

Avalo Cotton Grower Program

Customer Support

Agronomy base knowledge with field scouting, digital tech knowledge, and cotton experience

Requirements

Knowledge of agronomic practices and cotton to provide guidelines and recommend agronomic practices, not to change growers' practices but to fit closely with the organic or pima cotton farmers. Someone very customer service based available to answer questions and assist with field requirements.

Geography

SE corner of Panhandle: Lubbock to Amarillo to Childress/Vernon

Duty Summary

- Training / Initial Farmer Meeting held in Midland (Hall County)
- Talking to farmers, helping with soil sampling and submitting, site surveys, placing drone plate markers, relationship building with grower.
- **April 15th to June 15th** - Planting season
- **June 15th to Post Plant Phase** - 10-20 hours/week post planting checking in doing field inspection, checking on drone use to make sure data matches in field collected data, looking at stand establishment, determining yield expectation, answering questions. Avalo will provide protocol for field inspection requirements.
- **October to Christmas** - Harvest season answering questions, interviewing and helping with data entry.

This position would average about 20 hours per week fluctuating depending on which part of the season, including walking fields but also good customer service type of individual. Must have familiarity about use of drones. The Avalo team is very hands on and main role for contractor is field work and being the grower's contact person.

My Ag Data used for data collection platform, will help customer with set up of accounts early in the season, assist with transferring data if they use a different platform, and with any finish data post-harvest.
