduate Dean.
- Failure to pass the qualifying examination within the specified time will result in dismissal from the program by the Graduate Dean.

A student who is dismissed from a program yet maintains the minimum performance standards of the institution may apply for admission to another degree program at Texas Tech University.

Dismissal from Graduate School

- Continued unsatisfactory progress in any area of a student's work will be cause for dismissal by the Dean of the Graduate School.
- Any student placed on academic suspension twice will be dismissed from the Graduate School and will not be allowed to return.

General Information

The Graduate School, like other colleges and schools of Texas Tech, reserves the right to institute, after due notice and during the course of a student's work toward a degree, any new ruling that may be necessary for the good of the university and therefore, ultimately, of its degree recipients. Normally, a student may graduate under the provisions of the catalog in effect the semester of admission into the degree program.

Responsibility of Students. Each graduate student is expected to become thoroughly familiar with both departmental and Graduate School regulations and with the requirements for degrees.

To facilitate communications, graduate students should promptly notify the Graduate School of changes of address.

Graduate Advisors. The Dean of the Graduate School is the general advisor for all graduate students, but, insofar as the particular courses and program requirements are concerned, students are counseled by the chairpersons of their major and minor departments or by other professors designated for such counseling. Advisement in matters pertaining to teachers' certificates is the responsibility of the director of teacher certification in the College of Education.

Extracurricular Activities. Graduate students may participate in extracurricular activities within university policies. They are encouraged to participate in honor societies for which they may be qualified.

Professional and Career Development Activities. A successful career after graduate school requires more than academic knowledge and skills, whether you choose to pursue a job in an academic, industry, government, or non-profit organization. You also need to build core competencies in critical thinking, leadership and management, domain-specific knowledge, communication, professionalism, teamwork, and ethics, and the Texas Tech University Graduate School is here to help you in that process. The Graduate Center is host to numerous academic support services and facilities that include a computer lab, meeting space, quiet study areas, and a dining facility. The Graduate Writing Center (GWC) is dedicated to developing graduate students' and postdoctoral fellows' writing and research skills.

Requests for Workplace Accommodation. Graduate students who believe they have a disability and wish to request a non-academic accommodation under the Americans with Disabilities Act (ADA) or other applicable State and Federal civil rights laws should contact the university's

student ADA coordinator (Student Disability Services) and the staff ADA coordinator (through Human Resources). The staff ADA coordinator will inform the Graduate Dean regarding the accommodation.

Prerequisites for a Graduate Major. For a graduate major, an applicant must have completed, or must take, sufficient undergraduate work to ensure adequate background for successful graduate work in the proposed field. With approval of the department or program, the student may receive credit by examination for such leveling requirements. Any department may specify additional prerequisites if they are considered necessary and may require an applicant to pass an examination before being accepted.

Transfer Credit and Distance Courses. There is no automatic transfer of credit from another university toward a graduate degree at Texas Tech. In general, all such work is subject to review by the student's department and approved by the Graduate Dean. There is a separate time limit for course-work validity. Courses are valid for six years for a master's degree and eight years for a doctoral degree. Any exceptions must be approved by the Graduate Dean and be requested through the Enrollment Services portal. No work completed with a grade of less than B will be considered. Graduate credit will not be granted for courses taken by correspondence.

Grades. The grades used in the Graduate School are the same as those used in undergraduate work (A, B, C, D, and F), but graduate credit is allowed only for courses completed with grades of A, B, and C, although grades of D and F are used in computing grade point averages. Instructors may choose to add a plus or a minus to the grade. These will be entered on the transcript but will not be used in calculating the grade point average.

Departments have the option to use pass/fail grades (P and F) for individually arranged courses, professional seminars, and certain other courses. No more than one-fourth of a student's program coursework may be graded pass/fail.

Work completed at another graduate school with a grade less than B will not be accepted for transfer credit unless approved by the Dean, nor will grades of pass or satisfactory. Grades on transferred work will not raise the grade point average on courses completed at Texas Tech.

Symbols CR, NC, PR, I, and W. The symbol CR (credit) or NC (no credit) should be assigned for every enrollment for a master's thesis or doctor's dissertation until the completed document has been approved by the student's committee and accepted by the Dean of the Graduate School. At that time a grade of A or B will be entered solely for the hours in which the student is enrolled in the final semester.

CR may be given by a professor when a student's work in other individual research courses (7000 courses) is not finished but is satisfactorily in progress at the end of a semester. When the research is completed, a standard letter grade should be entered.

A grade of PR (in-progress) may be given only when the work in a course extends beyond the semester or term; it implies satisfactory performance. For such courses, a "PR" grade is recorded instead of an "I" (incomplete) or CR (credit) grade. The "PR" is changed to a letter grade upon completion of the course.

The symbol I (incomplete) may be given by a professor when a student's work in a course has not been completed at the end of a semester, but when failure to complete the work has been due to causes beyond the student's control, and when the progress at the point at which the Incomplete is requested has been satisfactory. It is not used as a substitute for F. The incomplete (I) form should be initiated by the instructor of record online through the Office of the Registrar. The instructor assigning the grade must stipulate in writing at the time the grade is given, the conditions under which the incomplete (I) grade may be removed and the specific date by which the make-up work is to be completed. Beginning in the Spring 2015 term, any grade of Incomplete will revert to an F within one calendar year of the date the Incomplete is recorded. The Dean of the Graduate School will consider extensions of "I" grades beyond the one-year deadline only under serious circumstances beyond the student's control. The instructor of the course should submit an Extension of Incomplete Grade form to the Graduate School via the Enrollment Services portal for approval.

Students may officially drop a course through the 45th class day of a long semester or the 15th class day of a summer term and receive the grade of W regardless of their progress in the class. After this time period, students must complete all courses and receive a grade.

Grade Replacement Policy. Graduate students may retake and replace grades for graduate courses under limited circumstances. Grade replacement will adjust the cumulative grade point average. A notation will indicate the original course that is being replaced. The original grade will remain on the student's transcript; however, the higher grade will be used in the calculation of a student's grade point average and earned credit hours. Grade replacement is subject to approval by the Dean of the Graduate School.

Grade replacement is not automatically applied; an electronic grade replacement request form must be submitted no later than the grade replacement deadline for that term. The Graduate School will identify courses eligible for grade replacement in consultation with programs/departments and submit those to the Office of the Registrar for processing at the end of each term.

Grade replacement is limited to a total of three (3) credits for students enrolled in a graduate certificate program, six (6) credits for students enrolled in a master's program, and nine (9) credits for a student enrolled in a doctoral program; in the case of concurrent enrollment, the higher credit limit will apply.

The grade replacement policy only applies to didactic coursework. Special topics, independent study, seminar, thesis, and dissertation hours are ineligible for grade replacement.

Only grades of C, D, or F are eligible for grade replacement. A specific course may be repeated only once for consideration of grade replacement; the most recent A or B will replace a previous grade of C, D, or F in that course.

Courses taken pass/fail for grade replacement can only replace a grade of fail; they cannot replace a grade for which grade points were awarded (i.e., a D grade) in a course not taken pass/fail.

Once a grade replacement has been approved, the process cannot be reversed or changed.

No grade may be replaced after a graduate certificate or graduate degree has been awarded.

A course in which an academic integrity violation has been officially reported may not be repeated for grade replacement.

Responsible Academic Conduct Training. An essential part of the graduate experience is to raise awareness to professional standards of research ethics, integrity, and safety and of challenges that students may face throughout their careers. To supplement the effort provided by Texas Tech faculty, the Graduate School in collaboration with the Office of Research and Innovation has developed a responsible scholarship training that addresses academic practices such as data management, intellectual property, management of conflict of interest, ethical use of humans and animals in research, social responsibility of research, effective collaboration, and research misconduct. This training is required for all new and continuing degree-seeking graduate students. Separate training modules are available for different broad disciplines (student self-selects the module). For more information or to begin the training, go to <https://www.depts.ttu.edu/grad-school/training/responsible-academic-conduct-training.php>.

Apply to Graduate. A student planning to complete a graduate certificate or graduate degree in a particular term must a) be currently enrolled and b) file an "Apply to Graduate" online form (through Raiderlink) at the beginning of the semester of intended certificate completion/graduation. A list of deadlines, including the date for filing the "Apply to Graduate," can be found on the Graduate School website (www.depts.ttu.edu/gradschool). No candidate's name will be considered for graduation unless this form has been received by the Graduate School by the specified deadline.

A candidate who does not meet the requirements to graduate at the expected time is required to file a new "Apply to Graduate" online form for any subsequent graduation and enroll in that semester.

Students who have defended their thesis or dissertation successfully by the last class day and have met all other program requirements but have missed Graduate School deadlines for graduating in that term may petition the Graduate School to participate in commencement. Master's students in coursework only programs may participate in commencement if they have met their comprehensive evaluation component requirement but have one more course required for program completion (and are registered for that

course in the subsequent semester). These requests must be made by the program advisor through the Graduate School Enrollment Services portal.

Teacher Certification. Prospective students should understand that the material in this catalog applies only to requirements for graduate degrees and has no direct relation to certificates for public school teachers. The Graduate School gives no assurance that a program for a graduate degree and a program for a certificate will coincide. Students interested in teacher certificates should confer with the director of teacher certification in the appropriate program at the outset of their work.

Master's Program

General Requirements

The degree requirements set forth here are in addition to those stated in the "Enrollment" section of the Graduate School catalog text.

Prerequisites. Admission to a master's degree program is dependent upon the applicant's undergraduate record; scores on the Aptitude Test of the Graduate Record Examination or, for business applicants, the Graduate Management Admissions Test (except in programs in which either test has been waived); other relevant information; and the recommendation of the proposed major department.

A substantial body of undergraduate work in the major subject and considerable breadth of background are essential for graduate study. Therefore, students whose undergraduate programs are considered deficient in breadth or depth may be required to complete additional preparatory work without degree credit. Such undergraduate "leveling" courses must be completed with a grade of C or better. Some programs may require a grade better than a C.

Major Subject. Every program for a master's degree not granted special exception must embody a major comprising at least 18 semester hours of graduate work, which may include a thesis.

Minor. Programs for a master's degree may include courses outside the major area. These may be formally structured to create a secondary program of study called a Minor that is distinct, in subject area, from the primary program of study. All minors are a minimum of six credit hours. A minor is created by the offering academic unit and approved by the university using the Curriculog proposal process. Students who select and successfully complete the requirements of an approved minor will have this documented on their transcript.

Concentration. A concentration is a group of courses that constitute a distinction within a major. The concentration allows the student to complete the degree with a demonstrated proficiency in an area of focus within the major. A concentration is a minimum of six semester credit hours in the major. The concentration is created by the offering academic unit and approved by the university using the Curriculog proposal process. Students who select and successfully complete the requirements of an approved concentration will have this documented on their transcript. Concentrations are only available to students enrolled in the home major.

Basic Plans for the Master's Degree

There are two basic plans for the master's program:

- **Thesis option.** A minimum of 24 hours of graduate coursework plus 6 hours of thesis (6000). The courses for the master's degree with a thesis should be approved by the research advisor and not the graduate advisor.
- **Non-thesis option.** A minimum of 30 hours of graduate non-thesis coursework. Some degrees have a greater minimum hour requirement.

The option to offer thesis or non-thesis programs is a departmental decision. In addition, no more than 6 hours of individual study courses (aside from the thesis) will be permitted in the master's program.

Filing the Official Degree Program. Immediately following the first semester of enrollment (or the completion of 9 credit hours), the student must meet with their major department to establish a degree plan for their program of study. The degree plan must be submitted to the Graduate School through DegreeWorks by a representative of the proposed major department and of other departments as appropriate. Students are

expected to follow their degree plan as the basis for all subsequent enrollments. Substitutions of courses may be made only on the recommendation of the department or departments concerned and require approval of the Graduate Dean. Approval of a degree plan does not, however, constitute admission to candidacy for a master's degree. It merely signifies that the proposed program of study will be acceptable if the student satisfies all Graduate School regulations and all the requirements connected with the degree program.

Annual Review. The Graduate School strongly recommends that faculty of master's programs conduct a formal review of the progress of their students at least once a year and submit this review to the Graduate School Enrollment Services portal. Any student not making satisfactory progress toward the degree may be placed on probation and given conditions to stay in the program. Continued unsatisfactory progress in any area of graduate work will be cause for dismissal by the Graduate Dean.

Transferred Work. There is no automatic transfer of credit toward a master's degree, but, in general, work completed in residence at another accredited graduate school may, on the recommendation of the departments concerned, be accepted for as much as 6 semester hours toward a master's degree. Work completed at another graduate school with a grade less than B or grades of pass/fail or satisfactory will not be accepted. Transfer credit will not alter a student's grade point average at Texas Tech. Courses older than six years will not be accepted for transfer without an exception approved by the Graduate Dean.

Grade Requirement for Graduation. For the master's degree, the minimum requirement for graduation is an average of 3.0 in the major subject and an overall average of 3.0 on all courses within their program for the master's degree, comprising the official program for the degree. Individual departments or colleges may have higher standards.

Admission to Candidacy. Every applicant for a master's degree is required to make formal application for admission to candidacy for the master's degree as soon as 9 to 12 semester hours of the master's degree work, excluding leveling courses, have been completed. This application is submitted to the Graduate School through the DegreeWorks system.

Admission to candidacy will be granted at such time as all of the following requirements have been met:

- All conditions relating to admission to the program have been met.
- At least 9 semester hours of the graduate work required for the master's degree have been completed (exclusive of transfer and extension courses).
- All required leveling work has been completed with C or better grades.
- An average grade of 3.0 or better has been maintained in all courses comprising the official program exclusive of leveling work.
- Proficiency in a foreign language or tool subject required for the particular degree has been acceptably demonstrated.
- The general field of the thesis has been stated and approved (for thesis students only).
- Work to date is acceptable to the departments concerned, as attested by their approval of the application for admission to candidacy.
- The entire program conforms with the general requirements of the Graduate School and the requirements of the particular degree.

Time Limit. With the exception of certain specially approved programs, work credited toward a master's degree must be completed within six years. Students whose graduate study at Texas Tech is interrupted by active duty military service will be granted an extension of time for the period of their active duty.

Combined/Accelerated Baccalaureate-Master's Programs. The Graduate School supports the development of combined/accelerated bachelors to master's programs. Such programs provide an opportunity for highly-qualified students to earn both degrees in a cost-effective and timely manner. The programs are designed to ensure that students in these programs earn a high-quality master's degree in pursuit of their educational and/or professional goals. The following guidelines set the minimum expectations for the combined/accelerated bachelor's to master's programs. Programs may set more stringent standards.

- There must be an application process to each program to identified highly qualified candidates.
- The earliest a student may apply to a combined/accelerated program is the semester in which they will attain their 90th hour. Additionally,

students from institutions with which TTU has articulation agreements must have, or be in the semester that they will attain, 30 hours at TTU. Students admitted into a Combined/Accelerated Bachelor's-Master's program will remain classified as an undergraduate student until the minimum number of credits required for the undergraduate degree has been completed. This has implications for financial aid for students and should be discussed with the student by their program advisor.

- Once accepted by the respective program into the combined/accelerated bachelor's to master's program, the student must apply to the Graduate School for which all admission will be conditional.
- To obtain full standing in the Graduate School, students must meet the required hours for their respective baccalaureate degree and the program director must notify the Graduate School that the student has satisfied the program's academic requirements.
- No undergraduate-level course may be counted toward the master's degree.
- Courses completed at the graduate-level prior to being accepted to the combined/accelerated bachelor's to master's programs may be counted toward the master's degree.
- A student must have a minimum of 30 earned student credit hours at the graduate level, exclusive of hours that are counted toward the baccalaureate degree.
- A maximum of 9 hours of graduate-level courses can be used to meet the requirement of the bachelor's degree.
- Course content in graduate coursework applied to the baccalaureate degree should be in conformity with the expectations of Comprehensive Standard 3.6.1 (Post-baccalaureate program rigor) of the Principles of Accreditation (graduate-level academic content is more advanced in relation to content and outcomes than the undergraduate classes substituted).
- Students must be offered the option to have their baccalaureate degree conferred at the time when they meet the respective baccalaureate program requirements; otherwise, their baccalaureate and master's degrees will be conferred simultaneously upon completion of all baccalaureate- and master's-degree requirements.
- The student must meet all requirements that are expected of a student in the respective master's program.
- All combined baccalaureate-master's programs must be approved by Graduate Council and Academic Council.

All combined baccalaureate-master's programs must be approved by Graduate Council and Academic Council.

Language, Tool Subject Requirements

Language Requirement. Many programs require a reading knowledge of one or more foreign languages, although it is not a university-wide requirement. When this requirement exists, see the appropriate departmental section in this catalog for further information. The essential purpose of a language requirement is to assure that the student gains access to scholarly literature of his or her field in more than one language. Foreign students may use their native language (if it is not English) to meet this requirement if this essential purpose is served thereby and their major department approves. Foreign students must provide official documentation of acceptable grades in languages taken abroad or be tested as described below.

To qualify for Admission to Candidacy in a program that requires knowledge of a foreign language, the applicant must demonstrate proficiency in one of the following ways (as specified by the department) not more than six years prior to submission of an official program of study: (1) passing with a C- or better the second course of the sophomore sequence of the required language; (2) passing with a B- or better the second half of one of the special 6-hour programs for graduate students offered in French, German, and Spanish; (3) passing a standardized examination in French, German, Spanish, or Latin given in the Department of Classical and Modern Languages and Literatures or one of the examinations in French, German, or Spanish furnished by the Educational Testing Service and administered by the university's Testing Center. Arrangements for these examinations should be made in the applicable unit. The Department of Classical and Modern Languages and Literatures will administer the examinations in any other foreign language in which instruction is offered by the department. Arrangements for testing for other foreign languages will be approved by the Graduate Dean. Successful completion of the

language proficiency should be submitted to the Graduate School through the Enrollment Services Portal.

Students majoring or minoring in foreign languages in the Department of Classical and Modern Languages and Literatures are subject to higher performance levels in satisfying the master's requirement. Students should consult the graduate advisor of the appropriate language for guidelines.

Tool Subject Requirement. Some departments require a tool subject in lieu of or in addition to the language requirement. When this requirement exists, further information can be found in the appropriate departmental section within this catalog. When this provision can be satisfied by a formal course(s), a grade of B or better is required either in a single course or in the last of a sequence of such courses.

Master's Thesis

The master's thesis should represent independent work by the student, be conducted under the supervision of an advisory committee, and be written clearly and concisely in standard English (or another language when appropriate). As soon as the student's area for thesis research has been determined, the Graduate Dean will appoint an advisory committee upon recommendation of the major department. The committee must consist of at least two members of the graduate faculty, including a majority of members from the student's home academic department/program. Adjunct faculty may not serve as sole committee chair on a thesis committee but may co-chair with an approved member of the graduate faculty. Emeritus or retired faculty, as well as other qualified individuals from outside of the university, may serve as external members on the student's committee, but may not serve as chair. No more than one external member may serve on a committee. External members must be approved by the Graduate Dean after a careful review of their qualifications.

Completion of the thesis option requires the preparation of a written thesis and a public oral defense of the thesis. At least three weeks prior to the thesis defense, or by the deadline posted in the academic calendar, a Master's and Doctoral Defense Notification Form must be submitted to the Graduate School via the Enrollment Services portal via the appointed departmental liaison. After the scheduled thesis defense, all members of the committee must sign the Oral Defense Approval Form obtained by the student from the thesis/dissertation web page. If committee members are signing the approval form electronically, only verified or digitally drawn signatures are accepted. The completed Oral Defense Approval Form must be submitted to the Graduate School electronically via the Enrollment Services portal by the deadline posted in the academic calendar for the corresponding graduation term. The committee also must approve the final version of the thesis after the student has made necessary corrections by signing the Final Document Approval Form obtained from the Thesis/Dissertation webpage. If committee members are signing the approval form electronically, only verified or digitally drawn signatures are accepted. The student must earn a grade of B or better on thesis work to qualify for graduation. The thesis is assigned a letter grade in the final semester of thesis hours only; previous term thesis hours should receive a grade of CR (credit) or NC (no credit).

A manual entitled Texas Tech University Graduate School Formatting Guidelines (Revised January 2021) is available at the Graduate School website (www.depts.ttu.edu/gradschool). All manuscripts must conform to the Graduate School formatting guidelines. The final copy of the thesis must be submitted electronically in PDF file format as an Electronic Thesis/Dissertation (ETD) to the University Library's server. Deadlines and more information on this process are available through the Graduate School website. Paper copies may be required by the academic unit in which the student pursues the degree, but paper copies should not be submitted to the Graduate School.

During the semester of graduation, the candidate will pay Student Business Services a Thesis/Dissertation Fee to cover the cost of electronically storing the official copy (ETD) of the thesis. This fee is only paid once during the student's graduating semester. The Thesis/Dissertation Fee is posted to students' accounts by the Graduate School after Apply to Graduate forms have been processed for the graduating semester. Payment due dates are listed under the current semester's deadlines at www.depts.ttu.edu/gradschool.

Final Comprehensive Evaluation

The Graduate School requires a final comprehensive evaluation for all students in each master's program. The comprehensive evaluation is most often administered in the semester of intended graduation. This should be in a format most appropriate to the major field. At departmental discretion, the evaluation format may differ for thesis and non-thesis or professional and pre-doctoral students. The final evaluation should require a synthesis and application of knowledge acquired during the course of study and research leading to the master's degree.

A student is eligible to undergo evaluation only after having been admitted to candidacy by the Graduate Dean. As soon as possible after the evaluation, a report of the outcome should be sent electronically to the Graduate Dean via the Enrollment Services portal. A student who does not receive a satisfactory evaluation may be reassessed according to the policy of the program concerned. At the discretion of the program concerned, a student who receives a satisfactory evaluation but who does not graduate within 12 months may be required to repeat the assessment. Failure to pass the evaluation will result in dismissal. Appeals for comprehensive evaluation decisions are covered under [Operating Policy 64.07](#).

Doctoral Program

General Requirements

The degree requirements set forth here are in addition to those stated in the "Enrollment" section of the Graduate School catalog text.

Admission to Doctoral Study. Admission to doctoral study is restricted to applicants whose backgrounds show definite promise of success on this, the highest level of academic endeavor. Each doctoral department has its own requirements that applicants must satisfy for admission. It is essential that the student communicate with departmental advisors on this matter.

Years of Study. A minimum of three years of full-time graduate study beyond the bachelor's degree is required for the doctorate. Work completed for the master's degree, other than thesis hours (6000-level courses), may be considered as a part of this period if it forms a logical sequence in the entire program. Credit ordinarily will not be given for work completed more than eight years prior to admission to the doctoral program at Texas Tech University. Exceptions to this policy will require written justification through the student's department and approval by the Graduate Dean.

Work completed in the doctoral program of another recognized, accredited graduate school will be considered on the recommendation of the departments concerned, but no assurance can be given that such work will reduce the course or residence requirements here. In no case can transferred credit reduce the minimum residence (see "Residence Requirement").

Doctoral study cannot be calculated solely in terms of credit hours, but the program for the doctorate requires completion of at least 60 or more semester hours of work beyond the bachelor's degree, exclusive of credit for the dissertation. In addition, no more than 6 hours of individual study courses [aside from research (7000) or dissertation (8000) hours] ordinarily will be permitted in the doctoral program. Prior approval by the Graduate Dean is required for any exceptions.

Grade Requirement. For the doctoral degree, the minimum requirement for graduation is a grade point average of 3.0 in the major subject, exclusive of credits for the doctoral dissertation, and a grade point average of 3.0 in all other courses in their program taken for graduate credit outside the major. Individual departments and colleges may have higher standards than this minimum, university-wide requirement.

Major. The doctorate requires at least 60 semester hours of graduate work beyond the bachelor's degree, exclusive of the dissertation. Twelve (12) semester credit hours of dissertation are required. The Graduate School does not require a formal minor.

Minor. Programs for a doctoral degree may include courses outside the major area. These may be formally structured to create a secondary program of study called a minor that is distinct, in subject area, from the primary program of study. All minors are a minimum of 15 credit hours. A minor is created by the offering academic unit and approved by the university using the Curriculum proposal process. Students who select and

successfully complete the requirements of an approved minor will have this documented on their transcript.

If a formal minor is declared, it must be represented on the student's doctoral committee (see "Advisory Committee") and must be covered on the qualifying examination (see "Qualifying Examination"). Programs at variance with this description may be approved in exceptional circumstances. The advisory committee and the program faculty must approve such proposed exceptions before they are submitted to the Graduate School for consideration.

Track. A track is a group of courses that constitute a distinction within a major. The track allows the student to complete the degree with a demonstrated proficiency in an area of focus within the major. The track is created by the offering academic unit and approved by the university using the Curriculum proposal process. Students who select and successfully complete the requirements of an approved track will have this documented on their transcript. Tracks are only available to students enrolled in the home major.

Residence Requirement. The purpose of residence in a doctoral program is to ensure the intellectual immersion of students in a research and learning environment with faculty, peers, and staff. This intellectual immersion can take place in forms other than those of a full-time student on campus. Recognizing that there are several ways to acquire the benefits of residence, programs are allowed to set the residence requirements that best fit their particular program. Students are expected to consult their departments about specific residence requirements for their degree.

If a doctoral program does not specify a residence requirement, then the residence requirement for that program is fulfilled by the completion of a full schedule (at least 12 semester hours) of graduate coursework in two consecutive terms. Students holding half-time assistantships may satisfy the requirement by taking at least 9 hours of coursework in each of the two long terms and 6 hours in the summer. Other patterns require approval of the Graduate Dean.

The plan for fulfilling the residence requirement must be indicated on the doctoral program form (Program for the Doctoral Degree) submitted to and approved by the Graduate School in the first year of doctoral study. (For any program variations in this requirement, see the college or department sections in this catalog.)

Filing a Doctoral Degree Plan. Early in a student's doctoral studies, a formal evaluation will be made of his or her background preparation in the major field. This evaluation may vary according to the academic unit involved; in some cases, it may consist of a formal written or oral exam, in others, a review meeting with a committee or graduate advisor, in still another, the successful passing of a key course or courses. On the basis of this evaluation, whatever form it takes, the student's course of study will be projected and submitted to the Graduate School through the DegreeWorks system via the appointed departmental liaison. This evaluation will occur during the student's first year of doctoral study. Students are expected to follow it as the basis for all subsequent enrollments. Substitution of courses can be made only on the written recommendation of the department or departments concerned and approval of the Graduate Dean.

Transfer of Coursework. There is no automatic transfer of credit toward the doctorate degree. On the recommendation of the department or program, the graduate school will review transfer courses for acceptance. Work completed at another graduate school with a grade less than B or grades of pass/fail or satisfactory will not be accepted. Transfer credit will not alter the grade point average at Texas Tech University. Up to 12 semester credit hours taken at an accredited institution may be transferred into a doctoral degree plan. Upon approval by the Graduate Dean, up to 30 block semester credit hours of a previously awarded master's degree may be counted towards a doctoral program. Should such credit be approved, no other transfer credit will be allowed. Credit ordinarily will not be given for transfer work completed more than eight years prior to admission to a doctoral program at Texas Tech University without exception by the Graduate Dean.

