

# Cross-Disciplinary Research Methods

## A Graduate Course Across Disciplines

Participation is based on instructor permission and selected participants will receive an \$250 stipend.

### Why should I take this class?

The course teaches methods for exploring innovative research across disciplines; it helps you develop communication skills to interact with other fields and learn how to represent your case effectively in competitive environments. Enhancing your interdisciplinary skills opens opportunities to leverage your benefits in any professional environment.

"This course provided opportunities to communicate with individuals outside of my own discipline; this communication illustrated that everyone has a unique perspective of approaching a problem, and sometimes that unique perspective is precisely what is needed to develop a solution to your own problem." – BV

"I would highly recommend this course to advanced graduate students to sharpen their understanding of their field and challenge themselves to think more critically and broadly as researchers." – MN

"The final project for this course was a wonderful addition. It provided a space where I was able to let my creativity and imagination run without boundaries; this freedom reignited my passion for exploring new ideas, in particular, it allowed me to explore ideas that I probably would not have thought about without communicating with other individuals." – BV
