

Student Employment:

Position: Student Greenhouse Tech.

Duties: Perform necessary and routine maintenance on greenhouse operating systems including irrigation and electrical systems (fans, belts, small motors). A basic knowledge of electrical and plumbing would be ideal. Occasionally will be required to help researchers with greenhouse projects i.e. planting, harvest data collection, some data entry. We would generally like to hire someone who is looking for a stable, secure position while they complete their studies.

Sophomore/Junior applicants are preferred but freshman students will be considered if they have previous experience with the aforementioned skills. I am looking for an individual who is self-motivated, responsible and doesn't mind working alone with minimum supervision. We offer an informal work environment with flexible hours where we understand that school is your first priority.