Advisory Committee. As soon as the course of study for an applicant has been determined, an advisory committee of at least three members of the graduate faculty (including the minor area, if a minor is declared) with a majority of members from the student's home academic department/program, will be appointed by the Graduate Dean on the recommendation of the advisor concerned. This committee will meet as often as necessary

with the applicant and will direct his or her work at all stages. Either the chair or the co-chair of a student's committee must be graduate faculty and be a member of the department or program faculty from which the student will receive the doctorate. Emeritus or retired faculty as well as other qualified individuals from outside of the university may serve as external members on the student's committee but may not serve as chair; no more than one external member may serve on a committee. External members must be approved by the Graduate Dean after a careful review of their qualifications.

Annual Review. The Graduate School requires faculty in each doctoral program to conduct a formal review of their students' progress at least once each year, with copies of these progress reports submitted to the Graduate School via the Enrollment Services portal. Any student not making satisfactory progress may be placed on probation and given conditions to meet to stay in the program. Continued unsatisfactory progress in any area of a student's work will be cause for dismissal from the program by the Dean of the Graduate School.

Time Limit. All requirements for the doctoral degree must be completed within a period of eight consecutive calendar years from matriculation or four years from admission to candidacy, whichever comes first. Graduate credit for coursework taken at Texas Tech more than eight calendar years old at the time of the final oral examination may not be used to satisfy degree requirements. Absent an extension, the student may be permitted to retake the qualifying examination, and, upon passing that examination, be readmitted to candidacy by the Graduate Council for some period of time not to exceed four years.

Final corrected electronic copies of the dissertation must be received in the Graduate School no later than one year after the final examination or within the eight-year or four-year time limit, whichever occurs first. Failure to complete this step will result in the degree not being awarded.

Admission to Candidacy. Authority for admitting an applicant to candidacy for a doctor's degree is vested in the Graduate Council. Upon receipt of a recommendation from the student's advisory committee, the Graduate Dean will submit it to the Graduate Council for approval. By written communication, the Graduate Dean will transmit the results of the council's action to the applicant, to the chairperson of the advisory committee, and to the chairperson of the department concerned. A student must be admitted to candidacy for the doctorate at least four months prior to the proposed graduation date.

Language, Tool Subject Requirements

Doctor of Philosophy. Each department offering a doctoral program determines its language requirements, subject to the approval of the Graduate Council. Language requirements, if any, are described in the sections of this catalog devoted to instructional departments.

Some departments require a tool subject in lieu of or in addition to the language requirement. When this requirement exists, see the appropriate departmental section in this catalog for further information. If this provision is satisfied by formal courses, a grade of B or better is required either in a single course or in the last of a sequence of such courses passed not more than eight years prior to the student's approval for doctoral work.

Doctor of Education. To qualify for admission to candidacy, applicants for the Ed.D. degree are required to show competency in educational research methods and educational statistics as well as a foreign language if their research requires such competency.

Qualifying Examination, Final Examination

Qualifying Examination. The Qualifying Examination for Admission to Candidacy for the doctor's degree is one of the major features of the doctoral program and will be administered in both the major and minor areas of study (if a formal minor has been declared). The examination requires a synthesis and application of knowledge acquired during the course of study for the doctoral degree; consequently, satisfactory performance in coursework does not necessarily guarantee successful performance on the qualifying examination. A student is eligible to stand for this examination after receiving approval of the doctoral degree plan from the Dean of the Graduate School, completing all language and tool requirements, and completing most of the coursework prescribed by the approved plan. Students must take this examination within one calendar year of

completing all requirements listed on the degree plan. Failure to do so will be cause for dismissal from the program.

The qualifying examination normally is prepared and administered by the candidate's advisory committee and any other professors the committee or the Graduate Dean may consider necessary. In some instances, the department or college may administer the examination. The major portion of the examination is ordinarily a written exam requiring at least six hours. It usually also includes an oral examination under the supervision of the committee and any other professors who may be invited to participate.

If the qualifying examination is considered satisfactory and the requirements in languages (including English) and/or tool subjects have been met, the chairperson of the advisory committee will send electronically to the Graduate Dean via the Enrollment Services portal, for consideration by the Graduate Council, a formal written recommendation that the applicant be admitted to candidacy for the doctor's degree. The letter also will state the date of the examinations and whether the student passed both the major and minor portions (if an official minor is involved). This recommendation will be forwarded as soon as all the above requirements have been met.

If the qualifying examination is not satisfactory, the chairperson of the advisory committee will relay this information electronically via the Enrollment Services portal to the Graduate Dean. An applicant who does not pass the qualifying examination may be permitted to repeat it once after a time lapse of at least four months and not more than 12 months from the date of the unsatisfactory examination. Failure to pass the qualifying examination within the specified time will result in dismissal from the program irrespective of performance in other aspects of doctoral study.

Final Examination. A final public oral examination, usually over the general field of the dissertation, is required of every candidate for the doctorate and must be held when school is in session and faculty are on duty. The oral examination must be scheduled by the student and the advisory committee after the committee has read the completed dissertation and prior to the defense deadline during the semester of graduation. Students should present their dissertation to all committee members at least three weeks before the defense date. In addition, the Graduate School requires three weeks notification prior to the oral examination. Students and/or their chair must recommend a graduate faculty member to serve as the Graduate Dean's representative during the final examination or defense. The Graduate Dean's representative must be a member of the graduate faculty who does not have an appointment in the student's department; this representative's appointment may be in the student's college. A copy of the dissertation should also be sent to the Graduate Dean's representative three weeks prior to the defense for review. The required Defense Notification Form noting the time, place, and other information concerning the examination is available at www.depts.ttu.edu/gradschool and should be submitted to the Graduate School electronically via the Enrollment Services portal at least three weeks before the defense date. The Graduate Dean's representative's name must be included on the Defense Notification Form; acceptance of the Defense Notification Form by the Graduate School constitutes acceptance of the recommended Dean's representative. The student and/or committee chair is responsible for communicating directly with the Dean's representative to coordinate all details pertaining to the defense.

The advisory committee and the Graduate Dean or a member of the graduate faculty designated to act in place of the Graduate Dean conduct the examination. All members of the committee participate fully in the examination and cast a vote. Professors other than members of the committee, including the Graduate Dean's representative, may participate in the examination but have no vote in determining the outcome. At the conclusion of the examination, all members of the committee and the Graduate Dean's Representative must sign the Thesis/Dissertation Approval Form obtained by the student from the thesis/dissertation web page. Verified authentic electronic signatures are acceptable. When the student has completed any additional corrections to their document given at the end of the oral defense all committee members must sign the Final Document Approval Form obtained from the Thesis/Dissertation webpage. If committee members are signing the approval form electronically, only verified or digitally drawn signatures are accepted. The completed Final Document Approval Form must be submitted to the Graduate School electronically via the Enrollment Services portal by the deadline posted in the academic calendar for the corresponding graduation term. Appeals for final exam decisions are covered under [Operating Policy 64.07](#). The approval of the

dissertation is a separate step following corrections made to the dissertation by the student (see below).

Dissertation

Except for the Doctor of Musical Arts, a dissertation is required of every candidate for a doctoral degree. This requirement is separate and apart from other requirements in doctoral programs; consequently, successful performance in other areas does not necessarily guarantee acceptance of a dissertation. The dissertation work must earn a grade of at least B to qualify the student for graduation. The Graduate School strongly recommends that each student be required to present and defend a dissertation proposal before his or her committee early in the course of the research. An approved dissertation proposal form is not required by the Graduate School.

The advisory committee and the Graduate Dean must approve the subject of the dissertation at least four months before the candidate's proposed date of graduation; often this takes the form of a successfully defended dissertation proposal although other methods of approving the subject may be considered. The dissertation must demonstrate a mastery of the techniques of research, a thorough understanding of the subject matter and its background, and a high degree of skill in organizing and presenting the materials. The dissertation should embody a significant contribution of new information to a subject or a substantial reevaluation of existing knowledge presented in a scholarly style. The work on the dissertation is constantly under the supervision of the advisory committee and any other professors the committee or the Graduate Dean may consider necessary. The committee also must approve the final version of the dissertation after the student has made necessary corrections by signing the Final Document Approval Form obtained from the Thesis/Dissertation webpage. If committee members are signing the approval form electronically, only verified or digitally drawn signatures are accepted. The completed Final Document Approval Form must be submitted to the Graduate School electronically via the Enrollment Services portal by the deadline posted in the academic calendar for the corresponding graduation term.

All manuscripts must conform to policies and formatting instructions published at www.depts.ttu.edu/gradschool. The final copy of the dissertation must be submitted electronically in PDF file format as an ETD to the University Library's server. Deadlines and more information on this process are available through the Graduate School website. Paper copies may be required by the academic unit in which the student pursues the degree; no paper copies are to be sent to the Graduate School. All copies of a dissertation must be accompanied by an abstract of no more than 350 words.

Thesis/Dissertation Fee. During the semester of graduation, the candidate will pay Student Business Services a Thesis/Dissertation Fee to cover the cost of reviewing and archiving the official copy (ETD) of the dissertation. This fee is paid only once. The Thesis/Dissertation Fee is posted to students' accounts by the Graduate School after the student successfully meets the ETD deadline during the graduating semester. Payment due dates are listed under the current semester's deadlines at www.depts.ttu.edu/gradschool.

Interdisciplinary Graduate Opportunities

In today's global society, the grand challenges facing us—energy, water, climate, food, health—require the understanding of more than a single discipline to achieve the desired impactful solutions. The intersection of ideas from several disciplines across all of the arts and sciences on intellectual provides the potential to address these grand challenges and organizational issues. Interdisciplinary Studies at Texas Tech University allows graduate students to integrate areas and courses from the existing graduate colleges and programs to best fit their interests and career aspirations that might not be defined in traditional disciplinary boundaries. Popular combinations of disciplines have been formalized into pre-designed program structures. More unique combinations can be created by students in the self-designed program options within the Interdisciplinary Studies Master of Arts (M.A.) and Master of Science (M.S.) degree programs.

Arid Land Studies, M.S.*

Program Coordinator: Dr. Jorge Salazar-Bravo, Associate Professor of Biological Sciences

The Master of Science in Arid Land Studies (MSALS) is a unique interdisciplinary program designed to prepare students for international, arid lands-oriented careers in natural resources, environmental science, and associated economic and social factors. Programs are individually tailored to fit student goals. The interdisciplinary nature of this program is ideal for students who wish to expand their knowledge in interrelated areas of study rather than specialize in a single discipline. The program must be related to the sustainable use and management of drylands. MSALS students may choose the thesis option (24 hours of graduate coursework plus 6 hours of thesis and 6 hours of research credit) or the 36-hour non-thesis plan.

Students in the MSALS program choose three subject areas from the sciences and/or humanities that best suit their career goals. Common subject areas include (1) agricultural sciences and natural resources; (2) geosciences; and (3) water resources and environmental toxicology. However, any graduate course may be taken upon recommendation of the graduate advisor. No more than 12 credit hours may be taken within any single college except the College of Arts & Sciences.

Admissions Criteria. Applicants to the program must satisfy the requirements set by the university and the Graduate School. Applications and supporting documentation must be submitted to the Graduate School (<https://www.depts.ttu.edu/gradschool/admissions/howtoapply.php>) with copies to Dr. Jorge Salazar-Bravo, J.Salazar-Bravo@ttu.edu. Competitive scholarships may be available. For additional information, email Dr. Salazar-Bravo.

* This program is being phased out and not accepting new students.

Biotechnology

Program Coordinator: Dr. Yehia Mechref, Professor of Chemistry and Biochemistry; Director of Center for Biotechnology and Genomics

Biotechnology, M.S.

Texas Tech University offers an interdisciplinary Master of Science in Biotechnology degree designed to prepare students for a laboratory research career in biotechnology, or to enhance their graduate credentials as preparation for further professional degree programs. In addition, the School of Law and the Graduate School offer a dual-degree program leading to the degrees of Doctor of Jurisprudence (J.D.) and Master of Science in Biotechnology.

The Texas Tech Center for Biotechnology and Genomics administers the Master of Science in Biotechnology, with an emphasis in bioinformatics as an additional option. The degree program is offered with a concentration in an intensive research experience (either completed as a Research Concentration in Life Sciences or a Research Concentration in Bioinformatics), or a coursework-based degree program designed to be completed in one year if desired.

The research-based concentration is a two-year program (38 credit hours), with the first two semesters consisting of required and elective coursework. The second year (nine to 12 months) is devoted to research (and possibly additional advanced coursework). Students may satisfy the research requirement in either of two ways: (1) complete an M.S. thesis, based on research carried out in the laboratory of a participating faculty member, or (2) complete a non-thesis internship in a research laboratory on campus, an industrial research laboratory, a government laboratory, or a not-for-profit foundation laboratory. Students who select a non-thesis option must pass a comprehensive final exam during their fourth (or final) semester.

The coursework-based M.S. program concentration is comprised of 30 credits of graduate coursework consisting of required and elective classes. All students selecting this option must enroll in a capstone course designed to prepare students to integrate the skills and knowledge learned from their coursework and synthesize new concepts and innovate ideas, products, and processes. Students who select a non-research, 30-credit option must pass a comprehensive final exam during their second (or final) semester.

Students may focus some of their elective courses in a minor (e.g., Communication Studies) to create a program tailored to their future

professional goals. Options should be carefully discussed with the director and/or graduate advisor of the center.

The core curriculum (required courses for all students) consists of an introductory lecture course (BTEC 5301), an introductory lab course (BTEC 5338), a course on the ethics of research (CHEM 5104), a bioinformatics course (BTEC 5322), and a course in scientific communication (BTEC 5100). The remaining coursework requirements are satisfied by selections from a broad list of approved electives offered by the Center for Biotechnology and Genomics or other departments.

Students interested in the program should have an undergraduate degree that provides a sound background in biological sciences, preferably from a molecular perspective. A minimum of one semester of organic chemistry is required. A second semester of organic chemistry and at least one semester of biochemistry or cell biology and one semester of molecular biology/molecular genetics are highly recommended. Admission will be based on the student's undergraduate record and GRE scores and on other considerations such as previous research experience and letters of recommendation. Applications should be submitted through the Office of Graduate Admissions.

Scholarships. A limited number of scholarships will be available at the start of the fall semester for outstanding first-year students, with preference given to students enrolled in the 38-credit research-based concentration. Students awarded these competitive scholarships will be eligible to pay tuition at the in-state rate. Applications are available to both Texas residents and nonresidents and are evaluated holistically by the Biotechnology and Genomics Scholarship Committee.

Concentrations. Students interested in hands-on experience in biotechnology (Concentration in Research) will carry out research leading to an internship or thesis in Biotechnology (either in Bioinformatics or Life Sciences). In addition to the credit hours required for academic coursework, these Research concentrations necessitate 18 credit hours of research—BTEC 7000 in combination with BTEC 6000 (thesis) or BTEC 6001 (internship).

Required Courses. (Courses are required for both the Bioinformatics Research and the Life Sciences Research concentrations.) BTEC 5100, 5301, 5322, 5338; CHEM 5104 (Research Ethics).

Additional courses required for Bioinformatics emphasis: BTEC 5333; NS 5342; and BTEC 5311 OR 5312 OR 5313.

Additional course required for coursework-based concentration: BTEC 5335.

Electives Courses. (Not all courses are offered every year): BTEC 5001, 5311, 5312, 5313, 5333, 5340, 5414, 6000, 6001, 6101, 7000.

Students may take other electives of their choice from throughout the university as long as the courses are approved by the Graduate Advisor.

Biotechnology, M.S. / J.D.

The dual degree candidate must choose to pursue both degrees by the end of the third or fourth semester in law school and must meet admission requirements for the M.S. degree. Students in the dual degree program cannot take any courses outside the School of Law during their first year. Typically, if all prerequisites are met, both degree programs can be finished in a maximum of four and one-half years, including summer sessions. Separate applications for the J.D. and M.S. portions of the dual degree are required. LSAT scores that are satisfactory for admission to the School of Law will eliminate the requirement that the student take the GRE.

The dual degree program is designed principally for the student with an interest in intellectual property law in the area of biotechnology. A candidate for the J.D./M.S. in biotechnology may credit up to 12 non-law hours of approved courses toward the J.D. degree, and 12 law hours may be credited toward the M.S. degree.

Heritage and Museum Sciences, M.A.

Program Chair: Dr. Eileen Johnson, Chairperson and Horn Distinguished Professor of Museum Science; Senior Curator of Anthropology, Museum of Texas Tech University

The Master of Arts in Heritage and Museum Sciences is housed in the Museum of Texas Tech University. Heritage and Museum Sciences offers

a concentration in either Museum Science or Heritage Management. The concentration in Museum Science emphasizes thorough preparation in the broad spectrum of museum theory and practice. Graduates from the Museum Science concentration of the program have a comprehensive background in museum studies and are prepared as generalists in a number of subdisciplines, including collections management and care; exhibitions and interpretation; museology; museum management; and curatorship in anthropology, art, history, paleontology, or the natural sciences.

The Heritage Management concentration emphasizes extensive investigation in the field of heritage management. Graduates from the Heritage Management concentration of the program are prepared to enhance local, regional, and national sociological and scientific values; encourage preservation and stewardship of cultural and natural heritage; advocate public service; and direct educational programming designed to derive maximum advantage from innovative technology without the loss of cultural identity and biodiversity. The Heritage Management concentration is configured to allow students to emphasize areas of special interest such as heritage administration, conservation, interpretation, heritage education, and use (heritage tourism and ecotourism). The concentration offers both theoretical and practical coursework designed to prepare graduates to be leaders in the heritage field.

The chairperson of the program administers the Heritage and Museum Sciences program and reports to the Dean of the Graduate School. Interested persons should contact the chair or graduate advisor at Heritage and Museum Sciences (heritage.museum.sciences@ttu.edu) for comprehensive information about the program and application process. Applicants will be considered for admission to the Heritage and Museum Sciences program after the following materials are received: (1) two letters of reference from persons knowledgeable of the student's academic and professional abilities, and (2) a completed career summary statement. Prior to admission consideration, students must complete the online application through the Graduate School and satisfy the requirements of the university, including an official transcript of complete undergraduate coursework and GRE scores. Once that process is concluded, program admission and competitive scholarship and fellowship awards are based on three general categories of criteria:

- **Academic Record.** All academic records may be considered – 60 hours, total, major, post-baccalaureate.
- **Test Scores.** Scores on the GRE should be no more than five years old. The GRE is required, but no test score will be considered the sole criterion.
- **Individual Profile.** Profiles may include recommendation letters, research background, motivation, multilingual proficiency, undergraduate institution, presentations, and the completed career summary statement. Other information that admission and scholarship committees may consider is work commitment, demonstrated commitment to a particular field of work or study, and community involvement.

Course Requirements. All students majoring in the program must take the following 4 required courses: MUSM 5326, 5327, 5330; HMGH 5323.

Museum Science Concentration. A student in the Museum Science concentration must take at least 15 hours from the Museum Science core curriculum, a minimum of 12 hours of elective graduate-level courses, and 6 hours of thesis or internship. The Museum Science core curriculum includes the following course options: MUSM 5321, 5325, 5326, 5328, 5329, 5331, 5332, 5333, 5340.

Heritage Management Concentration. A student majoring in the Heritage Management concentration must take at least 15 hours from the Heritage Management core curriculum, a minimum of 12 hours of graduate-level elective courses, and 6 hours of thesis or internship. The Heritage Management core curriculum includes: HMGH 5325, 5330, 5331, 5332, 5333, 5334, 5339.

Additional Requirements. For electives, the Heritage and Museum Science program uses a variety of existing courses offered by various departments within the university to address individual educational and career goals. All students in both concentrations must develop competency in the core courses taught by members of the Heritage and Museum Sciences graduate faculty and museum staff. Competency is construed to mean an understanding of professional museum and heritage practices..

A total of 45 credit hours of graduate-level work is required for graduation. In addition, students must pass a faculty panel exam (qualifiers) prior to beginning either the internship or thesis and must pass comprehensive written and oral exams at the conclusion of their studies. Students pursuing the thesis option must write and defend a thesis. Internships (full-time, paid) are to be at a location approved by the student's advisory committee and program chairperson.

Following the first 9 credit hours of graduate study, each student's curriculum is formalized through consultation with the graduate advisor that reflects the student's area of emphasis. This degree plan is approved by the graduate advisor and the chairperson and sent to the Graduate School. When approved, it serves as a tool for advising and review to assure completion of degree requirements.

A minor at the master's level in the Museum Science concentration consists of 9 approved credit hours in the core curriculum; a minor at the doctoral level consists of 15 hours of Museum Science courses, at least 9 of which must be from the core curriculum. A minor at the master's level in the Heritage Management concentration consists of 9 approved credit hours in the core curriculum; a minor at the doctoral level consists of 15 hours of Heritage Management courses, at least 9 of which must be from the core curriculum. Masters and doctoral students from outside the program may also select from the required courses.

Interdisciplinary Studies, M.A. or M.S.

Program Coordinator: Dr. Cari Carter, Assistant Professor of Practice, Graduate School

The Master of Arts (30 semester credit hours) or Master of Science (30 semester credit hours) in Interdisciplinary Studies degree programs are intended for students who wish to continue education at the graduate level but do not seek specialized training concentrated in a traditional major area. These programs are not a substitute for a traditional master's degree; rather, they are designed for students with broader interests in several fields or for those whose career goals do not match fully with a single identifiable academic unit or department. Emphasis is placed on continued intellectual and cultural development in a constantly changing society in which new career interests may extend over several traditional specializations.

Each program, exclusive of any chosen concentrations, minors, or certificates with required courses, is developed individually according to the student's interests and background. Among the few restrictions are the requirements that coursework be completed in at least three different subject areas with typically 9-12 hours from any one area, within at least two different colleges. Some programs (departments/colleges) have specific prerequisites for students taking their courses so students are encouraged to discuss their options with those program advisors. For the non-thesis option in either degree program, students may choose the master's examination, an internship, a project report, or the portfolio as their final comprehensive component of their program.

The standard admission policy for applicants to other degree programs will apply to those seeking admission to the interdisciplinary master's program. Applicants may submit undergraduate and graduate records. For further information, contact the coordinator of the program in the [Graduate School](#) office.

Students normally select areas of study that meet their own educational and career interests, as described above. However, a number of study themes are identified in the following paragraphs that provide somewhat more specialized focus, while maintaining the interdisciplinary nature of the program as originally approved.

Applied Linguistics

Courses relating to theoretical, descriptive, historical, and applied study of language structure and use may be selected in a plan leading to the degree in interdisciplinary studies. Studies in second language teaching and learning, evaluation and assessment, and curriculum design, as well as in various languages (American Sign Language, Arabic, Chinese, English, French, German, Japanese, Spanish) will provide a comprehensive understanding of the discipline. Interested students may contact Dr. Greta Gorsuch (greta.gorsuch@ttu.edu), Department of Classical and Modern Languages and Literatures. See discussion of graduate linguistics in the graduate programs section of the College of Arts & Sciences.

Environmental Evaluation

Students may gain a holistic view of environmental evaluation by taking courses that focus upon problems and techniques relating to natural resources and their utilization. Work in geography, geology, land and water management, atmospheric sciences, and other disciplines is tailored to each student's interests. Interested students may contact Dr. Jeff Lee (jeff.lee@ttu.edu), Department of Geosciences.

Institute for Studies in Pragmaticism

The Institute for Studies in Pragmaticism, a Unit within the Provost's Office, was founded in 1971 at Texas Tech University. It is situated in the main Library Building 3rd floor, room 305. The Institute for Studies in Pragmaticism offers graduate and undergraduate level courses on methods associated with interdisciplinary studies. The only prerequisite is approval of the instructor. Students in any branch of Texas Tech University or Texas Tech University Health Sciences Center are eligible to enroll.

As course participants, students will have direct access to Institute resources such as:

- materials on its long history of interdisciplinary research,
- individual consulting and study opportunities,
- scholarship opportunities, and
- international scholarly network.

For details, please visit the website of the Institute www.pragmaticism.net

Contact: Dr. Elize Bisanz, Director, Institute for Studies in Pragmaticism
Box 40002, Texas Tech University, Lubbock, TX 79409-0002 | 806.834.3966
elize.bisanz@ttu.edu

International Affairs

This interdisciplinary concentration focuses on problems that are international in scope. Students may focus on problems that are global in nature, such as international business/economics or international security/conflict, or they may focus on problems that are regional in scope. The regions available for emphasis in this program are as follows: Asia, Africa, Latin America, Europe, and Post-Soviet Europe. Students will have the Department of Political Science as their home department but will also take courses in and work with faculty from the Department of History, the Department of Economics, or any other department that matches their interests. Interested students may contact Dr. Toby Rider (toby.rider@ttu.edu), Department of Political Science.

Peirce Studies

This degree concentration focuses on application of Charles Peirce's unique theory of interdisciplinary method for which he is a recognized founding figure. Peirce designated a principal aspect of his methodology as Semeiotic, the theory of natural processes structured as dialogues. This program aims to make interdisciplinary methodology accessible to young scholars and researchers as (i) a testable objective hypothesis and working theory; (ii) as a research tool with roots extending at least to the ancient world; and (iii) as a common methodological foundation that can be implemented between diverse disciplines. Charles Sanders Peirce (1839-1914), a true American genius, made major research contributions in both sciences and humanities, especially concerning their interrelationships. Students enrolled in Peirce Studies will normally take 6 to 9 hours of PRAG 5000 and additional hours in several defined areas, depending upon each student's future educational or occupational goals. Interested students may contact Dr. Elize Bisanz (elize.bisanz@ttu.edu), Director, Institute for Studies in Pragmaticism.

Women's and Gender Studies

The interdisciplinary concentration of graduate work focuses on institutional structures, interpersonal constructions, and personal experiences of gender and gender identity in society. Selected courses are offered in history, sociology, human development and family studies, communication studies, English, and psychology with related work available in business administration, the humanities, and other areas of the social sciences. An emphasis on women's studies may be pertinent to careers in education, law, management, and personnel relations, as well as in the administration and delivery of social services to families, women, and children. Interested

students may contact Dr. Elizabeth Sharp, Director of the Women's and Gender Studies Program, 806.742.4335, womens.studies@ttu.edu.

Other Options

Studies of an interdisciplinary nature offer almost limitless combinations. Students may select from graduate offerings in almost the entire catalog and from the graduate offerings of the School of Law and the Health Sciences Center. Those interested in a customized program should contact the senior lead advisor in the Graduate School or visit https://www.depts.ttu.edu/gradschool/Programs/INDS/Self_Designed_Prgm.php.

