

## **RISK ASSOCIATED WITH THE USE OF LIVESTOCK/HORSES STATEMENT**

Working with livestock is inherently risky. Animals are capable of injuring people, especially when they are in the fight or flight mode in response to stress or unfamiliar situations. The instructor will work to provide students with the ability to manage horses or livestock with minimal stress, thus decreasing the risk of injury to people and animals. It is imperative that students follow instructions and communicate any discomfort with assigned activities.

Please see link for additional information on animal-borne diseases:
