**Subject:** Student worker positions at A&M AgriLife Research

Hi,

I work at the Texas A&M Research Station here in Lubbock and we have some student worker positions in our cotton breeding program for the fall season.

We will be harvesting cotton samples in our research trials and processing the samples afterwards (ginning and delinting). So it would be a good experience for students that would like to get familiar with ag research.

Could you share this information in your department, please?

Here is the link for the student employment application form. Students can specify their interest in the cotton breeding program in the Special Skills section.

Thank you very much,

*Andrea Maeda* (Mah-eh-dah)