Interdisciplinary Studies, M.A. or M.S.: Interdisciplinary Studies Concentration

The 9-hour concentration in Interdisciplinary Studies introduces students to the theories and methods of interdisciplinary study as well as the cognitive process that interdisciplinarians use to approach complex problems.

Required (3 hours): IS 6301

Electives (6 hours): IS 5310, 5332, 6302, 6303, 6304, 6305, 6306

Interdisciplinary Studies, M.S.: Energy Concentration

Program Coordinator: Kim Cappillino, Senior Director, Graduate School

The M.S. in Interdisciplinary Studies is offering a concentration in Energy as a means to prepare students for entry and/or advancement in energy-related careers. Programs are individually tailored to fit the students' goals through the selection of three areas of study as part of a 30 credit hour program. Students will complete a portfolio as their final comprehensive component of their program to illustrate their understanding of and ability to integrate the three areas of study.

Students will select three of the following four areas of study and complete the courses listed within the selected areas (Nine hours * 3 areas = 27 SCH).

Energy Commerce: ENCO 5313, 5321, 5365.

Oil and Gas: PETR 5390, 5391, 5392.

Renewables: ENGR 5380; WE 5304, 5312.

Law and Policy: LAW 5309, 5327, 5311 OR 5356.

Final Comprehensive Experience. Students will enroll in IS 6350 and complete a portfolio as their final comprehensive component of their program to illustrate their understanding of and ability to integrate the three chosen areas of study.

Land-Use Planning, Management, and Design, Ph.D.

Program Coordinator: Dr. Clifford Fedler, Professor in Civil, Environmental, and Construction Engineering

The interdisciplinary Ph.D. program in Land-Use Planning, Management, and Design (LPMD) focuses on various aspects of land and land use. It trains students to be leaders in their community, firms, and organizations with enhanced understanding of multidisciplinary endeavors, improved communication skills between compartmentalized systems of knowledge, and the ability to bring knowledge from one discipline to focus on problems and ongoing projects in another. LPMD training prepares students to be leaders in administrative, legislative, academic, research, and design firms, or organizations that deal with land use.

This program is administered by the Graduate School with an interdisciplinary steering committee. Faculty and courses are drawn from participating units across the university. Studies of the complex factors influencing human use of resources, training in the research and evaluative methods that can be applied to interdisciplinary studies, and education in the institutional structures that shape policy and action are included in the program.

Students with an interest in issues of resiliency including environmental/natural resource management and planning, community planning and design, public policy administration, and historic preservation are encouraged to work together to take on global challenges involving land use.

Because students come from a variety of backgrounds with different interests and career goals, one standard course of study is not required. Students craft a degree plan with their advisory committee drawn from two or more departments and two or more colleges. This committee arranges a student's course of study and specialization. The student then follows this "custom-designed" program of study, while the advisory committee is responsible for administering comprehensive exams and for directing both the dissertation and the student's program.

Students admitted to the LPMD program are expected to bring a set of knowledge and skills from their background departments. They will be exposed to various courses in contributing disciplines and, with the assistance of their advisor and committee, will be expected to demark an intersection that will be the focus of the dissertation. All students are required to complete a minimum of 60 hours beyond the bachelor's degree plus a minimum of 12 (8000-level) hours of dissertation. This includes a specified core of multidisciplinary courses.

In addition to the core course requirements, LPMD students must select either the general track or the Land Use, Design, and the Built Environment track. Track courses, research projects, and the student's dissertation will focus on the track selected and will be chosen by the student and approved by the advisor. The general track provides the greatest flexibility in the plan of study to pursue interdisciplinary research aimed at analyzing, planning, managing, and designing complex systems. The Land Use, Design, and the Built Environment track focuses on a range of issues relating to the physical, social, and cultural characteristics of the built environment and how to address a variety of challenges facing our communities, such as community resilience, mitigation and optimization of environmental impacts, historic preservation and adaptive reuse, community and public health, emerging technologies, among others. For more information on the Land Use, Design, and the Built Environment track, contact Dr. Clifton Ellis (clifton.ellis@ttu.edu).

Requirements considered for admission to the program include GRE, grade point average, statement of research interests and goals, writing samples/portfolio, letters of recommendation on official letterheads, and anything else the prospective student feels appropriate to indicate their strengths. International applicants must submit TOEFL or IELTS score or an alternative form of proof of English language proficiency as allowed by [TTU Graduate School Admissions](#).

Core Courses and Specialization Courses are selected with the advisory committee. Other degree-related courses include: LPMD 7000, 8000.

Wind Science and Engineering, Ph.D.

Program Coordinator: Dr. Delong Zuo, Professor of Civil Engineering

Texas Tech University offers a unique multidisciplinary Ph.D. in Wind Science and Engineering. The educational objective of the program is to provide students with the broad education necessary to pursue research and solve problems related to the detrimental effects of windstorms (e.g., hurricanes, tornadoes, and thunderstorms) and to learn to take advantage of the beneficial effects of wind (e.g., wind energy). Each student's core coursework and dissertation research are multidisciplinary. The doctorate requires at least 60 semester hours of graduate studies in addition to a dissertation (12 semester hours of WE 8000).

These 60 hours include six required core courses listed below, field of emphasis courses, and an external internship.

A master's degree is strongly recommended. Graduate courses completed during a master's degree can be transferred if they are in an emphasis field of study (i.e., atmospheric science, engineering, economics, business administration, or a combination to have an emphasis area in wind energy, wind engineering experiments, economics/risk management, damage documentation, emergency management). The courses to be transferred have to be approved by the program advisor.

Required Courses

- **Physical Sciences:** ATMO 5316, 5319, 5332, 5352.
- **Engineering:** CE 5331 (Application of Machine Learning in Structural Engineering), 5348; CS 5370, IE 5306, ME 5336.
- **Social, Behavior Science and Economics:** BECO 5310; ENCO 5313; MCOM 5326; PHIL 5125; SOC 5327.

- **Quantitative/Qualitative Analysis:** ANTH 5305; ATMO 5331; ECO 5301, 5331; GEOG 5309, 5342; STAT 5378, 5379.

Additional Courses. Additional courses are required to fulfill the requirement of 60 semester credit hours. The specific courses are chosen by the student with the advice and consent of the doctoral advisor, depending on the student's area of research emphasis. Some of the courses available to fulfill the additional course requirements are: ATMO 5327, 5328, 5351; CE 5331, 5346, 5347; IE 5320; FIN 5320; MATH 5334, 5335; PUAD 5352; RE 5300, 5301, 5311; WE 5302, 5320.

School of Veterinary Medicine Programs

One Health Sciences, Ph.D.

The School of Veterinary Medicine offers a Ph.D. graduate program in One Health Sciences to align with the current demand for an interdisciplinary and interprofessional approach to improve public health. The program is designed to train scientists with a broader vision of One Health, interfacing animal, human, and ecological health from local and global perspectives and everything in between. The program incorporates the One Health competency into the curriculum and evaluation. Students will demonstrate proficiencies in communication, collaboration, teamwork, leadership, systems thinking, and management while successfully addressing the current and emerging One Health challenges. Students interested in pursuing a degree must complete the online application to the Graduate School. Interested students are encouraged to contact faculty at the School of Veterinary Medicine in exploring potential research projects.

The Ph.D. program is full-time, face-to-face, and housed at the School of Veterinary Medicine in Amarillo, Texas. Graduate students must complete 72 credit hours, of which 18 will be core courses and 12 will be dissertation hours. Of the remaining 42 credit hours, students will select from electives to build expertise in one of the school's five areas of research excellence: One Health; Disease Ecology, Prevention and Management; Andragogical Scholarship; Sustainability of Animal Agriculture; and Molecular Mechanisms of Diseases.

Veterinary Sciences, M.S.

The School of Veterinary Medicine (SVM) Master of Science in Veterinary Sciences (MSVS) is a pioneering program focusing on veterinary medicine and education in preparing post-baccalaureate students for successful careers in veterinary sciences. This degree will provide a unique training program for preparing students interested in the broad field of veterinary sciences. The program is built on the strength, diversity, and expertise of the TTU SVM faculty; the school's strategic location in the heart of Texas's animal industry; and adjacent to the TTU Health Sciences Center (TTUHSC) in Amarillo. The MSVS program will be full-time, face to face, and housed at TTU SVM Amarillo Campus. Students must complete a minimum of 42 credit hours. MSVS students will have the opportunity to work with their advisor to develop a research project and original educational scholarship.

Interdisciplinary Graduate Courses

Interdisciplinary Studies (IS)

- 5000—Graduate Directed Studies (V1-12).** Prerequisite: Consent of coordinator. Advanced studies in developing cultural understanding. Projects to be assessed by faculty committee.
- 5031—Internship in Interdisciplinary Studies (V1-6).** Supervised internship experience in an aspect of interdisciplinary studies designed to provide students with practical experience in their specified field.
- 5310—Special Topics in Interdisciplinary Studies (3).** Examines selected topics, problems, or current events related to interdisciplinary studies with content varying based on the topic. May be repeated for credit as topic varies.

5332—Advanced Topics in Interdisciplinary Studies (3). Nature of the course depends on the students' interests and needs for advanced study in their specific field in interdisciplinary studies.

6000—Master's Thesis (V1-6).

6301—Foundations of Interdisciplinary Studies (3). Introduces students to the theories and methods of interdisciplinary study as well as the cognitive process that interdisciplinarians use to approach complex problems.

6302—Frontiers in Transdisciplinary Research (3). Examination of the theories, concepts, and strategies of conducting transdisciplinary research to enable students to effectively evaluate, consume, and successfully complete future transdisciplinary research projects.

6303—Leading Interdisciplinary Teams (3). Examination of the leadership theories, concepts, processes, and strategies that can be used to organize, implement, and sustain interdisciplinary teams and projects.

6304—Tackling Wicked Problems (3). Students will identify, understand, and address the characteristics of wicked problems and the methods being used to dissolve or reduce these problems.

6305—Making Connections with Diverse Communities (3). Designed to help students develop interpersonal communication skills with an emphasis on verbal and nonverbal communication concepts and meeting the needs of a diverse population with a focus on securing and implementing an internship or other professional experience in interdisciplinary studies.

6306—Enhancing Employability, Recognizing Diversity (3). Designed to help students develop essential skills in order to find employment that aligns with their knowledge and skill level.

6310—Introduction to Quantitative Research Methods (3). Introduces quantitative research methods, focusing on their application in interdisciplinary contexts. Students will learn how to design, conduct, and analyze quantitative research, integrating methods from various disciplines.

6311—Introduction to Qualitative Research Methods (3). Introduces qualitative research methods, focusing on their application in interdisciplinary contexts. Students will learn how to design, conduct, and analyze qualitative research, integrating methods from various disciplines.

6330—Master's Report in Interdisciplinary Studies (3). An individual project under the guidance of faculty from one or more departments that serves as the culminating academic and intellectual experience of the student's interdisciplinary program of study.

6350—Professional Portfolio in Interdisciplinary Studies (3). Prerequisite: MSIS professional concentration student. Designed to showcase how the three areas of study can be integrated into a singular understanding within a chosen business application.

6351—Career Advancement Internship (3). Prerequisite: MSIS professional concentration students only. This professional experience will provide valuable career insight and advancement possibilities while serving as the culminating academic and intellectual experience for the INDS professional concentration.

7000—Research (V1-12).

Integrative Studies (INTS)

5100—Colloquium in Integrative Studies (1). Introduces students to the interdisciplinary studies graduate program and expectations through a series of professional presentations and assignments.

5300—Perspectives in Interdisciplinary Studies (3). Prerequisites: B or better in theory course in each area of study and at least one disciplinary research methods class, or instructor consent. Provides students with expectations of interdisciplinary methods of inquiry and problem solving.

Center for Biotechnology and Genomics Graduate Courses

Biotechnology (BTEC)

5001—Topics in Biotechnology (V1-6). Prerequisite: Instructor consent. Special areas of current interest in biotechnology. Content and credit vary by section number. May be repeated for credit.

5100—Scientific Communication (1). Different aspects of scientific communication, including presentation of scientific material, written communication skills targeted toward information organization and summary, and reading and thoughtful analysis of primary scientific literature.

5301—Introduction to Biotechnology (3). Prerequisites: CHEM 3311, CHEM 3312, CHEM 3313. Scientific bases of biotechnology techniques. Applications of biotechnology and ethical and social impact. [GBTC 6301]

5311—Protein Engineering (3). Prerequisite: BTEC 5338 or instructor consent. A protein-based course to determine the structure-function

relationship of protein through protein engineering and x-ray crystallography.

- 5312—Gene Expression Analysis (3).** Prerequisite: Instructor consent. Introduction to nucleic acids, gene structure and function; techniques of RNA extraction, quantification and quality determination; applications of next generation sequencing for gene expression analysis.
- 5313—Experimental Mass Spectrometry in Biotechnology (3).** Prerequisite: Instructor consent. Mass spectrometry instrumentation and generation and interpretation of mass spectra in analysis of biomolecules. Other preparative analytical techniques, including 2D-gel and chromatographic techniques.
- 5322—Bioinformatics: Methodologies and Applications (3).** Introduces students to bioinformatics applications and methodologies, especially related to genomics and proteomics.
- 5333—Advanced Bioinformatics (3).** Trains students in the developmental aspects of bioinformatics. Topics requiring advanced bioinformatics knowledge will be covered. Computer programming, database and web development will be integral to the completion of this course.
- 5335—Capstone in Biotechnology (3).** Prerequisites: Students will be permitted to take this course in their final semester as a requirement for graduation. Students are expected to complete all core courses before taking capstone course. This course can be taken concurrently with other elective courses. Prepares students to integrate the skills and knowledge learned from their coursework and apply it to solve practical problems in Biotechnology.
- 5338—Methods in Biotechnology (3).** Prerequisites: CHEM 3310 or CHEM 3311 and CHEM 3314. Methodology for identification and manipulation of genes, for protein expression and purification, and for enzyme assays.
- 5340—Advanced Instrumentation Techniques in Biotechnology (3).** Prerequisites: BTEC 5338 /GBTC 5338 (Texas Tech Health Sciences Center course). Topics include DNA sequencing and amplification, mass spectrometry, liquid-handling robotics, automated chromatography, and protein-ligand interactions and kinetics.
- 5344—Biocomputing: BioPython and Bioconductor (3).** Prerequisite: Consent of instructor. Biocomputing distance learning class teaches students the fundamentals of programming directed towards problem solving in the biological sciences and biostatistics.
- 5414—Advanced Plant Biotechnology (4).** Prerequisite: Any genetics course. Principles of biotechnology and genetic engineering. Genetic manipulations applied to problems in plant research and agriculture. F, odd years.
- 6000—Master's Thesis (VI-6).** [GBTC 6000]
- 6001—Biotechnology Internship (VI-9).** Research and training in a university, private-sector, or government laboratory. Consent of program director required. For nonthesis students.
- 6101—Biotechnology Seminar (1).** Presentation of current research topics in areas directly relevant to biotechnology. [GBTC 6101]
- 7000—Research in Biotechnology (VI-9).** Full-time laboratory research under the direct supervision of a TTU or TTUHSC graduate faculty member. For thesis-option students. [GBTC 7000]

Cross-Cultural Studies Graduate Courses

Cross-Cultural Studies (CCS)

- 5301—Foundations of Cross-Cultural Studies (3).** Comprehensive, in-depth exploration of the concept of culture and how arguments about cultural diversity, ethnicity, and race are constructed, substantiated, and used across disciplines from a theoretical perspective.
- 5302—Cross-Cultural Research Methods (3).** Review of empirical research methods from a cross-cultural perspective across multiple disciplines and diverse populations.
- 5303—Issues in Cross-Cultural Studies (3).** Independent study in Cross-Cultural Studies. May be repeated for credit.

Heritage and Museum Sciences Graduate Courses

Heritage Management (HMG)

- 5323—Principles of Heritage Management (3).** Prerequisite: Consent of instructor. Provides a theoretical framework and examines issues of evaluation, legislation, sustainability, socioeconomic impact, and communication to foster global responsibility and present integrative approaches to managing heritage resources.
- 5325—Heritage Management Field Methods (3).** Prerequisite: Consent of instructor. Field course emphasizing methods of collecting objects,

specimens, and samples in the field, as well as methods of identifying and documenting heritage properties.

- 5330—Heritage Education (3).** Provides a hands-on approach to heritage education through key concepts and competencies with the intention to equip informal educators at cultural and natural heritage sites.
- 5331—World Heritage Sites (3).** A survey of how World Heritage Sites are selected and managed. Examines the impacts of world heritage designation on cultural and natural heritage.
- 5332—Digital Heritage (3).** Emerging 3D digital technologies are used to document, preserve, and analyze heritage. Students will gain experience with these techniques through a research project.
- 5333—Heritage Tourism (3).** Aims to explore the complex issues and challenges in cultural and heritage tourism, including a potential one-week study abroad opportunity.
- 5334—Heritage Interpretation (3).** Studies the interpretation and presentation of heritage as a means of communication in historic sites and historic house museums.
- 5337—Intangible Cultural Heritage (3).** Explores the profound importance of intangible cultural heritage, emphasizing its cultural, social, and economic significance, while fostering sustainable conservation and appreciation.
- 5339—Heritage Provenance Research (3).** Theory and practice of provenance research are explored from the perspective of due diligence, ethical practice, and lawful return of looted art and cultural objects.
- 5341—Heritage Management Practicum (3).** Individual instruction course of supervised experiences involving hands-on activities in heritage administration, collections, heritage education, and exhibitions. Sections allow for experiences in all Museum areas.
- 6000—Master's Thesis (VI-6).**
- 6001—Heritage Management Internship (VI-6).** Internship at an approved museum to include a special project approved by the student's advisory committee. Project provides practical experience for professional development.
- 7000—Research (VI-12).**

Museum Science (MUSM)

- 5321—Museology (3).** Prerequisite: Consent of instructor. Establishes a historical and theoretical framework for museum science, promotes a global perspective of museums, and acquaints students with the broad-based implications of museum work as a science. This is a required course for M.A. in Heritage and Museum Sciences.
- 5325—Museum Field Methods (3).** Prerequisite: Consent of instructor. Problems of collecting museum artifacts, specimens, and samples in the field and methods of handling material before it reaches the museum. Sections will allow work in anthropology, history, paleontology, and vertebrate biology.
- 5326—Museum Administration (3).** Prerequisite: Consent of instructor. Instruction and investigation in aspects of museum management and administration including policies and procedures, personnel management, budget formulation, governance, and interaction with support organizations. This is a required course for M.A. in Heritage and Museum Sciences.
- 5327—Museum Collection Management (3).** Prerequisite: Consent of instructor. Defines the roles of museum collections and focuses on general museum concepts, procedures, and issues related to the management and care of collections. Instruction in art, humanities, and natural science collections. This is a required course for M.A. in Heritage and Museum Sciences.
- 5328—Museum Practicum (3).** Prerequisite: Consent of instructor. Individual instruction course of supervised experiences involving hands-on activities in museum administration, collections, education, and exhibitions. Sections will allow work in all areas of the Museum of Texas Tech.
- 5329—Material Culture (3).** Discussion of major trends in historical, psychological, philosophical, anthropological, and art historical literature in terms of their application to the interpretation of the past through its material culture.
- 5330—Museum Law, Ethics, and Standards (3).** Prerequisite: Consent of instructor. Addresses the ethical considerations and legal obligations of museum collections, administration, and operations. Attention given to international concerns as well as to state and national issues. This is a required course for M.A. in Heritage and Museum Sciences.
- 5331—Exhibition Principles (3).** Prerequisite: Consent of instructor. Investigates the theories and methods of effective interpretation of museum objects through exhibit planning, development, design, fabrication and implementation. Combines theoretical and practical aspects. This is a required course for M.A. in Heritage and Museum Sciences.

5332—Museum Preventive Conservation (3). Prerequisite: Consent of instructor. Designed to give future museum workers an awareness of the need for specialized care of artifacts. Introduction of current methods and theories pertaining to museum collection care. This is a required course for M.A. in Heritage and Museum Sciences.

5333—Museum Education (3). Prerequisite: Consent of instructor. Examination of the role of education in museums, with emphasis on the theory and practice of program development, teaching strategies, and off-site resources. This is a required course for M.A. in Heritage and Museum Sciences.

5334—Curatorial Methodology (3). Prerequisite: Consent of instructor. Develop skills for analysis of sources, original research, and scholarly writing within museum context. Students acquire requisite knowledge and skill for professional curatorial practice. This is a required course for M.A. in Heritage and Museum Sciences.

5340—Museum Collections Documentation (3). Prerequisite: Consent of instructor. Introduction of traditional and electronic management of museum collection data emphasizing the philosophy of data preservation and retrieval. This is a required course for M.A. in Heritage and Museum Sciences.

6000—Master's Thesis (V1-6).

6001—Museum Internship (V1-6). Internship at an approved museum to include a special project approved by the student's advisory committee. Documentation of project provides practical experience for professional development.

7000—Research (V1-12).

Indigenous & Native American Studies Graduate Course

Indigenous & Native American Studies (INAS)

5301—Seminar in Indigenous & Native American Studies (3). Integrates material from multiple disciplines that contribute to Indigenous studies. Intended to orient students to key theories and approaches that are necessary for a holistic understanding of the issues—past and present—that shape the lived experience of indigenous peoples around the world.

Institute for Studies in Pragmatism Graduate Courses

Pragmatism (PRAG)

5000—Independent Research in Peirce Studies (V1-6). Prerequisite: Consent of instructor. Directed interdisciplinary inquiry in Peirce studies. May be repeated for credit.

5301—Common Methods for Cross-Disciplinary Research (3). Prerequisite: Graduate standing. Helps students identify and connect similarities across disciplines, apply learned methodologies to new situations, and develop research questions and shared goals.

6000—Master's Thesis (V1-6).

7000—Independent Research in Peirce Studies (V1-6). Prerequisite: Consent of instructor. Directed study of selected interdisciplinary problems in Peirce studies. May be repeated for credit.

8000—Doctor's Dissertation (V1-6).

Latin American and Iberian Studies Graduate Course

Latin American and Iberian Studies (LAIS)

5300—Directed Studies (3). Prerequisite: Consent of instructor and Director of Latin American and Iberian Studies. Content will vary to meet the needs of students. May be repeated for credit.

Land-Use Planning, Management, and Design Graduate Courses

Land-Use Planning, Management, and Design (LPMD)

7000—Research (V1-12).

8000—Doctor's Dissertation (V1-12).

Renewable and Wind Energy Graduate Courses

Renewable Energy (RE)

5300—Advanced Technical Wind Energy I (3). A multidisciplinary course for students with a physical science/engineering background wishing to pursue a technical approach to wind energy.

5301—Advanced Technical Wind Energy II (3). Prerequisite: RE 5300. An in-depth multidisciplinary course for students with a physical science/engineering background wishing to pursue a technical approach to wind energy.

5303—Data Science for Renewable Energy (3). Covers the application of the Data Science Method (DSM) for Renewable Energy specific applications. [RE 4303]

5307—Renewable Energy Grid Integration (3). Gives students a deeper understanding of the electric grid and the integration of renewable energy into the regional, state, and national electric grids. [RE 4307]

5310—Wind Energy Law, Policy, and Regulation (3). Develops an understanding of the regulatory principles affecting wind project development from greenfield to decommissioning or repower. Provides an overview of law and policy to consider when planning a wind project.

5311—Wind Energy Finance and Economics (3). Develops an understanding of the financial and economic principles affecting commercial wind project development from greenfield to decommissioning or repower—to include the basics of energy markets and how electricity is bought and sold.

Wind Energy (WE)

5302—Renewable Energy Systems (3). Provides an overview of different types of renewable energy technology, the global demand for different energy resources, and a brief discussion of energy policies.

5304—Applications of Renewable Energy Technology (3). Provides an overview of renewable energy harnessing technologies. Addresses various renewable energy sources, their advantages and limitations, state-of-art technology, and a higher-level description of renewable energy project management and research and development.

5312—Renewable Energy Law, Policy, & Regulation (3). Provides students with an understanding of the laws, policies, and regulation of renewable energy projects. Principles include energy and storage regulation, transmission/grid, market basics, project finance structures, and greenhouse gas governance.

5320—Renewable Energy Policy (3). Provides overview of basic economic concepts and examines the progress made in renewable energy policy in the U.S. and the world.

5332—Special Topics in Wind Energy (3). Examines specialized rotating topics relating to wind energy and renewable systems. May be repeated for credit when topic varies.

7000—Research (V1-12). Prerequisite: Consent of instructor. May be repeated for credit.

8000—Doctor's Dissertation (V1-12).

School of Veterinary Medicine Graduate Courses

School of Veterinary Medicine (SVM)

5251—Immunology (2). Presents an introduction to veterinary immunology including mechanisms of resistance of infectious pathogens and tissue injury caused by the immune system. In addition, this course will cover topics on mucosal immunity and systemic inflammatory response.

5271—Virology (2). Students will learn the principles of viruses and prions of veterinary medical importance to animal and public health, including molecular, cellular, and organismal effects on the host that lead to diseases. Viral diseases relevant to North America and some important foreign animal diseases will be explored. Students will be introduced to diagnostic and management strategies relevant to common viral diseases.

5310—Spanish for Specific Purposes in Agriculture 1 (3). Prerequisite: Students must pass an entrance exam to ensure they are at an intermediate level of Spanish. The first of a series of three courses that will lead to a certificate in SSPA, this course will cover a range of topics, key vocabulary, and activities aimed at promoting communicative competence in Spanish in specific areas such as animal health, animal welfare, and food safety.

5370—Microbiology (3). Provides an overview of the bacterial and fungal classes important in animal health and disease and explores how virulence mechanisms lead to the spectrum of animal bacterial and fungal diseases. The interaction of bacteria and fungi with the animal host,

the environment, and shared human hosts will be explored. Students will be introduced to diagnostic and management approaches relevant to common bacterial and fungal diseases.

- 5380—Parasitology (3).** Students will learn the fundamentals of parasitology in animals of veterinary importance. Emphasis will be placed on the understanding of the epidemiology, host-parasite interaction, and clinical disease of North American parasites, particularly those in Texas and the surrounding regions. Attention will also be given to those that pose a zoonotic, biosafety, or security threat. Students will also learn diagnostic, management, and treatment practices in the different species of parasites and their hosts.
- 5390—Curriculum and Assessment in Veterinary Medical Education (3).** Provides students a deep dive into the essentials of veterinary medical education curriculum development, program assessment, and assessment of/and for student learning. The course discusses theories, practices, approaches to curriculum development and assessment practices while affording a hands-on learning of technology enhanced tools of the trade.
- 5391—Learning and the Learner: Contemporary Issues in Veterinary Medical Education (3).** Students will learn best practices and strategies to enhance learning environments while gaining a keen awareness of learning behaviors of veterinary medical students. Course learning objectives will be attained by exploring relevant scientific literature, consultation with experts, and collaborative teaching experiences. Students will develop practical, evidence-based knowledge that yields powerful, purposeful, and individualized adult learning experiences.
- 6000—Thesis (V1-6).** Students will articulate and compose research activities into a measurable product toward the completion of a thesis as part of the requirement for the program.
- 6001—Advanced Special Problems (V1-6).** Prerequisite: Study of advanced topics not covered in other graduate courses. Achievement of competencies in One Health-deep subject matter requires that students pursue non-traditional interdisciplinary study. This course provides the mechanism to do so.
- 6101—Leadership, Communication, and Crisis Management (1).** Introduction to leadership principles, communication methods and strategies, and procedures to manage crises.
- 6103—Research Seminar (1).** Weekly seminars on topics related to One Health will be presented by faculty, graduate students, and visiting lecturers.
- 6104—Journal Club (1).** Students will practice reading and reviewing scientific One Health literature in the form of a journal club, a long-established method of training graduate students.
- 6201—Population Health and Management (2).** Fundamentals of population health and management, focusing on management and reduction of disease in various populations, using data to employ One Health decision-making.
- 6211—Inquiry, Investigation, and Innovation (2).** Introduction to research methods with a One Health approach, focusing on study design, data collection, scientific investigation, responsible research, and commercialization.
- 6301—One Health Concepts and Practice (3).** Introduction to the topic of One Health and how the health of humans, animals, and ecosystems are linked.
- 6302—Applied One Health and Public Policy (3).** Development of a framework for understanding the social, political, and economic aspects of public policy related to One Health sciences.
- 6307—One Health Economics (3).** An advanced survey course aimed at familiarizing the student with human, animal, and ecosystem health research questions and appropriate economic theoretical frameworks for considering those questions. Topics include valuing the environment, markets for human and animal health services, the economics of food safety, and health resource allocation.
- 6311—Qualitative and Quantitative Statistics I (3).** Applied statistical methods for the research scientist, including statistical properties and tests, ANOVA, and introduction of regression methods; and representing statistics mathematically, graphically, and verbally.
- 6312—Qualitative and Quantitative Statistics II (3).** Prerequisite: SVM 6311, equivalent graduate level statistics course, or advanced undergraduate statistics course, subject to review and approval by instructor of record. This course builds upon concepts learned in SVM 6311. Advanced statistical concepts and methods for biostatistics, epidemiology, econometrics, and similar will be presented. Focus on multiple regression, fixed and random effects, and binary response models; truncated distributions, endogeneity, and other statistical complexities. Proficiency in interpretation, presentation, and critical analysis of applied statistics.
- 6330—Environmental Health (3).** Provides a broad overview of challenges to human and animal health from the environment including teach-

ing the basic concepts and skills to assess, control, and prevent these challenges in environmental health.

7000—Research (V1-12). Student-directed research.

8000—Dissertation (V1-12). Student-directed work toward completion of dissertation.

Interdisciplinary Graduate Minors

Biotechnology

The Graduate Minor in Biotechnology is offered to graduate students all over Texas Tech University so they might gain additional training in the salient theoretical and experimental aspects of biotechnology. This is with a view to aid their graduate studies elsewhere in the University.

Students will be required to be enrolled in and complete any three of 10 BTEC courses offered at the Center for Biotechnology and Genomics.

Available Courses: BTEC 5301, 5311, 5312, 5313, 5322, 5333, 5338, 5340, 5344, 5414

Business

The 9-hour Graduate Minor in Business is offered to non-business graduate students all over Texas Tech University so they gain knowledge on how businesses work and how to manage different business functional units to create value for stakeholders.

Required Course: BA 5301

Electives: ACCT 5301; BECO 5310; BLAW 5390; FIN 5320; ISQS 5331; MGT 5371, MKT 5360

Cross-Cultural Studies

The Cross-Cultural Studies (CCS) program is designed to provide fundamental competencies on multicultural and international/transnational issues as well as core principles of human development and sociopolitical factors impacting diverse populations from a global perspective.

The CCS program is supported by a multidisciplinary curriculum geared toward enhancing cross-cultural knowledge, skills, and leadership, along with lifetime professional success in a broad variety of traditional and nontraditional career paths. The CCS program includes two different options: a Graduate Minor and a Graduate Certificate.

TTU system degree seekers across master's and doctoral programs can pursue either the Graduate Minor or the Graduate Certificate, whereas the Graduate Certificate is open to non-degree seekers aiming to enhance their professional expertise by incorporating cross-cultural knowledge into their careers.

The core courses included in the CCS program are designed to provide students with a comprehensive, in-depth exploration of cross-cultural issues. In addition, the courses explore how arguments about cross-cultural subjects are constructed, substantiated, and used across disciplines. The program encourages critical thinking and analytical reasoning to develop an in-depth understanding of practical applications of cross-cultural theoretical frameworks and methodologies (qualitative-quantitative) from a multidisciplinary perspective. Students also evaluate the significance of cross-cultural knowledge and the main challenges and issues experienced by professionals across fields in today's multicultural society.

Requirements for the Graduate Minor are as follows:

- Completion of 15 hours of courses as approved by director of the CCS program.
- Nine hours of required coursework (see core courses below).
- Six hours of electives (2 courses) approved by the cross-cultural studies program director. Students can choose and combine courses from electives across disciplines in the university system.
- No courses may be taken for pass/fail credit. With approval of the program director, some special topic courses may be taken for credit more than once.

Core Courses: CCS 5301, 5302, 5303

Contact: Dr. Elizabeth Trejos-Castillo, CCS Program Director
806.834.6080 | elizabeth.trejos@ttu.edu

Ethnic Studies

Ethnic studies is offered as an interdisciplinary minor for students who may find a greater knowledge of ethnic groups and majority–minority relations a useful complement to their major area of study. With the continued prominence of public issues related to race and ethnicity, students from diverse fields may benefit from either a broader or a more specialized knowledge of ethnicity. Students may focus on African-American, Mexican-American, or Native-American studies. The Ethnic Studies Committee, which is comprised of faculty from the departments offering courses acceptable as part of the minor, supervises the minor degree plans.

A doctoral minor consists of at least 15 hours of ethnic studies courses to be taken in at least two departments outside the student's major field. A minor at the master's level consists of 6 hours of ethnic studies courses in two departments outside the major. General rules of the Graduate School governing minors at both degree levels apply.

Courses in the ethnic studies program include but are not limited to the following: ANTH 5322, 5323, 7000; COMS 5302; ECO 7000; EDBL 5332, 5333; EDCI 7000; EDEL 7000; HIST 5319, 5333, 6304, 7000; POLS 5327, 7000; SOC 5312, 5313, 7000; SPAN 5381, 7000.

Indigenous and Native American Studies

Students will examine the concepts and impacts of sovereignty, decolonization, colonization, and indigenizing on the lives, culture, and communities of Indigenous Peoples and Native Americans through a variety of instructional methods and interdisciplinary collaboration. 15 hours are required.

Core Course: INAS 5301

Elective Courses: ANTH 5323; ARTH 5335; ENGL 5327; HIST 5319; LAW 6343; SPAN 5370; WGS 5310, 5360

Interdisciplinary Studies

The Interdisciplinary Studies graduate minor will provide a foundational understanding of theories and methods of interdisciplinary study as well as the leadership practices or research processes used to approach complex problems. Required courses are: IS 6301, 6302, 6303.

Latin American and Iberian Studies

Latin American and Iberian Studies (LAIS) administers a minor at both the master's level and the doctoral level. The LAIS minor at the master's level consists of the following 9 credit hours:

- Up to 6 graduate credit hours of LAIS content courses taken in a discipline of concentration selected from history, Spanish, Portuguese, anthropology, geography, political science, or another discipline that meets the required LAIS standards upon consultation with the director of LAIS.
- At least 3 additional graduate credit hours of LAIS content courses in disciplines different from the subject of concentration chosen by the student.

The LAIS minor at the doctoral level consists of the following 18 graduate credit hours:

- Up to 12 graduate credit hours of LAIS content courses and a minimum of 9 hours taken in a discipline of concentration to be selected from history, Spanish, Portuguese, anthropology, geography, political science, or another discipline that meets the required LAIS standards upon consultation with the director of LAIS.
- At least 6 additional graduate credit hours of LAIS content courses in disciplines different from the subject of concentration chosen by the student.

Interdisciplinary Graduate Certificate Programs

Biotechnology

The Graduate Certification in Biotechnology will be administered from the Center for Biotechnology and Genomics. There is no definitive time limit for completion of the certification program; students will be expected to complete a total of 12 credit hours. Three courses for 9 credit hours will be completed from a list of core courses. The three required courses are: BTEC 6301, BTEC 5322, and BTEC 5338. One additional course of three credit hours will be completed from a list of electives. All courses will be offered from the Center for Biotechnology and Genomics and will bear a BTEC designation.

Contact: 806.742.6927 | www.depts.ttu.edu/biotechnologyandgenomics/

Cross-Cultural Studies

See program information on previous page. Requirements for the Graduate Certificate are as follows:

- Completion of 12 hours of courses as approved by director of the CCS program.
- Nine hours of required coursework (see core courses below).
- Three hours of electives (1 course) approved by the cross-cultural studies program director. Students can choose and combine courses from electives across disciplines in the university system.
- No courses may be taken for pass/fail credit. With approval of the program director, some special topic courses may be taken for credit more than once.

Core Courses: CCS 5301, 5302, 5303

Contact: Dr. Elizabeth Trejos-Castillo, CCS Program Director
806.834.6080 | elizabeth.trejos@ttu.edu

Energy Economics and Finance

This certificate is available to students in the M.S. in Interdisciplinary Studies Energy concentration at the conclusion of the three courses in Energy Commerce. Required courses are: ENCO 5313, 5321, 5365.

Global Bridge Program

The Global Bridge Program is a certificate program designed to give high quality international students an opportunity to earn a graduate certificate from Texas Tech University in their chosen concentration. Once the certificate is successfully completed, the student's home university will use the certificate to complete required coursework for their degree. TTU would then admit those students as full TTU graduate students with a semester of graduate coursework already completed. TTU benefits by recruiting high-quality students who will matriculate into full-time graduate studies, and students benefit by entering into graduate studies with a completed semester already on their transcript.

All students will complete ESL 5310 as part of the certificate program regardless of the concentration they select. Students will select one of the following concentrations and complete three of the courses listed within the selected concentration to complete the certificate program.

Additional information on the Global Bridge Program can be viewed on the Office of International Affairs website.

- **Biotechnology:** BTEC 5001, 5301, 5311, 5312, 5313, 5322, 5333, 5338
- **Chemistry/Biochemistry:** CHEM 5301, 5302, 5304, 5310, 5314, 5321, 5330, 5331, 5340, 5341
- **Classical and Modern Languages and Literatures:** CMLL 5302, 5309; GERM 5314; LING 5322
- **Industrial, Manufacturing, and Systems Engineering:** IE 5306, 5311, 5318, 5320, 5342, 5344, 5351, 5356, 5357
- **Kinesiology:** KIN 5302, 5303, 5307, 5313, 5315, 5334, 5335, 5353, 5355, 5357
- **Language and Literacy:** EDCI 5320, 5380; EDLL 5342, 5344, 5355
- **Master of Business Administration:** ACCT 5301; ISQS 5331; MKT 5360; FIN 5320; MGT 5371

- **Media Research and Data Analytics:** Required: MCOM 5364, 5366. Select one of the following: MCOM 5324, 5374, 6315. Approved special electives (please contact College of Media & Communication.)
- **Personalized Learning:** EDCI 5320, 5380; EDPL 5390, 5391, 5395
- **Plant and Soil Science:** PSS 5318, 5325, 5328, 5335, 6323
- **Sport Management:** SPMT 5320, 5321, 5322, 5324, 5325, 5329, 5344, 5345, 5346

Indigenous and Native American Studies

Students will examine the concepts and impacts of sovereignty, decolonization, colonization, and indigenizing on the lives, culture, and communities of Indigenous Peoples and Native Americans through a variety of instructional methods and interdisciplinary collaboration. 15 hours are required.

Core Course: INAS 5301

Elective Courses: ANTH 5323; ARTH 5335; ENGL 5327; HIST 5319; LAW 6343; SPAN 5370; WGS 5310, 5360

Law and Policy

This certificate is available to students in the M.S. in Interdisciplinary Studies Energy concentration at the conclusion of the three courses in Law and Policy. LAW 5309 and LAW 5327 are required for all students. Students will select between LAW 5311 or LAW 5356 as their third course.

Oil and Gas

This certificate is available to students in the M.S. in Interdisciplinary Studies Energy program at the conclusion of the three courses in Petroleum Engineering. Required courses are: PETR 5390, 5391, 5392.

Renewables

This certificate is available to students in the M.S. in Interdisciplinary Studies Energy concentration at the conclusion of the three courses in renewable energy. Required courses are: ECE 5380; WE 5304, 5312.

Social Entrepreneurship

The five-course graduate certificate envisioned will be comprised of two core and three elective courses. The graduate certificate will support the efforts of the newly formed Danielle Alexandra & Richard L. Clemmer Institute for Social Entrepreneurship and Enterprise at Texas Tech University. This graduate certificate program will be important to anyone who wants to become an agent of change in the social sector, to learn how to help individuals design and launch social entrepreneurial organizations (for profit, non-profit and hybrid), to become involved in social investing and philanthropy, and to participate in social change projects in their local community, nation, or world. Required courses are: IS 5310 (Foundations of Social Entrepreneurship, IS 5310 (Capstone Project). Electives are: IS 5332 (Social Entrepreneurship Elective 1), 5332 (Social Entrepreneurship Elective 2), 5332 (Social Entrepreneurship Elective 3).

Wind Energy

The Renewable Energy Program offers a graduate certificate in wind energy to address a national need for workforce development in wind energy and other clean energy sources, which are expected to double by 2050 and be part of a 40% US generation mix. The certificate program offers a wider range of topics within the wind energy curriculum, along with electives from other departments. Students will have an option to choose between the technical and managerial tracks.

Contact: Dr. Manohar Chamana | m.chamana@ttu.edu
<https://www.depts.ttu.edu/renewableenergy/GraduateCertificate/index.php>

Managerial

This 15-hour graduate certificate offers professionals post-baccalaureate level training options in six topic areas relevant to the industry, including pertinent case studies. Specifically designed for non-technical professionals who wish to assume managerial responsibilities in wind energy. Note: Electives may be substituted with any relevant courses offered in WE, ECE, IE, ECO, and ATMO departments. Required courses are WE 5310, 5311.

Electives are ECE 5316, 5343, 5372, 5373, 5391; ECO 5310, 5343, 5345; IE 5306, 5319, 5329; WE 5320, 7000.

Technical

This 15-hour graduate certificate offers professionals post-baccalaureate level training options in six topic areas relevant to the industry, including detailed case studies. They are specifically designed for technical professionals who wish to assume technical responsibilities in wind energy. Note: Electives may be substituted with any relevant courses offered in WE, ECE, IE, ECO, and ATMO departments. Required courses are WE 5300; RE 5301. Elective courses are ATMO 5301; ECE 5316, 5343, 5372, 5373, 5391, 5310, 5343, 5345; IE 5306, 5319, 5329; WE 5320, 7000.

Graduate Certificate Programs

The director of each certificate, in consultation with the director of graduate studies, will develop and specify a program of study appropriate for each student. If students decide to pursue studies beyond the certificate level, course credit earned toward the certificate can be considered toward a graduate degree.

Graduate certificates are intended to meet the supplemental post-baccalaureate education needs of professionals. A graduate certificate program is a set of courses that provides in-depth knowledge in a subject matter. The set of courses provides a coherent knowledge base.

A student applying for a graduate certificate program will be admitted with a "GCRT" designation. Some certificate programs require the GRE or GMAT, and some do not. To take any graduate course, all prerequisite courses (including undergraduate courses) must be taken and necessary background obtained before attempting the course. A student will be required to have a baccalaureate degree to start a graduate certificate program. There is only one exception to having a baccalaureate degree. If an undergraduate student from Texas Tech University has a 3.0 GPA or better and is within 12 hours of completion of a baccalaureate degree, the student may start taking graduate courses toward a graduate certificate. The student must have a baccalaureate degree to receive a graduate certificate.

Graduate credits earned while the student is enrolled in a graduate certificate program may not be applied toward a graduate degree unless the student completes the GRE or GMAT and enrolls as a fully accredited graduate student. After taking the GRE or GMAT and fulfilling all other admission requirements, a student may use the courses taken for a graduate certificate degree if the courses fulfill the requirements of the program of study for the degree.

Graduate students may pursue a graduate certificate that is outside their graduate program of study. No more than one transfer course (if approved by the advisor of the graduate certificate program and the Graduate School) will be allowed for a graduate certificate program. If a graduate student is in good standing and dropping out of the graduate program, the student may receive a graduate certificate if the necessary courses have been taken. To receive a graduate certificate, a student must have a GPA of 3.0 or better. No grade lower than a C will be accepted.

Texas Tech University

Health Sciences Center

The Texas Tech University Health Sciences Center (TTUHSC) is a separate institution in the Texas Tech University System and includes the School of Medicine, School of Nursing, School of Health Professions, Graduate School of Biomedical Sciences, Jerry H. Hodge School of Pharmacy, and the Julia Jones Matthews School of Population and Public Health.

This catalog section highlights the TTUHSC programs that cooperate with Texas Tech University to offer undergraduate and graduate programs in selected areas related to the health sciences. TTUHSC is accredited by the Southern Association of Colleges and Schools Commission on Colleges to award baccalaureate, master's, and doctorate degrees and certificates. Contact the Commission on Colleges at 1866 Southern Lane, Decatur, Georgia 30033-4097, or call 404.679.4500 for questions about the accreditation of Texas Tech University Health Sciences Center. (**Please note:** All inquiries regarding the educational programs of TTUHSC, admissions requirements, financial aid, etc., should be directed to the respective TTUHSC office and **not** to the Commission on Colleges of the Southern Association of Colleges and Schools.) The Commission should be contacted only if there is evidence that appears to support the institution's significant non-compliance with a requirement or standard. Additional information is available at www.ttuhsc.edu.

The **School of Health Professions** offers 20 different doctoral, master's, baccalaureate, and post-baccalaureate degree programs and five certificate programs in addiction counseling; athletic training; audiology; clinical laboratory science; clinical mental health counseling; clinical rehabilitation counseling; healthcare administration; molecular pathology; occupational therapy; physical therapy; rehabilitation sciences; physician assistant studies; speech-language pathology; and speech, language, and hearing sciences.

The **Graduate School of Biomedical Sciences** strives to educate the next generation of scientists and health-related professionals in a dynamic and productive research environment that fosters creativity and discovery. The school offers four degree programs on various campuses: Biomedical Sciences (Lubbock), Biotechnology (Lubbock, Abilene), Graduate Medical Education Sciences (Lubbock), and Pharmaceutical Sciences (Amarillo, Abilene).

The **School of Nursing** offers a variety of degree programs in which students can earn their bachelor's, master's, and doctoral degrees as well as post-graduate certifications.

The **School of Medicine** was established to educate future physicians in primary and specialty care for West Texas and beyond. The school offers two educational tracks that lead to the Doctor of Medicine (M.D.) degree, a standard four-year curriculum and an accelerated three-year program for students interested in pursuing a career in Family Medicine.

The **Julia Jones Matthews School of Population and Public Health** offers the Master of Public Health (M.P.H.) degree program, the Graduate Certificate in Public Health, and multiple dual-degree options.

The TTUHSC **Jerry H. Hodge School of Pharmacy** is a dynamic, nationally recognized program with one of the largest clinical pharmacy faculty in the nation. The School of Pharmacy utilizes state-of-the-art research and cutting-edge therapeutics to graduate outstanding pharmacists and scientists. School of Pharmacy students receive unrivaled clinical training, have an unwavering focus on excellence, and are provided tools to build their dreams. The School offers a Doctor of Pharmacy (Pharm.D.), Pharm.D./MBA, and Pharm.D./MPH.

Prospective students and others interested in services for students with disabilities should make inquiries to the program offices. Qualified students are considered for admission without regard to race, color, religion, sex, national origin, or disability.

Graduate School of Biomedical Sciences

3601 4th St. | Lubbock, TX 79430-6206 | T 806.743.2556
graduate.school@ttuhsc.edu | www.ttuhsc.edu/biomedical-sciences

About the School

Development of a strong program of graduate education in the basic biomedical and related health sciences is one of the responsibilities and goals of the Texas Tech University Health Sciences Center. Present-day medicine cannot exist outside the academic framework and intellectual discipline which the biological, chemical, and medical sciences provide. Graduate training in these areas, an integral component of the overall program of TTUHSC, is provided by the Graduate School of Biomedical Sciences (GSBS), which is accredited by the Southern Association of Colleges and Schools Commission on Colleges.

The program offers opportunities for study and research leading to the following degrees:

- Master of Science in Biotechnology
- Master of Science in Biomedical Sciences
- Master of Science in Graduate Medical Education Sciences

- Master of Science in Pharmaceutical Sciences
- Doctor of Philosophy in Biomedical Sciences
- Doctor of Philosophy in Pharmaceutical Sciences

Areas of concentration for the GSBS program include the following:

- Biochemistry, Cellular, and Molecular Biology
- Molecular Biophysics
- Immunology and Infectious Diseases
- Translational Neuroscience and Pharmacology

Students interested in pursuing a career in academic medicine as a physician-scientist may apply to the M.D.-Ph.D. program. The M.D.-Ph.D. program permits a student to complete the requirements of both the degrees in one of the approved graduate programs. M.D.-Ph.D. students may receive a salary, tuition scholarships for both the medical and graduate portions of the program, and health insurance benefits for the duration of the salary. This program is designed to be completed in seven years and will provide the student with rigorous training in both clinical medicine and biomedical research. Students interested in this program should indicate their interest on the application form submitted to the American Medical College Application Service at www.aamc.org/students/amcas/start.htm.

GSBS graduate courses are available to graduate students at Texas Tech University as a graduate non-degree student (NDGD).

Further information about graduate programs offered through the TTUHSC Graduate School of Biomedical Sciences may be obtained by contacting the Graduate School of Biomedical Sciences, Texas Tech University Health Sciences Center, Lubbock, Texas 79430, 806.743.2556, or via email at graduate.school@ttuhsc.edu. For more information and to apply online, visit www.ttuhsc.edu/biomedical-sciences.

The policies and procedures for the Graduate School of Biomedical Sciences differ from those established by the Texas Tech University Graduate School. Policy information is available on the website at www.ttuhscc.edu/biomedical-sciences. Programs are subject to change, depending on availability of resources and educational goals.

sopadmissions@ttuhscc.edu

About the School

The School of Pharmacy offers the following degree programs:

- Doctor of Pharmacy
- Pharm.D. / M.B.A.
- Pharm.D. / M.P.H.

One school, four campuses.

Traditionally, the pharmacist's role has been that of a dispenser of medications. However, this traditional method of practice is no longer adequate to ensure safety and effectiveness in the use of medications and health devices. The focus of practice has changed from one of product distribution to a more expansive duty, assuming the responsibility for our patients' outcomes from the medications we dispense. Health care reform has put an emphasis on primary health care. In addition, the effect of drug therapy differs based on individual patient characteristics, necessitating expertise in Special Populations care. This emphasis coupled with a lack of access, increasingly rising costs, and a concern for quality is placing the pharmacist in an important role as a member of the health care delivery teams of today.

Pharmacists are located in most rural communities and throughout inner cities and urban sprawl across the country. This physical placement of the pharmacist, who is trained in delivering comprehensive care to the public, allows access to health care where it is critically lacking. The pharmaceutical services provided in this changing arena include participating in the drug therapy decision process through recommending therapeutic objectives, selecting the most appropriate drug product to achieve the desired therapeutic outcomes given the patient's unique characteristics, determining dose and dosage schedule, selecting the drug product source of supply and drug preparation, and monitoring the patient's response to the therapy so that the patient receives the optimal benefits with minimal adverse drug effects. Texas Tech University Health Sciences Center (TTUHSC) Jerry H. Hodge School of Pharmacy offers the degree of Doctor of Pharmacy (Pharm.D.) with a Concentration in Special Populations with this expanded role of the pharmacist in mind. The effective delivery of essential health care services requires a greater responsibility of the pharmacist and a greater depth and breadth of education to support it. With its state-of-the-art facilities, world class faculty clinicians and researchers, and national reputation for preparing practice-ready pharmacists, students are well trained for today and tomorrow's health care teams.

The School of Pharmacy accepted its first class into the professional program beginning Fall, 1996. Currently, 155 students are admitted once each year in the fall semester for either a face-to-face or online pathway. Students may be admitted to the Amarillo, Abilene, or Dallas campus as first year students. If admitted to the Amarillo campus, students spend their first two years on the Amarillo campus then complete their third and fourth years on one of the regional campuses – Amarillo, Dallas/Fort Worth, or Lubbock. If assigned to Abilene or Dallas, most students will stay at that campus for the duration of their pharmacy education, with some possible rotation experiences at regional campuses. Students in the online pathway spend their first two years in a remote location, followed by one year on the Amarillo, Abilene, Dallas or Lubbock campuses, then the

final semester at their remote location. The School of Pharmacy has more than 400 students enrolled in professional and postgraduate programs. The School of Pharmacy employs approximately 68 full-time equivalent faculty, 46 post-doctoral pharmacy residents, and 36 graduate teaching and research assistants; approximately 68 staff serve the students and programs of the School.

The Doctor of Pharmacy Program. The School of Pharmacy offers the Doctor of Pharmacy (Pharm.D.) as its primary professional degree. The 4-year professional program requires at least two years of pre-professional studies that may be completed at any accredited college or university. A combined Pharm.D./M.B.A. degree is also offered. Through the School of Pharmacy's affiliation with the TTUHSC Graduate School of Biomedical Sciences, M.S. and Ph.D. degrees are also awarded.

Graduates from the Texas Tech University Health Sciences Center School of Pharmacy will be eligible to apply for licensure in any state or territory of the United States. Licensure as a pharmacist is administered by boards of pharmacy in each state. Every state and territory requires graduates to complete the North America Pharmacy Licensure Examination (NAPLEX) as well as a state prepared examination on laws and rules for pharmacy practice within the state.

Pharm.D. / M.B.A. Program. The idea of a Pharm.D./M.B.A. program was born in early 2006 in discussions between several faculty at the Texas Tech University Rawls College of Business and the Texas Tech University Health Science Center Jerry H. Hodge School of Pharmacy. The central theme was the need to develop and train the future leaders of the profession. The Health Organization Management concentration within the M.B.A. program matched what the pharmacy faculty believed were the necessary areas of focus to develop strong leaders in health care organizations.

The curriculum is designed to meet the accreditation requirements of business and pharmacy. The curricular design model was determined after reviewing other Pharm.D./M.B.A. programs matched with the teaching schedules and course prerequisites. Rather than adopting the various models currently in use throughout the U.S., the faculty chose to use a dual-degree approach and integrate both programs into a typical 4-year course of study. Since the program was structured to be a dual-degree, it was essential that all of the approved content for both degree plans be met. The Pharm.D./M.B.A. program at Texas Tech is the 31st program in the country and one of the only programs to award the M.B.A. by the time of completion of the Pharm.D. degree. The HOM program at the Rawls College of Business is one of the few accredited programs for health organization management in the country.

Pharm.D. / M.P.H. Program. The Pharm.D./M.P.H. program provides opportunities for selected students to develop their leadership skills in public health pharmacy practice. The mission of the Pharm.D./M.P.H. program is to prepare pharmacy students to meet the increasing demand for pharmacists to lead population health management initiatives within the healthcare systems and at the city, state, and national levels. The TTUHSC Pharm.D./M.P.H. combined degree program allows students who have completed a bachelor's degree program previously and are admitted into the Doctor of Pharmacy degree program to complete the Masters of Public Health curriculum within a concurrent timeframe. Several courses within the Doctor of Pharmacy program satisfy the requirements for the elective coursework required for the M.P.H. degree program. Students concurrently enroll in both Doctor of Pharmacy and M.P.H. program coursework within the P-3 and P-4 years (3rd and 4th professional years of the Doctor of Pharmacy degree program) to complete the requirements of both degree programs. A major final project in the spring of the P-4 year is required for completion of the M.P.H. program.

Julia Jones Matthews School of Population and Public Health

About the School

The Julia Jones Matthews School of Population and Public Health (JJMSPPH) serves to advance the mission of improving the health of local, national, and international populations and be a source of scientific advances and best practices in population and public health.

The training students receive emphasizes the knowledge and skills of core public health fields and the integration and application of those fields to public health practice. This will provide students with the knowledge, skills, and values needed to succeed in careers that focus on population and public health.

Graduate Programs

The Master of Public Health (M.P.H.) degree program prepares health professionals to practice skillful and evidence-based preventive public health; conduct and communicate research that informs the diverse fields within public health; and provide interdisciplinary expertise in the service of academic, professional, and community-based public health organizations. The M.P.H. is offered in a Generalist concentration. Additionally, we offer an accelerated (15 month) track to complete the program. The Graduate Certificate in Public Health is for students who wish to have an extra credential but may not be ready to pursue a master's degree. Both the master and certificate programs are offered online.

The Master of Public Health is fully accredited by the Council for the Education on Public Health (CEPH). For questions about the accreditation of the M.P.H., please contact CEPH at 1010 Wayne Avenue, Suite 220, Silver Spring, MD, 20910, 202.789.1050, www.ceph.org.

School of Health Professions

health.professions@ttuhsc.edu | www.ttuhsc.edu/health-professions

About the School

The School of Health Professions at TTUHSC offers the following degree and certificate programs:

- Bachelor of Science in Clinical Laboratory Science
- Post-Baccalaureate of Science in Clinical Laboratory Science
- Bachelor of Science in Healthcare Management
- Bachelor of Science in Speech, Language, and Hearing Sciences
- Post-Baccalaureate of Science in Speech, Language, and Hearing Sciences
- Master of Science in Speech-Language Pathology
- Master of Science in Healthcare Administration
- Master of Science in Molecular Pathology
- Master of Physician Assistant Studies
- Master of Athletic Training
- Master of Science in Clinical Rehabilitation Counseling
- Master of Science in Clinical Mental Health Counseling
- Master of Science in Addiction Counseling
- Doctor of Audiology
- Doctor of Philosophy in Rehabilitation Science
- Concentration in Communication Sciences and Disorders
- Concentration in Movement Sciences and Disorders
- Doctor of Physical Therapy
- Doctor of Occupational Therapy
- Post Professional Doctor of Occupational Therapy
- Doctor of Science in Physical Therapy
- Doctor of Science in Rehabilitation Sciences
- Certificate in Clinical Laboratory Science
- Graduate Certificate Programs:
 - Health Informatics and Data Analytics
 - Health Systems Policy and Management
 - Healthcare Finance & Economics
 - Health Systems Engineering and Management
 - Long Term Care Administration

Admission to School of Health Professions programs is competitive and by application to the school. Admission and application deadlines vary for each program. Admission to Texas Tech University does not ensure or guarantee admission to the Texas Tech University Health Sciences Center School of Health Professions, nor does admission to the School of Health Professions confer admission to Texas Tech University.

Prospective students and other interested persons are encouraged to contact the Office of Admissions and Student Affairs for information on health profession careers and educational programs, 806.743.3220. Students who are attending Texas Tech University and wish to take the courses to satisfy prerequisite requirements for these professional programs will be advised through the Office of Pre-professional Health Careers, Room 205, Holden Hall, 806.742.3078.

D.N.P. Program | T 806.743.2748 or 800.851.8240

About the School

The School of Nursing is an integral part of the TTUHSC and is committed to improving the availability and quality of nursing care. The School of Nursing is known for innovation in nursing education, excellent student retention and graduation rates, above national average National Council Licensure Examination (NCLEX) scores, and producing well-prepared nurses for West Texas and beyond. The School's mission is to educate students for practice in evolving healthcare systems and to advance knowledge and practice through research, service, and community engagement.

The School of Nursing is based at TTUHSC with various regional campus locations. The School of Nursing offers the following degrees:

- Bachelor of Science in Nursing
- Master of Science in Nursing
- Doctor of Nursing Practice

Undergraduate Programs

The school offers the following undergraduate programs for students to earn a Bachelor of Science in Nursing:

- Bachelor of Science in Nursing (B.S.N.)
- Registered Nurse to Bachelor of Science in Nursing (RN to B.S.N.)
- Accelerated B.S.N.
 - Veteran to B.S.N. Track
 - Second Degree B.S.N. Track

The Bachelor of Science in Nursing (B.S.N.) program is for students who are not licensed as registered nurses. The online RN to B.S.N. program is for students who are licensed as registered nurses. The web-accessible Second Degree B.S.N. track is for students with baccalaureate degrees in non-nursing fields. The web-accessible Veteran to B.S.N. track is for veterans with prior military medical training and experience.

Graduate Programs

The School of Nursing's graduate programs are recognized for innovative approaches to nursing education at master's, post-graduate, and doctoral levels. The master's programs are offered online with preceptor-guided clinical learning experiences available in or near the student's home community. The school offers the following graduate degrees and certificates:

- Master of Science in Nursing (M.S.N.) Leadership Program
 - M.S.N. Nursing Administration
 - M.S.N. Nursing Education
 - M.S.N. Nursing Informatics
- Master of Science in Nursing (M.S.N.) Advanced Practice Registered Nurse (APRN) Program
 - M.S.N. Family Nurse Practitioner (FNP)
 - M.S.N. Adult-Gerontology Acute Care Nurse Practitioner (AGACNP)
 - M.S.N. Pediatric Primary Care Nurse Practitioner (PNP-PC)
 - M.S.N. Acute Care Pediatric Nurse Practitioner (ACPNP)
 - M.S.N. Nurse Midwifery
 - M.S.N. Psychiatric Mental Health Nurse Practitioner (PMHNP)
- Post-Graduate Certificates
 - Family Nurse Practitioner Post-Master's Certificate (FNP)
 - Adult-Gerontology Acute Care Nurse Practitioner Post-Master's Certificate (AGACNP)

- Psychiatric Mental Health Nurse Practitioner Post-Master's Certificate (PMHNP)
- Nurse Midwifery Post-Master's Certificate
- Nursing Education Post-Master's Certificate
- Nursing Informatics Post-Master's Certificate
- Doctor of Nursing Practice (D.N.P.) Program
 - B.S.N. to D.N.P. for FNP and PMHNP
 - Post-Master's DNP

The baccalaureate degree program/master's degree program in nursing/Doctor of Nursing Practice program and/or post-graduate APRN certificate program at Texas Tech University Health Sciences Center is accredited by the Commission on Collegiate Nursing Education (<http://www.ccnaccreditation.org>). Additionally, the School of Nursing program is accredited by the Texas Board of Nursing (BON). Contact the BON at 333 Guadalupe #3-460, Austin, Texas 78701, or call 512.305.7400 for questions about accreditation of the School of Nursing programs. The Nurse-Midwifery program, for master's degree and post-graduate certificates, is accredited by the Accreditation Commission for Midwifery Education (ACME). For inquiries about accreditation, please contact ACME at 8403 Colesville Road Suite 1550 Silver Spring, MD 20910-6374, www.midwife.org/acme, or acme@acnm.org.

School of Medicine

John DeToledo, M.D., Dean

Texas Tech University Health Sciences Center
3601 4th St. | Lubbock, TX 79430 | T 806.743.3000

<https://www.ttuhsc.edu/medicine/default.aspx>

About the School

Founded in 1969, the TTUHSC School of Medicine has continually worked to address the shortage of physicians in West Texas by providing quality innovative educational opportunities to medical students and residents who serve as competent and compassionate medical professionals for the region and the state of Texas. The **medical education** program emphasizes the principles of primary care and provides sound interdisciplinary and inter-professional training that integrates basic sciences knowledge, clinical skill, diversity, and a humanistic approach focusing on high standards and comprehensive evaluation. The school's **medical practice**, Texas Tech Physicians, strives to utilize state-of-the-art technology to effectively meet the growing needs of a diverse and largely rural patient population through strong partnerships with clinical affiliates. Principles of teamwork, humanistic care, and cost-effectiveness are embedded into the practice of medicine. The **research** strategy of the school is to develop insights into the science of medicine, treatments, prevention, cures, and enhanced methods for managing patient illness, with an emphasis on opportunities for medical student research. Centers of Excellence and Institutes work toward defined areas of excellence where contributions on a national level can be made.

The School of Medicine is based at TTUHSC and operates four educational campuses. Two of these are in Lubbock, and one each is in Amarillo and in Odessa (including a training site in Midland and collectively referred to as the Permian Basin campus). All students begin their education in Lubbock and are distributed across the four campuses for their clinical education. Of 180 students in each matriculating class, 72 complete clinical rotations at the Lubbock Health Sciences Center campus, 54 at the Amarillo campus, 30 at the Lubbock-Covenant campus, and 24 at the Odessa (Permian Basin) campus.

The School of Medicine program is accredited by the Liaison Committee on Medical Education.

School of Law

Dean Jack Wade Nowlin, M.A., J.D., Ph.D.

3311 18th Street | Lubbock, TX 79409-0004

T 806.742.3791 | F 806.742.1629

<https://www.depts.ttu.edu/law/> | admissions.law@ttu.edu

About the School of Law

Texas Tech University's School of Law is known for its practical approach to legal education, which helps students succeed from day one. With a strong clinical program serving low-income clients in the West Texas area, a nationally competitive advocacy program, and award-winning law journals, students have countless opportunities to build real-world skills. The National Jurist regularly ranks Texas Tech as a "Best Value" because of its competitive tuition and high bar exam pass rate.

What truly sets Texas Tech Law apart is its people. Here, law students and professors build meaningful relationships that go beyond the classroom. Faculty members are passionate about teaching, mentoring, and supporting students every step of the way. The Law School offers a range of student support programs, from academic success resources and bar prep courses to career services and wellness initiatives, ensuring students have the tools they need to succeed.

The School of Law offers one degree program:

- Doctor of Jurisprudence (J.D.)

Because Texas Tech is the only campus in the state that is home to a major university, law school, and medical school, law students also can pursue any of the following 15 dual degree or concentration programs:

- J.D. / Doctor of Medicine
- J.D. / Master of Business Administration
- J.D. / Master of Engineering
- J.D. / Master of Public Administration
- J.D. / Master of Science in Agricultural and Applied Economics
- J.D. / Master of Science in Accounting (Taxation)
- J.D. / Master of Science in Biotechnology
- J.D. / Master of Science in Environmental Toxicology
- J.D. / Master of Science in Personal Financial Planning
- J.D. / Master of Science in Sport Management
- J.D. / Business Law Concentration Program
- J.D. / Civil Rights & Anti-Discrimination Law Concentration Program
- J.D. / Criminal Law and Innocence Concentration Program
- J.D. / Energy Law Concentration
- J.D. / Law and Science Concentration Program

Applying for Admission

The School of Law seeks to enhance the educational experience of all students by admitting applicants from a wide range of backgrounds and experiences. Applicants who possess a U.S. bachelor's degree or equivalent from an accredited college or university prior to enrollment are eligible for admission. The admissions committee reviews applications holistically and on a rolling basis. Texas Tech Law reserves the right to deny admission to applicants who, in the judgment of the admissions committee, appear to be unfit in character to engage in the study or practice of law.

Applicants to Texas Tech Law must apply online via the LSAC electronic application. An application is considered complete and ready for review when the following documents have been submitted:

- Valid LSAT score
- Official transcript
- Two letters of recommendation
- Resumé
- Personal statement

Applications should be submitted to the School of Law at the earliest opportunity after September 1. The deadline for the Regular Decision is March 3.

Additional information is available online at

www.depts.ttu.edu/law/admissions/process.php. Students may also contact the School of Law Office of Admissions for more information at admissions.law@ttu.edu.

Undergraduate Course Descriptions

Pre-Law (PLAW)

3002—Legal Profession Internship (V1-3). Internship in the legal profession. Must be accepted into the Pre-Law Academy to register.

3101—Legal Profession Seminar (1). Prerequisite: Must be admitted to Pre-Law Academy. Introduces students to people in the legal profession, exposes students to different legal practice areas, and covers information about admission to law school.

4301—Lawyering Skills: Legal Analysis and Advocacy (3). Prerequisite: Must be admitted to Pre-Law Academy. Introduces students to the fundamental concepts related to the legal system, legal analysis, and persuasive oral argument.

School of Veterinary Medicine

Guy H. Loneragan, B.V.Sc., Ph.D., Dean

7671 Evans Dr. | Amarillo, TX 79106 | T 806.742.3200

www.depts.ttu.edu/vetschool | SVM@ttu.edu

About the School of Veterinary Medicine

The Texas Tech University School of Veterinary Medicine is a research-intensive academic unit built to reflect the school's value-based culture and mission, a commitment to excellence. Students are empowered with academic freedom to pursue the broadest ideals of scholarship that align with the school's five areas of research emphasis: One Health; Disease Ecology, Management, and Prevention; Andragogical Scholarship; Sustainability of Animal Agriculture; and Molecular Mechanisms of Disease.

The School of Veterinary Medicine offers a Ph.D. in One Health Sciences. This program meets the current demand for an interdisciplinary/interpro-

fessional approach to improve public health. The program is designed to train scientists with a broader vision of One Health, interfacing animal, human, and ecological health from local and global perspectives and everything in between.

Additionally, the School of Veterinary Medicine offers a Spanish for Specific Purposes Certificate Program, supporting the overall Texas Tech status as a Hispanic Serving Institution (HSI).

Applying for Admission

Students interested in applying for the Ph.D. in One Health Sciences program should do so through the TTU Graduate School application portal. Requirements include education history, proof of English proficiency, two letters of recommendation, and a personal statement to indicate why the student intends to pursue a One Health Sciences education. Visit <https://www.depts.ttu.edu/vetschool/academics/graduate-program/index.php> for more information.

Academic Advising and Support

Academic Advising

Texas Tech academic advisors serve as university guides for students on their path toward academic progress and graduation. Advisors facilitate student growth and development, guide degree plan implementation, and assist students in navigating the world of higher education. Every major and every department provide academic advisors, either faculty or professional, to work with students during their academic careers. Academic advising is an active process that requires input and investment from the student and the advisor. Students maintain ultimate responsibility for their academic progress; the advisor holds the role of guide, facilitator, mentor.

Academic advising is not simply course selection advising. The goal of academic advising is to provide a means of communication and a consistent point of contact for academic support and progress. To that end, many departments require regular meetings between advisors and students prior to registration for the following term. Students should be aware of the advising requirements from their college and department.

Academic Recovery Process

All students admitted to Texas Tech have the potential to be academically successful. Texas Tech recognizes that many factors can undermine a student's academic performance. The Office of the Provost provides dedicated academic advisors and the Academic Recovery Process to engage, review, and advise motivated students who, for whatever reason, have found themselves on academic suspension or academic dismissal.

Through intensive academic advising, students will develop a personalized Academic Recovery Plan that will investigate the causes of past academic underperformance, anticipate future challenges, identify and implement strategies for addressing these issues, and construct short- and long-term course selections to speed and support recovery.

This generalized Academic Recovery Process is required for all students in exploratory designations who fall on academic warning, academic probation, and for declared students in some academic colleges. Students who are not in academic good standing should review the policy on academic standing and check with their Associate Academic Dean to determine the best route back to academic success. Students who are denied when applying to return to any specific academic college from academic suspension or academic dismissal may be eligible to return to the university as exploratory students after successfully completing an approved Academic Recovery Plan with University Advising.

Contact: Texas Tech University Advising | 347 Drane Hall | 806.742.2189
advising@ttu.edu | www.advising.ttu.edu/recover

Academic Testing Services

Academic Testing Services provides a wide variety of standardized exams integral to the admissions, enrollment, matriculation, and graduation/certification/licensure requirements of Texas Tech, the state of Texas, and specific employers recruiting Texas Tech graduates. These standardized exams meet specific requirements for undergraduate, graduate, and professional career path programs at Texas Tech. Exams administered include, but are not limited to, the following: GRE, PRAXIS, TEAS, and TSI. To learn more about TSI compliance see www.depts.ttu.edu/tsi/.

ADA Testing Accommodations are available to students registered through Student Disability Services. This program provides an optimal test environment for students needing extended test time, reduced distractions, Kurzweil, CCTV, and assigned readers/scribes, etc. Testing protocol is based on the student's approved Letter of Accommodation issued by Student Disability Services.

Additional programs include classroom make-up exams, CLEP and other credit-by-exam options, and proctoring for distance-learning exams. All exams are administered by expert staff in an appropriately proctored test environment.

Students may choose to take the International English Language Testing System (IELTS) rather than the TOEFL. However, IELTS is not administered on the Texas Tech campus. A full list of test centers is available on the IELTS website at www.ielts.org. Information regarding scores accepted at Texas Tech for both the TOEFL and the IELTS can be found in the Admissions and Graduate School sections of this catalog.

First-Generation Transition & Mentoring Programs

First-Generation Red Raiders is dedicated to increasing the retention and graduation rates of first-generation college (FGC) students as they pursue a degree at Texas Tech University. Through peer mentorship, social engagement, and success pathways, First-Gen Red Raiders is focused on supporting first-generation students as they navigate each phase of their university experience leading toward graduation and beyond.

First-Gen Red Raiders is committed to creating an inclusive space for first-generation students so that they feel a greater sense of belonging at Texas Tech. This includes leading the education, outreach, and engagement efforts related to FGC students at Texas Tech and nationally. Texas Tech serves as a First-Gen Scholar Institution through the NASPA Center for First-Generation Student Success.

Contact: 131 Drane Hall | 806.742.7060 | firstgen@ttu.edu

Learning Center (LC)

The Learning Center's mission is to provide students with the tools needed to obtain academic independence and success while providing a welcoming environment.

The Learning Center provides resources to enhance the academic success of all enrolled Texas Tech undergraduate students by offering the following free services:

- Drop-in peer tutoring for Math, Physics, Chemistry, Biology, Accounting, Engineering, and other courses.
- Open study area to accommodate individual and group studying.

The Learning Center is open Monday through Thursday (8 a.m. to 8 p.m.) and Friday (8 a.m. to 5 p.m.) for in-person tutoring. Open varied weekends (Saturday and Sunday from 12 p.m. to 6 p.m.).

Marsha Sharp Center for Student Athletes

The Marsha Sharp Center for Student Athletes (MSC) is a facility to support the academic success, career development, leadership development, community outreach, and personal development of student athletes at Texas Tech. The MSC is home to Academic Services and the J.T. & Margaret Talkington Department of Student-Athlete Development. The 15,500-square-foot facility has a hall of honor to recognize the academic

performance of student athletes, one classroom, two computer labs, tutoring rooms, and administrative offices for 16 full-time Academic Service professionals and 2 Student-Athlete Development professionals.

Programs for Student Achievement (PSA)

Programs for Student Achievement offers the Programs for Academic Development and Retention (PADR) course, which is designed to provide opportunities for students to acquire and build effective learning strategies and personal management skills to aid them in college and beyond. These courses are open to all students at Texas Tech University. The course meets for 12 weeks, offering students personalized support through classroom interactions and individual coaching opportunities.

The PADR student will learn to develop focus, purpose, and direction to achieve success not only in academia but also on a personal and professional level. PADR courses address factors that limit academic performance and implement strategies to overcome such factors. Students in PADR will also learn to effectively locate and utilize campus resources to aid in building and maintaining academic success.

In addition to classroom interaction, students have the opportunity for individualized plans, which might include one-on-one time with an instructor or university life coach. This time allows for collaboration between student and instructor as they work on specific problems hindering success.

The PSA offices are open from 8 a.m. to 5 p.m., Monday through Friday.

Contact: Box 45020 Lubbock, TX 79409 | Room 214 Drane Hall

Undergraduate Course Descriptions

Programs for Academic Development and Retention (PADR)

- 0010—Strategies for Academic Achievement for the Media and Communication Major (0).** Theories of learning and motivation. Techniques for personal growth and academic skills development. Required for less than 2.0 GPA first semester at TTU and students returning from academic suspension.
- 0011—Strategies for Academic Achievement for the Math or Science Major (0).** Theories of learning and motivation. Techniques for personal growth and academic skills development. Required for less than 2.25 GPA first semester at TTU and students returning from academic suspension.
- 0021—Strategies for Academic Achievement (0).** Theories of learning and motivation. Techniques for personal growth and academic skills development. Required for less than 2.0 GPA first semester at TTU and students returning from academic suspension.
- 0022—Strategies for Academic Achievement in the College of Visual and Performing Arts (0).** Theories of learning and motivation, techniques for personal growth and academic skills development. Required for less than 2.5 cumulative TTU GPA and students returning from academic suspension.
- 0031—Strategies for Academic Achievement for the College of Arts and Sciences Major (0).** Theories of learning and motivation. Techniques for personal growth and academic skills development. Required for less than 2.25 GPA first semester at TTU and students returning from academic suspension.
- 0041—Strategies for Academic Achievement for the College of Human Sciences Major (0).** Theories of learning and motivation. Techniques for personal growth and academic skills development. Required for less than 2.0 GPA first semester at TTU and students returning from academic suspension.
- 0051—Strategies for Academic Achievement for the Non-Traditional Student (0).** Theories of learning and motivation. Techniques for personal growth and academic skills development. Non-traditional students should follow the minimum GPA requirement set forth by the college in which they are enrolled.
- 0061—Academic Strengths (0).** Theories of learning and motivation. Techniques for personal growth and academic skills development. Required for university studies students with less than a 2.0 GPA first semester at TTU, PREN/TTUD students with a cumulative GPA of less than 2.0, and students returning from academic suspension.

- 0071—Strategies for Academic Achievement for Majors in Agricultural Sciences and Natural Resources (0).** Theories of learning and motivation. Techniques for personal growth and academic skills development. Required for less than 2.0 GPA first semester at TTU and students returning from academic suspension.
- 0080—Academic Strengths for Arts and Sciences (0).** Theories of learning and motivation. Techniques for personal growth and academic skills development. Required for all students who were previously required to enroll in PADR but did not complete.
- 0081—Strategies for Academic Achievement for the College of Business Major (0).** Theories of learning and motivation. Techniques for personal growth and Academic skills development. Required for 30 hrs at TTU with cumulative GPA less 2.25 and students returning from academic suspension.
- 0090—Theories of Academic Integration (0).** Focuses on combining academic strategies with personal skills development and engagement with the campus community. Required for all students returning from academic suspension who previously earned a DP in a PADR course.
- 0091—Strategies for Academic Achievement for the Engineering Major (0).** Theories of learning and motivation. Techniques for personal growth and academic skills development. Required for any engineering student whose cumulative GPA falls below 2.0.

Raider Success Hub

Raider Success Hub (RSH) (www.success.ttu.edu) is an online platform intentionally geared toward student success and retention. Students can use RSH to connect with their success team, which is comprised of academic advisors, success specialists, career advisors, and many more, through multi-channel communication methods such as SMS and LiveChat.

Students can log in to:

- Make appointments with academic advisors, success specialists, financial aid counselors, and career advisors.
- View academic status, alerts, and deadlines.
- See appointments and class schedules.
- Complete tasks related to success plans.
- Explore majors, minors, and careers.
- Send a text message to your Success Team (TIP: Opt-in to SMS by texting YES to 806.742.1278).

Contact: www.success.ttu.edu | help.success@ttu.edu | 806.742.8687

Student Success Specialists

Student success specialists are focused on supporting student success both in and out of the classroom. The success specialist does not replace the academic advisor, who is there to assist with degree planning and course selection. Instead, the specialist's role is complementary to the advising process and is focused on helping students get connected to the resources at Texas Tech to help students be academically, professionally, and personally successful. Whether students need assistance with time management, aren't sure who to reach out to about finding mental health resources, are struggling with finances, are wondering how to get involved on campus, or just need someone to talk with about the stresses of college life, the specialist is there to listen and to connect students with the individuals and offices on campus who can provide whatever help is needed. The success specialists are embedded in and work directly with the academic colleges or units to provide specialized retention outreach and support services. Success specialists are listed on students' Success Team on Raider Success Hub and can be contacted through the success hub portal.

Supplemental Instruction (SI)

Supplemental Instruction (SI) provides peer-led review sessions for historically difficult courses. SI sessions are free for all undergraduate students who want to improve their understanding of course material, grades, and meet others in their course.

Research shows that students who regularly attend SI sessions achieve an average grade level one-half to one full letter grade higher than students who do not attend. SI Sessions are offered in in-person and online formats weekly.

SI sessions are led by professor-recommended students, known as SI Leaders, who have shown excellent competency in the subject area. The SI Leaders attend every lecture, create activities and handouts for each session based on the material presented in the most recent lecture, and emphasize ways to be successful in the course. SI review sessions offer guaranteed study time and additional support outside of the classroom. Please refer to <https://www.depts.ttu.edu/provost/aiss/supplemental-instruction> for the current schedule of SI sessions.

Contact: <https://www.depts.ttu.edu/provost/aiss/supplemental-instruction>

TECHniques Center

The TECHniques Center, a program of Student Disability Services, is a fee-for-service academic enhancement program that is the only one of its kind at a public institution in Texas. The program provides supplemental academic support services to meet the needs and promote the retention of undergraduate students with documented evidence of learning disabilities, Attention Deficit Disorders, and Autism Spectrum Disorder.

Student participants are undergraduates majoring in degree programs that they have chosen. They are expected to meet the same academic requirements and have the same curricula as other students. Qualified staff members work closely with students enrolled in this program to provide support, assistance, and guidance. Certified tutors provide interactive study skills and content tutoring and are trained to work with each student's individual learning style.

techniques.center@ttu.edu

Texas Success Initiative (TSI)

The Texas Success Initiative (TSI) is a developmental education program mandated by the State of Texas to ensure that students enrolled in Texas public colleges and universities possess the necessary academic skills to succeed. State regulations require that all students enrolling in public higher education institutions demonstrate college readiness in reading, writing, and mathematics by earning passing scores on the TSI Assessment Test or providing proof of exempting ACT, SAT, or STAAR test scores; an associate's or bachelor's degree from an accredited public institution of higher education; honorable discharge from the U.S. military; or active U.S. military service. More information can be found at <https://www.depts.ttu.edu/registrar/tsi/>. Students with questions about their status regarding the Texas Success Initiative should contact the TSI Compliance Office at 806.742.3661.

The TSI Assessment Test is available through Academic Testing Services, 214 West Hall, 806.742.3671. Students will need to present their driver's license or passport for identification purposes. After testing, students must submit their test scores to the TSI Compliance Office, 103A West Hall.

Students who have tested but did not meet the minimum scores in one or more sections of the TSI Assessment are required to talk with the academic advisor about required TSI support courses. The TSI office at Texas Tech University works with the academic advisors to provide customized plans for student development and developmental coursework in reading, writing, and mathematics to ensure each student will be successful in their selected academic majors and beyond.

Contact: www.depts.ttu.edu/tsi | 806.742.3242

Texas Success Initiative Courses (TSI)

Integrated Reading and Writing

0204—Developmental Literacy I (0). This is the first of a two-course sequence in developmental literacy focused on reading, writing, speaking, and listening in the college reading and writing settings. This course devel-

ops reading identification skills (main ideas, details, facts, patterns, strategies, and themes) as well as structural writing skills (grammar, sentence structure, paragraph structure, purpose, and organization). Students are assigned to this course on the basis of testing and evaluation. Not applicable toward general degree requirements in any degree program. Course will not count toward full-time enrollment. Students must earn an A, B, or C in the course to progress to next TSI course.

0304—Developmental Literacy II (0). This is the second of a two-course sequence of developmental literacy focused on reading, writing, speaking, and listening in the college reading and writing settings. This course reinforces reading skills (critical reasoning, visualization, strategies, and processes) as well as structural writing skills (summarization, writing conventions, style, audience, writing contexts, and research process). Students are assigned to this course on the basis of testing and evaluation. Not applicable toward general degree requirements in any degree program. Course will not count toward full-time enrollment. Students must earn an A, B, or C to pass the course and fulfill TSI Literacy requirements.

0305—Developmental Literacy for Second Language Learners (0). This is one course in a sequence of developmental literacy classes focused on reading, writing, speaking, and listening in the college reading and writing settings. With consideration of the student's individual needs, this course develops reading identification skills (fluency, vocabulary, main ideas) and reinforces reading skills (reasoning, visualization, and processing). Additionally, the course develops writing skills (grammar, structure, purpose, and organization) and reinforces writing skills (conventions, style, context, audience, and research). Students are assigned to this course on the basis of testing and evaluation. Not applicable toward general degree requirements in any degree program. Course will not count toward full-time enrollment. Students must earn an A, B, or C to pass the course and fulfill TSI Literacy requirements.

0504—Basic Literacy (0). Prerequisite: By placement. This is the first of a two-course sequence in developmental literacy focused on reading, writing, speaking, and listening in the college reading and writing settings. This course develops reading identification skills (main ideas, details, facts, patterns, strategies, and themes) as well as structural writing skills (grammar, sentence structure, paragraph structure, purpose, and organization). Students are assigned to this course on the basis of testing and evaluation. Not applicable toward general degree requirements in any degree program. Course will not count toward full-time enrollment. Students must earn an A, B, or C in the course to progress to next TSI course.

Mathematics

0202—Developmental Math I: Introductory Algebra (0). This is the first of a two-course sequence of developmental mathematics courses designed to help students improve their basic math and algebra skills while fulfilling TSI compliance requirements. This course is designed to teach students basic algebra skills to prepare them for TSI 0300, TSI 0320, TSI 0330, or TSI 0340. There are four major topics: one-variable linear equations, two-variable linear equations, systems of two-variable linear equations, and operations on polynomials. Students are assigned to this course on the basis of testing and evaluation. Not applicable toward general degree requirements in any degree program. Course will not count toward full-time enrollment. Students must earn an A, B, or C in the course to progress to next TSI course.

0300—Developmental Math II: Quantitative Reasoning (0). Second of two-course sequence designed to help students improve math skills. Course designed to prepare students for skills in quantitative reasoning. Topics: quantitative reasoning, exponentials, logarithms, probability, statistics, and problem solving. Not applicable toward general degree requirements in any degree program. Course will not count toward full-time enrollment. Students must earn an A, B, or C to pass the course and fulfill TSI math requirements.

0320—Developmental Math II: Intermediate Algebra (0). This is the second of a two-course sequence of developmental mathematics courses designed to help students improve their basic math and algebra skills while fulfilling TSI compliance requirements. This course is designed to prepare students for algebra skills necessary to be successful in College Algebra. There are four major topics: factoring polynomials, quadratic equations, functions, and logarithms. Students are assigned to this course on the basis of testing and evaluation. Not applicable toward general degree requirements in any degree program. Course will not count toward full-time enrollment. Students must earn an A, B, or C to pass the course and fulfill TSI Math requirements.

0329—Developmental Math II: Equations, Functions, and Graphs (0). Corequisite: MATH 1329. Developmental math support in introduc-

tion to equations, functions, and graphs with an emphasis on algebraic manipulations using examples of interest to students of business and the social sciences.

0330—Developmental Math II: Applied Mathematics (0). This is the second of a two-course sequence of developmental mathematics courses designed to help students improve their basic math skills while fulfilling TSI compliance requirements. This course is designed to prepare students for skills necessary to be successful in an applied mathematics course. There are four major topics: set theory, logarithms, probability, and statistics. Students are assigned to this course on the basis of testing and evaluation. Not applicable toward general degree requirements in any degree program. Course will not count toward full-time enrollment. Students must earn an A, B, or C to pass the course and fulfill TSI Math requirements.

0340—Developmental Math II: Statistics (0). This is the second of a two-course sequence of developmental mathematics courses designed to help students improve their basic math skills while fulfilling TSI compliance requirements. This course is designed to prepare students for skills necessary to be successful in Statistics. There are four major topics: sampling methods, measures of variation, probability, and distributions. Students are assigned to this course on the basis of testing and evaluation. Not applicable toward general degree requirements in any degree program. Course will not count toward full-time enrollment. Students must earn an A, B, or C to pass the course and fulfill TSI Math requirements.

0502—Basic Mathematics (0). Prerequisite: By placement. This is the first of a two-course sequence of developmental mathematics courses designed to help students improve their basic math and algebra skills while fulfilling TSI compliance requirements. This course is designed to teach students basic algebra skills to prepare them for TSI 0300, TSI 0320, TSI 0330, or TSI 0340. There are four major topics: one-variable linear equations, two-variable linear equations, systems of two-variable linear equations, and operations on polynomials. Students are assigned to this course on the basis of testing and evaluation. Not applicable toward general degree requirements in any degree program. Course will not count toward full-time enrollment. Students must earn an A, B, or C in the course to progress to next TSI course.

0550—Developmental Math II: Precalculus (0). Prerequisites: Code 3 or higher on MPE or a score of at least 610 on the SATM or a score of at least 26 on the ACTM or a 3500 on the STA2. Corequisite: MATH 1550. Developmental math support on topics from college algebra, trigonometry, and analytical geometry that are necessary prerequisites for Calculus I.

Non-Course-Based Option Courses (NCBO)

Integrated Reading and Writing

0304—Non-Course-Based Literacy (0). Prerequisite: By placement. Students participate in learning approaches designed to address a student's identified weaknesses and effectively and efficiently prepare the student for college-level work. Topics include reading comprehension, application of prior learning, and how to approach college writing. Students are assigned to this course based on testing and evaluation. It does not apply to general degree requirements in any degree program. The course will not count toward full-time enrollment. Students must earn an A, B, or C to pass the course and fulfill TSI Literacy requirements.

Mathematics

0302—Non-Course-Based Mathematics (0). Prerequisite: By placement. Students participate in learning approaches designed to address a student's identified weaknesses and effectively and efficiently prepare the student for college-level work. Topics include factoring, solving quadratic equations, functions, set theory, logarithms, probability, and statistics. Students are assigned to this course on the basis of testing and evaluation. Not applicable toward general degree requirements in any degree program. Course will not count toward full-time enrollment. Students must earn an A, B, or C to pass the course and fulfill TSI math requirements.

Refresher TSI Workshop Courses (REF)

Integrated Reading and Writing

0304—Literacy Refresher Workshop (0). Students move through a series of content modules using a mastery learning approach. Topics include reading comprehension, application of prior learning, and how to approach college writing. Students are assigned to this course on the basis of testing and evaluation. Not applicable toward general degree requirements in any degree program. Course will not count toward full-time enrollment. Students must earn an A, B, or C to pass the course and fulfill TSI Literacy requirements.

Mathematics

0302—Mathematics Refresher Workshop (0). Students move through a series of content modules using a mastery learning approach. Topics include factoring, solving quadratic equations, functions, set theory, logarithms, probability, and statistics. Students are assigned to this course on the basis of testing and evaluation. Not applicable toward general degree requirements in any degree program. Course will not count toward full-time enrollment. Students must earn an A, B, or C to pass the course and fulfill TSI math requirements.

TTU eXplore Program for Students Exploring Majors

Choosing a major is a big decision, but the decision does not have to be difficult. Students who are exploring majors have access to academic advisors who are trained to work with them through the eXplore process. These advisors direct students toward an amazing university experience, an on-time graduation, and a rewarding and fulfilling future career field.

The eXplore process incorporates an expansive list of exploration activities that students can complete on their own or with the guidance of an academic advisor. Providing students the option to choose their own eXploration elements creates a truly individualized process geared toward meeting students where they are in their educational path. By utilizing interviews, career assessments, real-world research, and other tools provided by campus partners, students can identify their values, interests, skills, and abilities. This process results in the student having a higher confidence in their choice of major and leads to a significantly higher on-time graduation rate.

Writing Centers of Texas Tech University

At the Writing Centers of Texas Tech University, the Undergraduate Writing Center serves undergraduate students, while the Graduate Writing Center serves graduate students and postdoctoral associates. Both centers strive to create supportive face-to-face and online environments where writers from all disciplines can develop their written communication skills. In one-to-one consultations, experienced writing consultants work with writers at any stage of the writing process on any writing project. All consultants collaborate with writers to address global writing concerns involving focus, organization, and idea development, as well as sentence-level issues. In addition to consultations, the Undergraduate Writing Center offers writing groups and other programming. The Graduate Writing Center offers workshops, writing groups, thesis and dissertation boot camps, and a semesterly two-week seminar on foundational writing skills for graduate-level writers. There are no additional charges for any services.

Contact: Writing Centers of Texas Tech University | Weeks Hall Third Floor | 806.742.2476 | writingcenter@ttu.edu

Student Services

Academic HealthPlan (AHP) Insurance

It is recommended that all students have health care insurance. Many students choose the TTU Academic HealthPlan (AHP) policy. Parents should consider covering their student under AHP since AHP is frequently more affordable than keeping a student on a parent's current plan and is uniquely designed to meet the health care needs of college students. Visit <https://ttu.myahpcare.com> for more information about this year's TTU Academic HealthPlan policy.

Alumni Association

Started in 1927 by the first graduating class, the Texas Tech Alumni Association (TTAA) has grown to a membership of nearly 30,000 loud and proud alumni, current students, and friends of Texas Tech University. The TTAA helps amplify the voices of alumni everywhere by championing what it means to be a Red Raider.

Located in the McKenzie-Merket Alumni Center on the TTU campus, the TTAA provides academic support to the university through student scholarships, Excellence Grants, professorships, and awards for faculty and staff. In addition, the association sponsors many on-campus activities for alumni and students, including the Official Texas Tech Ring tradition, homecoming events, Student Alumni Association events, and pre- and post-game gatherings at the Frazier Alumni Pavilion in the fall. The Techsan Connection mentoring platform, hosted by the TTAA and TTU Career Services, offers alumni and students a unique way to find mentoring connections and career advancement opportunities. The TTAA also publishes the quarterly Texas Techsan magazine and provides a complimentary one-year membership to all undergraduates in partnership with the Office of the President.

Association members maintain a lifelong connection to the university through alumni networks and more than 80 alumni chapters nationally and internationally, that provide networking opportunities through game-watching parties, happy hours, annual dinners, golf tournaments, and more. Alumni and students can connect through mentoring. Every TTAA membership helps elevate Texas Tech University.

Contact: 806.742.3641 | www.TexasTechAlumni.org

ATM

Plains Capital Bank, Bank of America, Prosperity Bank, and Texas Tech Credit Union have ATMs in the SUB. Anyone having ATM access cards honored by financial institutions may use these machines for a variety of transactions. The ATMs are normally accessible 24 hours a day in the east lobby of the Student Union.

Campus Bus System

The campus bus system, funded by the Student Transportation Fee, provides transportation throughout the campus and to nearby off-campus residential areas. On-campus routes provide service from the residence halls and commuter parking lots to the interior of the campus. Off-campus and on-campus service runs from 7:15 a.m. until 7:30 p.m. Students can access the Citibus On-Demand shuttle service from 7 a.m. until 11 p.m. by downloading the Citibus On-Demand app and requesting a ride during service hours. For more information on this service, go to <https://citibus.com/services/#citibus-ondemand>. Students also can ride any Citibus route in Lubbock free of charge by using their Texas Tech ID.

Contact: Student Government Association | 806.742.3631

Cocurricular Activities

Students attending Texas Tech have an endless array of experiential opportunities. The Student Union & Activities office and the Center for Campus Life boast over 500 registered student organizations representing academic, professional, honorary, graduate, religious, service, athletic, and special interest groups. Additionally, students can gain volunteer leadership experience through involvement in the Student Activities Board (SAB) where they can plan traditional campus events like Texas Tech's Homecoming Week and the annual Arbor Day celebration. Students can enroll in leadership programs, participate in Greek letter organizations, and experience multicultural programs through the Center for Campus Life. The value of these experiences is immeasurable as students enjoy the luxury of having a practical forum in which to cultivate leadership skills and develop peer and faculty/staff networks.

Student participation in an off-campus activity is strictly voluntary. Students are responsible for their own safety and welfare. Participation in off-campus activities is at the student's own risk, and the university assumes no responsibility. Students are responsible for making their own individual arrangements with instructors for class work missed while participating in any on-campus or off-campus activity. For students involved in Big 12 sports, eligibility rules for the Big 12 Conference are administered by the Texas Tech Athletics Council.

Center for Campus Life | 201 Student Union | 806.742.5433

Fraternity and Sorority Life

Fraternities and sororities have been an active part of university life since 1952 by complementing the academic and cocurricular activities of the university's community life. With almost 60 chapters recognized at Texas Tech University, more than 5,500 students are involved in Fraternity and Sorority Life. The university promotes a self-governing community, reaffirming an attitude of cooperation, support, and encouragement. The Fraternity & Sorority Life Office is the liaison between Greek letter organizations, their alumni, and the university administration.

806.742.2403 | fsl@ttu.edu | www.fsl.ttu.edu

Grievance Procedures

In accordance with institutional accreditation, opportunities are available to students for redress of grievances. Generally, students wishing to review a grievance related to an action of a faculty member, staff member, or department should first direct their concern to the supervisor responsible for the department in the university organizational structure. Procedures for handling specific problems have been established to expedite the filing and facilitating of student concerns. Questions involving academic matters should first be directed to the appropriate department office in which the related course resides. Grievance procedures are described in the *Student Handbook*, and questions may be directed to the Office of the Dean of Students, 201 Student Union Building, 806.742.2984, or www.depts.ttu.edu/dos.

Intercollegiate Speech, Debate

The Red Raider Speech and Debate Team competes in a variety of events at the regional, national, and international levels. The team has a long history of winning national championships, has an active travel schedule,

and receives strong institutional support. It is active in several national and statewide forensics organizations including the National Forensic Association, the International Public Debate Association, Pi Kappa Delta, and the Texas Intercollegiate Forensics Association. All students are welcome to participate; no previous experience is needed. The team is supported by the Department of Communication Studies with offices in MCOM 258 and 260.

Contact: Director of Forensics, Scott Thomson | 607.379.5010

debate.comc@ttu.edu

Lime Scooters & E-Bikes

Lime scooters and electric bikes are available for students and employees to rent through the Lime app for short trips on campus. There are designated spaces for these vehicles to be parked after use. Locations will be indicated through the app. Make sure scooters and bikes are returned to specified locations to avoid additional fees.

Music Organizations

The university is represented by the following official major ensemble musical organizations: Jazz Ensembles, Jazz Orchestra, Goin' Band (Marching Band), Opera Theatre, Treble Choir, Matador Singers (Tenor/Bass Choir), University Choir, Concert Band, Symphonic Band, Symphonic Wind Ensemble, and Symphony Orchestra. Students may also participate in the University Singers, Lubbock Chorale, Court Jesters, University Band, Jazz Combos, Mariachi Los Matadores, Sinfonietta, Saxophone Quartets, Woodwind Ensemble, Woodwind Quintet, String Ensemble, String Quartets, Harp Ensemble, Flute Ensemble, Clarinet Choir, Horn Ensemble, Trombone Choir, Trumpet Ensembles, Tuba/Euphonium Ensemble, Brass Quintet, Percussion Ensemble, Steel Drum Bands, Collegium Musicum, Celtic Ensemble, Balkan Ensemble, Tango Orchestra, piano accompanying, and additional chamber ensembles. Each group studies a broad and representative repertoire and maintains an annual public performance calendar. Participation is open to any university student who meets audition requirements, however, preference may be given to music majors or minors.

Office of the Dean of Students

The Office of the Dean of Students will lead an effort to focus on non-academic matters affecting student life, student success, and student learning. These efforts are achieved through encouraging student responsibility and leadership, supporting students and families during times of crisis, assisting faculty and staff in resolving student concerns, and active involvement in issues related to student life at Texas Tech University.

Office of Student Conduct

The Office of Student Conduct is responsible for reviewing and adjudicating alleged violations of the Code of Student Conduct. All students are afforded due process while working with this office and are also informed about their rights and responsibilities throughout the process. In addition to adjudicating alleged violations of university policy, this office also serves as a clearinghouse for various background checks of current and former Texas Tech students.

The Office of Student Conduct works in partnership with various campus units, including but not limited to: Dean of Students Office, Student Counseling Services, University Student Housing, Texas Tech Police Department, Risk Intervention & Safety Education, and more. This office also works to maintain compliance with various federal and state regulations.

Contact: 307 Student Union | www.studentconduct.ttu.edu | 806.742.1714

Office for Student Civil Rights & Sexual Misconduct

The mission, purpose, and scope of the Office for Student Civil Rights & Sexual Misconduct is to promptly address all complaints of discrimination and harassment, specifically those involving Title IX, gender-based harassment, sexual misconduct, and discrimination based on race, ethnicity, national origin, religion, age, disability, or any other protected characteristic or class. The office assists and supports students who bring complaints; provides coordination and provision of resources, remedies, and interim measures; and facilitates a fair and equitable investigation and adjudication process where reports indicate student misconduct in violation of university policy. The office provides support for pregnant and parenting students. The department also assists campus partners with numerous education, training, and prevention efforts throughout the campus community.

Parent and Family Relations/Texas Tech Parents Association

Parent and Family Relations is dedicated to student success by engaging parents and family members as active partners in supporting student success at Texas Tech University. Parent and Family Relations provides a variety of programs and services to parents, family members, and students. These programs include Family Days, Holiday Bus Trips, Sibling Saturday, the Parent and Family Guide, The Parent & Family Webinar Series, Red Raider Orientation for Parents and Family Members, and the Red Raider Family Network.

Contact: Drane Hall – 1st Floor | 806.742.3630 | parent@ttu.edu
www.parent.ttu.edu

The Texas Tech Parents Association (TTPA), an incorporated non-profit organization, was established in 1956 to provide programs and services for Texas Tech families as well as a network to support the Red Raider community. Programs and services include scholarships, faculty and student awards, military family support, parent ambassadors, the Road Raiders Safe Travel Network, and local chapters of TTPA. Membership dues and donations enable the awarding of scholarships and awards as well as provide program support.

Contact: parents@texastechparents.org | www.texastechparents.org

RaiderGate: A Student Tailgate Tradition

Sponsored by the Student Activities Board, Student Government Association, and Student Union and Activities, RaiderGate is the university's premier student tailgating event. Open to Texas Tech students and student organizations only.

Student Union and Activities | 806.742.3636

Red Raider Student Employment Center (RRSEC)

The Student Financial Aid Office administers part-time opportunities designed to assist students in financing their education while gaining valuable work experience and mentoring. Part-time employment both on-campus and off-campus is available to current Texas Tech students enrolled at least half-time. Students seeking part-time employment are encouraged to view available opportunities by selecting "Red Raider Applicants" at rrsec.ttu.edu. To learn more about financial assistance and student employment opportunities, visit financialaid.ttu.edu. Any student who has submitted a FAFSA and has remaining federal aid eligibility can apply for a federal work study position.

Red to Black® Peer Financial Coaching

Red to Black® is dedicated to helping students and their families navigate finances with confidence. Our programs provide the tools, knowledge, and personalized support needed to make smart financial decisions now and in the future.

With workshops, resources, and one-on-one coaching, Red to Black® can help you LEARN how to manage finances, PLAN for upcoming expenses, and ACT to build a strong financial future. Whether you are planning for college or managing current expenses, we are here to help you thrive financially!

www.r2b.ttu.edu

Risk Intervention and Safety Education (RISE)

The Risk Intervention and Safety Education (RISE) office seeks to maximize student success through effective health promotion and comprehensive prevention education services. RISE seeks to promote a campus environment that values holistic wellness and empowers students to live vital, meaningful lives. RISE administers the online Voices for Change course that is required for all incoming first-year and transfer students, facilitates educational workshops, and hosts free campus events on a variety of topics including:

- Bystander Intervention
- Alcohol and Other Drugs
- Sexual Assault Prevention and Consent
- Sexual Health
- Suicide Prevention
- Stress Management and Mental Wellbeing
- Healthy Relationships
- RISE and Campus Resources

Spirit Programs

The Texas Tech Spirit Program leads fans in supporting the teams at football, basketball, soccer, and volleyball games. They serve as ambassadors at athletic events and at many different school and community functions. In addition to their game day role, the squad members represent Texas Tech on the national stage at competitions. The national award-winning Spirit Program includes a large co-ed cheer team, a small co-ed cheer team, a pom squad, Raider Red, and the Masked Rider program.

spirit@ttu.edu | <https://www.depts.ttu.edu/centerforcampuslife/spiritsquads/>

Student Counseling Center

The Student Counseling Center (SCC) provides professional psychological services in a welcoming environment to address the variety of concerns affecting a college student's personal life and academic performance. Services are provided by licensed psychologists/counselors and by their supervisees.

College life is brimming with new challenges and choices. SCC services focus on the common issues students frequently encounter in this process. This can involve relationship loss, coping with grief, body image concerns, depression, anxiety, stress/time management, alcohol or other substance abuse, gay/lesbian/bisexual/transgender identity concerns, communication skills, general adjustment to college, or simply help in understanding oneself better.

The SCC offers a variety of therapeutic services for students including the MindSpa (self-guided facility for management of stress and anxiety), brief individual and couples counseling, and group counseling. Students can take advantage of a variety of topic-specific groups (e.g., depression, adult children of addicts, build your social confidence) as well as

general counseling groups called Understanding Self and Others. Manage Your Mood groups help students develop the skills to effectively manage symptoms of depression and/or anxiety. SCC therapists also educate the campus community about suicide prevention and strategies for responding to peers who are struggling with mental health concerns through Question, Persuade, Refer gatekeeper training and Mental Health First Aid. These presentations are available for classes, residence halls, and campus organizations.

SCC services are available to all currently enrolled students. All services are strictly confidential within limits of the law. The SCC is open Monday through Friday, 8 a.m. to 5 p.m. A Walk-in Clinic is available to initiate counseling services from 12:30 p.m. until 3:30 p.m., Monday through Friday.

Contact: 201 Student Wellness Center | www.depts.ttu.edu/SCC
806.742.3674

Student Government

The Student Government Association (SGA) provides students with opportunities to excel through their participation in leadership activities and university-wide committees. Students can get involved through First-Year Council, First-Year Leadership Association, Ambassadors, Student Senate, and executive offices. SGA also provides many services to students, including Raider Ride (temporarily disabled), housing guides, WORD magazine, new student guide, information maps about Citibus routes, and other programs and publications.

Student Government Association also supports student organizations through a funding process that allocates a portion of student services fees to registered student groups. The four executive officers—President, Internal Vice President, External Vice President, Graduate Vice President—work to represent the views and needs of students to the administration as well as local and state governments. The SGA is always receptive to new programs and practices that can benefit students.

Contact: Student Government Association | 302 Student Union
806.742.3631 | www.sga.ttu.edu

Student Health Services

Student Health Services is the primary care clinic for students at Texas Tech University. This Joint Commission-accredited clinic is staffed with board-certified physicians, advanced practice providers, and licensed counselors and psychologists to provide high-quality care.

Student Health is located on the first floor of the Student Wellness Center at the corner of Main and Flint on the west side of the campus. Services are available by appointment Monday through Thursday from 8:00 a.m. to 5:30 p.m. and Friday from 8:00 a.m. to 12:00 p.m.

Clinical Services. Clinical services include primary and urgent care, women's health, sports medicine, nurse clinic, travel health consults, and an after-hours answering service. Student Health offers many of these services virtually. Student Health also has a COLA-accredited medical lab, X-ray department, and retail pharmacy on site making it the most convenient place for students to receive care.

Pharmacy. The Student Health Pharmacy can fill most prescriptions, including those written by an outside physician or transferred from another pharmacy. Over-the-counter medications are available at very competitive prices. Pharmacy purchases may be charged to major credit cards. The pharmacy also accepts most prescription insurance plans. Prescriptions may be transferred to the Student Health Pharmacy by calling 806.743.2636.

Cost. Student Health strives to be the most affordable place for TTU students to receive healthcare. All TTU undergraduate students pay a student health and wellness fee which allows Student Health to significantly discount the services for students who receive care at Student Health. Student Health Services accepts most major insurances and considers co-pays and deductibles covered by the student health and wellness fee. Graduate students can opt to pay the medical service fee during their first visit of each semester to have full access to services.

Immunization Requirements and Immunization Holds. TTU requires all incoming students under the age of 22 to provide documentation of a Meningitis vaccine or booster dose during the five-year period prior to but no later than ten days before the first day of the first semester they will enter the institution. TTU has partnered with Med+Proctor to manage this process and remove registration holds once full immunization compliance is met.

In order to avoid delays in registration, students should upload their immunization records to Med+Proctor prior to attending Red Raider Orientation. Visit <https://www.depts.ttu.edu/studenthealth/newstudents/> for more information.

Tuberculous Screening. Screening may be required for students from countries with high rates of tuberculosis. Since most international students are required to have Academic Health Plan health insurance, this screening test can be done at Student Health for no out-of-pocket cost to the student. Required students should provide documentation of the test and results or receive the test at Student Health Services before or during the first semester of enrollment. Failure to comply with this requirement will result in a hold being placed on the student's account. For more information about the TB requirement and due dates for international students, visit www.depts.ttu.edu/studenthealth/internationalstudents/.

Confidentiality. Student Health commits to keeping students' care confidential in compliance with state and federal law. A student's medical information is kept completely confidential and cannot be released to anyone, including parents and/or guardians without the student's written permission unless otherwise authorized by law.

Contact: Student Health Services | 806.743.2848
studenthealthservices@ttuhsc.edu | www.depts.ttu.edu/studenthealth/

Student Involvement

The Office of Student Involvement is dedicated to student success at Texas Tech University and beyond graduation. The department fosters environments for individuals to connect and build community. Student Involvement supports all student organizations by providing resources and tools to help further their organizational mission and initiatives. Student Involvement staff engages students in active learning through leadership development opportunities and community service experiences.

Contact: Student Involvement | 203 Student Union | 806.742.5433
<https://www.depts.ttu.edu/centerforcampuslife/Involvement/studentorgs@ttu.edu> | @ttustudentorgs

Student Legal Services

Student Legal Services is dedicated to the concept of preventative law by providing legal advice and guidance to students. The program's primary objective is providing students confidential legal advice on individual issues by informing students of their obligation, duties, and rights as defined by a system of law. Student Legal Services' attorneys are able to represent students under limited circumstances; however, most cases are resolved through negotiation, advice, and proper direction.

Student Legal Services is staffed by three licensed attorneys, an administrative business assistant, law clerks, and student externs from the Texas Tech School of Law. Appointments are necessary to ensure correct placement with the appropriate attorney. Outreach presentations are available for student organizations and academic classes.

Contact: 2nd Floor Student Union | 806.742.3289

Student Organization Representative Council (SORC)

The Student Organization Representative Council (SORC) includes all registered student organizations separated into councils based on their area of interest. These councils include a SORC representative from each organization and Student Government Senators to facilitate the agenda. It allows the opportunity for students to have a fair and equal say in univer-

sity-related matters, to promote the events of their organization, to educate and diversify the campus, and to promote events sponsored by the Student Government Association.

Contact: Student Government Association | 806.742.3631

Texas Tech Chess Program (TTCP)

The Texas Tech Chess Program (hereafter referred to as the TTCP) embraces as its charge the following aspirations: to promote and passionately advocate for the growth of chess, especially via engaged and persistent outreach to the K-12 students in Lubbock and the surrounding area; to recruit, build, and mentor a competitive collegiate team. The TTCP seeks to support the academic pursuits of our students while simultaneously providing a challenging and competitive experience against the top chess programs in the country. We endeavor to uphold the values of Texas Tech University and to serve as informed and conscientious citizens of the world. We are strengthened by our close partnership with Student Life, and we strive daily to provide rich and significant opportunities for growth and excellence.

The Texas Tech Chess Program was formed in 2007 and, over the past 14 years, has captured more than 10 national titles as well as numerous regional and state championships. Included among the team's signature wins are the National College Team Championship in 2011 and 2012. In 2015, the TTU Chess Team won the Pan-American Intercollegiate Chess Championship for the first time in program history and then, just four years later, won it again in 2019. In 2014 and then again in 2020, Texas Tech University was named Chess College of the Year. The TTCP is led by International Grandmaster Alex Onischuk, a former U.S. Champion and one of the top professionals in the world.

The Texas Tech Chess Program offers competitive chess scholarships to qualified undergraduate and graduate applicants, and all scholarship awards reduce in-state tuition. Additionally, scholarship recipients receive rigorous training under supervision and tutelage of International Grandmaster Onischuk.

Working alongside the Knight Raiders—the university's student chess club—the TTCP offers a variety of services and opportunities related to chess. Activities include regular meetings, tournaments, after-school programs, workshops for teachers, and chess camps for kids. The Chess Program staff prepares the state-wide UIL chess quizzes and also provides resources and support to community organizations in the form of chess sets, chess clocks, a specialized chess library, demonstration boards, chess game analysis programs, and tournament management.

Texas Tech Credit Union

Faculty and staff at Texas Tech University and Texas Tech University Health Sciences Center are eligible for membership with Texas Tech Credit Union. Membership perks include free benefit-driven checking and savings accounts, new and used vehicle loans, personal loans, and mortgage loans. TTCU also offers 24-hour online and mobile banking, bill pay, credit scorecard, the ability to get paid up to 2 days early with direct deposits, access to 30,000+ fee-free ATMs, and more. Branches are located at 1802 Texas Tech Parkway, Room #1A98 in the Health Sciences Center, and 4005 98th Street. For more information visit texaschfcu.org or call 806.742.3606.

Toreador Media

Toreador Media, located on the first floor of the rotunda in the Media & Communication building, provides out-of-classroom learning opportunities for students to use academic training obtained at Texas Tech in practical settings of publishing the student newspaper, The Daily Toreador, digital media at www.dailytoreador.com, and social media platforms. All publications, productions, and broadcasts within the department are nonacademic and considered out-of-classroom learning opportunities, free from administrative censorship. Student editors in Toreador Media have

the authority to make all content decisions and bear the responsibility for their decisions.

Toreador Media employs 30-50 students each semester as collegiate editors, reporters, photographers, videographers, anchors, graphic designers, and social media personnel. Many of the employees are students in the College of Media & Communication, and some study other disciplines. Students interested in the fields of journalism, marketing, public relations, graphic design, photography, and videography are encouraged to apply for positions on the student-led staff by visiting www.dailytoreador.com.

Contact: Media & Communication Rotunda | Room 180 | 806.742.3388

Transcript Services

Official Texas Tech transcripts are available to purchase for a fee. Transcripts may be ordered online at www.depts.ttu.edu/registrar (additional fees may apply) or in person at the Office of the Registrar, 103 West Hall. Please allow two business days for online transcript order processing. Release of official transcripts may be temporarily delayed to ensure accuracy and completeness of the record. Transcripts submitted to Texas Tech from other institutions become the property of Texas Tech University.

University Career Center

University Career Center provides a number of services designed to assist all Texas Tech students and alumni with their career development and post-graduate decision-making. With more than 20,000 employer contacts, hundreds of recruiters visit the University Career Center each year to conduct employment interviews with students in an effort to fill internship, Co-Op, and full-time positions.

To obtain interviews and submit a resumé, students may register at www.hiredraiders.ttu.edu. To assist students who are undecided about their majors or career plans, the University Career Center offers career assessment inventories, which include the Strong Interest Inventory, FOCUS2, MBTI, and StrengthsQuest.

The University Career Center also sponsors various job fairs that include graduate and professional schools, school districts, summer camps, and two large all-major career fairs. Resources include job listings, internship information, mock interviews, resumé assistance, and an extensive online career library. Counselors are available to meet individually with students to discuss career-related topics and post-graduate decision making. The University Career Center website www.careercenter.ttu.edu offers numerous resources to assist students in career exploration, development and job search including thousands of videos on specific career paths.

Veterans' Education Services

The Military and Veteran Programs Department assists veterans, active service members, and their families in achieving academic and personal success by helping provide a seamless transition from military to student life, supporting and encouraging campus and community engagement, and helping provide a positive experience through degree completion and on to a successful future.

The department embraces the following values:

- **Service.** The department appreciates veterans' service and understands the diversity of thought and experience veterans bring to the university. The department's calling is to serve those who have served.
- **Commitment.** The department will connect veterans to campus and community resources, enhancing their overall college experience to provide a greater chance of successful academic achievement and degree completion.
- **Integrity.** The department treats everyone with the dignity and respect they have earned and deserve.
- **Growth.** The department provides an encouraging environment that is focused on veterans' success and development.

Exemptions under the Hazlewood Act. The purpose of the Hazlewood Exemption (Hazlewood Act) for Texas veterans is to provide an education benefit to honorably discharged or separated Texas veterans and to eligible dependent children and spouses of Texas veterans. Eligible students may receive an exemption from payment of tuition and most fees. Exclusions apply for up to 150 credit hours maximum. For more information see <https://www.depts.ttu.edu/mvp/hazlewood/hazlewood.php>.

Federal VA Benefits Certification. Each student using federal VA Educational Assistance is responsible for providing accurate information to the Department of Military and Veterans Programs. The U.S. Department of Veteran Affairs requires accurate updated information; therefore, students must report all changes of status to their academic schedule, degree plan, or address immediately through the Military and Veterans Programs Department's online Forms Portal at www.mvp.ttu.edu.

- Undergraduate students who have accumulated 60 or more credit hours must file a copy of their official degree plan or teacher certification plan with the Veterans Coordinator or enrollment certification will be canceled.
- Graduate students must be admitted into an approved program and provide a degree plan as soon as possible after enrollment at Texas Tech.
- All veterans using federal benefits must submit military transcripts for evaluation no later than the end of their second semester of enrollment or enrollment certification will be canceled.

Each semester, all students using federal VA Educational Assistance or the Hazlewood Act exemption must complete and submit a certification request **immediately** after registration through the Military and Veterans Programs Department's online Forms Portal at www.mvp.ttu.edu.

Students using the federal or state Tuition Assistance Program through the Department of Defense should provide documentation to Student Business Services, 301 West Hall, 806.742.3272, www.sbs.ttu.edu.

Resources and Facilities

Athletic Facilities, NCAA Programs

As a member of the National Collegiate Athletic Association (NCAA) and the Big 12 Conference, Texas Tech provides intercollegiate athletic programs for both men and women. Texas Tech's 17 athletic programs operate under NCAA and Big 12 rules and regulations as well as under the auspices of the Texas Tech Athletic Council whose membership represents the faculty, student body, Alumni Association, and a member-at-large appointed by the university President.

Red Raider athletic activities are organized under the Director of Athletics with head coaches in each of the sports responsible to the Director. Texas Tech began competing in the Big 12 Conference in 1996 after a 35-year membership in the former Southwest Conference.

Female athletes compete in intercollegiate volleyball, soccer, cross country, basketball, golf, tennis, softball, and indoor/outdoor track and field. In 1993, the Lady Raider basketball team claimed the school's first NCAA National Championship. The men's program includes football, basketball, cross country, indoor/outdoor track and field, baseball, golf, and tennis. Texas Tech has added two national titles in track and field in recent years, with the men's team claiming the NCAA Outdoor Championship in 2019 as well as the NCAA Indoor Championship in 2024, under longtime head coach Wes Kittley. Additionally, Texas Tech has finished in the top 10 nationally in recent years in men's basketball, baseball, men's golf, women's golf, women's tennis, and women's track and field.

Texas Tech completed its largest athletic facility investment in its history during the 2024 season with the opening of the South End Zone Building and Dustin R. Womble Football Center, a \$242 million project that provides significant additions to premium areas of Jones AT&T Stadium as well as state-of-the-art team amenities for the university's more than 120 football student-athletes. It is the largest contiguous football facility in the country, connecting the Sports Performance Center, Womble Football Center and South End Zone Building all in one.

Jones AT&T Stadium is named for Texas Tech's late President Emeritus Clifford B. Jones and his wife Audrey and for SBC Communications. While SBC's gift of \$20 million enabled renovation of the stadium in 2003, the Jones family provided the initial funds to permit construction of the stadium in 1947. Because SBC Communications acquired AT&T in 2005 and chose to keep the AT&T name, the former Jones SBC Stadium was renamed and became the only collegiate athletic facility in the nation with the AT&T name. A 2003 renovation added a new west side building, complete with 54 luxury suites, a club level, and press and camera levels. In 2010, an east side stadium building opened, featuring 29 luxury suites and over 500 outdoor club seats. The addition increased stadium capacity to over 60,000.

Dan Law Field at Rip Griffin Park hosts the university's baseball team and has been voted one of the best places in the nation to watch a college baseball game. Outdoor track and field events are held at the Terry and Linda Fuller Track Complex, and soccer events are held at the John Walker Soccer Complex. Basketball games tip off in the 15,098-seat United Supermarkets Arena, one of the finest on-campus basketball-volleyball facilities in the nation. In October of 2016, Tech debuted a center-hung video board with four displays and four corner boards throughout the arena.

The Texas Tech tennis and softball programs enjoy the Don and Ethel McLeod Tennis Complex and Rocky Johnson Field. The university's golf teams began their first season at The Rawls Course in 2003. Named after Texas Tech alumnus Jerry S. Rawls, who provided an \$8.6 million gift for construction of the course, The Rawls Course was named the fourth-best on-campus course in the nation and fifth-best public golf course in Texas by *Golfweek Magazine* in 2024.

The Marsha Sharp Center for Student-Athletes opened in 2004 and features classrooms, a computer lab, a resource library, tutoring rooms, private study areas, and administrative offices.

In October 2017, Texas Tech opened the Sports Performance Center. Funded by gifts to The Campaign for Fearless Champions, the state-of-the-art Sports Performance Center provides Texas Tech student-athletes world-class opportunities to compete, train, and achieve at the highest levels. The building houses a 200-meter indoor banked track with seating for more than 2,000 spectators. The indoor football practice field provides an important recruiting tool and ensures that Texas Tech football players will never miss another practice due to inclement weather. A removable door separates the football and track venues, allowing privacy and student-athlete access to both sides of the facility during events.

Texas Tech unveiled in February 2020 the Cash Family Sports Nutrition Center, a \$5.6 million dining facility that serves the university's more than 400 student-athletes. The facility allows Texas Tech to enhance its nutritional offerings through on-site meal preparations, a touch-screen ordering system, and the Dean and Christi Quinn Education Kitchen.

Additionally, Texas Tech opened the Dustin R. Womble Basketball Center in May 2021, a state-of-the-art practice complex for both the Red Raider and Lady Raider basketball programs that is located immediately east of the United Supermarkets Arena. The \$32.2 million facility was funded through philanthropic giving to The Campaign for Fearless Champions.

Bookstore

The Raider Depot Campus Store is located in the Student Union Building. Working directly with faculty and TTU departments, the Raider Depot Campus Store offers a large selection of required and recommended textbooks and course materials; options include new, used, digital, access codes, Inclusive Access, and rentals. Book buybacks are conducted at competitive prices every day.

The Raider Depot Campus Store offers the best selection of Texas Tech apparel, spirit items, giftware, school supplies, and much more. Additionally, the Raider Depot Campus Store carries Apple hardware and accessories as well as Dell laptop configurations, which students can shop by major.

Texas Tech students can purchase and rent course materials and shop for apparel, gifts, and more online at www.raiderdepot.com. Competitive shipping rates are available. Order online and pick up in store!

The Raider Depot Campus Store accepts major credit cards, PayPal (online), and Follett gift cards. Please visit the store website for updated store hours, promos, sales, in-store events, and announcements.

Contact: 806.203.3232 | www.raiderdepot.com

Child Development Research Center

The Department of Human Development and Family Sciences in the College of Health and Human Sciences operates a Child Development Research Center (CDRC) that offers a full-day program for children from birth to 6 years old. The center provides varied opportunities for university students to work in classrooms with professional staff to acquire information and skills related to the development and guidance of young children. The CDRC also provides opportunities for faculty and graduate students to conduct research on child behavior and family interactions, as well as to generate innovative strategies for promoting human development and family studies across the life span.

Enrollment is open to children of any race, creed, or nationality. Applications should be made through the Child Development Research Center Office, at 15th and Akron or online at <http://www.depts.ttu.edu/hs/cdrc/application.php>.

Information Technology (Computing) Services

The Information Technology (IT) Division (www.it.ttu.edu), under the oversight of the Vice President and Chief Information Officer (CIO), provides a wide selection of computing resources, services, and support for students, faculty, and staff in support of institutional strategic goals and priorities. Some of the key services provided include email, computer labs, printing services, software site licenses like Microsoft, and the learning management system. For information on IT services specifically for students, please visit <https://www.ttu.edu/it4students/>. Additional services include the following:

- **Customer Experience (ITCX)** seeks to provide the best IT experience, from start to finish, for students, faculty, and staff. ITCX is the primary point of contact for anyone needing technical assistance, predominantly utilizing student employees for frontline support. Customer Experience also provides IT training and support for classroom technology and devices, including assistance for on-campus residents. Students, faculty, and staff may utilize the self-support and chat features through askIT (www.askit.ttu.edu) or contact ITCX at 806.742.4357 (HELP) or ithelpcentral@ttu.edu.
- **Enterprise Systems** is comprised of several departments that support the critical IT infrastructure and resources for TTU. These include network infrastructure, Single Sign On, eRaider account management, high performance computing, the Microsoft ecosystem, WiFi, and the wired network as well as cybersecurity.
- **Enterprise Applications** plays a key role in addressing the university's needs by facilitating the selection, implementation, and maintenance of enterprise applications that enhance the business processes at Texas Tech University. This team leverages a variety of tools and strategies to ensure application security and optimize the available resources for overall productivity and success.

International Affairs

International Affairs integrates the global vision of Texas Tech University by fostering international leadership, awareness, education, research, and outreach for the university and the greater community. Working with and through the colleges, International Affairs (IA) coordinates international activities at Texas Tech and is composed of the following divisions/stand-alone units:

- Center for Global Communications
- International Center for Arid and Semi-Arid Land Studies
- K-12 Global Education
- International Grants Administration & Partnerships
- International Relations
- International Student and Scholar Services
- Study Abroad
- TTU Center in Sevilla

Contact: International Affairs | www.international.ttu.edu | Vice Provost Elizabeth Trejos-Castillo, Ph.D. | 806.742.3667

Center for Global Communication (CGC). The Center for Global Communication (CGC) develops and advances educational programming and resources that enhance communication as well as multicultural skills for students to effectively converse in a global context. CGC provides resources for students interested in learning more about global challenges, speaker programs for faculty to raise awareness of global issues, and global challenge teaching modules for faculty.

Contact: Center for Global Communication (CGC) | Director, Dr. Rich Rice | rich.rice@ttu.edu

The International Center for Arid and Semi-Arid Land Studies (ICASALS). ICASALS promotes the university's special mission of the interdisciplinary study of arid and semiarid environments and the human relationship to these environments from an international perspective. The purpose of ICASALS is to stimulate, coordinate, and implement teaching, research, and public service activities concerning all aspects of the world's arid and semiarid regions, their people, and their problems.

Contact: International Center for Arid and Semi-Arid Land Studies (ICASALS) | Director, Dr. Clifford Fedler | clifford.fedler@ttu.edu

K-12 Global Education. The K-12 Global Education (GE) unit serves as a liaison for the university, providing cultural programming to K-12 students from public, private, and home schools throughout the South Plains.

Contact: K-12 Global Education (GE) | Assistant Director, Jessica Moreno 806.742.3667

International Grants Administration and Partnerships (IGAP). IGAP works with faculty to identify and disseminate international research and development grant opportunities and to help develop and submit multidisciplinary proposals to funding agencies. Additionally, they work with faculty to develop partnerships with international institutions to further enhance the international reputation of Texas Tech University.

Contact: Division of International Grants Administration and Partnerships Assistant Vice Provost and Senior Director, Reagan Ribordy reagan.ribordy@ttu.edu or Associate Director, Michael Johnson michael.johnson@ttu.edu

International Relations (IR). Comprised of International Alumni Relations, International Arts and Culture (art exhibits, speakers, etc.), International Scholars Engagement, and International Fundraising, IR engages and connects TTU alumni, scholars, and donors and brings cultural programming to the multiple and diverse South Plains and TTU communities.

Contact: Division of International Relations | Assistant Director, Carolina Arellanos | carolina.arellanos@ttu.edu

International Student and Scholar Services (ISSS). ISSS operates the university's international student and exchange visitor immigration programs and provides employment-based immigration services to the university. It also oversees the office of International Student Life. Counselors advise and assist international students and scholars concerning immigration rules, financial concerns, and cross-cultural issues.

Contact: Division of International Students and Scholar Services Director, Tina Newton | tina.newton@ttu.edu

International Student Life (ISL). International Student Life plans activities for international students and coordinates with other offices on campus to provide services and programmatic support to all international students. From airport pickup to advising the International Student Advisory Board, this office is the go-to place for international students.

Contact: Division of International Student Life | Assistant Director, Beth Mora | beth.mora@ttu.edu

Study Abroad (SA). Study Abroad coordinates all study abroad programs for Texas Tech University, to include international internships, service-learning, and research. Many academic departments offer faculty-led programs with a wide variety of course offerings and locations including the TTU Sevilla Center and TTU Costa Rica. Counselors advise and prepare students and faculty for positively impactful educational experiences abroad that prepare students to function objectively and comfortably in the global marketplace while earning academic credit.

Contact: Division of Study Abroad | Director, Whitney Longnecker whitney.longnecker@ttu.edu

For the TTU Center in Sevilla, Spain, contact Director, Dr. Sara Pink (sara.pink@ttu.edu).

Passport Office. International Affairs also offers full passport services to the public.

Contact: Administration and Finance | Director, Rachel Jarnagin rachel.jarnagin@ttu.edu

Landmark Arts

The mission of the Exhibitions and Speakers Program of Texas Tech University School of Art is to promote contemporary visual arts awareness at the School of Art and in the Lubbock community through a program of exhibitions, visiting artists and scholars, symposia and workshops, publications, and hands-on experience with working artists. As a component of the School of Art, the Landmark Arts program integrates academic and professional practice.

The galleries of Landmark Arts are Landmark Gallery, Studio Gallery, Folio Gallery, SRO Photo Gallery in the Art Building, and Satellite Gallery at the Charles Adams Studio Project in downtown Lubbock. The Landmark Gallery exhibits contemporary art by nationally and internationally recognized professional artists. Landmark Arts also presents speaker programs

and symposia, featuring artists and scholars from around the U.S.A. that engage campus and Lubbock community participation.

Folio Gallery is an intimate venue that displays prints, photographs, and drawings by visiting professional artists. The Studio Gallery and South Gallery offer student-driven exhibitions such as the capstone exhibitions of the M.F.A., M.A.E., B.A., and B.F.A., and the annual undergraduate-juried competition. The SRO Photo Gallery presents the viewer with wide-ranging solo exhibitions of fine art photography by professional artists from around the country. The Satellite Gallery presents current creative research by students and faculty.

The galleries are open from 10 a.m. to 5 p.m. weekdays, 10 a.m. to 5 p.m. on Saturday, and noon to 4 p.m. on Sunday. During university holidays the galleries are closed. More information is available at www.landmarkarts.org.

Lubbock Lake Landmark

The Lubbock Lake Landmark, a renowned archaeological and natural history preserve, contains a cultural record from the Clovis Period (12,000 years ago) through historic times, making Lubbock one of the oldest communities in the New World. The Landmark is a unit of the Museum of Texas Tech University and offers tours, outreach, and programs related to the ongoing archaeological and natural history research at the preserve. Community and student volunteers assist in much of the research conducted and educational programming offered at the site. The Landmark is closed on Monday but open from 9 a.m. to 5 p.m. Tuesday through Saturday and 1 to 5 p.m. Sunday.

Museum of Texas Tech University

As an education resource for a diverse audience, the Museum of Texas Tech University collects, researches, and disseminates information about the natural and cultural heritage of local and related regions. It is accredited by the American Alliance of Museums and is located on the campus at Fourth Street and Indiana Avenue.

The building, completed in 1970 and extended several times since then, contains over 250,000 square feet of galleries, research facilities, classrooms, work areas, and collection housing. The museum complex includes the main museum building, Moody Planetarium, Natural Science Research Laboratory, and Lubbock Lake Landmark. A 40-foot mural, created in India ink by Peter Rogers, dominates the lobby. Galleries showcase long-term and temporary exhibitions drawn from the museum's own collections and traveling exhibits.

The Moody Planetarium is a 71-seat and two-wheelchair area auditorium with a full-domed digital mirror projection system. It has daily astronomy and laser programs for the public at 2 and 3:30 p.m. Wednesday through Friday; 11:30 a.m., 2, and 3:30 p.m. on Saturday; and 2 and 3:30 p.m. on Sunday.

The Museum houses the Master of Arts in [Heritage and Museum Sciences](#) academic program.

Although the chief source of funding for the museum is legislative appropriation, additional support comes from endowments and granting agencies. The Museum of Texas Tech University Association supports traveling exhibits. The education division of the museum conducts programs throughout the year, including curriculum-based, self-guided tours for public schools, public workshops and lectures, special events, and other activities for major exhibitions. Volunteers from the community and Texas Tech University are always needed and welcome. The museum is a military-friendly, Blue Star museum.

The museum is closed on Monday but open free of charge from 10 a.m. to 5 p.m. Tuesday through Saturday and 1 to 5 p.m. on Sunday.

National Ranching Heritage Center

The National Ranching Heritage Center (NRHC) tells the story of ranching in North America through the real stories of real ranches and real heritage of early settlers who forged the ranching lifestyle into what it is today. The museum boasts 27 acres of indoor and outdoor exhibit areas with more than 50 historic ranching structures from historic ranches. The historic structures at the NRHC have been chronologically arranged to exhibit the evolution of

ranch life from the late 1700s through the mid-1900s. Each was relocated, restored, and furnished for period correctness. A mile and a half of paved pathways provides wheelchair and stroller access to each structure. Posted signs give a history of the structures in both English and Spanish.

The Cash Family Ranch Life Learning Center featuring Hank the Cowdog, the newest addition to the NRHC, explores modern-day ranching and how it impacts daily life through interactive, hands-on exhibits. With Hank the Cowdog as the guide, visitors can experience what life on Hank's ranch is like and learn about the business of ranching, a day in the life of a cowboy, ranch equipment, cattle nutrition, prairie ecology and natural resources, native wildlife, and so much more.

TripAdvisor, the world's largest travel site, has inducted the center into its Hall of Fame for six consecutive years of consistently high ratings from travelers.

In addition to museum exhibits, the museum hosts several public events and education-based seminars and programs throughout the year. More than 200 community and student volunteers assist at public events where many dress in period clothing to re-enact scenes from pioneer days and frontier life.

The NRHC is open to the public from 10 a.m. to 5 p.m. Monday through Saturday and 1 to 5 p.m. on Sunday. The NRHC is closed on all major holidays, including the holiday schedule of Texas Tech faculty and staff. For additional information, visit ranchingheritage.org, call 806.742.0498, or email ranchhc@ttu.edu.

Psychology Clinic

The Texas Tech Psychology Clinic has a long history of providing quality services to the Lubbock area and university community. The Psychology Clinic is now located on the first floor of Texas Tech Plaza, adjacent to campus. The Psychology Clinic is the primary training facility for the clinical and counseling psychology doctoral programs. The purpose of the Psychology Clinic is threefold: 1) to provide multidisciplinary, evidence-based training to doctoral students under the supervision of program faculty; 2) to provide high-quality, affordable psychological services to the university, Lubbock, and greater West Texas communities; and 3) to advance theory-based mental health research. The Psychology Clinic provides a range of outpatient services to children, adolescents, and adults, including individual, family, and couples therapy. Therapists address a broad range of issues such as depression, anxiety, relationship and interpersonal problems, emotional and behavioral problems, eating concerns, and problems with stress and coping. The Psychology Clinic also provides psychological and neuropsychological testing and assessment services.

Radio and TV Stations

Texas Tech Public Media. Licensed and owned by Texas Tech University, Texas Tech Public Media broadcasts from stations in Lubbock, El Paso, and San Angelo. The four branches include PBS Texas Tech Public Media (KTTZ-TV), NPR Texas Tech Public Media (KTTZ-FM), PBS El Paso (KCOS), and NPR San Angelo (KNCH). All four stations operate as divisions within Texas Tech University and are licensed by the Federal Communications Commission (FCC) to the university's Board of Regents. Texas Tech Public Media is supported by its listeners and viewers, and additional funding is supplied by grants, underwriting, and financial support from Texas Tech University.

PBS Texas Tech Public Media (KTTZ-TV) produces local, noncommercial educational and arts programming and holds community events for viewers of all ages. KTTZ-TV's office, studio, production, master control, transmitters, engineering facilities, and 650-foot antenna tower are located on the southwestern campus triangle west of Indiana Avenue. The station broadcasts a variety of digital programs 24 hours a day, seven days a week. PBS, PBS Kids, and Create are all aired by KTTZ-TV. The signal coverage zone encompasses Lubbock and 13 surrounding counties and serves 157,000 households. KTTZ-TV is a member of the Public Broadcasting Service (PBS), a noncommercial network of 356 television stations interconnected by satellite.

NPR Texas Tech Public Media (KTTZ-FM) airs classical music and arts programming, as well as local, community-based, people-first news coverage. NPR Texas Tech Public Media broadcasts on a frequency of 89.1 MHz

at 70,000 watts but also hosts three high-definition channels—with content spanning music and arts programming to news from around the globe. KTTZ-FM operates 24 hours a day, seven days a week—providing service to South Plains listeners within a 75-mile radius of Lubbock.

PBS El Paso (KCOS). Like PBS Texas Tech Public Media, PBS El Paso produces local, noncommercial educational and arts programming and holds community events for viewers of all ages. Located in El Paso, Texas, the station broadcasts a variety of digital programs 24 hours a day, seven days a week. PBS, PBS Kids, and Create are all aired by KCOS-TV. KCOS-TV's signal reaches a potential audience of 2 million people in three states and two countries: Texas, New Mexico, and Chihuahua, Mexico. KCOS-TV is a member of the Public Broadcasting Service (PBS), a noncommercial network of 356 television stations interconnected by satellite.

NPR San Angelo (KNCH) airs national and state-wide programming to the Concho Valley of west-central Texas, as well as music and arts programming and local, community-based, people-first news coverage. NPR San Angelo broadcasts on a frequency of 90.1 MHz. KNCH-FM operates 24 hours a day, seven days a week. Licensed to San Angelo, it is owned by Texas Tech University and operated out of Texas Tech's campus in Lubbock.

KTXT-FM. The campus radio station, KTXT-FM (The Raider 88.1), is the student radio station that broadcasts on a frequency of 88.1 MHz at 35,000 watts. Staffed by students and administered by the College of Media & Communication, KTXT-FM provides the university community with diverse programming, including BBC World Service; Texas Tech news and information; weather; live play-by-play broadcasts of Texas Tech soccer, volleyball, and softball; alternative music; and a variety of student-produced radio programs. Students from the campus community can serve as members of the staff and gain valuable educational experiences related to management, marketing, producing, and entrepreneurship.

Red Raider Plaza

Red Raider Plaza is the newest outdoor leisure area on campus. It is located on the NW lawn of the Student Union Building. Red Raider Plaza opened in Spring 2021 and featured large open seating, Adirondack chairs, picnic tables, and giant yard games such as Connect 4 and a chess/checkers board, plus horseshoes and cornhole. Hundreds of students, faculty, and staff visited the plaza in Spring and Summer 2021. Red Raider Plaza reopened in Spring 2022 with new furniture, games, and landscaping.

Research & Innovation

Texas Tech University is making great strides in increasing its research activities and advancing its vision to become an internationally recognized public university.

Texas Tech is listed among the nation's top doctoral universities in the Carnegie Classification of Institutions of Higher Education, which is a highly regarded measure of a university's research activity and graduate programs.

In 2019, Texas Tech received the Hispanic Serving Institution (HSI) designation from the U.S. Department of Education. This designation allows the university greater opportunities to provide unique research experiences to a diverse student body.

With 100 faculty members ranked among the top 2% of the most cited researchers worldwide and more than 50 specialized centers and institutes, Texas Tech researchers strive to find innovative, transformative solutions to issues that reach far beyond West Texas.

Texas Tech's strategic plan, "A Foundation for the Next Century: A Pathway to 2025," emphasizes innovative research and creative activities as one strategic priority. As a part of this strategic priority, research and scholarly themes have been identified for which Texas Tech University is positioned to be a world leader. Growth in these themes will require support for increased development of personnel and infrastructure resources. As such, the university aspires to leadership in

- Interconnections of water, land, food, and fiber
- Energy production, distribution, and utilization technologies
- Health, well-being, and quality of life
- Creative inquiry and expression across the arts, humanities, and sciences

As Texas Tech expands and enhances its undergraduate and graduate student and postdoctoral research enterprise, both undergraduate and graduate students are encouraged to enhance their classroom activities with research faculty in all areas of the university (creative arts, social sciences, humanities, agriculture, engineering, mathematics, and the sciences). The research programs at Texas Tech prepare students for successful careers by providing unique, hands-on experiences across disciplines.

Innovation. Texas Tech knows the important part innovation plays at any university. Ranked 12th in the nation for entrepreneurship undergraduate education by the Princeton Review, the Innovation Hub at Research Park boasts more than 50 mentors and 35 faculty ambassadors to assist students in their entrepreneurial endeavors. The Hub offers more than 12 unique programs for aspiring entrepreneurs at any stage of the process, from early-stage ideas to fully-fledged startups seeking pre-seed funding, co-working space, and mentorship, and is completely free for all Texas Tech students.

Speech-Language and Hearing Clinic

The Speech-Language and Hearing Clinic, with facilities on the east side of the Health Sciences Center, serves as a practicum site for students in the Department of Speech, Language, and Hearing Sciences.

Under faculty supervision, students in speech-language pathology and audiology provide clinical services for the students, faculty, and staff of Texas Tech University and other residents of West Texas and eastern New Mexico. Assessment services and therapy are available for children and adults with hearing problems or disorders in language, voice, stuttering, or articulation. Individuals are accepted by self-referral and upon referral from other professionals. Anyone needing these services should contact the office of the Speech-Language and Hearing Clinic at 806.743.5678.

Student Union Building

The Student Union Building (SUB) is the community center of campus. The SUB has as many as 20,000 students, faculty, staff, alumni, and guests come through its doors daily.

The Student Union & Activities department works hard to bring Texas Tech spirit into the building. The third floor of the building was renovated in 2017 to provide an open collaboration space for all students. The space is filled with moveable tables, chairs, and whiteboards, as well as a threaded power system throughout the floor, resulting in hundreds of available power outlets for students to charge their laptops, phones, and other devices. Additionally, the second-floor corridor was updated with new paint and carpet with a renovated student collaboration space on the West side in 2019. In 2014 the Student Union added the Stars and Stripes Military, Veteran, and Family Lounge. The Red Raider Ballroom was renovated with improved lighting, sound, and visual technologies in 2013. In 2006 the SUB completed a \$45 million renovation and expansion that has created one of the finest facilities in the United States. The expansion included additional space for the official campus bookstore, a games area, Student Government Association office suite, and office spaces for the Student Union & Activities department, Dean of Students, Center for Campus Life, Office of Parent and Family Relations, and Student Legal Services.

The SUB features a food court, a casual dining area with seating for 500 patrons, multiple study rooms and spaces, 20 technologically capable meeting rooms for events, the 936-seat Allen Theatre, the courtyard, and the east entrance ATM hub. The food court was renovated with a Pizza Hut®, Boar's Head® Deli, and Raider Pit BBQ that opened in Spring 2022. A full-service Chick-fil-A® opened in 2019. The retail and service corridor on the first floor houses the University ID Office, Prosperity Bank, a University Police sub-station, Sam's Place Mini-Market, CopyMail service center, Smart Choices, and Paciugo Gelato Caffé.

The Student Union Building is open from 7 a.m. to 11 p.m. Monday–Friday, 8 a.m. to 11 p.m. Saturday, and noon to 11 p.m. Sunday.

Texas Tech Farm at Pantex

The Davis College of Agricultural Sciences & Natural Resources operates an agricultural farm at Pantex, located 12 miles east of Amarillo. This farm

consists of 5,770 acres of deeded land and an agricultural use permit on an additional 5,304 acres controlled by the Department of Energy. The farm serves as a valuable resource for agricultural research and education, adding strength, flexibility, and prestige to the academic programs at Texas Tech.

Texas Tech Police Department

The Texas Tech Police Department is located at 413 Flint Avenue and provides 24-hour law enforcement services and security for the Texas Tech University and Texas Tech University Health Sciences Center communities. In case of an emergency, dial 911. The department phone number is 806.742.3931.

Officers of the Texas Tech Police Department are licensed by the Texas Commission on Law Enforcement.

The Texas Tech Police Department offers presentations on a number of topics, including personal safety, burglary/theft prevention, sexual assault awareness, active shooter awareness, and drug and alcohol awareness programs.

The department posts information and crime statistics online at www.depts.ttu.edu/tttd/. The Public Information Officer (PIO) for the Police Department serves as the liaison between the campus community and the department to promote our initiatives, events and campus engagement efforts. The PIO may be reached at the main number listed above. The PIO oversees our social media presence, and you may follow us at Texas Tech Police Department on Facebook, Texas Tech Police on Instagram and @TexasTechPD on X.

Texas Tech University K-12

Texas Tech K-12, a division of Texas Tech University Online, has been offering state-approved online education for kindergarten through 12th grade students for over 30 years. Texas Tech K-12 is a Carnegie tier-one research institution, providing a rigorous and flexible curriculum that empowers students to work at their own pace, recover credits and achieve their academic goals from anywhere.

Texas Tech K-12 serves K-12 students through a variety of programs including:

- Full-Time Diplomas (tuition-free or paid options)
- Individual Courses, AP & Dual Credit Options
- Credit by Exams (CBEs)
- District Solutions and International Partnerships
- Adult Education for GED and High School Diploma Completion

Why Choose Texas Tech K-12?

- Accredited & Approved: We meet the highest standards for quality education and are recognized for our commitment to student success.
- Flexible Learning: Students can start at any time and work at their own pace to balance academic goals with other activities.
- Supportive Community: Texas-certified teachers and a dedicated support team provide personalized assistance to help students succeed.

Texas Tech University Press

Texas Tech University Press (TTU Press) has been the book publishing arm of Texas Tech University since 1971 and a member of the Association of University Presses since 1987. The mission of TTU Press is to disseminate the fruits of original research by publishing rigorously peer-reviewed works that compel scholarly exchange and that entertain and enlighten the university's broadest constituency throughout the state, the nation, and the world. TTU Press publishes 15–20 new titles each year and has approximately 450 titles in print. In addition to a diverse list of nonfiction titles focused on the history and culture of Texas, the Great Plains, and the

American West, the Press publishes in the areas of natural history, border studies, and peace and conflict studies. Additionally, the Press is committed to publishing early career writers who work in literary genres that are underrepresented in the contemporary commercial publishing landscape. It also publishes the annual winner of the Walt McDonald First-Book Competition in Poetry.

For more information and to order, visit www.ttupress.org or call 800.832.4042.

Texas Tech University Theatre

The School of Theatre and Dance presents a schedule of major dramatic and choreographed productions each academic year under the direction of professionally qualified members of the theatre arts/dance faculty and/or graduate students. The School selects plays to give each student generation an opportunity to experience a representative selection of the great works of the past as well as plays by modern, diverse, and contemporary authors. Many of these plays, dance concerts, and musicals are presented on the newly remodeled main stage of the Charles E. Maedgen Jr. Theatre, which seats 355 patrons in a comfortable, continental arrangement.

With the advent of the new building, we also boast a state-of-the-art, completely flexible black box theatre and a small Studio Theatre as well. The theatre season, which was once divided between the lab and the main stage, is currently presented also in these two intimate spaces and, occasionally, spaces around Lubbock. All Texas Tech students are eligible to audition for roles in plays or to work on production crews.

New plays are also developed in Texas Tech's innovative summer program, WildWind Performance Lab, and the intricacies of devised theatre in Marfa, Texas, at the Crowley Theatre. The School collaborates with the Burkhart Center for Autism Research to produce a collaborative play each semester under the company the BurkTech Players, and because Lubbock is considered the School's campus, site-specific and found spaces are taken advantage of as well. We also feature new plays and choreography in our Frontier Fest each spring.

Transportation and Parking Services

All vehicles parked on campus must have a valid Texas Tech ePermit. Students living off campus may purchase an ePermit for a commuter parking lot or garage that is valid weekdays from 7:30 a.m. to 5:30 p.m. Students living on campus may purchase an ePermit for their residence hall parking lot that is valid 24 hours a day, seven days a week or may purchase a commuter parking lot or garage ePermit. ePermits are available on a first-come, first-served basis. Transportation and Parking Services uses license-plate recognition to monitor campus parking, so students receive no physical permits.

By using "My Parking Account" on the Transportation and Parking Services website (www.parking.ttu.edu), viewers can access and update account information, register motor vehicles and bicycles, purchase an ePermit, and explore other ways to simplify their on-campus parking experience. The website also provides maps, citation appeals procedures, traffic and parking regulations, and other useful information.

A free on-campus Motorist Assistance Program is available 24 hours a day for anyone who runs out of gas, needs a battery boost, needs a car door unlocked, or has a flat tire on campus. Call 806.742.6277 (MAPP).

To contact Transportation and Parking Services, call 806.742.7275 (PARK) or visit www.parking.ttu.edu for more information about office location and operating hours.

University Libraries/Special Collections

Texas Tech University Libraries serve as a vital partner with students and faculty in their learning endeavors. The University Libraries' system is comprised of (1) University Library, (2) Southwest Collection/Special Collections Library, (3) Architecture Library, and (4) Peters Family Legacy Library. The University Library is a patent and trademark depository and is one of two regional depositories for U.S. government documents in Texas. The central focus of the Texas Tech University Libraries is to make available

3.72 million physical volumes, electronic resources, special collections, and archives and to offer services to students and faculty that enable academic and research success.

The University Library is open more hours than any other building on campus (with special 24/7 hours during final exam periods) and provides access to approximately 191,000 online journals, newspapers, and periodicals; 686,000 e-books; more than 400 databases; and 1 million architecture and art digital images. The University Library is the center of academic, social, and intellectual discovery on (and off) campus. Librarians offer personalized assistance for research and reference needs in person, by phone, via email, or through the Ask-A-Librarian chat service. Every major has its own Personal Librarian who can be found at <http://guides.library.ttu.edu/>. The Library's award-winning Document Delivery service will obtain materials not owned by the Libraries for students and faculty and will hold and/or deliver them upon arrival.

The Library houses 200 public computers (both PC and Mac) and 30 laptops, the most computer stations on campus, each equipped with the full and latest versions of the Microsoft Office Suite, Adobe Creative Suite (Photoshop, Illustrator, InDesign, etc.), AutoCAD, and other project/product and publishing tools. The University Library also features the Study Hub with 14 Solstice Pods allowing screen mirroring for group work, as well as four KIC Scanners allowing patrons to easily digitize content.

In the basement of the University Library, the state-of-the-art Crossroads Recording Studio provides a free facility to all students and university employees for practice, performance, podcasts, music, theater, and oral presentations. The basement also houses instruction labs for workshops and more.

On the second floor, Dynamic Media Services (DMS) and the 3D Animation Lab provide access to the latest Mac and PC software, including industry-standard design, video editing, and 3D art, modeling, and animation software. Anatomy models, digital cameras, high-definition digital camcorders, GoPro cameras and mounts, more than 5,000 American and international film and movie DVDs, and music and audiobooks on CD are all available for checkout. The DMS also includes two podcast studios for recording and shares space with the Library Makerspace featuring 3D printing, scanning, doodling pens, laser cutting and modeling assistance, in addition to a Virtual Reality Lab offering VR headsets with controllers.

Thirty-six group study rooms are available for reservation and over 180 individual study rooms are available for checkout. The Library also offers exhibit space reservations for faculty, staff, and students, as well as event space on a limited basis.

The university offers a 1 credit-hour course (LIBR 1100) to convey effective library research methods and strategies for scholastic success. The Library also offers numerous workshops throughout the year on topics such as databases, managing citations, 3D printing, and more.

The Architecture Library is located on the eighth and ninth floors of the Huckabee College of Architecture Building. Its collection includes materials on architecture, design, urban planning, and landscape architecture, as well as an image library of digital collections on architecture, art, and design. The Architecture Library's services include reference, reserve, instruction, and circulation. It offers 12 public computers with dual monitors, standard and large-format flatbed scanners, two KIC Scanners, and a WEPA printing station.

Hours are Monday through Thursday 8 a.m. to 10 p.m., Friday 8 a.m. to 6 p.m., Saturday 1 to 6 p.m., and Sunday 1 to 10 p.m.

Contact: 806.742.8058 or <https://guides.library.ttu.edu/archlib>

The Peters Family Legacy Library is located within the Student Enrichment Center. It is staffed with a full-time librarian and staff member. Its collections include books and resource materials relevant to sociological, historical, political, and cultural aspects of underserved communities. It also offers four public computers.

Hours are Monday through Friday 8 a.m. to 8 p.m. and Saturday noon to 5 p.m.

Contact: 806.742.1435 or <https://www.depts.ttu.edu/library/pfllibrary/>

The Southwest Collection/Special Collections Library (SWC/SCL) includes the Southwest Collection; the University Archives; Rare Books; the James Sowell Family Collection in Literature, Community and the

Natural World; the Archive of Turkish Oral Narrative; and the Southwest Music Archive.

The Southwest Collection is the regional repository for historical information pertaining to West Texas and the Southwest. The SWC/SCL collects and makes available for research more than 1,800 collections of personal papers; more than 5,000 hours of oral history interviews; noncurrent business and institutional records; and a non-circulating library of Texana, Western Americana, maps, periodicals, photographs, newspapers, interviews, films, videotapes, and microfilm.

The University Archives serves as the institutional memory for Texas Tech University by collecting, preserving, and making accessible to researchers such materials as administrative and faculty records, publications, photographs, memorabilia, and video and audio recordings. These materials document the legal, historical, fiscal, administrative, and intellectual aspects of the university, as well as the cultural and social aspects of student life.

Consisting of some 38,000 volumes, Rare Books is a rich resource for research. Its holdings provide a wide breadth of materials, including rare and early printed books and maps; artists' books; and limited edition, illustrated, and finely bound books. Areas of strength include the history of science and medicine, European and American literature, book history and book arts, Russian and Eastern European history and culture, Meso-American and illuminated Medieval manuscript facsimiles, and Greek and Roman classical authors.

The James Sowell Family Collection in Literature, Community and the Natural World contains the personal papers of award-winning contemporary American writers whose work deals with the natural world, the significance of communities, and questions of social justice. In addition to published books, materials available for research include correspondence, drafts of manuscripts, research notebooks, diaries, calendars, photographs, and film.

The Archive of Turkish Oral Narrative is a research collection devoted to the study of Turkish folktales and related narrative forms: folk history, legends, folk minstrelsy, and myths.

The Southwest Music Archive is a premier music archive in Texas actively pursuing musicians and their associates to collect and preserve the state's vast musical heritage. Additionally, the archive is working outside the state to obtain important music collections that have been overlooked.

All materials may be used by both the university community and the general public for research or reference. The SWC/SCL is located north of the University Library. Reading Room service is provided during regular semesters from 9 a.m. to 5 p.m. Monday through Friday with some extended hours available. The building is closed on campus holidays, and all hours are subject to change. Please call to confirm hours. Inquiries and donations are welcome. Tours are available.

University Recreation

The Department of University Recreation is a comprehensive fitness, leisure, and recreation department providing world-class facilities and cutting-edge programs and services. At Texas Tech, University Recreation is the primary destination for students to engage in recreation, social, and wellness-orientated programs, and services. Blending ingredients of fitness, leadership, leisure, recreation, and wellbeing programs/services with the co-curricular educational experience, UREC is key to student-success in and outside the classroom.

Robert H. Ewalt Student Recreation Center. With over 242,000 square feet of recreational activity space, the Student Recreation Center has a variety of exercise, fitness, and leisure opportunities for the Red Raider campus community. Highlights include:

- Seven gym courts ideal for badminton, basketball, pickleball, and volleyball
- Multi-activity court (MAC) perfect for indoor soccer or floor hockey
- The Free Weight and Machine Weight with over 175 weightlifting stations, dumbbells, and barbells
- Raider Power Zone which is a combination of functional fitness training and power-lifting racks

- Over 90 cardiovascular fitness machines from leading commercial manufacturers, including Concept 2, Life Fitness, Matrix, Precor, and Woodway
- A 1/8 of a mile elevated track with stretching and core fitness spaces
- A 53-foot tall climbing and bouldering wall
- Racquetball courts
- Multiple fitness studios, including CrossFit Texas Tech Box, F45, and Raider Ride Cycling Studio
- Men's and women's locker rooms
- Equipment Issue with a variety of equipment to support and complement your activities

Outdoor Pursuits Center. The Outdoor Pursuits Center (OPC) is the place to be for the outdoor enthusiast. With nationally certified professional and student leaders, the OPC offers a variety of weekday, weekend and extended trips throughout the fall and spring semester. Examples include:

- Mountain bike riding at Palo Duro Canyon
- Hiking Big Bend National Park
- Ice Climbing in Colorado
- Mountain Bike Riding at Caprock Canyon State Park
- Canoe/Kayak adventures

Additionally, the OPC has all the rental equipment and regional park information for the weekend or weeklong adventure. Items available for rental include:

- A fleet of watercraft including canoes, kayaks, and personal flotation devices
- Single and multi-person tents
- Sleeping bags
- Cookware
- Skis, boots, bindings, and poles
- Snowboards
- Maps and informational guides regarding local, state, and national parks

Fit/Well Suite. Home to personal training, massage, and expert information regarding fitness and wellness programs and services available through Recreational Sports, this space will help students meet and exceed fitness and wellness goals. Here, students can:

- Purchase and register for a variety of personal training packages.
- Purchase a massage package to help smooth out the aches and pains from exercise.
- Learn more about our complimentary group fitness class program with over 50 classes/week.
- Purchase and become a member of the CrossFit Texas Tech Box or F45 Functional Fitness Studio.
- Learn about monthly wellness educational wellness demonstrations and programs.
- Purchase a Muscle Milk or other beverage for pre- or post-workout satisfaction.

Indoor Aquatic Center.

- Ideal for fitness swimming, the indoor aquatic center can be set at 50- or 25-meter lengths.
- Register yourself for an American Red Cross, Learn 2 Swim Program, or stroke proficiency clinic.
- Men's and women's locker rooms

Outdoor Leisure Pool. Nationally recognized with multiple design awards, the outdoor leisure pool space is the ideal location for fun in the sun. Picture-perfect for fitness swimming, family activities, or relaxing alone, this fitness and leisure activity area has something for everyone. Additionally, this space is great for family gatherings and birthday party rentals.

- Competition and Activity Pools for lap and fitness swimming
- Double T splash pad and slide area
- Three-tier wet deck ideal for relaxing and soaking up vitamin D
- Spa
- 645-foot long lazy river
- Sam's Place poolside dining

Sports Programs. Intramural Sports is an essential program to the students at Texas Tech University. Bringing together individuals to build community with respectful competition is a key ingredient to this program. From leagues to tournaments to one-day special events, intramural sports are outstanding ways to play and compete. Examples include basketball, badminton, cornhole, disc golf, flag-football, pickleball, softball, and volleyball.

Texas Tech University boasts one of the most vibrant and active sport club programs in the nation! With over 30 sport clubs and more than 1,100 participants, many students find their community within a sport club organization. These organizations help build community through community service, competition, fund raising, and travel. Many sport clubs do require individuals to pay semester dues and attend practices. Examples include:

- Archery
- Baseball
- Climbing
- Fencing
- Gymnastics
- Polo
- Rugby
- Soccer

Urbanovsky Park. When the weather is just too perfect to exercise indoors, take your fitness activities to Urbanovsky Park. This outdoor lighted park is a great space to enjoy fresh air while exercising. Features include:

- 9-hole disc golf course
- 8 tennis courts
- 4 basketball courts
- 3 sand volleyball courts
- 1 mile running trail
- Soccer and Rugby fields
- Functional fitness and chin-up bar exercise zone

West Rec Turf, Natural Grass, and Softball Complex. Located near HSC, this outdoor competition complex is open to members who purchase a Recreational Sports and Student Recreation Center membership. West Rec Turf is available for late afternoon and evening activities and is typically home to intramural sports, flag football, and soccer competitions. West Rec Natural Grass is a lighted complex perfect for soccer or other informal activities. The softball complex consists of four fields and is ideal for a weekend tournament rental.

Vietnam Center and Archive

Texas Tech University established the Vietnam Center in 1989 with the missions of funding and guiding the development of the Vietnam Archive and encouraging continued study of all aspects of the American Vietnam experience. The center provides a forum for all points of view and all topics related to Southeast Asia, particularly America's involvement in the region before, during, and since the Vietnam War.

The Vietnam Archive collects and preserves materials and artifacts focusing on the men and women who directly participated in wartime events. This includes people from the United States as well as from all participant nations. Located in the Special Collections Library, the Vietnam Archive currently contains approximately 20 million pages of material, making it the largest repository of Vietnam War related materials outside the U.S. federal government.

In addition to documents, artifacts, and related items, the Vietnam Archive includes a dynamic oral history project, a library of more than 14,000 books, and an unrivaled microfilm/microfiche collection. The Vietnam Archive microform collection comprises material from all the U.S. presidential administrations involved in Southeast Asia from World War II to 1975 and contains a comprehensive collection of other government agency and military branch records. This collection also includes one of the largest French Indochina and Vietnamese newspaper collections in the country.

To ease the burden of researching these vast holdings, the Vietnam Archive has developed one of the largest online document retrieval systems in the nation. Created in 2001, The Virtual Vietnam Archive now provides access to more than 10 million pages of materials, all of which are accessible free of charge through the internet. These online materials include documents; photographs and slides; and thousands of maps, audio recordings, oral history interviews, films, and more. The Vietnam Archive is continually adding new pages of digital material online each year.

In addition to the Vietnam Archive and its component projects, the Vietnam Center also administers a number of special projects and events, including scholarships for Texas Tech students, annual conferences and symposia, and numerous other projects and publications. The Vietnam Center website is www.vietnam.ttu.edu.
